READINESS: Notice of Readiness to load or discharge is warranty that the vessel is in all respects ready to receive or discharge cargo, and that the vessel's equipment is ready and capable of loading or discharging petroleum or petrochemical products. Phillips Puerto Rico Core Inc. reserves the right to refuse to accept such notice of readiness if, upon inspection, the vessel is found not to be ready to receive or discharge cargo. Vessels may tender Notice of Readiness upon arrival, berth or no berth, according to the terms of the charter party or contract of affreightment under which they have been engaged.

BALLAST: Ship's Masters are reminded that they are prohibited by Puerto Rico law from pumping dirty ballast overboard when within the Puerto Rican limits. Facilities are provided for disposing of dirty ballast ashore at Puerto de Las Mareas. U.S. Coast Guard Regulations are enforced for any discharge of dirty ballast, and any violations will be quickly detected and reported.

Ballast is pumped ashore (when authorised by Terminal) through a 12 in. line, capable of receiving at a pressure at the ship's rail of 100 p.s.i. The ballast facilities are sufficient to accommodate 100,000 barrels of dirty ballast. Vessels are requested to arrive with minimum of dirty ballast.

FRESH WATER: Available at the dock in limited quantities.

FUEL: No bunkers are available at Puerto de Las Mareas. However, arrangements for bunkering at any other ports in the island can be made through the Agents.

STORES: May be ordered through the ship's Agent for delivery at the terminal.

CONSULS: No consular representatives are located in the vicinity of Puerto de Las Mareas. Some nations maintain consular representatives in San Juan. Further information can be obtained from the Agent.

REPAIRS: Complete repair and dry dock facilities are available in San Juan. Limited facilities for emergency repairs are available at Ponce. Requests for such services should be made through the Agent.

SURVEYORS: There are no classification society surveyors stationed at Puerto de Las Mareas, but they are available on call from Ponce or San Juan. Requests for survey services should be made through the vessel's Agent at least 24 hours prior to arrival.

FIREARMS: All firearms and ammunition should be shown on the stores list and will be removed from the vessel during its stay in Puerto Rican waters. Any violations of this regulation will result in fines and confiscation of firearms and ammunition.

CUSTOMS: U.S. Customs and Immigration Authorities will board vessels at the dock, except in unusual circumstances, in which case they will board the vessel at anchor outside the harbour. The vessels will be required to furnish an accommodation ladder.

American Flag vessels will not require Customs entry or clearance unless arriving from or departing to a foreign port.

SAFETY: The provisions of Part 35 "Operations" of the Rule and Regulations to Tankvessels, Sub-chapter D (CG-123) published by the U.S. Coast Guard are in force at Puerto de Las Mareas, and must be observed under penalty of fine and imprisonment as provided therein.

Particular attention is called to the following safety precautions:

(1) Vessels must be, and remain, in readiness to sail from the dock at any time. In the event of engine repairs, which might interfere with such readiness to sail, being required, written permission must be obtained from the Harbour Master before such repairs may be undertaken.

(2) Scuppers must be plugged during cargo-handling operations.

(3) Absolutely no smoking or open lights will be permitted on the dock or open decks.

(4) Screens in good conditions must be used over gauging hatches when not actually gauging.

(5) Operations may be suspended at the discretion of the Master, or may be required to be suspended by the Harbour Master, during severe electrical storms.

(6) In the event of a breakdown of communications between dock and the shore terminal during loading operations, and the need to shut off the flow of cargo to the vessel, an emergency signal consisting of a continuous sounding of the ship's whistle shall be given. The signal shall not be discontinued until the flow of the cargo has been shut off.

(7) An electrical bonding cable will be provided from the dock to the ship. This bonding cable must be firmly secured to a clean metal surface of the vessel's hull or cargo piping before hoses are connected, and must remain in place until the hoses are disconnected.

(8) The vessel must moor bow to seaward when feasible and be prepared to get underway on short notice. A towing cable shall be made ready forward and aft with the bight at water's edge.

(9) Each foreign flag vessel must be in possession of a valid Letter of Compliance issued by the Commandant, U.S.C.G. for the carriage of the specific products to be loaded or discharged. All vessels must possess a Certificate of Financial Responsibility and be able to produce the same upon demand.

(10) Ship to ship transfer of cargo within the harbour is not permitted.

(11) All persons considered to be intoxicated or under the influence of drugs shall not be allowed to board the ships or enter the facilities during cargo operations.

Violations of these and other safety regulations, as described in Parts 35 of Sub-chapter D will result in the suspension of cargo-handling operations by the Harbour Master, or the PPRC dock personnel or safety inspectors, without recourse. Such suspension of cargo operations will continue until the violations are corrected or the safety hazards removed.

POLLUTION: *Oil Spill Avoidance:* All vessels must comply with the latest Commonwealth and Federal laws and regulations regarding prevention of oil spills. Such laws absolutely prohibit any discharge overboard of oily water, oily ballast or oil in any form. Since the harbour is an enclosed area with no flow of water through it, any violations, no matter how small, will be quickly detected and reported to the U.S. Coast Guard. VIOLATORS WILL BE VIGOROUSLY PROSECUTED AND ARE LIABLE FOR HEAVY FINES.

Sanitary Regulations: Pollution laws and regulations concerning sanitation apply to the harbour of Puerto de Las Mareas. Trash and galley waste will not be dumped into the waters of the harbour and must be kept on board until the vessel has sailed. Discharge of toilets and bathrooms into the waters of the harbour is prohibited. Sanitary facilities are provided on the dock for use by crew members while their vessels are at the berth.

MAIL: Official and personal mail may be addressed to the vessel care of Agent, and will be delivered to the vessel by the Agent on arrival. The Agent will accept official and personal mail from the vessel, and will ensure its delivery to the local U.S. Post Office, upon receipt of a mail transmittal slip to support disbursements.

SHORE LEAVE: When the vessel is berthed at Puerto de Las Mareas there normally are no restrictions on shore leave. In order to avoid delay in sailing, Masters are requested to ensure that all crew members are on board their vessel at sailing time. There are no facilities to provide shore leave from vessels at anchor awaiting berth.

Crew members from foreign vessels must carry their crewman's landing permit, Form I-95A, when on shore leave.

GARBAGE DISPOSAL: Service available from Ponce Waste.

WASTE OIL DISPOSAL: No facilities for dirty ballast.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar.

GENERAL: *Charts:* The general area and the harbour of Puerto de Las Mareas is shown in U.S. Hydrographic charts number 25677 and 25640.

Tides: Tides in the general area of Puerto de Las Mareas have an average yearly range of 0.8 ft. from MLW to MHW.

SHIPMASTER'S REPORT: February 1988.

The Oil Port is called Jobos, Phillips Oil Terminal. Guayama is the nearest town, and La Salinas is just nearby.

British Admiralty Charts for the area are inadequate, U.S. Chart No. 25687 is of greater assistance.

The Pilot, using a tug, boards at Lat. 17° 54′ N., Long. 66° 11′ W. This position is very close to the Fairway Buoy.

This vessel, a 218.5 m. LOA tanker, proved to be one of the largest ever handled at the terminal.

Berthing for large vessels takes place in daylight only, close to the daybreak or before sunset, when the wind subsides.

Max. draft requested was 36 ft. 06 in. Vessels berth heading seaward.

Entering the port and making the turn with such a large vessel is not easy. We had to put our bulbous bow on the Eastern bank in order to stop the vessel for the tugs to change side.

The jetty is built for smaller vessels so our ropes were either short, or had to be crossed.

Vessel discharged 335,000 bbls. of naphtha, through 2 × 8 in. hoses tested for 118 p.s.i., and flow requested not to exceed 18,000 bbls./hr.

Discharging was smooth, with slight difficulty during stripping because of the high back pressure.

We had good co-operation with the Authorities, Terminal and Agent. Chas. Martin Inspector attended. According to new Company's policy, the inspector refused to sign any documents other than Chas. Martin's Forms.

U.S.C.G. did not board, even though the vessel had not been to a U.S.A. port for about 2 years.

Provisions were of U.S. quality and were expensive. No bonded stores available.

PILOT'S REPORT: March 1993.

Approaches: Extreme caution should be exercised when approaching the port, in particular for anchoring at night.

Restrictions: Inbound and outbound traffic during daylight hours only. Local pilots will advise ship's Master accordingly upon arrival at the port.

Anchorages: Vessels may anchor at a distance of at least 1 mile E.S.E. from the Lima Mike (LM) Buoy. It is recommended that anchorage positions be obtained from the local Harbour Pilot on arrival or from the vessel's Agent.

General Information:

Vessels bound for Las Mareas should prior to departure from previous port obtain U.S.C.G. Chart No. 25677.

Local Government Regulations require that vessels inbound remain at least 1 mile South of the (LM) Lima Mike Buoy, until they have a pilot on board.

It is recommended that vessels, that do not have the local chart on board, remain drifting until they can contact the local pilot for advice. These vessels should not get closer than 3 miles from the Lima Mike Buoy.

Fishing: Do not eat fish caught near the anchorage, unless you are familiar with the local species.

AUTHORITY: Puerto Rico Ports Authority, see "San Juan".

Operator: Phillips Puerto Rico Core Inc. (Postal address: Call Box 10003, Guayama, Puerto Rico 00785). *Tel:* (809) 864-1375. *Telex:* 3451056. *FAX:* (809) 864-2302. *Contact:* Captain Jaime Rivera, Port Captain. Victor M. Reyes, Marine Transportation Coordinator.

MAYAGUEZ: 18.13 N. 67.12 W.

DOCUMENTS: See "San Juan".

PILOTAGE: Ship's Agents must make arrangements with Captain of the Port Office at Mayaguez Pier well in advance, not less than 24 hours before arrival of vessel at harbour entrance. Pilot boats are painted black (hull) and white (topside) as required, showing the letter "P" on each bow. Pilots board 1 to 2 miles offshore of Sea Buoy depending on weather conditions. Pilot service available day and night.

ANCHORAGES: Close to the entrance channel and boundaries. Sufficient depths for larger vessels.

RESTRICTIONS: The bay is easily entered day or night and is a good harbour in any weather, except in a hurricane. The harbour is 3.8 miles wide, and offshore is protected by reefs which extend across the harbour entrance in a general North by West direction.

The principal channel is about 0.4 miles wide, with depths at the entrance of about 47 ft. to 120 ft. and it is marked by lighted buoys and the range. Depth in the inner channel is approximately 30 ft. and close alongside the pier from 28 ft. to 29 ft.

MAX. SIZE: Cargo vessels 600 ft. or more in length call at the port. Safe draft for operations at the wharf is 27 ft.

RADIO: Communication to all points, including ships at sea, is available through commercial systems. Cables-Telex via RCA Communications, Inc., a global service of Radio Corporation of America. ITT World Communications, Inc., tel. 830-3316. Puerto Rico Telephone Company, local and overseas communications services, 129 and 128.

TUGS: Not used at Mayaguez Port.

BERTHING: Berthing permit required from the Ports Authority. The Puerto Rico Ports Authority operates the terminal facilities which consist of a bulkhead wharf approximately 1,200 ft. long, apron width 30 ft., and transit sheds and open storage. There are other berthing facilities in the port which are owned by the tuna packing plants.

STEVEDORES: Arrangements are made by the ship's Agents or representatives.

MEDICAL: The Agent should know in advance of any medical needs so that he can make the necessary arrangements with the U.S. Public Health Service. Good medical and hospital services available.

TANKERS: See "Guayanilla".

Regular calls from Esso and Texaco to unload fuel by means of barges in order to supply tanks on land by means of pipes located at berthing facilities.

FRESH WATER: Available alongside the berth at 4 outlets to supply any amount required at any time. Hose connections of 2.5 in. or less, maximum pressure.

FUEL: All grades available.

FIRE PRECAUTIONS: Standard fire and safety precautions throughout. U.S. Coast Guard regulations.

CONSULS: Dominican Republic, France, Tel: 832-4322. Others at San Juan and Ponce.

REPAIRS: Call San Juan facilities where complete salvage equipment is available. Service to other ports of the island.

GANGWAY/DECK WATCHMEN: Ship provides gangway watchmen.

OPENING/CLOSING HATCHES: By stevedores.

REPATRIATION: Arranged by ship's Agents.

AIRPORT: Mani Airport, 15 minutes from pier, served by regular airlines daily from Mayaguez to San Juan.

TIME: GMT minus 4 hours all year round.

HOLIDAYS: Refer to "San Juan".

POLICE/AMBULANCE/FIRE: Telephone numbers: Police, 343-2020, 832-2300; Ambulance, 832-0496, 832-3212; Fire, 343-2330, 832-2330.

TELEPHONES: Can be arranged by Puerto Rico Telephone Company.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required to go ashore.

AUTHORITY: Puerto Rico Ports Authority. See "San Juan".

Captain of the Port, Mayaguez. Tel: 832-3590.

PONCE: 17.58 N. 66.37 W. (See Plan)

DOCUMENTS:

Crew Landing Permit (Form 1-95).
Crew List (Form 1-418).
Ship's Stores Declaration (Form USCF 1303).
Crew Effects Declaration (Form USCF 1304).
Cargo Manifest (Form USCF 1302).

PILOTAGE: Pilotage is compulsory for all foreign and U.S.A. vessels.

The pilot service is under the supervision and direction of the Puerto Rico Ports Authority and their Captain of the Port Office.

ANCHORAGES: Harbour is protected from the prevailing Easterly trade winds by enclosing reefs.

RESTRICTIONS: Depths: Entrance channel 50-150 ft.; turning basin, 34 ft..

MAX. SIZE: Max. draft 39 ft.

BERTHING: 9 berths available. Vessels of 1,000 ft. LOA can be berthed. 1×40 ton Paceco Portainer at Berth No. 8. Ro/Ro ramp available. Three container yards; 12 acres, 9 acres and 6.7 acres.

MEDICAL: Nurse available at dock area. Other medical services available upon request to the Agent.

FRESH WATER: Water is available whenever ordered in advance, 24 hours a day.

FUEL: Available either by barge or truck.

CONSULS:

Colombia
Denmark
Dominican Republic
Honduras
Netherlands
Panama
Spain
Sweden
Switzerland

REPATRIATION: Arranged by ship's Agents.

TIME: GMT minus 4 hours.

HOLIDAYS: 19 holidays in the year. Work performed 24 hours a day, 7 days a week.

DEVELOPMENTS: See "Plan".

AUTHORITY: Port of Ponce, Board of Management, P.O.Box 125, Playa Station, Ponce, P.R. 00734-4125. *Tel:* (809) 848-4992, (809) 844-1335. *FAX:* (809) 840–4681. *Contact:* Jose A. Buitrago, Port Director. Wilfredo Mattei, Port Captain.

PORT ARECIBO: 18.29 N. 66.42 W.

Port Arecibo is located on the North coast of the island, 32 nautical miles Westward of San Juan. There is a breakwater to afford some protection from heavy seas, but even so the port is not considered safe for vessel's operations, which are practically non-existent, except for a tug-barge operation (liquid chemicals are pumped out from a tank-barge alongside the pier through a pipeline to P.R. Chemical storage tanks ashore).

A sizeable fleet of pleasure craft use a section of the berthing facilities. There has been a significant growth in tug-barge traffic calling at the port.

There is a pier 600 ft. long. Depth alongside is close to 20 ft., but there is a shallow spot towards the inshore end of the pier. There is also a 30,000 sq. ft. cargo shed and open storage area.

The port is mainly used as an industrial port.

Port installations are under the control of the Puerto Rico Ports Authority.

Port Arecibo is not a Customs Port of entry.

AUTHORITY: Puerto Rico Ports Authority. See "San Juan".

Captain of the Port, Port Arecibo. Tel: 878-6460.

PORT FAJARDO: 18.20 N. 65.38 W.

The Port of Fajardo lies on the East coast of Puerto Rico. There is a 250 ft. long concrete pier owned by the Puerto Rico Ports Authority for the passenger and cargo ferryboats and other craft which engage in inter island traffic to the islands of Vieques and Culebra.

Port operations are under the control of the Captain of the Port.

For Customs service, the Port of Fajardo is under the jurisdiction of the Fajardo Custom House.

AUTHORITY: Puerto Rico Ports Authority. See "San Juan".

Captain of the Port, Port Fajardo. Tel: 863-0805.

SAN JUAN: 18.28 N. 66.07 W. (See Plan)

DOCUMENTS: Customs:

1. American flag vessels engaged exclusively in the coastwise trade (to or from American ports only, U.S. Virgin Islands ports excepted) are not required to make entry or to obtain clearance. A Permit to Depart is required, however, if loading coastwise cargo.

2. No formal entry or clearance is required for American yachts arriving or departing regardless of destination, but a report of arrival must be made within 24 hours after arrival from foreign ports or from the Virgin Islands.

3. All vessels arriving from foreign ports for discharging and/or loading cargo must report arrival within 24 hours and make entry within 48 hours. Vessels arriving in distress or for the purpose of taking on bunkers, water and/or stores and departing within 24 hours need not make entry or clearance, but must report arrival and comply with certain Customs formalities, such as reporting bunkers and stores taken, before departing.

(a) The following valid documents shall be available for examination and return to Master regardless of length of stay in port:

1. Register or Nationality Certificate.
2. Load Line Certificate (if over 150 tons).
3. Water Pollution Certificate (if over 300 tons).

(b) Additional documents, to be filed in duplicate for Customs purposes, are as follows:

1. Master's Oath of Vessel in Foreign Trade (C.F. 1300).
2. General Declaration (C.F. 1301).
3. Cargo Declaration (C.F. 1302) in the English language.*
4. Ship's Stores Declaration (C.F. 1303).
5. Crew Effects Declaration (C.F. 1304).
6. Crew List/Passenger List (Immigration Form I-418).
7. Clearance from Last Port (original only – if available).

(*) Only one copy of the Cargo Declaration is required for in-transit cargo for foreign ports.

4. NOTE: Specific procedures for the entry and clearance of vessels are extensively described under Part 4 of the Customs Regulations (19 Code of Federal Regulations, Part 4) and Title 46, United States Code. Questions on such procedures may be directed to:

District Director of Customs,
P.O.Box 2112,
Old San Juan, Puerto Rico 00902.
Attention: Carrier Control Branch.
Tel: (809) 725-3310
(809) 721-7777

Or to the Port Director of Customs at the following sub-ports: Fajardo (809) 863-0950, Mayaguez (809) 832-0308, Ponce (809) 842-3195 or 842-1030.

Immigration: From 0800 – 1700 hrs., Monday through Saturday, no charges. Exceptions are Federal holidays, Sundays and periods from 1700 hrs. – 0800 hrs. daily, when overtime charges paid by the Federal Government will be charged to the steamship company according to specified tariff.

Documents required:

1. U.S. Crew List, Form I-418 (only one is necessary) duly visaed by the American Consul at port of departure: if there is no Consul available, list must be signed by the Master and sworn before an Immigration Officer on arrival.

2. If crew is to be given shore leave, Form I-95 is to be prepared for each member of the crew. If this form fully filled out for each member of the crew is not presented to the Immigration Inspectors, crew will be detained on board.

3. Both copies of Form I-95 must be printed (or typed) legibly, not written in script.

4. Whenever passengers are carried, a separate Form I-418 listing each passenger, must be presented in accordance with instructions thereon, together with a Form I-94 if required.

For additional information on Consular Clearances for the Dominican Republic and Venezuela, and Immigration Documentary requirements, said offices should be contacted directly.

Agent:

3 sets of Bills of Lading.
2 copies of Manifest (for San Juan only).
1 copy of Crew List.
1 copy of Stores List.
1 copy of Crew Purchase List.
1 copy of Narcotics List.
1 copy of Passengers List.

MAX. SIZE: Cargo vessels 750 ft. in length call regularly at the Port of San Juan. Channel to tanker berth, 36 ft.

PILOTAGE: Pilot services are available day and night. Pilotage is compulsory for: all vessels of foreign registry; American flag vessels bound to or arriving from foreign ports and American flag vessels not having on board a deck officer duly licensed as harbour pilot for Puerto Rico waters.

Ships' Agents must make arrangements with pilot station well in advance (not less than 24 hours) of arrival of vessel at harbour entrance. Pilot boats are painted black (hull) and white (topside) with the letter "P" on each bow. Pilots board 3 miles offshore of Sea Buoy. Call Pilot station on Channel 16 VHF. There is no inner anchorage for incoming vessels to wait for the Pilot.

Port Administration: Most of the port terminal installations are under the control of the Puerto Rico Ports Authority. Utilisation of all port terminal facilities is subject to prior application to the Puerto Rico Ports Authority and the issuance of a written berthing permit by the Operations Division of the Maritime Department of the Ports Authority, tel: 729-8725 and 729-8705.

Vessels approaching to enter San Juan Harbour shall remain outside, not less than 3 miles to the North of the harbour entrance, to pick up the Pilot; and vessels ready to depart shall inform the Maritime Traffic Control or look-out station via radio-telephone of their intention.

ANCHORAGES: Deep draft anchorage "E", on the S.W. shore of Isla Grande, is for vessels awaiting Customs or Quarantine, and no vessel shall remain more than 24 hours without a permit from the Puerto Rico Ports Authority and U.S. Coast Guard Captain of the Port.

The effective size of this anchorage area has been reduced on its S.E. sector on account of the construction of barge mooring facilities that encroach on the area.

Restricted Anchorage "F" (Fox), shoreward of the West margin of Anegado Channel, is for vessels discharging explosives. Anchorage permit required from U.S. Coast Guard Captain of the Port and the Puerto Rico Ports Authority.

Anchorage "D", East end of San Antonio Channel, is for yachts, schooners and small craft.

RESTRICTIONS: Besides the harbour entrance channel (Bar Channel) and the main ship channel (Anegado Channel) with depths of 48 ft. and 36 ft. 6 in., respectively, there are 4 other navigable channels in the inner harbour:

The Army Terminal Channel, which runs in a straight North to South direction is approximately 1 mile long and 300 ft. wide with a depth of 37 ft. The channel leads into the turning basin off the Army Terminal on the South shore of the bay. On the Westerly margin of the channel there are located the pile clusters berthing facilities, silos and other shoreside installations for the receipt of bulk grain shipments and petroleum products.

The Puerto Nuevo Channel, approximately 1 mile long and 300 ft. wide, with an average depth of 30 ft. 6 in., runs East-Northeasterly from the Army Terminal Turning Basin to the Graving Dock Turning Basin. This provides access to modern marine terminal facilities in the Puerto Nuevo port zone.

The Graving Dock Channel, approximately 1 mile long and 300 ft. wide, with average mid-channel depth of 29 ft., runs in a general Southeasterly direction from Anegado Channel to the Graving Dock turning basin.

San Antonio Channel, approximately 1.5 miles long and 300 yards wide, with average mid-channel depth of 32 ft. 6 in. – 36 ft. branches out from Anegado Channel for about 0.25 miles up to Isla Grande Light Beacon, thence along the North shore of Isla Grande in a straight West-East direction for about 1 mile to the small craft anchorage "D" and the Yacht Club. This channel is bounded on the North margin by commercial piers and the Frontier Base berthing facilities and in the South by Isla Grande marginal wharf and the container terminal facilities.

HEALTH: Foodstuffs and plants not to be taken ashore.

RADIO: Radio communication to all points, including ships at sea, is available through commercial systems. Cables, telex via RCA Communications, Inc., a global service of Radio Corporation of America, tel. 723-6170, San Juan, Puerto Rico. Also, Western Union International, tel: 725-2121, ITT All American Cables & Radio, tel: 723-3732, and ITT World Communications, Inc., tel: 725-1515.

The Maritime Traffic Control Station "KRS – 893" at Fort San Cristobal in San Juan Harbour is manned around the clock for radio-telephone communication with incoming and outgoing ships' traffic. Transmitting vessels can communicate with the station through 156.8 MHz (Channel 16) for call and reply and working Channel 14, 156.7 MHz.

TUGS: Crowley Towing & Transportation, tel: (809) 722-1111, Telex: ITT 3450056, RCA 3252660, and McAllister Brothers, Inc., Puerto Rico Branch, tel: (809) 721-8888, telex: Towco 3450469, operate a fleet of tugs. Service is available day and night, subject to previous arrangements.

Use of tugs compulsory for docking and undocking vessels 8,000 tons displacement and over unless equipped with bow or side thrusters.

BERTHING: Finger Piers No. 1 – 7 and the open bulkheads between them are located in the Old San Juan waterfront and Piers No. 8 to 14 are situated in the section known as Puerto de Tierra on the outskirts of downtown San Juan at the North margin of San Antonio Channel.

With the exception of Pier 15 and Frontier Base which are Navy property, all the piers including those in the Old San Juan waterfront and the new facilities (Terminals A, B, C, D, E, F, G, H, J, K, L, M and 1/2 N) located in the port zone known as Puerto Nuevo, on the South shore of San Juan, are Ports Authority owned installations. The utilisation of the berthing and other facilities by maritime operators is subject to prior approval by the Ports Authority.

The Port installations in San Juan Harbour aggregate in the neighbourhood of 22,700 lineal ft. of berthing space; 1,100,000 sq.ft. transit shed area: 1,500,000 sq.ft. open storage area and 105 acres of marshalling yards. The latter facilities are located mostly at the Puerto Nuevo port zone and Isla Grande.

All vessels must request and obtain well in advance before arrival a Berthing Permit from the Ports Authority.

Pier 1: North shore of the harbour, in the Old San Juan waterfront, East of Customs Building and next Westerly to the ferryboat landing. Modern twin berth, 770 ft. long, double deck, cruise and passenger vessels' terminal, pierside passenger and baggage gangways, elevators, parking and shopping. Water and light facilities available.

Ferry Terminal: Next Easterly to Pier 1. Ferry terminal for the San Juan-Catano ferry fleet.

Pier 3: North shore of the harbour, Old San Juan waterfront next Easterly to the ferry terminal. Tourist ships' terminal similar to Pier 1. Depths in the approaches and alongside tourist piers 35 ft.

Wharf No. 6: Marginal wharf, 1,300 ft. long, accommodates cruise and passenger vessels. Water and light facilities available.

Pier 7: Northerly continuation of Pier No. 6; 472 ft. long, 1 berth.

Pier 8: East of Pier 7, finger pier, 3 berths, general cargo pier. Transit shed area and other covered storage 171,000 sq.ft., open area 40,000 sq.ft. Water and light facilities available.

Pier 9: East of Pier 8. Finger pier, 3 berths, general cargo pier. Net storage space pier shed 133,738 sq.ft. open area 40,000 sq.ft. Water and light facilities available. South berth is a tug–barge terminal.

Pier 10: North shore of San Antonio Channel. East of Pier 9. Open Finger pier, 1 ship berth, tug and barge terminal. No transit shed space. Water, fuelling facilities and light available.

Wharf No. 11: East of Pier 10, marginal wharf, 1 berth, 580 ft. of bulkhead, general cargo pier. Transit shed area 100,000 sq.ft. ample back area. Water and light facilities available.

Wharf No. 12: An extension of Wharf No. 11 Bulkhead 550 ft. long, wide apron, 15,000 sq.ft. transit shed area, 37,000 sq.ft. open storage. General cargo wharves. Water and light facilities available.

Wharf No. 13: Prolongation of Wharf No. 12: 28,000 sq.ft. transit shed area, 55,000 ft. open storage area, general cargo wharf. Water and light facilities.

Pier 14: Extension of Piers 12–13 bulkhead; marginal wharf, general cargo pier, wide apron. 446 ft. long, 40,000 sq.ft. transit shed area, ample marshalling area. Water and light facilities available.

Frontier Base Pier: Navy facility operated by the Puerto Rico Ports Authority under contract. 2 berths for sea-going vessels. Depth alongside 30 ft. Principally used for berthing of cruise vessels and conventional ocean carriers handling open storage cargo.

Isla Grande Terminal: South shore of San Antonio Channel. General cargo wharf. 1,500 ft. long bulkhead. Wide aprons. Transit shed 32,000 sq.ft. with 240,000 sq.ft. of paved open area. Easterly section of bulkhead for shallow draft vessels.

Container Terminals:

(a) In Westerly section, Bulkhead wharf 1,320 ft. long. Wide apron, ample marshalling yards for trailers. 2×45 tons capacity container handling cranes. Paved marshalling area approximately 1,800,000 sq.ft.

(b) On the South shore, berthing facilities, 300 ft. bulkhead wharf with adjacent areas for TMT's Roll-on/Roll-off operations. Shoreside concrete ramp extending out to seaward. Tug-barge operation, loading and unloading through bow and side ramps, about 30 acres for trailers on exclusive lease basis. Max. draft approximately 18 ft.

(c) Trailer Marine Transport Roll-on/Roll-off three level ramp, barge-tug operation; loading and unloading at bow. Max. draft 18 ft.

The lands in Isla Grande and the conventional cargo handling terminal facilities are U.S. Navy property under lease and operated by the Puerto Rico Ports Authority. These facilities are in the process of being transferred to the ownership of the Puerto Rico Ports Authority.

Pier 15: Bulkhead Wharf and Finger Pier used by commercial vessels. Containerised and general cargo facilities. U.S. Navy installation under lease to Perez & Cia. from Puerto Rico.

Pier 16: Navy installation under lease. Graving and floating docks. See "Repairs".

Puerto Nuevo Docks: Terminals "A" and "B" marginal wharves. 2×500 ft. berths. 102,000 sq.ft. transit shed area. 2 cargo sheds. 30 ft. depth alongside. General cargo piers. Limited open storage area.

Trailership Terminals: 3 at Isla Grande port zone, above, 10 at Puerto Nuevo port zone. Berths C, E, F, G, H, J, K, L and M and West Side Army Terminal.

Berths "J" and "K": P.R. Maritime Shipping Authority Roll-on/Roll-off terminal. Shoreside movable ramps for side loading and unloading. Extra wide pier platform, ample trailer marshalling yards. 600 ft. long marginal wharf.

Berth "D": 100,000 sq. ft. of transit shed space for break-bulk operations and cargo stripping and distribution. Marginal wharf 40 ft. wide, 600 ft. long. Ample trailer marshalling yard. 30 ft. depth alongside, approximately.

Berths "E", "F", "G", "H", "J", "K", "L" (900 ft.), and "M": 600 ft. each, continuous bulkhead wharves, Lift-on/Lift-off operation. Max. draft alongside 30 ft. Extra wide pier platforms. Ample trailer marshalling yards. Five 25 ton capacity cranes are installed at Berth "E" to "H".

Army Terminal Pier: Finger pier; 3 berths. Approximately 50,000 sq. ft. transit shed area. East and West berths 600 ft. each. North berth 200 ft. Under the control of the Ports Authority. West side, ramp for Roll-on/Roll-off operation.

Isla de Cabras Pier: Explosives handling pier at Isla de Cabras. Ports Authority property.

BULK HANDLING FACILITIES:

Bulk Grain Handling Facilities: Berthing clusters, silos and other shoreside installations for the receipt of shipments of bulk grains (Nebraska Mills, California Rice Mills, Red Seal, etc.).

STEVEDORES: Arranged by the ship's Agents.

MEDICAL: Medical attendance and services are available for seamen at the United States Public Health Service in San Juan (out-patients). The Ashford Memorial Community Hospital handles internal cases.

TANKERS: *Caribbean Oil Refinery:* Pile clusters berth for handling gasoline and fuel oils, max. permitted draft 33 ft.

Navy Oil Pier: South shore of the bay, next Westerly to Terminal "A", Puerto Nuevo. G.S.A. property leased to Texaco, Esso, Shell. Berthing facilities 350 ft. long and 24 ft. MLW. Bunkers available.

FRESH WATER: Most of the piers have adequate installations to supply water.

FUEL: Served in barges either alongside the vessel at the pier or at anchor. Other combustible liquids are delivered in tank trucks by Shell, Esso and Texaco.

SEAMAN'S CLUBS: None.

CURRENCY: U.S.Dollar (U.S.$).

DEVELOPMENTS: The new port sector, under development at Puerto Nuevo, now at an advanced stage, will ultimately comprise 15 berths, of which 12 are already in operation.

Port facilities used predominantly by trailerships are located towards the Southern sector of the bay. These are marginal wharf type facilities immediately adjacent to the Puerto Nuevo Channel.

Presently, the Ports Authority has initiated the final stage for the development of some 108 acres of land that will be used as back-up lands in connection with the ocean-front operations of Wharves "J" to "N".

This land has been in a process of stabilisation over the last years and presently a project is already under way to remove the sand surcharge deposited on it. The material being removed is being used as surcharge material for the stabilisation of other areas.

The degree to which this stabilised terrain will be further developed will depend on their demand for use by maritime interests.

Culpeper, Chief Maritime Bureau, Tel: (809) 729-8704, 729-8744. Jose Quintero, Chief Operations Division.

YABUCOA: 18.02 N. 65.48 W. (See Plan)

DOCUMENTS: The following documents for vessels in foreign trade are required by the U.S. Customs and Immigration Authorities for entry and clearance:

Master's Oath (original and one copy) entry and clearance.
General Declaration (original and one copy) entry and clearance.
Stores List (original and two copies) entry.
Crew Purchases List (Curio List) (original and two copies).
Cargo Declaration (original and one copy).
Crew List (one copy certified and two copies not certified).
Clearance from Last Port (if arriving on an international voyage).
Crewmen Landing Permits (for each crew member without the Plastic Form 1-14).
Passenger List (if any passengers).
All permanent documents of the vessel.

Passenger List: The Passenger List must show full names, sex, age, nationality and occupation of passengers landing at Puerto Yabucoa. The ultimate destination of in-transit passengers must also be shown on the Passenger List.

Deratisation Certificates: Deratisation Certificates cannot be renewed at Puerto Yabucoa.

Outward Clearance: In most cases, the outward clearance and cargo documents will be delivered onboard the vessel, during her free time period or ballast period, prior to leaving the Dock.

Customs and Immigration: U.S. Customs and Immigration authorities will board vessels at the dock, except for unusual circumstances, in which cases they will board the vessel at anchor outside the harbour. The vessels will be required to furnish an accommodation ladder.

American Flag vessels will not require Customs entry or clearance unless arriving from or departing to a foreign port.

APPROACHES: Vessels arriving at Puerto Yabucoa should proceed to approximately 2 miles S.E. of the seaward end of the channel and stand-by on VHF Channel 19A for berthing instructions from Puerto Rico Sun Oil Company, Marine Department and/or the Pilot.

Approach to Harbour: The harbour is entered through a channel 500 ft. wide at its narrowest portion, on a course of 297° True. A rubble mound jetty is located at the N.E. side extending 500 ft. seaward. The channel is dredged to the 48 ft. contour which is approximately 5,765 ft. from shore. Seaward of the 48 ft. contour, a depth of 55 ft. is provided along with a 500 ft. channel width for a total distance of approximately 9,000 ft. from shore. Vessels approaching the channel from the E.S.E. will have a clear approach.

Navigational Dangers: The area seaward of the dredged channel is relatively open and free from danger, but care should be exercised in approaching the channel as soundings decrease extremely rapidly at the channel entrance. Outcrops of hard seafloor material exist in the regions adjacent to the channel.

PILOTAGE: Harbour pilots must be used by all vessels except for American flag vessels in domestic trade bound to or arriving from a U.S. Port with a deck officer onboard who is qualified and licensed as a Pilot for Puerto Yabucoa.

Pilot services are available at any hour of the day or night. The Ship's Agency will arrange for the Pilot upon notification of arrival. The Pilot will board in-bound vessels approximately 1.5 miles seaward of the channel entrance. The vessel should not approach any closer than this distance until the Pilot is on board.

Every vessel requiring a Pilot must provide, properly rigged and secured, a pilot ladder which conforms to international safety standards. When picking up or disembarking the Pilot, the vessel must heave to and provide a lee with the pilot ladder rigged on the lee side 6 ft. (2 m.) above the water.

ANCHORAGE: If a significant delay in berthing is anticipated the ship may anchor and await berthing instructions. A suitable anchorage is located 1.25 miles South of Punta Negra, Vieques Island approximately 18° 04′ N., 65° 27′ W. (Nautical Chart No. 25650).

This anchorage is to be used only at the discretion of the Master.

MAX. SIZE: The maximum draft that can be handled in Puerto Yabucoa is 43 ft.

RADIO:

Notice of Arrival: Vessels calling at Puerto Yabucoa must notify Puerto Rico Sun Oil Company through the ship's Agent 48 hours prior to arrival at Yabucoa Sea Buoy. If ETA is expected to change more than one hour it must be corrected at least 24 hours prior to arrival.

ETA times may be transmitted through commercial stations with a request to transmit the message by way of Telex No. 345-3014 PRSNOIL or Telex No. 345-0789.

Radio Communications: The following radio stations are available for communicating with Puerto Rico Sun Oil Company or the ship's Agency in Yabucoa.

a. Commercial Coast Stations:
   (1) Lantana Radio (WOE) – Lake Worth, Florida.
   Equipped with RCA automatic land line circuit direct to New York City, San Francisco and Washington, D.C.
   (2) New York Radio (WNY) – New York City.
   Equipped with RCA automatic land line circuit direct to New York City, San Francisco and Washington, D.C. Also equipped with teletypewriter (TWX) for direct communication with steamship companies in the United States having this equipment.
   (3) Chatham Radio (WCC) – Chatham, Massachusetts.
   Equipped with RCA automatic land line circuit direct to New York City, San Francisco and Washington, D.C.
   (4) Virgin Islands Radio (WAH) – St. Thomas, Virgin Islands.
   Very High Frequency (VHF)
   (a) Channel 16 – calling channel
   (b) Channel 28 – working channel
b. Puerto Rico Sun Oil Company Stations:
   The following stations are authorised to handle Puerto Rico Sun Oil Company business traffic only and cannot accept public correspondence calls.
   (1) Puerto Rico Sun Oil Marine Department and Ship Agency (WLZ) Yabucoa, Puerto Rico. On the air from 0800 hrs. to 1700 hrs. (1200 hrs. to 2100 hrs. GMT) Monday through Friday, except holidays.
   (a) Very High Frequency (VHF) Channels
   Channel 19A – standby and working channel.
   Channel 16 – standby channel (monitored during office hours).
   (b) Single Side Band (SSB) Frequencies
   4143.6 kHz – working frequency.
   8291.1 kHz – working frequency.
   12429.2 kHz – working frequency.
   16587.1 kHz – working frequency.
   2182 kHz – distress frequency.
   (2) Normally on the air and monitoring VHF Channel 19A during the period when Station WLZ is off the air.
   (a) Marine representative on call (WLZ).
   (b) Marine Portable No. 8 (KO 3274).
   Main Gate at Yabucoa Sun Oil Refinery (guarded 24 hours).
   (c) Tug "Marcus Hook Sun" (WX 7830).
   (d) Tug "Puerto Rico Sun" (WYZ 2756).
   (e) Tug "Seminole Sun" (WYZ 3110).
   The tugs are on the air 24 hours a day, although they are not always in Yabucoa Harbour.

BERTHING:

Docking Procedures: Upon arrival at the Sea Buoy the vessel must have:

(a) The engine on manoeuvring speed for picking up the Pilot and for entering the channel.
(b) Deck machinery and lines ready for docking and tying up port side to the Dock.
(c) Port anchor backed out of the hawse pipe and free to run.
(d) Vessels arriving in ballast must have the propeller submerged and have a trim of not more than 10 ft. by the stern.

Notice of Readiness: Notice of Readiness to load or discharge is warranty that the vessel is in all respects ready to receive or discharge cargo and that the vessel's equipment is ready and capable of loading or discharging petroleum products. Puerto Rico Sun Oil Company reserves the right to refuse to accept such Notice of Readiness if, upon inspection, the vessel is found not to be ready to receive or discharge the cargo. Vessels may tender Notice of Readiness upon arrival, berth or no berth, according to the terms of the Charter Party or Contract of Affreightment under which they have been engaged.

CARGO FACILITIES:

Connecting and Disconnecting Hoses: A crew will be provided by Puerto Rico Sun Oil Company to handle mooring lines and to connect and disconnect hoses and loading arms on the ship. Vessels are required to have blanks removed from cargo and ballast lines which will be used during cargo or ballast transfer when the vessel docks. In order to properly connect 2 loading arms to the vessel, the risers onboard should be at least 6 ft. between centres.

Communications for Cargo Transfer: Portable radios are provided by the shore crew for communications during loading and unloading operations. The Mate must sign a receipt upon receiving said radios and is responsible for returning them prior to sailing. Failure to return the radios shall result in billing for the cost of same. The original signed receipt shall constitute proof of liability. The ship must obtain this original when radios are returned.

Ballast: All dirty ballast must be pumped ashore to the ballast facilities. The ballast facilities can receive 70,000 barrels of ballast through a 24 in. line capable of receiving a pressure at the ship's rail of 125 p.s.i. Vessels are requested to arrive with a minimum of dirty ballast.

All clean and segregated ballast may be discharged overboard, provided the vessel is in compliance with all regulations as stated in 33 CFR 157.43.

Crude Oil Washing: Crude Oil Washing is permitted in Puerto Yabucoa provided the vessel complies with all safety and regulatory procedures as stated in 33 CFR 157, Sub-chapter D.

Vessels may Crude Oil Wash more than one third of their tanks provided it has been so stated in the terms of the charter agreement.

Butterworth Facilities: Puerto Rico Sun Oil Company has Butterworth facilities at the Main Dock, however, these facilities may not be used without prior approval and agreement from PRSOC.

The use of these facilities is normally restricted to cleaning Sun Company equipment due to the high utilisation of the Main Dock by vessels transferring cargo.

Pumping Data: The crude oil, products and ballast water are pumped through loading arms on the dock.

The sizes and approximate pumping rates are as follows:

Arm No.	*Product*	*Flange Size* (in.)	*Line Size* (in.)	*Max. Pumping Rate* Bbls.Hr.
1	Bunker C	10	14	6,000
	Ballast	10	24	10,000
2	Gas Oil	10	14	10,000
	Ballast	10	24	10,000
3	Jet Fuel	16	14	12,000
	Naphtha	16	12	7,500
	Kerosene	16	20	12,000
	No. 2 Fuel Oil	16	20	18,000
	Lt. Distillate	16	20	18,000
4	Lube Oils	10	14	5,000
5	Slack Wax	10	10	2,500
6	Aromatic Extract	10	8	1,500
7	Crude Oil	16	24	20,000
	Ballast	16	24	10,000
8	Crude Oil	16	24	20,000
	Ballast	16	24	10,000
Hose	Marine Diesel Fuel	4	4	150

TUGS: The use of tugs is compulsory for arriving and departing vessels. Sun Transport, Inc. has 3 tugs available to assist in docking and undocking. Arrangement for the use of tugs should be made through the Agent well in advance of the vessel's arrival.

MEDICAL: Medical and dental services are available in Yabucoa. Requests for ambulance service or hospitalisation for crew members can be made through the ship's Agent.

FRESH WATER: Fresh water facilities at this port are limited to approximately 100 tons while vessel is discharging or loading.

FUEL: Bunker C and Marine Diesel fuel oils are available at Puerto Yabucoa. Arrangements for bunkering should be made with a Puerto Rico Sun Oil Company Marketing Representative prior to the vessel's arrival in Yabucoa.

CONSULS: No consular representatives are located in Yabucoa. Many nations maintain consular representatives in San Juan. Specific information can be obtained from the ship's Agent.

REPAIRS: Limited repair facilities are available in San Juan. Requests for such services should be made through the Agent at least 48 hours before the vessel's arrival.

SURVEYORS: Classification Society Surveyors are available from Ponce or San Juan. Requests for these services should be made through the vessel's Agent at least 48 hours prior to arrival.

Cargo Inspection Services are available for quantity and for quality inspections of incoming and outgoing cargoes. The ship's Agent can arrange for such services, if requested. This service must be requested at least 48 hours prior to the vessel's arrival.

SHORE LEAVE: When the vessel is berthed at Puerto Yabucoa there normally are no restrictions on shore liberty. In order to avoid delays in sailing, Masters are requested to ensure that all crew members are onboard their vessel at sailing time. There are no facilities to provide shore liberty from vessels at anchorage awaiting berth.

Crew members from foreign vessels must carry their crewman's landing permit, Form I-95A, when on shore liberty.

GENERAL:

Consignment: All vessels calling at Puerto Yabucoa Harbour Tanker Terminal should be consigned to Puerto Rico Sun Oil Company, or to Hemisphere Oil Company, and all official documents for such vessels should show them so consigned. In conformance with Port Regulations no vessel will be allowed to tie up alongside a pier without having first obtained a berthing permit from the Ports Authority Captain of the Port.

Charts: The general Puerto Yabucoa Bay area is shown on USC & GS Chart No. 25661.

Ensigns: By international customs and usage, the American Flag is required to be flown at the masthead of all vessels from the time of entering the channel in-bound until clearing of the channel out-bound.

Sea Conditions: The wave action in the vicinity of the channel entrance is generally from the East or Southeast. Wave heights are less than 6 ft. 90% of the time, however, during tropical storms or hurricanes, wave heights can get substantially higher.

Weather: Easterly and Northeasterly winds are predominant over this region of Puerto Rico. January through March is the windiest season. September through November is the calmest season. The principal season for hurricane activity is during late Summer and early Fall.

Sanitary Facilities: Pollution laws and regulations prohibit vessels from discharging overboard sanitary and galley wastes into the harbour. Pollution laws and regulations also prohibit vessels from discharging galley wastes and garbage ashore.

Puerto Rican Laws: All vessels calling at Puerto Yabucoa shall comply with all applicable Laws and Regulations of the United States and of the Commonwealth of Puerto Rico.

Firearms and Ammunition: All firearms and ammunition must be shown on the Stores List and may not be removed from the vessel during its stay in Puerto Rico waters. Any violations of this regulation will result in fines and confiscation of firearms and ammunition.

Store and Supplies: Limited ship chandler service is available in Puerto Yabucoa. Stores and supplies can be ordered through the ship's Agent for delivery to the vessel, but such orders must be made at least 48 hours prior to the vessel's arrival.

Crew Transportation: Public transportation (Publico) for crew members from the Dock into town is available. The "publico" fare is to be paid by the crew member. Transportation to and from the airport can be arranged through the ship's Agent.

There are no water transportation facilities available at Puerto Yabucoa for vessels at anchor.

Mail: Official and personal mail may be addressed to the vessel in care of the Agent, and will be delivered to the vessel by the Agent on arrival. The Agent will accept official and personal mail from the vessel and will ensure its delivery to the local U.S. Post Office. Express mail and air freight services are also available.

Vacating of Berth: Vessels will be required to vacate berths promptly upon completion of loading or discharging cargo. Permission to use a berth when not loading or discharging cargo may be granted under special circumstances, and must be requested through the Agent.

Vessels discharging cargo will be allowed time for ballasting if required.

If a vessel fails to vacate the berth on the expiration of allowed time, it will be held liable for payment of any demurrage and/or damages incurred by Puerto Rico Sun Oil Company as a result of delays to other vessels awaiting berths, or for any other consequence of its failure to promptly vacate the berth.

AGENCY: *Selection of Agent:* Agency services are provided at Puerto Yabucoa by Puerto Rico Sun Oil Company. No other agencies are located at the port. Agencies from other ports may handle vessels calling at Yabucoa but, because of extremely poor communications in Puerto Rico, this can cause problems in possible ship delays.

Vessels may contact the Puerto Rico Sun Oil Company Ships Agency located within 500 ft. from Dock in Yabucoa, as follows:

Mailing Address: Ships Agency,
Puerto Rico Sun Oil Company,
P.O.Box 476,
Yabucoa, Puerto Rico 00767.
Telex No. Yabucoa: 345-3014 PRSNOIL or
345-0789 YABSOIL.
Panafax No.: (809) 893-0250.
Telephone Numbers
Yabucoa: (809) 893-2554 – Direct Line Marine Department and Ship's Agency.
(809) 893-2424/893-2073 Yabsunoil Switchboard
Extensions: 2276, 2282, 2286.

Deposit: The Agency requires a deposit of $15,000 for port expenses only. Other expenses such as cash to Master, excessive air travel, provisions, etc., to be wired additionally to Bankers Trust New York, Account No. 04-201-336, to be credited to Banco Popular, Hato Rey, Account No. 137-003080 in name of Puerto Rico Sun Oil Ships Agency.

SHIPMASTER'S REPORT: August 1986.

Position: Lat. 18° 03′ 18″ N., Long. 65° 50′ 08″ W.

Pilotage: Compulsory for non Sun Oil vessels. Pilot boards 1.0 to 1.5 miles off the Sea Buoy.

Restrictions: Berthing and unberthing possible day and night.

Anchorage: 2.5 miles East of Sea Buoy in depths of 10-25 fathoms.

Approach to Berth: No difficulties.

Immobilisation of Engines: Allowed with permission of Sun Oil.

Berth: North side of Yabucoa Bay. Wharf well fendered with berthing dolphins. Maximum length of vessel is 870 ft. and the max. draft alongside the berth and in the channel is 44 ft.

Tugs: 2×3,800 h.p.

Density: 1025.

Brief Description of Shore Line System: Position of connections-midships. Maximum loading rate 12,500 bbls.p.h. per pump. 2 pumps available for each line.

There are 8 loading arms, sizes from 10 in. to 16 in.
2 for crude oil.
1 for aromatic.
1 for slack wax.
1 for lube oil.
1 for naphtha.
1 for gas oil and ballast.
1 for bunker and ballast.

Bunkers and Lubricants: Available.

Fresh Water: Available.

Stores and Laundry Facilities: Available. Handled by San Juan companies.

Tank Cleaning and Dirty Ballast Facilities: Possible. Maximum capacity for dirty ballast 100,000 bbls. Sun Oil does not accept any leaded washings or dirty ballast from tanks which previously contained leaded cargo.

Points of Interest: Minimum ballast arrival draft:

Forward	14 ft.
Aft	24 ft..

No gangway from shore available.

SHIPMASTER'S REPORT: January 1988.

Documents: see "San Juan". Requirements similar to U.S. Ports.

Immigration: As for San Juan. Immigration Officer and Agriculture Inspector from Fajardo board on arrival for formalities.

Pilotage: Available on a 24 hour basis when required. Pilot boards from tug about 2 miles E.S.E. of buoyed channel entrance. After initial contact on Channel 16, pilot and tugs use Channel 73 for all berthing operations.

Anchorages: There are no safe anchorages for large vessels in the vicinity of Yabucoa. The designated waiting anchorage is off the island of Vieques, some 20 miles to the East of Yabucoa, where there is safe anchorage on the coastal bank. We anchored 1.5 miles South of Punta de Tierra, in approximate position Lat. 18° 04′ N., Long. 65° 28′ W. in a depth of about 24 fathoms. The vessel remained there in winds of up to Force 7, for 3 days without any problems. Some fishing buoys may be encountered within this area. BA. Charts are of insufficient scale, and it is recommended that Masters obtain the relevant U.S. charts for the area.

Max. Size: Our vessel is 97,000 d.w.t. and 253 m. long, and was berthed without undue difficulty, although space is very tight. The vessel immediately preceding us had been of 117,000 d.w.t., but with a part cargo. Oil Company states up to 45 ft. acceptable, but pilots not prepared to go above 43 ft. Our vessel was 41 ft. draft and had no difficulties, although only a little under-keel clearance.

Communications: Puerto Rico Sun Oil Co. has VHF in office, and usually listens on Channel 16 during office hours (Monday to Friday, 0800-1700). They are not easy to contact at lunchtime, and there is no watch kept during weekends or 'fiestas'. The radio is in the Marine Department Office near the jetty. They also have telex, (206) 345-3014. The Marine Department also provides Agency services if nominated. They were used by us on this occasion. Also see "Pilotage".

Tugs: According to the Pilot, two tugs are usually stationed here, and used for most vessels up to about 100,000 tons displacement. Over that size, at the pilot's discretion, a third tug is brought from a nearby port for berthing (we used 3 tugs). One tug is usually sufficient for sailing.

Berthing: Only one large vessel can berth at a time as there is only one jetty.

Vessels usually berth port side alongside. There are no mooring boats to handle lines, ropes are sent via messenger when vessel very near to the jetty. There is no shore gangway, means of access has to be provided by the vessel.

Medical: Doctors and small hospital available locally for ordinary illnesses. Anything serious is attended to in San Juan (which is 2 hours by road). It was not possible to get Cholera vaccinations updated, although if urgent these could be done in San Juan, but this would be very expensive due to distance.

Repatriation: No difficulties encountered. At time of our visit there was one direct flight weekly to and from U.K., and numerous daily flights from Europe and U.S.A. The airport is 2 hours by road from Yabucoa. Crew members being repatriated leave the vessel 4.5 hours before flight departure time in order to complete outward Immigration formalities before going to airport.

Shore Leave: Allowed – Form I–95 required.

Provisions: Obtainable from various Chandlers in San Juan, a delivery charge is made. As jetty very cluttered, it is necessary to carry all stores by hand up the gangway, therefore berth is not very suitable for major storing of large objects.

General: The port is privately maintained by Puerto Rico Sun Oil Co. Crude oil is the main import and various refined products are exported. There is also a barge jetty, and a facility for barges to load graphite from a Union Carbide plant.

AUTHORITY: Puerto Rico Ports Authority. See "San Juan".
Captain of the Port, Yabucoa. Tel: 893-2408.
Operator: Puerto Rico Sun Oil Co. (See "Agency").

NOTES

Please also advise Shipping Guides Ltd.

Qatar

DOHA: 25.17 N. 51.32 E. (See Plan)

DOCUMENTS:
8 copies of the Unfreighted Manifest.
2 copies of the Freighted Manifest.
2 copies of the Hatch List.
2 copies of the Stowage Plan.
2 copies of the Dangerous/Hazardous Cargo List.
1 set of Bill of Lading.
1 copy of Crew List.
A list of Food Stuff.
A list of Insecticides and any Poisonous Cargo.

Agents:
1 copy of the Arrival Report (Supplied by the Agent on boarding).
1 copy of the Crew List.
1 copy of the International Declaration of Health.
1 copy of the Passenger List (if applicable).

Port Health:
1 copy of Crew List.
1 copy of Dates and Types of Inoculations.
1 copy of the International Declaration of Health.

Immigration:
4 copies of Crew List.
4 copies of Lists of Passengers Landing (if applicable).

Customs:
Bonded Store List (Bond will be sealed but issues are available).
Port Clearance Certificate should be procured before the vessel sails.

PILOTAGE: Compulsory pilotage for all vessels of 14 ft. draft or more. Naval vessels exempted. Application for a Pilot should be made to the "Doha Port Control" through VHF (Channel 16 and 14) or Tel: 434377, 24 hours prior to the arrival of the vessel at the pilot station (via Doha Radio or via Doha Agents).

Pilot station keeps a VHF watch 24 hours a day on Channels 16 and 14. Call sign Doha Port. Similar watch kept on R/T 2182 kHz.

Pilot boat proceeds to the vicinity of the Doha Light Vessel, position Lat. 25° 16′ 08″ N., Long. 51° 41′ 05″ E. when the Pilot is required. Pilot launches are painted white. When the vessel is underway the Pilot requires a pilot ladder complete with manropes as per SOLAS Regulations.

ANCHORAGES: Near the Doha Light Vessel and S.E. from it only. Minimum depth of water 5 fathoms.

RESTRICTIONS: Depth of water in entrance is 8.0 m. plus tide and the minimum depth of water required under the keel for manoeuvring in the channel is 3 ft.

Car carriers and livestock carriers transit from sunrise to sunset only.

MAX. SIZE: Max. length 600 ft., up to 625 ft. by special permission from Harbour Master. Max. breadth 90 ft. Max. draft 8.3 m. on high tide.

HEALTH: The International Flag signals for Pratique must be flown and remain up until the vessel is cleared by the Port Health Authorities. A Port Health Official will board the vessel in the anchorage or at the Deep Water Jetty when the vessel is alongside. There is no Automatic or Radio Pratique available.

RADIO: ETA and Agent's messages should be routed through Doha Radio. Doha Radio A7D, continuous watch on W/T 500 kHz., R/T 2182 and VHF Channel 16. Radio-telephone communications through Doha Port signal station. Calling and listening 2182 kHz. Working frequencies, 2638 kHz, 2738 kHz, 2570 kHz.

TUGS: 5 Government tugs are normally available to assist in berthing operations.

BERTHING:

5 Berths – Total length 956 m. (Deep Water Berths); depth alongside 8.5 m.

4 Berths – Total length 893 m. (Shallow Water Berths); depth alongside 7.5 m.

Outer and inner dredged approach channels, 8.2 m. and 8.8 m. depth (C.D.) Wharves for smaller craft: West Inner Wharf 207 m., Collins Jetty 135 m.; Country Craft Jetty 287 m.; Fish Factory Wharf 60 m. Depths 2.5 m. to 6.0 m. (C.D.)

Equipment: 2×70 ton, 4×40 ton, 3×30 ton, 3×20 ton cranes, 2 straddle carriers, 2 container cranes and 122 trailers.

Transit storage areas at landward end of approach causeway with extensive paved open storage and transit sheds giving 16,722 sq.m. cover.

New transit storage area on extended main quay with extensive paved open storage, 5 transit sheds giving 30,000 sq.m. cover completed. Construction of 500 ton cold storage completed. Control tower for Doha Port is under construction.

Normally berthing and unberthing to and from the deep water jetty is with certain reservations:
(a) Draft and trim of vessel.
(b) Height of tide.
(c) Visibility from Navigation Bridge.
(d) Prevailing weather conditions.

The duty Pilot has the option to berth or unberth a vessel at his discretion after consultation with the Senior Pilot, when the above mentioned conditions are unfavourable.

STEVEDORES: ETA advice is required on the number of gangs workable. Advance notice is required for any heavy lifts (say in excess of 10 tons) and the consignee's name if possible as special arrangements have to be made for handling. Average discharge rate is 75 tons per hook per day.

MEDICAL: Unless an emergency no advance notice is required. Hospital facilities do exist and a doctor will visit on request. Current Vaccination and Cholera Certificates are required.

DENSITY: The density of the water is salt (1025) at all states of the tide.

FRESH WATER: Fresh water is available at the anchorage and when alongside the jetty and is supplied by tankers.

FUEL: Bunkers available from Qatar National Tanker and Bunker, Doha.
Actual Bunkering Locations:
Doha Port Harbour
Pilot Station Doha
Umm Said Harbour
Pilot Station Umm Said
Inner Anchorage
Outer Anchorage
Pilot Station – Halul Island

Grades Available: Gas Oil and Marine Gas Oil with 14 days' pre-notice, upon request.
Supply Method:
By tank trucks at berth and by tugs at anchorage.
Operation: 24 hours per day – 7 days per week.

CONSULS: The following countries maintain embassies in Qatar:
Bangladesh
Egypt
France
Gabon
Germany
Great Britain
India
Iran
Iraq
Japan
Jordan
Korea
Kuwait
Lebanon
Libya
Mauritania
Morocco
Oman
Pakistan
Saudi Arabia
Somalia
Sudan
Syria
Tunisia
U.S.A.
Yemen

REPAIRS/DRY DOCKS: All kinds of repairs can be carried out. Metal-locking, bottom brushing and underwater welding. Floating dock 105 m.×19 m.×6 m. Capacity 10,000 d.w.t.

GANGWAY/DECK WATCHMEN: The Public Security Department (Police) post a guard at each gangway, but it is advisable that the ship also supplies a watchman. Before landing *every* crew member must lodge his Passport or Seamen's Identity Card with the guard when alongside the jetty and at the dock Police Station when at the anchorage.

OPENING/CLOSING HATCHES: This work may be carried out by crew or stevedores, but usually by the latter.

CUSTOMS ALLOWANCES: Qatar is "dry" and no official allowance is made. The bond is sealed on the ship's arrival.

CARGO GEAR: No additional requirements apart from those required by International Law.

REPATRIATION: Crew changes can be carried out. The Agents will need to know the names, Discharge Book or Passport numbers and necessary information of dates, etc. well in advance for the Authorities. Repatriation is normally by air. Crew joining must have Seaman's Book.

AIRPORT: It is about 3 miles from the port to the airport. There are regular flights to Europe, U.K. and India by British Airways, M.E.A., Air India, P.I.A., Gulf Air, etc.

TIME: The standard time in Qatar is GMT plus 3 hours.

HOLIDAYS: The holidays in Qatar are usually religious and therefore fall on movable dates. As far as shipping is concerned there are only 2 days when work is not possible under any circumstances, Idd Al Fitr and Idd Al Adna.

POLICE/AMBULANCE/FIRE: Dial 999 and ask for service required.

TELEPHONES: Telephone available at the new jetty. No.414865.

SHORE LEAVE: Shore leave is permitted after the Immigration Authorities have cleared the ship and given permission, in writing, on the Crew List. Seamens' documents or Passports must be deposited with the police at the gangway and retrieved on returning aboard.

GARBAGE DISPOSAL: Service available through the Agents (QNNTC).

WASTE OIL DISPOSAL: Facilities not available.

SEAMAN'S CLUBS: None.

CURRENCY: Qatar Riyals.

IDENTIFICATION CARDS: Discharge Books or Passports are required to be handed to the Police before any crew member may proceed ashore. See "Shipmaster's Report".

GENERAL: Particular attention must be paid to:
(1)The Qatari flag must be flown at all times at the fore mast.
(2) Liquor is not allowed ashore and it is a serious offence to offer alcohol to a Qatari.
(3) Smoking is not permitted in any of the port areas.

DEVELOPMENTS: Construction of Container Berth and Flour Mill Berth are in progress in the harbour.

Inner and outer channel will be dredged soon after completion of same. All approaching vessels will be warned through their Agents.

SHIPMASTER'S REPORT: November 1984.

The Public Security Department warned me that the crew are not allowed to take a walk around the jetty when it is a holiday or the stevedores are not working.

Therefore, the crew must go directly outside the harbour limits or they stay on board.

The Security Department did not post a guard at the gangway but every crew member before landing must present his Passport or Seamen's Identity Book to the Immigration and they issue a shore permit that will be shown to the guard together with the Seamen's Identity Book.

The guard will keep the Seamen's Identity Book and the crew can cross to the Harbour Gate with the Shore Permit.

When the crew come back to the ship they collect their Seaman's Identity Books at the Gate but can keep the Shore Permit for the next time they go ashore.

Before the ship sails all the issued shore permits must be returned to Immigration.

AUTHORITY: Department of Ports, Ministry of Communications & Transport, P.O.Box 313, Doha, Qatar. *Tel:* PABX 457457. *Telex:* 4372 Mawani DH. *Cables:* "Mawani". *FAX:* 413563. *Contact:* The Harbour Master, Tel: 438586. Fax: 413994. G.A.Genkeer, Director of Ports.

AGENT: Qatar National Navigation & Transport Co. Ltd., P.O.Box – 153, Doha. Telex: 4206 Melaha Dh. Cable: "Navigation" Doha. Telephone: 321175/9, 23684, 21213.

HALUL ISLAND: 25.40 N. 52.25 E.

Halul Terminal S.B.M. **(See Plan)**

LOCATION: Halul Island (Position Lat. 25° 40.3′ N., Long. 52° 24.6′ E.) is part of the State of Qatar. Doha, the capital, is situated on the Eastern side of the country.

Halul Island is 52 miles in a N.E'ly direction from Doha. It serves as the export terminal for Qatar Marine Crude which is produced from the offshore oilfields of Idd El-Shargi, Maydan Mahzam, and Bul Hanine. The Halul Terminal is operated by Qatar General Petroleum Corporation.

Halul Island: The island is roughly circular in shape with a radius of approximately 0.5 miles. The island is hilly, rising to an elevation of 202 ft. (61.6 m.). (Charts: U.S. Government Charts: 62400, 62397, 62402, British Admiralty Charts: 2886, 3781, 3950, 3953).

The island is fringed by a reef which in places extends about 3 cables offshore.

The island is barren, with a number of oil storage tanks, a small industrial complex and personnel living quarters. There is a harbour on the Southern side of the island which is only for use of small craft.

DOCUMENTS: Following papers are required on arrival:

Notice of Readiness.
2 Crew Lists.
2 Health Declarations.
1 Valid Tovalop Certificate.
1 Arrival Report.
1 Request for Pilotage and Berthing Assistance.
1 Latest Light Dues Certificate.
1 copy Ship and Shore Cargo Figures and Experience Factor details for previous 10 loadings.

The Berthing Officer acts as ship's Agent and on behalf of National Customs and Immigration Authorities.

PILOTAGE: A Pilot is at all times to be considered as an advisor to the Master. The latter shall remain solely responsible for the safety of his vessel. The Pilot will remain on board throughout the vessel's stay at Halul.

Boarding: When VHF contact is made with Halul Radio, the Pilot will advise the Master whether he should proceed to anchor or whether a Pilot will board the vessel on arrival.

A Pilot will board the vessel about 2 miles East of Halul Island. The vessel is expected to make (if necessary) a good lee for the pilot launch.

Ship Deficiencies: The Master should inform the Pilot of any deficiencies on his vessel and any unusual characteristics pertaining to his vessel e.g. lack of astern power, time to change from ahead to astern, etc.

Pilot Signals: The vessel must display the proper signals prior to and subsequent to the boarding of a Pilot.

Pilot Ladder: The vessel shall rig on the starboard side, a pilot ladder which must conform in construction to all recognised international standards for pilot ladders. On vessels over 50,000 d.w.t., a combination of pilot ladder and accommodation ladder shall be rigged.

In the latter case the Pilot must not be expected to climb more than 9 m. on the pilot ladder.

There must be provision for the Pilot to pass safely from the head of the ladder to the deck of the ship.

Any such pilot ladder must be rigged well clear of all overboard discharges. 2 manropes are to be fitted, one on each side of the ladder, together with a safety line if conditions warrant such. At night both the ladder and the point of access must be properly illuminated.

A responsible officer must be in attendance when shore personnel are boarding/disembarking.

Note: To prevent unauthorised persons from boarding the tanker unobserved, particularly at night, the pilot/accommodation ladder must be retrieved after the Pilot and his assistant have boarded.

NAVIGATION: A light is exhibited at an elevation of 220 ft. (67.1 m.) from a white concrete tower with a black top, 16 ft. (4.9 m.) in height, situated on the summit of Jazirat Halul. Light characteristic is Fl.W.R. 12 secs. W 19M R 9M. Sectors W 030° – 300° (270°) and R 300° – 030° (90°) over pipeline area. On the Western and Eastern arms of the small boat harbour there are floodlights illuminating the breakwaters. There are various radio masts with red lights, the highest being 365 ft. above sea level. On each of the SBM loading points there is a white light morse "U" every 20 secs.

A hose marker light, flash white every 5 seconds, is located 150 ft. from the hose ends at each SBM.

Deepwater Channel: To the East of Halul there are 2 buoys marking a deepwater channel which is the recommended departure channel for all vessels.

H-1 Green conical – Quick flash green.
H-2 Red – Quick flash red.

Prohibited Navigation: The offshore oilfields are prohibited for navigation because of the numerous production stations, drilling rigs, wellhead jackets and oil and gas pipelines.

The location of the 3 oilfields are:

1. Idd El-Shargi with centre Lat. 25° 28.9′ N., Long. 52° 22.6′ E., radius 2 miles.

2. Maydan Mahzam with centre Lat. 25° 36.0′ N., Long. 52° 33.1′ E., radius 2 miles.

3. Bul Hanine with centre Lat. 25° 25.5′ N., Long. 52° 44.0′ E., radius 5 miles.

Navigational Warning: Masters should be aware, when crossing any pipeline, that many pipelines are not under the seabed and that the charted water depth may be reduced by at least 2 m.

It is strongly recommended that vessels do not pass South of Halul when making passage to/from Umm Said or Doha.

Also see "Radio – Halul Terminal Standard Cable" re-subsea wellhead.

ANCHORAGES: Vessels are advised, unless restricted by draft, to anchor in an area centred on a position from Halul Island Light 082° x 2.5 miles with radius 6 cables. Water depth is 70 ft. – 80 ft. and the bottom is sand.

Prohibited Anchorage: The area covered by the red sector of the Halul Island Light is to be taken as a prohibited anchorage. This is due to the number of oil pipelines within this area.

MAX. SIZE: SBM No. 1 up to 22 m. draft. (In certain conditions of weather and tide a maximum draft of 25 m. can be accepted). SBM No. 2 up to 29 m. draft. Displacement limit of 640,000 tons (550,000 d.w.t.) for both SBMs.

HEALTH: See "Medical".

RADIO: *General:* QGPC has its own radio station in Doha call sign Alpha Seven Delta (A7D). Cable address: Qatoff Doha (attn. PDP). Telex: Qatoff 4201 DH (Attn. PDP).

A sub-station is also maintained on Halul Island (call sign "Halul Radio").

A7D maintains 24 hour watch on 500 kHz, 2182 kHz and VHF Channel 16, while Halul Radio maintains a continuous radio watch on VHF Channels 6 and 16.

Vessels bound for Halul should contact "Halul Radio" approximately 6 hours prior to arrival on VHF Channel 16 or 6, or as soon as VHF contact can be established.

Long distance communication (initial ETAs, etc.) will normally be routed via Doha Radio (A7D).

Advance Notice of Arrival: A vessel must advise:

(a) Its ETA at Halul at least 72 hours before arrival.
(b) Confirmation of any amendment to its ETA at Halul 24 hours before arrival at Halul.
(c) On arrival at Halul, the exact time of arrival at Halul.

Note: Any failure to observe the laid down sequence of ETA advice may delay the loading of the vessel.

Ships Loading at Other Gulf Ports: Masters are advised that when they commence loading at the last port before Halul they should instruct their Agent to send a corrected ETA for Halul to QGPC.

Standard Cable: On receipt of the 72 hours ETA advice QGPC will transmit via Doha Radio a standard cable containing details of cargo, quantities, etc. (See below.)

If any vessel has any queries with regards to this cable or if the vessel cannot comply with the requirements of the cable the Master should contact QGPC immediately.

Halul Terminal Standard Cable:

To Master ....

We confirm your vessel nominated to load approximately ....bbls., Qatar Marine Crude at Halul Terminal for discharge .... approximate load temperature .... degree F ..... API gravity.

Depending on availability/draft/loading rate and prevailing weather conditions, vessel will berth at either SBM-1 or SBM-2 which are located 2.3 and 3.4 miles respectively S.E. from Halul Lighthouse.

Vessel arriving in ballast or light part loaded condition should ensure draft/trim/freeboard adequate for safe manoeuvring. The minimum acceptable draft being propeller fully immersed and recommended trim not exceeding 10 ft. by the stern, consistent with a maximum acceptable freeboard forward (Panama Lead to waterline) not exceeding 70 ft. (21.3 m.) Freeboard constraint mandatory for berthing and at all times while vessel moored to the SBM. Terminal will provide 2 SBM mooring lines. Please prepare 2 empty winch spooling drums forward and have 2 good messenger ropes ready to connect to the SBM mooring pick-up ropes. The use of winch drum ends is not permitted.

Starboard side derrick/crane, minimum SWL 10 tons should be rigged ready and starboard manifold prepared with reducers to connect 2×16 in. hoses.

Ship crew are required to moor vessel and connect hoses with guidance from our operations assistant. When proceeding towards berth, both anchors must be fully secured in the hawse pipe. Pilot will board 2 miles East of Halul. Pilot ladder and/or accommodation ladder should be rigged ready on the starboard side, and a good lee made when Pilot boards and mooring equipment lifted on board.

Please contact Halul Control/Halul Radio on VHF Channel 6 soonest for final instructions and berthing prospects.

Unmarked sub-sea wellheads are located at Lat. 25° 41.6′ N., Long. 52° 25.9′ E. and Lat. 25° 41.1′ N., Long. 52° 25.7′ E., respectively 7.0 m. and 4.0 m. above sea bed. The location is unmarked and vessels should navigate with caution accordingly.

Please acknowledge receipt and advise/confirm the following:

AA Present ETA Halul.
BB Arrival and sailing draft.
CC Maximum available loading rate long tons/hour.
DD Derrick/crane SWL.
EE That all ballast clean, deballasting time and if concurrent loading possible at either full or reduced rate.
FF Type and number bow mooring chain stoppers fitted.
GG That original and valid Tovalop Certificate on board with expiry date.
HH That vessel equipped with IGS, system fully operational and cargo tanks properly inerted.
II Cargo tank gauging and closed loading vent system fully operational.
JJ Any navigation aid or machinery defects that affects the vessel's ability to navigate or manoeuvre safely.

QATOFF Doha

Doha Radio (A7D):

Department of Telecommunications,
P. O. Box 648,
Doha,
State of Qatar.
Tel: 864444/864032.
Telex: 5061/2 DH.

Doha Radio keeps continuous watch on 500 kHz, 2182 kHz and VHF Channel 16.

HF telegraphy service:

A1A FREQ	QSX
8473 kHz	H24 C 5,6,15,16
12966 kHz	04-18 UTC C 5,6,15,16
16880 kHz	04-18 UTC C 5,6,15,16

Traffic lists at 0400, 0800, 1200, 2000, 2400 hrs. UTC on 484 kHz after announcement on 500 kHz, 8473 kHz, 12966 kHz and 16880 kHz.

MF telegraphy service:
Calling 500 kHz (H24).
Working 484 kHz.

MF telephone service:
Calling 2182 kHz (H24).
Working 2768 kHz/2049 kHz.

Use A7D for quick and reliable ship to shore and air to ground radio communications.

Ship's Radio Officers take notice: When in Doha or Umm Said you are always welcome to visit us. Just give us a call on MF/HF/VHF or telephone Doha 864646 and we will pick you up.

VHF: A Company VHF station on Halul Island, call sign "Halul Radio" maintains a continuous watch on Channels 16 and 6 (Channel 6 being the working frequency). The station has a range of approximately 50 miles and incoming tankers should establish communications withthis station when within range.

Ship to shore communication during loading is by portable VHF Radio telephone with emergency shutdown system, provided by the terminal.

TUGS: Not available.

BERTHING: Approach is from the open sea, passing to the Eastwards of Halul. There are 2 single buoy moorings. No. 1 SBM in position Lat. 25° 38.7′ N., Long. 52° 26.4′ E. This berth will primarily accommodate vessels up to 640,000 tons displacement. No. 2 SBM in position Lat. 25° 38′ 36″ N., Long. 52° 27′ 35″ E. This berth will accommodate vessels with up to a draft of 29 m. In both berths, mooring lines from the buoys are secured on the forecastle head using equipment provided by the terminal or using ship's bow chain stoppers if fitted. A suitable messenger rope should be ready for use. No moorings are used aft. The Pilot will advise in detail the mooring procedure.

	SBM 1	*SBM 2*
Position from Halul Lt.	133°×2.3 miles	124°×3.39 miles
Loading pipeline	30 in.	48 in.
Submarine hoses	2×20 in.	2×20 in.
Floating hoses	1×20 in. with 2×16 in. tails	2×20 in. with 16 in. tails
Length of hoses	1×810 ft. with 2×180 ft. tails	1×1,020 ft. and 1×990 ft.
Manifold Connection	2×16 in.	2×16 in.
Mooring Ropes	2×15 in. braided nylon grommets	2×15 in. braided nylon grommets
Water depth	105 ft. (32 m.)	120 ft. (36.5 m.)
Max. draft	72 ft. (22 m.*)	95 ft. (29.0 m.)
Loading rates	5,500 t.p.h.	9,500 t.p.h.

*Also see "Max. Size".

MOORING: All tankers loading at Halul SBMs must comply with "OCIMF Standards of Equipment Employed in the Mooring of Ships at Single Point Moorings".

Both SBM 1 and SBM 2 are equipped with OCIMF recommended 76 mm. chafe chains suitable for vessels over 350,000 tonnes deadweight. To accommodate these, vessels should be fitted with OCIMF approved bow Panama type fairleads, measuring at least 600 mm. × 450 mm., tongue or hinged bar chain stoppers, and winch spooling drums to permit 'hands-off' mooring.

The use of winch drum ends is not permitted.

Smit type brackets are not acceptable at Halul.

Preparations: When the Pilot has boarded, the ship's crew is required to use the starboard side ship's derrick or crane over the side to lift the mooring and hose connecting equipment on board from the pilot/mooring launch. An Operations Assistant will board with the Pilot. He will give guidance to the ship's crew on mooring and also on connecting the hoses.

Vessel's anchors must be stowed and properly secured in the Hawse pipe.

Briefing: Prior to approaching the SBM the Master, Pilot and Officer delegated to duty on the forecastle should meet and the Pilot will brief all concerned on the mooring operation.

Mooring Operation: On approaching the SBM the ship should make ready a rope messenger suitable for passing over the stem of the tanker to the mooring launch. This rope will be joined to a 10 in. pick-up rope (400 ft.) which is in turn connected to a 50 ft. pick-up wire and then the chafe chain. Each chafe chain is connected to a 15 in. grommet of braided nylon.

The starboard mooring is always picked up first.

Safe Practices: With the objective of achieving a safe 'hands-off' mooring procedure, winch spooling drums will be used for heaving the pick-up ropes. The use of winch or windlass drum ends is not permitted. Masters and crew should be aware at all times of safe working practices while mooring the ship and avoid standing in the danger sectors of ropes and wires under tension.

SBM Security: From the time of completion of mooring, the ship shall station a lookout on the forecastle. This lookout must inform the Berthing Officer in the event that the ship is likely to come into contact with the SBM.

Immobilisation of Engines: Under no circumstances should the ship's engines, steering gear, deck machinery power source, or any essential equipment be immobilised.

HOSE CONNECTION: Tanker manifold arrangements must comply with "OCIMF Standard for Oil Tanker Manifolds and Associated Equipment".

Connection Position: Hoses will be connected/disconnected on starboard side by ship's crew. The Operations Assistant will give guidance to the crew as required.

Connection Sequence: The first hose will be the tanker rail hose string. It must be connected to the forward of the 2 manifold connections.

Hose Sizes: Tanker rail hoses on both SBMs are 2×16 in. diameter. Vessel should arrive with reducers fitted to the starboard side manifold accordingly.

Ship Lifting Capacity: To lift these hoses, a derrick or crane with a SWL of 10 tons minimum is required.

Connection: The hoses shall be bolted to the ship's manifold with a bolt in every hole. When the hoses are connected the weight of each hose shall be taken by hanging a strop (supplied by shore) from the ship's derrick or crane.

LOADING: All vessels should arrive with cargo tanks properly inerted, gauging and venting systems fully operational, such that a closed loading procedure can be safely followed. The Pilot will verify the oxygen content of the cargo tanks prior to commencement of loading.

Load-on-Top: If load-on-top is to be practiced at Halul, the Pilot may measure the quantity of residue in the slop tank. However, the Pilot will not check tank soundings, ullages, sign Dry Certificates or otherwise act as a cargo surveyor.

Commencement of Loading: Upon request from the ship's Duty Officer the Pilot will instruct the shore to commence loading. Loading will be initially by gravity, and when the ship is satisfied that the cargo is flowing into the ship, the shore will be instructed to start pumping. The total quantity of cargo to load, maximum rate, and whether a "ship or shore stop" is applicable, should be established and confirmed with the Halul Control Room.

Loading Rates: SBM 1: Maximum loading rate is 5,500 tons per hour using diesel pumps.

SBM 2: Maximum loading rate is 9,500 tons per hour using either turbine pumps or a combination of turbine and diesel pumps.

Quantity Checks: During loading, ship and shore should check the long ton quantity of cargo loaded every hour and compare figures. If there is a large discrepancy, the quantities should be re-checked and if the difference remains, with no explanation from the ship, then an inspection of the pipeline and hose systems may be necessary.

Approximately 2 hours after the commencement of loading, the Pilot will advise the ship's Officer the provisional API gravity and shore tank temperature.

Valve Operation and Surge Pressures: During full speed loading, the Duty Officer should inform the Pilot if any valve manipulation, which is likely to restrict the flow of oil, is going to take place. Ships should be aware of the potential dangers of creating a pressure surge by closing valves too quickly and/or restricting the flow of oil by closing off tanks without first reducing the loading rate.

The Master will be held responsible for any apparent or subsequently apparent damage to the shore pipeline and hose system, resulting from surge pressure(s) caused by failure of the ship's pipeline/valve system or the mismanipulation of the ship's valve.

A pressure recorder will be installed at the ship's manifold for continuous monitoring and recording of pipeline pressures, which will also be continuously monitored by Halul Control.

Completion of Cargo Operations: Final topping-up operations should only be conducted in the presence of the Pilot in the cargo control centre. The loading rates should be progressively reduced to a safe level prior to tank valve closure to avoid surge pressure.

Loading can be completed by gravity which gives a rate of about 1,500 tons/hr.

Communications: Communication between ship and shore is by dedicated frequency VHF radio (supplied by shore), which will be positioned in the cargo control room. This radio will have an emergency stop frequency. In the event of an emergency, this facility can be used to stop the loading pumps at the shore terminal. This emergency stop procedure will be tested and demonstrated to the ship's Officers prior to commencement of loading.

Precautions: A watch must be maintained on the radio link with the shore. Connections at the manifold must also be watched continuously for any signs of leaks, ruptures, etc.

BALLAST:

Maximum Freeboard: The SBM's at Halul are considered exposed locations and the safety of operations is highly weather dependent. To ensure that a vessel is always safely moored, the maximum freeboard forward (Panama Lead to waterline) must not exceed 70 ft. (21.3 m.) with a positive stern trim at any time whilst the vessel is in the berth.

Deballasting: Vessels capable of simultaneous cargo loading and deballasting are required to do so in order to maintain the freeboard as low as possible.

Vessels unable to perform simultaneous loading and deballasting operations will, in marginal weather conditions or to comply with the maximum freeboard limitation, be required to load part cargo prior to deballasting.

Dirty Ballast Facilities: No dirty ballast facilities available. All vessels must arrive with clean ballast.

CARGO QUANTITIES/DOCUMENTATION: *Ullaging:* On completion of loading the ship must ullage all tanks into which cargo has been received. The Master is required to complete an ullage report provided by the shore.

Early Departure Procedure: In order to avoid delays to ships, Halul Terminal follows the "Early Departure Procedure" for the completion of cargo documents. When cargo loading is completed the Pilot will receive the departure papers from the shore. These will include documents completed as far as possible but without cargo quantities which the Master should sign as appropriate.

Departure from Halul Island will be dependant on ship/shore agreement on the cargo quantity loaded.

The final Bill of Lading cargo figure will be passed to the vessel by radio, prior to the Pilot disembarking. The Pilot will enter both the Bill of Lading Figure and Final Ship's Figure on Form 19X (Tanker Port Performance), which both the Pilot and Master will then sign. The Bill of Lading cargo figures information will also be transmitted to the vessel after departure via Doha Radio or direct by telex. The Master should insert these figures in the various incomplete forms that remain on board.

All delays resulting from the Master's refusal to accept Early Departure Procedure will be for the vessel's account.

Forms to be Signed: The following is a list of forms which have to be completed for each parcel of cargo and received by the Master. (Not all documents are signed by the Master.)

Bill of Lading.
Cargo Manifest.
Certificate of Quantity and Quality.
Discharge Certificate.
Master's Receipt of Documents.
Arrival Report.
Disbursement Memo.
Certificate of Origin and Authenticity.
Ullage Report.
Customs Export Bill.
Customs Clearance.
Port Timesheet and Form 19X.
Receipt for samples.

Discharge Certificate: We stress the importance of the Discharge Certificate placed on board at the completion of loading. It is absolutely essential that the Discharge Certificate should be completed in duplicate in respect of every discharge whether for entire or part cargo.

DEPARTURE: *Unmooring:* When all ship's papers have been completed and the hoses disconnected the vessel is ready to sail. The port mooring should be released first. The mooring should be lowered to sea level and the pick-up rope paid out slowly to allow the mooring launch to receive the pick-up rope on board. The starboard mooring will then be released.

When the vessel is clear of the SBM, the mooring launch will come alongside on the starboard side to load the mooring and hose connecting equipment, and then stand-by to await the Pilot.

Pilot Disembarkation: When the vessel has been unberthed the Pilot will disembark to the East of the two SBMs and well clear of the submarine pipeline area. Laden vessels should under no circumstances navigate in the pipeline area to the South of Halul Island. It is strongly recommended that all vessels use the Deep Water Departure Channel to clear the Halul area.

DENSITY: At berth, 1028/1030 (approximately).

CARGO: Flash point below 32° Fahrenheit.

H_2S Content in Halul Crude: H_2S Hydrogen Sulphide has a disagreeable odour characteristic of rotten eggs which quickly deadens the sense of smell so that a dangerous concentration may be present which cannot be detected by odour.

If exposure to hazardous concentrations of this gas is likely to occur, appropriate safety precautions should be taken. Suitable respiratory protection should be available during ullaging and sampling.

The TLV is given as 10 p.p.m. but concentrations in enclosed spaces should be reduced as far below this level as practicable and if men are to work without breathing apparatus, a nil concentration should be achieved before entry is permitted and effective ventilation should be maintained.

On tankers regularly committed to the carriage of sour crude, H_2S gas indicators should be provided.

It is important to realise that the concentration of H_2S can be measured and expressed in two different ways:

The p.p.m. in the liquid, by weight;
The p.p.m. in the air, by volume.

Producing and Processing Departments at terminal often use the liquid measure for H_2S content, and this could be confusing to tanker officers who usually think of H_2S as expressed in air volume measure. There can be a vast difference between the two measures. The measure in air is higher and can be very much higher. For example, chemists have measured a concentration of 7,000 p.p.m. (deadly) in the vapour stream coming out of ullage opening when a tank is being topped off with a crude oil containing only 70 p.p.m. H_2S in the liquid. Therefore, it is of vital importance to appreciate that a sour crude can release a lethal concentration of H_2S into the air.

The following guide to the effects on exposed persons of various atmospheric concentrations of H_2S gives some indication of its dangers:

Measured in air by volume	
50 to 100 p.p.m.	Eye and respiratory tract irritation after exposure of 1 hour.
200 to 300 p.p.m.	Marked eye and respiratory tract irritation after exposure of 1 hour.
500 to 700 p.p.m.	Dizziness, headache, nausea, etc., within 15 minutes; loss of consciousness and possible death after 30 to 60 minutes exposure.
700 to 900 p.p.m.	Rapidly produces unconsciousness and death occurs a few minutes later.
1000 to 2000 p.p.m.	Death is apparently instantaneous.

Apparent death from H_2S is not irreversible as prompt and efficient artificial respiration may restore life.

The terminal should advise the Master if the cargo to be loaded contains H_2S in concentrations which cause the gases vented during loading to be hazardous if inhaled. When handling cargo with noticeable H_2S content or when ballasting after discharge of such cargo, it is recommended that the following precautions should be taken.

The officer supervising the operations should keep a sharp watch on personnel for signs of fatigue or distress.

Lifelines, breathing apparatus and resuscitator should be readily available.

Loading through the pump room should be avoided where possible to reduce the possibility of H_2S contamination of the pump room atmosphere.

Gas should be vented through the cargo tank venting system and, if open ullaging is necessary, the ullage plugs should be kept open only for a minimum period of time.

When ullaging tanks, personnel should work in pairs and stand at right angles to the wind direction in relation to the ullage opening.

Personnel should not enter a pump room without first starting the ventilation, checking that there is no gas present, and without someone else standing by. If any gas concentration is recorded, a self-contained breathing apparatus should be worn.

Other spaces into which H_2S may have been drawn should be ventilated and checked before entry.

Persons overcome by H_2S should be moved to a gas free area immediately and artificial respiration should be administered at once.

Gas tests should be made on deck and in accommodation at regular intervals and particularly during the topping-off periods. If concentrations exceed 10 p.p.m. inside the accommodation or 50 p.p.m. on deck more than 10 ft. from a gas outlet, the loading rate should be adjusted and if this does not result in a decrease of the gas concentration, loading should be stopped until conditions have improved or other suitable measures are taken.

During discharge, the pump room bilges should be kept dry.

During loading or ballasting operations, conspicuous notices warning of potential danger should be posted on deck and at pump room entrance, and at the entrance to any other space which could be affected.

MEDICAL: There is no doctor on Halul Island. If there is any sickness on board, details should be included in the vessel's ETA message.

In emergencies, the services or advice of the QGPC Medical Officer in Doha may be obtained. If the doctor or patient has to be flown from to Doha, the vessel concerned will be charged for the helicopter hire, the services of the doctor and other related costs.

TIME: Local time is GMT plus 3 hours throughout the year.

FRESH WATER: Not available, except in cases of extreme emergency if a supply boat is available. For this service a charge of 1 day's supply boat hire plus cost of water will be charged.

FUEL: Various grades of bunkers available, diesel and fuel, ex barge or lighters at Halul anchorage provided minimum 7 days' prior notice given.

Also see "Doha".

REPAIRS: Not available.

SURVEYORS: (1) Watson Grey & Caleb Brett, Doha.
(2) Lloyd's Register in Bahrain.

TANK CLEANING: No facilities available and ships must arrive with clean ballast, lines and pumps.

CONSULS: The following countries maintain Embassies in Qatar.

Algeria
Bangladesh
Egypt
France
Gabon
Germany
India
Iran
Iraq
Japan
Jordan
Korea (South)
Kuwait
Lebanon
Libya
Mauritania
Morocco
Oman
Pakistan
Saudi Arabia
Somalia
Sudan
Syria
Tunisia
Turkey
United Kingdom
U.S.A.
Yemen

CUSTOMS: Trading in liquor is *strictly* prohibited and no alcoholic drink should be offered to Arab nationals.

Qatar Laws concerning Alcohol: The import and sale of alcoholic drinks in Qatar is subject to stringent Government control and there are heavy penalties for infringement of the relevant laws.

Masters are advised therefore, to ensure that no alcohol, of any description, leaves the vessel while at Halul Terminal.

REPATRIATION: Changes of personnel can be carried out at Halul Island. This can only be carried out on a limited scale due to scarcity of accommodation and transport. For crew joining a ship, Owners should notify the Agency, at least 72 hours in advance of arrival in Doha, the details of the personnel and the arriving flight. Crew leaving a ship at Halul can be arranged but advance notice is required.

SAFETY: Vessels must at all times comply with safety regulations as detailed in the ISGOTT (International Safety Guide for Oil Tanker and Terminals) published jointly by the International Chamber of Shipping and the Oil Companies International Marine Forum and The International Association of Ports and Harbours.

Safety Check List: This check list must be completed prior to the commencement of loading and verified at regular intervals thereafter. The Pilot and the Master of the vessel or a responsible officer will jointly carry out the safety inspection.

Cessation of Loading: If during loading operations, the Pilot becomes aware of any unsafe working practice or safety hazard, loading will cease until such time when the safety hazard has been removed. All delays thus incurred will be for vessel's account.

Hydrogen Sulphide: It is brought to the ship's attention that Qatar marine crude contains Hydrogen Sulphide (H_2S). See "Cargo".

Emergency Towing Wire: Whilst moored to the SBM, all vessels must have Emergency Towing Wires correctly positioned and rigged on the port side forward and aft. The eyes of the wires must be maintained just above the waterline, ready for immediate pick-up by a tug or supply boat. The inboard end must be properly secured to the bollards with a least 40 m. of slack wire on deck with a rope stopper to prevent the slack accidentally running out.

Tanker Emergency: In case of an emergency on board the Tanker the Pilot must immediately be informed. He will act as liaison between ship and shore.

If for whatever reason the Pilot is incapacitated, the Master/Officer on duty must inform Halul Control, giving brief details of the type of the emergency via the portable VHF radio (walkie-talkie) provided by shore.

In case of fire, explosion, etc., cargo must be stopped immediately by requesting "Emergency Stop" via the walkie-talkie and/or via the emergency stop frequency (push-button) provided in the radio.

The Master may also call "Halul Radio" on the ship's VHF Channel 6 or 16, giving details of the emergency and the kind of assistance required, if necessary.

BANKS:

Banque de Paris et des Pays-Bas.

5. N/A.
6. N/A.

SHORE LEAVE: Not permitted.

GARBAGE DISPOSAL: No garbage disposal service is available for tankers loading at Halul.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: No shore leave permitted.

CURRENCY: Qatar Riyals (Q.R.).

GENERAL:

Meteorological Service: A daily 24 hour weather forecast is issued at 0945 hrs. L.T. This forecast covers the area of Halul Island and the offshore oilfields. Details of this forecast can be obtained from Halul Radio on VHF Channel 6 or, if vessel is at one of the SBMs, from the Pilot on board the vessel.

Tidal Information: Halul Island can be found in British Admiralty tide tables Volume 2. Halul is a secondary port based on the standard port of Shatt al-Arab.

Climatic Conditions: Masters and crews should be aware of the extreme climatic conditions which exist in the Halul area during the months of June through October. Everybody should be made aware of the dangers of heat and sun stroke.

Stores and Laundry: Not available at Halul Island.

Courtesy Flag: The Qatar National flag should be flown during daylight hours when a vessel is at Halul Island.

Mail Service: There is an excellent mail service from Qatar to all parts of the world. Qatar stamps must be used on all mail sent through the national post office.

Blue air letter forms other than Qatari forms are not accepted.

AUTHORITY: Qatar General Petroleum Company – Marine Department, P.O.B. 47, Doha, Qatar. *Tel:* 402666, 402593. *Telex:* 4201 Qatoff Doha. *Cables:* Qatoff, Doha. *FAX:* 402707. *Contact:* P. Steynis, Marine Manager. R. Gale, Senior Marine Officer.

Agency: c/o Tanker Agency Department, QGPC PDA, P.O.Box 47, Doha, Qatar, Arabian Gulf. Tel: 402620. Telex: 4201.

UMM SAID: 24.54 N. 51.34 E. (See Plan)

DOCUMENTS: The Qatar Customs Authority requires the following documents to be kept ready on arrival at Umm Said Ports and presented to Customs Officer when alongside Berth No. 6, Berth No. 19 or to Pilot when at SPM/CBM/NGL Jetty.

2 copies Crew List.
2 copies Crew Declaration.
2 copies Stores List.
2 copies Bond List.
2 copies Arms and Ammunition List.
1 copy Last Port Clearance.
1 copy Health Declaration.
1 copy Vaccination List.

BUOYED CHANNEL: All vessels wishing to navigate the Umm Said Buoyed Channel must obtain prior clearance from Umm Said Control who can be contacted on VHF Channels 14 or 16 or by Telex via Doha Radio, addressed to Petroqat Umm Said. This precaution is essential to avoid unexpected encounters with deep-laden oil tankers.

APPROACHES:

Approach to Umm Said Terminal: With Halul Island peak astern steer 235° for a distance of 31.5 miles to (K) Kareinein Light Buoy in position Lat. 25° 24′ 18″ N., Long. 51° 56′ 16.4″ E., thence 226°, 12 miles to (M) Mishut Light Buoy in position Lat. 25° 15′ 51″ N., Long. 51° 46′ 43.4″ E.

From Mishut Light Buoy steer 214° for a distance of 8 miles to (W) Wakrah Light Buoy, leaving this light buoy on the port hand.

From Wakrah Light Buoy steer 180° for a distance of 6.4 miles, to (H) Hul Light Buoy leaving this buoy to port.

From a position of 2 cables West of (H) Hul Light Buoy, steer 164° for a distance of 1.9 miles to pass between Nos. 1 and 2 Outer Channel Buoys, thence 158° 30′, 0.3 miles to pass between Nos. 3 and 4 Outer Channel Buoys, thence 178°, 0.9 miles to leave No. 6 Outer Channel Buoy on port hand, thence 173°, 1.6 miles to pass between Nos. 7 and 8 Outer Channel Buoys, thence 191° 30′, 1.6 miles to pass between Nos. 9 and 10 Outer Channel Buoys, thence 176°, 0.8 miles to pass between Nos. 11 and 12 Outer Channel Buoys.

From a position midway between Nos. 11 and 12 Outer Channel Buoys, steer 157° for a distance of 2.2 miles, leaving S.E. Arrif Buoy on the starboard hand, thence 217° for a distance of 3.25 miles, leaving S. Arrif Buoy on the starboard hand.

After rounding S. Arrif Buoy, steer 335° for a distance of 1.7 miles, passing close West of No. 1 Inner Channel Buoy, thence 003°, 1.1 miles, passing close East of No. 2 Inner Channel Buoy.

From a position close East of No. 2 Inner Channel Buoy, steer 348°, 0.5 miles to pass between Nos. 3 and 4 Inner Channel Buoys thence 323° to round Turning Buoy, leaving this buoy on the port hand.

From Turning Buoy steer a course to enter the designated Anchorage Area. The Northern limit of the designated Anchorage Area is a straight line joining the Turning Buoy and Fairway Buoy positions.

Masters of vessels anchoring at Umm Said are required to use the appropriate anchorage. With the exception of emergencies only, anchoring outside this area or obstructing the fairway is *not* permitted.

Prohibited Area: A prohibited area enclosed by the pecked lines as shown on Chart No. 3786 (See "Plans") has been established. Masters of all vessels are prohibited from entering, anchoring or fishing within this area unless permission has been granted by the Corporation.

Outward Passage: The reverse track is followed as for the inward passage described above.

Charts: Admiralty Chart No. 3787 – Approaches to Musay'Id and Ad Dwaha.

Admiralty Chart No. 3950 – Fasht al Arrif to Ras Laffan.
Admiralty Chart No. 3786 – Umm Said Harbour.

Depths: In the Outer Channel there are least depths of 36 ft. (10.97 m.) in the vicinity of Nos. 1 and 2 Buoys, 3 and 4 Buoys and Nos. 9, 10, 11 and 12 Buoys.

Between the Outer and Inner Channel the depth varies from 40 ft. (12.2 m.) at Nos. 11 and 12 Outer Channel Buoys through 72 ft. (22.0 m.) and 78 ft. (23.8 m.) between S.E. Arrif and S. Arrif Buoys to 47 ft. (14.3 m.) close to No. 1 Inner Channel Buoy.

In the Inner Channel the least depth is 37 ft. (11.28 m.) between Nos. 3 and 4 Inner Channel Buoys.

From the Inner Channel to the Anchorage the depths vary from 43 ft. (13.1 m.) between the channel and Turning Buoy to 48 ft. (14.6 m.) at the Anchorage.

Tidal Conditions: In general the tide follows the coast line with the flood tide setting to the South or S.W., and the ebb tide setting to the North or N.E. The greatest caution must be exercised by all vessels when setting course to round the S.E. Arrif Buoy. It should be noted that tidal sets can run up to 2 hours after the predicted H.W./L.W. times.

Abnormal meteorological conditions may affect all the above tides by ±2 ft. (0.61 m.).

The normal tidal range is from 0.4 m. to 2.0 m., with the highest tides being in the region of 2.45 m. in exceptional circumstances.

Tide Gauge: The Terminal Office at Umm Said is equipped with a tide gauge, so that verification of tidal predictions, with actual depth of water, can be made.

PILOTAGE: Inward and outward pilotage is compulsory for all vessels loading at the North and South Berths (Crude/Stabilised Condensate), NGL (Propane, Butane and Condensate), NODCO (Products) and QAPCO (Ethylene). The Pilot boards the vessel in the vicinity of the Mishut Buoy and will contact the vessel approximately one hour before boarding. The Pilot normally disembarks in the vicinity of the Wakrah Buoy.

In the case of the North Berth (SPM) and South Berth (CBM), the Pilot remains on board the vessel throughout, acting as Loading Master and QGPC Representative.

Pilotage is compulsory for berthing and unberthing of all dry cargo vessels from sunrise to sunset.

Pilot Ladder: Tankers of 40,000 d.w.t. and over should have rigged, when in light condition, an accommodation ladder lowered to about 5.0 m. above the water. This can be adjusted to suit conditions. A pilot ladder should be rigged immediately abaft the accommodation ladder (on after leading accommodation ladders), to within 1.5 m. above the water. This will enable Pilot to ascend pilot ladder clear of launch, and then step on to lower platform of accommodation ladder.

A good lee must always be made.

Automatic pilot hoists should not be used unless such use is agreed to by the Pilot. On no account should weighted heaving lines be used in the vicinity of the pilot boat or mooring launches.

Pilotage is compulsory for dry cargo ships bound to for Umm Said Anchorage only if the draft is 33 ft. or over. Pilotage performed by Doha Pilots.

All dry cargo vessels using Umm Said Channel must obtain channel clearance from Umm Said Traffic Control on Channels 16 and 11 at Mishut Buoy, prior to entering channel and prior to sailing from Umm Said berths. Berthing and unberthing schedules are obtained from Doha Ports (Channels 16 and 14).

ANCHORAGES: Eastern Anchorage. Depth 48 ft.

Anchorage for dry cargo vessels is available in Umm Said Harbour more than one mile North of the Fairway Buoy. The anchorage to the S.E. of the Fairway Buoy is reserved for tankers and vessels drawing over 10.0 m. draft. Dry cargo vessels using this anchorage must obtain permission from Umm Said Terminal.

Prohibited Anchorage: A Prohibited Anchorage has been established in the vicinity of (W) Wakrah Light Buoy to protect submarine pipelines laid in the area. A yellow can buoy (Fl. Y. 10 secs.) (Radar Reflector) has been laid in position Lat. 25° 13′ 51″ N., Long. 51° 45′ 23.4″ E. and a line drawn 073°/253° from the coast through this position marks the Northern boundary of the Prohibited Anchorage. A similar buoy (Fl. Y. 6 secs.) (Radar Reflector) has been laid in position Lat. 25° 8′ 18″ N., Long. 51° 41′ 54″ E. and a parallel line drawn through this position marks the Southern boundary of the Prohibited Anchorage.

RESTRICTIONS: In the case of crude oil shipments, mooring, loading and unmooring is carried out at all times (weather permitting).

Mooring and unmooring operations are restricted to daylight hours at the NGL Jetty, NODCO Jetty (Berth No. 6) and QAPCO Jetty (Berth No. 19).

MAX. SIZE: *Depths/Drafts of Laden Vessels/Minimum Underkeel Clearance:* The draft of laden tankers leaving Umm Said is constrained by the depth of water in the Outer Channel. However, vessels are required to maintain a minimum underkeel clearance in relation to total height.

The table below details the minimum underkeel clearances for vessels using the Umm Said Channel.

Vessels up to 99,999 d.w.t.	3 ft. (0.91 m.) Clearance
Vessels from 100,000 to 149,999 d.w.t.	4 ft. (1.22 m.) Clearance
Vessels between 150,000 and 320,000 d.w.t.	5 ft. (1.52 m.) Clearance
LPG Carriers (All Sizes)	5 ft. (1.52 m.) Clearance

The following are examples of the tidal calculations to determine whether or not a vessel would be allowed to use the channel:

Ship A – VLCC 250,000 d.w.t.:

Sailing Draft	10.79 m.
Required Minimum Underkeel Clearance	+ 1.52 m.
Depth of water required	12.31 m.
Minimum depth of water at Chart Datum	10.97 m.
Height of tide required (minimum)	1.34 m.

Therefore this vessel can use the Umm Said Channel only if the height of tide is equal to or greater than 1.35 m. at the time of passing the outer end of the outer channel.

Ship B – Product Carrier 85,000 d.w.t.:

Sailing Draft	9.40 m.
Required Minimum Underkeel Clearance	+ 0.91 m.
Depth of water required	10.31 m.
Minimum depth of water at Chart Datum	10.97 m.
Height of tide required (minimum)	– 0.66 m.

Therefore this vessel can use the Umm Said Channel at any state of the tide.

Note: For vessels loading to drafts which are close to the limits of the Umm Said Channel, the small mooring launch is available to allow ship's officers to make a visual inspection of the draft prior to sailing.

The Pilot carries an up-to-date set of tide tables and will perform the tidal calculation in advance of the ship sailing to ensure that the margins of safe underkeel clearance are maintained. If the Master requires further information regarding this matter prior to arrival at Umm Said, he should contact the Terminal through the normal method.

Also see "Terminal Information" – "Berth Limitations".

Navigation in Shallow Waters: The navigation of deep drafted vessels at high speeds in shallow waters introduces certain hazards. Pilots and Masters of ships should be guided by the following:

- *(a)* Due consideration should be given to the effect of draw down at speed on vessel's draft in shallow water, bearing in mind vessel's trim.
- *(b)* If possible, confirm actual height of tide against predictions and if not, bear in mind that after strong winds the actual height of tide may be reduced and extra caution must be exercised for a few days during and after bad weather.
- *(c)* Ensure accuracy of vessel's draft reading, including the midship drafts, having in mind the tendency of vessels to sag and the adverse effect of a small list.
- *(d)* Note that list can mean an appreciable increase in draft.
- *(e)* When strong tidal streams are running across a channel, extra vigilance is required, and allowance made for set, particularly at reduced speed, to ensure vessel proceeds along mid-channel.

Particular attention should be paid to rounding the S.E. Arrif Buoy on a flood tide, especially when heading South. Extra allowance for set should always be made.

HEALTH: (Quarantine and Medical Clearance). Medical attention to Masters and crews of ships provided by Q.G.P.C. Medical Officer when asked for by Master.

For dry cargo vessels, the medical facilities are arranged through Agent.

RADIO: Doha Radio – A7D – continuous watch on W/T 500 kHz, R/T 2182 kHz and VHF Channel 16.

Doha Port continuous watch on R/T 2182 kHz and VHF Channels 16 and 14. Umm Said Terminal for channel clearance keeps continuous watch on Channel 16.

When advising their ETA ships must state their last port of call within the previous 21 days and report any sickness on board. If the last port of call is Bahrain or Ras Tanura, the previous port must be stated.

Radio Messages: Vessels are requested to inform Petroqat, Umm Said by cable of their ETA at (M) Mishut Light Buoy, 72 hours, and confirm 24 hours and 12 hours prior to their arrival. It should be clearly indicated that times quoted are in GMT. They should also state the quantity of cargo, in long tons, the maximum loading rate required, deballasting time and whether able to load and discharge ballast concurrently. Any crew changes and/or medical treatment required should also be notified in this cable.

These cables should be addressed to Petroqat, Umm Said, and passed via Doha Radio.

The following cable is sent to all vessels by Agent (Petroqat):

Quote:

Advise your ETA at pilot station Mishut (M) Buoy in GMT 72 hours and confirm 48 hours, 24 hours and 12 hours before arrival. Pilotage is compulsory and in order to confirm pilot boat arrangements essential you advise firm ETA 48 hours before arrival to avoid any delays. Rig combination accommodation/pilot ladder on Lee side before arrival. Pilot hoist and weighted heaving lines must not be used. Tugs are available if required. Please advise your requirements 48 hours in advance.

It is preferred that mooring hawsers in general consist of rope where possible but all wire moorings or wires with rope tails are acceptable. Please note, however, that for safety reasons, all springs which are connected to the main jetty must be of rope or wires with rope tails.

Please advise your last cargo, and confirm that your tanks are cooled down and ready in all respects to receive your nominated cargo. Butane and propane can be loaded concurrently if required. Loading lines are 12 in. diameter and vapour return lines are 8 in. diameter all fitted with Class 150 ASA flanges. Your attention is drawn to the Prohibited Anchorage (Lat. 25° 10′ N.) safeguarding the submarine pipelines laid in the vicinity of Wakrah (W) Buoy.

If your vessel is fitted with telex which has high (75B) and low (50B) speed transmission, please ensure that your machine is operating on low (50B) speed mode to ensure that we receive clear, ungarbled text.

Petroqat Umm Said

Unquote.

Telex Messages: Vessels fitted with telex machines may make contact through Telex No. 4050 Qpausd Dh. However, only the low (50B) transmission mode should be used to ensure the receipt of clear, ungarbled text.

High (75B) speed transmission mode must not be used.

VHF: Umm Said Terminal is equipped with VHF radio equipment operating on Channels 6, 8, 9, 10, 11, 12, 13, 14, 15, 16, 17, 67, 68, 69, 70, 71, 72, 73, 74 and 77 of international maritime mobile telephone service.

A continuous 24 hour listening watch is maintained on Channel 16, the call sign being "Umm Said". The range of station is approximately 50 miles.

Also see "Pilotage".

Berth Radio Frequency: Tanker berthing/loading operations are carried out using intrinsically safe portable VHF radio sets on a frequency of 155.975 MHz (transmit and receive). These radio sets also have the facility to use VHF Channel 9.

TUGS: The use of tugs is compulsory and is as follows:

North Berth: Tugs not used.

South Berth: One tug used during berthing. Tug may be utilised for unberthing if weather conditions are unfavourable.

NGL Jetty: Two tugs used for both berthing and unberthing.

NODCO Jetty No. 6: Two tugs for berthing and unberthing.

QAPCO Jetty No. 19: One tug used for berthing, assuming that vessel is fitted with an operational Bowthruster unit. For unberthing, the use of a tug is at the Pilot's discretion and will depend upon the weather conditions at the time.

Given sufficient prior notice a tug can usually be made available on request.

BERTHING: Pilots act in same capacity as Mooring Masters in the berthing of vessels, after which they supervise raising of flexible hoses and connection to ship's manifold. During loading operations they act as the Corporation's representatives.

Vessel's crew are required to assist with hose connecting.

North Berth: Crude Oil: North Berth is a Single Point Mooring in position Lat. 24° 53′ 37.2″ N., Long. 51° 34′ 54″ E., connected to the shore installation by a 36 in. submarine pipeline. The seaward end of the pipeline and buoy terminates in 2×16 in. × 900 ft. flexible floating hoses.

Stabilised Condensate: SPM is also designed to accommodate vessels for loading stabilised condensate. The submarine pipeline is 30 in. in diameter and the seaward end of the pipeline and buoy terminates in 2×16 in. × 890 ft. flexible floating hoses.

Gear to be Provided by Tankers:

- *(i)* General: All tankers berthing at the SPM will be required to have situated on the foc'sle head a Tongue Type bow stopper capable of accepting a 3 in. diameter chafing chain and manufactured and fitted in accordance with the Oil Companies' International Marine Forum and Classification Societies' Recommendations regarding the standard of equipment employed in the mooring of ships at Single Point Moorings. In addition, all tankers mooring at either the SPM or CBM berths must comply with the OCIMF standard for Oil Tanker Manifolds and associated equipment.
- *(ii)* North Berth (Crude): Vessels are moored by a single hawser from bow to buoy.
  The following equipment should be carried by each vessel:
  1×4 in. circumference × 40 fathom messenger rope, one axe, crowbar and large hammer ready for use at the bow.
  One good boat rope at least 200 ft. long, ready at accommodation ladder position.

Derrick or crane rigged over the portside manifolds should be capable of lifting 16 in. floating hose to a height of up to 30 ft. above deck (S.W.L. 15 tons). 2×1 tonne chain blocks for hose connection.

Reducers or adaptor (if necessary) bolted to the ship's manifold flanges so as to take 2×16 in. loading hoses.

(iii) North Berth (Stablised Condensate): Stabilised condensate is loaded through the multiproduct SPM at a maximum loading rate of 4,000 tonnes/hour. From the shore, the cargo passes through a single 30 in. sea line to the SPM and then into a single 20 in. floating hose, culminating in 2×16 in. overrail hoses which are connected to the ship's portside manifold.

Mooring Arrangements: For vessels arriving at this port without the approved type of "AKD" stoppers fitted, the Terminal will supply suitable snotters and shackles. These will be utilised forward to make fast the chafe chain (attached to the end of the SPM Mooring rope) to a suitable set of ship's bollards. The Pilot will advise as to this arrangement.

However, it should be noted by all Master that, for vessels that are anticipating returning to Umm Said to load Naphtha, they should inform their Owners/Charterers of the necessity to have a suitable "AKD" stopper fitted at the earliest opportunity. This is a safety requirement of the OCIMF for all vessels loading at SPMs. Vessels which fail to comply with this recommendation after a reasonable period of time (to be determined by the Terminal) will be refused entry to the port of Umm Said on safety grounds.

Equipment to be supplied by the vessel will be the same as that for vessels loading crude oil at the SPM with an additional length of messenger rope required aft for the effective "tying-off" of the crude oil loading hoses, which would otherwise be floating free and in danger of fouling the ship's propeller.

Warning: Ship's anchors must never be used within 0.5 miles of this berth or the 36 in. submarine pipeline and must therefore be well secured at all times.

South Berth: Crude Oil: The South Berth consists of a Conventional Buoy Mooring, connected to the shore by a 24 in. submarine pipeline. The seaward end of the pipeline terminates in 2×16 in. × 240 ft. flexible hoses.

Mooring: Vessels are moored to this berth by the use of the ship's two anchors and wires from 6 mooring buoys, (five aft and one forward).

The following equipment will be required on board each ship *in addition* to the equipment required for the North Berth (see above).

Port and starboard anchors with at least 13 shackles of anchor chain on each.

Five mooring wire drums aft and one on the portside of the foc'sle. These drums will be used for heaving up the 4.75 in. circumference wires from the mooring buoys. Vessels should provide either completely empty drums and 4 in. circumference messenger ropes of sufficient length to reach the waterline. Alternatively, the mooring wires may be spooled directly on top of the ship's wires, providing that the latter are neatly stored and sufficient space is available on the drum. However, it is recommended to remove any fibre rope, rope tails and shackles from drums.

TERMINAL INFORMATION:

Berth	*Max. t.p.h.*	*Fixed sea-line*	*Over rail hoses*
North (SPM) - Crude	7,000	One – 36 in.	Two – 16 in.
North (SPM) - Stabilised Condensate	4,500	One – 30 in.	Two – 16 in.
South (CBM)	5,000	One – 24 in.	Two – 16 in.

Depth of Water: Available depth of water at seaward end of sea-line is as follows:

North Berth (SPM)	65 ft. (19.6 m.)
South Berth (CBM)	48 ft. (14.6 m.)

An allowance of 8 ft. for South Berth has been made for height of sea-line end cradle above the sea bed.

Berth Limitations:

North Berth (SPM)	– 320,000 Summer d.w.t. Bow to manifold 590 ft.
South Berth (CBM)	– Maximum 320,000 tons Summer d.w.t. Minimum 50,000 tons Summer d.w.t.

Note: Minimum size of vessels at CBM is governed by vessel's length – 650 ft. minimum.

Ballast:

(i) It is essential that vessel is adequately ballasted to ensure safe handling and manoeuvring. Please comply with the Mooring Master's request as to ballast quantity and disposition.

(ii) Umm Said is an open roadstead and subject to sudden changes in weather. *All tankers will be required to maintain a minimum of 20% of Summer deadweight ballast/load condition at all times.* An adequate forward draft must be maintained at all times and the freeboard from waterline to the mooring Panama Fairlead must never exceed 25 m. Vessels in light condition in strong winds risk parting the mooring hawser. Masters of all vessels should note that, should a situation arise that a vessel has to vacate the berth due to adverse weather or for any other reason, the vessel must have on board sufficient ballast/cargo to enable it to manoeuvre with safety. Thus it is of great advantage to commence loading whilst discharging ballast or prior to completely ballasting.

Note: No vessel will be allowed to reach a condition where she is "Flying Light".

Loading Operations: After the vessel has been securely moored in berth, the hoses are lifted and connected to the ship's manifold.

The Mooring Master will not transmit any loading instructions to the shore until the officer-in-charge of the deck is satisfied that the hoses are connected correctly and that all valves have been set for receiving cargo.

Monitoring of Cargo Quantity: During loading, hourly checks of vessel's tanks shall be made by ship's personnel to determine cargo loaded comparison with shore figures if required. This is to prevent loss of oil through a leaking hose, and particularly applies at night when seepage of oil can remain unobserved.

Pressure Surges: Closure of ship's valves against the flow of oil results in increased hose line pressure. In case of total shutdown, a shock wave can cause severe damage to the shore installation.

At all times, sufficient tanks must be open to safely accommodate the current flow rate. Any valve closure that is likely to cause a rise in pressure must be advised to the pilot *prior* to shutting down.

During "Topping-off", the pilot will be on hand, and will maintain contact with shore control to ensure the regulated decrease in loading rate required for safe operation.

Completion of Loading: When loading is completed, hoses will be disconnected and lowered, under the supervision of the Mooring Master.

Ships will then proceed to an anchorage allocated by the Mooring Master or direct to sea upon receipt of documents.

NGL Jetty: This is a 'T' type jetty with breasting dolphins flanked either side by 2 mooring dolphins. Water depth at the berth is 42 ft. (12.8 m.). The jetty is fitted with a telescopic ladder.

Max./Minimum Size:

LOA: 550 ft. – 950 ft.

Capacity: 30,000 cu.m. – 120,000 cu.m.

Mooring and unmooring operations are restricted to daylight hours. The use of 2 tugs is mandatory for berthing and unberthing at this jetty.

Products loaded are Butane, Propane and Condensate. Vapour recovery lines are provided for Butane and Propane and must be connected. Vessels without provision for this connection will not be accepted.

Loading Rates are as follows:

Butane 1,200 tonnes p.h. (12 in. loading line, 8 in. vapour return line).
Propane 1,200 tonnes p.h. (12 in. loading line, 8 in. vapour return line).
Condensate 1,500 tonnes p.h.

Bulk Ethylene Jetty: Ethylene tankers are moored at the Qatar Petrochemical Company's facilities at Berth No. 19. Liquid ethylene is loaded through one Chicksan type 12 in. loading arm and there is a similar 6 in. vapour return arm on the North side. Flanges are Class 150 ASA.

Total development height of arms is 46 ft.

Maximum loading rate 600 tonnes p.h.

Mooring and unmooring operations are restricted to daylight hours.

Tugs are available to assist in mooring and unmooring.

Mooring: The jetty has bollards spaced at 17 m. intervals. The jetty fendering consists of solid rubber, cylindrical fenders of 1.5 m. length and 1.0 m. diameter, spaced at approximately 10.0 m. intervals.

Mooring Arrangements:

1. Vessels moor in either direction at Pilot's discretion.
2. The actual "Tie-up" is 3, 3 and 2, fore and aft (3 head/stern lines, 3 breast lines and 2 springs).
3. There is no restriction on the LOA because Ethylene tankers are all of a certain size, which can be accommodated quite safely at the present moment. As a general guide, any vessel having a stern to manifold distance in excess of 94.0 m. should ask the Terminal for further details prior to arrival.
4. Minimum depth of water at berth is 42 ft. (12.8 m.).

Product Loading Berth: *NODCO – Berth No. 6:* The jetty has bollards spaced at 21.5 m. intervals. The jetty fendering consists of solid rubber, cylindrical fenders of 1.5 m. length and 1.0 m. diameter spaced at 10.5 m. intervals.

Mooring Arrangements:

1. Vessels may moor in either direction at Pilot's discretion.
2. The actual "tie-up" will be 3, 3 and 2, fore and aft (3 head/stern lines, 3 breast lines and 2 springs).
3. Maximum permitted LOA 780 ft. (238 m.).
4. Maximum bow or stern distance to manifold 390 ft. (119 m.).
5. Maximum beam 45 m.
6. Maximum arrival displacement not to exceed 60,000 tonnes.
7. Minimum depth of water at berth 13.00 m.
8. Extreme care should be taken to tend moorings and gangway, especially in N.W.ly winds.

Loading Arrangements:

1. 2×8 in. loading arms for heavy fuel oil.
2. 2×8 in. loading arms for other products (white oils).
3. The pumping rates are as follows:
   Heavy fuel oils: 1,200 cu.m./hr. with 2 loading arms and 500 cu.m./hr. with 1 loading arm.
   White oils: 1,000 cu.m./hr. with 2 loading arms and 400 cu.m./hr. with 1 loading arm.

CARGO HANDLING FACILITIES: Government Pilots provide berthing assistance. See "Doha".

Max. draft permissible at any state of the tide – 33 ft.

Max. draft permissible at HW – 39 ft.

Max. LOA – 850 ft.

Berth	*Length*		*Depth*		
No.	(m.)	(ft.)	(m.)	(ft.)

QAFCO N	212	700	11.8	39.0	Ammonia
QAFCO S	212	700	12.0	40.0	Urea

Qatar Fertiliser Company (QAFCO): QGPC (Oil and Gas) do *not* supply pilotage or agency services for vessels utilising the QAFCO jetty.
Arrival Information: Masters should telex their ETA Umm Said 7 days, 72 hours and 24 hours in advance.

The Telex address is: Shipping Section, 4215 QAFCO DH.

The time for tendering "Notice of Readiness" is the anchoring time at the Freighter Anchorage in Umm Said.

Please do not tender N.O.R. upon reaching the Mishut Buoy, as this pilot boarding area is not applicable for vessels using the QAFCO installation.
(QAFCO) Jetty: General: Finger Jetty 700 ft. long and 100 ft. wide, and lies in a direction 310° – 130° (T).

Fixed navigation beacon with one flashing light and one red light mounted one above the other on the seaward extremity of the jetty.

Berthing on both sides, North for bulk Urea and Ammonia loading and unloading grain, and South side for bagged Urea loading only.

Gravity fendering arrangements on jetty head protected by tubular rubber slings.

Bollards over the full length of the jetty head.

Lighting by conventional street lightings.

Jetty approach is 1,200 ft. long with a roadway 20 ft. wide.
Operational Equipment:

North Berth -	Ammonia Arm	1×10 in. liquid loading arm at a fixed point (Class 150 ASA).
	Bulk Loader	One mobile bulk urea automatic shiploader.
	Grain Unloading	6 unloading points for connecting 2 mobile grain unloading machines.
South Berth -	Bag Loaders	Two mobile bagged urea automatic ship loaders.
Loading Capacities		Ammonia at maximum 450 tonnes/hr. Bulk Urea at minimum 400 tonnes/hr. Bagged Urea at maximum 125 tonnes/hr.

CARGO: *Inert Gas System:* The Terminal will not accept any oil tanker which is not fitted with a fully operational Inert Gas System, and does not have all tanks fully inerted prior to commencement of loading.
Flash Point: Flash point of Qatar Crude is below 32° Fahrenheit.
H_2S Content: Qatar (Land) Crude contains concentrations of H_2S (sulphuretted hydrogen). This is an evil-smelling poisonous gas which can be lethal depending on concentration of gas in the air inhaled. It can be detected normally by its smell, but a high concentration of the gas rapidly paralyses sense of smell and may lead to a false sense of security. It is, therefore, important that when the presence of the gas is detected the area or compartment concerned must be left with all possible despatch until adequate ventilation can be carried out. The explosimeter will not detect this type of gas.

It is not intended to exaggerate the dangers of H_2S and if a vessel is fitted with an operational inert gas system then these dangers can be regarded as minimal. However, in the light of experience gained, the under-noted precautions have been proved necessary to provide against a possible accident:

(a) The accommodation air-conditioning system should be placed into the recirculation mode, so that none of the toxic gas is drawn into the accommodation. *This is essential throughout the whole loading operation and is a mandatory requirement.*

(b) The H_2S meter supplied by the shore should be utilised by Ship's Officers whenever they suspect the presence of the gas.
Note: The alarm setting on the meter is set at 10 ppm. The operation of the meter will have been demonstrated by the Pilot/Loading Master to the Chief Officer, who must ensure that all his Officers are fully conversant with its operation.

(c) During loading, venting of tanks should be allowed only through the agreed venting arrangements (as noted in the ship/shore safety check list). *On no account should any tank lids be opened for any purpose whatsoever.*

(d) Manual ullaging of tanks should be kept to a minimum and, if undertaken, personnel should keep to windward of the tank openings and avoid breathing fumes as much as possible. Breathing apparatus should be worn if manual ullaging of tanks is to be undertaken over a prolonged period of in a confined space.

(e) Entry into pump rooms or any compartments where gas can collect should be avoided. If entry is considered necessary, then an approved breathing apparatus and lifeline should be worn by the person entering and other persons should be standing by, and tending the life-line. One of those persons on stand-by should be wearing a second breathing apparatus set and life line, ready to rescue the person entering the compartment should the latter be overcome by fumes.

(f) Breathing apparatus, life lines and oxygen resuscitators should be readily available during all cargo and tank cleaning/gas freeing operations.

(g) During cargo discharging and tank cleaning/gas freeing operations, the gas ejector for the pump room should be kept running.

(h) Please display the notice headed "Hydrogen Sulphide the Invisible Killer" in a cargo control room, in order to ensure that all personnel connected with the loading operation are aware of the dangers.

LOADING:
Notice of Readiness: The Notice of Readiness should be addressed to the "Qatar General Petroleum Corporation (Oil and Gas Operations), Umm Said, Qatar".

The Notice will be *received* by the Corporation Representative, provided that the vessel is ready to load. The normal procedure is to present the Notice to the Pilot who received it at the same time as he boards the vessel, in the majority of cases.

Laytime will commence as stipulated in the export agreement between purchasers and vendors.
Tank Dips: During loading, hourly checks of vessel's tanks shall be made by ship personnel to determine cargo loaded for comparison with shore figures if required. This is to prevent loss of oil through a leaking hose and particularly applies at night when seepage of oil can remain unobserved.

Inspection of vessel's tanks will be made by a ship's Officer before loading and, if required, by a Q.G.P.C. Representative. Opening dips and closing ullages will be taken by ship's personnel and the quantity of cargo calculated.

Particular care must be exercised by ship's personnel, towards completion of loading, in the "Topping-off" of tanks to ensure that the Terminal is given timely advice of any decrease in pumping rate required. Adequate "Stand-by" notice should be given before the final "Stop".
Loading Pumps: Three 2,230 h.p. pumps are used to load crude oil and it is important to note that any rapid changes in the oil velocity may cause pressure surges in the loading system. A pressure surge may rupture the flexible hoses connected to the vessel spilling dangerous quantities of crude oil onto the decks or surrounding areas and may also cause excessive damage to the Terminal installations. To avoid these risks, valve operations and tank switching should be done with extreme care. Please ensure that 15 minutes' notice is given for "Slow Speed" and/or "Stop" instructions. A letter of protest will be issued by the Shore Representative/Mooring Master on any occasion a pressure surge is generated, whether Terminal installations have been damage or not.
Tank Inspection Certificates: Masters should note that Corporation personnel are not authorised to sign dry tank certificates prior to loading. As such, if verification of tank inspection is required, then shipowners should make their own arrangements for a third party survey.
Bills of Lading/Documentation: There is no provision for "Early Departure Procedure" at Umm Said, and all Masters will be provided with a full set of documentation prior to departure. It should be noted that the Agent will sign all original documents on behalf of the Master, and the copies that the Master receives will be stamped to this effect.
BALLAST: In the world today there is a greater awareness of the environment in which we live and the need to ensure that we protect our inheritance for future generations. As such, we ask Masters of all vessels entering Qatari waters to ensure that the ballast to be discharged is clean. You are required to sign a declaration, stating that the ballast to be discharged complies with current MARPOL regulations (Oil content to be less than 15 p.p.m.), and it should be noted that sampling of ballast water may be carried out in Umm Said, and if proven to be in contravention of the current MARPOL regulations, then the ship will be refused permission to discharge that ballast. In effect imposing a severe financial penalty for failure to comply with anti-pollution regulations.

In addition, vessels should ensure that no oily water of any sort is discharged overboard, whether it be from bilges, pump rooms or washed overboard from deck. Scuppers should be effectively plugged and any leaks or overflows of cargo should be contained within the confines of the vessel. Any vessel found to be in contravention of these rules will be liable to heavy fines and liabilities for claims arising from pollution of the sea and shore areas. Where a vessel has caused pollution, it will be held responsible for all the costs of the cleanup operation.

The message is very clear from the Qatari Government. Do not cause any pollution, otherwise heavy penalties are in force.
MEDICAL: Medical and hospital facilities available.
DENSITY: The density of sea water in Umm Said harbour is in the region of 1030 to 1035. However, no "Dock water allowance" should be made when calculating the departure draft, as the density of water in the region of shallowest depth of water may be less than in the Umm Said port area, especially during a flood tide.
FRESH WATER: Available at cargo berths but not at S.B.M., C.B.M. or L.N.G. Berth.
FUEL: Available at Berth No. 6. Also see "Doha".
CUSTOMS ALLOWANCES: The State Laws of Qatar are very strict about the import of liquor and its consumption both on the mainland and on vessels in the harbour. No employee, whether senior or junior, is permitted to import any liquor direct or to bring any liquor ashore from vessels, and under no circumstances should liquor be offered for consumption on your vessel to any Q.G.P.C. employee or any shore personnel. Vessels should seal their liquor store before arrival, and any cameras should also be placed under seal.
REPATRIATION: Immigration/Transit facilities for arriving or departing ship personnel are good. 24 hours notice should be given on name passport details and Seaman's Book No. to ensure minimum delay to travelling personnel. Officers and crew joining a vessel must have Seaman's Books.
DISCHARGE CERTIFICATE: The Master of every vessel loading at Umm Said is handed a numbered Discharge Certificate for completion by the Customs or Port Authority at port of discharge and return by air mail to Qatar General Petroleum Corp., P.O.Box 3212, Doha, Qatar within 40 days of sailing from Umm Said.

Instructions regarding the cable to be sent after discharging a cargo loaded at Umm Said must be strictly followed.

It must be emphasised that failure to comply with this requirement may result in delay or even boycott of the vessel upon return to Qatar.

It is therefore in best interest to ensure that Agent at port of discharge attends to despatch of this certificate and the cable with least possible delay. Airmail should be used for Certificate posting.
N.B. If the cargo is destined for onward transit, the final destination of the cargo must be advised on the Certificate.
SECURITY: The Government of Qatar and the Corporation are anxious to ensure that unauthorised persons do not board vessels loading at Umm Said. Vessel's co-operation is requested in checking the identity of all persons boarding.

Vessels are particularly advised to keep all points of access to vessel under surveillance at all times, and to provide maximum night illumination of vessel insofar as the safety regulations permit.

A State Police Launch is present in the area and may be available for assistance if required.

SHORE LEAVE: No shore leave is allowed in Umm Said, but can be arranged for ship's business purposes.

GARBAGE DISPOSAL: Not available.

Government Regulation: The MARPOL regulations regarding the disposal of garbage are now in force and as such, all vessels entering Qatari waters should take steps to ensure that no garbage is thrown over the side from their vessels. Any vessel found in contravention of this regulation will be subject to a fine, and be made to pay for any clean-up operation.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Qatar Riyals (Q.R.).

GENERAL: *Stores and Provisions:* At Umm Said there are facilities for the supply of stores.

Photography: Photography is prohibited, all cameras on board should be kept in a locker for sealing by Customs Officer on arrival.

Q.G.P.C. Light Dues: A charge is made to cover the provision and maintenance of light buoys in the Entrance and Industrial Channels to Umm Said. This covers one visit to this port, both inward and outward passage.

Qatar Port Dues: The State of Qatar imposes Port Dues on all petroleum carrying vessels which load hydrocarbon substances in one or more of the oil loading ports located in the State of Qatar which includes islands and offshore areas belonging to the State of Qatar.

Note: The G.R.T. for purposes of these calculations will be that shown on the Arrival Report signed by the Master.

M.E.N.A.S. Light Dues: M.E.N.A.S. Light Dues at rates fixed by the Middle East Navigation Aids Service are payable at Umm Said to cover both inward and outward passage through the Gulf.

Industrial channel dues are applicable to all vessels berthing at QASCO/NODCO/Commercial Harbour and QAPCO (i.e. Berths No.1-19).

DEVELOPMENTS: The new Umm Said port, opened in 1977, has a total water frontage of 4.5 km. of which 2.5 km. has been developed to provide deep-water berths and a harbour for small craft. Three berths at the Northern end having 15.5 m. minimum depth of water at MLLW are reserved mainly for the requirements of Qatar Steel Company and 2 berths at its Southern end having 13.0 m. minimum depth of water are reserved mainly for the requirements of Qatar Petrochemical Company. Three additional berths having 13.0 m. and two berths having 10.0 m. minimum depth of water at MLLW are available for specialised and general cargoes.

Inner approach channels and manoeuvring areas have been dredged to serve all berths in the new Port.

In addition there are wharves under construction which will be used by general cargo vessels, Ro/Ro vessels, car carriers and container vessels.

A chemical plant is also being constructed.

SHIPMASTER'S REPORT: 1980 (updated 1990).

Vessel: 210,000 tonnes d.w.

Pilotage: This is now compulsory for the inward passage too for tankers. The Pilot/Mooring Master boards by boat from Doha at Mishut Buoy in position Lat. 25° 16′ N., Long. 41° 47′ E.

Agents/Operators: Qatar Petroleum Producing Authority has now been renamed Qatar General Petroleum Corporation and Notices of Readiness, etc., should be addressed accordingly. Cable address: PETROQAT, Umm Said.

Documents: 2 Crew Lists, 2 Stores Lists, 2 Bonded Stores Lists, 2 Arms and Ammunition Lists and Port Clearance from last port.

Radio: A7S was heard after contact had been established on VHF. The Mooring Master did not know of any ships ever using this station.

SHIPMASTER'S REPORT: January 1992.

Vessel called to load 25,000 tonnes of Jet Fuel.

Restrictions: Daylight berthing/unberthing only.

Tugs: Two tugs for berthing/unberthing. Tugs use ship's lines.

Berthing: Berthed at NODCO Jetty, Berth No. 6, the most Southern end of the new Umm Said port, starboard side alongside with 3 head/stern lines, 3 breast lines and 2 spring lines. All soft ropes (See also "Plan").

Ship is turned before berthing and berths head out on heading 211° (T).

Jetty Layout: Berth No. 6 is part of a long straight quay with fenders of 1.0 m. diameter (approx.). There are 4 loading arms, 2 for black oil and 2 for white products. The black oil arms are the most Northern ones.

No shore gangway, the ship's accommodation ladder could be used.

All bitts on the quay are situated 1.0 m. (approx.) from waterfront. Not a single one further inland.

As the prevailing wind in the Winter is Northwesterly, it is possible for ships to be blown off the jetty in Winter, as there are no bollards for breast lines other than those at 1.0 m. from the quay line.

Loading: Loaded through 2 arms with 8 in. ASA 150 flanges. Max. loading rate per arm 550 cu.m./hr.

NOTES

Please also advise Shipping Guides Ltd.

Reunion Island

POINTE DES GALETS: 20.55 S. 55.17 E. **(See Plan)**

LOCATION:
West Port: 20° 55′ S., 55° 17′ E. The West Port is comprised of the North Dock and the South Dock.

East Port (Baie de la Possession): 20° 54′ 50″ S., 55° 19′ 40″ E. The East port comprises the West Dock (Berths P.10 and P.11).

Arrival time at both ports is the time when the vessel crosses the leading line no more than 2 miles from the breakwaters.

FLAG: French flag.

APPROACHES: *West Port:* Channel and Buoyage: The leading line 102° 30′. In the channel the depth is 10 m., 70 m. wide and is buoyed by 4 spars, 2 on each side.

The leading marks for access to the North Port, South and Fishing Port, respectively 009°, 189° and 260°, are marked as shown below:

North Dock: By day, 2 white rectangular signs, with a thick red line marking the centre line, at night, 2 fixed red lights.

South Dock and Fishing Basin: 2 rectangular white signs with a black vertical line marking the centre line by day. 2 fixed green lights by night.

PILOTAGE: *East Port and West Port:* Compulsory for all vessels over 50 m. LOA. Pilot is normally ordered by ship's Agent, or in particular cases by the Harbour Master if contacted by VHF beforehand. Pilot launch carries regulation pilot signals. Pilot boards at the entrance to the port about 1 mile to 2 miles from the breakwaters. Pilot on VHF Channel 16, it is recommended that a watch be kept and ETA confirmed.

Working Hours: Between 0430 hrs. and 2200 hrs. in the East Port, and between sunrise and sunset in the West Port.

ANCHORAGES: *East Port and West Port:* There are 2 anchorages in the roads near the port.

(a) In Baie de St. Paul in depths of about 40 m., well marked and safe except in very strong swell. Private mooring buoy available in bay.

(b) In Roads of La Possession unmarked anchorage and little used.

If vessel requires a Pilot for anchoring, then anchorage dues are incurred. Vessels anchoring by their own means do not incur charges.

RESTRICTIONS: *West Port:* Manoeuvring is best done in the early morning or at daybreak because during the day wind can make movement difficult. The current on the entry leading line varies in strength (between 1 and 2 knots) and direction. Its direction can only be determined by careful observation during the approach. As a consequence ships should be ready to anchor on instruction from the Pilot while transiting the channel.

Berth No. 8 unsafe during swell periods.

MAX. SIZE: *West Port:* Under certain conditions, the topography of the port and jetties, access is limited to the sizes below:

North Dock: Length 160 m., beam 22.0 m., draft for entry 8.5 m. Greater with preliminary agreement of the Port Authorities. Departure draft fixed by the Port Authorities. (Length 160 m. if draft less than 8.50 m.).

South Dock: Length 175 m. Beam 24 m.
  Draft 8.0 m., mean draft for inbound vessels.
  Draft 8.5 m., mean draft for outbound vessels.
  Draft 8.5 m., max. draft for inbound vessels.
Length 160 m. Beam 24 m.
  Draft 8.5 m., mean and max. draft for inbound vessels.
  Draft 9.0 m., mean and max. draft for outbound vessels.

In any case, a normal trim is recommended.

Fishing Basin: Length 55 m. draft 4.50 m.

Otherwise entry or departure are under Port Station control. Normally entry only occurs at the following times depending on the season. Maximum daylight 0445 hrs. – 1845 hrs.

East Port: LOA 215 m., draft 12.0 m. and beam 34 m.

RADIO: Saint Lys or Saint Denis Radio.

VHF: Harbour Master's Office equipped with VHF. Call on Channel 16, no watch between 2200 hrs. and 0400 hrs.

TUGS: 2×2,400 h.p. and 1×800 h.p. Only used to assist vessel manoeuvring in the port. Tug joins vessel in outer harbour. Tug will also assist on roads (deliveries of mail).

BERTHING: *West Port:* Berth assigned by Harbour Master, basis vessel's length and draft. Oil tankers berth in the South Dock (P.8 and P.9). Molasses tankers berth in the North Dock (P.2). GPL, bitumen and cement tankers berth in the outer harbour at Dolphin Berth (P. H.). This berth was available for tankers less than 160 m., but now never used.

Fore Port: Channel: 70 m. usable width. Turning circle 300 m. Dredged to 10 m. Max. draft available for vessels less than 130 m. LOA: 8.00 m. Max. draft for vessels 160 m. LOA: 7.50 m. (forward) and 8.5 m. (aft).

North Dock: Narrow entrance. Max. size: 160 m. LOA and 22 m. beam. Max. draft 8.5 m.

Berth 1: 160 m. length, 8.50 m. depth.

Berths 2, 3, 4: Total length 366 m., 9.00 m. depth. Berth No. 4 used by French Navy.

Berth 5: 150 m. length, 7.5 m. depth. French Navy.

Berth 6: 140 m. length, 6 m. depth. French Navy.

Berth 7: 210 m. length, 9 m. depth. Bulk sugar loading berth, rate 400 t.p.h.

South Dock: Berths 8, 9: Each 190 m. length, 10 m. depth.

Berth S: 120 m. length, 8.5 m. depth.

Fishing Basin: 6 berths, 70 m. length, 5 m. depth. Max. draft 4.2 m.

The depths above are dredged depths.

Forklifts for handling 40 ton containers with spreaders at certain berths.

East Port: Located at Baie de la Possession, now handles 75% of the traffic for the Pointe des Galets.

Berthing is carried out between the hours of 0400 and 1900. Departures are possible up to 2200 hrs.

Approach to the port is easy. The leading line (162° True) is marked by two black diamonds on white square towers. At night, two red lights are exhibited.

In the daytime there is occasionally a strong Northerly wind and a current of 0.5 knots may be experienced. There is no swell, except at times of cyclone.

Length of quay (Berths P10 and P11):	510 m.
(Berths P15 and P16):	510 m.
Depth alongside:	12.8 m.
Depth of access channel:	13.20 m.
Width of access channel:	130 m.
Turning Basin:	300 m. × 400 m. with depth 13.2 m.

Berth P10 receives 90% of petroleum product for the port. Clinker and containers also discharged at the berth.

Berth P11 is a container terminal and handles 90% of the traffic for the port.

Berths P10 and P11 have special access conditions whereby the authorities give priority to regular users. Berths equipped with 2 post-Panamax gantry cranes. A third crane will be available early 1995.

Containers are handled at a rate of 250 per shift of 7 hours, with 4 or 5 gangs, depending on number of cranes on board the ship.

Berths P14 and P15 handle conventional cargo, bulk cargo and cars.

Bunkers are not available.

BULK HANDLING FACILITIES: *West Port:* Berth No. 7: Sugar loaded at 1,400 t.p.h. Max. draft on completion of loading is 8.20 m.

Berth No. 9: Portable vacuator for discharge of cereals, capacity 200 t.p.h.

CRANES: No shore cranes.

STEVEDORES: Normal working hours 0700 – 1400 hrs. and 1400 - 2100 hrs. Morning shift may be extended to 1700 hrs. if vessel is going to sail.

MEDICAL: Doctor and hospital facilities available.

TANKERS: Oil tankers berthing to P.10 must be fitted with I.G.S. The system must be operated from time of entering until time of leaving French waters.

Small tankers berthing to P.8 and P.9 may be authorised to discharge F.O. whose flash point is less than 63°C. Authorisation has to be obtained beforehand from the Port Authorities.

Also see "Berthing".

Operator's Report: (West Port) (Updated 1992).

Approaches: Currents generally set across the harbour entrance and vessels should not approach within one mile of the port without the Pilot onboard. Also it has been reported that when entering the channel at sunrise the sun's glare distorts and obscures some important ranges and structures.

Entry: The outer harbour is entered via a dredged channel of 10 m. (36 ft.) depth, about 70 m. (213 ft.) wide through the breakwaters. When entering the harbour between the breakwaters, a moderate speed may be necessary to compensate for cross currents. Once inside the breakwaters vessels have less than 1,500 ft. (450 m.) to the end of the outer harbour, to stop and turn 180° for berthing. Four buoys indicate limits of 8.5 m. water depth at side of dredged channel.

Weather: The port is subject to "rollers", ocean waves which though infrequent are not predictable. They occur at certain intervals, in any weather and during a perfect calm, unaccompanied by any change in the atmosphere or other indication. The first appearance is a long swell, not assuming the shape of an ordinary wave until it reaches the shore, on which it will burst with great violence, sometimes assuming greater proportions than during a cyclone.

Masters are advised to discontinue cargo transfer operations and to vacate the berth before the swell reaches the stage where the motion imparted to the ship and the consequent bumping against the pier might result in severe damage to the vessel. (A swell warning is in existence).

General: Petroleum products are stored at the Shell Terminal for Esso, Caltex, Total and Elf. White products and gas oil are discharged at Berth P10 (East Port), while heavy F.O. is discharged at Berths P8 and P9 (West Port).

Port Approaches: The approach to the port is clear of navigational dangers, but soundings are of little value as depths of 200 fathoms can be found one mile offshore. However, the land provides good radar echoes and visibility is usually good, except during heavy rain.

Special Preparations: Both anchors must be ready before arrival. Mooring lines, gangway and manifolds must be prepared for berthing starboard side to Berth P9. Ships mooring at Berths P8 and P9 must have lifting gear ready, respectively on port and starboard side, to lift cargo hoses.

Special Conditions: A tanker at Berth PH near the breakwater may have to leave the harbour and return later if another large vessel is to be turned in the outer harbour.

Tugs: Normally one tug assists making fast as required by Pilot after vessel enters within the breakwaters. Tug normally pushes, but if making fast use tug's lines.

Berthing Procedures:

Berth PH – Outer Harbour: Vessels bound for Berth PH on the North side of the outer harbour pass the berth on their port side soon after passing through the breakwaters. They are then turned to starboard with the aid of a tug and berth starboard side to the pontoons, heading seaward.

Berth PH consists of a central "T" shaped platform supporting 2 hard arms and it is protected by a breasting dolphin of steel piles. The face of this dolphin is slightly inside the line joining the 2 concrete breasting structures on which the ship lays when berthed. Resilience of breasting dolphins is rather limited.

The disposition of the bollards is not particularly favourable for a proper lead of the spring lines when the ship is positioned alongside.

Berths P8 and P9 – Bassin Pres. J. Caille: After having passed through both breakwaters the vessel turns to starboard with the aid of the tug and berths head into the dock port and starboard side to, respectively to Berths 8 and 9.

These are non-dedicated tanker jetties and are normally used for general cargo. Ships carrying gas oil are shifted to these berths from Berth PH The hose is connected purposely for the operation. Bollards are placed along the edge of the jetty. Breast lines cannot be secured. Both berths are well sheltered and not affected by swell.

Pipe-lines are laid under the quay and flexible hoses are connected each time the ship has to discharge.

Weather at Berth: Weather conditions are generally good except during the cyclone season which occurs November to March. The cyclone warning system is well developed and early warning can be expected. When cyclone warning is received, ships are advised to be ready to leave the port.

Fendering: The fendering system at Berth PH is made of rubber faced timber and is considered insufficient if unusually high swell imparts motion to the ship.

Gangway: Ship's gangway is used.

Facilities:

Water is available at the quays.

Fuel Oil available ex-quay at Berth P8 and P9.

Provisions are available but expensive.

Ship's stores are mostly imported and are therefore, expensive. Availability uncertain.

Ballast, Slops and Tank Cleaning: There are no slop or diry ballast facilities, and tank clearning is only allowed with special permission from the Harbour Master when 2 tanks may be made available.

Engine room slops may be discharged by prior arrangement.

Cargo Connections: Berth PH has 1 × 10 in. and 1 × 8 in. counter-balanced hard arm for handling of gas, rum, molasses, cement and bitumen. Connection is a bolted flange, ASA standard.

Berths P8 and P9 have flexible hoses, 6 in. for gas oil and 8 in. for fuel oil. Connection is a bolted flange.

Ullageas and Temperatures: Taken by a terminal representative accompanied by a ship's officer.

Oil Pollution: Pointe des Galets and all Reunion is covered by the French National "Polmar" plan to cover oil pollution prevention.

Fire Fighting: The port has its own fire brigade and both tugs are equipped with foam and water. There are also fire hydrants on the quays.

Also see "Shipmaster's Reports" – January 1987 and May 1989 (East Port).

DENSITY: 1025.

FRESH WATER: Available at all times by pipeline at the quays. Rate 10 t.p.h. minimum.

FUEL: Fuel and marine diesel available at Berths No. 8 and 9.

REPAIRS: Repairs can be effected by P.I.B. Tel: 43.80.05. Telex: 916614. Slipway facilities for vessel of 55 m. LOA and draft 4.5 m.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Normally performed by ship's crew who also unlash and hook containers at the 3rd height.

REPATRIATION: All facilities available for crew change and repatriation.

AIRPORT: 30 km. away, daily connections world-wide (Air France, Air Mauritius, S.A.A., Reunion Air Service, Point Air and Air Madagascar).

TIME: GMT plus 4 hours. No alterations during the year.

HOLIDAYS: No cargo work on May 1st or November 1st. Possible to work on January 1st, Easter Monday, May 8th, July 14th, August 15th, November 11th, December 20th and December 25th.

TELEPHONES: *West Port:* Police 42.00.17 and 42.15.80. Ambulances 18 or 42.06.53 (Private), Fire 18, Harbour Master 42.09.12. Telephones can be placed onboard at all berths.

East Port: Police 42.00.47. Ambulance and Fire 18.

SERVICES: Harold J. Thomson (Indoceanic Services) – P&I Club representative (Oceanus, Strike, London Mutual and others). Speaks excellent English, will assist with any shipping services or supplies. Tel: 42.85.85. Telex: 916252. Fax: 42.03.10.

SHORE LEAVE: Crew are allowed to go ashore.

IDENTIFICATION CARDS: Seaman's Book compulsory, to avoid visa problems.

GARBAGE DISPOSAL: Skips are placed alongside. Garbage is collected when ships depart. Contact Tel: 420130 or 432730 for details.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: French Franc (F.Fr.).

DELAYS: General cargo rate 500 – 1,000 tons per day, depending on category and conditions.

SHIPMASTER'S REPORT: 1978 (updated 1988). West Port.

Documents: 3 Crew Personal Effects Lists, 3 Crew Lists, 3 Bonded Stores Lists. Declaration of Health (Supplied on arrival).

Pilotage: Pilotage compulsory. Pilot boards 1 mile off breakwater, minimum of 12 hours' notice required.

Anchorage: At Saint Pauls Bay, 5 cables offshore in depth of 20 fathoms – the water is too deep further offshore.

Restrictions: Vessels can enter and leave at any stage of the tide during daytime. Max. beam for North Port 22 m.

Max. Size: Length 175 m. with draft 8.0 m. and length 160 m. with draft 8.5 m.

Tugs: Normally 1 tug required for berthing and unberthing in the North and South Port. (3 tugs available in 1986).

Radio: Radio station – Saint Denis Radio "FFD". VHF Channel 26 (Hours: 0800 – 2000 hrs. weekdays, 0800 – 1200 and 1500 – 1800 hrs. on Sundays and 24 hours during cyclone periods).

VHF: Pilot and Port Authority Channel 16.

Special Bulk Facilities: Bulk sugar berth – rate 400 t,p.h. No quay cranes – no Ro/Ro facilities. Facilities for handling containers and storage space for containers in North and South Dock in the West Port and at the East Port.

Fresh Water: Available.

Repairs: Facilities available.

Services: Provisions, Bunker fuel, diesel available.

SHIPMASTER'S REPORT: January 1987.

East Port: Tankers berth at Berth P10.

Currents of opposite direction are observed. At a distance of 3 miles off the breakwaters an Eastward current of 1.5 knots experienced and when 1 mile off, a Westerly current of 1.0 knots experienced.

SHIPMASTER'S REPORT: May 1989. East Port (Updated 1994).

Vessel called at La Reunion laden with mogas, gas oil and jet fuel, which was part discharged in the port "Port de la Possession".

Port: Port de la Possession (locally also referred to as East Harbour or East Port).

Documents:

5 copies Crew List.
1 copy Vaccination List.
2 copies Stores List.
2 copies Personal Effects List.
1 copy Maritime Declaration of Health.

Local Time: GMT plus 4 hours.

Communications: Communication with St. Denis Radio/FFD is rather difficult as only MF facilities available and watch keeping is during daytime only.

VHF contact can be established on Channel 16, with Port Control, but only during office hours (0400 hrs. – 1900 hrs.).

Port Authority and Pilots work from 0400 hrs. – 1900 hrs.

Anchoring: No anchoring facilities are available and vessel must drift whilst awaiting berth. Port Control confirms on VHF, time of Pilot boarding and position.

Health: Radio Free Pratique is available through the Agent.

Cyclone: Cyclone season is from January to the end of March.

Berthing: Two powerful tugs of 32 tons' bollard pull are used for berthing. Only 2 berths are available, giving access to vessels up to 215 m. LOA, 34 m. beam with a draft of 12.5 m., of which one berth is used for tankers.

Tankers: The dock has one portable Chicksan of 10 in. diameter which connects the vessel's manifold to the underground pipe. Therefore only 1 product can be discharged at a time.

Shore tanks are about 3 km. away (16 in. pipeline).

Fire Fighting: Being a container dock, portable shore fire-fighting equipment is made available for tankers, consisting of 2 lorries with water sprayers.

Telephone: Provisions for placing shore telephone on board is available.

Fresh Water: Fresh water is available at both berths.

Bunkering: No bunkering facilities at present at the East port.

Medical: The town is only 3 km. away, with adequate medical facilities. The Doctor visits the ship if requested by the Agent. However, for cases which require the attention of a Dentist or an Optician, the crew member is taken ashore by the Agent. Cholera vaccinations are also administered on board by the doctor, however, for yellow fever vaccination the crew member must go ashore.

Customs: Allowance of 200 cigarettes and 1 bottle spirits is permitted for each member of the crew to be held out of the bond.

Shore Leave: All crew members are allowed to go ashore and no shore pass is required.

Repatriation: All facilities available for crew changes and repatriation.

Airport: Daily worldwide links by Air France, Air Mauritius, SAA, Reunion Air Services and Air Madagascar.

AUTHORITY: Direction Departementale de l'Equipement de la Reunion, Arrondissement Mixte, Subdivision Exploitation du Port et du Littoral,BP 2008, 97821 Le Port, La Reunion, Republique Francaise. *Tel:* 42.09.55.*Telex:* 916428 RE. *FAX:* 42.06.02. *Contact:* R. Goavec, L'Ingenieur des T.P.E., Chef de la Subdivision S.E.P.L.

Port Captain. Tel: 42.09.12. Telex: 916249. FAX: 43.05.52.

NOTES

Please also advise Shipping Guides Ltd.

Romania

GENERAL

DOCUMENTS: After a vessel is alongside the wharf it is boarded by the Sanitary Commission (for the sanitary inspection of crew as well as for veterinary and phitosanitary inspection). On completion of the sanitary inspection the vessel is boarded by the Control Commission. The Master fills in a Form of Declaration (4 copies) which, together with the Cargo Plan, Manifest of Goods, Sanitary Certificates, etc., is handed to the representative of the Agency. Within a maximum of 12 hours after performing arrival formalities the Master or Chief Officer completes the Declaration questionnaire at the Harbour Master's Office. The following documents will be tendered which will be retained until departure:

Certificate of Nationality.
Certificate of Tonnage.
Cargo Equipment Safety Certificate.
Load Line Certificate.
Radiotelegraphy Equipment Certificate.
Safety Construction Certificate.
Ship's Register.

Note: Crew Lists and Passenger Lists must be issued in several copies (about 10 of each). If the vessel is staying more than 12 hours in the port, Provisions Lists, Crew Personal Effects Lists and Bonded Stores Lists should be issued.

PILOTAGE: Pilotage is compulsory in all Romanian Ports for all vessels. See individual ports for details.

RADIO: All radio communications are through Constantza Radio (call sign YQI) on 500 kHz. and 461 kHz. Continuous watch is maintained on VHF Channels 16 and 12.

TUGS: Towage in the roads and in the ports is compulsory for all vessels greater than 1,000 g.r.t. See individual ports for other provisions or exceptions.

STEVEDORES: Orders for stevedores must be made a minimum of 4 hours before starting operations. To apply for stevedores and for gangs of workers contact the vessel's agent.

CUSTOMS ALLOWANCES: A small quantity of goods is permitted for each crew member from the bond. The quantities for a 5 day period are:

Master and Chief Officer: 400 cigarettes and 2 bottles of alcohol each;
Rest of crew: 200 cigarettes and 1 bottle of alcohol.

Quantities in excess of these amounts are kept under customs seal. To renew these quantities from the bond, contact the agent who will contact the customs.

TIME: GMT plus 2 hours.

Summertime: GMT plus 3 hours from the first Sunday in April to the last Sunday in September.

HOLIDAYS: The official holidays in Romania are: New Year (January 1st and 2nd), Easter Monday (March/April), Labour Day (May 1st and 2nd), August 15th; National Day (December 1st), December 22nd; Christmas (December 25th and 26th) and all Saturdays and Sundays throughout the year.

WORKING HOURS: Official hours for starting are 0700 hrs., 1500 hrs. and 2300 hrs.

CURRENCY: 1 Leu 5 100 Bani.

SPECIAL REGULATIONS: From the time a vessel enters the territorial waters of Romania until leaving the zone (12 miles), hoisting of the Romanian flag is compulsory.

Carrying out external maintenance (painting, repairs, etc.) is permitted only during daylight; at nightfall Master's must take all necessary steps to bring the equipment (tools, ladders, platforms, ropes, etc.) back on board.

If a vessel must shift from one berth to another, according to the decision of the Port Authorities, the Master of the vessel is to be advised in writing by the agent at least 2 hours in advance of such shifting. Refusal to perform the shift requested by Port Authorities, is punishable with a fine by the Harbour Master.

In order to prevent the carrying of disease and epidemics into the country by rats, Masters are obliged to install ratguards immediately after berthing. Diameter of ratguards must be at least 50 cm. If ratguards come off ropes due to wind or faulty fastening they must be replaced immediately.

Dock working is not normally available from Saturday morning or the evening of a holiday until 0800 hrs. on the following day or Monday following the weekend.

According to the custom in Romanian ports, Shippers will accept Notice of Readiness only after the vessel has been inspected by the official surveyor appointed by ROMCONTROL Office, who issues a certificate stating vessel's fitness for loading. Survey charges are to vessel's account.

The official survey is compulsory. When loading/discharging tally charges are to vessel's account.

Throwing of garbage overboard is not allowed in the territorial waters of Romania. Failure to observe these rules results in penalties imposed by the Harbour Master. Discharge of ballast and dirty water is not allowed. Once again, failure to observe this will result in fines for pollution being imposed.

Sea Protests are to be issued (5 copies) and handed to the agent or Agency Department within 24 hours of the vessel's arrival. The Notes of Protest are to include abstracts from the Log Book containing details with regard to the respective situation. If the Log Book is presented in a language other than English, 5 copies of translation into English will also be necessary.

Protests with regard to damage caused during loading/discharging operations must be handed over to Agency as soon as possible but not later than 12 hours from the time they occured. The protest has to contain the following items:

time when damage occured;
place of damage;
description of damage;
other details if necessary.

It has to be stressed that any protests handed in later than 12 hours from the time the damage occured will not be taken into consideration by the Port Authorities.

AGENT: Ship's Agent in Romanian ports (state and private companies) may be appointed on long term contract basis or occasionally, by letter or telex before ship's arrival in the loading and/or discharging port.

The major company acting as Ship's Agents and Ship Chandlers is Navlomar S.A. Bucharest, 16 Carol I Blvd., P.O.Box 851, Post Code 70 033. Tel: 13.53.42. Fax: 14.40.71. Telex: 10735, 11783 navlo r. Navlomar have branches in Constantza, Mangalia, Galatzi, Braila, Tulcea and Sulina.

When appointing an agent, Owners have to indicate vessel's name and flag, g.r.t., d.w.t., as well as n.r.t., Suez Canal Tonnage, cargo quantity for port and kind of operation.

Necessary funds for disbursements, including bunkers and special services requested, should be remitted, at agents' request, in free currency, telegraphically or by telex through one of the authorised banks in Romania, in the favour of Navlomar before sailing clearance of the vessel.

Cash to the Master in free currency may be arranged by each Navlomar branch agency if instructed accordingly by the Owner.

In required, Navlomar may also arrange supply of provisions, fresh water and small quantities of bunkers at the roads, weather permitting, lashing and technical materials, deck and engine stores.

Navlomar provides its own form of Bill of Lading.

Duty free shops are available in all Romanian ports in the premises of Navlomar branches.

For international telephone calls, Navlomar provides its own telephonic booths and in Constantza, radio telephone can be installed on board the vessel, if requested.

Motor boats and cars for crew transportation are also available.

BRAILA: 45.15 N. 27.59 E.

LOCATION: Second river port of the Danube, situated West of the Danube Delta between km. 168.5 and km. 175, upstream from Sulina, 19.2 km. from Galatzi (B.A. Chart No. 2835).

Also see "Sulina" – "Shipmaster's Reports".

PORT LIMITS: The limits of the port are marked by km. 168.5 and km. 175.

DOCUMENTS: See "General" before first port.

PILOTAGE: Compulsory for all ships. River pilots are replaced by port pilots in the roads, or during navigation in the port zone.

ANCHORAGES: For maritime vessels and river convoys the roads are situated from km. 166 to km. 168.5 (5 – 6 vessels). Vessels anchor between the channel and the right bank so as not to obstruct navigation in the vicinity of the port.

RESTRICTIONS: Navigation forbidden during poor visibility.

MAX. SIZE: Vessels of 8,500 d.w.t. and 9,000 d.w.t. may operate in Braila. The depths are between 11.1 m. and 25 m., but the drafts of vessels are limited by the Sulina Bar at 23 ft. (7.01 m.).

HEALTH: See "Constantza".

RADIO: When proceeding in the channel at Sulina Bar, all radio communications, except VHF transmissions, are prohibited.

VHF: Direct contact with local authorities is possible.

Braila Pilot Station – Channel 14 – continuous listening.
Braila Harbour Master – Channel 68 – continuous listening.

RADAR: Not available.

Continuous radio watch to be maintained on Channel 16 with Galatzi Port Control when transiting or at anchor. No vessel should proceed into the port or manoeuvre without Port Control permission.

TUGS: See "Constantza".

BERTHING: The port has 3 sectors:

1. The Old Harbour between km. 172 – km. 171 and km. 171 - km. 169.8, including the passenger quays and Berths No. 1 – 6 for general cargo, 2,200 m. total length.
2. The Dock Basin situated from km. 169.8 to km. 169, including Berths No. 1 – 4 (direct to the river), total length of 550 m. and Berths No. 5 – 17 (inside the basin) with a surface area of 10 ha. The entrance is 75 m. wide and depth is 6.0 m. – 7.5 m.
3. The Ferry Zone situated between km. 169 and km. 168.5.

CRANES: At Berths No. 11 – 15 there are 5 cranes of 16 tons and 5 cranes of 5 tons capacity, at Berths No. 6 – 9 there are 3 cranes of 16 tons and a conveyor bridge of 8 tons capacity. At Berths No. 1 – 3 ship's gear or floating cranes of 5 tons – 16 tons capacity are used.

The port also has 9 floating cranes of 5 tons – 16 tons capacity and 31 mobile cranes of 5 tons – 40 tons capacity.

BULK CARGO FACILITIES: See "Berthing" and "Cranes".

Loading/Discharging Rates:

Cargo	*Operation*	*Thousands of Tons per Ship per Day* *Vessel Capacity (Tons)* Upto 600	601-1500	1501-3500	3501-6000	6001-15000

		0.30	0.40	0.50	0.70	0.90

STEVEDORES: See "General" before first port.

MEDICAL: Medical assistance is available at the city hospital. All problems will be handled by the agent.

FRESH WATER: Available.

FUEL: Bunkers are only available from the specialised berth.

FIRE PRECAUTIONS: See "Constantza".

REPAIRS: All kinds of repairs possible, including dry docking.

DRY DOCKS: See "Repairs".

SURVEYORS: The Romanian Shipping Register (RNR) is authorised for class surveillance.

GANGWAY/DECK WATCHMEN: See "Constantza".

HATCHES: Opening and closing of hatches on account of the vessel.

CUSTOMS ALLOWANCES: See "General" before first port.

CARGO GEAR: See "Constantza".

REPATRIATION: Possible.

TIME: See "General" before first port.

HOLIDAYS: See "General" before first port.

POLICE/AMBULANCE/FIRE: City Police – Tel: 055. Ambulance – Tel: 061. Fire – Tel: 081.

For all problems connected with police and ambulance contact vessel's agent on VHF Channel 10. In case of fire contact Braila Harbour Master by VHF Channels 16 and 68.

TELEPHONE: See "Constantza".

SHORE LEAVE: See "Constantza".

IDENTITY CARDS: See "Constantza".

REGULATIONS: See "General" before first port and "Sulina".

AUTHORITY: Harbour Master's Office, Braila. *Tel:* 13068. *Telex:* 55279. *FAX:* 12184. *Contact:* Captain Tutupanu Ion, Harbour Master.

CONSTANTZA: 44.09 N. 28.39 E. (See Plan)

LOCATION: Constantza is on the West side of the Black Sea, 337 km. from the Bosphorus (B.A. Chart No. 2284).

PORT LIMITS: As the commercial limits of the port are marked by the breakwaters the Notice of Readiness is received at the operating berth after obtaining "Free Pratique". In order that the vessel may be considered "arrived" she should notify the port authority of the time and place of anchoring.

DOCUMENTS: See "General" before first port.

PILOTAGE: The Masters of vessels proceeding to Romanian ports must advise their ETA on departure from the last port and then 5 days, 48 hours and 24 hours before their arrival in the roads. Masters must give the agent a confirmation by cable stating the date and time of anchorage in the roads.

On entering the 12 nautical mile zone (from Constantza lighthouse), the vessel must contact Port Control Constantza by VHF Channel 67 in order to receive information regarding the access into the port and the time of the pilot boarding. The radio connection with the pilot boat is made on Channel 14 (continuous watch). Whilst in the roads, vessels should keep continuous watch on Channel 67 (Port Control Constantza).

Vessels approaching the entrance must enter through the fairway. The pilot boards vessels 0.5 miles East of the North jetty. During bad weather (strong winds, high seas) the pilot will board between the breakwaters.

A vessel requesting a pilot shall hoist "G" flag and shall give 3 blasts on the whistle (two long and one short); after the pilot boards the vessel, the flag "G" shall be substituted by flag "H".

The superstructure of the pilot boat is white with letters "NR" on the funnel and the hull is painted black with "PILOT" in white letters on the side. The pilot boat has a radio-telephone (VHF Channel 14) and radar.

ANCHORAGES: The Constantza roads are 4 nautical miles long and 4 nautical miles wide, being limited to the North and South by Latitudes 44° 11.5′ N. and 44° 07.5′ N. and to the East and West by Longitudes 28° 42.5′ E. and 28° 48.1′ E.

The meridians 28° 45.3′ E. and 28° 46.6′ E. divide the port roads into 3 zones, numbered from West to East as follows:

Zone No. 1 – 2 nautical miles breadth – for vessels under 40,000 g.r.t. (excepting tankers).

Zone No. 2 – 1 nautical mile breadth – for vessels over 40,000 g.r.t. (excepting tankers).

Zone No. 3 – 1 nautical mile breadth – for tankers and liquified gas tankers.

The open roads of Constantza port permit safe anchorage in depths of 24 m. – 27 m. for 40 to 50 large vessels, with the possibility of making a full swing in case of change of wind or current direction.

RESTRICTIONS: The pilotage of vessels in the roads and in the port is compulsory, even when shifting berth, except for auxilliary and technical port vessels, small trawlers and pleasure craft. Pilotage is performed continuously, day and night, in accordance with the shifting programme set down by the port authorities, subject to the vessel's needs.

Entrance to the port during night time is strictly forbidden for vessels with LOA more than 200 m. and draft over 40 ft., especially tankers.

MAX. SIZE: Depths up to 13.50 m. allow berthing and operation of vessels with maximum capacity of 65,000 d.w.t. in the docks for dry cargoes, and those of up to 14.00 m. in the docks specialised for liquid petroleum products allow operation of vessels with maximum capacity of 80,000 d.w.t. – 90,000 d.w.t. For larger oil tankers with maximum capacity of 150,000 d.w.t., the port has Berth No. 79 (South breakwater), facing Oil Dock No. III, with a depth of 19.00 m.

HEALTH: *Sanitary Inspection:* Immediately upon berthing the Sanitary Commission checks the ports of call during the voyage, the nature of the cargo, the number of crew and passengers, the port of destination, the state of health of all those on board, particularly regarding any disease, vaccinations, etc.

The Sanitary Commission orders steps to be taken in cases of contagious disease. The Sanitary Control inspect crew and provisions on board. If no contamination danger exists the Sanitary Commission issue the vessel's "Free Pratique".

RADIO: See "General" before first port.

VHF: Direct contact with local authorities is possible.

Port Control Constantza – Channel 67 – continuous listening.
Harbour Master's office – Channel 67 – continuous listening.
Constantza Pilot Station – Channel 14 – continuous listening.
Towage Department – Channels 11 and 13 – continuous listening.
Salvage Department – Channels 16 and 13 – continuous listening.
Navlomar Agency – Channel 10 – continuous listening.

RADAR: Radar surveillance is permanently maintained by Constantza Port Control. The Master is obliged, when off the port or at anchor, to keep watch on VHF Channel 67 – Port Control Constantza (PCC). No entry or manoeuvre in the roads is permitted without the permission of PCC.

TUGS: Towage in the roads and port is ensured through a Towage Contract given to the vessel by the agent. Towage is compulsory for any vessel greater than 1,000 g.r.t. For vessels smaller than 1,000 g.r.t. the needs of towage are set according to the weather and the zone of shifting. Vessels without propulsion or those which have to repair their engines, must employ towage whatever the tonnage. Usually, tugs assisting the ship to berth use ship's lines.

The tariffs are set according to the tug's power, the tonnage of the vessel and the period of towage.

BERTHING: The port of Constantza has a surface area of 722 ha. of which 318 ha. are basins and 404 ha. are quays. The latter includes 107 ha. open storage, 33 ha. warehouses, cereals, silos (90,000 tons), cement (40,000 tons) and phosphates (30,000 tons), 15 km. operating wharf, 70 berths (7 for liquid cargoes and 63 for dry cargoes).

Dock No.	*Berth* No.	*Length* (m.)	*No. of Berths*	*Depth* (m.)	*Use*
1	1 – 5	675	5	9.2 – 9.7	General cargo to be stored on open spaces or to be handled directly from one means of transport to another.

	62	232	1	11.0	Phosphates, apatite.
	63	220	1	9.8	Bulk or bagged fertilisers.
	64 – 67	852	4	11.0 – 13.5	Ore, coke, coal.
	68	215	1	11.0	Bulk or bagged cement.
10	69 – 70	610	2	11.8	Liquid petroleum products.
11	72 – 73	610	2	12.8 – 13.5	Liquid petroleum products.
12	75 – 76	608	2	12.8 – 13.5	Crude oil products.
	78	344	1	14.0	Gas freeing, tank washing, bunkering.
1 South	79	405	1	17.1 – 18.0	Crude oil.
	80 – 84	1395	5	13.0 – 18.0	Ore, coke, coal.
	PMT	356	1	10.4	Ore

In addition to the berths above there are 14 waiting berths for deratting, washing, gas freeing tanks and repairs.

CRANES: The port has 155 cranes with lifting capacities of 5, 8, 10, 15, 16 and 50 tons; 6 discharging gantries for ore and coal of 20 tons; 2 discharging gantries for phosphates of 25 tons; 2 discharging gantries for ore of 50 tons; 2 container gantries of 40 tons; 2 discharging gantries for ore of 25 tons; 2 discharging gantries for containers in warehouse of 40 tons; 94 mobile cranes of 12, 70, 90 and 110 tons; 15 floating cranes of 16 tons – 25 tons; 1 floating crane of 50 tons and 1 floating crane of 100 tons.

Generally, during cargo operations, port cranes are used but all vessels must have their loading/discharging gear in good working order.

BULK CARGO FACILITIES: See "Berthing" and "Cranes".

Cargo Handling Rates:

SPECIALISED CARGO HANDLING FACILITIES: There is a specialised berth for operating Ro-Ro ships with a depth of 9.2 m. – 9.7 m. (See "Berthing" – Berth No. 52). For operating container ships, a 240 m. berth with depth of 8.4 m. – 9.0 m. is provided with special loading/discharging equipment. Under construction at Constantza South – Agigea, there are specialised berths for operating Ro-Ro ships, container ships, ferries and LASH vessels. There are no facilities to operate LPG ships.

BRIDGES: Vessels calling at Constantza South for transiting the Danube – Black Sea Channel must ensure a maximum draft of 5.5 m. and a free height under bridges of 17.0 m.

STEVEDORES: See "General" before first port.

MEDICAL: Port clinic is available for medical attention to all crew members at the following times: Monday, Wednesday, Friday from 1300 hrs. – 1600 hrs. and Tuesday, Thursday and Saturday from 0800 hrs. – 1300 hrs. In case of emergency contact vessel's agent. A letter from the Master is required in all cases.

DENSITY: The average salinity of the water in the port is 1016 as a result of the following figures: Spring 1014 – 1015, Summer 1016 – 1017, Winter 1017 – 1018.

FRESH WATER: Fresh water can be supplied at any berth, even during loading/discharging operations. Delivery is available direct from the quay installations or from fresh water tankers. The approximate price is U.S.$1.35/ton.

FUEL: Bunkers are available at a specialised berth at the petroleum basin and by special barge for all types of fuel and oil. Supply of small quantities in the roads, in special cases, is available, weather permitting, transport charges being levied separately. The following types of fuel can be supplied in any quantity:

Fuel Oil: CNM Type 2, 1500 sec., equivalent MFO 180 cst.
(approximate price U.S.$150.00/ton).
CNM Type 3, 600 sec., equivalent RDW 80 cst.
(approximate price U.S.$190.00/ton).
Diesel Oil: Types −5, +5 and −15 equivalent MDO.
(approximate price U.S.$400.00/ton).

FIRE PRECAUTIONS: Smoking on deck or use of unprotected lights, especially in warehouses or around warehouses, is strictly prohibited when cotton, hemp or other inflammable goods are being handled. The Master is directly responsible for damage caused by fire breaking out on board as a result of non-observance of these rules by the crew or workers.

Special precautions must be taken at the petroleum terminal as wel as when operating in the vicinity of inflammable products warehouses Smoking, welding and repairs which may cause sparks or flames are prohibited.

CONSULS: Russia and Turkey.

REPAIRS: In the Constantza shipyard all kinds of repairs are possible (hull and engine). The yard has floating docks of 8,000 tons, 10,000 tons and 15,000 tons, and 2 dry docks for ships larger than 150,000 d.w.t Small repairs can be performed during loading/discharging operations

DRY DOCKS: See "Repairs".

SURVEYORS: In Constantza there are representatives of Lloyd's Register, Bureau Veritas and the Romanian Register of Shipping through which classification inspections can be arranged for Germanische Lloyd, Norske Veritas, American Bureau, Nippon Register and Registe of Russia.

GANGWAY/DECK WATCHMEN: It is recommended that deck watchmen be hired when special general goods are being handled Hiring and payment can be arranged by the agent.

HATCHES: First opening and last closing are the vessel's obligation account. The hatches must be opened completely on all sides. Hatch beams or hatch covers must be shifted by using ship's gear.

CUSTOMS ALLOWANCES: See "General" before first port.

CARGO GEAR: See "Cranes".

REPATRIATION: Crew changes and necessary repatriation can be arranged by the agent. The approximate assistance tax is U.S.$30.00 per person (in the port) and U.S.$15.00 per person for ship to ship transfer. In addition, hotel bills, tickets, restaurant bills, etc. are to the vessel's account.

AIRPORT: The 'Mihail Kogalniceanu' Airport (about 25 km. from the port) is available for international flights.

TIME: See "General" before first port.

HOLIDAYS: See "General" before first port.

POLICE/AMBULANCE/FIRE: Port Police – Tel. 19100, ext 406 Ambulance (port) – Tel. 19100, ext 232. Ambulance (city) – Tel. 061 Fire (port) – Tel. 19100, ext 222 or 223. Call agent on VHF Channel 10 for all problems connected with Police and Ambulance. For fire service contact Port Control Constantza on VHF Channel 16 and 67 or The Naval Salvage Group on VHF Channel 16.

EMERGENCY CO-ORDINATION CENTRE: In any emergency contac Port Control Constantza on VHF Channel 16 or 67 or The Naval Salvage Group on VHF Channel 16.

TELEPHONE: It is not possible to install telephones on board ships For international telephone calls, Navlomar provides its own telephone booths, placed in the Captain's Hall at the Navlomar agency. Paymen for such calls is effected on the owner's account. Telex messages telegrams or ordinary mail can also be delivered to the agent fo forwarding.

SERVICES: Tank cleaning, slop discharge, compass adjusting, radi and radar repairs, laundry and other services are available. For dir ballast, vessel is charged U.S.$3.00 per tonne. For the transit of foreig seamen to and from Romania (and Romanian ports) and in order t avoid delays or other unpleasant events, the owners/companies shou advise at least 2 days in advance all details (full name, date, destinatio etc.) concerning the respective person arriving. In such cases a necessary funds are to be sent in advance, either included in the funds for the disbursements or separately.

SHORE LEAVE: When the inspection on arrival is completed, the cre may go ashore but must be in possession of their passport and shor permit. Entrance and exit is permitted only through Gate No. 1.

IDENTIFICATION CARDS: See "Shore Leave".

REGULATIONS: Carrying out exterior maintenance (painting, repairs etc.) is permitted only during daylight; at nightfall the Master must tak all necessary steps to bring the displayed equipment (tools, ladders platforms, ropes, etc.) back on board.

If the vessel must perform a shift from one berth to another, accordin to the decision of the port authorities, the Master is to be advised i writing by the agent at least 2 hours in advance. Refusal to perform shift requested by port authorities is punishable by the Harbour Maste

In order to prevent the carrying of disease and epidemics into th country by rats, Masters are asked to note the following:

Placement of ratguards immediately after berthing;

Great attention must be paid to placing ratguards on the ropes so tha no space is left between them and the ropes;

Diameter or ratguards must be at least 50 cm.;

If ratguards come off the ropes (due to wind or faulty fastening) the must be replaced immediately.

SHIPMASTER'S REPORT: September 1987.

The Agent and the Customs advised me to take plenty of cartons cigarettes out of the bond into my cabin before sealing. We distribute over 3,000 cigarettes during our stay, to pilots, pilot boat, tugs, linesme jetty operators and officials. Additional requests were made for bee soft drinks, Elastoplast, ballpoint pens, coffee, pocket books, soa flyspray and magazines. It is very important that these requests a granted, otherwise long delays may be experienced. On our first call n crew members required currency but several crew members we ashore, I was warned by the Customs that next time the ship had t draw some Romanian money, i.e. changing foreign currency at blac market rates is dangerous. Any Romanian money can, in fact must, b returned to the Agent before sailing.

On both visits we loaded 50,000 tonnes of fuel oil at Berth No. 72 an average rate of about 900 t.p.h. through 1 × 12 in. Chicksa Surveyors were Oil Inspections Taygar S.A. and on both occasions th surveyors were British and very helpful both professionally a personally.

Gauging, cargo documents and Outward Clearance takes hours. O our first visit cargo was completed at 1325 hrs. and pilot boarded 0130 hrs. the next morning.

All rooms and lockers must be kept locked at all times as even sm items may be stolen (knives, mugs, ashtrays, coffee.)

GALATZI: 45.25 N. 28.05 E.

LOCATION: The port is situated on the left bank of the Danube between km. 144 and km. 156, upstream of Sulina. (B.A. Chart No. 2835).
Also see "Sulina" – "Shipmaster's Reports".
PORT LIMITS: The limits of the port are marked by km. 156 and km. 144.5.
DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory for all ships. River pilots are replaced by port pilots in the roads, or during navigation in the port zone.
ANCHORAGES: The port of Galatzi has 3 areas situated as follows:
Zone 1: km. 155 – km. 156 – loaded maritime vessels.
Zone 2: km. 158 – km. 159 – unloaded maritime vessels.
Zone 3: Mm. 76 – Mm. 78.5 – maritime vessels.
RESTRICTIONS: Navigation forbidden during poor visibility.
MAX. SIZE: The maximum draft is limited by Sulina bar at 27 ft. (8.23 m.).
HEALTH: See "Constantza".
RADIO: See "Sulina".
VHF: Direct contact with local authorities is possible.
Galatzi Port Control – Channel 16 – continuous listening.
Galatzi Pilot Station – Channel 14 – continuous listening.
Galatzi Harbour Master – Channel 68 – continuous listening.
RADAR: Radar surveillance available. Vessels should keep continuous watch on VHF Channel 16 (Galatzi Port Control) when transiting or at anchor. No vessel should proceed into the port or manoeuvre without Port Control permission.
TUGS: See "Constantza".
BERTHING: The port has four sectors:
1. The Old Harbour in the vicinity of km. 151.5 downstream with a quay length of 1,160 m. (365 m. for passenger vessels; 350 m. for ballast products; 445 m. waiting quay for maritime vessels).
2. The Dock Basin situated downstream of the Old Harbour. The quay has a total length of 1,440 m. (540 m. direct to the Danube and 900 m. in the basin).
3. The New Basin or Wood Basin situated downstream of the Dock Basin to km. 146. Length of the quay is 2,365 m.
4. Ore Harbour situated between km. 155.5 and km. 157, upstream of the Siret Mouth. Quay length is 800 m. (400 m. for maritime vessels with depth up to 9.0 m. and 400 m. for river vessels).
Alongside there are 43 cranes of 16 tons capacity. The maritime quays are provided with conveyor belts. The port also has floating cranes of 16 tons capacity.
CRANES: At Berths No. 26 – 28 there are 6 cranes of 5 tons capacity, at Berth No. 30 there are 3 cranes of 5 tons capacity, at Berths No. 23 – 25 (direct to the Danube) there are 6 cranes of 8 tons capacity and 2 cranes of 10 tons capacity. At Berths No. 39 – 44 loading/discharging is by ship's gear. At Berths No. 45 – 53 there are 13 cranes of 10 tons capacity, one crane of 5 tons capacity and one conveyor belt for river vessels.
BULK CARGO FACILITIES: See "Berthing" and "Cranes".
Cargo Handling Rates:

Cargo	Operation	*Thousands of Tons per Ship per Day* *Vessel Capacity (Tons)* Upto 600	601-1500	1501-3500	3501-6000	6001-15000	over 15000

STEVEDORES: See "General" before first port.
MEDICAL: Medical assistance is available at the city hospital. All problems will be handled by the agent.
FRESH WATER: Fresh water is available direct from quay installations at a rate of 10 tons/24 hours for vessels up to 4,000 d.w.t.
FUEL: Bunkers only available from barge.
FIRE PRECAUTIONS: See "Constantza".
REPAIRS: All kinds of repairs possible in Galatzi Repair Yard.
SURVEYORS: The Romanian Shipping Register (RNR) is authorised for class surveillance.
GANGWAY/DECK WATCHMEN: See "Constantza".
HATCHES: Opening and closing of the hatches on account of the vessel.
CUSTOMS ALLOWANCES: See "General" before first port.
CARGO GEAR: See "Constantza".
REPATRIATION: Possible.
TIME: See "General" before first port.
HOLIDAYS: See "General" before first port.
POLICE/AMBULANCE/FIRE: City Police – Tel: 055. Ambulance – Tel: 061. Fire – Tel: 081. For all problems connected with police and ambulance contact vessel's agent on VHF Channel 10. In case of fire contact Harbour Master or Galatzi Port Control on VHF Channel 68 or 16.
EMERGENCY CO-ORDINATION CENTRE: In all cases of emergency contact Galatzi Port Control on VHF Channel 16.
TELEPHONE: See "Constantza".
SHORE LEAVE: See "Constantza".
REGULATIONS: See "General" before first port and "Sulina".
AUTHORITY: Galatzi Port Authority. *Tel:* 16218, 15248. *Telex:* 51208. *FAX:* 16218. *Contact:* Buccr Constantin, Harbour Master.

MANGALIA: 43.49 N. 28.35 E.

LOCATION: The port is situated on the S.E. coast of Romania, 246 km. from Istanbul. (B.A. Chart No. 2285).
PORT LIMITS: As the commercial limits of the port are marked by the ends of the breakwaters the Notice of Readiness is received at the operating berth after obtaining "Free Pratique". In order that the vessel may be considered "arrived" she should advise the port authority the time and place of anchoring in the roads.
DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory for all ships.
From the North end of the S.E. breakwater over a distance of 8.5 cables to the South there are depths of less than 3.0 m., so care must be taken.
ANCHORAGES: The Mangalia roads are limited to the North and South by the parallels 43° 49.2′ N. and 43° 48.2′ N. and to the East and West by the meridians 27° 39.2′ E. and 28° 37.8′ E.
RESTRICTIONS: Pilotage is compulsory in the roads and in the port, even when shifting berth, except for auxilliary and technical port vessels, small fishing vessels and pleasure craft, but always with Port Authority permission.
MAX. SIZE: The entrance is 200 m. wide with 10 m. depth.
HEALTH: See "Constantza".
RADIO: See "General" before first port.
VHF: Direct contact with local authorities is possible.
Harbour Master's Office – Channel 68 – continuous listening.
Mangalia Pilot Station – Channel 14 – continuous listening.
TUGS: See "Constantza".
BERTHING: The port is formed by 4 breakwaters of 3.78 km. total length. The harbour basin has an area of 80 ha., with 2 berths each 200 m. in length and 9.0 m. depth.
The sea port has recently become operational, formed by 2 breakwaters of 1.53 km. and 2.0 km. length, enclosing a basin of 300 ha. Piers of 400 m. length allow deep draft vessels to berth. There are also 4,300 sq.m. of covered warehouses.
CRANES: The port is equipped with 5 ton electric cranes and various mobile cranes and forklifts. Generally, during operations, port cranes are used but all vessels must have their loading/discharging gear in good condition.
STEVEDORES: See "General" before first port.
MEDICAL: Medical assistance available at the city hospital. All problems will be handled by the agent.
TANKERS: No facilities available.
DENSITY: See "Constantza".
FRESH WATER: See "Constantza".
FUEL: Bunkers available in small quantities from road tankers only.
FIRE PRECAUTIONS: See "Constantza".
REPAIRS: All kinds of repairs are possible at a special repair yard, length of berth 520 m.
DRY DOCKS: There is a dry dock for vessels up to 150,000 d.w.t. (dry dock dimensions are 360 m.×60 m.×10.5 m.).
HATCHES: See "Constantza".
CUSTOMS ALLOWANCES: See "General" before first port.
CARGO GEAR: See "Constantza".
REPATRIATION: Possible.
AIRPORT: Constantza Airport, 70 km. from the port.
TIME: See "General" before first port.
HOLIDAYS: See "General" before first port.
POLICE/AMBULANCE/FIRE: City police – Tel. 055. City Ambulance – Tel. 061. Fire (city) – Tel. 081. For all problems connected with fire contact Mangalia Harbour Master by VHF Channel 68.
TELEPHONE: No facilities. For international calls use only the booths of the City Post Office.
SHORE LEAVE: See "Constantza".
REGULATIONS: See "General" before first port.
AUTHORITY: Harbour Master, Mangalia. *Tel:* 51299.

SULINA: 45.11 N. 29.45 E. (See Plan)

LOCATIONS: Situated at the Danube mouth on the right bank of the Sulina Channel, 148 km. from Constantza (B.A. Chart No. 2284).
PORT LIMITS: From the line of the entrance on the Sulina Channel to "Mile 2".
DOCUMENTS: See "General" before first port.
PILOTAGE: Vessels should notify arrival at the roads to the Sulina Free Port Administration – Sulina FPA – Agency Department, Telex No. 52294 and No. 52295. ETA can be confirmed or amended when necessary by VHF Channel 16. There is no specific zone for the pilot boat. Usually the pilot boards the ship at the anchorage.

The approaches are as follows:

Sulina – S.E. Approach No. 5: 1.6 miles in width, 7 miles in length. Alignment 146° – 326°. The centre line joins the following positions:

S1: Lat. 45° 03.1′ N., Long. 29° 53.4′ E. – 11.5 miles, true bearing 124.4° to the Sulina Lighthouse.

S2: Lat. 45° 08.9′ N., Long. 29° 47.9′ E. – 5.75 miles, true bearing 095.7° to the Sulina Lighthouse.

From the No.01 Buoy (whistle buoy) and then following the course 301.2°, vessel will proceed in to the Sulina Channel and then into port. Maximum draft admitted is 23 ft. (7.01 m.).
ANCHORAGES: The anchorage place is communicated by the pilot station, both for inner or outer roads.
RESTRICTIONS: Vessels proceeding to Danube river ports must wait at the Sulina roads, 1 mile from the black buoy marked "01" (green flash). All vessels should have an Administration Pilot on board. In the Sulina Channel navigation is forbidden at night and during poor visibility.
MAX. SIZE: The maximum draft at the Sulina Bar is 23 ft. (7.01 m.). Vessels of maximum LOA 180 m. may call at the port of Sulina. No tide restrictions. Any changes regarding the maximum draft are broadcast daily at 1150 hrs. on 1935 metres Long Wave band.
HEALTH: See "Constantza".
RADIO: Until reaching Sulina Bar, all radio communications should be transmitted to Constantza Coast Radio Station. When proceeding in the channel at the Sulina Bar, all radio communications are prohibited, except for VHF radio communications.
VHF: Direct contact with local authorities is possible. Vessel may contact Sulina Pilot Station, Sulina Harbour Master, Free Port Administration and Navlomar Shipping Agency on Channel 16.
RADAR: Not available.
TUGS: See "Constantza".
BERTHING: The port has 2 berths in the Maritime Transit Basin and 2 berths in the river, both 180 m. long.

Loading/discharging operated by Free Port Administration's gear. Transhipment by the ship's own gear.
CRANES: The port has 5 floating cranes of 10 tons – 32 tons capacity.
BULK CARGO FACILITIES: No special facilities available. Bulk fertilisers can be transhipped to barges. Fertiliser in bags can be stored in special warehouses. Different kinds of ore can be handled and stored in open spaces.
STEVEDORES: See "General" before first port.
MEDICAL: Medical assistance is available at the city hospital. All problems will be handled by the agent.
FRESH WATER: Fresh water available at Maritime Transit Basin and at the City Quay.
FUEL: Bunkers and Shell Marine lubricating products available.
FIRE PRECAUTIONS: See "Constantza".
REPAIRS: Ordinary maintenance possible. Qualified personnel available for mechanical works.
DRY DOCKS: None available.
SURVEYORS: Lloyd's Agent and representatives of classification societies as well as official surveyors may be called at short notice.
HATCHES: Opening/closing of the hatches for vessel's account. **CUSTOMS ALLOWANCES:** See "General" before first port.
CARGO GEAR: See "Constantza".
REPATRIATION: Not possible.
AIRPORT: Nearest airport at Tulcea, about 70 km. up the Danube.
TIME: See "General" before first port.
HOLIDAYS: See "General" before first port.
POLICE/AMBULANCE/FIRE: Contact Port Authority on VHF Channel 16 for all problems connected with police, ambulance and fire.
TELEPHONES: See "Constantza".
SERVICES: No special services available.
BANKS: No American or European banks in Sulina, bank facilities can be arranged through Agent by connection to Bucharest, or Tulcea (Romanian Commercial Bank).
STORING: See "Prelims".

1. Vessel can be stored by barge supplied by foreign partners, surveyance and guard of the barges being provided by Sulina Free Port Administration.
2. Previous notification for barge storage compulsory, details to be obtained through Sulina Free Port Administration's representatives.
3. No transhipment into trucks directly possible for the moment.
4. Fork lifts can be used on the jetty to handle stores.
5. No Customs interference regarding storing on the territory of Sulina Free Port, first period (negotiable) of storage free of charges, tariffs to be established by the Administration. Storage possible both in covered and open spaces, on platforms.
6. Riggers belonging either to the Administration or to Romtrans (Specialised Romanian Foreign Trade Enterprise for forwarding activity, which has an office in Sulina Free Port) can be employed, for sorting and arranging cargo on platforms and in warehouses.

SHORE LEAVE: See "Constantza".
IDENTIFICATION CARDS: See "Constantza".
GARBAGE DISPOSAL: Service available.
WASTE OIL DISPOSAL: Service available.
SEAMAN'S CLUBS: No Seaman's Clubs.
Services available in the port: Duty free shops, international telephone service, church services, postage facilities.

CURRENCY: Lei.
REGULATIONS: Maximum speed in the Sulina Channel is 10 km./hr.
Entrance and navigation only by daytime in the Sulina Channel.
Also see "General" before first port.

SHIPMASTER'S REPORT: February 1984.
The entrance route to Danube River from Gura Sulina for Galatz and Braila is as follows: Arrival point Lat. 44° 47′ N., Long. 29° 55.8′ E. and from this point vessel is to steer 000° True till Lat. 45° 05.1′ N., Long. 29° 55.8′ E. and from this point 301° True to No. 1 Buoy. Because of shallow water the vessel must not go South of No. 1 Buoy. With radar, Sfantul Gheorge Lighthouse was observed at 15 miles, Sulina at 20 miles and lighthouse at South Mole at 15 miles. Anchorage area is 2 miles East or 1 mile North of No. 1 Buoy. Pilot on VHF Channel 16. Pilot embarks 1 mile East of the No. 1 Buoy.

After anchoring near to Sulina, Customs, Immigration and Doctor board the vessel for clearance. After clearing the vessel another two Pilots board and vessel proceeds to destination. No navigation is permitted during the night for large vessels.

SHIPMASTER'S REPORT: December 1989.
Vessel: 12,800 g.r.t., 156 m. LOA and 22.8 m. beam.
Transit of the River Danube (Sulina - Galatz - Sulina):

Two port pilots are taken on at Lat. 45° 08.8′ N., Long. 29° 47.6′ E. as far as Lat. 45° 09.8′ N., Long. 29° 42′ E., where the vessel has to anchor to carry out Police, Customs and Port formalities.

If the vessel is transiting for the first time, the Tonnage Certificate for the Suez Canal is requested in addition to ordinary certificates. This additional certificate is held at the Captaincy, and is only handed back on the return passage.

Once formalities have been completed, 2 pilots are taken on for the transit of the canal as far as Galatz, where these pilots are changed for 2 port pilots. Vessels berth starboard side alongside.

On arrival in Galatz, all the formalities are repeated and those carried out at Sulina being considered null and void.

Loading at Galatz is rapid, the gangs work 24 hours a day. As the vessel is berthed starboard side to quay, it is necessary to go as far as Km. 159 to turn, before going down river. This location is supposed to be safe, however, by reason of bad buoyage (in fact non-existent) as well as inadequate dredging, great care has to be taken as there are some mud banks, unknown to everybody, on which it is possible to go aground.

On both the inward and outward voyages, vessels anchor at the 48 Mile marker. This anchorage is very safe.

At the level of Tulcea, navigation is very easy, and the use of tugs is not compulsory, in fact it is not advisable. The most delicate part of the Danube is between Miles 57 and 58. Our sounder indicated that at this point there are minimum depths of 8.0 m.

AUTHORITY: Sulina Free Port Administration is both specialised foreign trade state enterprise and Port Authority in Sulina Free Port.

Sulina Free Port Administration, 202 Deltei St., 8829 Sulina, Tulcea County, Romania. *Tel:* (915) 43664, 43242, 43243 or local 325. *Telex* 52294 and 52295. *FAX:* 915-432. *Contact:* Micu Mihai, General Director.
AGENT: Sulina Free Port Administration – Agency Department.

TULCEA: 45.10 N. 28.49 E.

LOCATION: The port is situated at the entrance of the Danube delta 62 km. from Sulina. (B.A. Chart No. 2835).
PORT LIMITS: The limits of the port are marked by Mm. 35.5 and Mm. 41. The Notice of Readiness is received at the operating berth after obtaining "Free Pratique". In order that the vessel may br considere "arrived" she should notify the Port Authority the time and place o anchoring in the roads.
DOCUMENTS: See "General" before first port.
PILOTAGE: Compulsory for all ships. River pilots are replaced by po pilots in the roads.
ANCHORAGES: The port of Tulcea has 2 zones situated as follows:
Zone 1: Mm. 34.5 – Mm. 37.
Zone 2: Mm. 44.5 – Mm. 45.5.
RESTRICTIONS: The pilotage of vessels in the roads and in the po is compulsory even when shifting berth. Maximum draft is 23 f (maximum at Sulina Bar). For other details see "Sulina".
MAX. SIZE: Maximum draft is 23 ft. (7.01 m.).
HEALTH: See "Constantza".
RADIO: See "Sulina".
VHF: Direct contact with local authorities is possible.
Tulcea Port Control – Channel 68 – continuous listening.
Tulcea Pilot Station – Channel 14 – continuous listening.
Tulcea Harbour Master – Channel 16 – continuous listening.
Navlomar Agency – Channel 10 – continuous listening.

Vessels should keep continuous radio watch on Channel 68 (Tulce Port Control) when transiting or at anchor. No vessel should procee into the port or shift without Port Control permission.
RADAR: Radar surveillance not available.
TUGS: See "Constantza".
BERTHING: The port has 2 piers of 230 m. total length and depth 9.0
CRANES: The port is equipped with 3 Kangur cranes of 16 tons capac

BULK CARGO FACILITIES: See "Berthing" and "Cranes".
Loading/Discharging Rates:

Cargo	*Operation*	*Thousands of Tons per Ship per Day* *Vessel Capacity (Tons)* Upto 600	601-1500	1501-3500	3501-6000	6001-15000	over 15000
Ore	Field	1.00	1.50	2.00	3.00	5.00	7.00

16. De Kastry

(b) Addresses and telephone numbers of V/O "Soyuzvneshtrans", VVO "Sovfracht" and V/O "Sovbunker":

VVO "Sovfracht" is the sole organisation in rendering brokerage services to local and foreign Shipowners. V/O "Sofracht" carries out chartering of foreign and Soviet tonnage and is the General Agent for foreign flag vessels in ports.

Postal address: VVO "Sovfracht" 1/4, Rozhdestvenka Street, Moscow, 103759, Russia.
Cable: Sovfracht Moscow
Telephone: 926-11-18
Telex: 411168 a, b, 411170 a, b.
Fax: 2302640.

Vsesoyuznoe Obyedinenie (V/O) "Sovbunker" carries out ships' bunkering and port consignment stock operations.

Postal address: V/O "Sovbunker", 10/12, Kaloshin Lane, Moscow, 121002, Russia.
Cable: Sovbunker Moscow
Telex: 411170
Telephone: 248-23-52.

Vsesoyuznoe Obyedinenie (V/O) "Soyuzvneshtrans" carries out all transportation and forwarding of export and import cargoes as well as transit of goods via Russia and foreign territories.

Postal address: V/O "Soyuzvneshtrans", 17/16, Gogolevsky Boulevard, Moscow, 121019, Russia.
Cable: Soyuzneshtrans Moscow
Telex: 411441, 411442
Telephone: 203-11-79.

(c) Guiding principles to comply with when calling at Russian ports: All vessels calling at above ports must also abide by the Customs and Obligatory Harbour Regulations of each particular port of call which are obtainable through the local Inflot agencies.

(d) Ship/shore radio link: Ships' communication with ports of call is usually maintained through the local port radio stations, some information of which is given in the respective entries for the ports.

Ships' radio stations and/or radio-telephones (excluding VHF), must not be operated when the vessel navigates or lies at anchor within thelimits of the port boundaries as well as when calling at or leaving the port, except in emergency, e.g.

when giving distress signals;
when rendering assistance to other vessels in distress;
while making way through the ice;
after having obtained special permission of the Harbour Master.

Note: Superiority in use of radio communication means is given to an icebreaker when leading a convoy of ships through the ice; in case there are two or more icebreakers in a convoy – to a leading icebreaker.

Vessels equipped with VHF radio-telephones must keep them operated in the calling Channel stipulated by the Obligatory Harbour Regulations when navigating within a port limit.

(e) Notice of Arrival: The Master of a vessel should send preliminary information to the Inflot Shipping Agency about the vessel and the cargo not later than 12 days prior to vessel's arrival at the port of destination (for tankers, gas carriers and vessels loaded with liquid chemicals, as a rule, 14 days prior to arrival).

In the preliminary Notice the Master should state the following information:

Name and nationality (flag) of the ship;
Port of departure (last port of call);
Draft fore and aft, cargo carrying capacity, volume of holds, measures of hatches, number and location of 'tweendecks, etc.;
Nature and total quantity of cargo and stowage plan; heavy lifts (over 3 tons) to be shown separately;
Amount and spacing of water ballast (for tankers only), as well as the name of cargo which was unloaded from the vessel before taking ballast;
Particulars of inoperative cargo handling gear as well as whether the vessel requires supply of electric power from the shore for lighting purposes during cargo handling operations (all possible damages which may occur either for lack of all relevant information mentioned above or due to untimely and/or incorrrect data given by the Master to the Port Authorities when advising ETA, etc., are to be for the vessel's account);
Request for any kind of port services.

More precise information about a vessel's approach to the port (roadstead) of destination is to be given by the Master to the Inflot Shipping Agency. Masters of dry cargo vessels are to inform ports of destination about their ETA at first 96 hours and then 12 hours prior to arrival and as far as Masters of tankers, gas carriers and vessels loaded with liquid chemicals are concerned they are to inform Port Authorities 72 hours and 12 hours prior to their arrival at a port.

Masters of tankers bound for loading/unloading oil products are t inform ports of destination 72 hours prior to their arrival that they have in their possession International Certificate on Civil Liability for O Pollution Damage.

According to Charter Parties, Sale Contracts and other documents stipulating conditions of carriage of goods by sea, Masters should give necessary information to additional addresses at stipulated time.

The Port of destination Authorities should be immediately informed by the Master about all unforeseen delays during the voyage.

Vessels calling at ports for bunkers, fresh water, provisions, etc. only should advise their ETA to the Port Administration in due time stipulated above.

The Port Administration should provide Masters of calling vessels with all necessary information regarding anchorage, berthing and handling of cargo not later than 2 hours prior to vessel's arrival.

Since for some ports, time and terms of giving Notice of Arrival are different to that mentioned above, Masters are advised to look at the information for a particular port.

(f) Pilotage: Pilotage is compulsory for all vessels when calling o leaving Russian sea ports, as well as when mooring and unmooring. I addition the Pilots perform shifting berths and other duties related to the harbour operations.

A Pilot having boarded a vessel shall be advised by the Master of the precise draft and other particulars necessary for safe pilotage of a vessel.

According to the Merchant Shipping Code of Russia, the Master of a vessel shall be obliged to pay a fine in an amount of double the rate due as pilotage fee for incorrectly declaring the draft, length or breadt of a vessel or its net registered tonnage, irrespective of the liabilit established by law for the consequences which may occur as a resu of the incorrect information.

A Pilot should be ordered through the local Inflot Agency 12 hours prior to vessel's arrival at the Pilot boarding place. More accurate information should be given 4 hours prior arrival unless otherwise stated in the Obligatory Harbour Regulations.

Also see "Baltic Deep Sea Pilotage".

(g) Anchorages: A vessel approaching the Port of Call and not havin been boarded by a Pilot immediately on arrival, or for any other reason shall anchor in the anchorage area specially designed for this purpose and under no circumstances let its hull go across the boundaries of this area or prevent other vessels from using the leading lights, navigation marks or lights.

No anchorage is allowed in the prohibited zones shown on the charts listed in special manuals for navigation and/or in the Obligatory Harbou Regulations as well as those announced in the appropriate Notices t Mariners.

No anchorage is allowed at a distance of less than 1.5 cables lengt off fairways and leading lines as well as in depths not providing a vesse with a safe anchorage while drifting on the anchor chain.

No vessel shall anchor within the water area of a shipbuilding yar after being refused permission to carry out repairs.

It is prohibited to change a vessel's anchorage by drifting.

Vessels carrying explosives or inflammable liquids must anchor in th areas recommended for them only.

All vessels when at anchor shall carry the lights or the marks i accordance with International Regulations for Prevention of Collision at Sea. Apart from that every vessel by night, when at anchor, shall b illuminated from stem to stern with additional lights placed so that th hull be as far as possible visible from the surface of the water.

Vessels using a kedge anchor shall, in addition to the lights and th marks as to the International Regulations for Prevention of Collisions a Sea, conspicuously display by night a white light and by day a red fla lowered from the stem by the anchor chain to the extent of half of th side's height.

In restricted visibility whether by day or night, every vessel when a anchor shall use sound signals conforming strictly with the Internation Regulations for Prevention of Collisions at Sea.

Masters of all vessels when at anchor are not allowed without th Harbour Master's consent, except in emergency, and/or in case of Po and Boarding officials, to give anybody permission to come alongsid in a private launch or a small rowing boat whether under oars or sa and board a vessel.

Swimmers must not be allowed to come on board a ship.

Should, in case of emergency, swimmers have been taken on boa or strangers have been discovered aboard a vessel, the Master of suc ship shall forthwith without delay report the fact to the Harbour Mast and shall later hand those people over to the Representatives of th Port Administration.

(h) Regulations for entering and leaving Russian ports: Whe approaching Russian ports all vessels must follow the recommende courses announced in issue No. 1 of the Russian Notices to Mariner (GDNOMD).

All vessels when approaching a port or a Pilot's boarding place a well as when leaving a port during the daytime must keep their Nation flags hoisted. A vessel's National flag must be kept hoisted on the ste flagstaff from 0800 hrs. in the morning up to sunset, and the Sta National flag on the fore mast. In Arctic ports during prolonged peri of light National flags must be kept hoisted from 0800 hrs. till 2000 h

Every vessel coming from abroad shall hoist Quarantine Signals the International Code of Signals depending on health and sanita conditions on board.

For entry permit, a vessel must contact the Port Control service eith by VHF radio-telephone or by means of visual signals, viz, by da hoisting her call-sign, and by night, making call-sign signals in Mor Code by searchlight or by Morse-lamp.

No ship shall enter the Harbour until the proper signal has be hoisted at the signal station or by a pilot boat authorising such entry

No vessel is allowed to enter the Harbour until the prohibition signals hoisted at the signal station shall have been lowered down.

If entry is refused a vessel must immediately slow down, alter course and if possible leave the fairway, and drift or drop her anchor in the recommended area.

Turn of entry to the Harbour is controlled by the Port Administration with regard to tonnage of vessel, nature of cargo, weather conditions in the port area, readiness of the port to start cargo operations and other circumstances.

Simultaneous entry of two or more vessels to the Harbour or vice versa is not allowed in the majority of ports.

In all cases a vessel entering the Harbour must give way to the outgoing one not preventing her manoeuvrability.

(i) **Sanitary and Quarantine requirements:** It is prohibited by law to contaminate inner and territorial waters of Russia with any kind of substances which are considered to be unhealthy for people or harmful to live resources of the sea. It is also prohibited to discharge into the sea oil contaminated, faecal, washing waters and oil residues; no rubbish, waste foodstuff shall be thrown into the water. The list of harmful substances is published annually in issue No. 1 of the Russia Notices to Mariners.

Not later than 6 hours before arrival Masters of all vessels coming from foreign countries to Russian ports should advise Quarantine Authorities by radio through Inflot Agency giving full details of health conditions on board as well as sanitary conditions at the last port of call.

If medical assistance is required on board Master has to contact Inflot Agency or any other local port Agent.

No shore connection is allowed to a vessel until Free Pratique is obtained.

Masters are advised to ask a Sanitary Officer for inoculation, vaccination, fumigation, de-contamination, etc., if required, whilst he is on board a ship together with the other Boarding Officials.

Veterinary Certificates of Good Health are required for the livestock, all kinds of meat, animal food and raw meat stuff brought to Russian ports from abroad. Certificates should be issued by the proper authorities of the country from which the cargoes have been exported.

Masters should have a Phytoquarantine Certificate for the goods of vegetable nature.

It is prohibited to take ashore fruit, vegetables, grain seeds, plants, plant products, etc., without a certificate issued by a local branch of the Agricultural Quarantine Inspection; animals and birds are also not allowed to be brought ashore without getting pemission from the veterinary authorities.

(j) **Regulations for the Clearance of Vessels on Arrivals and Departures:**

Upon arrival at a Russian port the Master of a foreign flag vessel has to hand over to a representative of the Inflot Shipping Agency the following documents (filled in with full accordance of the IMOrequirements) duly signed by the vessel's administration for further examination by:

(a) *Boarding Port of Call Officials:*

(1) Ship's Patent;

(2) Measurement Certificate;

(3) Load Line Certificate (or International Load Line Exemption Certificate);

(4) Passenger Ship Safety Certificate;

(5) International Certificate on Civil Liability for Oil Pollution Damage (for vessels carrying more than 2,000 tons of oil).

(b) *Health Authorities:*

(1) Ship's Health Certificate;

(2) Derat Certificate;

(3) International Certificate of Vaccination;

(4) Maritime Sanitary Declaration.

(c) *Customs Officials:*

(1) General Declaration;

(2) Cargo Declaration;

(3) Ship's Crew Personal Effects Declaration;

(4) Crew List;

(5) Passenger List.

The Master has to declare to the Customs:

(1) Cargo Manifest, Bills of Lading and other documents for the cargoes carried by the vessel.

(2) Other Ship's documents on request.

The Master fills in a form of Master's Declaration (Shipowner's address, cargo, cases of illnesses on board, if any, etc.) with the Agent's assistance.

In accordance with Article 38 of the Merchant Shipping Code of Russia in case a foreign flag ship which, on calling at a Russian port, raises doubts as to her meeting the requirements of safe navigation may, irrespective of whether she possesses the necessary ship's papers mentioned above, be subjected to an examination by way of technical survey on the same basis as ships sailing under the State Flag.

The Obligatory Harbour Regulations to be fully complied with during a vessel's stay at Russian ports are handed over to the Master either by Pilot or by representative of the Harbour Master's Office, or by Agent when arriving for the first time.

Upon sailing from a Russian port: No other documents apart from those mentioned above are required in order to obtain the authorisation to leave the port.

No vessel is to get under way without having obtained the permission of the Harbour Master.

The authorisation to leave the port shall be given after a vessel herself and her draft shown in the Master's Statement have been checked by a Port Authorities' representative.

The Harbour Master may not allow a vessel to leave the port, if:

(1) The Cargo Loading Regulations have not been fulfilled, *i.e.* a vessel is considered overloaded or wrongly loaded in case:

(a) a vessel's load lines corresponding to the maximum depth to which she should have been loaded are under water without any list;

(b) the cargoes loaded in the holds and/or on deck have not been made fast in a proper manner or have not been made fast at all;

(c) a vessel has a bad list* caused by faulty loading or her stability does not correspond with the ship's documents;

(d) a vessel loaded with bulk or liquid cargoes has not used the necessary materials or accommodations to prevent cargoes from shifting or overflowing in case of vessel's pitching and rolling;

(e) the deck cargo is considered as danger to the safety of a vessel and the safety or life on board caused by faulty loading;

(f) the corresponding regulations for loading of dangerous cargoes or cattle to be carried by vessel have been broken;

(g) other loading regulations have not been abided by in the course loading.

(2) Under other circumstances which may cause a danger to the safety of a vessel and the safety of life on board, as well as in case when the ship's documentation regulations have been infringed.

(3) When the port dues, tolls and fines have not been paid.

All expenses which may occur due to a vessel's possible delay in the port in connection with the reasons stated above are to be for the Owner's account.

Note: *According to the Harbour Regulations a vessel is not allowed to leave a port if her list exceeds 5° or she has trim by bow which was not specified by her construction.

ANNEX 2

The Memoranda for Masters of Foreign Vessels calling at Russian Ports.

1. On arrival of the ship the Master is to submit to the representatives of the Port Authorities the following documents (IMO Forms) duly signed by ship's administration:

General Declaration (Form I). Filling in of points 8 and 11 is not compulsory (5 copies).

Cargo Declaration (Form II). (4 copies). Filling in of point 6 is not compulsory; points 7, 8 and 9 are to be filled in only for:

(a) cargoes for which Bills of Lading were not issued (names of Shippers and Consignees to be stated);

(b) transit cargoes;

(c) cargoes for other Russian ports;

(d) cargoes of agricultural origin;

Ship's Stores Declaration (Form III) – not required.

Crew's Effects Declaration (Form IV). Amount of Master's and Crew members' valuables (gold, silver, platinum, jewellery, bonds, travel checks, etc.), personal firearms and cartridges (ammunition), explosives and narcotics are to be stated in point 2 (2 copies).

Crew List (Form V) (4 copies).

Passenger List (Form VI) (4 copies).

2. The Master of a ship is to instruct all members of the ship's crew that in accordance with the Rules in force in Russian ports:

Exportation and importation of local currency is forbidden;

No articles are permitted to be taken ashore or brought on board the ship without permission of the Custom House Authorities;

Articles taken ashore or brought on board the ship and concealed from Customs control shall be regarded as smuggled goods liable to confiscation with a fine imposed;

Likewise, the sale of any articles of foreign origin on the territory of the state will be regarded as smuggling;

No wastes shall be thrown into the water or on the quay; the discharge of oil contaminated water and/or oil residues is prohibited;

All mooring ropes must be fitted with rat-guard plates;

Only one gangway must be led ashore at night when loading or discharging is not carried out;

It is prohibited to take ashore grain, seeds, plants, plant products, soil, etc. as well as animals and birds;

Violation of the above-mentioned rules will entail penalty in accordance with the laws of the state.

(k) Customs Examination: Immediately after the clearance formalities have been accomplished, all the vessel's premises with cargoes and articles not destined for the port of call and not being allowed to be taken ashore are sealed by the Customs Officials. In case a part of cargo and/or articles, not for discharge at destination port, are stowed in the same area as articles for discharge at the destination port, the sealing is carried out after discharge of articles destined for the port.

Extracts from Customs Regulations:

It is allowed to bring in on arrival to the state:

1. Personal effects in quantities necessary for the trip.

2. Food-stuff, wine and/or alcohol, cigarettes/tobacco in quantities necessary for personal consumption during the trip, but duty free for 1 person not more than:

spirits-1 litre;
wine-2 litres;
250 cigarettes or 250 gm. of tobacco/tobacco articles.

Fresh, salted or smoked meat, fat, dressed poultry, smoked and home-made sausages, eggs, honey, milk and fish-products, but not canned fish – unless permit of the Ministry of Agriculture is available.

3. Foreign currency without restrictions on quantity.

Bringing in local currency from abroad (if not stipulated by special agreements), as well as State-loan bonds and lottery tickets is strictly prohibited.

4. Jewellery and every day necessities made of precious metals or jewels without restrictions in quantity (duty free.)

It is allowed to bring in not more than 2 jewellery articles for every day necessities made of pearl only or mixed with pearl having total weight not exceeding 100 gm.

It is prohibited to bring in natural pearl and seed-pearls.

5. Foreign currency, jewellery and every day necessities made of precious metals or jewels and pearl must be declared to the Customs.

6. It is *strictly prohibited* to bring in to the state:

Fire-arms and ammunition of any military kind;

Narcotics and psychotropic substances as well as appliances for Smoking opium and hashish;
Printed matter cliche, negatives, developed films, photos, video-cassettes and video-discs with films recorded on them, manuscripts, gramophone records and any other type of sound recording, drawings, pictures and articles of fine arts containing data which may do harm to political and economic interests of the state, State security, public order, human health and morals of the people.

It is allowed to take out when leaving the state:

7. Personal effects, foreign currency, jewellery and every day necessities made of precious metals, jewels and pearl that had been brought to the state earlier.

(Taking abroad state currency if not stipulated by special agreements, State-loan bonds and lottery tickets is strictly prohibited.)

8. Food-stuff, wine, spirits and cigarettes/tobacco in quantities necessary for personal consumption during the journey but not more for a single trip than:

spirits – 1 litre;
wine – 2 litres;
250 cigarettes or 250 gm. of tobacco/tobacco articles;
black or red caviar – 150 gm.;
ground or instant-coffee – 200 gm.;
spices 200 gm.

9. Articles bought for officially received Russian currency for personal use only, not more than 5 pieces of jewellery and/or every day necessities made of precious metals, jewellery or any kind of pearl in total; articles and decorations made of silver having total weight not more than 400 gm.

10. It is allowed to take out without quantity restrictions any articles (except forbidden ones) bought for foreign free currency in specialised shops on the state territory on producing corresponding bills (receipts) given by shops.

11. It is *prohibited* to take out of the state:

1. Fire-arms and ammunition of any military kind as well as military outfits.
2. Narcotics and psychotropic substances.
3. Nullified securities.
4. Works or art, antiquities (paintings, sculptures, china, articles made of crystal, ceramics, wood, leather, precious and non-precious stones and metals, bone, hand-work, carpets, gobelins, furniture, fancy clothes and footwear, numismatics, works of art, weapons, books, manuscripts, gramophone records, musical instruments, stamps, etc.) and other articles being a high artistic, history making, scientific or other cultural valuables.

Note.: Articles mentioned above may be taken out of the state with special permission of the Ministry of Culture provided an export duty equal to 100% of the value stated in the Export Permit has been paid.

5. Antlers and hides of stags.

(l) Berthing: Berthing can only be effected with tug assistance and a State Pilot on board. Likewise, no vessel shall leave or shift berth without employing the services of a Pilot authorised by the Port Administration to make the voyage in question.

Vessels must take up the berths assigned to them and conform strictly to the Obligatory Harbour Regulations in force.

A Pilot or the Agent shall provide the Master with all necessary information as regard to depths, tugs, conditions in the Harbour, etc., before mooring and shifting berth starts.

The responsibility for the safety of a vessel during her manoeuvring and berthing as well as for possible damages to a berth or other port facilities shall always rest with the Master.

No vessel is allowed to change berth due to handling of cargo or for any other reason unless the main engines, the mooring winches, the steering gear, etc., are in good working order and there is sufficient number of the members of the crew to ensure shifting berth when required.

It is strictly prohibited to work with vessel's propellers when lying alongside berth. To avoid damage to the underwater parts of a berth while mooring or unmooring every vessel must have the main engines going "dead slow" until her stern is 10 m. from the quay.

When berthing, Masters should use strong and reliable mooring lines and make them fast over the quay pile-moorings and bollards only. It is strictly prohibited to make fast mooring lines over any part of the quay equipment which has not been intended for that purpose.

When lying alongside berth, every vessel must have a gangway or a gangway board with a lifeline secured, led ashore and made fast. There should be a net under the gangway platform and a lifebuoy nearby. Gangways must be sufficiently illuminated at night.

(m) Stay in port at berths: When lying alongside berths, all vessels to be moored by long safe ropes which are to be kept fast at all times, and constant watch should be kept by day and at night.

All mooring ropes must be fitted with rat-guard plates.

From sunset to sunrise all vessels' decks, cargo decks and gangways must be illuminated.

Every vessel, whether in the outer roads or in the harbour, must always have on board a sufficient number of crew to be able to ensure both the ship's safety and her everyday routine. Vessel's fire-fighting and life-saving equipment must always be ready for use on board or to render assistance to other vessels or shore objects in case of emergency.

When in port, no vessel is allowed, without having obtained the Harbour Master's permission, to make repairs to the main engines or to the ship's auxiliary equipment thus depriving her of the opportunity to shift berth at short notice in case of emergency.

It is not allowed, without the permission of the Port Administration, to use vessel's boats, underwater oxygen and any underwater apparatus of other types.

No vessel is allowed to clean boilers or discharge any sort of chemicals or organic products into the water, giving off smoke and sparking from vessels' funnels.

(n) Ship's movement in the harbour and shifting berths: No vessel shall leave or shift berths without the permission of the Port Authorities. In case there are no provisions in the Contract of Carriage of Goods by Sea or in the Bill of Lading, a vessel shall accomplish one shifting from berth to berth during the course of her loading and shifting upon unloading to the loading berth at the Owners' risk and expense. Any subsequent shifting shall be at the expense of the goods.

All shiftings in the port connected with a vessel's needs, viz. bunkering, loading supplies and/or provisions, making repairs, etc., shall be at the expense of the vessel.

All haulings both during the course of loading and unloading shall also be at vessel's expense.

(o) Tugs' assistance: Tugs, if necessary, are usually ordered by the Master according to a Pilot's advice.

In some ports use of tugs during mooring and shifting berths is compulsory due to the heavy conditions of navigation.

Ordering of tugs and payment for the assistance rendered is made in accordance with the tariffs in force. Masters of vessels shall order tugs through a local Inflot Shipping Agency.

A tug's detention time at a vessel's side while waiting for her readiness for the towage is considered to be as the working time and therefore is to be paid accordingly.

For cancellation of a tug, a vessel shall be charged full rate, including detention time and time of passage of a tug from the berth to the vessel and vice versa.

When ordering a tug for unmooring, Master should fill in and sign a special application form given by the Agent. The actual time of completing the towage shall be approved by the Master of a towed vessel.

In ports where the towage is compulsory when mooring and shifting berths, the Master shall be charged for the tugs' assistance whether used or not, and having refused tugs shall be held responsible for the consequences thereupon.

(p) Notice of Readiness: In case there are no special provisions in the Contract of Carriage of Goods by Sea, the Master shall, during the established office hours upon the accomplishment of Customs formalities and having obtained Free Pratique, deliver a Notice of the ship's readiness for loading or unloading to the shipper or the consignee through the Inflot Shipping Agency.

The Notice of the vessel's readiness shall be considered accepted if she is actually ready to load the cargo into or unload it out of all the vessel's holds or tanks.

(q) Handling of Cargo: All cargo handling areas in the ports are under control of the Port Administration which shall provide vessels with labour, tally staff, sheds and warehouses, employees, etc.

To ensure successful handling of cargo the vessel shall, when required by shippers or consignees, receive or discharge cargo day and night, as well as on Sundays and holidays, furnishing free of charge all necessary cargo handling gear. Though in most ports the cargo handling is done by port cranes both from the quays and lighters, a vessel shall, in some ports, use her own cargo handling equipment, which has to be in good working condition.

In the latter case, the Master shall produce to the Agent the Cargo Equipment Certificate which must be valid.

Loading or unloading time is calculated as to the rates stipulated in a Charter Party or according to the Customs of the Port in the absence of same.

Should the port labour participate in the opening or closing of hatches, a vessel's administration shall be responsible for the rules of safety engineering to be complied with.

Opening and closing of mechanised ship's hatches shall always be done by the ship's crew.

Should shore cranes be used for loading or unloading instead of a vessel's cargo-handling equipment, the Master shall beforehand remove aerials, aerial halyards, stay rods, wires, etc., crossing the air space over a ship's hatches and preventing the shore cranes' derricks from free circulation.

The vessel's derricks shall not project over the sides.

(r) Agency: All foreign vessels upon arrival at the ports are attended by the Maritime Agencies Inflot, or by one of the local port shipping Agents.

Shipping Agencies provide foreign vessels with the following services:

Inform the Port Authorities and other organisations about vessels' expected time of arrival (ETA), nature and quantity of cargo to be handled, expected time of loading or discharging, etc.;

Render assistance to the Masters in obtaining Pilots, tugs, berths, launches, etc.;

Perform all the necessary formalities connected with the vessels' arrival and departure;

Ensure that Masters are acquainted with the Port Rules, Obligatory Harbour Regulations as well as other documents and instructions issued by the Port Authorities;

Give advice to the Shipowners and other interested parties regarding vessels' movement and the prospects for the handling of cargo;

Render help in speeding up cargo handling operations;

Provide vessels with supervisors and tallymen;

Prepare time sheets and submit them to the Masters, Port Authorities and Shippers (Consignees) for their further approval;

Sign on Masters' behalf cargo and other documents;

Arrange bunkering, delivery of fresh water, provisions, technical supplies and all kinds of ship-repairs;

Render help to the members of the crews in obtaining medical assistance;

Make payment of dues, charges, fines (if any), etc., on behalf of the Shipowners and for their account;

Take all necessary measures for improvement of the handling of cargoes and ships' services;

Look after the Court (Arbitration) cases and cargo claims on behalf of the Shipowners;

Make Sea Protests as well as translation and duplicating of any documents on Masters' requests;

Repatriate members of the crews from the state to their home ports

Invite surveyors qualified by the State Register of Shipping to conduct vessels' surveys;

Make extension of ships' documents;

Render help to the Shipowners in delivering and redelivering of their vessels on time charter;

Assist in arranging cargo fumigation on board;

Perform any commissions on the instructions of the Shipowners in regard to the ships' services and protection of their interests before any Authorities.

It is in the interest of the Master to advise Port Agent timely information as regard to a vessel's name and flag, ETA, gross register tonnage; draft fore and aft; position of cargo in hold (stowage plan); number, weights and location of heavy lifts, number and length of oversized (over 9 m.) pieces and Owners' cable address and telex number thus putting the Agent in a position to calculate the approximate sum of the disbursement expenses and ask the Shipowners to remit same (disbursement accounts are to be paid before vessel's departure).

Note: Bearing in mind the fact that most of the shore offices are closed on Sundays and holidays, the Master shall cable to Inflot Agency well in advance his order for bunkers, repairs, technical supplies and cash to enable the Agent to make necessary arrangements.

All branches of Inflot Agency work round the clock, including Sundays. Cable address of any branch of Inflot Agency is "Inflot", e.g. "Inflot St.Petersburg".

(s) **Fire safety measures:** Fire safety measures at ports must comply with the provisions of the International Code for the Carriage of Dangerous Goods by Sea. Every vessel upon arrival at a port must keep constant fire watch day and night and have fire-fighting and life-saving equipment always ready for action. Members of the crew must keep strictly to the Fire Safety Regulations especially during vessels' stay at oil and timber berths. Giving off smoke out of the funnels is strictly prohibited. In all the ports a fire brigade could be called over the phone by dialling 01 in case of fire.

(t) **Medical assistance:** Medical assistance, if required, is available, including vaccination and inoculation as well as dispensary and hospital treatment in all the ports. In case of emergency an ambulance or a doctor should be called for by telephone – 03 in all the ports.

(u) **Customs of the ports:** Customs of the ports should apply in case:

(1) there is no Contract of the Carriage of Goods by Sea at all;

(2) there are no provisions in a Charter Party or in the Bills of Lading in respect of items covered by these Customs;

(3) a Charter Party or a Sale contract and/or any other Contracts of the Carriage of Goods by Sea specially refer to these Customs of the Ports.

(v) **National and general holidays:**

5 days working week with 2 holidays has been introduced for most of the industrial enterprises, government and commercial offices and other institutions. Saturdays and Sundays are weekly holidays.

(w) **Places of Recreation for foreign seamen:** In the majority of the commercial sea ports foreign seamen can spend their spare time in the International Seamen's Clubs which can offer concerts by professional and amateur actors and singers, evenings of public hearing of recorded Russian and foreign music, films, etc. Sightseeing is usually organised by the local excursion bureaux.

(x) **Summer Time:** 1st April to 1st October – clocks advanced 1 hour at 0000 hrs.

DEEP-SEA PILOTAGE: See "Baltic Deep Sea Pilotage".

ARCHANGEL: 64.34 N. 40.30 E.

LOCATION: A White Sea port. Archangel is situated at the mouth of the Severnaya Dvina River, in the S.E. corner of Dvina Bay. A part of the harbour is situated at the Northern end of the Povrakulsky Island, at the junction of the Maimax River and the Kuznechikha River, and is called the Economia Avant-port. The total length of the port area is about 30 miles.

DOCUMENTS: Refer to beginning of Russian section.

PILOTAGE: Compulsory. Notices of ETA in accordance Soviet Wood Charter Party. Pilot boat located in area of the light buoy "Mudyugsky I". VHF Channel 16. Pilot boat is tug-boat with word "Pilot" on wheelhouse. Vessels awaiting Pilot may anchor at safe distance to North from pilot boat location. In event bad weather pilot boat goes to shelter, being available by VHF radio.

While waiting for a Pilot, vessels may lie at anchor at a safe distance to the North from the pilot boat location.

In the event of bad weather a Pilot shall board a vessel at a sheltered place shown by him.

When a Pilot is not able to board a vessel due to weather conditions, a pilot boat is usually situated on the Southern side of the Mudyug Island. In this event vessels should anchor at the entrance of the channel from seaward and wait for a Pilot's arrival.

ANCHORAGES: There are several places which can be used by foreign vessels for anchorage. They are:

(1) The outer roads with depths from 10.0 m. to the North and N.W. from the reception buoy "Mudyugsky I".

(2) Customs formalities are carried out alongside the berth or at Solombala roadstead immediately after vessel's arrival, and half an hour prior to vessel's departure.

(3) The Solombala roadstead with depths of 5.0 m. – 9.0 m. is used by vessels for anchorage while awaiting a berth for loading cargo.

The ground at all roadsteads – mud and sand; anchoring is performed according to the Pilot's recommendations.

RESTRICTIONS: Ice breaks up in April. Port area open from end of April through to November. From November till April, ice classed vessels sail with assistance of ice-breakers.

During the time of high water vessels can enter the port through the approach channel Berezovy Bar if having length not more than 160 m. and draft not exceeding 8.0 m. Changes of passage drafts are published in the Notices to Mariners. Vessels going to Timber Mills No. 2 and No. 3 as well as to the cargo area Bacariza pass through the central draw span of the railway bridge twice during 24 hours. Vessels having air-draft less than 13.7 m. pass through the bridge throughout 24 hours. During bad visibility (less than 5 cables) movement of vessels within the port is not allowed.

In the Approaches to the Port there is an overhead power cable between:

(a) 64° 37.91′ N., 40° 29.05′ E. and

(b) 64° 37.72′ N., 40° 29.03′ E.

The vertical clearance is 45.0 m.

HEALTH: All vessels coming from foreign countries inspected by Sanitary Office. If no diseases vessel obtains Free Pratique. If vessels entering after calling at another Russian port, Pratique automatic.

RADIO: All information from sea may be routed through Murmansk Radio (UMN) and Archangel Radio (UGE), A1 500 kHz, A3 2182 kHz.

All vessels when approaching the port of Archangel should establish radio contact through the coastal "Archangel Radio" station which operates 24 hours per day on the following frequencies:

Call Sign	*Frequencies (kHz)* *Working*	*Calling*	*Type of trans-mission*	*Time*	*Remarks*
UGE	500/476	500/480	A1A	H24	
"Archangel-Radio"	2182	2182	H3E	H24	
"Archangel-Radio-1" (CPR)**	156.8*(16)	156.8*(16)	F3E	H24	
"Archangel-Radio-8" (Inflot Shipping Agency)	156.375*(67)	156.8*(16)	F3E	H24	Operates during period of navigation only
"Archangel-Radio-5"	156.700*(14)	156.8*(16)	F3E	H24	
Vessels' movement control (VMC)	156.700*(14)	156.7*(14)	F3E	H24	

*Frequencies are given in MHz.

**CPR – Central Port Radio station.

The storm signals station is situated in the Solombala area on the embankment of the Severnaya Dvina River named after George Sedov (Lat. 64° 35′ N., Long. 40° 30′ E.).

Storm signals are shown by the International Code of Signals by day and by Morse system at night.

Masters of vessels proceeding to the port of Archangel should advise ETA and all necessary information to the Inflot Agency as per conditions of the "Soviet Wood" Charter Party.

24 hours prior to arrival advise ETA to Inflot Agency. Four hours prior to approaching the "Mudyugsky I" Masters should advise more precise time of arrival.

TUGS: If necessary ordered 2 hours before arrival and normally join vessel near berth. Usually use ship's lines.

BERTHING: To certain extent depends upon tides. 37 berths available with depths alongside up to 9.6 m.

There are a large number of berths in the port along the river front, as well as at the Economia Avant-port.

Berths are equipped to handle timber, wood-pulp, paper, bulk, liquid, machinery and general cargo. There are enclosed warehouses and concrete floor sheds in the port.

CARGO HANDLING FACILITIES: Berths of the commercial port are equipped with mobile electric cranes of up to 32 tons capacity. Loading of timber from berths of timber mills is effected by shore cranes and vessels' cargo gear. There are also floating cranes from 5 to 100 tons capacity as well as other cargo handling equipment and interport transport means. Container crane of 30 tons capacity and back-up facilities.

BRIDGES: Vessels proceeding to load cargo at Timber Mills 2 and 3 have to pass under bridge which is opened twice a day. Vessels with air-draft less than 13.7 m. can pass throughout 24 hours.

STEVEDORES: No particular ETA advices to stevedores/shippers required except those mentioned in Soviet Wood C/P. Loading rates, etc., also stipulated by Charter Party.

Mobile electric cranes of up to 20 tons capacity are operated on the quays. There are also floating cranes of up to 50 tons capacity, other cargo handling equipment and intra-port transport facilities. Sometimes, cargo handling is by vessels' gear.

MEDICAL: If any medical attention or prompt assistance required, Master has to contact Agent. No advance notice required. Clinic and hospital available.

TANKERS: Report 1994.

Terminal:

Name: Arkhangelsk Oil Terminal. Tel: (81800) 478157.
Telex: 242132 OVIS SU.

Shore tanks:

Product	No.	Total Capacity (cu.m.)
Gas Oil	9	90,000
Jet Fuel	3	30,000
Jet Fuel	2	2,000
L.C.G.O.	6	30,000
S.N.O.	2	10,000
S.N.O.	1	1,000
Heptane-Hexane Fraction	4	20,000
Lubricating Oils	6	6,000
Lubricating Oils	13	5,200
Gasoline	4	20,000
Gasoline	5	2,000
Gasoline	1	1,000

Shorelines: Length for all products 1,500 m. (approx.).
Diameter 530 mm. – Gas Oil/Jet, Fuel/Gasoline/ L.C.G.O./S.N.O./HH.Fraction.
Diameter 219 mm. – Gasoline, Lubricating Oils.
Berths: There are 2 berths being used for all mentioned products. Both berths: Maximum draft 7.80 m., length 150 m. and loading rate about 600 cu.m./hr.

DENSITY: Fresh water practically throughout port.

FRESH WATER: Usually delivered by self-propelled barges. A few berths are equipped with shore water lines.

FUEL: Bunkers (gas oil and marine diesel fuel) can be delivered by lighters.

FIRE PRECAUTIONS: While lying alongside timber berth vessel to take maximum fire precautions.

CONSULS: No Consuls in Archangel.

REPAIRS: All types of repairs possible, also underwater surveys.

DRY DOCKS: There are floating docks with capacity up to 7,000 tons.

SURVEYORS: Register of Shipping of Russia and Saybolt.

GANGWAY/DECK WATCHMEN: Not available from shore. Usual watch kept by ship's crew.

OPENING/CLOSING HATCHES: Normally carried out by ship's crew.

CERTIFICATES:

Seaworthiness.
Measurement.
Loading Line.
Cargo Equipment.
Safety Equipment Certificates.
Radio Telegraphy.
Radio Telephony.
Oil Pollution Prevention.
Sewage Pollution Prevention.
Derat Certificate.

CUSTOMS ALLOWANCES: Tobacco/wine: No quantity limits, but can only to be brought ashore in limited quantities.

REPATRIATION: Repatriation and crew changes require visa formalities.

AIRPORT: Airport near town. Served by regular airlines.

TIME: GMT plus 3 hours, October 1st to April 1st. GMT plus 4 hours April 1st to October 1st.

HOLIDAYS: General holidays: (Subject to change in near future.) All Sundays and Saturdays: January 1st (New Year's Day); March 8th (World Women's Day); May 1st, 2nd (World Labour Day); May 9th (Victory Day); October 7th (Constitution Day); November 7th, 8th (Great October Socialist Revolution Day). Cargo work on these days at shippers' discretion.

POLICE/AMBULANCE/FIRE: Police 02; Ambulance 03; Fire 01.

EMERGENCY CO-ORDINATION CENTRE: None.

TELEPHONES: Can be arranged on board.

SERVICES: Compass adjusting, radar and radio repairs, etc.

BANKS: None.

STORING: See "Prelims".

1. Barge or truck.
2. Vessels can be stored during loading.
3. Trucks can proceed alongside.
4. No.
5. Customs permission required.
6. No.

SHORE LEAVE: Each crew member properly signed in Ship's Articles and having valid Seaman's Book allowed ashore.

IDENTIFICATION CARDS: Only Seamen's Books required.

GARBAGE DISPOSAL: Collection of garbage is available. It is collected by special lorries ordered via "Inflot" Agency during office hours. Dry garbage must be packed in bags. Charge: 1 container (75 cu.m.) U.S.$ 36.00 (Prices are subject to change).

Disposal of bilge water into barges. U.S.$ 43.00 per ton. Minimum charge U.S.$ 630.00.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: One Seamen's Club available. All services available apart from international telephone and church services. Tel: 94847, 94776.

CURRENCY: Roubles.

Any European currency can be exchanged in State Bank, or in Seaman's Club Exchange Stall.

DELAYS: On account of rain when loading timber.

NAVIGATION: Masters proceeding for loading timber should bear in mind that the swing bridge on their way to Timber Mills No. 2 and No. 3 is open once daily.

All vessels with drafts of less than 3.6 m. especially when engaged in towing timber rafts, should keep out of the way of deep-drafted vessels when passing through narrow places and approaching channels both at sea and in the river, and should not hamper their safe passage in such places. They should also safely pass vessels engaged in dredging of a channel.

When approaching a bend in a channel, every vessel should beforehand give a signal by 1 prolonged blast on her whistle or siren, reduce her speed and when it is safe and practicable, keep to that side of the channel which lies on the starboard side of such vessel.

Every Master when passing through a narrow channel, or approaching a bend in a channel should take positive early action prescribed by the International Regulations for Preventing Collisions at Sea to avoid a risk of collision with a vessel approaching from the other direction.

Deep draft vessels shall not overtake each other when navigating in the channel of the Beresovy Bar. A vessel proceeding to the port along the course of the channel must keep out of the way of another vessel leaving the port.

No vessel shall navigate in the port harbours in restricted visibility when navigational lights, marks, leading lights, buoys, etc. are not visible.

Ice: At the head of Dvina Bay drift-ice extends as far as 12 miles from the shore by the end of November. The Severnaya Dvina estuary usually gets frozen over at the beginning of November. At Dvina Bay the ice usually breaks up in April and at the Severnaya Dvina estuary – at the beginning of May. Thus, navigation in the port area lasts all year round for vessels with ice-class for White Sea.

Powerful ice-breakers, ice-strengthened vessels and tugs are maintained by the Port of Archangel Authorities to assist in navigation of the Dvina Bay waters and off the coast when ice conditions prevail.

Tide: The tidal range at the head of Dvina Bay reaches 0.8 m. – 1 m. and at Mudyug Island 0.1 m. – 0.5 m.

The in-going flood stream is usually stronger and about 1 hour longer in duration than the out-going ebb stream.

Sometimes the in-going stream at the bar of Severnaya Dvina may be hardly observed, being reduced to a few minutes of slack water. I may run steadily for some time then gradually attains its usual strength and goes on to set up to the time of high water.

The tidal streams in the Severnaya Dvina are considerably influenced by both strength and direction of the wind.

Moderate Northerly and Westerly winds increase the height of the tide and hold the fall of the water.

Only the in-going flood streams have been observed at the Severnaya Dvina estuary at springs. The extreme tidal range of the water level observed there is about 4 m.

DEVELOPMENTS: For the immediate future no draft increase expected. Some berths under reconstruction and cranes being installed to load timber.

AUTHORITY: Chief of the Port of Archangel, Naberezhnaya Lenina 36, 163061 Archangel, Russia. *Tel:* 37840. *Telex:* 242111. *Cables:* 163061 Morport Archangel. *Contact:* Via VHF.

AGENT: Shipping Agency "Inflot", Archangel. Tel. 35874, 38573, 34040. Telex: 242115, 242231.

DE KASTRI: 51.29 N. 140.47 E.

SHIPMASTER'S REPORT: July 1991:

LOCATION: The port of De Kastri lies at the head and on the Western shore of the Gulf of Tartar and handles approximately 120 ships a year, split evenly between Russian and foreign ships.

Exports from De Kastri consist almost entirely of timber and oil products. Prior to our vessel's visit, all oil cargoes had been handled by Russian vessels. The timber trade is open to foreign traffic. The principal oil cargo handled was gas oil.

The population of De Kastri is about 4,000.

The port is affected by ice during the Winter season. Pack ice up to 2.0 m. thick blocks De Kastri Bay between November and May. The port authorities endeavour to keep the port operational during this period by the use of ice breakers, and timber exports are maintained. Oil expor is suspended though, as the river traffic which supplies De Kastri is unable to operate in the Winter months when the Amur is frozen over.

PILOTAGE: Pilotage is compulsory for the inner harbour and quarantine anchorage. Pilot is not required for anchoring in the outer part of the bay. Pilot was requested but did not come out to vessel.

Pilotage is normally arranged through Inflot (Government Agency). The pilot station will respond to calls on VHF Channel 16.

ANCHORAGES: The designated quarantine anchorage is situated approximately 4 miles inside De Kastri Bay, 2.5 miles S.E. of De Kastr town jetty. Charted depths of between 6.0 m. and 8.6 m. make i unsuitable for foreign going tankers. Indeed, the largest size of vesse that reputedly uses this port is 10,000 d.w.t. However, it is suitable for smaller vessels as it is sheltered and offers good protection in all excep E'ly. winds.

We anchored with Alekseeva Point (Lat. 51° 28.3′ N., Long 140° 51.5′ E.) bearing 352°(T)×0.87 miles in 15.0 m. of water, one mile inside of the bay. We were not equipped with Soviet charts and had to rely on B.A. Chart No. 3340 for approach, which is designed for offshore navigation only. No Pilot boarded vessel so anchoring was carried out by the Master.

We put 6 shackles in the water and vessel swung predominantly to the prevailing wind. There was little current evident. The holding ground was good, with bottom consisting of soft mud and shells. Very little shelter is afforded in this location, but it would not be recommended to take a vessel of our size (30,000 d.w.t.) further into the bay without more detailed knowledge of the depths and nature of the bottom.

APPROACHES: *Navigational Aids:* Navigational aids in the port consis of lighthouses, lightbuoys and transit marks. Lights are unreliable. O the 4 cardinal marks around Buruny Shoal (51° 27.6′ N., 140° 51.7′ E.) only the North and South buoys were lit. Davydova Lighthouse, with a nominal range of 9 miles, was barely visible from the vessel's anchored position, 1.3 miles to the S.S.W.

TUGS: The port is understood to have 2 tugs, one of which is the pilot cutter. No information was available on power or size.

BERTHING: The town's wharf consists of a single jetty, about 200 m long and was observed to handle up to 2 vessels at one time.

Charted depths range from 6.7 m. to 7.5 m., although local informatio suggests that 5.0 m. may be the maximum draft a vessel can draw and still safely use the wharf.

Fresh water and diesel oil bunkers are available for local vessels alongside the wharf, but it was not clearly established whether this also applied to foreign ships. Provisions may also be purchased in limited quantities, although the variety available is not large.

Cargo Handling Facilities: The wharf is used primarily for the export of timber. Seven cranes of around 10 tonnes capacity are available.

There are no special facilities for containers, Ro-Ro, etc.

TANKERS: Transfer of petroleum products is mainly carried out by ship-to-ship (STS) transfer at the Quarantine Anchorage. The ships to be lightered (STBL) rely on the lightering vessels (LV) to provide cargo hoses. From our observations, barges are built with wood rubbing bands. The supplementary fendering consisting of 3 or 4 rubber tyres was rigged only at our request.

Oil and Gas Facilities: There are no oil or gas facilities in De Kastri itself. Oil products are handled at the Quarantine Anchorage for export cargoes, and limited shipments are probably brought into the port for local consumption. Twelve oil storage tanks were observed, about 3 miles from the town.

1. Berth Operator/User: The Amur River Shipping Company Limited appears to be the only local carrier involved in the transportation of oil cargoes from the Komsomolsk Refinery on the Amur to De Kastri. Export thereafter has been by Soviet vessels. No other oil carriers are known to operate from the port.
2. This vessel (30,000 d.w.t.) is probably about the largest class of vessel that can safely use De Kastri Bay for STS operations at this time. The accuracy and type of survey on which the existing Soviet charts are based are not known, and it is not therefore possible to comment on the safety of anchorages further inside the bay. However, it does appear that a safe and more sheltered anchorage can be found for STS operations in about 12.0 m. of water, about 1 mile to the S.W. of our anchored position.
3. The maximum safe draft for a vessel loading at De Kastri anchorage is about 10.0 m.
4. The tides are diurnal, with a spring range of about 2.0 m.
5. Water density as measured by vessel on arrival was 1022.
6. Berthing and unberthing at the anchorage is carried out day and night.
7. The only limitation on freeboard would be length of cargo hoses carried by some of the river barges. The barge "Poronaysk" would be unable to discharge to a ship whose freeboard was much greater than 15.0 m.

REPAIRS: No repair facilities are available at present.

AIRPORT: The nearest airport is about 3 hours drive by car. It offers internal flights only, to Harborosk and Moscow. Obtaining tickets for flights is reported to be time consuming, with lengthy delays likely. This is borne out by the independent surveyors whose journey from Odessa to De Kastri took 4 days.

GENERAL: *Distress and Rescue:* There is no Coastguard, lifeboat or salvage services available. In the event of an incident the Soviet navy is called upon to provide assistance. During our visit a fishing vessel ran aground within the port. The navy took on the responsibility for towing the vessel off the mud.

Communications: Communications are difficult and unreliable.

Services: There is a boat service to Vladivostock and a road link to Harborosk.

No services, such as tank cleaning, compass adjustment, consuls, etc., are available at present.

IGARKA: 67.27 N. 86.35 E. (See Plan)

GENERAL: A sea and river port, Igarka is situated about 344 miles Southward of the mouth of the Enisei River which flows into the Enisei Gulf of the Kara Sea.

The port is open for navigation about 130 – 135 days from July till mid-November. Ice first begins to form in the second half of October.

No tidal range is observed in the port waters.

The port of Igarka specialises in timber exports.

DOCUMENTS: Refer to beginning of the Russian section.

PILOTAGE: Pilotage is carried out round the clock. Master of a vessel approaching the Port of Igarka from seaward has to order Pilots via the Chief of the Igarka Hydrobase and the Master of the pilot boat 48 hours prior to arrival to the Oshmarino Point where the River Pilots usually meet vessels. Confirm ETA 6 hours before arrival.

In case of bad weather, Pilot boards a vessel at a place as directed by the pilot boat. Since the distance of pilotage from the pilot station up to the port of Igarka is about 360 miles, 2 Pilots are usually required for the service.

The Master of a vessel should use VHF radio-telephone (calling frequency 156.8 MHz) or radio-telephone (calling frequency 500 kHz) for establishing the radio contact with a pilot boat in order to check the time and the place of boarding/unboarding of a Pilot.

ANCHORAGE: Information on best location of anchorage, if required, will be given by the pilot boat.

The anchorage in the outer roads is bounded on the East by the leading lines of Igarka and Northern Igarka leading marks, on the West by the left bank of the Enisei River, on the North by the beam line of the buoy of Igarka Oseryodok, on the South by the leading line of Port of Igarka entrance leading marks.

In the event of bad weather or main engine trouble a vessel should lie at anchor in a place as directed by a River Pilot, who shall advise a Master all necessary data about the anchorage.

RESTRICTIONS: Vessels can enter or leave the port 24 hours per day.

To ensure safe passage across the Lipatnikovsky and Turushinsky Bars of the Enisei River, vessels proceeding to the port of Igarka must have draft not exceeding 7.0 m. (See "Max. Size").

MAX. SIZE: Max. LOA 150 m. Also see "Restrictions".

HEALTH: Not later than 4 hours before arrival, Master to radio "Inflot" advising health condition on board. International code quarantine signals to be shown on arrival at port limits. No one, except Pilot and Port Authorities, may board or leave the ship until Free Pratique is given after port health inspection.

RADIO: Radio communication is effected through the "Igarka Radio" port radio station operating on the frequencies given below.

Call sign	*Frequencies (kHz)* *Working*	*Frequencies (kHz)* *Calling*	*Type of trans-mission*	*Time of work*	*Remarks*
UFR	500	500	A1	H24	Operates during navigation only
"Sever" (Port)	156.7*	156.7*	F3	H24	

*Frequencies are given in MHz.

Notice of Arrival: As per conditions of the "Soviet Wood" Charter Party.

TUGS: Normally join vessel with Harbour Pilot on approaching port. Vessels at anchor order tugs through "Inflot". Ship's tow lines used.

BERTHING: Tug assistance for berthing is compulsory. A berthing Pilot boards a vessel from a tug either in the outer roads or in the port. Depths alongside berths are up to 7.5 m.

After having approached a berth at a safe distance, a vessel, in most cases, should cast 2 anchors and then with tug assistance, turn stern to the Island and moor with 3 mooring ropes led from the stern. When mooring, a vessel should have ready on board 4 mooring ropes each not less than 100 m. in length (3 ropes to be led ashore and 1 rope prepared for a tug.).

Vessels moored in the inner roads must have strong ropes which should be made fast over the pile moorings only.

If 3 or 4 vessels are moored at the quay, the outside ones should have a red light exhibited in the middle of each mooring rope led ashore.

Notice of Readiness and other conditions of loading – as per the "Soviet Wood" Charter Party. Opening and closing of hatches by ship's crew.

When a vessel is moored in the inner roads, stern to the Island, loading is by floating cranes; when at berth – ship's derricks are used.

Loading is done by ship's wire strops, with a test label attached to every strop.

MEDICAL: Medical assistance is free, hospital facilities available – all arrangements made by "Inflot".

DENSITY: Fresh water.

FRESH WATER: May be taken from the river in places indicated by the Pilot, but not in the port area.

FUEL: Not always available.

CUSTOMS ALLOWANCES: Only reasonable quantities for personal consumption may be taken ashore.

REPAIRS: Only minor repairs.

GANGWAY/DECK WATCHMEN: Ship's crew to provide watchmen services.

OPENING/CLOSING HATCHES: By ship's crew.

REPATRIATION: No facilities.

AIRPORT: Situated 1.5 km. away, 1 daily flight to Krasnogarsk.

TIME: GMT plus 7 hours (all the year round).

HOLIDAYS: No official holidays are observed during the navigation season.

POLICE/AMBULANCE/FIRE: Police, Tel: 0-02; Ambulance, Tel: 0-04; Fire, Tel: 0-01.

TELEPHONES: Telephones cannot be connected on board vessel.

SHORE LEAVE: Permitted during 0600 – 2400 hrs. subject to police control.

IDENTIFICATION CARDS: Required for crewmen going ashore.

GENERAL: It is forbidden for crew to swim in the harbour.

AUTHORITY: The Port of Igarka Authority, 47 Gorky Street, 663200 – Port of Igarka, Russia. *Tel:* 2-13-16. *Cables:* "Transflot" Igarka.

AGENT: A Branch of Archangel Shipping Agency "Inflot". Telex: 242115. Cables: "Transflot" Igarka.

KANDALAKSHA: 67.08 N. 32.25 E. (See Plan)

GENERAL: The port of Kandalaksha is situated in the N.W. extremity of the Kandalaksha Bay of the White Sea. Year round navigation is possible with the assistance of the ice-breakers for ships that have no Super-Ice Class. Vessels that have Super-Ice Class can go to and from the port. Only in the coldest of Winters may the assistance of ice-breakers be necessary, as during the period February-March-April the floating ice of the basin of the White Sea drifts and is pressed by the S.E. winds into Kandalaksha Bay, and it makes it difficult to pass strips of the hummock ice. However, in warm Winters, the basin of the sea may have no ice and navigation for vessels is not difficult. The port Kandalaksha and its anchorage are protected from waves of all directions. The difference between the high and low water is a maximum of 2.8 m.

PILOTAGE: Compulsory inward and outward. The distance of the compulsory pilotage is 8 nautical miles. The Pilot usually boards and disembarks the vessel at the distance 1.0 nautical miles S.E. from Garely Islands (Lat. 67° 03′ N., Long. 32° 39′ E.). Communication with the Pilot is on VHF Channel 16 throughout 24 hours. Call sign "Kandalaksha Radio 5". Masters of the vessel going to the port should order a Pilot by sending a telegram or telex to Kandalaksha via "Inflot" Murmansk 24 hours before arriving at the port and corrected 4 hours before arrival (by VHF) at the above mentioned position. On request of the Master, pilotage may commence or be completed in any position in Kandalaksha Bay. The Pilots are highly qualified. Anchorage for vessels waiting for a berth is situated in the Outer Roads of the port (position approx. Lat. 67° 08′ N., Long. 32° 23′ E.). The depths of water in the Roads are 35 m. – 40 m. and the bottom is mud.

RESTRICTIONS: The port of Kandalaksha can accept vessels with a draft of not more than 9.3 m. Inward and outward vessels with the draft of more than 8.0 m. are permitted, with the permission of the Harbour Master, to start 2 hours before the high water in the port.

All vessels navigating within the Inner Roads and Outer Roads must keep strictly to the following port regulations:

Vessel's speed must not exceed 4 knots.

Anchorage in the Inner Roads is prohibited.

MAX. SIZE: The length of the berths permits mooring of vessels with length up to 200 m. The depth at the berth permits vessels to moor with a draft not more than 9.0 m. (using 2 pontoons between berth and the body of the vessel) at low water.

HEALTH: The Master of a vessel coming from a foreign port should report every sickness of the crew. The Health Authorities board together with Customs and Immigration, and if they find everything in order, Free Pratique is granted. Each vessel shall produce a Derat Certificate and Sanitary Certificate.

RADIO: Cable via "Inflot" Murmansk, ETA, draft, length, breadth and moulded depth of the vessel, according to the vessel's certificate.

All vessels, when approaching the port of Kandalaksha, should establish VHF contact with the port, operating around the clock on the following channels:

1. Sea Inspection and Pilot Office of the port:
   Call sign "Kandalaksha Radio 5".
   Calling Channel 16. Working Channel 13.
2. Operator of the port and Controller:
   Call sign "Kandalaksha Radio 2".
   Calling Channel 16. Working Channel 14.

TUGS: Port has tugs up to 1,600 h.p. Use of tugs for mooring, unmooring and shifting is compulsory, according to port rules. Master should order the number of tugs according to the Pilot's advice.

BERTHING: The port has 5 berths:

Two berths with a total length of 250 m. that permit loading and discharging of vessels with draft of not more than 9.0 m. (providing 2 pontoons with the breadth 12.0 m. are used).

Two berths with a total length of 200 m. that permit handling of cargoes of vessel with draft not more than 7.0 m. (providing 2 pontoons with the breadth 12.0 m. are used).

A fifth berth has been built for the river vessels with a draft of 3.6 m.

CRANES: The capacity of the cranes is 20 tonnes, and with joint operations of two cranes, the capacity is 40 tonnes.

STEVEDORES: Ordered by the Agent. Port Working Hours: 0800 hrs. – 1600 hrs., except Sunday and holidays.

MEDICAL: Master has to advise Agent prior to arrival if medical attendance is required aboard. The Port Clinic has dental facilities and medical first aid.

DENSITY: 1001.6.

FRESH WATER: Available at Berths No. 3 and 4.

FUEL: Not available.

FIRE PRECAUTIONS: No smoking in the port area, except in the places specially allocated.

CONSULS: None.

SURVEYORS: Should be ordered via Jurinflot International Moscow (Fax: 212-8074) or via International Maritime Agence (Fax: 915-80-62).

REPAIRS: Port can undertake welding, metal work and turning work.

AIRPORT: The nearest airport is situated 100 km. from Kandalaksha town.

CUSTOMS ALLOWANCES: No restrictions on board.

TIME: The local time is Moscow time, which is GMT plus 3 hours. In the Summer (May-September), Summertime is kept.

HOLIDAYS: 1st, 2nd and 7th January, 8th March, 1st May, 9th May, 12th June.

POLICE/AMBULANCE/FIRE: Police Tel: 002. Fire Tel: 001. First Aid Tel: 003.

TELEPHONES: Available on board at Master's request. The cost of using the telephone is U.S.$ 5.00 per day.

BANKS: Arctic Promstroybank, Pronina Street, Building 4, Kandalaksha 184040. Tel: 2-23-05, 2-44-85. Telex: 12661202 BANK.

Kandalaksha Office of Seuzapcombank, Spekova Street, Building 32, Kandalaksha 184040. Tel: 2-20-90, 2-25-91. Telex: 126618 SEVER.

SHORE LEAVE: Crew members are allowed ashore. Identification cards will be issued on arrival.

DELAYS: Awaiting berth if there is port congestion.

DEVELOPMENTS: The Port Authority has a plan of reconstruction for the next 5 years. As a result of the expansion, the port handling capacity will increase to one million tons from the current capacity of 250,000 tons. This reconstruction will permit entering of the vessels to the port with a draft of 12.0 m.

AUTHORITY: Port of Kandalaksha, 19 ul. Belomorskaja, Kandalaksha, 184040 Russia. *Tel:* (812) 164-18-35. *Telex:* 126604 Strop. *FAX:* (812) 164-18-35. *Contact:* Zakharov Valentin Nikolaevich, General Director. Rintcin Vasiliy Alexandrovich, Deputy General Director. Mjagkov Vladimir Andreevich, Harbour Master.

KHOLMSK: 47.03 N. 142.03 E. (See Plan)

GENERAL: The seaport of Kholmsk is situated on the Western coast of Sakhalin Island, in the Tartarsky Strait of the Japan Sea and at the head of Nevelskoy Bay.

The port is open for navigation all the year round.

The outer roads of the port are bounded by an arc of 7 cables length radius, the centre of which is marked with a light located on the Southern mole of the Commercial Harbour.

The port is divided into 3 parts: The Kovsh (a basin), The Commercial and Fishing Harbours. The Commercial Harbour is situated in the centre of the port area. It is protected by the Southern and Northern moles. The entrance to the Harbour 150 m. wide, is situated between these 2 moles. Due to shoal water along the coast, there is not much space for vessels manoeuvrability in the Commercial Harbour. Cargo berths are situated in a basin (The Kovsh) of the Southern part of the Harbour.

The Port of Kholmsk, due to its position, size and weather conditions in the area, cannot be used as a sheltering port.

During Westerly and N.W'ly gales, particularly in the Autumn and Winter (October — March) the heavy sea swell penetrates into the Kovsh (mainly from the N.W.) causing the variable current with surge (the "Tvagun"). Due to this phenomena the stay in port is not safe therefore Masters of all vessels are recommended to leave the port for sea after having received a storm warning of a gale coming from Westerly or N.W. directions.

All vessels proceeding to the port of Kholmsk in the Autumn and/or Winter must have available on board a sufficiency of fuel, fresh water, provisions and strong manila ropes, be seaworthy in all respects, thus ensuring vessel's safety during a possible stay in the open sea roadstead.

In case there are no vacant berths in the port, vessels are not allowed to enter the harbour without prior permission.

It is also prohibited to enter the harbour after a storm warning has been received by vessel despite the fact that there are vacant berths in the port.

DOCUMENTS: Refer to beginning of the Russian section.

PILOTAGE: Compulsory. Pilot meets a vessel in the outer roads. In the event of bad weather, when Pilot is unable to come on board, vessel should follow in the wake of pilot boat.

ANCHORAGES: There are no anchorages protected from the wind in the Nevelskoy Bay.

During off-shore winds vessels may anchor in the outer roads situated opposite the port entrance. The outer roads are open to Westerly winds.

Masters should bear in mind that during the period of navigation fish nets are usually laid in the outer roads. The seaward side of the border of the fish nets, situated about 8 cables length off-shore, is usually marked by wooden buoys with flags.

Anchorage in the outer roads may also be obtained at 4 – 6 cables length off shore. Depths are from 18 m. to 20 m. Holding ground sand and stone.

A vessel should proceed to the anchorage along the leading line of the port of Kholmsk leading lights. At a distance of half a mile off the port entrance, a vessel should steer off the leading line at 2 – 3 cables length and then drop anchor.

The holding ground is better in the Southern part of the outer roads than in the Northern part.

When at anchor, a vessel may not approach the leading line closer than 1.5 cables length.

RESTRICTIONS: Vessels may enter the port at any time of day or night.

MAX. SIZE: The maximum permissible draft for entry to the port is 6 m. Length not over 105 m. and beam up to 20 m. Since depths in the channel may vary at times, the Port Authorities shall undertake to advise the Masters of incoming vessels accordingly.

HEALTH: Not later than 6 hours before arrival, Master to radio "Inflot" advising health condition on board. Health Authorities board together with Customs and Immigration and if all found in order Free Pratique is granted. If vessels enter after calling at another Russian port, Pratique is automatic.

RADIO: Ship-shore radio link can be established through the port radio-station Kholmsk Radio operating 24 hours a day on the following frequencies:

	Frequencies (kHz)		*Type of trans-mission*	*Time of Work*
Call sign	*Working*	*Calling*		
UFO	500	500	A1A	H24
"Kholmsk Radio"	2182	2182	H3E	H24
"Kholmsk Radio-2"	2720	2720	H3E	H24
(Port Controller)	156.45*(9)	156.45*(9)	F3E	H24
"Kholmsk Radio-5"	156.7*(14)	156.8*(16)	F3E	H24
"Kholmsk Radio-1" (Vessel movement control post)	2720	2720	H3E	H24

*Frequencies are given in MHz.

RADAR: No shore based radar.

TUGS: Two tugs of 300 h.p. and two tugs of 1,200 h.p. are available. Number of tugs required for assistance is usually agreed between Pilot and Master. Tugs normally join the vessel in the inner area of the port.

BERTHING: Berths with depths up to 7.3 m. alongside, are equipped to handle general and bulk cargoes, metals, timber, food products, etc., as well as passenger traffic.

Fishing Port: Max. LOA 132 m. Max. draft 6.0 m.

CRANES: Cranes of up to 40 tons capacity are operated on the quays. There are also other cargo-handling equipment and inter-port transport facilities. There are enclosed warehouses and open concrete floor sheds.

STEVEDORES: Arranged through "Inflot".

MEDICAL: All requirements should be ordered in advance through "Inflot" if medical assistance required aboard.

FRESH WATER: Available from berth, road delivery not possible.

FUEL: Not available.

CONSULS: None.

REPAIRS: Only minor repairs can be carried out.

DRY DOCKS: None.

SURVEYORS: Inspectors of the Shipping Register of Russia only.

GANGWAY/DECK WATCHMEN: Gangway watch compulsory and carried out by crew.

HATCHES: Opening and closing of mechanised hatches is always done by the ship's crews.

CUSTOMS ALLOWANCES: No restrictions on tobacco and alcohol on board ship. Only tobacco required for personal consumption may be taken ashore.
AIRPORT: No local airport.
TIME: GMT plus 11 hours. Summertime (April 1st - October 1st) GMT plus 12 hours.
HOLIDAYS: New Year's Day; March 8th (World's Women's Day); May 1st, 2nd (Labour Day); May 9th (Victory Day); October 7th (Constitution Day); November 7th, 8th (Great October Socialist Revolution Day). Cargo work can be arranged on these days.
POLICE/AMBULANCE/FIRE: Police Tel: 602. Ambulance Tel: 603. Fire Tel: 601.
TELEPHONES: Can be arranged on board.
TIDE: Changes in the water level are of small account. They are mainly due to the irregular diurnal tides. The maximum range of the water level observed is 0.4 m.
AUTHORITY: The Port of Kholmsk Authority, 39 Sovetskaya Street, 694620 Kholmsk, Sakhalin Is., Russia. *Tel:* 96-3-05. *Telex:* Via Morflot Kholmsk 412613 SSC SU. *Cables:* Morport Kholmsk. *Contact:* Harbour Master.

AGENT: The Sakhalin Main Maritime Agency Morflot. 6 Morskaya Street, Port of Kholmsk, Sakhalin Island 694620, Russia. Cables: "Morflot Kholmsk". Tel: 222-86; 220-80. Telex: 412613 SSC SU.

MEZEN: 65.50 N. 44.04 E.

GENERAL: A commercial seaport, Mezen is situated at a distance of 22 miles to the South of the mouth of the Mezen River flowing into the head of the Gulf of Mezen, in the White Sea.

The port area is bounded on the North by a line connecting the Ryabinov and the Nerpinsky points and on the South by the parallel of 65° 50′ N., Northward of the town of Mezen. The anchorage at the Kuloi river mouth is also included at the port of Mezen area.

Vessels drawing 3.9 m. – 4.2 m. are usually grounded while loading timber alongside a floating berth of the timber-mill at low water.

The port is open for navigation from the end of May until October.

Tidal streams are observed in the Mezen river. The tide is semi-diurnal with two high waters and two low waters a day.
DOCUMENTS: Refer to beginning of the Russian section.
PILOTAGE: Compulsory. A Pilot meets a vessel at an anchorage buoy, at the Mezen River bar (Lat. 66° 12′ N., Long. 44° 04′ E.), at a distance of 22 miles off the port of Mezen. In the event of bad weather a Pilot at his discretion, may board a vessel in the outer roads.

Pilotage cannot be effected at night.

A Pilot cannot board a vessel earlier than 2 hours before the high water in the Semzha River, and a vessel may be piloted into the port not later than 1 hour before the water in the river reaches its high level.

Pilots do not board vessels in rough water (if the wind is over Force 6 Beaufort scale).

In case Pilot cannot embark a vessel in the outer roads, Master should follow in the wake of pilot boat up to Tolstic Point (Lat. 66° 04′ N., Long. 44° 05′ E.) where a Pilot will board ship. After leaving the port Master should disembark Pilot on to pilot boat at Tolstic Point and then follow it up to the outer roads of the port of Mezen.
ANCHORAGES: Anchorage can be obtained in the outer roads and in certain places of the Mezen River situated between the outer roads and the Kamenka settlement.

The outer roads are situated at the Mezen River mouth. They are bounded on the South by a line connecting the Ryabinov and the Maslyany Points.

Vessels in the outer roads are subject to effects of the N.W. and N.E. winds and heavy waves caused by them. The depths in the outer roads are about 7 m. The holding ground is sand, mud and rocks. Anchorage can be obtained in the inner roads with depths at low water of up to 4.5 m. – 5 m. (length of area is 1.5 mile and width up to 150 m.).

The inner roads are situated opposite the Kamenka settlement. A good anchorage can be obtained there by two vessels simultaneously. The anchorage at Burnovsky Point with depths from 4.5 m. – 5.5 m. can be used by two loaded vessels drawing up to 4.2 m.
RESTRICTIONS: Vessels may enter port only in daytime on high water. Masters have to pay full attention to Pilot's advice as river has varying bends.
MAX. SIZE: The permitted draft for the entry to the port is announced monthly by the Port Authorities. It should not exceed 3.9 m. – 4.2 m. The maximum permitted length is 70 m.
HEALTH: As for "Archangel".
RADIO: Vessels can establish radio contact through the port radio station Mezen Radio operating 24 hours a day on the following frequencies:

Call sign	*Frequencies (kHz)*		*Type of trans-mission*	*Time*
	Working	*Calling*		
UZT	500	500	A1	HX
"Mezen-Radio"	2182	2182	P3E	H24
			J3E	H24
"Kamenka-2"	156.8*(16)	156.8*(16)	F3E	H24
(Port Controller)	156.45*(9)	156.45*(9)	F3E	H24
"Kamenka 5"	156.8*(16)	156.8*(16)	F3E	H24
(Harbour Master)	156.6*(12)	156.6*(12)	F3E	H24

*Frequencies given are in MHz.
Notice of Arrival: As per conditions of the "Soviet Wood" Charter Party.
REPAIRS: Only minor repairs can be effected. There are no dry docks in the port.
FRESH WATER: Fresh water can be supplied at the berths and by road tankers.
FUEL: Supplies not guaranteed.
BERTHING: The floating dams are used as mooring berths in the port. The depths alongside at low water are about 3.5 m. Vessels drawing 3.9 m. – 4.2 m. are usually grounded while loading at low water.

The port of Mezen specialises in timber exports but other cargoes are also handled at berths. Covered warehouses and open concrete floor sheds are available.

Tug assistance for mooring berths is not compulsory. Berthing is usually done in the daytime. Tugs, if necessary are ordered by Master according to the Pilot's instructions.

Rendering of Notice of Readiness and opening and closing of hatches are usually done in accordance with the "Soviet Wood" charter party.

Loading of timber is done by ship's winches and floating cranes with capacity 5 tons.
TIDE: The difference between two successive high waters and low waters is small but the range of the tide changes considerably. At the Kamenka settlement the mean range of the tide is 2.8 m. and the mean range of the spring tide is 3.1 m. At the Semzha River the mean range of the spring tide reaches 7.7 m. Everywhere in the Gulf of Mezen the differences in the duration of falling and of rising water are big and in some places of the Gulf of Mezen they may reach 5 hours.

Considerable changes in the water level are observed in the Spring. They are usually caused by the seasonal increase in the amount of water (due to melting snow) brought down by the rivers.
TIME: GMT plus 3 hours (all year round).
AUTHORITY: The Port of Mezen Authority, Morport, 164652 – Kamenka Settlement, Mezen, Archangel Region, Russia. *Tel:* 9-43-41 (Chief of the Port), 9-40-81 (Harbour Master). *Cables:* Morport Mezen.

AGENT: A branch of the Port of Archangel Main Maritime Agency "Inflot" at the Port of Mezen.

Port – "Inflot", Kamenka Settlement, 164650 – Mezen, Archangel Region, Russia. Cables: "Inflot Mezen-Kamenka". Tel: Exchange – 94391. Inflot – 94126.

MURMANSK: 69.00 N. 33.03 E. (See Plan)

GENERAL: A Barents Commercial Seaport and Fishing Port, Murmansk, is situated at the Eastern coast of the Southern elbow-shaped bend of the Gulf of Kolsky, between the latitude of Mishukov Point in the North and Lat. 68° 55′ 33″ N. in the South. It is the last unfrozen port of the Northern seas route.

In very severe Winters the Southern and middle elbow-shaped bends of the Gulf get frozen over for a short period of time in February or March, during calm and frosty weather. In mild Winters drift ice is observed. The Northern part of the Gulf never gets frozen over. The port of Murmansk is open for navigation all the year round. In the event of ice conditions in the Gulf of Kolsky, ice-breaker assistance will be effected in compliance with the Harbour regulations in force.

The port area occupies nearly all Southern elbow-shaped bend of the Gulf of Kolsky. The port of Murmansk consists of 2 harbours: the Commercial and the Fishing Harbours.
DOCUMENTS: Also refer to beginning of the Russian section.
General Declaration, 5 copies (IMO Form).
Crew List, 6 copies (IMO Form).
Passenger List, 6 copies (IMO Form).
Crew Effects Declaration, 2 copies (IMO Form).
Cargo Declaration, 3 copies (IMO Form).
PILOTAGE: Compulsory. Pilot station is situated at Kislaya Gooba (position Lat. 69° 11.5′ N., Long. 33° 31.6′ E.) in Kolsky Bay, 9 miles South of the entrance. ETA to be given to Agents before arrival (see "Radio"). Since Pilots are not available at the pilot station any time, it is vital that ETA is duly given to the Agent to arrange a Pilot by indicated time. Pilot launch is distinguished by word "Pilot" in black letters on boat's superstructure. Pilots can be contacted on VHF Channel 16. Every vessel should drift whilst waiting for Pilot since depths in the Pilot station are too big to permit anchorage.

During rough sea Pilot is not able to board a ship at the Pilot station area. In this event vessel should follow the Pilot boat in the wake of it up to the Salny Island and embark a Pilot Southward of the Island at a place indicated by Pilot boat.
ANCHORAGES: At the pilot station depths are too great to permit anchorage, but there is sufficient sea room for vessel to await Pilot with engines stopped. Anchorage with depths from 20 m. – 35 m. is situated in the Southern elbow-shaped bend of the Gulf of Kolsky, Westward of the Kievaraksky leading line (the port inner roads). The holding ground is good.

Every vessel waiting for mooring berth should anchor Westward of the Kievarasksky leading line but not obstructing other vessels' traffic.

It is strictly prohibited to lie at anchor Eastward of the Kievaraksky leading line. If, in case of emergency, a Master has to lie at anchor in the prohibited area, he should immediately report the fact to the Harbour Master of the Commercial port of Murmansk.
RESTRICTIONS: Vessels can enter the inner roads of the port at any time of day or night.

The speed of vessels navigating within the limits of the Gulf of Kolsky is restricted by the following limits:

(*a*) It shall not exceed 14 knots in the area bounded by the parallels of the Letinsky Point and the Northern side of the Salny Island.
(*b*) It shall not exceed 10 knots in the area bounded by the parallels of the Northern side of the Salny Island and Pinagory Point.
(*c*) It shall not exceed 6 knots in the area Southward of Pinagory Point.
(*d*) In case the wind is over Force 6 Beaufort Scale all movements of ships within the port basin and roads may be carried out with the Port Authorities' permission only.

MAX. SIZE: LOA 200 m., draft 12.0 m.
HEALTH: International quarantine signals to be used on arrival. No later than 6 hours before arrival at the inner area Master should radio Agents giving full details of state of health on board, and requesting Pratique which will be given on arrival.
RADIO/RADAR: Murmansk Radio operating 24 hours on 2182 kHz. Coastal radio station UMN operating 24 hours on 500 and 472 kHz. Coastal radio station UMV operating 24 hours on 13080 kHz.

Radio contact can be established through the port radio station Murmansk Radio, operating 24 hours a day on the following frequencies:

Call sign	*Frequencies (kHz)* *Working*	 *Calling*	*Type of trans-mission*	*Time*
UMN	500	500	A1A	H24
"Murmansk Radio"	2182	2182	H3E	H24

Radar/VHF Link:

In the South circular bay, movement of all vessels is severely controlled by Coastal Radar Station (Murmansk Radio 9 – VHF Channels 12, 18 and 67). All vessels under way must make contact with it and carry out the recommendations received.

All vessels when at anchor or navigating in the Gulf of Kolsky must keep constant VHF watch on Channel 16.

The port radar station gives all possible information to any vessel navigating in the Gulf in the restricted visibility. Radar navigation is usually controlled by a Pilot on board a vessel.

Storm predictions are transmitted on Channel 16 VHF for vessels in the vicinity. Vessels at moorings are warned through the Agent.

Notice of Arrival: Every foreign vessel on approaching the Gulf of Kolsky must ask for entry permission into the Gulf from the Toros Island signal station by exhibiting her International Code letters by day and at night her call sign should be made in Morse code by searchlight.

Advice to Agent: ETA first notice be given to Agent by Shipowner 10 days prior to ship's arrival. Master has to inform Port via Agent 48 hours and 12 hours before ship's arrival.

VHF: Port VHF maintains contact between ship and shore. Calling on Channel 16 working channel will be according to instructions from shore (Channels 7, 26 and 27).

TUGS: 4 tugs 1,200 h.p. – 2,300 h.p. Normally join vessel in the inner area of the port. Ship's lines as well as tug's lines can be used, the latter being supplied free of expense to vessel.

BERTHING: Main berths, depth alongside 32 ft. at low water. Average height of tide about 3.9 m. Vessels berth port or starboard side alongside at Master's and Pilot's discretion. The berths of the Commercial Harbour with depths alongside of up to 12.0 m. are equipped to handle general and bulk cargoes, metals, machinery, chemicals, foodstuff, etc.

There are enclosed mechanised warehouses for apatite including open concrete floor sheds.

Berths of the port are equipped with mobile electric cranes of up to 40 tons capacity and other cargo handling equipment and intra-port transport. Since loading/unloading is usually done by the port cranes, there are no specific requirements to vessel's cargo gear.

STEVEDORES: Arranged by Agent on basis of Master's ETA. Loading and unloading is carried on throughout 24 hours a day including holidays.

MEDICAL: Hospital and medical facilities available. Vaccination can be arranged. If doctor required on board Master should inform Agents by radio or VHF.

TANKERS: See "Shipmaster's Report".

DENSITY: At the berth varies between 1006 and 1025.

FRESH WATER: Available from most berths, otherwise supplied by barge. To avoid delay recommended to order before arrival.

FUEL: All grades available. Delivered by barge. Advance notice required.

CONSULS: There is no local representation.

REPAIRS: All kinds of repairs can be carried out for vessels of up to 30,000 dwt.

DRY DOCKS: Large dock; length 225 m., width 45 m. Small dock; length 141 m. width 30 m.

GANGWAY/DECK WATCHMEN: Not obligatory.

OPENING/CLOSING HATCHES: Usually performed by ship's crew.

CERTIFICATES: At first Russian port of call certificates of tonnage and those required by International Convention will be required for examination.

CUSTOMS ALLOWANCES: No restrictions on crew's consumption of tobacco and alcohol on board. It is forbidden to take these items ashore.

TIDE: Changes of the water level in the Gulf are due to the tides. The tide is semi-diurnal with two high waters and two low waters a day. The difference in time of high and low water is about 6 hours. The range of the tide at mean neap is about 2.4 m. and at mean spring 4.5 m. The extreme range of water level is usually observed during the Autumn months and the lowest during Spring.

TIME: GMT plus 3 hours in Winter. GMT plus 4 hours in Summer. (April 1st – September 30th).

TELEPHONES: Ambulance, Tel: 003, 2395 and 2422; Fire service, Tel: 2252 and 2524.

GARBAGE DISPOSAL: Collection service available. Containers are placed alongside the ship, telephone number of garbage service is 21-26 (this number to be used within the port only). Cost for one container of 0.75 cu.m. capacity is U.S.$ 36.00. 24 hours notice required for garbage disposal. Garbage removed between 0800 hrs. – 1600 hrs. from Monday to Friday.

WASTE OIL DISPOSAL: Collection service available with barges only. One barge is available of about 350 tons capacity to receive bilge water and oily water. Telephone number of the service is 23-55. Charge for removal of one ton is U.S.$ 43.20.

SEAMAN'S CLUBS: None.

CURRENCY: Russian Roubles. Import of currency is unlimited, but amount of currency brought into the country must be declared.

DEVELOPMENTS: Reconstruction is being carried out in order to speed up loading of iron-ore and other cargoes.

SHIPMASTER'S REPORT: May 1993.

Vessel:

LOA	176.8 m.
Beam	21.8 m.
Max. draft	9.72 m.
Summer d.w.t.	19,350 tonnes.
B.R.T.	12,587 tons.
N.R.T.	6,641 tons.

Jetty: Murmanol – Berth No. 2/4.
Max. Draft: 6.80 m. at L.W. (Pilot's advice).
Position: Lat. 68° 55.9′ N., Long. 33° 02′ E.
Berthing: Vessels berth port side alongside (at Master's and Pilot's discretion).
Restrictions: Vessels may berth and unberth at any state of the tide.
Tugs: Tugs' lines normally used.
Telephones: Available at berth. No connections on vessels.
Density: 1000 – 1010.
Loading: Loading rate for Gas Oil is 500 – 550 tonnes/hr. and for Fuel Oil and Motor Fuel Oil 220 – 260 tonnes/hr., using 100 mm. diameter shore hoses.
Ballast: Ballast water to be pumped to shore slop tank via 100 mm. shore hose at max. pressure 3 kg./sq.cm. – 4 kg./sq.cm.

AUTHORITY: The Port of Murmansk Authority, 19 the Port Passage, 183027 Murmansk, Russia. *Tel:* 2-22-60, 2-23-10, 2-55-65 (Harbou Master). *Cables:* Mortorgport Murmansk. *FAX:* 47-85-54493. *Contact:* V. Avdyukov, Harbour Master.

AGENT: "Inflot" Shipping Agency, 19 The Portovy Proezd, 183027 Murmansk, Russia. Cables: "Inflot Murmansk". Tel: 2-56-66, 2-51-97. Telex: 126116.

NAKHODKA: 42.48 N. 132.53 E. (See Plan)

GENERAL: A commercial port, Nakhodka is situated in Nakhodka Bay, in the N.W. part of the Japan Sea.

Sometimes Nakhodka Bay is covered with sludge which is frequently driven out by winds into the sea.

From the beginning of January to March the Nakhodka Bay is usually covered with thin ice which can easily be broken by vessels and driven out into the sea by favourable winds.

The port is open for navigation all the year round.

Changes of the water level in the Nakhodka Bay are of small account but the rise of the water level caused by strong Southerly winds blowing for considerable periods of time, may reach quite a high level.

The Northern part of the Nakhodka Bay from the entrance up to the line connecting the Lindgolm and Basnin Points is occupied by the Commercial port. The fishing port is situated Southward of this line.

The most dangerous wind for vessels lying in the Nakhodka Bay is the strong Southern wind of long duration caused by typhoons. The wind usually gives rise to the water level and produces waves of up to 3 m. height in the Bay.

DOCUMENTS: Refer to beginning of the Russian section.

PILOTAGE: Pilotage in the port of Nakhodka is compulsory for all vessels irrespective of nationality and ownership with the exception of the local coasters.

Since 1981 the following Traffic Scheme has been established in the Nakhodka Bay (Navarea XIII No. 28 04.04.81).

1. All vessels arriving at Nakhodka Bay ports from sea are requested to proceed to Nakhodka Bay lighted pivot mid channel Buoy No. 1 (Lat. 42° 43′ 31″ N., Long. 132° 56′ 26″ E.) which is the pilot boarding place.
2. Main Ship Channel No. 1 (740 m. wide) leads from lighted Buoy No. 1 along Nakhodka Bay entrance range axis 180° – 000°.
3. Channel No. 2 (740 m. wide) 050° – 230° leads from lighted Buoy No. 1 to Nakhodka Bay lighted pivot mid channel Buoy No. 2 (Lat. 42° 46′ 00″ N., Long. 133° 00′ 06″ E.) to Vostochny Port Channel No. 3 (250 m. wide) leads along axis of Vrangel Bay entrance range 297° – 117°.
4. Channel No. 7 (740 m. wide) leads from lighted buoy No. 2 along axis of Vrangel Bay entrance range 297° – 117° up to crossing the Main Ship Channel No. 1 to Nakhodka Bay.
5. Channel No. 4 (740 m. wide) leads from Main Ship Channel No. 1 along axis of Novitsky Bay range 089.3° – 269.3° up to crossing the Channel No. 7 to Vrangel Bay and Channel No. 5 (250 m. wide) leads to Novitsky Bay.
6. Entrance Channel No. 6 (250 m. wide) leads from main ship Channel No. 1 along axis of Torgovy Port range 087.9° – 267.9° to Nakhodka Bay.
7. All vessels 50 m. and more in length are requested to proceed via above mentioned channels.

Channels No. 1, 2, 4, 7 have two-way traffic. Vessels are requested to proceed along the right side of channel axis.

Channels No. 3, 5, 6 have one-way traffic. Vessels to proceed along the channel axis, according to Traffic Centre instructions.

8. Vessels that proceed from sea are requested to contact Traffic Regulation Centre on Channel 12 call sign "Kamensky-17" not less than 2 miles before approaching Nakhodka Bay lighted pivot Buoy No. 1.

Vessels at berth or anchored within Nakhodka Bay water area are requested to seek permission of the Traffic Regulation Centre before unmooring or weighing the anchor.

Vessels anchored are requested to keep continuous watch on Channel 16.

To avoid damage to a vessel and/or any port installation, vessels should be moored/unmoored by the method of parallel mooring unmooring with tug assistance.

Being at 10 m. distance from a berth a vessel is allowed to use his main engine in case of emergency only.

ANCHORAGES: A safe anchorage can be obtained in Areas No. 305, 306 and 307, with depths from 13.0 m. – 28.0 m. and in the anchorage "10" area with depths from 18.0 m. – 28.0 m. The holding ground in both anchorages is mud, sand, sand with mud, stone.

The "3" area is a quarantine anchorage which serves as the Pilots' boarding place and an anchorage for deep sea-going vessels over 3,000 d.w.t.

The "10" anchorage area is an anchorage for tankers proceeding to the oil port situated in the Novitsky Bay. Boundaries of the anchorages are shown on the chart.

To lie at anchor in the Nakhodka Bay, in the fairway and in the dredged harbours, except in emergency, is strictly prohibited.

Masters to advise Port Director of time of anchoring and position, and on departure, time of weighing anchor.

RESTRICTIONS: Vessels can enter or leave the port at any time of day and night. There are no size restrictions for entry to the port, except for vessels having the maximum permitted draft.

Anchorage for tankers is allowed only in the "10" area.

MAX. SIZE: The permitted draft for vessels proceeding to the Commercial port is 9.10 m., the Fishing port 8.0 m. and the Passenger Terminal 8.6 m.

Vessels drawing over the permitted draft must obtain Harbour Master's permission prior to entry to the port.

HEALTH: Advise "Inflot" by radio in advance if there is any case of quarantine illness on board the ship. If vessel is arriving from a cholera area, then cholera inoculations are required.

TUGS: Tug and mooring launch assistance available. 2 tugs used. Tugs join the vessel in Nakhodka Bay as directed by Master or Pilot. Ship's tow lines are used.

RADIO: Radio communication can be effected via the radio station of the Primorsk Shipping Company – "Nakhodka-Radio" some data of which is given in the table below.

Call sign	*Frequencies (kHz)* *Working*	 *Calling*	*Type of trans-mission*	*Time of work*
UKI	500	500	A1A	H24
Nakhodka Radio–1	156.100*(2)	160.700*(2)	F3E	
"Novitsky-2"	157.65*(33)	157.65*(33)	F3E	H24
(Oil Harbour controller)	157.7*(34)	157.7*(34)	F3E	H24
"Kamensky-17"	156.8*(16)	156.8*(16)	F3E	H24
(Vessels' movement	156.7*(14)	156.7*(14)	F3E	H24
control post)	156.375*(67)	156.375*(67)	F3E	H24

*Frequencies are given in MHz.

0100–1300 (Moscow Time)

VTMS in operation, call "Kamenskiy 17".

BERTHING: May be effected at any time of day or night. In daytime vessel's mooring position will be marked by a flag and at night by a red lantern. These signals mark the point where the ship's bow should be at the mooring.

The berths of Cargo Handling Port Area No. 1 have depths alongside from 8.6 m. up to 10.2 m. and are equipped to handle grain, equipment, cables, wire ropes, metals, phosphorus, etc.

The berths of Cargo Handling Port Area No. 2 have depths alongside from 9.1 m. up to 10.2 m. and are equipped to handle grain, coal, cement, foodstuff and general cargoes.

The berths of Cargo Handling Port Area No. 3 have depths alongside from 8.8 m. up to 11.8 m. and are equipped to handle timber, sawn timber, equipment, machinery and other cargoes.

Passenger vessels are handled at two berths with depths alongside 8.8 m. and 6.1 m.

Electric cranes of up to 41 tons capacity are operated on the quays. There are also floating cranes with lifting capacity of up to 300 tons and other cargo handling equipment, intra-port transport included.

2 grain handles available, rate 300 tonnes/hr. each.

Loading and/or unloading is usually done in accordance with conditions and rates stipulated by Charter Parties and Sales Contracts.

STEVEDORES: Arranged through "Inflot".

MEDICAL: Medical service is free. All requirements should be ordered in advance through "Inflot".

TANKERS: Slop reception facilities are available.

Report: 1994.

Terminal: Nakhodka Oil Terminal (Neftebaza). Tel: (266) 22531, (266) 22737. Telex: 213804 NEFTO SU.

Shore tanks:

Product	No.	Total Capacity (tonnes)
Ethyl Gasoline	12	34,800
Aviation Gasoline	10	10,500
Aviation Kerosine	3	9,700
Diesel Fuel Oil	20	61,600
Marine Diesel Oil	4	13,600
Fuel Oil M-40/100	2	13,000
Light Fuel Oil F-5	2	8,000
Motor Fuel Oil	2	8,000
Lubricating Oil	13	12,600

Shore lines:

Product:	Length (m.)	Diameter (mm.)
Gasoline	760	500
Diesel F.O.	1,500	600
Heavy F.O.	1,420	600
Ethyl Gasoline	960	500

Berthing Facilities: The port has 1 pier with 5 berths. Vessels are being moored alongside Berths No. 1 and 2 with a max. draft of 12.0 m. and Berths No. 3 and 4 with a max. draft of 6.8 m.

Berth No. 5 is for stern mooring with a max. draft aft of 6.8 m.

Loading Rates:

Product	Rate (tonnes/hr.)
Ethyl Gasoline	750 – 800
Aviation Gasoline	360
Aviation Kerosine	720
Diesel Oil	860 – 880
MDO	700 – 720
Fuel Oil M-40/100	500 – 800
Motor Fuel Oil	570 – 800

FRESH WATER: Can be supplied by barge only.

FUEL: Available.

CONSULS: North Korea, Tel: 55310. Japan, Tel: 56360.

WIND: The most dangerous wind for vessels lying in Nakhodka Bay is the strong Southern wind of long duration caused by typhoons. The wind usually gives rise to water level and sends heavy waves of up to 4 m. height into the Bay.

REPAIRS: All kinds of repairs for vessels of up to 25,000 d.w.t. can be carried out.

SURVEYORS: Saybolt (Vladivostok).

OPENING/CLOSING HATCHES: Can be carried out by stevedores.

CUSTOMS ALLOWANCES: No restrictions on tobacco and alcohol on board ship. Only tobacco required for personal consumption may be taken ashore.

REPATRIATION: Can be arranged during the Summer months provided passport and documentation in order. During Winter months there are no facilities for foreigners to reach nearest international airport so repatriation is only possible via infrequent passenger ships to Japan.

AIRPORT: Nearest international airport is at Khabarovsk, 1,000 kilometres away. Vladivostok is now closed to foreigners or international traffic, though sometimes used for air freight.

TIME: GMT plus 10 hours. GMT plus 11 hours in Summer.

SHORE LEAVE: Permitted subject to police control.

DEVELOPMENTS: Port under reconstruction. On completion vessels with draft of 11.6 m. will be able to berth.

SHIPMASTER'S REPORT: April, 1983.

Documents: 2 copies of Camera List on plain paper signed by the Master giving Make and Serial No. of cameras in possession of crew members.

Also see "Regulations".

Anchorage: All tankers must anchor, while awaiting berth, in the anchorage with the following co-ordinates:

	Lat.	Long.		Lat.	Long.
(a)	42° 45.80′ N.	132° 54.71′ E.	(b)	42° 45.80′ N.	132° 55.27′ E.
(c)	42° 55.57′ N.	132° 55.44′ E.	(d)	42° 44.37′ N.	132° 55.44′ E.
(e)	42° 44.39′ N.	132° 54.56′ E.	(f)	42° 44.73′ N.	132° 54.56′ E.
(g)	42° 45.16′ N.	132° 55.08′ E.	(h)	42° 45.39′ N.	132° 54.71′ E.

VHF: "Nakhodka Port Radio Control" maintains continuous watch on Channel 12. This station can be used for conveying messages to Agents. It is not possible to talk directly with Agents.

Medical: 10 Roubles per person for medical consultation.

Fuel: Owner must contact Bominflot London (Telex No. 23830. Fax: (071) 734 3370) for supply of fuels.

Tankers: All ballast (including clean ballast) in cargo tanks must be pumped ashore. Installation can receive ballast at the rate of 300 t.p.h. to 400 t.p.h. Gas oil loading rate about 700 t.p.h. Interruptions in loading due to shortage of cargo ashore. Vessel took about seven days to load 20,700 tonnes of gas oil.

Surveyors: Russian Register of Shipping Surveyor can carry out hull and machinery surveys on behalf of Lloyd's Register of Shipping.

Customs: All pornographic literature and films must be kept sealed during the vessel's stay in port.

Shore Leave: From 4 tanker berths, shore leave possible by boats only. Same arranged by Agents.

All seamen are welcomed in the local Seaman's Club.

Regulations: Photography strictly prohibited within port limits.

SHIPMASTER'S REPORT: May 1984.

See "Vostochny".

AUTHORITY: The Port Authority of Nakhodka, 22 Port Street, 692900 Nakhodka, Primorsky Krai, Russia. *Tel:* 5-77-02, 5-79-38, 5-78-15. *Cables:* Mortorgport Nakhodka Primorskogo.

AGENT: The Far Eastern Main Maritime Agency – "Inflot". Postal address: ul Leninskaia 2, Primorski Kray, Nakhodka, 692900 Russia. Telephone: 56155, 56233, 59773. Telex: 213826. Telegraphic address: Inflot Nakhodka. Fax: (266) 5-99-50.

NARYAN-MAR: 67.38 N. 53.00 E.

GENERAL: A commercial port, Naryan-Mar is situated in the S.E. part of the Barents Sea, at a distance of 70 miles from the Pechora River mouth on the right bank of the Gorodetsky Shar Creek.

The port is open for navigation for a period of 120 – 130 days in the year.

In the Pechora River Inlet first ice usually begins to form between 20th and 25th October, but sometimes appears at the beginning of the month.

The inlet becomes completely frozen over at the middle of December. Ice finally disappears at the end of June or sometimes beginning of July. Changes in the water level in the Pechora Inlet, due to melting of ice in Spring, have not been observed.

The formation of ice in the rivers flowing into the Pechora Inlet usually depends upon the time of the appearance of ice in the Inlet itself. Rivers, as a rule, become frozen over by the middle of October. The ice in the rivers usually breaks up earlier than it finally disappears in the Pechora Inlet.

The Pechora River at the Kuya settlement area becomes frozen over at the end of October, and the ice finally disappears by the end of May.

DOCUMENTS: Refer to beginning of the Russian section.

PILOTAGE: Compulsory. Besides information stipulated in Soviet Wood Charter Party, vessels approaching Pilot Buoy may contact Port Authorities or Pilot in first 15 minutes of any odd hour from 0700 till 2300 hrs. (Moscow time), frequency 2182 kHz. Signals for Pilot to be given in accordance with International Code. Pilot boat wooden, standard type, white painted, with word "Pilot" in black letters on wheelhouse. Pilot usually boards vessel at the Pilot Anchorage light buoy (Lat. 68° 30′ N., Long. 54° 32′ E.). In case of bad weather, and in extraordinary circumstances Pilot shall embark vessel in the Srednevskie Islands area. In this event a vessel approaching the port from seaward should follow pilot boat in the wake of it, up to the Srednevskie Islands leading line where Pilot will be able to board ship.

Master of a vessel proceeding to the Port of Naryan-Mar should order a Pilot through the Harbour Master 24 hours prior to arrival at the Pilot Anchorage light buoy and advise more precise ETA not later than 4 hours before approaching it.

Master should order Pilot not later than 2 hours prior to shifting berth and/or leaving the port.

ANCHORAGE: A recommended anchorage for foreign vessels is situated in the area with the central point Lat. 68° 30′ N., Long. 54° 33′ E. The depths in the anchorage are from 5.4 m. – 6.6 m. Also Inner Roads where anchorage will be indicated by Pilot.

An anchorage can be obtained at the right bank of the Pechora River off Urpinsky leading line No. 24. Depths are from 4 m. – 17 m. The bottom is sand and mud.

Good anchorages with depths from 5 m – 10 m. can also be obtained opposite Zakhrebetny Bay and N.E. of the town of Naryan-Mar.

All vessels arriving from abroad or leaving the port for abroad, must anchor opposite Zakhrebetny Bay for port formalities.

RESTRICTIONS: Vessels can enter or leave the port at any time of day or night.

The permitted draft for entry to the port is about 4.5 m. but it is usually advised by the Port Authorities at the beginning of navigation. The maximum permitted length of a vessel is 125 m.

The entrance to the port is by the fairway leading from the Pilot Anchorage light buoy across the Pechora River Bar.

The bar itself is the extensive shoal water area extending Northward of the Bolvansky Nos. Point. Three channels are dredged across the bar: The Receiving Channel, the Bar Channel and the Povorotny Channel. The last one serves as turning-point from the Receiving Channel into the Bar Channel. Vessels drawing not more than 4.9 m. can pass across the bar only at high water level.

It is prohibited to enter or leave the port through the Bar Channel and/or Receiving Channel as well as to navigate in the port area during dense fog, heavy rain and snow falls, strong winds of over Force 6 and absence of floating marks.

With the appearance of ice in the Pechora Inlet and in the Pechora River, entry to the port is not allowed without Harbour Master's permission.

The speed of a vessel navigating from the Pilot Anchorage Light Buoy through the Receiving Bar Turning, Alekseevsky, Polovsky, Kuisky, Urpinsky and other Channels shall not exceed 6 knots, with the exception at the part of the Pechora river between the Zakhrebetny and Srednevsky Channels where it is allowed to navigate with speed not exceeding 12 knots.

When passing floating cranes nearby, lighters and vessels lying alongside the port quays, every ship should proceed at dead slow speed.

MAX. SIZE: Draft declared by Port Authorities after being checked in the beginning of the season, and is about 15 ft.

HEALTH: Vessels inspected by Sanitary Officer. If no diseases, vessel obtains Free Pratique. Pratique automatic when vessel arrives from another Russian port.

RADIO: Naryan-Mar Radio.

Call Sign	*Frequencies (kHz) Working*	*Calling*	*Type of transmission*	*Time of work*	*Remarks*
UOY	500	500	A1	HX	
Naryan-Mar Radio 1	156.8*	156.8*	F3E	H24	Operates during period of navigation only
Port Controller	156.7*	158.0*	F3E	H24	

*Frequencies are given in MHz.

Storm warnings for vessels' traffic in the Pechora Inlet area for the coming 24 hours are transmitted via both the Central Port Radio and VHF radio.

Notice of Arrival: Should be given in accordance with the "Soviet Wood" Charter Party conditions.

BERTHING: The Port of Naryan-Mar specialises in timber exports. Depths at the berths are up to 6.5 m. There are enclosed warehouses and open concrete floor sheds.

The necessary number of tugs for entering or leaving the port as well as for shifting berth shall be agreed upon between Pilot and Master.

A mooring berth is usually indicated by a Pilot. Shifting berths without having obtained Harbour Master's permission is not allowed. Ship's tow lines are usually used during towage.

Diesel mobile cranes of up to 6 tons capacity are operated on the quays. There are also track-laying cranes of up to 12 tons and floating cranes with lifting capacity from 35 tons – 40 tons.

STEVEDORES: As per "Soviet Wood" Charter Party.

MEDICAL: No advance notice required. Clinic and hospital available.

DENSITY: Fresh water irrespective of tide.

FRESH WATER: Available from shore.

FUEL: Not guaranteed.

CONSULS: No Consuls.

REPAIRS: Small repairs only.

DRY DOCKS: None.

SURVEYORS: State Register of Shipping.

GANGWAY/DECK WATCHMEN: To be provided by vessel.

OPENING/CLOSING HATCHES: According to "Soviet Wood" Charter Party.

CERTIFICATES:

Seaworthiness.
Measurement.
Load Line.
Cargo Equipment.
Safety Equipment.
Radio Telegraphy.
Radio Telephony.
Oil Pollution Prevention.
Sewage Pollution Prevention.
Derat Certificates.

CUSTOMS ALLOWANCES: Tobacco/Wine – No quantity limits.

REPATRIATION: Repatriation and crew changes require visa formalities.

AIRPORT: Airport served by regular lines and situated near town.

TIME: GMT plus 3 hours. No seasonal alterations.

TIDE: Changes in the water level in the port area depend upon tides and effects of the wind.

The tide is semi-diurnal with 2 HW and 2 LW a day. The range of the tide varies from 0.9 m. – 1.8 m. Changes in water level are caused by the effects of the wind and may reach 1 m. – 1.5 m.

HOLIDAYS: See "Archangel".

POLICE/AMBULANCE/FIRE: Police 02; Ambulance 03; Fire 01.

EMERGENCY CO-ORDINATION CENTRE: Not available.

TELEPHONES: Can be arranged on board.

BANKS: None.

STORING: See "Prelims".

1. By truck when alongside.
2. Vessels stored by truck only.
3. Yes.
4. No.
5. See "Archangel".
6. Normally carried out by ship's crew.

SHORE LEAVE: Each crew member properly signed in ship's Articles and having valid Seaman's Book is allowed ashore.

IDENTIFICATION CARDS: Only Seamen's Books.

DELAYS: Caused by rains, when vessel loading cargo of sawn goods.

AUTHORITY: The Chief of The Port of Naryan-Mar, Ul. Naberezhnaya 11, 164700 Naryan-Mar, Russia. *Tel:* 26-95. *Telex:* 24211. *Cables:* Morport Naryan-Mar.

AGENT: A branch of the Port of Archangel Main Maritime Agency "Inflot" at the Port of Naryan-Mar. Pechora Timber Mill 164700, Khatanzeisky, the Port of Naryan-Mar, Archangel Region, Russia. Cable: "Inflot Naryan-Mar". Tel: "Inflot" via the timber mill switchboard 30-70, 31-05

NEVELSK: 46.40 N. 141.51 E. (See Plan

GENERAL: The sea fishery port of Nevelsk is situated in the Tatarsky Strait, in the Southern part of the Nevelsk Bay. The port is open for navigation all the year round.

Changes of the water level are mainly caused by in and off-going tida floods.

The port consists of two parts. The Outer part includes a part of the Nevelsky Bay water area with the imaginary boundaries drawn by an arc of 1.5 mile radius from the light mark installed on the Southern point of the Western breakwater. The Inner port consists of the harbour of the fishing port, the Small and the Northern Scoops. The boundary of the Inner is the line connecting the points of the Southern and the Western breakwaters.

The Master of a vessel when entering the port should keep on the leading line of the green leading light marks located at a distance of 5.5 cables to the North of the Southern point of the Naga Reef. The true direction of the Leading line is 259° – 079°.

The Port of Nevelsk, bearing in mind its position, size, weather and hydrological conditions, is not and cannot serve as a sheltered port as it is only partially protected from the effects of the sea swell and winds blowing from South, West and N.W. directions and is not protected from S.W. winds at all. Therefore deep sea-going vessels cannot be allowed to enter the port during storm warnings. It is dangerous to stay in the port when heavy S.W. winds are expected.

PILOTAGE: Effected round the clock. The Master of a vessel should order a Pilot via the Harbour Master's office.

ANCHORAGE: Situated in the Outer port to the South of the leading line and to seaward of the 20 m. contour. The anchorage is not protected from West and North winds and waves. The bottom is sand. The anchorage in the inner area is dangerous as the ground there (stone plate) does not hold anchors well.

RESTRICTIONS: The permitted draft is determined by the Harbour Master. Vessels having draft over 5.8 m. are allowed to enter the port after having obtained the Harbour Master's permission.

RADIO: Communications can be effected through the port radio station "Nevelsk Radio-1".

Call Sign	*Frequencies (kHz)* *Working*	*Calling*	*Type of trans-mission*	*Time of work*
UFM-2	500	500	A1A	H24
"Nevelsk-31" (Port Controller)	156.8*(16) 156.45*(9)	156.8*(16) 156.45*(9)	F3E F3E	H24 H24

*Frequencies are given in MHz.

TUGS: Tugs ordered by the Master for mooring and unmooring meet vessels within the boundaries of the Inner port.

BERTHING: All vessels entering the port are moored to the berths according to instructions of a port controller.

The berths of the port with depths alongside of up to 6.5 m. are equipped to handle general, bulk liquid and other cargoes.

There are closed warehouses, open concrete floor sheds and a cold store in the port.

It is recommended to use manila mooring ropes due to insufficient protection of the port from effects of winds, waves and strong variable current with surge (the so called "tyagun".).

Opening and closing of hatches is usually done by the crew. All deep draft vessels are loaded/unloaded in the roads.

The berths of the port are equipped with 5 ton portal cranes. There are other cargo handling facilities and intraport transport.

FRESH WATER: Available in limited quantities.

FUEL: Diesel oil available.

CONSULS: None.

REPAIRS: Possible for vessels up to 4.0 m. draft.

TIME: GMT plus 11 hours. Summertime (April 1st – October 1st), GMT plus 12 hours.

AUTHORITY: The Port of Nevelsk Authority, 32 Rybatskaya Street, 694740 Nevelsk, Sakhalin Island, Russia. *Tel:* 20-06 (Port Director). *Telex:* Via "Inflot", Kholmsk. *Cables:* Morport Nevelsk. *Contact:* Port Director.

AGENT: Sakhalin Main Maritime Agency, Inflot, at Kholmsk, Sakhalin Island, Russia.

NOVOROSSIYSK (Including Sheskharis Oil Harbour): 44.43 N. 37.47 E. (See Plan)

GENERAL: In Winter, strong, gusty N.E. winds (called "Bora"), reaching hurricane force at times, blow from the coastal mountains. Due to these winds, vessels lying at anchor in Novorossiysk Bay may very quickly become covered with ice when the temperature of the air is cooled below freezing-point.

It is impossible to enter the port when "Bora" blows, therefore, all vessels are recommended to leave Novorossiysk Bay for the open sea beforehand or lay at anchor in the Yuzhnaya Ozereika Roads, at a distance of 8.5 miles Westward of the entrance to the port of Novorossiysk or in Anchorage Area No. 416, to the South of the Doob Point, until the weather improves.

The range of water level in Novorossiysk Bay caused by the effect of the winds, does not exceed 0.6 m. The changes of water level, due to variation in atmospheric pressure ("Seish" effects), are observed at times. The "Seish" may last up to several days. The maximum range of water level, due to the "Seish", observed in Novorossiysk Bay is 0.6 m.

The port consists of 2 harbours – the Dry Cargo Harbour and Sheskharis Oil Harbour.

The inner roads are situated at the head of Novorossiysk Bay are divided from the outer roads by the Western and Eastern Moles. The outer roads are situated between the moles and the Southern border of the port.

The Dry Cargo Harbour situated inside the inner roads is protected by 2 (Western and Eastern) moles.

Two passages, the Western and Eastern, divided by Penaisky Shoals, lead to the inner roads through the port area. The Western passage is wider in comparison with the Eastern, and vessels may enter outer roads passing through it by one course.

DOCUMENTS: Refer to beginning of the Russian section.

Shipmaster's Report: (1975) Notwithstanding the instructions for documentation for all Russian ports referred to at the beginning of the section, the Novorossiysk Port Authorities require the following:

General Declaration (IMO FAL Form 1)	4 copies
Cargo Declaration (IMO FAL Form 2)	4 copies
Ship's Stores Declaration (IMO FAL Form 3)	3 copies
Crew Effects Declaration (IMO FAL Form 4)	2 copies
Crew List (IMO FAL Form 5)	8 copies
Passenger List (IMO FAL Form 6)	8 copies
Money List	2 copies

PILOTAGE: Compulsory: 96 hours prior arrival cable Inflot giving ETA, name of vessel, gross tonnage, exact draft, type of engine. Flag, sound and Morse signal G. Pilot meets vessel at Lat. 44° 37′ N., Long. 37° 52′ E. Movement of vessel within inner harbour – only under Pilot guidance. If Pilot is not available vessel should anchor in Area No. 415, opposite the Kabardinka settlement, recommended as an anchorage (No. 416), and wait until Pilot arrives.

Procedure: Send request for Pilot to Port Dispatcher 2 hours before arrival. Establish contact with Control Post (SUDS) on VHF Channel 9, 30 minutes before entering Regulated Movement area. Message should include:

(a) Type and name of vessel.
(b) Time of approach to zone (Regulated Movement area).
(c) Nationality and name of owners.
(d) N.r.t. and g.r.t.
(e) Length and max. draft.
(f) Type and quantity of cargo.

A continuous listening watch should be maintained on Channel 9 whilst within the area (vessels at anchor on Channel 16).

ANCHORAGES: Anchorage in the outer roads of the port is allowed almost everywhere but most convenient places for the purpose are to be considered the following 3 areas. The first one is Area No. 415 situated to the North of the Doob Point.

Depths there vary from 12 m. to 27 m., the holding ground is mud. In the event of winds blowing from seaward Masters of all vessels are recommended to leave this area for the open sea. Area No. 414 is the second anchorage place, situated 8 cable lengths Westward of the Penai Point. Depths there are from 13 m. to 27 m., the holding ground is mud and mud with shell. The third place is Area No. 412 situated 6 cable lengths South-Eastward of the port entrance. Depths there are from 20 m. to 24 m.

Vessels approaching the port of Novorossiysk with N.E. gales ("Bora") blowing, or caught by the storm whilst lying in the outer or inner roads, or after having received storm warning, should use every opportunity to proceed to sea or lay at anchor in the Yuzhnaya Ozereika Roads (Anchorage Points No. 408 and 410), having the main engines ready and keeping constant anchor watch.

Under the circumstances, every vessel should keep regular radio contact with port radio station.

Masters of vessels lying at anchor in the outer roads and/or in the port, are usually warned beforehand about the forthcoming N.E. winds. Since these winds may reach hurricane force during a very short period of time, particularly in Winter, all Masters lying at anchor in Novorossiysk Bay are recommended to pay careful attention at every change of the weather, to watch position of vessel to be able to prevent her drifting about anchor and proceed to sea in due time.

RESTRICTIONS: No restrictions on night entry into the Inner Roads. Mooring and/or unmooring, both in the Dry Cargo Harbour and the Sheskharis Oil Harbour cannot be effected during Southerly or N.E. winds over Force 7.

MAX. SIZE: The permitted length for entry into port is 250 m., draft 11 m. for dry cargo vessels.

Tankers: 250,000 d.w.t., 19 m. max. draft.

HEALTH: Free Pratique automatic for vessels coming direct from Russian port. From other countries, usual procedure of sanitary inspection applies.

RADIO: Vessels can establish radio contact through port radio station Novorossiysk Radio operating 24 hours a day.

Station	*Call Sign*	*Channel*

Control Post (SUDS)	Novorossiysk 17	9, 95
Tugs and Berthing		6

All vessels passing through the traffic controlled zone and/or anchored there have to keep constant VHF radio watch on Channel 16.

The port signal station is equipped with radar which gives all possible information for ensuring safe pilotage, and also helps Pilots in shifting vessels within the port inner roads.

Inflot on VHF Channel 16, working Channel 67.

TUGS: A sufficient number of tugs of between 600 h.p. and 5,000 h.p. are available in the port.

While manoeuvring ships to the Sheskharis Berths two more tugs of 150 i.h.p. are engaged regardless of the ship's size in view of the constructive features of the berths.

BERTHING: When proceeding in inner harbour, vessels must keep both anchors ready to let go; ships to be moored by safe ropes which to be kept tight at all times. Also be ready to use anchor chain over bollard according to Pilot's recommendation. Strictly prohibited to work with propellers lying alongside berth. All mooring ropes must be fitted with rat-guard plates.

The quays of the Dry Cargo Harbour with depths alongside of up to 11.5 m. are equipped to handle general, 20 ft. and 40 ft. containers and bulk cargoes (coal, ore), metals, timber, sugar, grain, cement, fruit and vegetables.

Berths of the port are equipped with modern cargo handling facilities. There are portal cranes of up to 40 tons capacity, floating cranes with lifting capacity of up to 100 tons, automatic and electric cargo lifters and other equipment.

Opening and closing of hatches is usually done by ship's crew with the help of portal cranes at dry cargo berths, if ordered by Master, grain berth excluded.

Ores are loaded in compliance with the Temporary Regulations for Carrying Ores handed over to the Shipmaster by Inflot Agents during inwards clearance.

Following are the basic requirements of above Regulations to the ores being loaded *(a)* moisture contents not higher than 12% (if other percentage is not stipulated by Charter Party); *(b)* angle of repose is not less than 35°.

Grain and other bulk cargoes are to be loaded in strict conformity with the International Convention.

STEVEDORES: All necessary services including stevedoring work available under Port Authority guidance. Port cargo-handling regions where ships berth managed by Port Authority and used for stevedoring, tallymen service, storage, etc. On the matters connected with services available, foreign vessels have to apply to Port Authority through Maritime Agency "Inflot".

MEDICAL: In case of accident (emergency), medical attendance rendered at any time. Hospital facilities available. Also inoculation, vaccination, etc.

TANKERS: Bearing in mind N.E. gales, oil carriers lying alongside oil pier must have boat-ropes lowered to water and illuminate them at night. All scupper holes on main deck must be closed tightly. Master responsible for overflow of oil in the vicinity of harbour and has to bear harbour cleaning costs. No repair work can be done on tankers lying alongside oil pier. No ballast water may be pumped out, no garbage or refuse thrown overboard. Ballast to be pumped into shore slop tank.

The Sheskharis Oil Harbour is situated in the Eastern part of the outer roads, 2.2 miles N.W. of the Penai Point. It is protected by a mole from the South and oil jetty from the North. The base of the jetty is used as a berth for fire-fighting boats.

Since it is not safe to stay alongside berths in the Sheskharis Oil Harbour during strong winds blowing from any direction, all tankers, after having received a storm warning should take urgent measures to leave for sea.

Depths at the berths of the Sheskharis Oil Harbour are from 4.5 m. up to 19.0 m.

To ensure safe loading/unloading of oil products as well as to expedite the vessel's turn around time, every tanker should be equipped with cargo manifolds capable of fitting 8 in. – 16 in. shore-loading connections.

These manifolds should allow the upward connection with shore cargo flanges of not less than 1 m. in height and located on deck at 3 m. – 5 m. length from side of vessel.

Deepwater Berth No. 1: Accepts vessels of 80,000 to 250,000 d.w.t. Arrival and departure draft not to exceed 19.0 m.

A tanker is to have a site 3.0 m.×3.0 m. on cargo deck free of pipelines/deck openings and other constructional elements to secure end platform of shore gangway. The centre of site to be 5.5 m. from starboard side and 12.0 m. – 13.0 m. from cargo manifold in forward direction.

To ensure normal contact with shore fenders vessel's fully loaded freeboard should not be less than 6.3 m. Cargo manifold flanges should have thickness 30 mm. – 32 mm.

Report: 1994.

Max. Size:

Berth No.	Max. Draft (m.)	D.W.T. (tons)
1	forw'd 19.5 / aft 19.5	250,000
2	forw'd 13.7 / aft 15.8	60,000
3	forw'd 10.7 / aft 11.3	30,000
4	Bunkering	
5	forw'd 8.7 / aft 10.6	12,000
6	forw'd 12.8 / aft 12.8	60,000
7	forw'd 12.8 / aft 12.8	60,000
8	forw'd 8.7 / aft 10.6	12,000

Berth Length:

Berth No.	Length (m.)	Berth No.	Length (m.)
1	500	5	120
2	220	6	220
3	150	7	220
4	Bunkering	8	120

Facilities: Slops may be discharged at a rate of 3,000 tonnes/hr. at all berths.
Bunkers and fresh water are available at all berths.

DENSITY: About 1010 – 1014.

FRESH WATER: Available from shore; minimum quantity invoiced at 15 tons. Fresh water also available from lighters.

FUEL: Most grades available. Fuel for tankers can be supplied ex-shore. Bunkers for dry cargo vessels are usually delivered by lighters.

FIRE PRECAUTIONS: All operations involving open fire and sparks are prohibited on oil pier. Two fire extinguishers, thick felt and sand must be ready beside hose connection.

CONSULS: No Consulates in port or its vicinities.

REPAIRS: All kinds of repairs for vessels of up to 60,000 d.w.t.

Cargo Superintendent's Report: 1975.

The Novorossiysk Shiprepair Yard is capable of carrying out any ship repairs, and is equipped with 3 floating docks. I was unable to obtain information on the size of these docks, but estimate they are capable of handling vessels in the 100,000 ton range.

SURVEYORS: Saybolt.

GANGWAY/DECK WATCHMEN: Gangway watch compulsory and carried out by crew.

OPENING/CLOSING HATCHES: Normally by crew, otherwise according Charter Party.

CUSTOMS ALLOWANCES: No quantity limits but nothing allowed to be taken ashore.

REPATRIATION: No facilities exist for effecting crew changes. A crew member may be repatriated due to family reasons or sickness but repatriation requires visa formalities.

AIRPORT: Nearest airport is at Anapa, which is 50 km. from the port. Daylight flights only.

TIME: GMT plus 3 hours. GMT plus 4 hours in Summer.

HOLIDAYS: New Year's Day, 8th March (World's Women's Day); May 1st, 2nd (Labour Day); May 9th (Victory Day); January 7th (Christmas). Cargo work can be arranged on those days.

POLICE/AMBULANCE/FIRE: Police, Tel: 02; Ambulance, Tel: 03; Fire, Tel: 01.

TELEPHONES: Can be arranged to be fitted on board.

SHORE LEAVE: Crew members are allowed ashore. Crew members of foreign vessels get shore passes which grant them permission to stay ashore till 2400 hrs. Crew members who lose their shore passes as well as those late from ashore, are not granted shore leave any longer in conformity with local regulations.

IDENTIFICATION CARDS: Crew members get shore passes.

SHIP SUPPLY SERVICE: Local consignment centre may supply marine oils and lubricants, manufactured by Mobil Oil, Castrol, Elf-Aquitaine and Esso.

Marine paints and coatings of Hempel, Sigma, Interpaints, as well as chemicals and treatments manufactured by Perolin, Unitor, Rochem.

Spares are available for Sulzer, B&W, MAN main auxiliary diesel engines, for Magnavox, Mx-1102 satellite navigator.

Address: Consignment Centre, 8 Portovaja Street, Novorossiysk 353901, Russia. Tel: 6-28-97. Telex: 27243, 412629.

The Russian-American joint venture Soyuz Marine Service began servicing of the Russian and foreign ships in Novorossiysk in 1990.

The following kinds of underwater technical works are possible:

Cleaning of ship's hull, photography, using TV-cameras, inspection for Register's control, repairing of outboard fittings, electro/oxygen cutting and welding, polishing of propellers, fitting of the cathode protection and other kinds of underwater works.

Payment for foreign vessels to be made in U.S. dollars.

Vessels are requested to make their requirement known by radio not later than 15 days before arrival to "Novorossiysk Inflot SMS" (for foreign vessels) and "Novorossiysk Transflot SMS" (for Russian vessels).

Office: Soyuz Marine Service, 93 Lenin Avenue, Novorossiysk 353918. Tel: 3-42-10. Contact: Captain Yury Yashny.

SHIPMASTER'S REPORT: December 1991.

Anchorage: On arrival, vessel had to anchor off the port as the cargo was not ready. The anchorage for tankers (No. 416) was well sheltered from the North and N.E. sides with high mountains. The anchorage area was rather small and too close to the shore (a maximum of 2 ships could stay keeping a safe distance from each other). Caution is to be exercised approaching the anchorage as the centre is just about one mile away from the nearest land.

Formalities: Port officials, including Customs, Immigration, Port Health and Agriculture officials along with the agent boarded the vessel upon berthing. Immigration authorities assembled everyone so that they could see them 'in person'. Otherwise proceedings were quite quick.

Berthing: The berth (See "Plan") is meant for large tankers as stated in the agent's telex. Vessel approaches starboard side to the jetty with 4 tugs assisting (2 tugs forward and 2 tugs aft). First lines to go ashore were backsprings. Vessel's backspring winches, forward and aft, could not be utilised for sending the lines as the 'lead' would have been too short (a longer vessel would have no difficulty). Mooring was slow as only one mooring boat available for both forward and aft. Mooring lines consisted of 4 headlines, 2 breast ropes and 2 backsprings forward and

4 sternlines, 2 breast ropes and 2 springs aft. This was sufficient moorings to withstand a wind, usually from the North and N.W. of up to 40 knots. The harbour is well sheltered with high mountains (2,500 ft.) on the North and N.E. sides.

The gangway was a hydraulic one provided by the jetty and placed forward of the manifold in a clear space.

There is another tanker berth for smaller vessels on the other side of the jetty with max. draft 12.5 m.

Cargo: Vessel presented 16 in. connection by way of 3 'Y' pieces connected to 6 manifolds on the vessel.

Although the vessel's presentation flanges were 38 mm. thick and requirement was 30 mm. – 32 mm., the Chicksan could still be hydraulically locked on to the vessel's flanges without any difficulty. Otherwise vessel met all requirements for the connection, i.e.:

(1) Distance from vessel's presentation flange to the railings to be between 4.5 m. and 5.0 m.

(2) Vertical distance from flanges to the top of the manifold tray to be between 0.6 m. and 1.2 m.

(3) Flanges to be in one line.

(4) Distance between the flanges to be between 2.0 m. and 3.0 m.

Loading rate required by the terminal is minimum 7,200 cu.m./hr. and maximum 10,000 cu.m./hr. Vessel maintained a rate of 7,000 cu.m./hr.

Ballast: Ballast cannot be discharged into the waters of the harbour and has to be discharged ashore. As the vessel had segregated ballast tanks it could discharge into the harbour freely, but the Port Authorities are very serious and concerned about clean ballast and the quantity of it.

Dry Tank survey carried out prior to loading, but the surveyor did not seem to be concerned about the fitness of the tanks.

Generally, the cargo operation was smooth and authorities co-operative. Language and communications are a problem if no interpreter present.

After completion of cargo loading, it took nearly 6 hours for the pilot to board. Prior to departure the Customs and Immigration boarded the vessel to give clearance.

After leaving berth the vessel turned through 180° in the basin with the assistance of tugs. This is difficult for a fully laden vessel, especially if the wind is strong.

General: Russian Rouble is quite low compared to U.S. Dollar. There were 48 Roubles to U.S.$1.00.

The main city is about 17 km. from the port and it does not provide much for seamen, except for the Seaman's Club.

SHIPMASTER'S REPORT: August 1993.

Approaches/Anchorages: Port Control should be contacted on VHF Channel 9. They will then advise the vessel the area to anchor in. No Pilot is required for vessel's anchoring in Area 416, which is outside the designated Port Limit, and sometimes for Area 415. However, for other anchorage areas within the Port Limit, pilotage is compulsory.

Formalities: For clearing grain ships, vessel is boarded by Quarantine Inspectors, Cargo Inspectors from the Agriculture Department, Customs and Immigration Officials.

Formalities take about 2 hours. Samples of cargo are taken for analysis.

The following documents are required:

7 copies Crew List.
4 copies Personal Effect Declaration.
4 copies Stores List.
4 copies Currency Declaration (Crew and Ship's cash).
2 copies List of Ports of Call.
2 copies Stowage Plan, Hatchwise Cargo.

On departure, the Customs Officials, who board the vessel for clearing purposes, are quite particular in checking the Currency Declaration against receipts of foreign currency exchanged by individual crew, and the balance remaining.

Restrictions: No restriction on night entry. Permissible drafts are as follows:

Berth No. 5: 12.50 m.
Berth No. 10: 11.50 m.
Berth No. 16: Forward 11.50 m., aft 11.80 m.
Berth No. 18: 11.50 m. (Evacuator discharge).
Berth No. 22: 11.80 m. (Evacuator discharge directly to Silo). Maximum length 275 m. (Vessel of this length was alongside Berth No. 5).

Pilotage: Pilots are fairly efficient and capable.

Radio/Communications: Very poor. To make an international call, 3 days prior booking is required. Radio Novorossiysk can connect to local numbers only.

Telex communication is possible. However, Agents appear rather reluctant to use this facility.

Agents "Inflot" operate on VHF Channel 67. Most of the time they answer after repeated attempts at calling them.

Berths: There are a number of shore cranes which are fairly modern. Crane operators are sufficiently efficient. All grain cargo is discharged directly into rail wagons, hence the discharge rate is directly related to the supply of wagons, each wagon is about 90 cu.m. capacity.

During the Summer season (July – September), the supply of wagons is less, as they are used for their own harvest season elsewhere in Russia. During our stay, supply of wagons was very poor. The average discharge rate for evacuator discharge can be about 8,000 tonnes/day, and grab discharge about 6,000 tonnes/day.

The berths are well fendered with bollards at 25 m. interval.

Agency: There are few private agencies in operation, and some others to be opened shortly. "Economu Shipping" and "Transflot" are in operation at present, and I understand that an Italian firm is bidding to open an agency soon.

Inflot Agency is the Government controlled agency and the most influential at present. Fortunately, we did not have any unusual requirements, so the need to use them beyond the normal port formalities did not arise.

Private surveying firms are also opening their offices at Novorossyisk, with foreigners manning them. The bunker survey was conducted by Inspection Services International, Head Office at Beluederegasse 2, 1040 Wein, Vienna, Austria. Tel: 505-3060. Fax: 505-3070. Telex: 113268 Isi A.

Stevedores: Directly under the Port Authority. The port is divided into 3 sections, Eastern, Central and Western, each with a Chief Foreman who is supposed to board the vessel daily. For grain vessels, it appeared the vessel had NO control over the number of gangs to employ, though the discharge sequence is controlled by the ship. The stevedores did a fairly good job of hold cleaning, leaving no sweepings behind. All holds were swept clean. Bob Cats, tyred bulldozers were used for final collection of cargo. All cargo, spilt on deck by grabs, was also swept and collected.

Outturn Report: An Outturn Report is given to the vessel daily, which states the total cargo discharged and the balance remaining onboard. It is important to sign this report as "for receipt only". We were fortunate to have this report quite well squared off eventually, but there was an occasion where the difference had accumulated to as much as 3,000 tonnes. As the final Outturn Report was not presented to the vessel prior to departure, the Agent was given a written authority to sign the same on our behalf, with this remark inserted: "Vessel is not responsible for any shortage of weight, as all cargo onboard was discharged into barges and wagons supplied by consignees, and neither the vessel's Officers nor the vessel's representative participated in reweighing of cargo ashore. All cargo discharged is in good condition and the quality and quantity as per Bills of Lading.

On completion of loading, the vessel's holds were sealed by a NCB surveyor. On arrival at this port, seals were found intact and were opened in the presence of Agent and various boarding officials, including Agriculture Department Officials. On completion of discharge, vessel's holds were empty and free of cargo".

Medical: The need to use their services did not occur. However, Cholera Vaccination could not be procured.

Density: At outer roads and at berth: 1008.

Fresh Water: Available by barge at U.S.$ 12.00/ton. There are no fresh water connections at the berths, and the supply is made through barge only. We procured 55 tonnes for cash payment of U.S.$ 100.00. Fresh water can be supplied at anchorages within Port Limits at the same price.

Repairs: There are floating dry docks. Vessels upto 100,000 d.w.t. can by dry docked. A fair amount of repairs could be carried out, subject to availability of spares, etc. All stevedore damage was attended to on completion of cargo, with each dock section having their own workshop and repair team dealing with their damage alone. However, the quality of work was rather shoddy and needed a thorough check by ship's staff.

Gangway Watchman: A border guard stands by the gangway at all times. Ship's crew have to deposit their Passport in exchange for a shore pass at the gangway. No outsiders can board the ship without proper documents/pass. Hence security onboard is fairly good.

Repatriation: This is possible. However, the Agents appear very reluctant to arrange repatriation. Two passport size photographs are required to get Exit Visa, which takes about 2 days. The nearest airport is Krasnadar, about 100 km. away, which is connected by a daily flight to Moscow. All ticketing is done through Aeroflot. The fare to Moscow is U.S.$ 100.00. However, at Moscow, one has to change from the Domestic to International Airport. At Moscow, it appears there is uncertainty of getting connections.

Ship Chandler: Only one ship chandler is available. Fresh provisions are available at reasonable price. Some meat products (chicken, pork and beef) are available.

Some dairy products, like longlife milk, cheese, etc., are imported from Italy.

It is prossible to obtain bonded items, which again are imported from Italy. A cash discount is available on bonded items only.

All fresh provisions are obtained on a day to day basis. Some produce may be available on one day, and not be seen in the market for a few days.

AUTHORITY: The Port of Novorossiysk Authority, 14 Port Street, 353901 – Novorossiysk, Krasnodarsky Krai, Russia. *Tel:* 6-21-31 (Chief of the Port), 6-22-41, 6-25-16, 5-46-44 (Harbour Master). *FAX:* 62203. *Cables:* Morport Novorossiysk. *Contact:* Valeriy Bykov, Port Manager (Tel: 62131). Georgy Popov, Harbour Master (Tel: 62516).

AGENT: Main Maritime Agency "Inflot", 13 Portovaja Str., Tel: 54014, 52260, 53086, 62678. Telex: 279114. Cables: "Inflot", Novorossiysk.

ONEGA: 63.54 N. 38.06 E. (See Plan)

GENERAL: The port of Onega is situated on the right bank of the Onega River (3 – 4 miles up from the mouth), flowing into Onezhsky Bay off the White Sea.

Port open for navigation for about 6 – 7 months per year, starting from May. The port is closed for foreign flag vessels from 1st of September to 31st of December annually. In Autumn, when the river is covered with ice, assistance of ice-breaker is required but may not be rendered regularly.

Opening and closing of the port for navigation as well as turn and order of entering the port is usually regulated by the Port Authorities.

Changes of water level in the river depend on tide, spring floods and effects of the wind.

The tide is semi-diurnal with two high and two low waters a day. At the Onega river mouth the range of the tide at mean springs may reach 2.7 m.

The rises of the water level are due to North-Westerly, Northern and North-Easterly winds. The falls of the water level are usually caused by South-Easterly, Southerly and South-Westerly winds.

The Onega River becomes frozen over at the beginning of November. Ice begins to form in October and usually breaks up at the end of April or early May.

A vast area of shoal waters is situated at the mouth of the Onega River.

Access into the Onega River is by the Karelsky Fairway. Vessels drawing up to 6.1 m. may pass through it at high water.

Since depths in the river vary, Masters are recommended to get in touch with the Harbour Master to make enquiries about the existing least depth in the fairway before entering the river.

The port specialises in timber exports.

DOCUMENTS: Refer to beginning of the Russian section.

PILOTAGE: Compulsory. A Pilot should be ordered by the Master 24 hours prior to arrival at the Letny Orlov Pilot Station. A Pilot meets a vessel at a distance of 0.7 mile Westward of the Letny Orlov Point.

ANCHORAGES: Vessels drawing up to 2.4 m. can obtain anchorage in the Town Roadstead below the Severoles Wharf. The roadstead situated opposite Timber Mill No. 32 – 33 can be used as anchorage by vessels drawing up to 3.55 m.

During winds blowing from the N.W., vessels are recommended to anchor in the Petchak area of the Solovetskie Islands, with depths of 10 m. at 1 mile distance offshore.

During Southerly winds of Force 5-6, a safe anchorage with depths of 10 m. can be obtained in the Konyukhov Inlet, 1 mile offshore.

In case of North-Westerly storms, vessels lying on the Karelsky Roads should anchor in the Purnema area with depths from 6 m. to 10 m. where an anchorage light buoy is installed (Lat. 64° 20′ N., Long. 37° 27′ E.).

The recommended anchorages for vessels proceeding to the port of Onega along the fairway are situated in the following places:

1. On the line of the Town of Onega leading marks and on the beam line of the front mark of Pikhnemsky No. 2 leading line. Depths are from 3.7 m. – 4 m., the bottom – mud and small stone.

2. In the area of the Onega River, a short distance Northward of the town of Onega leading marks, opposite the Export quay. The least depth in the area is 4 m., its length – 700 m., the bottom is mud and small stone.

3. Southward of the Pristansky (Quays) leading line but not passing over the line of the Pristansky Sekushchy (Quays Crossing) leading marks to the Eastward of it. The depths are from 3 m. – 3.7 m., the holding ground – mud, small stone and stone.

RESTRICTIONS: Vessels having draft not more than 3 m. may enter port at any time, but with draft more than 3 m. only 1 hour before high water.

The speed of vessels having the maximum draft should not exceed 8 knots. The movement of vessels within the port area is not allowed during restricted visibility.

MAX. SIZE: The maximum permitted draft is usually announced at the beginning of the navigation season after sounding of the fairway has been accomplished. It varies from 4.0 m. – 5.8 m. Approach Channel – Depth 6.0 m. at H.W. Maximum permitted length is 124 m.

HEALTH: Alongside or on the Roads all vessels coming from abroad inspected by Sanitary Office representative. If no diseases, vessel obtains Free Pratique. If vessel enters directly after calling at another Russian port, Pratique automatic.

RADIO/VHF: Besides Murmansk and Archangel, Onega Radio (UZS), 500 kHz; VHF of pilot office at port of Onega (Channel 16).

Vessels can establish radio contact through the port radio station Onega Radio operating 24 hours a day on the following frequencies:

Call Sign	*Frequencies (kHz)* *Working*	*Calling*	*Type of trans- mission*	*Time of work*	*Remarks*
UZS	500/441	500/425	A1A	H24	
"Onega-2" (Port controller)	156.8*(16)	156.8*(16)	F3E	H24	Operates during navigation
"Onega-5" (Harbour Master)	156.45*(9) 156.8*(16)	156.45*(9) 156.8*(16)	F3E F3E	H24 H24	Operates during navigation

*Frequencies are given in MHz.

The Onega Storm Signals Station is located on the roof of the Harbour Master's office. Day signals warning about forthcoming storms and strong winds in the Onega Bay area are exhibited at mast of the signal station.

TUGS: The number of tugs required for mooring/unmooring and shifting berths is determined by the Master after having consulted the Pilot. Tugs should be ordered 6 hours prior to leaving the port for sea.

BERTHING: Depths at the port berths are up to 6.5 m. There are enclosed warehouses and open concrete floor sheds. Loading of timber usually by ship's gear.

STEVEDORES: No particular ETA advices to stevedores/shippers. Loading of timber usually carried out by ship's winches at average rate of 24 stds. per hatch per working day.

MEDICAL: Doctor and hospital facilities available.

FRESH WATER: Available. Usually delivered by tug.

FUEL: Availability not guaranteed.

REPAIRS: Small repairs only.

GANGWAY/DECK WATCHMEN: Usually by ship's crew.

OPENING/CLOSING HATCHES: In accordance with "Soviet Wood" Charter-Party conditions.

CUSTOMS ALLOWANCES: No restriction on quantity, but nothing to be taken ashore.

REPATRIATION: Subject to visa formalities.

AIRPORT: Nearest at Archangel.

TIME: GMT plus 3 hours. GMT plus 4 hours in Summer.

HOLIDAYS: See "Archangel".

SHORE LEAVE: Allowed up to midnight.

IDENTIFICATION CARDS: Only Seamen's Books required.

AUTHORITY: The Port of Onega Authority, 198 Oktyabrsky Prospekt, 164880 – The Port of Onega, Archangel Region, Russia. *Tel:* 21-33 (Harbour Master); 24-91 (Port Controller); 21-51 (Chief of the Port). *Cables:* Morport Onega.

AGENT: A branch of the Port of Archangel, Main Maritime Agency "Inflot" at the port of Onega. Postal address: 164880 – The Port of Onega – Archangel Region, Russia. Cables: "Inflot Onega". Tel: Timber Mill Switchboard 33-33, "Inflot".

ST. PETERSBURG: 59.53 N. 30.13 E. (See Plan)

GENERAL: A Baltic Sea port, St. Petersburg is situated on the islands of the Neva Delta, at the head of the Nevskaya Guba (Neva Bay), in the Eastern extremity of the Gulf of Finland. Year-round navigation is possible with ice-breaker assistance from the end of November until middle of April. Ice first begins to form in the middle of November, when usual Winter frosts come, and in January (time varies with the season) all the area becomes completely covered with fast ice.

DOCUMENTS: Refer to beginning of Russian section.

APPROACHES: The Kronstadt Korabelny Farvater (Kronstadt Ship's Channel) which is about 12 miles in length, extends from the port of St.Petersburg Entrance light buoy to the St.Petersburg Morskoi Canal, which is about 15 miles in length, and leads to the entrance of the sea commercial port of St.Petersburg. The least bottom width of about 80 m. is in the part of the Canal which is protected by 2 dams (moles).

DEEP SEA PILOTAGE: See "Baltic Deep Sea Pilotage".

PILOTAGE: Pilots usually board and disembark vessels at the port of St.Petersburg approaching light buoy (Lat. 60° 02′ N., Long. 29° 26′ E.). In case of bad weather a vessel should follow the pilot boat up to the Kronstadt Roads where a Pilot will come aboard the ship.

St.Petersburg pilot boat on VHF Channel 16 and 9 throughout 24 hours. Call sign "St.Petersburg Pilot".

There is a Port Coastal Radar Vessels' Movement Control System ensuring vessels' radar pilotage along the Kronstadt Korabelny Fairway and the St.Petersburg Morskoi Canal in case of low visibility and during absence of floating navigational marks. Radar pilotage is carried out by a Pilot on board a vessel.

St.Petersburg Deep-Sea Pilot Services: Licensed Pilots are always available 24 hours a day, 365 days a year, for safe navigation in Baltic waters.

All Pilots are highly qualified, reliable and experienced Ice-Pilots. To obtain a Pilot send a telegram or telex to Agent.

ANCHORAGES: Vessels approaching the port from seaward should take anchorage off the port of St.Petersburg Entrance Light Buoy. The depths in the Roads are between 20 m. – 25 m. and the holding ground is mud and sand.

Vessels anchored at Outer Roads and berthed in the port are requested not to operate VHF on Channels 6, 8, 9, 11, 12, 13, 14 or 26 for intership communications.

RESTRICTIONS: No restrictions on night entry, no tide in St.Petersburg. Vessels with drafts 8.5 m. and more, and length 170 m. and more, must be towed when proceeding in the St.Petersburg Morskoi Channel from the Lesnoi Mole Roads (Timber Mole Roads) up to the Neva Gates.

All vessels navigating within the port must keep strictly to the following regulations:

(a) Vessel's speed should not exceed 10 knots when navigating in the Kronstadt Korabelny Farvater and in the open part of the St.Petersburg Morskoi Canal (from the entrance up to the moles).

(b) When navigating in the channel between the moles of the St.Petersburg Morskoi Canal as well as in the Bolshaya Neva River from the Neva Gates up to Lieutenant Schmidt Bridge and also in the Ekateringofka River, vessels speed should not exceed 3 knots.

(c) In the Inner Roads and in the port harbours, Masters should navigate with a speed ensuring the safety of vessel but never exceeding 3 knots.

MAX. SIZE: Draft restriction 11.0 m. in fresh water under normal weather conditions. Length not over 260 m. Breadth up to 40 m.

HEALTH: Master coming from foreign port shall report every sick passenger or crewman; Health Authorities board together with Customs and Immigration and if find all in order grant Free Pratique. Each vessel shall produce Derat Certificate and Sanitary Patent.

RADIO: Cable Agent ETA, draft and other data, information required via St.Petersburg Radio Station (call sign URD). All vessels when approaching the port of St.Petersburg should establish radio contact via the St.Petersburg Coastal Radio Station operating 24 hours a day on the following frequencies:

Call sign	*Frequencies (kHz)* *Working*	*Calling*	*Type of trans- mission*	*Time of work*
"Sanct Petersburg-Radio"	2182	2182	J3E	H24
"Sanct Petersburg-Radio" (CPR)**	156.8*(16) 161.9*(26)	156.8*(16) 157.3*(26)	F3E F3E	H24 H24
"Sanct Petersburg-Radio" (Vessels' movement control post)	156.8*(16) 156.45*(9)	156.8*(16) 156.45*(9)	F3E F3E	H24 H24

*Frequencies are given in MHz.

**CPR – Central Port Radio Station.

Note: Emergency calls with regard to collisions, fire on board and dangers to human life may be given on VHF Channel 9. Call sign of Traffic Controller is "St.Petersburg Port Control".

Port radar station gives all possible information to any vessel navigating in the Kronstadt Korabelny Farvater and St.Petersburg Morskoi Canal during restricted visibility, from the St.Petersburg Entrance Light Buoy (Lat. 60° 02′ N., Long. 29° 26′ E.) up to the dams (moles) of the St.Petersburg Morskoi Canal. Navigation is usually controlled by a Pilot on board the vessel.

Signals for vessels approaching the entrance to the Commercial Port of St.Petersburg from seaward are hoisted at the pilot vessel.

Traffic prohibition signals, when the pilot vessel is absent from her usual position may be exhibited at a vessel specially designated for this purpose.

RADAR: Pilot in contact with radar service. Also see "Radio".

TUGS: Tugs up to 5,000 h.p. are available. Normally join incoming vessels at Inner Road. Ship's lines usually used.

The number of tugs a Master should order for inward and outward towage as well as for shifting berths in the harbour depends on Pilot's advice.

BERTHING: There are more than 50 berths, used for loading, discharging and waiting in the port. Total length of quays is more than 8.0 km., project depths alongside the working berths are from 8.1 m. up to 11.0 m.

Almost all berths have railway alongside the quay.

There are 4 cargo regions and 1 handling complex in the port, which can handle bulk, general, unitised, refrigerated and forest product cargoes.

The leading import commodities are: Cereal and raw sugar in bulk, containers, coffee in bags, steel, machinery, equipment, refrigerated fruits and meat.

The main export cargoes are: Steel, non-ferrous metal, containers, round timber, coal and fertilisers.

Note: Cereals, raw sugar, ore, fertilisers in bulk and also refrigerated cargoes are transferred direct from ship to rail wagons. There is no storage for these cargoes in the port.

Marine passenger terminal, situated on Vasiliyevsky Island, belongs to the Baltic Shipping Company. Sometimes passenger vessels can moor at the port berth.

Storage: Warehouses and concreted open storage areas are available.

Total storage area is about 54.0 ha., closed storage area 8.8 ha. and open storage area 45.2 ha.

CRANES: Multi-purpose gantry cranes capacity 6 tons – 40 tons (more than 100 units). Floating cranes capacity 15 tons, 100 tons, 300 tons (3 units).

Note: Floating crane capacity 350 tons belongs to the shipbuilding yard and can be used in case of necessity.

Forklifts with capacity 1 ton – 10 tons (more than 600 units).

BULK CARGO FACILITIES: For cereals: Mobile pneumatic machine "Noero" (about 15 units). Pneumatic cereal unloader at berth "Hartmann" (6 units) with rate of 300 t.p.h. can discharge cargo at 2 berths.

Gantry crane with grabs 3.0 cu.m. – 7.0 cu.m.

Raw sugar, coal, fertilisers, ore can be handled with cranes and grabs.

Bucket loaders with capacity 0.6 tons – 3.5 tons (more than 40 units).

CONTAINER FACILITIES: Container crane with capacity 30.5 tons (8 units) – 4 for ships and 4 for wagons.

Straddle carriers with capacity 30.5 tons – 35.0 tons (12 units) and forklift trucks with capacity 16 tons – 25 tons (20 units).

Stuffing/stripping is possible with forklift trucks with capacity 1.5 tons – 2.0 tons.

Note: No electric points for reefer containers available.

RO-RO FACILITIES: About 10 berths can be used for Ro-Ro vessels. Four of these berths are equipped with ramps. Terminal tractors "Sisu", "Terberg" (25 units) and wheel tractors (40 units) can be used for transporting.

TIDE: Considerable rises of water level may be caused by strong Westerly winds – and falls by Easterly winds. Usually the changes in water level are greater during the Autumn and Winter months. During Autumn and Winter the range of level may reach 1.2 m. from the MWL and sometimes even more.

During Spring and Summer it is never more than 0.5 m. The greatest rises in the water level are observed in the Neva Bay. The extreme difference in level between the maximum rise and the minimum fall of these seasonal changes observed is about 3.5 m. At the mouth of the Neva River the greatest changes in the water level are caused by the S.W. Autumn gales. The difference in level usually reaches 0.2 m. – 0.3 m. and only sometimes up to 1 m.

STEVEDORES: Ordered by Agent.

MEDICAL: Masters to advise Agent prior arrival if medical attendance required aboard.

TANKERS: Report: 1994.

Tankers up to 15,000 tonnes d.w.t. handled at Berth No. 112. Max. draft 9.6 m. 6 tanks of 3,000 tonnes each for gas oil, and 4 tanks of 2,500 tonnes capacity for fuel oil. Pumping rate per hose 300 cu.m./hr. through 12 in. line.

DENSITY: Fresh water in port area.

FRESH WATER: Most berths supplied by shore installations, otherwise barges. Also available at Outer Roads Anchorage.

FUEL: Bunkers available, usually delivered by lighters.

FIRE PRECAUTIONS: No smoking allowed in port area, except in places specially allocated.

CONSULS: Consulates of the following countries are situated in St.Petersburg: Bulgaria, China, Cuba, Czech Rep., Finland, France, Germany, Hungary, Italy, Japan, Netherlands, Poland, South Africa, Sweden, U.K. and U.S.A.

DRY DOCKS: *Floating Docks:*

No.	*Length* (m.)	*Depth* (m.)	d.w.t.
1	130	6.2	6,000
2	90	6.2	4,000
3	140	6.2	8,000
4	168.5	6.2	15,000

SURVEYORS: 1. There are independent maritime surveyors Joint Stock Company "Morservice" performing all kinds of surveyor works and tallying of cargoes. Tel: 251-06-46 (24 hours), or by Telex via Agent.

2. There is an Inspector of the Shipping Register of Russia.

REPAIRS: All types of repairs for vessels of up to 20,000 d.w.t. can be carried out in the port.

GANGWAY/DECK WATCHMEN: Not compulsory.

OPENING/CLOSING HATCHES: According to charter party.

CERTIFICATES:

Passenger Ship Safety.
Safety Equipment.
Safety Radiotelephony.
Safety Radiotelegraphy.
Exemption Certificate.

CUSTOMS ALLOWANCES: No restrictions on board.

TIME: GMT plus 3 hours in Summertime from last Sunday in March until last Saturday before last Sunday in September.

HOLIDAYS: 1st January; 2nd January; 7th January; 8th March; 1st, 2nd and 9th May; 12th June; 7th November.

POLICE/FIRE/AMBULANCE: Police 9692; First-Aid from Port 503; from Town 03; Port Fire 8509, 8536, 8973; Town Fire 01.

EMERGENCY CO-ORDINATION CENTRE: Contact "Inflot" or St.Petersburg Radio Station on the VHF Channel 16 and 26.

STORING: See "Prelims".

1. Vessels may be stored by barge or truck.
2. No restrictions.
3. Trucks may proceed alongside.
4. Forklift trucks may be used.
5. No exceptions from Russian laws.
6. As a rule riggers are available.

IDENTIFICATION CARDS: Needed, will be given on arrival.

GARBAGE DISPOSAL: The collection of garbage is effectuated by Environment Protection Department. Tel: 114-90-92. Application is via Agent.

WASTE OIL DISPOSAL: The collection of waste oil is effectuated by special types of ships. These ships deliver waste oil to port's oil station. Application is via Agent.

SEAMAN'S CLUBS: There is an International Seaman's Club. Tel: 216-40-44. There is also the House of Friendship. Tel: 216-96-88.

CURRENCY: Local currency is the Rouble. U.S.$ 1.00 = 1736 Roubles (23.3.94).

AUTHORITY: Sea Port of St.Petersburg Ltd., Mezhevoi Kanal 5, St.Petersburg 198035, Russia. *Tel:* 251-02-90. Timber Port: 114-97-75. *Telex:* 621101. *FAX:* 1868544. *Cables:* Seaport St.Petersburg. *Contact:* Anatoly P. Bilichenko, General Manager, who may be contacted through "Inflot". Captain F.Podanev, Harbour Master.

AGENT: Main Maritime Agency "Inflot". Postal address: 10 Gapsalskaya Str., St.Petersburg 198035, Russia. Tel: 251-12-38; 251-27-48; 251-73-26. Telex: 121 505 A, B and C. Fax: (812) 186-15-11.

SOCHI: 43.34 N. 39.43 E. (See Plan)

GENERAL: The Port of Sochi is an ice-free port, situated at the mouth of the Sochi River, S.E. of the Uch-Dere Point, in the Eastern part of the Black Sea.

The port is protected by the Caucasian chain of mountains from cold N.E. winds but it is open to winds blowing from Southerly and Westerly directions when heavy waves may roll over the port moles causing heavy swell in the harbour.

The port mostly handles passenger traffic.

There are passenger terminals, one of which serves hydrofoil ships only. About 3 million passengers visit the port yearly.

A cargo pier is equipped to handle fruit, building materials and cars. There are enclosed warehouses on the cargo pier and on one of the passenger terminals.

DOCUMENTS: Refer to beginning of the Russian section.

PILOTAGE: Pilot boat usually meets vessel at a distance of about 1 mile from the port. In the event of bad weather or restricted visibility, vessel should anchor or drift at a safe distance from the port until Pilot arrives.

ANCHORAGE: Deep drafted vessels may obtain anchorage in the Outer Roads Westward of the Northern mole. The depths in the roads are from 11 m. to 12 m.

Some distance Westward, in depths 20 m. – 23 m., there are mooring buoys which can be used during vessels' stay in the roads.

Anchorage can also be obtained at 1.3 – 1.5 miles distance S.S.W. of the Sochi Lighthouse. Depths there are about 29 m. The bottom is mud with sand, and small stone closer to the shore.

Anchorages are open to winds blowing from the sea.

RESTRICTIONS: There are no time restrictions for entry to the port.

In case of stormy weather entry to the port is difficult due to the swell caused by heavy waves in the approach and in the narrow entrance to the port.

In the event of heavy surf vessels must anchor in the outer roads since entry to the port is impossible.

Entry to the port is not allowed during heavy waves over Force 4 and winds over Force 6 as well as during bad visibility.

During the Autumn-Winter period the Port of Sochi cannot be used as shelter port, because lying in the port is dangerous due to the strong variable current ("Tyagun") usually caused by gales blowing between S.E. and N.W.

Under these circumstances the Port Authorities cannot guarantee safety to a vessel which, after having received a storm warning, did not make for sea, and bear no responsibility for the consequences.

MAX. SIZE: The max. permitted draft is 8 m., length 190 m. and beam 25 m.

RADIO: Vessels can establish ship-shore radio contact through the port radio station Sochi Radio, operating 24 hours a day on the following frequencies:

Call Sign	*Frequencies (kHz)* *Working*	*Calling*	*Type of transmission*	*Time of work*
UZB	500	500	A1A	H24
"Sochi-Radio"	2310	2310	H3E	H24
"Smena" (Port Controller)	156.6*(12)	156.6*(12)	F3E	H24
"Sluzhba" (Harbour Master)	*156.8*(16)	156.8*(16)	F3E	H24
	156.675*(73)	156.675*(73)	F3E	H24

*Frequencies are given in MHz.

A signal station is located at the Sochi Lighthouse from which visual signals are shown.

BERTHING: A vessel intending to enter port with tug assistance should keep the Sochi mid-channel leading marks in line ahead and stop the main engines in due time to allow vessel to come to the state of "no motion" at a distance of 1 mile from the port entrance. Only under these conditions is a tug allowed to approach a vessel and receive or cast off the tow rope.

Due to a small port area and heavy water streams caused by vessels' propellers, Masters of vessels of 2,000 g.r.t. and over must order 1 tug for entering and leaving the port; for vessels of 4,000 g.r.t. and over 2 tugs are required. Shifting berth is allowed during winds not exceeding force 5 Beaufort scale. Opening and closing of hatches on dry cargo vessels is carried out by the crew; on passenger vessels cargo hatches are opened and closed by the port workers.

There are 2 portal cranes of up to 20 tons lifting capacity, 10 ton caterpillar cranes, fork-lifts and other cargo handling equipment.

FRESH WATER: Can be supplied by pipelines at nearly all berths.

FUEL: Not available.

REPAIRS: Not available.

TIME: GMT plus 3 hours. GMT plus 4 hours in Summer.

AUTHORITY: The Port of Sochi Authority. 1 Voykov Street, 354000 Port of Sochi, Russia. *Tel:* 996-63-64, 996-63-63, 996-62-32. *Telex:* 128. *Cables:* Morport Sochi.

AGENT: A branch of the port of Novorossiysk Main Maritime Agency "Inflot" at the Port of Sochi. Postal address: Voykov Street, Sochi 354000, Russia. Cables "Inflot Sochi". Tel: 99-05-86, 996-62-70.

All foreign vessels calling at Sochi are attended by Maritime Agency of Tuapse.

TUAPSE: 44.06 N. 39.04 E. (See Plan)

The port of Tuapse is situated between the mouths of rivers Tuapse and Pauk and the depths of 40 m. Year round navigation.

DOCUMENTS: Refer to beginning of Russian section.

PILOTAGE: Compulsory in and out, possible at any time. Vessels await Pilot at anchorage. Pilots board and leave vessels in the Outer Roads behind the Pervomaisky Breakwater if the sea (swell) up to Force 4. When leaving harbour during bad weather Pilot leaves vessels in the Inner Roads. Communication with Pilots on VHF Channel 6.

ANCHORAGES: Depths 13 m. – 22 m. Position of anchorage, bearing to the entrance red light and distance is radioed by Harbour Master through Agent to each vessel prior to arrival (unless berth available). When at anchor, vessel shall keep VHF watch on VHF Channel 16.

MAX. SIZE: See "Berthing".

HEALTH: Sanitary Officer boards on arrival or when berthed. No automatic Free Pratique. In the event of fever or any suspected epidemic disease onboard Masters shall inform the sanitary service immediately on arrival.

RADIO/VHF: Radio communication can be effected through the port radio station "Tuapse-Radio".

Station	*Call Sign*	*Channel*
Port Controller	Tuapse 1	16, 1
Port Dispatcher	Tuapse 2	14
Port Control		9
Pilots		6

All movements in the port area require permission from the Port Director. Such permission for small vessels expires after 15 minutes and should be renewed.

Arrival Advice: Masters shall send 96/72/48 and 24 hours' ETA notices to Agent, advising also quantity of ballast onboard and time required for deballasting ashore. Masters shall also advise quantity and grade of cargo, stowage plan, LOA and maximum draft, number of passengers, health condition of crew.

TUGS: Tugs are compulsory for berthing/unberthing or shifting, as well as when lying at inner anchorage. Tugs normally join vessels at the buoy marking the Pervomaisky breakwater. Ship's lines to be used.

BERTHING: At any time with winds up to Force 7. The port consists of 2 harbours, with 3 berths for dry-cargo ships (max. draft 12 m. (brackish water), LOA up to 220 m.) and 6 berths in the oil harbour for tankers (max. draft 12 m. (brackish water) LOA up to 235 m.). Oil harbour, shore cargo manifolds diameter 250/400 mm. All dry-cargo berths are equipped with portal cranes of 10-32 tons capacity. Loading/unloading usually by shore cranes. The port is not sheltered for vessels during strong S.E./S.W. winds. During strong gales from these directions lying in port is dangerous due to strong swell, especially the one called "tyagun". In this event vessels must leave harbour when recommended by the Port Authority. When lying in port the main engines shall not be immobilised without special permission by Harbour Master.

MEDICAL: First medical aid at any time; hospital facilities available.

TANKERS: Report: 1994.

Terminals:
Crude Oil Terminal. Tel: (86261) 21342.
Products Terminal. Tel: (86261) 22551/75330/75321.
Oil Refinery. Tel: (86261) 23615.
Oil Terminal. Tel: (86261) 71294.

Shore tanks:

Product	No. of Tanks	Total Capacity (tonnes)
Gas Oil	16	56,000
Kero	4	17,690
Naphtha	6	18,000
Fuel Oil	3	7,500
Crude Oil	7	51,100
(Crude tanks are concrete underground tanks).		
A-76	4	14,000
Kerosene	5	20,000
Dirty ballast tanks available.		
Under construction	4	

Shore lines:

Product	Shore lines No.	Diameter (mm.)
Gas Oil	2	500
Kero	1	500
Naphtha	1	400
Fuel Oil	1	400
	1	500
Crude Oil	1	1,000

Length varies from 1.5 km. to 2.8 km.

Berthing:

Berth No.	Length (m.)	Max. Draft (m.)	Products handled	Loading Rate (tonnes/hr.)	Shore Connection (in.)
1	230	12.0	Fuel Oil	700	10
			Gas Oil	1,050	
			Crude Oil	1,200/2,400 (1 or 2 lines)	
2	170	11.2	Fuel Oil	700	10
			Gas Oil	1,050	
			Crude Oil	1,200/2,400 (1 or 2 lines)	
3	186	9.75	Naphtha	750	10
			A-76	600	
			Kero	1,200	
			Fuel Oil	850	
			Gas Oil	850/1,730 (1 or 2 lines)	
4	186	11.5	All Products/Crude Oil (Out of Service).		
5	200	12.0	Kero	1,200	10
			Gas Oil	850/1,730 (1 or 2 lines)	
			Naphtha	750	
			Fuel Oil	850	
6	165	9.75	Gas Oil	1,500	10
			Kero	1,200	
			Naphtha	750	
			Fuel Oil	850	

DENSITY: 1011/1015.

FRESH WATER: Available from any berth, road delivery not possible.

FUEL: Fuel oil and gasoil available at oil berths or ex-lighters. Masters giving 72 hours' notice.

FIRE PRECAUTIONS: Conventional rules for oil ports.

CONSULS: None.

REPAIRS: Emergency repairs. Floating docks subject to special arrangement.

SURVEYORS: Leading world classification societies are represented by the Register of Russia. Saybolt have office in Tuapse.

POLLUTION: Marine pollution shall be avoided by all means, specially due to proximity of health resort area. Any pollution is subject to heavy fines.

OPENING/CLOSING HATCHES: Normally by crew.

GANGWAY/DECK WATCHMEN: Not required. Gangways shall be lighted up and protected by nets.

CUSTOMS ALLOWANCES: No restrictions. Export/import of state currency is forbidden.

REPATRIATION: Possible in emergency.

AIRPORT: Sochi – 120 km. Served by regular airlines.

TIME: GMT plus 3 hours. GMT plus 4 hours in Summer.

HOLIDAYS: 1st January, 8th March, 1st, 2nd May, 9th May, 7th October, 7th and 8th November. Work during holidays can be arranged.

FIRE/AMBULANCE/POLICE: Telephones: Fire – 301; Fire-boat – 231; Ambulance – 003; Militia (Police) – 002. *Office Hours:* 0800 – 1700 hrs. (Monday to Friday).

TELEPHONES: Available for all vessels.

SERVICES: Compass adjusting, radar and radio repairs, gyro compass repairs, lubricants, paints and chemicals of Mobil, Castrol, Esso, Elf-Aquitaine, Rochem and Perolin Unitor also spares for Sulzer, M.A.N. and Burmeister and Wain engines also for Magnavox Satellite Navigators available from consignment centre of Novorossiysk (Tel: 62897. Telex: 279113/412629). Deliveries made with 3 days prior notice to Agent.

SHORE LEAVE: Crew allowed ashore.

IDENTIFICATION CARDS: Seaman's Books are sufficient.

NOTICES:

Brief Information for Masters:

ETA: ETA messages shall also contain quantity of ballast and time for deballasting ashore.

Anchorage: Anchorage position is obtained from Agent prior to arrival, if no immediate berthing is expected. No boats, rafts or other objects shall be launched from vessels. No swimming is allowed.

Bad Weather: S.W. gales develop heavy swell in harbour and vessels may be recommended to leave berth. Main engine shall not be immobilised when alongside berth without Harbour Master's permission. If permitted a tug-boat shall be hired to stand-by.

Bunkers: Small quantities of gas oil and IFO available ex-barge.

Free Pratique: Free Pratique will be granted after Custom's and other formalities are completed, which are normally carried out at all times when alongside berth, otherwise in day time at anchorage, weather permitting.

Fresh Water: Available ex-cargo berths only.

Garbage and Wastes: Any garbage, food wastes, etc. should be collected by crew into special containers placed on board each vessel by a boat upon arrival. Landing of garbage is compulsory.

Launch: Launch for crew at Master's request between 0800 hrs. and 2400 hrs., subject to availability of boats, weather permitting.

Meat Rooms: Meat rooms on board shall be sealed by the Vet Inspector during Custom's visit upon arrival in roads or upon berthing and the seal should not be removed before sailing. Meat of Russian origin is allowed for use.

Pollution: Oil spillage must be avoided. In case of a spill, all operations must be stopped immediately and the accident reported to the Port Authority and your Agent at once. Any oil spot or slick noticed on the sea surface near your vessel should also be immediately reported to your Agent and entered in the log.

All outboard sea valves should be locked up upon arrival in Russian territorial waters and kept securely closed until sailing. Port seals may be placed on the said valves after docking.

Oil Record Book should be kept up to date and always ready for inspection by Port Authority or Pollution Control.

Radio: Transmission on any frequency to any station except Tuapse Port Radio is not allowed within 12 mile limit. VHF Channel 16 is to be monitored continuously while in roads. This Channel shall be used for calling only. Channels 1, 3, 6, 8, 9, 12, 14, 26 and 27 shall not be used by vessels for ship-to-ship communication.

Steel Ropes: Steel ropes are not allowed when mooring in the Oil Harbour. All mooring lines shall be kept tight at all times.

Salinity: The sea water in harbour is brackish (salinity 1.011–1.014).

Sick Crew: Seamen with fever and symptoms of infectious disease should be reported to Port Sanitary Doctor on ship's arrival and without delay.

Duty Free: Shop is run by Shipchandler and is open 0800 – 1200 hrs., 1300 – 1700 hrs., Monday through Friday (Tel: 398).

Smoke: Emission of smoke from funnel in harbour is prohibited.

Smoking: No smoking is allowed on all decks when alongside at oil berth or when bunkering from a barge.

Telephone: Shore telephone set will be placed on board for fire-safety and business only when alongside a berth.

Useful Phone Nos.: "Inflot" – 322/836/288/427; "Nafta" – 357/282; Pilot - 338; Harbour Master – 323/235/223/503; Seamen's Club – 269; Shipchandler – 398; Pilot – 338.

Shore Leave: Shore leave allowed around the clock.

Attention of Chief Officers: All mooring ropes and lines are to be equipped with *rat-guards* immediately upon completion of mooring or shifting.

Failure to comply with this regulation will incur a heavy fine by the Port Sanitary Service without further warning.

Safe Draft: Safe permissible draft alongside berths:

Berth No. 1	12.00 m.	Berth No. 7	7.40 m.
No. 2	11.20 m.	No. 8	6.20 m.
No. 3	9.75 m.	No. 9	11.00 m.
No. 4	11.50 m.	No. 10	11.00 m.
No. 5	12.00 m.	No. 11	12.00 m.
No. 6	9.75 m.	No. 11A	9.75 m.

Safe Trim and List: Vessels alongside berths should always maintain seaworthy trim and list (not exceeding 2°), and always remain afloat.

Tugs: Tugs are compulsory, ship's lines used. Masters should avoid using ship's propellers when approaching berth and should inform tugs of each manoeuvre to avoid damage. During S.E. gales vessels with a small quantity of cargo or ballast on board at Berths No. 1, 2, 5 and 6 are recommended to call tugs for safety.

Rat Guards: Compulsory for each rope, even tankers. Failure to comply will bring heavy fine.

Sewage: Must be discharged, whenever feasible, into a special craft before sailing.

Notice to Masters of Vessels: Additional Compulsory Regulations at the Port of Tuapse.

With the aim of preventing sea pollution following additional rules should be strictly complied with:

1. A reliable communication with shore organisations should be maintained during the whole period of vessel's stay in the port, by VHF on Channel 16, or by shore telephone placed on board when alongside berth. The use of such telephone for non-official conversations is prohibited.

2. Upon berthing all overboard valves, except those of the engine cooling systems, should be sealed by the ship's personnel.

3. Before commencement of any operations with oil products, drip pans should be placed under the manifold flanges, all scuppers and other openings on deck should be properly plugged, and all sounding pipes and air pipes checked. No oil operation shall start before all ship systems are ready and the vessel is reported to the representative of the oil harbour or the bunkering craft.

4. In case of an oil spillage, all oil operations should immediately be stopped, and the accident reported at once to the Port Authority by VHF from the roads or by telephone when alongside a berth: Telephone Nos.: Inflot – 322/836. Nafta – 357. Harbour Master's Office – 223/503. Pilot – 338.

All measures to prevent further discharge of oil overside and deck cleaning should be taken without delay.

5. Discharge of any liquids (oil products, domestic and fecal/bilge or sewage waters, etc.), garbage and wastes overboard is prohibited.

6. No ballast can be discharged overside into the sea without permission of the Hydrochemical laboratory and without their representative being present.

7. No chemicals are allowed to be used for neutralising spilled oil or oil products.

8. The administration of any vessel which has polluted the sea and the territorial waters of Russia, and failed to undertake necessary measures to prevent a discharge of substances harmful to human health or living resources and marine life, as well as failed to report such incidents, shall be responsible in accordance with the law and regulations in force.

9. All ships should collect any garbage (food wastes, etc.) into special containers placed on board upon arrival, and see that the garbage is removed from the vessel before sailing.

Fire Fighting and Emergency Procedures:

Instructions on Fire Fighting Safety and Emergency Procedures at Oil Berths and on Tankers lying at Loading Berths at the Port:

1. Smoking in the Oil Harbour is prohibited.

Use of open fires and hot work without special permission of the Oil Harbour Fire Guard is not allowed.

2. In case of fire or emergency, inform Fire Guard (Tel. 301) immediately; at the same time start fire-fighting.
3. In case of oil spillage on the quay or on a tanker, cease all cargo operations immediately until the spilled oil is removed.
4. Stop loading during electrical storms.
5. Stop loading when another tanker is underway to an adjacent berth until her mooring is completed.
6. Connecting hoses and loading operations are prohibited when ship to shore bonding cable is missing.
7. The following fire-fighting equipment should be located near the ship's main cargo manifolds on deck:

2 fire extinguishers; a felt sheet, a container with sand and shovel; foam and water hoses with jet nozzles laid out.

8. If a fault or a condition threatens to create a fire is discovered, stop loading immediately until the hazard is eliminated.

Use of tools that may produce sparks is not allowed.

Principal Rules of Anti-Fire Safety for Tankers lying Alongside in the Oil Harbour:

In order to ensure the fire safety of the Oil Harbour and of vessels lying alongside, it is strictly forbidden:

(a) To pump out ballast and water with remains of oil products out of tanks/bilges;
(b) To carry out work with a naked flame;
(c) To throw overboard lighted cigarettes, matches, garbage, also to use signal rockets, fireworks, fire, etc.;
(d) To maintain fire in the galley, to use portable electric fire appliances, cabin ventilators and smoke on board during loading/discharging of oil cargoes. Smoking is allowed only in ship's smoking rooms;
(e) To perform steam scavenging of the smoke or exhaust pipes which may cause sparking;
(f) To use unprotected electric lights, pocket electric torches for lighting decks, tanks or ladders;
(g) To use on deck wire ropes while mooring, if the vessel is carrying 1st. category cargo;
(h) To load/discharge during thunderstorms;
(i) To use tools made of ferrous metal when connecting hoses to avoid sparking.

The vessel's administration are obliged to take all necessary measures to avoid any possible leakage of cargo from pipes and fittings onboard or pump out or spill on deck and in to the sea.

3. All scuppers on the loading/discharging deck section are to be plugged.

4. It is absolutely necessary that the vessel's hull should be connected to the shore earthing appliances if the vessel is loading/discharging a 1st. Category cargo.

5. The manholes of the cargo tanks are to be closed and the sight holes to be covered with Davy's nets.

6. Before commencing loading/discharging all the anti-fire appliances are to be ready for immediate use.

7. In case of fire on board the fire brigades should be called without delay, the vessel's Administration organising the extinguishing of fire by crew also.

8. The vessel's Administration must acquaint the crew with the above rules.

9. Master is responsible for the observance of the above rules.

GENERAL: Deballasting or discharge of tank-washings facilities (slops) at a rate of up to 2,000 t.p.h., craft for discharge of bilge water. Food waste and garbage, etc. shall be collected into special containers placed on board upon berthing. Laundry facilities. No boats, rafts, etc. shall be launched from vessels without special permission. All mooring ropes to be provided with rat-guards immediately upon mooring or shifting berths. Local representative of the Insurance Company of Russia (Ingosstrakh) Ltd., and experts of the Russian Chamber of Commerce and Industry.

DEVELOPMENTS: Reconstruction works including dredging underway.

AUTHORITY: The Port of Tuapse Authority, 2 Maxim Gorky Street, 352800 Tuapse, Russia. *Tel:* 7-15-15, 2-19-15. *Telex:* 191115 Volna Su. *Cables:* Morport Tuapse. *FAX:* (86261) 2-18-35. *Contact:* O. Antonov, General Director (Tel: 7-12-35, 2-72-64).

AGENT: "Inflot," Shipping Agency, 25, Gagarin Str., 352800 Tuapse. Cables: Inflot. Telex: 279116 Inf Su. Tel: 7-13-22, 7-18-36, 28-1-54.

VANINO: 49.05 N. 140.16 E.

SHIPMASTER'S REPORT: May 1994.

VESSEL: Bulk carrier of 26,000 d.w.t. LOA 177 m. Beam 22.9 m. The vessel is equipped with cranes.

GENERAL: Situated along the Vanino Bay. It is the prime commercial port for the Sovetskaya Gavan area, Khabarovsk Region, on the N.E. coast of the Russian mainland adjacent to Sakhalin Island. The port is open all year round. It is a natural coastal harbour and a first port of entry.

DOCUMENTS:
7 copies General Declaration (I.M.O. FAL Form No. 1)
3 copies Cargo Declaration (I.M.O. FAL Form No. 2).
2 copies Ship's Stores Declaration (I.M.O. FAL Form No. 3).
2 copies Crew's Effects Declaration (I.M.O. FAL Form No. 4).

2 copies Drugs and Narcotics List.

APPROACHES: Coming from the South (usually), steer to position Lat. 49° 05′ 05″ N., Long. 140° 38′ 06″ E., then steer to course 261° up to position Lat. 49° 04′ 08″ N., Long. 140° 31′ 05″ E., through the zone of deviation, thence contact "Vanino Port Control" on VHF Channel 10 for further instructions. Prior to this, when about 10 nautical miles from the port, contact "Vanino Port Authority" on VHF Channel 16 for instructions and to be plotted and programmed by their local traffic control. Also, there is a Traffic Separation Scheme to be followed along the approaches to the port.

Traffic Separation Scheme: The T.S.S. is an IMO adopted scheme. It is recommended for all ships, both during day and night and in all weather conditions. All ships should steer and keep to the right hand side of the T.S.S. There is a roundabout (circular traffic lane), 1.2 miles in width, centered in position Lat. 49° 05′ N., Long. 140° 24′ E., which is marked by a red and white banded buoy.

PILOTAGE: Compulsory for all ships. Pilot boards 1.0 miles off the Mys.Sevemyl Entrance Breakwater in position Lat. 49° 04.95′ N., Long. 140° 19.45′ E., and disembarks just off the breakwater. Pilot boat is a motor launch with blue hull and white superstructure. Pilot ladder is usually rigged on the leeward side at 1.0 m. off the waterline.

ANCHORAGE: Anchorage at the outer roads of Vanino Bay is considered at 13 anchor points, odd numbered sectors North of the Bay and even numbered sectors South of the Bay. Depths between 13 m. and 19 m., sandy bottom and sheltered from West to N.W. winds during the Winter, and/or South to S.E. winds in the Summer.

HEALTH: Pratique usually granted when alongside, after being boarded by Health/Quarantine inspectors.

RADIO: MORFLOT/FEPCO working frequencies for cablegrams:

Shore	Ship
3605 kHz	4183 kHz
6380 kHz	6278 kHz
8675 kHz	8367 kHz
12678 kHz	12551 kHz

TUGS: 1×3,000 h.p., 2×1,500 h.p. and 1×700 h.p.

BERTHING:

Berth No.	Length (m.)	Depth (m.)	Cargo Handled	Cranes Capacity (tonnes)

17	150	9.3		
18	120	4.9	For barges	
19	175	8.5	Wood products	25-40
20	175	10.2	Wood products	
			Bulk cargo	
			Steel products	
			General cargo	
14	122	8.5	For ferries	
13	80	8.9	For bunkering	

CRANES: Gantry and mobile type on tracks, capacity from 5 tonnes to 40 tronnes.

MEDICAL: Limited facilities available.

DENSITY: 1015, varies because of tide flow from river upstream.

FRESH WATER: Available by barge only, rate 30 tons/hr. 24 hours notice to Harbour Master through the local Agent in writing. Cost U.S.$ 6.10 per ton, excluding barge fee.

FUEL: H.F.O. and M.D.O. available by barge, various grades/rates, with ample notice to concerned parties.

REPAIRS: Small repairs can be undertaken.

DRY DOCKS: Capacity for coastal vessels only.

SURVEYORS: Russian Register of Shipping available.

OPENING/CLOSING HATCHES: Performed by the ship's crew.

REPATRIATION: Not possible.

AIRPORT: Nearest international airport is at Khabarovsk City, about one hour's drive by car.

TIME: GMT plus 10 hours in Winter. GMT plus 11 hours in Summer.

HOLIDAYS: Cargo operations are carried out regardless of the occasion.

SHORE LEAVE: Permitted. Passport necessary for issue of landing permit by the Immigration Office, and to be shown at the gate. Immigration Police were not stationed at the gangway this time (as is usual in all Russian ports by agreement with Immigration local office and Port Authority).

GARBAGE DISPOSAL: No facilities.

WASTE OIL DISPOSAL: No facilities.

SEAMAN'S CLUB: Not available.

CURRENCY: U.S.$ 1.00 = 1,800 Russian Roubles.

GENERAL:

Weather:

April to June	Foggy season.
June to August	Rainy season.
September to October	Fine season.
November to April	Ice season.

Ice is firmest from mid-January to mid-February, and is in abundance from mid-February to mid-March.

Coastal and tidal currents are generally Southerly in direction, at about 0.5 – 1.0 knots.

Provisions: Limited foodstuffs available and very expensive.

Communications: Telephone, facsimile, telex, telegraph and VHF radio facilities available at the local Agent's office.

Inmarsat facilities also possible and available at Agent's office.

Charts:

British Admiralty Charts No. 4511 (General).
No. 3340 (Approaches).

DMAHTC Charts No. 96012 (General).
No. 96140 (Approaches).
No. 96143 (Harbour).

Russian Charts No. 26092 (Approaches).
No. 26099 (Harbour).

Agency: Far East Port Consulting Limited (F.E.P.C.O.), Zheleznodovozhnaya Street 1, 682860 Vanino, Morflot Kholmsk, Khabarovsk Region, Russia. Tel: 54480, 54486, 57670. Fax: 51482. Telex: 141248 Fedco Su. Inmarsat: (872) 1402610. Cable address: Kholmsk Morflot for Vanino FEPCO.

VOSTOCHNY: 42.44 N. 133.03 E.

LOCATION: The commercial port of Vostochny is situated in the Vrangel Inlet, on the North-Western coast of the Nakhodka Bay, in the Sea of Japan. Navigation at the port continues all the year round.

DOCUMENTS: See "General" before first Russian port.

PILOTAGE: Pilotage in the port of Vostochny is compulsory. The services rendered by Pilots are carried out round the clock. In case the Pilot is not able to board a vessel due to bad weather, Master should follow recommendation given by the Pilot from the Pilot boat.

The port is equipped with a shore automatic vessels' movement control system (radio call sign "Kamensky-17"), on VHF Channels 16 and 12.

ANCHORAGES: Vessels are allowed to anchor in the port Inner Roads, the Vrangel Inlet, after having obtained the Harbour Master's permission only.

RESTRICTIONS: There are no entry restrictions in regard to vessel's length. Vessel's speed should not exceed 12 knots while proceeding through the main fairway and 6 knots when approaching the Vrangel Inlet. Under all circumstances Master shall choose the vessel's speed bearing in mind current navigational conditions.

The mooring of vessels having deadweight of 10,000 tonnes and over and length of more than 150 m. in ballast is not allowed during winds having velocity 10 m./sec. and over.

MAX. SIZE: The maximum draft of vessels mooring at the Coal Pier is 15 m. and 9.7 m. when mooring at other berths.

HEALTH: A vessel having arrived in the port Outer Roads and having no contact with the shore may not need to go through the clearance formalities. Vessels, having arrived in the port Inner Roads (the Vrangel Inlet) irrespective of the fact that they are to carry out cargo handling or not, shall go through all the necessary formalities for the clearance of the ship both on arrival and departure.

RADIO: Notice of Arrival – see "General" before first Russian port.

VHF: Radio communication can be effected through the Port Radio Station "Vostochny-Radio", some details of which are given in the table below.

Call Sign	Frequencies (MHz) Working	Calling	Type of transmission	Time of work
"Vostochny-2"	156.7(14)	156.7(14)	F3E	H24
(Port controller)	157.775(95)	157.775(95)	F3E	H24
VTMS in operation.				

TUGS: 3 powerful tugs available. Masters of vessels are to use minimum of 2 tugs when mooring/unmooring and shifting berths at the port of Vostochny. The use of a third tug is compulsory during absence of a tug-pusher when mooring/unmooring bow-towed barges.

The number of tugs and their horse-power is determined by a Pilot with the Master's consent.

BERTHING/CRANES: Berths of the port with depths of up to 10 m. are equipped to handle bulk, liquid, general and timber cargoes as well as various kinds of vehicles. There are also specialised systems for the handling of coal and containers.

STEVEDORES: The official working breaks at coal terminal are: 0700 – 0800 hrs.,1200 – 1300 hrs., 1900 – 2000 hrs., 0000 – 0100 hrs.

At all the other terminals official working breaks are: 0800 – 0900 hrs., 1200 – 1300 hrs., 1700 – 1800 hrs., 0000 – 0100 hrs.

FRESH WATER: Can be taken at berths.

FUEL: Can be taken from lighters only.

REPAIRS: No facilities.

DRY DOCKS: None.

HATCHES: Opening and closing hatches is carried out by dockers.

TIME: GMT plus 10 hours in Winter; GMT plus 11 hours in Summer.

GENERAL: *Charts:* Russian Chart No. 700.

Ship chandler's shop and restaurant available.

NOTICE:

To Masters of Foreign Vessels calling at Russian ports:

1. On arrival of the ship, the Master is to submit to the representatives of the Port Authorities the following documents (IMO Forms) duly signed by ship's administration:

General Declaration (Form I) – 5 copies
  Filling in of points 8 and 11 is not compulsory.
Cargo Declaration (Form II) – 2 copies
  Filling in of point 6 is not compulsory
  Points 7, 8 and 9 are to be filled in only for:
(a) Cargoes for which Bills of Lading were not issued (names of Shippers and Consignees to be stated).
(b) Transit cargoes;
(c) Cargoes for other Soviet Ports;
(d) Agricultural cargoes.
Ship's Stores Declaration (Form III) – not required.
Crew's Effects Declaration (Form IV) – 2 copies.

Amount of Master's and crew members' valuables (gold, silver, platinum, jewellery, bonds, travellers' cheques, etc.), personal firearms and cartridges are to be stated in point 2.

Crew List (Form V) – 6 copies.
Passenger List (Form VI).

2. The Master of a ship is to instruct all members of the ship's crew that in accordance with the Rules in force in Russian Ports:

Exportation and importation of state currency is forbidden;

No articles are permitted to be taken ashore or brought on board the ship without permission of the Customs House Authorities;

Articles taken ashore or brought on board the ship and concealed from Customs Control shall be regarded as smuggled goods, shall be confiscated and a fine shall be imposed;

Likewise, the sale of any articles of foreign origin on the territory of Russia will be regarded as smuggling;

No rubbish shall be thrown into the water or on the quay. The discharge of oil contaminated water and/or oil residue is prohibited;

All mooring ropes must be fitted with rat-guards;

At night only one gangway must be ashore when loading or discharging is not carried out;

It is prohibited to take ashore grain, seeds, plants, plant products, soil, etc., as well as animals and birds;

Violation of the above-mentioned rules will entail penalty in accordance with the laws of Russia.

NOTICE: *Extracts from the Obligatory Decrees of Vostochny Port:*

Port Limits: Inner roadstead-Vrangel Bay, a line drawn between Kamensky Point and Petrovsky Point.

Pilotage: Pilotage is compulsory for all craft exceeding 20 m. LOA, day and night. Request for a Pilot shall be made to "Vostochy-2" on VHF Channel 16, working on Channels 14, 9 and 6.

Navigation: Navigation in Nakhodka Bay and fairway leading to inner roads is one-way only. Max. speed is up to 8 knots if over 150 m. LOA, 10 knots up to 150 m., and 12 knots if less than 50 m. The overtaking of craft is prohibited at the inner roadstead. Navigation in the inner road by all craft exceeding 50 m. LOA must be at dead slow speed.

Mooring: Mooring must be made with not less than 2 tugs.

Draft: Permissible draft by Coal Berth is to 15.0 m. and at other berths 9.7 m.

Anchorage: Anchorage is temporily prohibited at Vrangel Bay.

Declarations: All declarations with regards to damage done to the ship while loading (unloading) or mooring shall be made by the Master through "Inflot" to Port Authorities in writing within 4 hours of the accident and in any case, before the ship leaves the port. Failing this the port shall consider no claims and shall bear no liability for any damage.

Prohibition: The following are prohibited at the port:
(a) pouring of sanitary water overboard and any smoking.
(b) using of the any chemical means in order to neutralise the spilled waters alongside.

For infringement of the abovementioned Master or his Owner shall be punished (fine to 25,000 roubles or deprivation of freedom for 5 years in accordance with Russian legislation).

Signed: Harbour Master.

SHIPMASTER'S REPORT: May 1983.

The Port of Vostochny is a relatively new port, and lies in Nakhodka Bay, at the extreme N.E. end in a smaller Bay, known as Vrangel Bay.

Documents:

On Arrival:	Prior Departure:
5 General Declarations (IMO Form)	1 Cargo Time Sheet
4 Cargo Declarations (IMO Form)	1 General Declaration
2 Stores Lists	1 Cargo Declaration
2 Crew's Personal Effects Lists	Cargo Manifests, (Prepared by Agent)
6 Crew Lists	
4 Passenger Lists	
2 Money Lists	
2 Marine Declarations of Health	
1 Vaccination List	
1 List of Ports Visited	

Port Authorities board the ship at any time to effect clearance. They use the accommodation ladder. Frequently a moderate swell runs into Nakhodka Bay from the South, making boarding from even quite large launches very difficult. Immigration Authorities inspect all Crew Seamens' Books. Process of clearance takes about 1.5 hours.

Approaches: When about 4 hours from the port call "Nakhodka Port Control", on Channel 16, Working Channel 12. Nakhodka Port Control has the whole of Nakhodka Bay (Amerika Bay on some charts) under radar surveillance. All shipping movement within the Port Limits are controlled by them. They give direct steering and sailing orders over VHF Channel 12 to vessels under way after passing Buoy No. 1 (Lat. 42° 43.3′ N., Long. 132° 56.3′ E.) inward bound, also anchor berth given with bearing and distance from Mys Shvedova Lt. Ho. usually in the Quarantine Anchorage indicated on Chart BA. 3198 and Anchorage No. 3 on Chart BA. 3041 (Nakhodka Bay). Anchorage good in clay and mud in about 19 m. of water. After anchoring, report to Nakhodka Port Control, and revert to listening watch on Channel 16.

Berthing: Vessel proceeded to the Coal Berth at Vostochny under guidance from Nakhodka Port Control. Fairways well defined on BA Chart No. 3041. Pilot meets vessel off the entrance to Vrangel Bay, just after passing Buoy No. 2. (Lat. 42° 46.0′ N., Long. 133° 00.6′ E.). Pilot normally boards by pilot ladder or accommodation ladder, port side. 2 tugs used for berthing, which is nearly always port side to.

Berth is new and very modern (Japanese construction). Very well fendered with large rubber fenders at regular intervals. Usable length of quay is about 275 m., bollards at regular intervals all the way along the quay. Although two berths are shown on the Coal Jetty on BA Chart No. 3041 (Nos. 49 and 50) only No. 49, is in fact, used. This is because the loaders (two in number) only serve Berth No. 49. Depth of water alongside reported as 15 m. and 14 m. guaranteed. No restriction on air draft for loaders, ample clearance for vessel of this size (Panamax).

Departure presents few problems, as plenty of room and water immediately off the berth. Two tugs used as for berthing. These tugs are small, and not really big enough for a vessel of this size, and take a long time to get the ship moving off the berth. However, when clear of berth, vessel can be turned short round with engines and also with the aid of the tugs. Immediately vessel is turned and heading outwards Pilot disembarks. Vessel proceeds outwards to fairway buoy, listening out for Nakhodka Port Control on Channel 12 until passing Buoy No. 1.

Bulk Cargo Facilities: There are 2 large loaders on the Berth, rated at 2,000 tonnes per hour, self trimming. We loaded bituminous steam coal, SF given as 42, but no real check possible on this figure. Vessel loaded 55,000 tonnes in 32 hours., and would have been even faster, but for plant breakdowns. Shore cargo personnel helpful as possible, but somewhat limited due to language problems. Informed by them that cargo delays are common due to availability of cargo lacking. All coal brought by rail to port from some considerable distance. Draft and deadweight survey carried out by shore foreman and ship's staff. Cargo documentation and port clearance by Authorities takes about 4 hours, from time of finishing loading.

Density: Density range of water from 1025 to 1028.

Regulations: Many regulations are in force as is common with most Russian ports, below are listed some of the most important ones.

1. Soviet currrency must not be brought in or out of the country.
2. No goods may be imported or exported without permission of Customs.
3. No goods may be taken ashore and sold or brought aboard concealed from Customs Control, as this will be construed as smuggling and heavy fines will be imposed.
4. No dumping of rubbish or pollution of any kind may take place into the harbour waters.
5. All moorings to be fitted with rat guards.
6. Only one gangway to the shore. No ladders to be put out on off side, and off side to be lit by lights at night.
7. No boats to be swung out or lowered.
8. No swimming or fishing allowed whilst alongside.
9. Ship's radio station not to be used in port and VHF not to be used for other than official messages with Shore Authorities or Marine Authorities.
10. Radar must not be used alongside. If radars are to have maintenance carried out by ship's staff, Inflot should be contacted for permission to be granted by Shore Authorities.
11. No photography is allowed.
12. No persons other than the ship's crew and fare paying passengers to be on board at any time. All shore personnel coming on board must be vetted by the Authorities.

SHIPMASTER'S REPORT: March 1984 (Updated 1988).

Vessel loaded coal for Japan.

The Coal Jetty is modern with a conveyor system and 2 moving shiploaders fitted with excellent trimmers. Several delays occurred.

In addition to the coal jetty, which is numbered 49 and 50, there is a container terminal, Berths No. 6, 7 and 8 and a timber wharf, Berths No. 10, 11 and 12, where logs of coniferous trees are loaded. Berth No. 9 is for small passenger vessels.

Documents prepared were as follows:
Customs Lists
Money/Currency List showing each crew members balance
Money/Currency List in Master's possession
Camera List (very important)
Passenger List (if no passengers state "Nil")
List of Narcotics
Arms and Ammunition List (state "Nil" if nothing on board) and List of Vessel's Port of Calls within the last year.

The Quarantine Doctor asked for Vaccination List, but these were not available on board vessel as several vaccinations concerning the crew had already expired. No difficulties occured because of this and it seems not to be compulsory.

All Authorities and Inflot Agent came from Nakhodka, the Agent was the only English speaking person and acted as interpreter.

SHIPMASTER'S REPORT: May 1984 (Updated 1988).

Port of Nakhodka and Vostochny (English translation of Vostochny is Eastern).

Chart: B.A. Chart No. 3041.

Arrival: Prior arrival Agents will instruct vessel to proceed to position Lat. 42° 27.2′ N., Long. 132° 56.3′ E. and steer a course of 000° true; which is the Southern entrance to Separation Zone. Also Agents require state of crew health.

As vessel passes Buoy No. 1, Master must report same to Nakhodka Port Control on Channel 16, transferring to Channel 12, at which point vessel will be radar controlled to anchorage, Port Control gives vessel course to steer and anchorage position, vessel remains on Channel 12 and instructions passed to vessel regularly. Even tc number of cables to anchorage position, at which time vessel is instructed to drop anchor. If berth is available vessel proceeds to Buoy No. 2 as instructed and onto Fairway No. 3 along which the Pilot will board quite close to Entrance Buoys of the Bukhta Vrangelya (Vostochny Port).

Vessel berths port side alongside assisted by 2 tugs, head inwards, pier well fendered with large hard double rubber fenders (size 1 m. long by 0.5 m. deep and high). Normal securing to berth is 4 lines and 1 spring each end. Rat guards are required and must be fitted prior to Quarantine Clearance.

On berthing, 2 guards are placed at bottom of gangway and Agent boards with 2 Quarantine Officers, 2 Customs Officers and 2 Immigration Officers.

The following papers are required and best to give Agent all documents to sort out:

5 copies General Declaration (IMO Form 1).
5 copies Crew List (IMO Form).
3 copies Passenger List ("Nil" returns required if no passengers).
2 copies Vaccination List (Cholera and/or Yellow Fever).
*2 copies Crew Effects Declaration.
*2 copies Crew and Ship's Currency Declaration.
*2 copies List of Cameras with type and serial Nos.
2 copies Drugs in Master's Safe.
1 copy Ship's Stores List (Bond, etc.).
1 copy Parcel List ("Nil" return required).
1 copy Delivery Bill of Mail ("Nil" return required).
1 copy Declaration of Arms/Ammunition List ("Nil" return required).
1 copy Maritime Declaration of Health (Japanese form accepted).
4 copies Cargo Declaration (if cargo onboard).

*One of each taken ashore, other copies stamped and retained onboard for clearance check before sailing.

Ensure crew declare all goods, watches, radios, firearms, gold, jewelry, etc.

All Discharge Books checked by Immigration, Customs have random check on cabins. Quarantine only check Derat Certificate and Vaccination List. Note *all* types of "magazines" are forbidden and must be collected and sealed up before clearance.

When all paperwork is completed and Officials leave vessel taking Discharge Books ashore and clearance is given, cargo work can commence after draft survey. Discharge Books are returned to vessel after a few hours and are required to be handed to the gangway guards when any crew go ashore, even to read the draft.

Draft Surveyor checks everything and quite thorough, even with hold cleaning. Once surveyor has completed he arranges cargo operations to commence as per ship's instructions.

Vessel loaded two grades of coal:

1. Partizensky (J-6) 40,000 tonnes.
2. Nerjungrin (SS) 15,000 tonnes.

At consignee's request cargo was loaded with 20,000 along bottom, then 15,000 of SS and complete with 20,000 J-6 on top. Reason being the 15,000 SS was very powdery and mixed would be easier to discharge. This entailed a draft survey at the end of each layer of coal. Loading rate up to 1,200 tonnes/p.h. per loader.

Details of Berth, Loader, Etc.:

Berth: A pier built out from shore with length of 400 m. and width 56 m. of which only 340 m. is used for mooring. Depth of water at forward end of vessel 16 m. and at pier end about 18 m. Max. draft allowed 15 m. Cement constructed pier of 10 cement pontoons driven into sea bed on each side, with horn bollards on top of each pontoon (2 bollards). Then double horizontal rubber fenders on face.

Loader: Two units, travelling type with elevation boom, has outreach from fender face of 28.2 m. and airdraft of 18 m. Telescopic head Spoon or Fast Belt.

Belt Conveyor: Two belts from yard to pier at 180 m. per second.

Stocks: Two yards approx. area each 730 m. by 45 m. and plenty of stockpiles.

Max. Size Allowed: 100,000 d.w.t. (LOA 300 m., beam 43 m. and draft 15 m.).

Steam Line: On quay for ice melting.

Yearly Production: 6.2 million tons per year.

Future: Increase production by 5 million tons when other side of pier is developed as presently no loaders, although pier is complete in all respects.

Stowage Factor of Coal: About 42 cu.ft. per ton.

Bunkers: Available ex-coaster.

Fresh Water: Available ex-barge from Nakhodka (very expensive).

Stores: Not available.

Shore Leave: Allowed between 0800 hrs. and 2400 hrs. (Master not restricted). There is nothing to see at Vostochny but 1 hour by car/mini bus to Nakhodka where a Seaman's Mission and export shop are located.

Time: GMT plus 10 hours. Between 1st April and 1st October GMT plus 11 hours.

Radio Station: Nakhodka Radio used. 8510 kHz call sign "UKK3" and 500/435 kHz call sign "UK1" and answered first call. Other frequencies as per Radio Station Signals Vol. 1.

Tugs: Two tugs used of about 1,000 h.p. and 2,000 h.p. (Local Regulations require any vessel berthing to use 2 tugs).

Pilot: 24 hour berthing allowed.

Agents: "Inflot" are available on demand, visit the vessel at least once a day and are very helpful.

Cargo Weights: This is done by electronic weights scale ashore and on draft surveys. Weights in each hatch are not correct, as seen from our Facts Sheet vessel same quantities each run, yet time in each hatch varied from 40 minutes to 90 minutes for same quantity. Final draft survey agreed with ship's figures which were used for Bill of Lading (ship only signs "Mate's Receipt").

Other Berths: Across bay are 3 general cargo berths and 3 container berths with a maximum draft allowed of 9.7 m. Gantries are only suitable for the smaller container vessel of about 1,000 boxes.

Departure: Once cargo completed all paper work done on vessel, Agent attends to cargo papers after which Customs and Immigration board. Immigration check each crew member with Discharge Book photograph, Customs check bond seal and break it. Apart from papers given to Master they require a Cargo Declaration (IMO Form) completed. Ship has to request a Port Clearance, otherwise none is given.

Stevedores: Continuous working of cargo with meal breaks between 0700 – 0800 hrs., 1200 – 1300 hrs., 1900 – 2100 hrs. and 2300 – 2400 hrs.

Sailing: Once vessel clear of berth vessel is swung 90° to port and lined up between Entrance Buoys at which time Pilot disembarks and vessel reports to Nakhodka Port Control who advise course to steer and watch you on radar until passing Buoy No. 1. Then vessel steers 180° until clear of separation scheme.

SHIPMASTER'S REPORT: August 1984.

Vostochny Approach.

B.A. Chart Nos. 2511, 3198, 3041.

The main port of Nakhodka handles all traffic routing inside the bay. Contact Nakhodka Traffic Control on Channel 12 not less than 2 miles prior to arrival Buoy No. 1, Control will give you anchoring position and course to steer. When approaching anchoring position Control gives you run down and distance to go for dropping anchor.

Officials board at anchorage (6 people). When vessel is cleared listen on Channels 16 and 12 for berthing instructions. When berth is free, Control informs you to heave up and proceed towards berth.

Vostochny Pilot (Channel 16) boards at Fairway Buoys off berths. 2 tugs assist berthing. Buoys have no numbers but mark the entance to Vrangelya Bay, where coal berth is situated. We berthed Berth No. 49, port side to. Depth at berth is 16.5 m., max. draft 15 m., airdraft 18.4 m. Max. ships size 260,000 d.w.t. (100,000 tonnes), beam 38 m. Loading rate 3,000 t.p.h. by 2 loading booms. This rate depends on availability of coal. Most of cargo comes from Siberia and requires 10 days passage from mines.

Vostochny Facilities: Fresh water available on jetty, use your own hose and coupling. Fuel and diesel available by barge. Ship chandler if required, also hospital and dental treatment available. Shore leave is by mini-bus or launch to Nakhodka. The mini-bus can only carry 10 people and the journey by launch takes approximately 75 minutes. An International Seaman's Club, souvenir shop and 4 restaurants are available at Nakhodka.

Documents: We made out our own forms which included:

6 copies Crew List.
2 copies Stores List.
2 copies Crew Declaration.
2 copies Currency List.
2 copies Dangerous Drugs List.
2 copies Passenger List.
2 copies Arms and Ammunition List
6 copies Notice of Readiness.
1 copy Port Health.

Any health forms will do, score out country of origin, they provide you with "Inflot" Agency Information Form.

4 copies General Declaration (IMO Form 1).
2 copies Cargo Declaration (IMO Form 2).

On completion of loading, Officials board for documentation of cargo loaded. When this is finished the Agent arranges for the Pilot via VHF. The Pilot takes vessel out of berth, using 2 tugs. Vessel proceeds assisted by Port Control towards Buoy No. 1 off Mys. Krylova.

AUTHORITY: The Port of Vostochny Authority, Postal address: P.O.Box Vrangel-1, Port of Nakhodka Area, Primorsky Krai, 692907 Russia. *Tel:* (266) 52-3-71, 52-2-71, 52-4-00. *Telex:* 213816. *Cables:* Port of Vostochny.

AGENT: See "Nakhodka".

VYBORG: 60.42 N. 28.44 E. (See Plan)

For Saimaa Canal see Index.

GENERAL: A Baltic Sea port Vyborg is situated at the head of the Gulf of Vyborg in the N.E. part of the Gulf of Finland.

The port area consists of a harbour protected from the North by the Castle bridge passing over the strait nearby the Castle of Vyborg and by the Smolyanoy point – from the West.

The port is open for navigation all year round (from December till April with icebreaker assistance). Ice in the Gulf of Vyborg begins to form normally about the middle of November. The Gulf usually becomes frozen over by the middle of December and the last ice finally disappears in April.

Whilst tidal range in the Gulf of Vyborg is of small account, considerable changes in the water level may be caused by strong winds (up to 1.6 m.), variation in atmospheric pressure (up to 1 m.), and the seasonal increase of the amount of water brought down from the land. The rise of the water level is usually caused by South, S.W. and sometimes by North winds. The maximum range of the water level in the Gulf is about 2.0 m.

The Vyborg Fairway (least depth 7.3 m.) leads from the entrance to the Gulf of Vyborg across the Transund roadstead up to the entrance of the Inner Vysotsky Roads. The Vyborg Sea Channel (least depth 6.5 m.) leads from the Inner Vysotsky Roads into the port, situated at the head of the Gulf. Both of these and the Fairway and the Channel, are open for navigation any time of day or night.

PORT LIMITS: The sea waters of the port are the fairways and anchorages to the East from 28° 23′ E. and to the North from 60° 34′ N.

DOCUMENTS: Refer to beginning of the Russian section.

PILOTAGE: Pilotage in the port area is carried out round the clock. It is compulsory for all types of vessels. Pilots board and disembark vessels in the following places:

1. At the port of Vyborg;
2. At the Reception Buoy, 5.1 cables Westward of the Northern point of the Mayachny Island (pilot station of the Vikhrevoy Island);
3. At the Brusnichnoe Lock berth or in the Lock itself.
4. At Kozliny Island (60° 26.7′ N., 27° 43.0′ E.) for the vessels proceeding to or from Finland only.

In the case of rough weather when safe boarding or disembarkation of a Pilot at the Reception Buoy of the Vikhrevoy Island pilot station is impossible, a vessel, with the Master's consent, may follow a pilot boat, in the wake of it from the Reception Buoy up to the Large Transund Roadstead or as the case may be, from the Large Transund Roadstead up to the Reception Buoy.

The radio communication between pilot boat and vessel is effected through VHF radio, Channel 12.

In case the Master of a vessel does not agree to follow a pilot boat, he can:

(a) When approaching the port from the seaward lie at anchor at the Reception Buoy area until the weather changes for the better;

(b) When leaving the port for sea, anchor at the Large Transund Roadstead at a place indicated by the Port Administration and wait until Pilot is able to disembark at the Reception Buoy area.

Vessels approaching the port from seaward should order a Pilot at the same time as they notify the Port Administration of the time of their arrival at the point of meeting a pilot boat.

ANCHORAGES: There are 5 anchorages at Vyborg Fairway and at Vyborg Sea Channel areas.

Two are situated at the Large Transund Roadstead area, one – at the Small Transund Roadstead, one – S.E. and one – N.W. of the channel. Anchorage positions are shown on the chart.

The holding ground in the anchorages is sand, mud, stone and clay. The depths are from 11 m. to 17 m.

RESTRICTIONS: Vessels are allowed to enter or leave the port when winds do not exceed Force 6. During daytime, when a vessel's length is not more than 135 m. and her draft does not exceed 6.5 m. (at the Kronstadt datum);

At night time, when a vessel's length is not more than 105 m. and her draft does not exceed 6.1 m. (at the Kronstadt datum).

Before entering or leaving the port Masters of vessels having length and draft exceeding those indicated above must obtain the Harbour Master's permission.

HEALTH: International code quarantine signals to be shown on arrival. Vessels placed in quarantine will be instructed where to anchor by the pilot station.

RADIO: Radio contact can be established through the Vyborg Radio port radio station operating 24 hours daily on the following frequencies:

	Frequencies (kHz)		*Type of trans-*	
Call Sign	*Working*	*Calling*	*mission*	*Time of work*
UNN	500	500	A1A	H24
"Vyborg Radio"	156.8*(16)	156.8*(16)	F3E	H24
(Harbour Master)	156.6*(12)	156.6*(12)	F3E	H24
"Ostrov Vikhrevoy"	156.8*(16)	156.8*(16)	F3E	H24
(Pilot Station)	156.6*(12)	156.6*(12)	F3E	H24
"Zaliv Novinskogo"	156.8*(16)	156.8*(16)	F3E	H24
(Pilot Station)	156.6*(12)	156.6*(12)	F3E	H24
"Vyborg Inflot"	156.8*(16)	156.8*(16)	F3E	H24
(Inflot Shipping Agency)	161.8*(24)	157.2*(24)	F3E	H24

*Frequencies are given in MHz.

Every vessel whilst proceeding along the Fairways and the Channel must have VHF radio-telephone in good working order, being able to ensure a reliable radio contact with the port of Vyborg and between vessels. If a vessel is not equipped with VHF radio, a Master can hire a VHF portable radio-set from a pilot station (via Pilot) for a fixed charge.

TUGS: Available, ordered through "Inflot". Compulsory for vessels over 80 m. LOA.

BERTHING: Can only be effected with Pilot on board. Berths of the port with depths alongside of up to 7.8 m. are equipped to handle general and bulk cargoes, timber, etc., as well as passenger traffic. There are enclosed warehouses and open concrete floor sheds.

Berths are equipped with electric cranes of up to 20 tons capacity. There are floating cranes of up to 15 tons capacity and other cargo-handling equipment and machinery.

Opening and closing of hatches is usually done by the ship's crew, but if required it can be done by port labour for vessel's account.

MEDICAL: "Inflot" to be advised in advance if any medical attention required.

DENSITY: Salinity 5%.

FRESH WATER: Available. Can be supplied by pipelines at all berths or delivered by barges.

FUEL: Available by barge only.

REPAIRS: Minor repairs can be effected.

SURVEYORS: Surveyors and Cargo Inspectors may be ordered through "Inflot" Agency or through Cargo Receivers' Agents V/O "Soyuzvneshtrans" (telex 121 541).

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Usually opened and closed by crew. Can be operated by stevedores on request.

CUSTOMS ALLOWANCES: No control on board the vessel. All items taken off vessel subject to Customs control.

TIME: GMT plus 3 hours from 1st October until 31st March, GMT plus 4 hours from 1st April until 30th September.

HOLIDAYS: Cargo operations can be carried out on all holidays.

EMERGENCY CO-ORDINATION CENTRE: Salvage Division of the Baltic Steamship Co., St.Petersburg. Tel: 259-03-55, 216-99-65. Telex: 121 501.

TELEPHONE: Connection to vessels is not possible.

BANKS: Vneshtorgbank in St.Petersburg.

STORING: Under Customs control from trucks alongside at the berth. Bunkers from a tanker or from trucks.

SHORE LEAVE: Permitted subject to police control.

DEVELOPMENTS: Three berths at Vysotsk of total length of 360 m. and draft 7.5 m. are under construction.

Dredging and deepening to take place to allow vessels of 12,000 d.w.t. to enter.

AUTHORITY: The Port of Vyborg Authority, Ulitsa Yuzhny Val 1, 188900 Vyborg, Russia. *Tel:* 24750, 99677. Harbour Master *Tel:* 20477, 99650. *Contact:* V. Abramov, Harbour Master of Vyborg Sea Port.

AGENT: The Port of Vyborg Maritime Agency "Inflot". Postal address: Inflot, P.O. Box 40, Vyborg, Russia. Cables: "Inflot Vyborg". Tel: 21400, 21735, 24818. Telex: 121521 Infl Su.

NOTES

Please also advise Shipping Guides Ltd.

St. Christopher and Nevis

BASSETERRE, St.Kitts: 17.18 N. 62.43 W. (See Plan)

DOCUMENTS:
5 copies of Crew List.
6 copies of Passenger List.
1 copy High Duty Cargo List.
1 copy Crews' Personal Effects List.
1 copy Clearance from last port.
2 copies Ship's Stores List.
7 copies Manifest.
2 copies Bills of Lading.
1 copy Port Officer's Report.
1 copy Boarding Officer's Form.
1 copy Coast Guard Form.
1 copy Unmanifested Cargo.
1 copy Maritime Declaration of Health.

PILOTAGE: Pilot not compulsory, but all vessels of 100 g.r.t. and over have to pay piloting fees, even if service not used.

ANCHORAGES: Harbour at Basseterre is an open roadstead and safe anchorage will be found at a distance of 0.25 miles to 0.5 miles from the shore opposite the piers in the centre of the town.

RESTRICTIONS: None.

HEALTH: The Customs Boarding Officer boards all vessels on arrival at port and inspects the clearance from the last port. If there are no health problems the vessel is immediately granted Pratique. If there is suspected disease or fever on board pre-notification is recommended. If this is done the Customs Boarding Officer will have a Medical Officer with him when he boards the ship on arrival.

RADIO: Contact is through Saba Radio, call sign PJA.

VHF: Port and Police on Channel 16 throughout 24 hours.

BERTHING: Main Berth: Length 400 ft., depth 30 ft. Max. LOA 700 ft.
Ro/Ro Berth: Length of berth 385 ft. Depth of water 16.5 ft.
Sugar Loading: Mobile unloaders rated at 150 t.p.h.

Berthing on ships without thrusters is achieved against off-shore wind by using port anchor to snub in and swing stern onto quay. Mooring boat runs lines ashore and stern line to buoy, aft breast lines sent to bollard in middle of end of quay.

CRANES: 1 Grove TM 8100 mobile crane with capacity 100 tonnes. 1 container lifter capable of lifting 20 ft. and 40 ft. containers of up to 35 tonnes.

STEVEDORES: ETA should be advised 24 hours before arrival of vessel, also tonnage to be discharged and number of gangs required. Discharging rate: 15 tons per gang per hour on bags. 6 tons per gang per hour on general cargo.

MEDICAL: Advance notice if possible – hospital facilities available. Valid Vaccination Certificate for passengers disembarking but not for in transit or cruise ship passengers.

DENSITY: 1025. Tides negligible (maximum 1 ft.).

FRESH WATER: Available alongside main berth and Ro-Ro Berth.

FUEL: Limited supply available by road tanker.

CONSULS: France, Netherlands, Spain, Trinidad and Tobago.

REPAIRS: The sugar factory has a well-equipped shop for machine, welding and maintenance work. They can assist with most engine repairs.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Not required.

OPENING/CLOSING HATCHES: Done by stevedores.

CUSTOMS ALLOWANCES: Half pound tobacco or 200 cigarettes. Wine and/or Spirit, 1 bottle.

REPATRIATION: Crew changes and repatriation can be arranged.

AIRPORT: 2 miles from town with regular daily connections to Antigua and Puerto Rico where onward passages to Canada, U.S.A., Great Britain and Europe can be arranged.

TIME: GMT minus 4 hours; no alteration.

HOLIDAYS: New Year's Day (January 1st); Good Friday; Easter Monday; Whit Monday; Queen's Birthday (date fixed by announcement annually); August Monday; Independence Day (September 19th); Christmas Day (December 25th); Boxing Day (December 26th).

POLICE/AMBULANCE/FIRE: Police Tel: 911; Fire Tel: 911; Ambulance Tel: 911; Hospital Tel: 465-2551.

TELEPHONES: Available on request.

IDENTIFICATION CARDS: Not needed, however, crew members are liable to be checked by Port Authority on entry and exit by security guard.

SHIPMASTER'S REPORT: November 1989 (Updated 1994).
Chart: BA. Chart No. 487

Approaches: Basseterre is conspicuous with Fort Thomas to the West and deep water jetty to the East.

The Shell Berth is marked as lighter moorings on B.A. Chart No. 487 insert plan.

The jetties in the centre section of the shoreline are now in a state of disrepair.

Vessels approach the Shell Berth from the S.W. and at a broad angle.

Pilotage: Pilotage is optional at oil berths (Shell and Texaco), available from 0630 hrs., VHF facilities available.

Shell charge a standard pilotage fee if taken or not. Vessel should make an early request as port is busy early in the morning berthing ships alongside the deep water jetty.

It is advisable to take Pilot on first visit. The new Texaco Berth, S.E. of Shell Berth is a bit more awkward.

Anchorage: In bay as marked on plan insert of Chart No. 487, anchorage is fairly sheltered.

Berthing: Approach Shell Berth from S.W. at a broad angle, and let go starboard anchor, when port forward mooring buoy on port bow is about 30 m. away. We found 6.5 m. datum throughout length of vessel.

Mooring: The performance of boatmen varies. Joshua, the main harbour boatman, is reported to be very good, he has a launch with a blue hull and white cabin. If he is busy elsewhere, a person with an open fishing boat will attend. Joshua will normally be available to run boat service, but the other person will not be available.

Stern buoys and port head buoy have hooks.

The LPG hose mooring buoy is the Easterly of the set of hoses.

Cargo Operations: Shell have 100 tonnes' capacity LPG, Texaco have 50 tonnes' capacity at present.

Hose Buoys: 1. East LPG end of hose (LPH)
2. LPG end of pipe (LPP)
3. White oils
4. West Road Bitumen (RC2)

Shell generally like 50/50 mix, unfortunately Trinidad generally supplies 70/30 mix which is not liked, as butane is used up too fast in cookers.

Submarine hose with 4 in. flange with valve, port side derrick. Pumping rate 50 t.p.h.

The Supervisor is very helpful, he boards on commencement and completion of operations.

Agent: The Supervisor often acts as Agent and Customs Official as no officials board the ship.

Clearance was given during discharge as we had to wait for Mr. Wade to find a Customs Officer.

Documents:
5 copies Crew List.
1 copy Unmanifested Cargo.
2 copies Ship's Bonded Stores.
2 copies Crew Manifest.
1 copy Maritime Declaration of Health.
1 copy Port Officer's Return.

General: Definitely no night pumping. Berthing operations commence at 0600 hrs.

Shell use VHF Channel 9, we lent them our Motorola.

The boatman can be hired for about U.S.$35.00 per day for shore leave.

Texaco have a new installation on the East side of the Bay with 2 mooring buoys (1 head, 1 stern), with ship's hose to dolphin, about 350 m. hose run to dolphin connection.

Texaco handle LPG and white oils.

The dolphin has a red flashing light (Lat. 17° 17.43' N., Long. 62° 42.7' W.), visible 3.5 miles.

Unable to raise Saba Radio from Basseterre. Contacted Barbados at 1330 hrs. GMT on Channel 1213.

The bay is fairly well sheltered, except for ground swell.

AUTHORITY: The St. Christopher – Nevis Port Authority, P.O.Box 963, Bird Rock, Basseterre, St. Kitts. *Tel:* (809) 465-8121, 8122, 8123. *FAX:* (809) 465-8124. *Contact:* The General Manager.

NOTES

St. Helena

JAMESTOWN: 15.56 S. 05.40 W. (See Plan)

PORT LIMITS: Within 3 miles radius of the port. Laytime commences at the anchorage.

DOCUMENTS:
4 copies of Crew List.
4 copies of Passenger List.
1 copy of Maritime Declaration of Health.
2 copies of Ship's Manifest.
1 copy of Crew Declaration.
1 copy of Ship's Stores, including Shops and Bars.

PILOTAGE: No Official Pilot.

ANCHORAGES: The harbour consists of an open roadstead with anchorages shown on charts.

MAX. SIZE: Any size vessel can enter the port. Maximum tide variation approximately 1 m.

HEALTH: Pratique will be granted by the boarding party or by telegram from Port Health Officer. If disease or fever suspected, Port Health should be informed by telegram 24 hours before anchoring so that the necessary precautions can be taken.

RADIO: Frequencies: 500 and 461 kHz A1A. 12963.5 kHz A1A. Working Hours: 500 and 461 kHz – Weekdays from 0800 to 1600 GMT. Sundays and public holidays from 0800 to 1300 GMT. 12963.5 kHz – Daily, except Sundays from 1200 to 1300 GMT. Listening watch on Channel 5 and Channel 6.

Call sign for R/T working – St. Helena Radio. Frequencies: 2182 kHz H3E, 3162 kHz H3E, J3E and R3E. 4396.0, 8737.0 and 13125.0 kHz. J3E and R3E. Working hours: 2182 and 3162 kHz – Weekdays from 0800 to 1600 GMT. Sundays and public holidays from 0800 to 1300 GMT. 4396.0, 8737.0 and 13125 kHz are only opened on request and ships should answer on Channels 414, 807 and 1217 respectively.

SITOR – Radio Telex Service: SELCAL 4635, A/B 4635 CWZHH. Frequencies: 4212.5, 8423.5. 12584.0 and 16811.5 kHz F1B. Working Hours: Weekdays 1000 to 1030 GMT 16811.5 kHz, ship answers Channel 1610. 1030 to 1100 GMT 12584.0 kHz, ship answers Channel 1210. 1500 to 1530 GMT 16811.5 kHz, ship answers Channel 1610. 1530 to 1600 GMT 12584.0 kHz, ship answers Channel 1210. 4212.5 (Channel 405) can be opened on request.

Call sign for VHF working – St.Helena Radio. Frequencies: Channels 16, 10, 12, 14, 22, 24, 25, 26 and 27. Working Hours: Continuous.

VHF: Harbour Master has VHF facilities. Call sign "Port Control"; Channel 16, working Channel 14, Monday to Friday 0830 hrs. – 1600 hrs.

TUGS: None.

BERTHING: Vessels anchor in 18 – 20 fathoms of water.

CRANES: 2×10 ton and 1×30 ton heavy lift crane.

STEVEDORES: 48 hours' notice required by Agents Messrs. Solomon & Co. (St. Helena) plc, also particulars of tonnage of cargo.

MEDICAL: Harbour Master, via Agent, should be notified if medical attention is required.

TANKERS: No facilities available.

FRESH WATER: Delivered by floating pipeline at approximately 10 t.p.h.

FUEL: Limited stocks of diesel oil held for local use only.

CONSULS: French Consul. Appointed representatives for Denmark and Norway.

REPAIRS: Small repairs can be carried out (welding or turning, etc.).

DRY DOCKS: None.

SURVEYORS: Messrs. Solomon & Co. (St. Helena) plc as Cargo Surveyor Agents for Lloyd's.

CERTIFICATES: Vaccination Certificates required for all crew. Derat Certificate should be valid.

CUSTOMS ALLOWANCES: Duty free stores will be sealed by Customs. An amount may be levied to cover the duty payable on the duty free stores consumed by passengers and/or crew aboard a visiting vessel whilst in port.

CARGO GEAR: All discharge carried out by vessel's derricks into lighters and barges.

GANGWAY/DECK WATCHMEN: Supplied by Messrs. Solomon & Co. (St. Helena) plc. on request.

HATCHES: Opening/closing of hatches normally carried out by crew.

REPATRIATION: No facilities for crew changes. Only for those left behind for hospitalisation.

AIRPORT: No airport on St. Helena.

TIME: GMT throughout the year.

HOLIDAYS: New Year's Day (1st January); Good Friday; Easter Monday; St. Helena Day (21st May); Whit Monday; Queen's Official Birthday; August Bank Holiday; Christmas Day (25th December); Boxing Day (26th December). Cargo work can be arranged except on Christmas holidays.

POLICE/FIRE/AMBULANCE: Police and Fire, Tel: 999. General Enquiries, Tel: 2626. Ambulance, Tel: 2500. Fax: (290) 2530.

SHORE LEAVE: No restrictions unless imposed by Immigration Department.

GARBAGE DISPOSAL: No facilities available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: No Seamen's Club, but telephone – Payphones (card/coin) available at the Post Office and throughout the Island. There is a Public Fax Bureau situated at the "Moon" on Napoleon Street near the Post Office.

Anglican and Catholic church. Sports arranged through agents.

CURRENCY: Own currency, pounds on par with UK Sterling. Will accept UK notes, not coins.

DELAYS: No delays in berthing. Loading or discharge can be delayed due to bad weather.

AUTHORITY: Harbour Master, The Wharf, Jamestown, Island of St. Helena, South Atlantic Ocean. *Tel:* (290) 2287, 2750. *Telex:* 4202 Govt Hl. *FAX:* (290) 2598 or 2297. *Contact:* D.E. Bennett, Harbour Master.

NOTES

Please also advise Shipping Guides Ltd.

ST. LAWRENCE SEAWAY (See Plan)

DOCUMENTS: Vessels intending to transit the St.Lawrence Seaway from Montreal, Lat. 45° 32′ N., Long. 73° 32′ W., to abeam of Long Point in Lake Erie, Lat. 42° 30′ N., Long. 80° 03′ W., must be pre-cleared by a representative, who shall assume responsibility to the St.Lawrence Seaway Authority for payment of all tolls and charges to be incurred.

Application for Pre-Clearance Form S-VM 429-07-90 may be obtained from the St. Lawrence Seaway Authority, 202 Pitt Street, Cornwall, Ontario, K6J 3P7, or from the St. Lawrence Seaway Development Corporation, P.O.Box 520, 180 Andrews Street, Massena, N.Y. 13662-1763.

In addition, the St. Lawrence Seaway Authority requires 1 Transit Declaration Form, and for cargo to or from overseas 1 unfreighted copy of the complete manifest.

A Ballast Water Exchange Report will be presented to the Master by the Pilot who boards at Les Escoumins. This should be completed and given to the Lockmaster prior to the ship departing St.Lambert Lock.

In first U.S. port, a "Traveller" is made up by the Customs Inspector with the following documents:

2 complete sets of U.S. Cargo Manifests, plus 6 copies for Agents.
1 set Manifest of Cargo for first U.S. port.
4 Stores Lists.
4 Personal Effects Lists.
4 Firearms and Ammunition Lists.
4 Crew Lists, Form 1-418.
4 Narcotics Lists.
4 Vessel's Itinerary Lists.
Vessel's Registry and copies of Paid Tonnage Tax Certificates.
Health Pratique.
Clearance from previous port.
2 sets Bills of Lading.
3 copies Stowage Plan.

In subsequent U.S. ports the following are required:

5 sets Manifest of Cargo for that port.
The Traveller and Permit to Proceed issued in previous port.
2 Stores Lists.
2 Personal Effects Lists.
2 Firearms and Ammunition Lists.
2 Crew Lists.
2 Narcotics Lists.
2 Sets Bills of Lading.
3 copies Stowage Plan.

Vessels navigating St. Lawrence Seaway are required to complete applications for:

Certificate of Financial Responsibility,
Certificate of Insurance, Form FMC 225,
Oil Discharge Assurity Bond, Form FMC 226,
Guarantee in respect of liability for discharging oil, Form FMC 227.

These applications have to be filed with the Secretary of the Federal Maritime Commission before a certificate is issued. The oil pollution liability certificate should be retained aboard the vessel.

ICE ADVISORY SERVICE: Ships inbound from seaward between December 15th and April 15th should advise the Ice Information Officer, Sydney, 36 hours prior to entering Cabot Strait, stating their position, destination, whether loaded or in ballast. This procedure will facilitate the passing of ice information to the ship as necessary. Ice information is also available from radio stations at Halifax, Seven Islands, Wirringate and Grindstone. The Canadian Broadcasting Corporation Maritime Network also broadcasts ice information daily during the Winter navigation season. Supplementary ice information may also be obtained from the Canadian Marine Service Icebreakers.

During the ice season, radio broadcasts of ice information are made twice daily from Marine radio stations as follows: Cape Race, Newfoundland; Fox River, Quebec; Mont-Joli, Quebec; Halifax, Nova Scotia.

PILOTAGE: The first pilot station when entering the St. Lawrence River is at Les Escoumins, 80 miles West of Pointe au Pere. This Pilot will take the ship to the Quebec Pilot station 121 miles to the West. Off Quebec a new Pilot boards to take the ship to Trois Rivieres, where there is another change of Pilot for the remaining trip to Montreal.

RESTRICTIONS: The average navigation season in the Montreal-Lake Ontario section of the St. Lawrence River is from April 1st to December 15th.

Montreal to Lake Ontario – Lock Nos. 1 to 7: Length between the breast wall and ship arrester 233.48 m., width 24.38 m., depth 9.14 m., channel depth 8.23 m.

Welland Canal – Lock Nos. 1 to 7: Length between the breast wall and ship arrester 233.47 m. to 234.21 m. Lock No. 8: Length 365.76 m., width 24.38 m., depth 9.14 m., channel depth 8.23 m.

Sault Ste. Marie – Canadian Lock: Due to a major structural failure in July 1987, the Canadian Lock at Sault Ste. Marie will be closed until further notice. Mariners are advised to use the U.S. Locks.

Information for U.S. Locks may be obtained from U.S. Corps of Engineers, Detroit District.

Speed Limits: 9.0 knots upbound, 10.5 knots downbound in the Beauharnois Canal; 8 knots in the Welland Bypass Channel and 6 knots in all other canals. The speed limits vary from 8.5 knots to a maximum 13 knots in remaining sections of the St. Lawrence River. Maximum speed limits for vessels in excess of 12 m. in length are contained in the Seaway Handbook. Changes are indicated through Seaway Notices.

For information relating to speed limits, on the Detroit, St. Clair and St. Mary's rivers contact the U.S. Coast Guard, Cleveland, Ohio or the Canadian Coast Guard, Sarnia, Ontario.

MAX. SIZE: Length 222.5 m., beam 23.16 m., draft 79.2 dm. Masts must not exceed 35.5 m. above water level. Other limiting dimensions are contained in the Seaway Regulations.

HEALTH: All ocean-going vessels must obtain Free Pratique before entering the Seaway. Vessels entering the Seaway direct may receive quarantine inspection and clearance from the Canadian Authorities at Montreal while at anchor awaiting entrance to the Seaway.

RADIO: *Notice of Arrival:* Master must give at least 24 hours' notice to Commander, 9th Coast Guard District, Cleveland, Ohio, of the vessel's ETA at Snell Lock. Also at least 24 hours' notice of ETA at first U.S. discharge port is required.

St. Lawrence Seaway Authority: Every vessel shall provide at least 24 hours' notice of arrival to the nearest Seaway Station, prior to an initial transit or in case reinspection of the vessel is required.

Calling In requirements are detailed in the Seaway Regulations.

Great Lakes: It is recommended that vessels within a radius of 30 nautical miles of a shore station use their FM transmitting and receiving equipment to ensure better connections. This pertains especially to vessels at anchor or in the proximity of a port or berth.

Radio Stations: Buffalo, New York, marine operator. Port Burwell, Ontario, marine operator. Geneva, Ohio, marine operator. Lorain, Ohio, marine operator. Rogers City, Michigan, marine operator.

TUGS: Whistle signals differ from those in international usage and are as follows:

1. Ship to Tug: 1 Long and 1 short (– ·) = ship ready to proceed. O.K. or all right. 1 Long and 2 Short (– · ·) = let go the bow tow-line. 1 Long and 3 Short (– · · ·) = let go the stern tow-line.
2. Both Ship to Tug and Tug to Ship: 1 Short(·) = work propeller ahead when stopped, *or,* stop propeller when working, either ahead or astern. 2 Short (· ·) = work propeller astern. 3 Short (· · ·) = slow down or check. 4 Short (· · · ·) = work propeller strong in the same direction it is working at the time the signal is blown. 5 or more Short blasts (· · · · ·) = the standard danger signal.

SEAWAY EQUIPMENT: *Radio-telephone Equipment:* All vessels, other than pleasure craft of less than 19.80 m. in overall length, must be equipped with VHF radio telephone equipment, in addition to the FM equipment otherwise required. The radio transmitters must have sufficient power output to enable the vessels to communicate with Authority Stations from a distance of 48 km. and must be fitted to operate from the wheelhouse and to communicate on 156.55, 156.6, 156.65, 156.7 and 156.8 MHz.

Stern Anchors: Every vessel of more than 110 m., the keel of which was laid after January 1, 1975 is required to be equipped with a stern anchor.

Propeller Direction Alarms: Every vessel of 1,600 g.r.t. or more shall be equipped with:

(a) propeller direction and shaft r.p.m. indicators located in the wheelhouse and the engine room; and
(b) visible and audible wrong-way propeller direction alarms located in the wheelhouse and the engine room, unless the vessel is fitted with a device which renders it impossible to operate engines against orders from the bridge telegraph.

Pitch Indicators and Alarms: Every vessel of 1,600 g.r.t. or more equipped with a variable pitch propeller shall be equipped with:

(a) A pitch indicator in the wheelhouse and the engine room; and
(b) effective April 1, 1984, visible and audible pitch alarms in the wheelhouse and engine room to indicate wrong pitch.

Disposal and Discharge Systems: Every vessel not equipped with containers for ordure shall be equipped with a sewage disposal system (enabling compliance with applicable laws relative to sewage disposal).

Garbage on a vessel shall be:

(a) destroyed by means of an incinerator or other garbage disposal device; or
(b) retained on board in covered, leakproof containers, until such time as it can lawfully be disposed of.

No substance shall be discharged or disposed of onto a lock or tie-up wall by any means, including overboard discharge pipes.

Vessels not fitted in accordance with Seaway Regulations will not be accepted for transit until the fittings have been modified as necessary and approved by a Seaway Officer.

POLLUTION:

1. No vessel shall
   (a) emit sparks or excessive smoke; or
   (b) blow boiler tubes.
2. No vessel shall discharge into Seaway waters any substances not in conformity with applicable United States Federal Regulations and Canadian Regulations with the exception of the waters of the Welland Canal where two specific zones are established in which no substances shall be discharged, namely:
   (a) from Lock 7 to Mile 17; and
   (b) from Lock 8 to the outer Port Colborne piers.
3. A record shall be kept of each location within the Seaway or adjacent waters where bilge water has been discharged.
4. Except as authorised by the Authority or the Corporation, no vessel shall discharge garbage, ashes, ordure, litter or other materials.

IDENTIFICATION CARDS: In the first U.S. port, the Immigration Officer requires an alphabetical Crew List made up on Form 1-418 and visaed by the American Consul in the last overseas port. This Crew List should contain the name of every crew member on board. Also needed are 3 copies of this Crew List on the same form. The Immigration Officer will require all Seamen's Books and Passports, to issue the completed Crew Landing Permits made out on Form 1-95A. The Master will be given a Crew List receipt which will indicate the names of crew members detained on board, if any. In case a crew member is detained on board he cannot go ashore, and at irregular times an Officer of the Immigration Service will check if the crew member is on board. A fine of $1,000 will be imposed on the vessel for each detained crew member who is not on board.

REGULATIONS: Detailed requirements are contained in the Seaway Handbook (obtainable from the St. Lawrence Seaway Authority, Constitution Square, 360 Albert Street, Ottawa, Ontario K1R 7X7), or in the Seaway Notices. An updated edition of the Handbook must be retained on board the vessel.

NOTES

Please also advise Shipping Guides Ltd.

Additional information regarding Seaway equipment, regulations or transit requirements can be obtained from the St. Lawrence Seaway Authority by contacting J. M. Kroon, Vice-President, Corporate Services, 202 Pitt Street, Cornwall, Ontario, K6J 3P7. Tel: (613)932 5170. Telex: 05-811517. Fax: (613)932-5037.

SHIPMASTER'S REPORT: September 1990 (Updated 1994).
Route: St. Lawrence Seaway. Great Lakes: Ontario, Erie, Huron and Michigan.
Port Visited: Burns Harbour, Indiana.
St. Lawrence Seaway and Great Lakes: Ballast Control Guidelines: Before entering Cabot Straits, ECAREG asked for details concerning location and depth of water where any ballast was taken on. Any ballast taken from depths of less than 2,000 m. should be exchanged. This was no comfort to us, as we had 1,800 tonnes of ballast on board for stability reasons. Following an exchange of telexes with ECAREG and Montreal Agents, common sense prevailed. The Canadian Coast Guard confirmed, it was not necessary to exchange ballast, if in any way deballasting affects ship stability. Subsequently we deballasted in Burns Harbour before lifting a steel cargo without further concern.

Ballast Water Exchange regulations became mandatory under U.S.Law on 10th May 1993, and are strictly enforced by the U.S. Coast Guard. If possible, it is recommended to carry out Ballast Exchange twice on tanks containing low salinity ballast water to ensure the minimum 30 parts per thousand salinity of all ballast water retained on board.

Seaway Inspection: This took place at anchor off Montreal and lasted for 2.5 hours, while the 3 Inspectors completed (a) Ship Inspection Report, (b) Radio Inspection Certificate and (c) Food Inspection. Item (a) is mainly concerned with compliance with the particular equipment requirements for the Seaway, such as rigging of seaway wires, landing booms, stern anchor, anchor marker buoys and air drafts. The Inspector was particularly helpful and tolerant, which was welcome, as only one officer had transited before. Item (b), compliance with the Canadian Radio Telephone Regulations. Item (c), the Food Inspection brought its own problems for this ship, with only one freezer room in use, concerning the sealing up of meats. Even our U.K. meat was found to originate from the Argentine, and had to be sealed with the pork and poultry from Spain. We still had 6 days to go before taking any local stores in Burns Harbour was possible, so had to make some grill doors for the shelving for a locker space within the meat room.

Ballast adjusted to meet the max. draft requirement of 26 ft. even keel before departure from the anchorage and approved by the Inspector.

Seaway Transit: The Seaway max. draft of 26 ft. is rigidly enforced. Even lying alongside the dock brings its own problems, when a large Laker passes in the narrow canal, causing the vessel to surge on her moorings (large Lakers use fresh water sprinklers on deck from the cold lake waters, to avoid an increase in drafts due to hogging in the Summer). An upright ship is equally important in the high sided locks. Port side Man Overboard Signal and bracket torn off when the port bridge wing nearly made contact with lock wall. The steel chafing bars, as fitted to the sides of this ship, were invaluable to prevent further damage and so thoroughly recommended for any vessel using the Seaway.

Shiphandling in Locks and Seaway: Tugs are not used in the Seaway to transit the 7 locks or Welland Canal for the other 8 locks to clear the Niagara Falls. Pilots normally "slide the wall", a term for placing the bow on the approach wall for positive control before entering a lock. The alternative of making a lock "on the fly" is sometimes used in fine weather, but more risky and applicable to this vessel, when our port shoulder landed heavily with consequent damage, making the last of 30 locks. The loss of paintwork, when "sliding the wall" on the timber fendering, is therefore much preferred. Quartermaster's steering on the downward run was in marked contrast to that on the way up, after they had learnt to use bold wheel movements in keeping with the slow speeds. Mooring in the locks varies from port to starboard, using the 4 ship's wires secured to winch barrels. Particular care should be taken when slacking away wires quickly, when dropping down in the locks, to avoid breaking. A further precaution is not to try to hold the stern against the "cut" of the screw, when coming astern for a starboard side landing. Better to let the Pilot control the swing, or else risk breaking the stern wire as we did.

Approximate Distances and Time Scale:

	Distance miles	Time allowed hours
Escoumins Pilot to Quebec.	122	12
Quebec to Montreal, with Pilot change halfway at Three Rivers.	138	12 plus 3 for inspection
Montreal through 7 Seaways locks and Thousand Islands, "Narrows" to Cape Vincent Pilot change.	160	24
Lake Ontario.	138	12
Welland Canal (8 locks to by-pass Niagara Falls).	28	12
Lake Erie to Detroit Bridge Pilot change.	213	22
Detroit Bridge to Lake Huron.	63	6
Lake Huron to Mackinac Bridge.	215	20
Lake Michigan to Burns Harbour (S.E. Chicago).	314	24
Total	1,253	6 days 3 hours.

The above times erred on the slow side to avoid engine problems caused by slowing down too quickly. In particular, the open water passages from Escoumins Pilot to Montreal and across the smaller Lakes (Ontario and Erie), were made at manoeuvring full speed instead of the more usual Sea Speed on both occasions, up and down. Engine ran on gas oil for the Seaway and Welland Canal locks passages only with our controllable pitch propeller.

AUTHORITY: The St. Lawrence Seaway Authority (See Above).

St. Lucia

CASTRIES (including Vieux Fort): 14.01 N. 61.00 W.

(See Plan)

PORT LIMITS: From Lat. 14° 01′ 24″ N., Long. 61° 00′ 05″ W. thence in the direction of 301°T for 1 mile, thence in the direction of 211°T for 1.2 miles, thence in the direction of 121°T for 0.88 miles to La Toc Point at Lat. 14° 30′ 00″ N., Long. 61° 00′ 46″ W. thence along foreshore at the average HW mark from La Toc Point around La Toc Bay to Tapion Point, thence along to the Castries River mouth and thence to the opposite bank including all marine works, wharves and property vested in the Crown. All around the bay to Seraphin Point, thence all around the bay to Veille Ville Point, thence to St. Victor Point and thence all around the shore to Vigie Point and then to Lat. 14° 01′ 24″ N., Long. 61° 00′ 05″ W.

DOCUMENTS:

Report of Ship's Stores. Form 1.
Crew Members' Stores List. Form 2.
List of Unmanifested Cargo. Form 3.
Report of Ship's Manifest. Form 4. (4 copies).
Passenger Lists. (5 copies).
Steamship Company Release. (1 copy).
Crew List. (5 copies).
Clearance from Last Port of Call.
Outbound Cargo.
Loading List.
Customs Report Outwards (Form A7)
Vessel Manifest (Contents of Ship). Form 16. (3 copies).
Entry Outwards and Certificate of Rummage. Forms 9 and 10.
Loading Licence. Form 14.
Clearance. Form 17. Form 18 (Steamship).

Where possible, Cargo Manifests and Stowage Plans should be forwarded by Airmail, ahead of the vessel to the local Agents.

PILOTAGE: Pilotage is compulsory for all craft except for ships of less than 100 g.r.t., Her Majesty's ships, pleasure yachts and fishing vessels.

Notice of ETA and request for a Pilot must be made to the Harbour Master not less than 24 hours before ETA. Cable address: "Paslu". Telex: 6355 Paslu LC. Confirmation of ETA is required 2 hours before arriving at the Boarding Station. Channel 16 VHF is continuously watched and ETA may be confirmed or adjusted on this frequency. Pilot boats (2) are: (1) A "Cheverton" built, 8.2 m. LOA, fibreglass hard top, with a "V" hull, single inboard 4236 Perkins diesel engine, complete with navigation and pilot lights. Painted black all around with letter "P" painted in white on both sides of bow. Name of pilot launch "Charles" painted in white at the stern. (2) A "Cheverton" built 8.73 m. LOA aluminium hard top pilot house aft. Single inboard 6.3544 Perkins diesel engine. Complete with navigation and pilot lights. Painted black all round with the words "Pilots" painted white on both sides of the pilot house. Name of second pilot boat is "Esperance" painted in white on stern.

The usual International Signals may be employed by vessels requiring a Pilot. The usual pilot boarding point 0.5 miles off Vigie Point. Ships that are 3 hours away are requested to call Vigie Lighthouse on S.S.B. 2182, VHF Channel 16, informing of ETA, draft and length.

Pilot boat stands by on Channel 16 VHF. Pilot station stands by on Channels 14 and 16 VHF.

Pilot boards vessels on the starboard side and for ships outward leaves on the port side.

In the event of bad weather ships will be advised accordingly.

Vessels awaiting Pilot may anchor between 1 and 2 miles N.W. of Vigie Point in 22 m. of water. Rock and sand bottom, very good holding ground, no shelter.

ANCHORAGES/APPROACHES: Deep and sheltered anchorage exists off Castries Harbour entrance. The approach channel is 91.44 m. wide with minimum depth of 14.75 m. to the port proper, which lies within an all protected harbour. The turning basin is 457.20 m. in diameter at a depth of 14.0 m.

Masters familiar with the Port of Castries may be invited to proceed to the Northern Anchorage/Quarantine Area not less than 3 cables off the Vigie promontory.

Care must be taken to drop anchor clear of the entrance range which is for in-going ships, 121°T on the Castries leading lights.

Also see "Pilotage".

RESTRICTIONS: Petroleum tankers are not moved during the hours of darkness except in emergency conditions.

MAX. SIZE: Ships up to 213 m. LOA and 9.1 m. draft can be accepted. No restriction on beam.

Also see "Tankers".

HEALTH: Pratique is usually granted by the Pilot or Boarding Officer and Immigration Department alongside on behalf of the Ministry of Health. In the event of any suspected disease or fever on board, the vessel is not allowed within 91.4 m. of the wharves until Pratique has been granted by the Medical Officer.

RADIO/VHF: Port Control on VHF Channels 16, 6, 12 and 14. Also 2182, 2146, 2381, 2527, 2582 and 2638 kHz.

TUGS: Tug "Chale", 1,400 h.p., available to assist in berthing if required. Towage compulsory for vessels over 400 ft.

BERTHING: There are six berths numbered 1 to 6 inclusive.

Berth Nos. 1 to 3 are general cargo berths and have a total length of 356.6 m. The draft varies from 5.5 m. at Berth No. 1 to 8.5 m. at Berth No. 3. Berth Nos. 4 and 5 are of recent construction and consist of a reinforced concrete platform supported on concreted piles.

Berth No. 4 is a container berth equipped with a heavy lift mobile crane for handling 20 ft. and 40 ft. ISO containers. It has a length of 152.4 m. (depth 9.75 m.) and storage capacity for approximately 3,500 containers.

Berth No. 5 is a break bulk cargo berth as well as Ro/Ro facilities with a ramp 14.6 m. wide. It has a length of 159 m. and a depth of 9.75 m. below LW.

A transit shed with an area of 6,882 sq.m. with cold storage facilities of 2,265.60 cu.m. for reefer cargo.

Berth No. 6 is a reinforced concrete deck supported on steel cased piles. The berth is 137 m. long and can accommodate vessels of 9 m. draft. It is a general purpose berth and handles banana traffic.

Within the port area there is a total shedded storage capacity of 17,205 sq.m. with a total upland of 15 – 17 acres.

Dock water density 45.7 gm./cu.m. with prevailing winds from a N.W'ly direction.

Pointe Seraphine: Information relating to the recently opened cruise ship berths at Pointe Seraphine:

Berths No. 1 and 2 are located at Pointe Seraphine, Castries Harbour and are dolphin type berthing facilities.

1. Each pier consists of:
   (a) Two reinforced concrete breasting dolphins.
   (b) Reinforced concrete walkways 8 ft. wide supported on steel "H" and spun concrete piles linking the berth to the shore.
2. Height of pier above M.S.L. = 7 ft. 0 in.
3. Overall length of pier = 174 ft. 2 in.
4. Bollards – there is one "T" head bollard on each breasting dolphin, and 4 single pillar bollards on the shoreline. Average distance apart is 145 ft.
5. Fendering – primary fendering consists of one "W" shaped rubber fender fixed to each dolphin.
   Two "D" shaped 12 in.×12 in. cover fenders fitted to the outer corners of each dolphin provide secondary protection.
6. Construction – each dolphin is 15 ft. 7.5 in. square reinforced mooring concrete structure supported by 14 in. diameter spun concrete piles. The landing stage of the berthing facility is 160 ft. long × 8 ft. wide.
   The landing stage is a reinforced concrete structure supported by steel "H" piles.
   The approach to the landing stage is 63 ft. long× 8 ft. wide and is of similar construction.
7. Average depth alongside Berth No. 1 35 ft.
   Berth No. 2 32 ft.

Vieux Fort: Depth of 8 fathoms at the entrance and 5 fathoms within the Port. 2 berths, 535 ft. long, 32 ft. – 35 ft. deep. Also see "Shipmaster's Report".

BRIDGES: There are no bridges or other restrictions to prevent access to the port by vessels of not more than 9 m. draft.

STEVEDORES: The normal working hours are from 0700 – 1600 hrs. Mondays to Fridays. Special arrangements are required outside of the above hours and for Saturdays, Sundays and Statutory Holidays. The hiring or calling of labour are as follows:

Monday to Fridays for work commencing from 0700 – 1100 hrs. request to reach Union before 1500 hrs. previous day.
1100 – 1600 hrs. before 0900 hrs. on the same day.
After 1600 hrs. before 1400 hrs. on the same day.

For vessels working on weekends request to reach Union by 1530 hrs. on Fridays.

Average rate on break bulk general is 15 t.p.h. per gang.

MEDICAL: Full hospital facilities available without prior notice.

FRESH WATER: Good quality potable water available in unlimited quantities at 20 t.p.h. per connection ex-quay.

FUEL: Limited quantity for yachts and small vessels only. Refuelling jetty at La Toc Bay owned by Texaco.

TANKERS: Tanker and Liquefied Gas Terminals – available at Coconut Bay through floating pipelines.

Also see "Shipmaster's Reports" and "Cul de Sac Bay".

CONSULS: *Embassies/High Commisions:* British High Commission, Venezuela, Organisation of American States, Germany and France. *Consuls:* Denmark and Netherlands.

REPAIRS: No facilities for large vessels. Routine maintenance or minor repairs are carried out. There is no foundry in the port.

DRY DOCKS: None available.

SURVEYORS: Lloyd's Agents are available and represent other Classification Societies and Surveyors. Others can be obtained from outside at short notice.

GANGWAY/DECK WATCHMEN: Gangway and gate watchmen can be supplied at Union award rates. Hold watchmen are required during discharge/loading operations. Shed watchmen are not necessary.

OPENING/CLOSING HATCHES: Ship's crew shall be required to raise and lower and position beams to the required height, opening and closing of MacGregor and pontoon hatches. Wooden hatches are normally handled by stevedores while alongside.

CUSTOMS ALLOWANCES:

1. Wine or spirits not exceeding one quart in all, and
2. Tobacco, not exceeding half a pound, or
3. Cigars not exceeding 50 in number, or
4. Cigarettes, not exceeding 200 in number, or
5. Goods to the aggregate of E.C.$50.00 belonging to a passenger, which accompany that passenger and when acquired abroad by him for his personal or household use or as souvenirs or gifts and admitted as such by the Comptroller of Customs.

CARGO GEAR: Discharge of general cargo is usually by ship's gear. Containers, if vessels are not self contained, may be handled by P&H crane 9125TC – 140 ton lorry mounted crane owned and operated by the Ports Authority. Manitowoc 230W crawler crane rigged for 41 ton lift also available (Tropical Lines).

REPATRIATION: Scheduled aircraft connect with all the English speaking islands of the Lesser Antilles several times daily from Vigie Airport which is 2 km. distant from Port Castries. Direct overseas flights arrive and leave from Hewanorra International Airport, Vieux-Fort at least once a week for the United Kingdom, New York, Miami and Caracas, Venezuela.

TIME: Local time is GMT minus 4 hours. Summertime is not used. All ETAs and other messages should be made in local time.

TELEPHONES: This service is available aboard ships at all berths by prior arrangement through the Agents. Standard rates apply.

HOLIDAYS: New Year's Day, New Year's Holiday, Independence Day (22nd February), Carnival Monday, Good Friday, Easter Day, Easter Holiday, May Day (Labour Day) (1st May), Whit Monday, Corpus Christi, Emancipation Day (1st Monday in August), Thanksgiving Day (1st Monday in October), St.Lucia Day (13th December), Christmas Day, Boxing Day.

The port is closed for work on Christmas Day, Good Friday and May Day (Labour Day).

POLICE/AMBULANCE/FIRE: All emergency services are available through Port Police Station on Jeremie Street, within walking distance from the port.

Emergencies can be reported to Vigie Lighthouse on Channel 16 at any time. Emergency Police dial 999; emergency Ambulance dial 999; emergency Fire dial 999.

EMERGENCY CO-ORDINATION CENTRE: The Headquarters of the Central Emergency Organisation is the Prime Minister's Office, Government Buildings, Castries, St. Lucia. Tel: 3203 and 3016. Telex: 6394 Foraff LC.

BANKS: Bank of Nova Scotia, P.O.Box 301, William Peter Boulevard, Castries, St. Lucia. Tel: 22292/95. Telex: 6385 Scobank L.C.

Barclays Bank plc., Bridge Street, Castries, St. Lucia. Tel: 23306/23300. Telex: 6348 Bacladom L.C.

Canadian Imperial Bank of Commerce, P.O.Box 350, William Peter Boulevard, Castries, St. Lucia. Tel: 23751/23753/23739. Telex: 6352 Canbank L.C.

Royal Bank of Canada, William Peter Boulevard, Castries, St. Lucia. Tel: 22245. Telex: 6309 Royalbk L.C.

St. Lucia Cooperative Bank, 21 Bridge Street, Castries, St. Lucia. Tel: 22881/22882. Telex: 6308 Coopnk.

National Commercial Bank of St. Lucia Ltd., P.O. Box 1031, Bridge Street, Castries, St. Lucia. Tel: 23562/22103. Telex: 6300 Natbank L.C. Cable: NATBANK.

SHORE LEAVE: When Immigration and Customs requirements have been satisfied there is no restriction on crew shore leave so long as they rejoin the vessel before departure. They should carry some sort of identification card or shore passes for security purposes especially for non-English speaking persons.

GARBAGE DISPOSAL: Skips are provided alongside the vessel. This service is undertaken by Castries City Council. Tel: 809-45-22121/31153. The rate charged is EC$500/skip. Prior arrangements have to be made for delivery and collection.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Eastern Caribbean Dollar (EC$).

DELAYS: There are no delays for want of a berth. Berthing delays are very infrequent and no labour shortages.

REGULATIONS: Castries is within the Northern zone of tropical storms. The hurricane season usually extends from May to October each year and the port may be more or less affected at any time during that period. When a storm is expected to pass over the island, ships may be placed on short notice for sea in such circumstances and required to maintain themselves in seagoing condition at all times.

SHIPMASTER'S REPORT: 1979 (Updated 1986).

Pilotage: Compulsory. Pilot boards 0.75 miles West of Vigie Light, ladder usually on the port side.

Restrictions: Vessel is able to enter and leave at any stage of the tide, day or night.

Max. Size: Max. draft 10 m.

VHF: Pilot on Channel 16.

Berthing: No. 6 Berth, West Wharf: Distance from entrance to berth 1 mile. Max. LOA (Approx.) 550 ft. Max. draft 10 m. There is mechanical equipment available to handle palletised cargoes, adequate storage space for breakbulk cargoes and palletised cargoes. The loading rate for bananas is 15 t.p.h. per gang with ship's derrick and the labour was satisfactory. Accommodation ladder required.

Services: Fresh water, fresh provisions, repair facilities, machine shop, Airport, laundry services, bunker fuel oil, diesel oil, lubricating oils, doctor, hospital, groceries and meats.

SHIPMASTER'S REPORT: Vieux Fort. 1979 (Updated 1986).

Pilotage: No ship exceeding 100 n.r.t. must enter without a Pilot. Pilot boards 0.5 miles S.W. of Mathurin Point (there is a strong N.W. current off Mathurin).

Restrictions: Vessel may enter and leave at any stage of the tide, day or night.

Max. Size: Max. LOA 520 ft.

Tugs: Tugs are not available and are not necessary for docking and undocking.

VHF: Available.

Berthing: One berth only available. Distance from entrance to berth 0.5 miles. Nature of bottom at the berth is mud. All banana loading is carried out by the side doors. Vessels berth port side to the quay. A very high rate of loading is attained (100 t.p.h.). A limited amount of mechanised equipment for handling palletised cargoes is available and also limited storage space for palletised and breakbulk cargoes. No equipment for handling containers is available. Accommodation ladder required.

Services Available: Only fresh water, airport and doctor available (i.e. no fuel or provisions available).

SHIPMASTER'S REPORT: Coconut Point. October 1989.

Charts: B.A. Charts No. 197, 499 and 1273.

Documents:

2 copies Crew Manifest.
2 copies Stores List.
6 copies Crew List.
1 copy Unmanifested Cargo.
6 copies Cargo Manifest.

Pilotage: Daylight pilotage only. They are busy 0600 hrs. – 0800 hrs. with cruise ships. Pilot boards due North of Tapion Rock Lighthouse.

Anchorage: North of Vigie Pt. in 15 fathoms, with Vigie Point 158° × 0.7 miles. We first anchored to await daylight with Vigie Point 104° × 0.3 miles, just North of the leading line. We were told to move to the North by the Signal Station. No appreciable set.

Radio/Signal Station: Vieux Fort on the South Coast will transmit information to Castries Signal Station. Both stations operate 24 hours. Call sign "Vieux Fort" or "Castries Lighthouse".

Signal Station on VHF Channels 12 and 14.

Tugs: One tug available.

Berthing: Ship's hose used. Coconut Point serves both Texaco and Shell depots. The usual ship rate is 300 bbls./hr. Maximum length of vessel 100 m., maximum draft 12 m.

Vessels berth stern to, with 2 shackles on port anchor and 2 stern lines to a buoy.

General: Pointe Seraphine: Berths No. 1 and 2 – New complex for cruise liners. Berth No. 6 for Geest banana ships. Other berths for general cargo. Vigie Airfield only used for local flights. International Airport in the Southern part of the island.

It is possible to telephone overseas from the Texaco office (via Cable and Wireless operator), payment to be made to the Texaco Manager.

Port Authorities trying to get Shell and Texaco to move to Cul de Sac Bay, just South of Castries, so that Coconut Point can be developed as a cruise terminal.

SHIPMASTER'S REPORT: Vieux Fort. December 1989 (Updated 1992).

Charts: B.A. Charts No. 499 and 1273.

Documents:

2 copies Crew Manifest.
2 copies Bond Stores List.
1 copy Health Declaration.
2 copies Inward Declaration.
6 copies Crew List.
2 copies Unmanifested Cargo.

Officials: Officials board on all occasions.

Pilotage: Pilotage is compulsory for all vessels over 100 g.r.t. Permanent Pilot based at Vieux Fort and is available 24 hours a day. Order Pilot at least 6 hours' in advance through Agent or Oil Company (Shell).

Contact can be made through Vieux Fort Lighthouse or Castries Lighthouse. No night berthing at sea berth. Berthing from 0600 hrs. onwards at sea berth.

We engaged a Pilot who boarded from fast green dugout fishing craft, about 0.25 miles West of Promontory. On next visit, I will undertake anchoring and mooring.

Approaches: Port conspicuous with Moule A Chique Promontory.

Beware of shoals off George Point.

Found counter current down West coast of St. Lucia (South-going).

Anchorage: About 3.5 cables off jetty, it is fairly well sheltered.

Berthing: It is best to use the port anchor. It is dropped when South mooring buoy and tank marked 'Shell' are in transit, after which vessel backs up between mooring buoys. Put hose buoys just on port quarter.

About 4 shackles on port anchor is normal. The depth alongside for the whole ship's length is 10.0 m.

There is no swell but wind is very gusty, shifting between North and East off the hills, which did not help berthing.

It is best to double lines to both buoys which have hooks. Boat used for Pilot acts as mooring/hose boat. On this visit it was a green hulled boat, previously blue hulled.

Cargo: Only ambient LPG handled at sea berth. Oils handled on South side of jetty.

The undersea 6 in. hose to buoys was lifted by the aft crane on port quarter, clear of water. Ship's hose coupled up to sea hose valve with the aid of a mooring boat, after which it is hung off by crane over port quarter. Standard 4 in. connection used.

Shore capacity 100 tonnes. Rate about 30 t.p.h.
Often large ship/shore differences.
Shipment received every 2 weeks.
No night discharge between 1800 hrs. and 0600 hrs.
Vessel can stay on buoys if pumping suspended overnight.
Shell operated on VHF Channel 9, we landed own Motorola.
Shell like a 50/50 mix.

General: Vessels cannot berth at the Banana Jetty between Tuesday night and Wednesday as banana ships have priority.

The berth is near to St. Lucia International Airport.

Agent: Available. The Shell Manager acts as Agent, and also acts for customs when they do not board.

If vessel advises Shell 24 hours in advance, they will obtain stores for the vessel. Apples, meat and frozen food available. Heineken beer was E.C.$ 22.00/case. Friday is a good day for the market.

Vessel called again 2 weeks later and made the following observations.

The call sign for Vieux Fort Lighthouse is "Moule A Chique Lighthouse".

We anchored and awaited daylight with Mathurin Pt. Lighthouse bearing 162° × 0.3 miles.

We called Mathurin Lighthouse, who advised us that a boat was ready but no pilot available. We berthed at 0645 hrs. without a Pilot.

We berthed with Battery Point ahead (bearing 060°), and then swung hard to starboard with the Banana Pier bearing 120° and the South mooring buoy in transit with the 'Shell' tank. We dropped the port anchor and then backed up to the stern mooring buoys, one on each quarter, until the hose buoy (first orange buoy) was under the crane. On completion of mooring operation we had 6 shackles of cable out on the port anchor.

For stores this time we requested 6 cases of apples, grapes and 25 cases of Heineken but only received the beer due to a failed delivery from Castries.

As provisions did not arrive we made a last minute visit to a local wholesaler (Inter Island Supply), who are on the road to the airport, about 0.5 miles from the Shell Terminal. We obtained 6 cases of apples at U.S.$38.00/case and grapes at U.S.$50.00/pallet. We also obtained additional cases of beer at U.S.$8.68 per case.

AUTHORITY: Saint Lucia Air & Sea Ports Authority, P.O.Box 651, Castries, St. Lucia, West Indies. *Tel:* (809) 45-22893/4. *FAX:* (809) 45-22062. *Telex:* 6355 Paslu LC. *Contact:* Gregory St.Helen, General Manager.

CUL DE SAC BAY: 13.59 N. 61.02 W. (See Plan)

LOCATION: The facilities of Hess Oil St. Lucia Limited (HOSLL) are located in Cul de Sac Bay (Lat. 13° 59′ N., Long. 61° 02′ W.) on the West coast of the island of St. Lucia, West Indies. Ready access for all vessels coming in from the Atlantic is provided by the St. Lucia Channel which lies between St. Lucia and Martinique. This channel is 17 miles wide and has general depths of 914 m. (500 fathoms).

PORT LIMITS: For tendering purposes a vessel will be considered as having taken arrival when it reaches the Pilot Station 2.5 miles due West of Bananes Point. A vessel's "Notice of Readiness" will not be accepted until the vessel has initially reached this point and notified HOSLL by VHF.

DOCUMENTS: The following documents are required for entry and clearance and are to be presented to the respective officers on boarding:

General Declaration for Ships.
Cargo Declaration.
List of Unmanifested Cargo.
Crew List.
Crew Members' Stores List.
List of Packages or Parcels Intended for discharge by Crew Members.

Normally it is necessary to have Customs entry completed before cargo operations can commence.

Customs clearance is accomplished by the vessel's Agent, cargo documents are placed onboard by the Terminal Department.

APPROACHES: *Harbour Entrance:* Cul de de Sac Bay is entered from the open sea between Bananes Point about 1 mile North of Marigot Point, and Ciceron Point about 0.75 miles farther Northeast of Bananes Point. Harbour entrance is 3,000 ft. wide.

Navigation Aids: The approach into Grand Cul de Sac Bay is marked by a range on a true heading of 131.1°. The front range showing fixed green, visible 7 miles, is on a 90 ft. cylindrical tower, alternate black and yellow bands, 168 ft. above sea level, in position Lat. 13° 59.02′ N., Long. 61° 01.03′ W.

The rear range light 1,910 ft. from the front range, in position Lat. 13° 58.82′ N., Long. 61° 00.83′ W., showing fixed green, visible 7 miles, is on a 25 ft. cylindrical tower, alternate black and yellow bands, with red and white vertically striped, 4 ft. × 16 ft. daymark, is 202 ft. above sea level.

Both front and rear range lights have a 6° arc of visibility, 3° on each side of the range line.

Ciceron Point, on the North side of the harbour, is marked by a flashing green light on a 25 ft. cylindrical tower, 40 ft. above sea level, with a 7 ft. × 7 ft. square daymark.

Ciceron Point rear range is located 1,130 ft. × 105.3° from Ciceron Pt. Light. The rear range is fixed green on a 45 ft. black and yellow banded square daymark. Arc of visibility 3° each side of range line.

The South side of the harbour is marked by Bananes Pt.Light, showing flashing red on a 15 ft. tower, 85 ft. above sea level, with a 7 ft. × 7 ft. × 7 ft. triangular red daymark.

A safe water buoy has been established in the Northwest sector of the harbour, showing a flashing white light, vertically striped red and white, radar reflector. This buoy marks the Southwest projection of a shoal area. South of this buoy are depths of at least 90 ft.

PILOTAGE: Service is available 24 hours a day and is compulsory for all vessels entering or leaving Cul de Sac Harbour. A HOSLL Pilot will assist the Master of any vessels docking or undocking at the Hess facilities, however, the Master of each vessel retains full responsibility for his ship at all times.

Vessels must remain at the pilot station 2.5 miles due West of Bananes Point until boarded by the HOSLL Pilot who will be placed aboard by a company tug.

The HOSLL Marine and Terminal Office is equipped with a VHF radiotelephone having the following channels:

Initial Contact: Channel 16.
Working: Channel 9.

Ships must call the HOSLL marine office on VHF at least 3 hours before arrival at the pilot station and advise of any change in their ETA.

Pilot Ladders: If the following regulations are not complied with, HOSLL Pilots may refuse to embark or disembark thus delaying the vessel.

(i) The Officer responsible for the embarkation and disembarkation of the Pilot is to be a Deck Officer.
(ii) The pilot ladder is to be properly secured and adequately lit at night.
(iii) The Pilot should be able to pass safely and conveniently from the head of the ladder onto the ship's deck. Where portable stanchions and bulwark ladders are used for this purpose, the portable stanchions must be rigidly secured to the ship's structure to prevent being unshipped and supported at not less than two points to prevent lateral movement. The bulwark ladder should also be independently attached and firmly secured. The stanchions should be of reasonable height and adequately capped to allow a firm grip.
(iv) The ladder is to be in good condition and its treads are to remain horizontal. The treads are to have a rough upper surface.
(v) The length of the ladder should not exceed 30 ft. Whenever the distance from sea level to a point of access on the ship is more than 30 ft. access from the pilot ladder to the ship must be by means of an accommodation ladder or other equally safe and convenient means.
(vi) The ladder is to be rigged so that each step rests firmly against the ship's side. Spreaders are to be provided not more than 10 ft. apart to prevent the ladder twisting.
(vii) A manrope or a safety line is to be secured at the vessel's rail and lowered over the side adjacent to and for the full length of the pilot ladder. A lifebuoy with self-igniting light is to be readily available.
(viii) The ladder is to be rigged well clear of any overboard discharges and at a place where the best lee can be provided to the boat carrying the Pilot.
(ix) Whenever a mechanical pilot hoist is used, a standard pilot ladder shall be at hand, ready for immediate lowering in the event of a hoist malfunction.

ANCHORAGES: No anchoring is permitted in Cul de Sac Bay without specific permission from the HOSLL Marine Manager.

RESTRICTIONS: Only vessels inbound or outbound from Cul de Sac Bay may use or be present in the Cul de Sac approach area. No vessel shall enter Cul de Sac Bay except for the purpose of using the facilities located therein and then only in compliance with the directions of the HOSLL Marine Manager.

Ballast Drafts:

Vessel d.w.t.	*Forward*	*Aft*
Under 20,000	12 ft.	18 ft.
20,000 to 35,000	14 ft.	20 ft.
35,000 to 50,000	15 ft.	21 ft.
50,000 to 85,000	18 ft.	24 ft.
85,000 to 150,000	21 ft.	28 ft.
150,000 to 200,000	32 ft.	36 ft.

These are minimum draft guidelines. Vessels over 270,000 d.w.t. must have not less than 3 ft. of water over the ship's propeller and not more than 10 ft. of trim by the stern.

These guidelines will be adjusted as weather and vessel handling characteristics dictate. Advice concerning any variance will be provided to the vessel by the Pilot in ample time to prevent any unnecessary delays to vessel's ballasting.

MAX. SIZE:

Dock No. 2 (VLCC Berth):

Length – 1,300 ft. LOA.
Beam – No restrictions.
Draft – 82 ft.
DWT – 400,000 long tons.

Larger vessels can be accommodated, however, each such move must be discussed on an individual basis prior to entry.

Dry Cargo Dock:

Length – 650 ft. LOA.
Beam – No restrictions.
Draft – 37 ft. 6 in.
DWT – 50,000 long tons.

HEALTH: Pratique is required and will be granted by the Customs/Immigration or Health Official boarding the vessel.

All vessels arriving from a foreign port will be boarded by Customs and Immigration Officers. VESSEL PERSONNEL ARE NOT ALLOWED ASHORE UNTIL PERMISSION IS GRANTED FROM THESE OFFICERS.

Quarantine is required only if vessel is coming from a plague infected area or if illness of a suspicious nature or there is a death (from any cause) onboard. The Master is obligated to report to the HOSLL Marine Office any of the above circumstances well in advance of the vessel's arrival at the pilot station in order that the Health Officials may be notified – failing which the vessel may be delayed.

RADIO: Masters must advise both HOSLL – St. Lucia and their Agents by radio 72, 48 and 24 hours in advance of their ETA giving the vessel's name, date and hour of arrival (local time) and the name of their past port of call otherwise delays to the vessel may result.

VHF: VHF radio frequencies:

1. Calling only	–	Channel 16
2. Hess Oil	–	Channel 1
3. Pilotage	–	Channel 9 and 65
4. Agency	–	Channel 9

Harbour tugs and the HOSLL Marine Dispatchers monitor VHF frequencies 24 hours a day. VHF call sign: Hess St. Lucia.

TUGS: Tug assistance in the harbour, docking and undocking is mandatory and is provided by diesel tugs, stationed in the port to provide this service. Additional tugs are available when required.

When tugs are alongside or assisting a vessel, all cargo tank openings must be closed, unless the cargo tanks are gas-free.

BERTHING:

Dock No. 2 (VLCC Berth): Vessels using this berth will be turned in Cul de Sac Bay and docked port side to.

This dock is equipped with 4×16 in. Chicksan arms for handling crude oil and 1×16 in. Chicksan for dirty ballast.

Dry Cargo Dock: Vessels using this berth will dock port side to.

This dock is equipped with:

1×6 in. hose for Jet Fuel.
1×6 in. hose for Gasoline.
1×6 in. hose for Distillates.
1×4 in. hose for Spraytex.
1×4 in. hose for Avgas.
1×3 in. hose for LPG.

Also see "Max. Size".

Moorings: A line handling vessel and personnel will be provided for mooring.

Vessels shall at all times remain adequately secured alongside the berth by the use of ropes or wires which are in good condition and properly sized for the load they are likely to incur. Mooring lines shall be regularly tended and kept taut.

The use of automatic tensioning winches to hold mooring lines is forbidden.

Immediately on docking, emergency towing wires of sufficient length to reach the water's edge, with eyes on the outboard ends, must be paid out from the offshore bow and the after quarter. The inboard ends must be made fast to the vessel's bitts.

Wires shall be in good condition, of adequate strength and adjusted as necessary throughout loading/discharging operations to keep the eyes at or above the waterline at all times.

Rat Guards: Rat guards are required only if a vessel is coming from a plague infected area.

Gangway: HOSLL will provide a gangway.

NOTICE OF READINESS: Notice of Readiness to load or discharge is a warranty that the vessel is in all respects ready to load or discharge, and that all of the vessel's equipment (including, but not limited to tanks, pumps, valves and pipelines) is ready and fit to load or discharge petroleum and/or petrochemical products. HOSLL reserves the right to refuse acceptance of such Notice of Readiness unless the vessel is in all respects ready to load or discharge.

A vessel will not be deemed ready to load or discharge and pumping will not commence until the Senior Deck Officer shall have executed and delivered to HOSLL the "Declaration of Inspection Prior to Bulk Cargo Transfer".

LOADING/DISCHARGING: Loading or discharging must not start until the Master or Chief Officer has:

(a) Signed a certificate acknowledging receipt of HOSLL's Terminal Regulations.

(b) Displayed in prominent positions on board "No Smoking", "No Naked Light", "No Visitors" notices.

(c) Jointly executed a HOSLL "Declaration of Inspection" with the Terminal Representative certifying that all necessary valves ashore and aboard are properly set; that the agreed loading/discharging signals are understood, and that all other matters relating to safe cargo transfer operations are being carried out.

Bonding Cable: A ground wire from the dock grounding system shall be connected to all vessels or barges loading/discharging petroleum before any hose connections are made. This cable is not to be disconnected until after all hoses or Chicksan arms have been disconnected and blanked off properly.

Connecting and Disconnecting Hoses: A crew will be provided by the terminal to connect and disconnect hoses and Chicksan arms on the vessel. Vessels should have blinds removed from the cargo lines, reducers installed and drip pans in place on arrival at the dock. The HOSLL Dispatcher will advise on arrival the size and number of hoses or arms to be connected. Also see "Berthing".

Communications: HOSLL will supply a VHF radio to the vessel for emergency communication between the vessel and the dock watch during loading/discharging operations.

Cargo Handling Signals: All vessels loading or discharging petroleum cargoes shall fly a red (bunker) flag between the hours of sunrise and sunset and during the night show a red light visible from all parts of the horizon at a distance of not less than 1 mile.

Weather Conditions: The loading and discharge of all crude petroleum and its products will be stopped during any severe electrical storm.

Loading of low-flash products will be stopped during periods of calm when the heavy vapours cannot be dispersed readily enough to prevent hazards from accumulating gas pockets. Vessel's Officers are cautioned to be on their guard during such conditions.

In the event of abnormal weather conditions in the area such as a hurricane, vessels will be notified that additional moorings are required. If the situation so demands, Masters may be instructed to suspend all operations and proceed to sea until normal weather conditions again prevail.

Demurrage: Vessels are required to vacate berths promptly upon completion of cargo handling operation (loading or discharging operations as the case may be). Permission to lay alongside at any time the vessel is not engaged in cargo handling operations must be granted in writing by the Marine Superintendent.

If any vessel fails to vacate its berth upon completion of cargo handling operations and expiration of free laytime for dock usage as outlined below, the vessel will be responsible as follows:

(a) To pay dock demurrage at the rate as specified by HOSLL per hour or a *pro rata* share thereof for a fraction of an hour.

(b) To hold HOSLL harmless for any demurrage and damages incurred as a result of other vessels awaiting berth or for any other consequences of its failure to properly vacate the berth.

The following rules shall govern the determination of demurrage:

(a) One hour free laytime will be allowed after completion of cargo loading operations. This free time will start at the time cargo hoses are disconnected from the vessel's manifold on completion of loading or discharge of cargo. Vessels awaiting cargo papers and/or Customs Clearance must vacate the berth within 1 hour of such completion and move outside to wait for their papers.

(b) Four hours' free laytime will be allowed for ballasting after discharge operations.

(c) Ballasting times for VLCCs will be handled on an individual basis for each vessel.

Overloading: Masters are advised that the international laws regarding overloading are strictly enforced and they should be guided accordingly.

Vessels shall not arrive or sail overloaded. All expenses incurred in discharging or lightering overloaded cargo will be for the vessel's account. Vessels departing to zones requiring lighter draft may sail with the draft permitted in that zone plus an allowance for fuel and water consumption to the zone limit.

Sea Suctions: Pumproom sea suctions and discharge valves are to be sealed on arrival. Seals are not to be broken while the vessel is in the harbour area. If it becomes necessary to break a seal, permission must be received first from the HOSLL dock representative who will check and record the seal numbers.

MEDICAL: Limited emergency medical attention is available from the public hospital at any hour of the day or night. The vessel's Agency Representative should be contacted by the Master with any requests for crew medical attention.

For routine medical treatment, a Doctor will board the vessel when requested through the vessel's Agency. Dental treatment is available weekdays.

All crew members requiring medical attention should be available upon vessel's arrival.

BALLAST: St. Lucia laws prohibit the pumping of dirty ballast overboard while a vessel is within their coastal waters. All dirty ballast must be pumped to the facilities available ashore. However, if a vessel is especially equipped with clean segregated systems which are reserved for ballast use only, it is permissible to pump overboard at the dock after the ballast tanks have been inspected and approved by a Marine Department Representative.

In pumping dirty ballast ashore, the ballast is received through a 36 in. shoreline at a maximum discharge pressure to the shore installation of 120 p.s.i.

Also see "Restrictions".

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: Limited supplies of marine hardware are available on the island.

There are no facilities for major repairs closer than Puerto Rico or Curacao.

SURVEYORS: Representatives of the American Bureau of Shipping, Lloyd's Register and other maritime classification societies are available from Puerto Rico and Curacao on 72 hours' notice. The vessel's Agent will assist Masters in soliciting their services.

Representatives of SGS (Societe General de Surveillance S.A.) will be available for cargo quantity and quality inspection as required. Other outside inspectors can be arranged upon adequate notice.

TIME: St. Lucia uses Atlantic Standard Time which is 4 hours slow of GMT all year round.

SHORE LEAVE: Under normal circumstances, no restrictions are imposed by the Immigration authorities on shore leave. Masters are requested to have all crew members on board at least 1 hour prior to departure time to avoid delay "waiting crew members".

HOSLL will provide the Master of each vessel with gate passes for the crew upon arrival.

Crew members are not permitted to walk through the terminal. HOSLL will supply transportation between the docks and the main gate at regular intervals. Crew members must make their own arrangements for transportation outside the main gate.

GARBAGE DISPOSAL: Service not available.

WASTE OIL DISPOSAL: Service not available.

SEAMAN'S CLUBS: None.

CURRENCY: Eastern Caribbean Dollar. U.S.$ 1.00 = EC$ 2.60-2.70.

GENERAL:

Winds: The trade winds normally blow from an Easterly direction ranging from N.N.E. to S.S.E. Night winds are generally lighter than the daytime winds. About daybreak the wind speed begins to pick up, reaching maximum strength in the late morning or early afternoon. A return to the lighter night-time winds begins during the late afternoon, usually around 1600 hrs.

In past years, hurricanes have occasionally passed close to and over the Island. Hurricane season runs normally from June through October of each year peaking in late August and September. For details see U.S. DMA Hydrographic Center – Sailing directions for the Caribbean Sea – Pub. 144.

Tides and Current: The tides are diurnal and small, the mean range being about 0.5 ft. and the diurnal range less than a foot.

Normally there is a current of 1 knot to 2.5 knots moving along the West coast of the Island in a Northerly direction.

Charts: Island of St. Lucia, U.S. DMA Hydrographic Center Chart No. 25521.

Anchorage in St. Lucia Island, U.S. DMA Hydrographic Center Chart No. 25528, and Harbours in St.Lucia Island – B.A. No. 449.

Flags: Vessels entering Cul de Sac Bay during daylight shall fly their national flag and continue to do so during daylight hours when moored. All vessels of foreign registry shall fly the St. Lucian flag when in the harbour.

Visitors: No visitors are permitted in the dock area. Only persons on official vessel's business are permitted on the docks.

Mail: Official and personal mail will be delivered onboard by the vessel's Agent upon vessel's entry.

Mail received for vessels while in port will be delivered onboard prior to sailing. Outgoing mail is accepted from Master provided it is accompanied by a mail transmittal slip or support disbursements.

Laundry: Limited vessel's laundry facilities are available.

Liquor: The transportation of alcoholic beverages inside HOSLL's property is strictly prohibited; consequently, no liquor or beer may be brought or removed from vessels. The only exception to the foregoing is the delivery of bonded stores ordered by Masters for their vessels.

Swimming: Swimming in the dock area is strictly prohibited as sharks and barracuda frequent the harbour.

AUTHORITY: Hess Oil St. Lucia Ltd. (HOSLL), P.O.Box 811, Castries, St.Lucia. *Tel:* (809) 452-3105 and 452-3904. *Telex:* 341-6346 A/B 6346 Hess Stl LC. *Cable:* Hess Oil St.Lucia. *FAX:* (809) 452-5688. *Contact:* General Manager.

St. Pierre and Miquelon

SAINT-PIERRE: 46.47 N. 56.10 W. (See Plan)

DOCUMENTS: Formalities completed on arrival. Advise Port Service beforehand of vessel's ETA, length, tonnage and draft 12 hours before arrival.

Declaration of Health.
Derat Certificate.
2 Crew Lists.
2 Passenger Lists.
2 Cargo Manifests of any cargo to be discharged.
2 Crew Declarations (tobacco, liquor, souvenirs).
Certificate of Registry.

APPROACHES: *North East Passage:* Max. draft 8.5 m. Vessels approach on a heading of 209° T.

South East Passage: Used by vessels not exceeding 25 m. LOA and 5.0 m. draft.

24 hours' notice required if using this entrance.

PILOTAGE: Contact Pilot 1 hour before arrival calling TXU by radio telephone on 2182 kHz or VHF Channel 16. Permanent watch kept. Pilot boats equipped with VHF Channel 12, radar, and radio-telephone. Pilot launch available at entrance to N.E. channel in position Lat. 46° 48.3′ N., Long. 56° 07.7′ W., in the vicinity of the Land Fall Buoy.

Pilot launch named *Radar,* length 45 ft. The hull is black and superstructure white with "Pilote" painted on each side. Pilot launch carries the International Signals for pilot launch day and night.

When the weather is bad contact Pilot on Channel 12 for instructions.

Pilot is compulsory for vessel of 100 g.r.t. and over.

Pilot Tel. 41.20.68 (office), 41.24.87 (residence).

ANCHORAGES: In the roads, depth 13 m., not secure in strong East winds.

Shipmaster's Report: The anchorage in the roads where fish is loaded ex-trawlers is not secure, even with moderate winds from any direction, and engines should be on stand-by continuously. Several ships have gone on the rocks in a matter of minutes.

MAX. SIZE: New Quay: Max. LOA 200 m. Max draft 10 m. Also see "Berthing".

HEALTH: If suspected disease on board contact Saint-Pierre Health Service. Tel: 41.21.11. (office), 41.21.17 (residence).

Masters of vessels arriving at Saint-Pierre may obtain Free Pratique via TXU. Message to be sent to Harbour Master Saint-Pierre at least 12 hours before arrival.

In the message the Master has to specify name of vessel, total number of crew members, where ship coming from, and if everybody on board healthy; in these conditions flag "Q" is not necessary on arrival, but if any suspected disease or fever on board, advise Health Authority as well as Agent, and stand by instructions for berthing. Flag "Q" has to be flown on arrival in the roads.

RADIO: Saint-Pierre Radio, call sign TXU, receiving on 2182 kHz. transmitting on 2410 kHz.

Masters of vessels arriving are requested to send their ETA to Harbour Master Saint-Pierre at least 12 hours before arrival and corrected by a further message if necessary. The ETA should be given in GMT. Also advise maximum draft and length.

VHF: Saint-Pierre Radio is equipped with VHF Channels 16 and 25 and maintains permanent watch on Channel 16. Port Captain on Channels 12, 10, 9 and 16. Keeps watch on Channel 12.

TUGS: 1×500 h.p.

BERTHING: Mole du Commerce: Length 170 m., depth alongside 8.50 m. 2 sheds (total area 2,700 sq.m.), water and bunkers.

Quai de Peche: Length 134 m., depth alongside 5.2 m. to 9 m. Roll-on/Roll-off terminal, one ramp, max. capacity 50 tons, 6,000 sq.m. open storage.

Mole Frigorifique: 3 berths; No. 1: 120 m. length, 7 m. depth over length of 92 m. No. 2: 85 m. length, 6 m. depth. No. 3: 123 m. length, 5.5 m. depth. Cold store of 15,000 cu.m. at −30°C. Open storage area of 15,000 sq.m. Water and bunkers available at all berths.

Quai de la Douane: South Side: Length 72 m. Depth 6.0 m. Water, electricity and telephone available. West Side: Length 49 m. Depth 6.0 m. Customs office located at this berth. East Side: Length 75 m. Depth 5.0 m.

Quai de l'Alysse: Length 50 m., depth 5.6 m. – 6.0 m. Water and electricity available. Berth used by fishery research vessels.

Quai du Frigorifique: New quay of length 56.4 m. with 2 mooring dolphins 100 m. to the East and West. Depth alongside 12.0 m. The berth can accept vessel of 200 m. LOA with draft of 10.0 m. Water and bunkers available.

Pilot will inform Master of berthing prospects and any special requirements.

STEVEDORES: ETA notices are to be sent to Agent 24 hours prior arrival. Stevedore in Saint-Pierre is Paturel Freres (Tel: 41.32.95 and 41.32.96). Cable Address "Reltupa Saint-Pierre". Telex: Reltupa 20 QN.

Approximately 60 men are available for working on board vessels when loading/discharging or transhipping in the port. Crew are allowed to work only when no gangs are available.

One normal shift 0730 to 1600 hrs. every week-day, Saturday 0730 to 1200 hrs. Day overtime, every day 1600 hrs. to 1900 hrs. Saturday 1200 to 1600 hrs.

Work done with ship's derricks.

It is requested that a net be put under gangway before starting work.

EQUIPMENT:

1 mobile crane, 10 tons at 18 m.
3 forklifts, 2 tons capacity.
2 forklifts, 7 tons at 3.5 m.
2 forklifts, 3 tons at 3.5 m.
1 tractor for 40 ton containers.
1×30 ton MAFI container trailer.

MEDICAL: All facilities available.

TANKERS: 1 berth (New Quay) alongside dolphins in depth of 12 m.

FRESH WATER: Available at berths. Supplied by hoses, rate 25 cu.m.p.h.

FUEL: Only diesel oil SG 825/840 at 15°C available at all berths.

CONSULS: Local representatives for Canada, Netherlands, Norway, Portugal and Spain.

REPAIRS: Small repairs can be effected. Floating dock, capacity 550 tons, for vessels up to 13 ft. 6 in. draft.

SURVEYORS: Bureau Veritas, Tel. 41.28.72.

OPENING/CLOSING HATCHES: Normally carried out by crew.

REPATRIATION: Can be arranged.

AIRPORT: Connections from Saint-Pierre to Halifax (Nova Scotia) International Airport.

TIME: GMT minus 3 hours all the year round.

AMBULANCE: Tel: 41.21.11 and 41.21.13 (switchboard).

TELEPHONES: Possible to place telephones on board at certain berths. It is possible to contact the shore on Channel 16 via Saint-Pierre Radio.

SERVICES: Compass adjusting, radar repairs, radio, Decca, Loran and gyro-compass repairs and maintenance possible.

BANKS:

Banque des Iles. Tel: (508) 41.22.17. Fax: (508) 41.25.31.
Credit St.Pierrais. Tel: (508) 41.22.49. Fax: (508) 41.25.96.

IDENTIFICATION CARDS: Each man to carry Passport or Seamen's Book.

GARBAGE DISPOSAL: Compulsory, daily collection of garbage carried out by a private company. Tel: (508) 41.41.17.

WASTE OIL DISPOSAL: Service effected by Speg-Oil. Tel: (508) 41.26.84, 41.21.98, 41.41.80. Fax: (508) 41.24.09.

SEAMEN'S CLUBS: No seamen's club, but following are available: Post office, sailing club, cultural centre, skating rink, football pitches, dance hall, bus and minibus.

Contact: Regional Tourism Agency. Tel: (508) 41.23.84.

CURRENCY: French Franc.

AUTHORITY: Direction du Port, Direction de l'Equipement, 6 Place Lieutenant Colonel Pigeaud, B.P. 4217, Saint-Pierre, 97500 Saint-Pierre et Miquelon. *Tel:* 41.32.01, 41.32.02. *Telex:* DDE SPM 914439 Qn. *Contact:* Jean Urtizberea, Port Captain. Tel. 41.24.10 (Office). 41.28.31 (Residence).

PILOTAGE: Agent to be notified of request for Pilot 24 hours prior to ETA. Boarding by Pilot at harbour entrance about 2 miles from anchorage. By day pilot boat flies pilot flag, by night shows signal-lights. Ship to fly "Request for Pilot" – flag by day and signal-lights by night. Also two long and one short blast (Morse Code "G").

ANCHORAGES: Well protected anchorages. Large vessels lie to in basin 90 ft. – 100 ft. depth. Average sized vessels berth at pier in 27 ft. – 40 ft. depth.

RESTRICTIONS: None.

HEALTH: Port Health Officer boards vessel at anchorage. Requires Bill of Health or Master's Declaration, and a copy of Passenger List. Vaccination Certificates are no longer required. Passenger and Crew Muster no longer required. No one allowed to embark or disembark before Pratique granted and Immigration Officials have boarded vessel.

RADIO: Cables should be routed through Cable and Wireless (West Indies) Ltd. Tel: 71901. Telegrams and Telex: 93. Signal Station maintains watch on SSB 2182 kHz throughout 24 hours.

VHF: The Fort Charlotte Signal Station should be contacted on VHF Channel 16 by vessels approaching, entering, manoeuvring in and departing from the Port.

RADAR: None.

TUGS: None.

BERTHING: One berth 900 ft. long. Max. draft approx. 30 ft. (salt water). Loading/discharging by ship's gear. Break-bulk (palletised) cargo handled. 10 ft., 20 ft. and 40 ft. containers handled on a limited scale (max. gross weight 10 tons).

CRANES: 35 tonne mobile crane available.

BULK CARGO FACILITIES: None at Kingstown.

Campden Park Bay, 2 miles North along the West coast – flour mill complex for receiving grain (bulk) and shipping flour. Max. draft 36 ft. One berth 300 ft. Loading gear – conveyor belt, height adjustable. Discharging into receiving hopper 25 ft. high. Loading: Max. 1,200 bags flour/feed per hour. Average rate 750 bags/hour. Discharge rate: Max. 60 t.p.h. per vacuator, average 40 t.p.h. Two vacuators normally used.

SPECIALISED CARGO HANDLING FACILITIES: No specialised berths for containers or Ro/Ro traffic.

Arnos Vale, a bay situated about 2 to 2.5 miles S.E. of Kingstown, features a buoy with a 4 in. floating line for LPG. Draft 14 ft.

BRIDGES: None.

STEVEDORES: 24 hours' notice of ETA required. Advise type of cargo, number of hatches to be worked, this required for arranging gangs of stevedores and longshoremen. Average discharge rate 3 – 5 tons per gang/hour.

MEDICAL: Advance notice to Agent of medical requirement is helpful. Hospital facilities available.

TANKERS: No facilities at Kingstown.

Arnos Vale (See "Specialised Cargo Handling Facilities") has available 3 buoys. Draft 24 ft., 17 ft. 6 in. and 14 ft. Serviced by floating and submarine line 6 in. and 4 in. Fuels available: White Products – Gasoline 93 R Octane, Kerosene Oil, Light Diesel Oil, Aviation Fuel; Black Products – R.C. 2 and Colas. Rate of discharge: White Products: 500 bbls./hr. Black Products: 300 bbls./hr.

Also see "Shipmaster's Report" dated February 1990.

DENSITY: Average 1025 oz/cu.ft.

FRESH WATER: Available. $5.00 (E.C.) per 100 gallons (I.G.). Delivery ex-pier by 3 in. line reduced by 1.5 in. nozzle – 2,500 gall./hr.

FUEL: Grades available. See "Tankers". 2 or 3 hours' notice during normal working hours required. Delivery ex Land-Tanker. Convenient to smaller craft only.

FIRE PRECAUTIONS: Usual precautions.

CONSULS: Consulate of the Netherlands (Mr. K. Boyer, P.O.Box 354. Tel: 84222, 72677).

French Consular Agent (Mr. Clifford Frank, P.O.Box 364. Tel: 61615).

Deputy British High Commissioner (Mr. M. D'ath, P.O.Box 132. Tel: 71701).

Embassy of the Republic of Venezuela. (Sr. Escobar C. Hernani, P.O.Box 852. Tel: 61374).

REPAIRS: Minor facilities only, e.g. minor mechanical repairs and simple welding, etc.

DRY DOCKS: There is a small mechanised dry docking cradle (privately owned) for small to medium sized yachts at Union Island, an island of the Grenadines chain 40 miles South of St. Vincent.

New dry dock at Super Yacht Base can accept vessels up to 65 m. length, 12.0 m. beam, 4.3 m. draft and 1,000 tons displacement. Tel: (809) 45-72178. Fax: (809) 45-61302.

SURVEYORS: Lloyd's Insurance (London). London representative: Messrs. Hazells Ltd., Kingstown. Tel: 61201. Telex: Hazells 7512.

GANGWAY/DECK WATCHMEN: Watchmen recommended. Rates fixed per day.

CARGO GEAR: Loading/discharging effected by ship's gear.

REPATRIATION: Facilities for crew changes and repatriation available.

AIRPORT: Arnos Vale Airport 2 miles from Port. Scheduled flights.

TIME: GMT minus 4 hours. No alterations to clock during the year.

HOLIDAYS: New Year's Day, (1st January); St. Vincent and Grenadines Day, (22nd January); Good Friday; Easter Monday; Whitsun Monday; Labour Day, (1st May); Caricom Day, (1st Monday in July); Carnival Day, (1st Tuesday in July); August Monday, (1st Monday in August); Independence Day, (27th October); Christmas Day, (25th December); Boxing Day, (26th December).

BANKS: Caribbean Banking Corporation, Middle Street, Kingstown, P.O.Box 118. Tel: 61501, 61502, 61503. Telex: 7513.

The Canadian Imperial Bank of Commerce, Halifax Street, Kingstown, P.O.Box 212. Tel: 71587. Telex: 7532 VQ.

Barclays Bank International Ltd., Halifax Street, Kingstown, P.O.Box 604. Tel: 61706. Telex: 7520.

The Bank of Nova Scotia, Corner White Chapel and Halifax Street, P.O.Box 237. Tel: 71601. Telex: 7546 VQ.

National Commercial Bank.

St. Vincent Agricultural and Loan Bank.

St. Vincent Co-operative Bank.

STORING: See "Prelims".

1. Vessels stored by truck.
2. No barges available.
3. Trucks allowed alongside.
4. Fork lift trucks can be used on jetty to handle stores.
5. Customs regulations regarding storing allows stores to be exported duty-free under Customs supervision, and sometimes Customs seals while in port.
6. Local Riggers available for assisting with storing.

POLICE/FIRE/AMBULANCE: Police Headquarters/Fire Department, Tel: 71211. Emergency: 99. General Hospital, Tel: 61185.

EMERGENCY CO-ORDINATION CENTRE: The Royal St. Vincent Police Station, Kingstown. Tel: 71211. Emergency: 99.

TELEPHONE: Two telephones available, $25.00 per day per phone.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Seaman's Book adequate.

GARBAGE DISPOSAL: Collection service is available. Skips are provided alongside ship. Contact Waste Masters, Kingstown, St.Vincent. Tel: (809) 457-1657. Fax: (809) 457-2768.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: No seaman's clubs. There is an International Telephone Service at Cable & Wireless, Kingstown. Church services held Saturday/Sunday. Minibuses run up to 10 pm daily.

CURRENCY: East Caribbean Dollar (EC$).

REGULATIONS: No unusual regulations.

DELAYS: Normal delays in berthing etc., as a result of limited docking area.

GENERAL: *Charts:* BA. 501 and BA. 791.

DEVELOPMENTS: Deep Water Berth to be extended by 300 ft. – 400 ft. to the North and by 150 ft. to the South. No schedule available at present.

SHIPMASTER'S REPORT: January 1979 (Updated 1994).

Pilotage: Compulsory for vessels over 180 n.r.t. Pilot boards 0.5 miles South of Fort Charlotte Light. A heavy swell may be experienced and vessel is always rolling.

Restrictions: Vessel may enter and leave at any stage of the tide, however, berthing is not recommended during hours of darkness. Unberthing may be carried out at any time.

Max. Size: LOA 550 ft. Max. draft approximately 30 ft.

Radio: Fort Charlotte on VHF Channel 16 and SSB 2182 kHz.

Berthing: One berth only available, vessels always dock port side to. Wharf is concrete with hard rubber fenders. There are storage facilities for breakbulk cargoes and palletised cargoes, there is also mechanised equipment for handling bananas. Container stowage in the container park. Two toplifters for handling 20 ft. and 40 ft. containers, max. weight 30 tons. Loading rate for bananas 15 t.p.h. per gang using ship's derricks. Vessel's accommodation ladder required.

Facilities Available: Fresh water, fresh provisions, airport, laundry services, doctor, hospital, groceries, fish and meats.

SHIPMASTER'S REPORT: February 1990.

Berth: Shell and Texaco Terminal at Greathead Bay (Arnos Vale).

Approach: For Shell and Texaco oil terminals in Greathead Bay, vessels are first required to clear Customs and Immigration at Kingstown.

From the North West, Kingstown is easily passed by being rather inconspicuous, a small city tucked away at the head of its own bay.

Best landmark is Fort Charlotte on the promontory to the West of the town.

From the East, the airfield runway is easily seen on the N.W. side of Greathead Bay.

Anchorage: Vessels either anchor for clearance in Kingstown Bay if Greathead Bay berth is occupied, or at night, or just lie in the bay for clearance.

The water is deep and the only shallow area is within 1 cable of the harbour wall.

We anchored with 4 shackles in water with Cane Garden Point bearing 160° at a distance of 0.65 miles.

Pilot: Pilotage inwards to Greathead Bay is compulsory (0600 hrs. to 1800 hrs.). Pilot is embarked from a black hulled launch in Kingstown Bay. Pilot not required outwards. Vessels may leave at any time.

Signal Station: Fort Charlotte on VHF Channels 16/11 throughout 24 hours. Port Office on VHF Channels 16/11 from 0800 hrs. – 1600 hrs.

Oil Moorings: Position Lat. 13° 08.2′ N., Long. 61° 13.2′ W., in the Eastern end of the bay tucked under the promontory.

Depth at moorings about 8.0 m. minimum.

Vessels finally moor less than ¹ cable from the cliffs.

The starboard anchor is let go abeam of cliff head (13° 08.08′ N., 61° 13.13′ W.), headland unnamed. Then one port breast line sent to buoy and 2 starboard stern lines sent to inshore buoy of two. Stern being pulled over to port quarter buoy so that buoy finishes up just forward of stern.

It is advisable to send port line first (use best available), then one stern line, gradually warping vessel into position.

There are 3 buoys, all painted white, the third buoy ends up on the starboard quarter and is generally not used.

Buoys only have eyes and require mooring shackles.

Vessel ends up with about 5 shackles in water, ship's head 190°.

Boatman has a dugout with outboard and also handles hoses.

Weather/Tides: Strong Easterly winds are prevalent which makes mooring difficult, particularly in heat of day.

Tides can be strong. The flood was observed running to East and ebb to West as at HW Kingstown. Flood is much stronger than ebb.

Due to prevailing wind, vessel does not, as a rule, set onto cliffs.

Best to moor at first light or at dusk.

Hose: At present the ship's floating hose of about 240 m. is run to Shell, slightly more to Texaco. Port side run off.

In June 1990, 3 submarine lines will be commissioned – 1×6 in. white oils, 1×6 in. RC250 (Bitumen) and 1×4 in. LPG. Pumping rate expected to be around 300 tonnes/hr.

Terminals: Shell centred in position Lat. 13° 08.28′ N., Long. 61° 13.05′ W. Texaco nearby to the West.

Shell tankage:

M 93	2,800 bbl.
ULG	2,800 bbl.
Av. Jet	3,400 bbl.
Av. Gas	1,000 bbl.
Gas Oil	6,000 bbl.
RC250	1,100 bbl.

No LPG tanks.

Texaco has similar tankage plus LPG facility.

Shell normally use VHF Channel 9, so if not available on ship's Motorola, ship has to land ship's set.

Water plugs between grades.

Agent: Shell agent not seen at Kingstown. Texaco use St.Vincent Motors.

Documents: Officials require 6 Crew Lists, 2 Crew Manifests, 2 Bonded Stores Lists, 2 Stores Lists and Health Declaration.

No problems were encountered and the bond was not sealed.

AUTHORITY: The St. Vincent Port Authority, P.O.Box 1237, Kingstown, St. Vincent, W.I. *Tel:* (809) 45-61830, 72719. *Telex:* 7500 Cwagency. *FAX:* (809) 45-62732. *Contact:* Harbour Master: Captain Brenan B. King, Tel: 61830, 61400. Port Manager: L. Kirby, Tel: 72719. Chairman: Kevin Gibson, Tel: 45-64487. Chester Charles, Administration Officer.

NOTES

Please also advise Shipping Guides Ltd.

Republic of Sao Tome and Principe

SAO TOME: 00.21 N. 06.44 E.

SHIPMASTER'S REPORT: May 1984.

DOCUMENTS:
6 copies Crew Lists.
6 copies Animal Lists.
6 copies Passenger Lists.
6 copies Arms & Ammunition Lists.
6 copies Ports of Call.
2 copies Personal Declaration.
2 copies Stores Declaration.
3 copies Cargo Manifests.

PILOTAGE: No service available.

ANCHORAGE: On the leading line shown on the chart, about 8 – 9 cables from the breakwater. By day or night the leading light structures are not easily recognisable. Vessels lie at anchor heading in a S.S.E.'ly direction and do not swing around to the tide. The ground, which is clearly visible when the sea is calm, is sand and holds well.

RADIO: Although Sao Tome has a listed radio station, it is not regularly attended and does not function properly. Masters are advised to send ETA messages via one of the major coast stations such as Cape Town. There is supposed to be a VHF station in port but this is also mostly unattended. There is telex connection to Europe.

BERTHING: *Cargo Handling:* If no other vessel in port, up to 200 tons per day in lighters of 40/60 tons each.

MEDICAL: There is a hospital and medical attention is available.

FRESH WATER: Not available.

AIRPORT: Sao Tome has regular flight connection with Luanda only. A once a month service to the Cape Verde Islands started in April 1984, on an experimental basis.

SHORE LEAVE: Crew members may go ashore but must return on board before 2000 hrs. They must carry their Passports with them.

GENERAL: *Provisions:* There is no ship chandling service. Some small amounts of fresh vegetables can be purchased.

Customs: The ship's bonded stores are not sealed by Customs.

Immigration: One policemen stays on board throughout the ship's stay in port.

Currency: The local currency is Dobras, about 33 Dobras = $1.00 (April 1984).

Mail: Because of the lack of direct flight connections, it is advisable not to send mail to or from Sao Tome.

SHIPMASTER'S REPORT: January 1989.

PILOTAGE: Not available.

ANCHORAGE: The anchorage is on the leading line shown on the chart, about 5 cables from the breakwater. The minimum depth of water is 10.0 m. and the holding ground is good. The vessel swings with the tide but generally heads in a South-Southeasterly or North-Northwesterly direction.

RADIO: Sao Tome Naval Radio Station is the local station, but is not regularly attended. None of the operators understands English. They will only reply if the vessel calls in the Portuguese language.

There is a manual telex connection with Europe, however ETA should be sent via a major coast station.

BERTHING: The length of the jetty is 200 m. and the maximum depth alongside at LW is said to be approximately 2.50 m.

CARGO HANDLING FACILITIES: Ocean-going vessels load and unload at anchor. There is a long Southeasterly swell and this makes operations dangerous. Vessel must have sufficient fenders for carrying out cargo operations.

The local stevedores are able to handle conventional derricks, but it is not recommended that they be allowed to handle sophisticated container cranes or other modern cargo handling gear.

There are approximately 10 lighters available for handling cargo of vessels at anchor and if only one vessel is discharging, a rate of up to 300 tonnes per day for breakbulk cargo can be achieved.

There are 4 lighters which are capable of carrying 1×20 ft. container at any one time and 1 lighter capable of carrying 1×40 ft. container.

The jetty is equipped with a fixed crane with 23 tonnes capacity and a mobile crane of 5 tonnes capacity.

There is only one lorry capable of carrying 40 ft. containers, therefore the discharge rate for 40 ft. containers is a maximum of 5×40 ft. containers per day. The discharge rate for 20 ft. containers is a maximum of 20×20 ft. containers per day.

As there is a lack of lorries to handle containers the harbour can become congested.

SHORE LEAVE: Crew members are allowed ashore, but must return aboard the vessel before 2300 hrs. Whilst on shore, crew must carry their Seaman's Books.

GENERAL: Sao Tome is a suitable place for conventional vessels, but is not recommended for pure container vessels, especially if they are not equipped with a powerful bow thruster, in order to work against the swell while unloading containers by own cranes.

NOTES

Saudi Arabia

GENERAL

NOTICE:

Saudi Arabia – Bahrain Causeway

The following Navigation Warning issued by the Saudi Seaports Authority – Riyadh is circulated to all concerned:

Date: 23.7.1407/25.11.1986

Subject: Navigation Warning "A" 172/25.11.1986

Saudi Arabia – Arabian Gulf – Saudi Arabia – Bahrain Causeway.

1. A causeway linking Saudi Arabia and Bahrain has been constructed and the following positions represent the centreline and general direction of the causeway:

A. Lat. 26° 13.17′ N., Long. 50° 13.27′ E.
B. Lat. 26° 13.20′ N., Long. 50° 13.87′ E.
C. Lat. 26° 13.15′ N., Long. 50° 14.38′ E.
D. Lat. 26° 12.83′ N., Long. 50° 15.63′ E.
E. Lat. 26° 12.70′ N., Long. 50° 16.00′ E.
F. Lat. 26° 11.33′ N., Long. 50° 18.82′ E.
G. Lat. 26° 11.02′ N., Long. 50° 19.55′ E.
H. Lat. 26° 10.92′ N., Long. 50° 20.17′ E.
I. Lat. 26° 10.83′ N., Long. 50° 22.20′ E.
J. Lat. 26° 10.17′ N., Long. 50° 24.07′ E.
K. Lat. 26° 10.05′ N., Long. 50° 25.25′ E.
L. Lat. 26° 10.28′ N., Long. 50° 27.00′ E.

2. Four Navigation Spans have been provided in the causeway, 1 main (Bridge No. 3) and 3 secondary (Bridge Nos. 1, 4 and 5).

(a) Main Navigation Span Bridge No. 3.
Centre of Span in position: Lat. 26° 12.10′ N., Long. 50° 17.23′ E.
Clearance Under Span: 28.5 m. at Admiralty Chart Datum.
Navigation Width of Span: 122 m.
Depth of Water Under Span: 7 m. at Admiralty Chart Datum.

(b) Secondary Navigation Span Bridge No. 1.
Centre of Span in position: Lat. 26° 13.18′ N., Long. 50° 13.58′ E.
Clearance Under Span: 15.5 m. at Admiralty Chart Datum.
Navigation Width of Span: 45 m.
Depth of Water Under Span: 5.5 m. at Admiralty Chart Datum.

(c) Secondary Navigation Span Bridge No. 4.
Centre of Span in position: Lat. 26° 10.87′ N., Long. 50° 21.10′ E.
Clearance Under Span: 15.5 m. at Admiralty Chart Datum.
Navigation Width of Span: 45 m.
Depth of Water Under Span: 5.5 m. at Admiralty Chart Datum.

(d) Secondary Navigation Span Bridge No. 5.
Centre of Span in position: Lat. 26° 10.12′ N., Long. 50° 25.75′ E.
Clearance Under Span: 15.5 m. at Admiralty Chart Datum.
Navigation Width of Span: 45 m.
Depth of Water Under Span: 4.5 m. at Admiralty Chart Datum.

3. (a) The North and South piles on the Eastern side of each navigation span are marked with red lights, while green lights mark the Western sides. These lights show over an arc of 40°, that is 20° either side of a line at right angles to the bridge span.

(b) Main Navigation Span Lights:
Characteristic: Occult 5 secs.
Height: 5 m.
Nominal Range: 5 miles.

(c) Secondary Navigation Span Lights:
Characteristic: Fixed.
Height: 7 m.
Nominal Range: 5 miles.

(d) The piles at either side of the navigable spans are also illuminated from above with floodlights.

4. Light beacons, Lateral System "A" with a height of 5 m., nominal range 5 miles and fitted with radar reflectors are to be inserted as follows:

Lat. 26° 12.87′ N., Long. 50° 17.50′ E.	Fl. Green 4 secs.
Lat. 26° 12.85′ N., Long. 50° 17.58′ E.	Fl. Red 4 secs.
Lat. 26° 12.48′ N., Long. 50° 17.35′ E.	Fl. Green 8 secs.
Lat. 26° 12.47′ N., Long. 50° 17.43′ E.	Fl. Red 8 secs.
Lat. 26° 11.73′ N., Long. 50° 17.03′ E.	Fl. Green 8 secs.
Lat. 26° 11.70′ N., Long. 50° 17.12′ E.	Fl. Red 8 secs.
Lat. 26° 11.35′ N., Long. 50° 16.88′ E.	Fl. Green 4 secs.
Lat. 26° 11.32′ N., Long. 50° 16.97′ E.	Fl. Red 4 secs.

5. All positions are referenced to the International Spheriod Datum Ain Al Abd (1970).

TRAVEL TO SAUDI ARABIA: *Crew Members' Wives' Passports:* We have been informed that the Director General of Passports, Riyadh, has notified Director of Passports (Eastern Province) Dammam, that wives of crew members arriving in Saudi Arabia and wishing to join their husbands on board vessels, are required to obtain, prior to arrival, valid Saudi Entry Visas from Royal Saudi Consulate in their countries.

The visa endorsed in passport must state the intention of joining the particular ship to obtain exit via seaport.

AUTHORITY: The Ports Authority of the Kingdom of Saudi Arabia formulates policy for and supervises the management and operation of the following ports:

	Lat.	*Long.*
East Coast:		
King Abdul Aziz Port, Dammam	26° 30′ N.	50° 12′ E.
King Fahd Industrial Port, Jubail	27° 04′ N.	49° 40′ E.
Jubail Commercial Port	27° 01′ N.	49° 40′ E.
Qatif	26° 34′ N.	50° 00′ E.
Darin	26° 32′ N.	50° 04′ E.
Al Khobar	26° 17′ N.	50° 13′ E.
Al Ugayr	25° 39′ N.	50° 13′ E.
Ras Tanura	26° 39′ N.	50° 10′ E.
Ras Al Khafji	28° 25′ N.	48° 32′ E.
Ras Al Ju'aymah	26° 56′ N.	50° 03′ E.
West Coast:		
Jeddah Islamic Port	21° 28′ N.	39° 10′ E.
Yanbu, King Fahd Industrial Port	23° 56′ N.	38° 15′ E.
Yanbu, Commercial Port	24° 05′ N.	38° 03′ E.
Gizan	16° 54′ N.	42° 32′ E.
Haql	29° 18′ N.	34° 57′ E.
Al-Khuraibah	28° 04′ N.	35° 10′ E.
Dhuba	27° 21′ N.	35° 42′ E.
Al Wajh	26° 14′ N.	36° 28′ E.
Umm Lajj	25° 01′ N.	37° 16′ E.
Rabigh	22° 45′ N.	39° 00′ E.
Al Laith	20° 09′ N.	40° 14′ E.
Al Qunfudah	19° 07′ N.	41° 04′ E.
Al Qahmah	18° 00′ N.	41° 40′ E.
Farasan	16° 43′ N.	42° 11′ E.

INERT GAS SYSTEM: Saudi Aramco has been informed that the Government of Saudi Arabia has ratified the Solas Convention of 1974 and its 1978 Protocol on May 29th, 1984. Therefore, Saudi Aramco is now obliged to enact the provisions of the said convention as soon as possible.

All Ship Owners/Operators to comply with the following:

1. Effective January 1st, 1985, all vessels of 70,000 d.w.t. and larger calling at any of Saudi Aramco's terminals to load crude/product cargoes must be equipped with an operable inert gas system in use.
2. Effective May 1st, 1985 all vessels of 20,000 d.w.t. and larger calling at any of Saudi Aramco's terminals to load crude/product cargoes must be equipped with an operable inert gas system in use.

Vessels not so equipped will not be accepted for loading as of the effective dates mentioned above.

The Solas Convention of 1974 represents a significant contribution to safety of tankers and oil installations and Saudi Aramco recommends that Ship Owners take immediate steps to comply with provisions of this convention as soon as possible and no later than the effective dates mentioned above. No exceptions will be allowed except in the most unusual circumstances.

Note: Saudi Aramco will follow the terms of the Solas Convention of 1974 and its 1978 Protocol *including* sections pertaining to exemptions. Any vessels exempted under this Convention will still, however, be required to comply with all Saudi Government Port Regulations as well as Saudi Aramco Safety Rules.

RULES/REGULATIONS: The Co-operation Council for the Arab States of the Gulf has issued a set of Rules and Regulations Valid for Saudi Arabian Seaports. These Rules and Regulations became effective on March 22nd, 1985.

EVERY VESSEL ARRIVING IN A PORT OF THE KINGDOM MUST HAVE A COPY OF THESE ON BOARD OR MUST OBTAIN ONE IMMEDIATELY ON FIRST ARRIVAL.

The Port Inspectors make periodical inspections and in the event of non-possession of the said Rule Book by a vessel, she may be penalised. If you already have one or after you get one, it is recommended that you read pages, 66-75, 163-172, 220-233 and 260.

Hereunder follows an EXTRACT from these Rules and Regulations:

General Regulations for Cargo Stowage and Handling:

1. The stowage of cargo bound for ports in the Kingdom of Saudi Arabia must be arranged to ensure simultaneous and optimum rate of discharge from the maximum number of hatches compatible with the requirements of seaworthiness.

2. Where practicable all general and bagged cargo of uniform type and size is to be stacked and secured on pallets to facilitate quick discharge when shipped to the Kingdom of Saudi Arabia in conventional vessels.

3. Exceptions to palletisation:

(a) Bagged cargoes may be pre-slung.

(b) Bagged cargoes arriving in full ship-loads may be discharged loose provided that such cargo is taken by direct delivery and a minimum discharge rate of 1,200 tons per 24 hours is guaranteed.

Bagged cargoes arriving in part ship-loads may be discharged loose provided that such cargoes are taken by direct delivery and a minimum discharge rate of 250 tons per hook per 24 hours is guaranteed.

(c) Foodstuffs, if palletisation would adversely affect the total distribution costs, but the stowage must be arranged to obtain optimum discharge rates.

(d) Cargo carried on schooners and small craft of less than 70 m. in length which are engaged in coastal trade within the Arabian Gulf, the Red Sea and to/from Somali ports.

The weight per bag shall not exceed 50 kg.

4. Tyres should be in bundles of appropriate size or pre-slung.

5. Bundled steel, profile iron, rebars, etc., shall be fitted with slings or lifting points suitable for multiple handling before commencement of handling this type of cargo, the ship's Master or Agent must present to the Port Management a Certificate precisely stating the safe loading capacity of the relevant slings and lifting points. Failing to comply with this requirement will subject the vessel to financial penalties in addition to legal liabilities to third parties.

6. Steel sheets shall be strapped and stacked in bundles of approximately 2 tonnes each. Wooden bearers and/or spacers shall be used in loading the bundles to facilitate discharge.

7. Pallets must be stowed in a ship's hold in a manner to facilitate discharge and make the best use of cargo handling equipment within the holds.

8. All cargo listed on the dangerous cargo list according to IMO Rules must be stowed and handled as prescribed.

9. Masters and shipping Agents are to instruct their stevedoring contractors at loading ports to execute complete separation in accordance with Bills of Lading and the Manifest, and will be held responsible for non-compliance with this regulation.

10. Comprehensive regulations govern the carriage of livestock by sea and their handling at ports in the Kingdom of Saudi Arabia, also the carriage and handling of bagged oil cake and scrap.

Unitisation of Timber:

11. Sawn timber, plywood and veneer is to be unitised. Timber cargoes shall be properly strapped to withstand multiple handling. Bundles shall be separated by skids or dunnage to facilitate lifting or handling by forklifts. Each bundle should weigh between 2 and 3 tonnes.

Bagged Cement, Lime, Gypsum and Similarly Packed Cargo:

12. Bagged cement in paper bags must be packed in 5-ply strengthened paper supported by an inner skin of polythene or similar waterproof material. If there is no synthetic layer, the bag must be made of extra-strengthened paper (minimum 6-ply), or of materials whose proven strength is at least equivalent to the above.

In the square of each workable hatch opening within the plumb of the ship's discharging gear, a block of bagged cement must be left in pre-slung form in flat straps capable of lifting the bagged cement in safe working loads without damaging the packaging. This block must have dimensions of at least 6 m. × 9 m. horizontally and these dimensions must be maintained down to the bottom layer.

(Additional regulations apply.)

13. The Master of any vessel carrying grain to a port, whether in bulk or in bags shall present an official certificate from the country of origin stating that the cargo was free from infestation and that it has been fumigated either before or after loading, in addition to a Certificate stating that the vessel was free from infestation prior to commencement of loading. Without these certificates the vessel will not be permitted to discharge and will be liable to the imposition of a fine.

14.The discharge of cargo for transhipment to another port, whether local or foreign is strictly forbidden without the prior permission of the competent authority.

The transfer of cargo from one vessel to another at anchorage or alongside berths within the port boundaries is strictly forbidden without the permission of the competent authority.

PORT REGULATIONS:

ARRIVAL:

1. Notification to the Port Management

1.1 The Owners of vessels bound for a port in the Kingdom of Saudi Arabia with cargo must give preliminary notice of the vessel's intended arrival to the Port Management of the discharge port or ports by telex or cable either directly or through the vessel's Agents on arrival at the first or sole loading port, before loading commences. Estimated time of arrival and estimated quantity of cargo by type must be given with the preliminary notice.

1.2 On completion of loading cargo for Saudi ports the following information must be sent to the Port Management of the discharge port or ports by telex or cable either directly or through the vessel's Agents:

(a) Vessel's name and former names, if any.
(b) Flag, port of registry and call sign.
(c) Length overall, g.r.t., n.r.t. and d.w.t.
(d) Expected draft on arrival.
(e) Expected time of arrival.
(f) Cargo particulars, including nature, weight, tonnage and stowage by hatches. Car carriers, Ro-Ro and container vessels to give both number and weight in tonnes of each type of unit.
(g) Any other cargo being carried for other destinations.
(h) If dangerous cargo is being carried, the quantity and class must be indicated in accordance with the IMDG Code and it must be stated whether this cargo is to be discharged or is in-transit.
(i) Number, position and S.W.L. of derricks and/or cranes, and particulars and positions of ramps.
(j) The number and nationalities of passengers to be disembarked or in transit.
(k) Expected requirements for bunkers and water.
(l) Name of vessel's Agent.
(m) Not less than 48 hours before the vessel's arrival a detailed List of Arms and Ammunition carried on board purely for self-defence. Failure to comply with this requirement will result in heavy fines and seizure of the arms by the concerned authorities.

1.3 A vessel bound for a port in the Kingdom of Saudi Arabia for loading or bunkering must notify the Port Management immediately orders have been received to proceed to Saudi Arabia giving the information as in 1.2 above but relevant for loading or bunkering

1.4 A further notice of ETA is to be sent 5 days, 2 days and 1 day prior to arrival at the port.

Also see "Advance Notice Requirements".

2. Vessels Failing to Give Required Notifications

2.1 Any vessel failing to comply with the requirements under section 1 above or arriving later than expected under the revised ETA, may lose its berthing registration and will be held responsible for all expenses incurred by the Port Management.

2.2 Exemption from the requirements listed under paragraph 1 above may be granted by the Port Management to vessels engaged in coastal trading or which have departed from a neighbouring country, depending on the availability of proper communication between the relevant ports, and the duration of the vessel's voyage.

3. Permission to Enter Port

3.1 The Master of a seagoing vessel must have prior permission of the Port Management to enter the port. Such permission may be subject to special restrictions or conditions if:

(a) The vessel arrives before or after the given ETA;
(b) The vessel is in danger of sinking;
(c) The vessel or the cargo is on fire or if there is the possibility of a fire, or if after a fire, it is uncertain whether it is completely extinguished;
(d) The vessel is a tanker;
(e) On account of the vessel's size or construction its movements or that of any other vessels or the port operations are endangered, hindered or impeded;
(f) On account of the condition of the cargo, the vessel is dangerous;
(g) The vessel arrives under tow;
(h) The vessel is over-loaded;
(i) The vessel has any person or animal on board suffering from an infectious or contagious disease, or if the presence of such infection, contagious or epidemic disease is suspected on board;
(j) The vessel is powered by nuclear energy, the arrival of such a vessel must be notified in accordance with the requirements as prescribed in section 1;
(k) If the vessel carries deck cargo which extends beyond her side.

4. Registration for Berthing

4.1 Vessels will be registered for berthing in accordance with the time given for arrival in the revised ETA. The Port Management reserves the right to refuse registration or to cancel the registration of any vessel already registered if required by port operations or for any infringement of these regulations by the vessel.

"Sambuks, schooners, yachts or any craft not registered in the port without radio transmitting equipment, shall stay first in "Small Craft Anchorage" for the visit of Authorities before proceeding inside the port."

5. Priority for Berthing

5.1 Allocation of berths shall be under the control of the Port Management who, in case of excess demand on facilities, shall have the power to use their discretion to give priority to:

(a) Vessels carrying passengers or pilgrims;
(b) Vessels carrying livestock;
(c) Vessels carrying essential or perishable foodstuffs;
(d) Vessels carrying refrigerated cargo;
(e) Any other vessel for special reasons.

6. Papers and Documents Required (see also special requirements for individual ports).

6.1 *Vessel's Papers and Documents*

6.1.1 On arrival at any port in the Kingdom of Saudi Arabia, the Master of each vessel shall present or make available for inspection the following papers and documents:

(a) Log Books;
(b) Registration Certificate;
(c) Classification Certificate;
(d) Load-line Certificate;
(e) Building Safety Certificate;
(f) Safety Equipment Certificate;
(g) Radio and Wireless Certificate;
(h) Cargo Gear Certificate;
(i) Marine Health Declaration;
(j) Vaccination List;
(k) Rat–Free Certificate;
(l) Clearance from the Last Port of Call;
(m) Israel Boycott Declaration;
(n) Ship's Stores List;
(o) Grain Shipping Certificate if the vessel is carrying a grain shipment;
(p) Mail Transport documents in accordance with the "International Postal Treaty" if any mail is carried aboard;
(q) 5 copies Crew List including name, nationality, date and place of birth, Passport number and rank;
(r) 5 copies of the Passenger List including name, nationality, date and place of birth, Passport number, port of embarkation, port of disembarkation;
(s) 2 copies of the List of Personal Effects of Crew and Passengers.

6.1.2 To obtain port clearance the Master of the vessel shall present or make available for inspection the following papers and documents to Port Management:

(a) Log Book;
(b) Registration Certificate;
(c) Classification Certificate;
(d) Load Line Certificate;
(e) Building Safety Certificate;
(f) Safety Equipment Certificate;
(g) Radio and Wireless Certificate;
(h) Port Stevedore Outturn Reports;
(i) Receipt for Payment of Custom's Duties;
(j) Shipping Note and Cargo Manifest for any cargo loaded.

6.2 *Cargo Papers and Documents*

6.2.1 The following papers and documents must be submitted to the Port Management not later than 48 hours prior to arrival (exemptions may be granted under certain circumstances at the discretion of the Port Management):

(a) 5 copies of the Cargo Manifests for Discharge, including any additions or amendments in English; 10 Copies of the original manifests accurately translated into Arabic;
(b) 2 copies of the Cargo Stowage Plan;
(c) 2 copies of the Hatch List or Bay Plan;
(d) 2 copies of the List of Dangerous/Hazardous Cargo for Discharge;
(e) 2 copies of the List of Dangerous/Hazardous Cargo in Transit;
(f) 2 copies of the List of Heavy and/or Awkward Cargo which requires special equipment;
(g) 2 copies of the List of any Wine, Spirits and Narcotics or Cargo of such nature on the vessel and its location or, in the absence of which, a nil return;
(h) A Declaration of type of reefer cargo;
(i) An Application for discharge permit;

6.2.2 *Specifications*

(a) All copies of the Manifests must be taken from the Master Manifest.
(b) The consignee column in all cargo manifests shall include the full name and address of the consignee. If for legal/commercial reasons a bank or financial institution appears as consignee in the Cargo Manifest, the name of the final consignee, if known, has to be shown beside the name of the bank.

(c) In case of transhipped cargo, the Cargo Manifest must show the name of the pre-carrying vessel, the port of transhipment and the bill of lading number for each consignment.

(d) The List of Dangerous/Hazardous Cargo must show:
  (i) The technical name;
  (ii) The IMDG Code class and UN number;
  (iii) The Quantity of each consignment;
  (iv) The location on board and bay number, if stowed in containers, or lash barges or on trailers.

6.2.3 *Exceptions*

(a) Vessels will be allowed to produce the aforementioned papers on arrival, provided the Port Management has received the following details by telex not less than 24 hours prior to arrival:
  (i) Name and flag of vessel;
  (ii) Port(s) of loading;
  (iii) Bill of Lading numbers;
  (iv) Marks and numbers as per Bills of Lading;
  (v) List of dangerous/hazardous cargo;
  (vi) List of heavy packages above 3 tonnes and/or awkward cargo lifts;
  (vii) Total number of Bills of Lading. LASH operators shall relate bills of lading to specific barge numbers;
  (viii) Statement of wine and spirit shipments for other ports showing where stowed or in the absence of which a nil return.

(b) A vessel carrying more than 200 Bills of Lading consignments for discharge in any one Saudi port is requested to submit cargo manifests not later than 72 hours prior to arrival.

7. Exempted Vessels

Exempted from the provision of Regulations 1, 2 and 4 are vessels entering in case of:
(a) Distress;
(b) Emergency refuge;
(c) Force majeure;
(d) Need of medical assistance.

8. Signals and Approach

8.1 Every vessel approaching the limits of a port must hoist the following flags:
(a) Ship's signal letters (in case of VHF failure);
(b) International code 'Q'-flag(s) in accordance with international health and safety regulations;
(c) International code 'B'-flag if the vessel is carrying dangerous goods or hazardous materials;
(d) The national flag of the country to which the vessel belongs.

9. The Flag of the Kingdom of Saudi Arabia

9.1 Every vessel entering a Saudi port must hoist the flag of the Kingdom of Saudi Arabia and keep it flying at all times throughout the stay in the port.

10. Pilotage

Pilotage is compulsory for all vessels entering or navigating within or leaving the pilot zones in the Kingdom of Saudi Arabia.

10.1 *Exempted Vessels*

The following vessels are exempted from the provisions of compulsory pilotage:
(a) Saudi Warships;
(b) Vessels of the government of the Kingdom of Saudi Arabia not designated for commercial use;
(c) Vessels under 150 net registered tons;
(d) Craft employed solely within port limits;
(e) Yachts and pleasure craft;
(f) Vessels operated by Port Management.

10.2 *Pilot Signals*

Every vessel subject to compulsory pilotage as above and which requires a Pilot shall:
(a) From sunrise to sunset hoist the international code flag "G";
(b) From sunset to sunrise give the letter "G"(– – ·) by a signal lamp;
(c) In the event of poor visibility caused by rain, fog or dust, sound the signal "G" (– – ·).

Vessels equipped with VHF should call the Port Control Signal Station on frequencies published by the port as soon as the vessel enters within VHF range.

Vessels having a Pilot on board must hoist the international code flag "H".

11. Valid Cargo Gear Certificate

11.1 All vessels must have a valid Cargo Gear Certificate issued by one of the following societies approved by the Ports Authority:
1. American Bureau of Shipping.
2. Bureau Veritas.
3. Det Norske Veritas.
4. Germanischer Lloyd.
5. Lloyd's Register of Shipping.
6. Nippon Kaiji Kyokai.
7. Polski Rejestr Statkow.
8. International Cargo Gear Bureau Inc.
9. Jugoslavenski Registar Brodova
10. China Corporation Register of Shipping

or any other competent authority recognised by the Government of the country in which the certificates are issued.

11.2 No rope, tackle, block, chain, hook or any other gear which is worn, damaged or otherwise unsuitable shall be used for the purpose of hoisting, lowering, heaving or otherwise handling of slung cargo or other articles. All cargo handling gear is to be tested and inspected according to Schedule B to these Regulations.

11.3 Vessels of more than 15 years of age at the start of a voyage as determined by the date of the first or sole Bill of Lading must carry out a cargo gear inspection of all cargo gear including deck machinery and the supply of power thereto, prior to loading for a Saudi Arabian port, and an appropriate inspection certificate should be issued.

This Certificate is valid for a period of 6 months. No general statements will be accepted. The Surveyor has to state that the inspection has been carried out on each part of the gear, deck machinery and its power supply, that he has observed each derrick, crane, winch, etc., in operation and each part has been found in good working order, and that all required current inspections as per Schedule B in this part have been fulfilled.

The Inspection Certificate must be provided by an approved Survey Bureau, Classification Society or an approved Government Department. *Exemptions:* 11.3 above does not apply to vessels less than 70 m. LOA engaged in coastal trades.

ADVANCE NOTICE REQUIREMENTS: The information below has to be telexed twice to respective Port Authority (with copy to Agent). The first telex to be sent (with estimated details) at the time vessel arrives at first port of loading, to be called 'preloading advice'. The second telex to be sent (with correct details) at the time vessel sails from the final port of loading, to be called 'final advice'.
1. Call Sign.
2. Vessel's name.
3. Owners/Line.
4. Nationality.
5. Agent.
6. LOA (m.).
7. Max. Draft (m.).
8. Hatches/holds.
9. G.R.T.
10. N.R.T.
11. D.W.T.
12. Vessel's previous name.
13. Vessel type.
14. Cargo type.
15. Total cargo weight tonnes.
16. Total cargo freight tonnes.
17. No. of containers/units.
18. No. of livestock.
19. ETA.
20. Actual arrival draft.
21. Hatchwise tonnage.
22. Year built.
23. No. of LCL containers and quantity showing each Bill of Lading number in that container.
24. Fumigation and Cleanliness Certificates in case of foodstuff cargoes.
25. Each loading port name where cargo loaded for Saudi port.
26. Economic Speed.
27. Vessel position 48 hours before arrival.
28. Last 3 ports of call.
29. Next port after Saudi port.
30. Vessel's Lloyd's Registered Number.
31. Port of Registry.
32. Hazardous cargo for Saudi port.
33. Hazardous cargo in transit for other ports.
34. P & I Club name and local correspondents.
35. Confirm that 5, 2, 1 day ETA notices with Call Sign, draft, cargo for Saudi port, hatchwise distribution, Master's name, crew number, nationality, previous/next port, vessel's position 48 hours' prior arrival and radar data will be supplied to port by the Principals/Master.

If the undermentioned information has not previously been given it is to be included in the advices:
(a) Type of radar.
(b) Frequency.
(c) Scan rate.
(d) Pulse width.
(e) Pulse peak power.
(f) Pulse repetition frequency.
(g) Beam width.

If the vessel is equipped with several radars the characteristics of each radar must be given.

Upon receipt of such information, the relevant Port Authority will give clearance date for the vessel to enter the port.

The following documents should arrive with the Agent in Saudi Arabian port latest 7 days prior to vessel's arrival date and subject to Arabic translation be submitted to Authorities latest 72 hours prior to vessel's arrival:

18 copies Cargo Manifest.
18 copies Freight Manifest.
18 copies Dangerous Cargo Manifest.
4 copies Hatch List.
4 copies Stowage Plan.
4 copies each Bill of Lading (3 Non-Negotiable)
4 copies Heavy Lift Cargo separately.

POLLUTION: Fines and penalties for not complying with the International Convention for the Prevention of Pollution of the Sea by Oil, 1975 are:
(a) Discharging oil or oily-mixture within 100 miles from the Kingdom's Coasts – one year imprisonment or S.R.20,000 (Saudi Riyals) or both.
(b) Saudi Flag Ships discharging oil or oily-mixture in any prohibited zones or areas mentioned in the conventions, the same fine and penalty as in (a).

(c) Not keeping the oil record book in the ship – 6 months imprisonment or S.R.2,000 (Saudi Riyals), or both.

(d) Not keeping the oil record book up to date – fine up to S.R.5,000 (Saudi Riyals).

SHIP'S FUEL TANKS: *Circular No. SEAPA – 15335/85.*

To: All Shipping Agents.
cc: All Ports.
From: The President and Chairman of the Board, SEAPA.
Date: 14.7.1405/04.04.1985
Subject: Flammability Check of Ship's Fuel Tanks.

With immediate effect you are advised to inform all concerned parties that the Port Management of all SEAPA ports will require additional flammability checks on fuel tanks of O/B/O carriers and tankers excluding tankers engaged solely in the transport of chemicals.

The purpose of this extra precaution is to deter the use of cargo oil as fuel supplement, and will be required on a random basis as advised by the Port Operations Department. The results are to be incorporated (when applicable) on the Gas Free Certificate.

When such random test is required by the Port Management, it will be necessary for the ship's Agent to arrange for the services of a surveyor.

For your information, if the atmosphere in any fuel oil bunker tank is discovered at more than 15 per cent (LEL), then the ship's Master will be required to engage a surveyor to provide an exact flashpoint analysis of the tank contents.

Furthermore, should the flashpoint be less than the prescribed limits stipulated in Regulation 33 of SOLAS, the Port Management reserves the right to remove the ship from the berth.

Regards:
Fayez I. Badr,
President and Chairman of the Board,
Ports Authority,
Kingdom of Saudi Arabia.

NAVIGATION INFORMATION: The Agents have the responsibility to deliver to the Master the updated copies of the Radio Navigational Warnings and Notices to Mariners issued by the Ports Authority, covering Saudi Waters.

AUTHORITY: The Ports Authority, Kingdom of Saudi Arabia, P.O.Box 5162, Riyadh 11188, Kingdom of Saudi Arabia. *Tel:* 01-405 0005. *Telex:* 401158, 401783, 405055 Ports SJ. *Contact:* Dr. Fayez I. Badr, Minister of State, President of the Ports Authority.

AL KHOBAR: 26.17 N. 50.13 E.

ALSO SEE "GENERAL" BEFORE FIRST PORT.

PORT LIMITS:
Harbour Boundaries:

All shore-based port property enclosed by a fence following the shore line extending seawards to a line running between the following points:

Latitude: 26° 16′ 12″ N.,	Longitude: 50° 12′ 54″ E.
Latitude: 26° 16′ 12″ N.,	Longitude: 50° 13′ 18″ E.
Latitude: 26° 12′ 00″ N.,	Longitude: 50° 13′ 36″ E.
Latitude: 26° 12′ 00″ N.,	Longitude: 50° 19′ 20″ E.
Latitude: 26° 17′ 12″ N.,	Longitude: 50° 19′ 20″ E.
Latitude: 26° 17′ 12″ N.,	Longitude: 50° 13′ 06″ E.

DOCUMENTS: Crew List required by Port Authority 48 hours prior to vessel's arrival.

PILOTAGE/ANCHORAGE/RADIO: There are no official anchorages, Pilots or radio facilities at Al Khobar port, which is only used by small craft.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)	*Remarks*
Total	500	3.4	General cargo and passenger, including a 10 m. wide quay ramp.

Total shed area (3 sheds): 8,200 sq.m.
Total open storage area: 6,900 sq.m.
Vehicle parking area: 6,900 sq.m. (inside security).
11,400 sq.m. (outside security).
Passenger terminal: 750 sq.m.

EQUIPMENT:
Forklifts: Forklifts up to 10 tons available.
Mobile cranes: 3 up to 20 tons, 1 between 20 and 40 tons.

AUTHORITY: Al Khobar Port Management, *Contact:* Rabah Al Hazeemi, Port Director.

AL QADIMAH: 22.21 N. 39.05 E.

ALSO SEE "GENERAL" BEFORE FIRST PORT.

PILOTAGE: The Pilot boarding place is West of the inner coastal reef in position Lat. 22° 20.5′ N., Long. 39° 01.6′ E. Pilotage undertaken during daylight only.

ANCHORAGE: To the North of the entrance channel in depth of 15 m. – 20 m.

VHF: Before entering the approach channel permission should be obtained from Qadimah Port Control, calling Channel 16 and working on Channels 72 and 74.

TUGS: 2 tugs available.

BERTHING: The port is used for unloading military cargoes. Vessels berth alongside 2 pontoons (150 m.×25 m. each) with depths of 13 m. – 14 m. alongside. Ro/Ro facilities available.

CRANES: Floating crane with lifting capacity 150 tonnes and mobile cranes available.

FRESH WATER/FUEL/PROVISIONS: Not available. Vessels should arrive with sufficient for their needs, making allowances for delays which may be experienced.

AUTHORITY: Ministry of Defence and Aviation.

DAMMAM: 26.30 N. 50.12 E. (See Plan)

ALSO SEE "GENERAL" BEFORE FIRST PORT.

LOCATION: Situated approximately mid way along the Eastern coast. It is the principal port of Saudi Arabia in the Arabian Gulf.

PORT LIMITS: The Seaward Limits of the Port of Dammam are bounded by a line joining the following positions:

Latitude	Longitude
26° 28.76′ N.,	50° 10.85′ E.
26° 29.24′ N.,	50° 09.05′ E.
26° 34.14′ N.,	50° 09.05′ E.
26° 34.14′ N.,	50° 10.05′ E.
26° 34.47′ N.,	50° 10.78′ E.
26° 37.89′ N.,	50° 14.25′ E.
26° 37.89′ N.,	50° 16.05′ E.
26° 26.64′ N.,	50° 16.05′ E.
26° 26.64′ N.,	50° 11.86′ E.
26° 24.90′ N.,	50° 11.04′ E.

and thence to the shoreline. A circular 95 m. high Marine Control Tower comprising 3 storeys at a height of 74.4 m. above ground level is located at Lat. 26° 30′ 31″ N., Long. 26° 24′ 48″ E.

Within the Port Limits the approach channel to the port is marked by buoys in accordance with IALA "System A". Depth of the approach is 15 m.

FLAG: In addition to the quarantine signals (See "Health") which are to be shown until Pratique is granted, the Saudi Arabian Flag must be flown from vessel's foremast while in port of Dammam. Saudi flags can be hired or purchased locally.

DOCUMENTS: In order to comply with Port, Customs and Agent's requirements, the following documents should be submitted to the Port Management via the Agent, at least 48 hours prior to arrival of vessel at Dammam port:

5 copies of the Cargo Manifest for discharge, including any additions or amendments in English; 10 copies of the original Manifest accurately translated into Arabic.
2 copies of Hatch List.
2 copies of Stowage Plan.
2 copies of List of Heavy Lifts.
2 copies of List of Long Length Cargo.
7 copies of List of Dangerous Cargo on board, if any.
Arms and Ammunition List, or "Nil" return.
Crew List showing Nationality.
Fumigation Certificate for Vessel and Cargo (if required).

The particulars of the Certificates required by the SOLAS regulations are entered on the Port's Form on the arrival of the vessel at the anchorage and the certificates are sighted after berthing.

Also see "Health", and "General" before first port.

APPROACHING: *Directions and Regulations for Vessels Entering or Leaving Dammam Port:*

Dry cargo vessels drawing 10.4 m. (34 ft.) or less should approach and leave by the East Channel.

Vessels in excess of 10.4 m. draft and vessels from Northward should use the Main Channel.

Prior to vessels entering the Ras Tanura Channel they must contact "Ras Tanura Radar Control" on VHF Channel 10, identify themselves and state where bound. Normal listening watch should then be maintained on Channel 16.

Vessels bound for Dammam Port must call "Dammam Port Control" 1 hour before the vessel's arrival at Buoy "D27" and give the following information:

(i) Vessel's name.
(ii) Length overall.
(iii) Maximum draft.
(iv) Cargo tonnage and main commodity.
(v) Hazardous cargo, if any.
(vi) Whether the vessel has a list.
(vii) Whether the vessel has any mechanical defects.

Vessels must not enter or navigate within the Port Limits without the permission of "Dammam Port Control". Inward vessels shall report the time of passing Buoy "D27" and shall keep a listening watch on Channel 16.

The speed of vessels within the buoyed channel is limited to 8 knots and overtaking other vessels within the channel is prohibited.

Anchoring within the buoyed channel is prohibited.

Upon arrival, if a vessel is instructed not to anchor in the Holding Anchorage, the Pilot will board abeam of Buoy "D13".

PILOTAGE: The pilotage area commences at Buoy "D1" (i.e. the channel entrance). Pilotage is compulsory and the normal Pilot Boarding Area is between Buoys "D12" and "D13". The only vessels allowed to proceed South of this position without a Pilot are exempted vessels, and vessels which would, under normal circumstances, require the services of a Pilot but have been instructed by "Dammam Port Control" to anchor in the Holding Anchorage.

Vessels bound for Dammam must contact "Dammam Port Control" 1 hour before arrival at Buoy "D27", giving details of ship (See "Approaching"), and must not enter the channel until permission has been given by "Dammam Port Control".

"Dammam Port Control" operates on the following VHF Channels: 16, 12, 13, 19 and 22.

Vessels Exempted from Compulsory Pilotage: These include:

- (i) Vessels of the Royal Saudi Navy.
- (ii) Vessels of the Saudi Government which are not assigned for commercial use.
- (iii) Vessels whose nett tonnage is less than 150 tonnes.
- (iv) Port craft.
- (v) Pleasure yachts.

Also see "Radio".

Vessels less than 150 tonnes, port craft and pleasure yachts shall wait at Small Craft Anchorage for authorisation to proceed to the port.

ANCHORAGES: The following anchorages are allocated as necessary for vessels:

(i) *Holding Anchorage:* (Depth 15 m.) bounded by a line joining the following positions:

Latitude	Longitude
26° 34.04′ N.,	50° 11.83′ E.
26° 33.54′ N.,	50° 10.05′ E.
26° 32.78′ N.,	50° 10.00′ E.
26° 32.00′ N.,	50° 10.05′ E.
26° 31.97′ N.,	50° 10.93′ E.
26° 31.64′ N.,	50° 11.75′ E.
26° 32.07′ N.,	50° 11.31′ E.
26° 32.89′ N.,	50° 10.72′ E.
26° 33.60′ N.,	50° 10.85′ E.

This anchorage is marked by Buoys.

(ii) *Working Anchorage:* (Depth 10 m.) bounded by a line joining the following positions:

26° 32.59′ N.,	50° 12.10′ E.
26° 32.28′ N.,	50° 11.63′ E.
26° 31.14′ N.,	50° 12.76′ E.
26° 31.59′ N.,	50° 13.01′ E.

(iii) *Explosive Anchorage:* (Depth 8 m.) bounded by a line joining the following positions:

26° 31.42′ N.,	50° 13.60′ E.
26° 31.50′ N.,	50° 13.12′ E.
26° 31.01′ N.,	50° 12.96′ E.
26° 31.01′ N.,	50° 13.60′ E.

(iv) *Small Craft Anchorage:* (Depth 6.5 m.) bounded by a line joining the following positions:

26° 30.89′ N.,	50° 14.05′ E.
26° 30.89′ N.,	50° 12.88′ E.
26° 30.14′ N.,	50° 13.60′ E.
26° 30.14′ N.,	50° 14.05′ E.

Anchoring in the channel is strictly forbidden.

MAX. SIZE: See "Berthing".

HEALTH: In accordance with international practice, quarantine signals must be displayed by all vessels approaching Dammam port. These signals shall be displayed continuously until Pratique granted. Signals are as follows: Sunrise to sunset – Quarantine Flag; Sunset to sunrise – Signal Lights – red over white.

The Quarantine Officer will board the vessel either at anchorage or at pier.

Documents required for immediate inspection are the following:

International Maritime Health Certificate (from the last port).

Valid Derat or Derat Exemption Certificate.

Crew List (3 copies).

Passenger List, if any.

Valid Cholera Certificates (of a date not exceeding 6 months) for all crew members and passengers.

Valid Yellow Fever Certificates for all crew members and passengers.

Certificates of Inoculation against any communicable diseases prevailing at the ports of departure.

Ship's Log Books.

RADIO: (Also see "Pilotage" and "Vessel Appointments").

Dammam Port has a modern radio communications system as follows:

(i) *VHF* – (Call sign "Dammam Port Control"). A continuous listening watch on Channel 16.

Working Channels are: Channels 12, 13, 19 and 22.

(ii) *Radio Telephone* – Facilities are available.

Note: International VHF Channels 01, 68, 71 and 73 are used for port and pilotage operations. Vessels must NOT use these Channels when in the vicinity of Dammam Port.

Telex: Dammam Port is connected to the International Telex network. The telex numbers are 801138 or 801139 Dapm SJ. Fax: 857-1727 (Director General), 858-3113 (Operations), 858-3340 (Marine Department).

Information is available from "Dammam Port Control" covering local weather conditions and any local hazards to navigation that may be appropriate from time to time. Suitable radar coverage is being provided in the Marine Tower.

Coast radio station at Dammam officially known as "Dammam Radio" with call sign "HZG". Tel: 826-5456, 826-5526. Fax: 827-45429. Telex: 802600 DMRD SJ, 802603 DMRD SJ. It is already in service employing radiotelegraphy, radiotelephony and radiotelex to provide radio communication link between vessels at sea and land based concerns.

VESSEL APPOINTMENTS: (See also "Radio").

It is a pre-requisite for all vessels trading to any Saudi Arabian port to give the appropriate Port Management the undermentioned information by telex on arrival at the first port of loading for Saudi Arabia:

In the case of Dammam Port, telexes should be sent to: The Port Director General, Dammam Port Management. Telex Nos. 801138 DAPM SJ, 801139 DAPM SJ.

(a) The information must be updated on leaving the final port of loading bound for Saudi Arabia:

1. Radio Code (Call sign).
2. Vessel's name.
3. Owner/Line.
4. Nationality.
5. Agent.
6. Length overall (metres).
7. Maximum draft (metres).
8. Number of hatches.
9. Gross registered tonnage.
10. Nett registered tonnage.
11. Deadweight tonnage.
12. Previous name (if any).
13. Type of vessel.
14. Type of cargo.
15. Total cargo weight tonnes.
16. Total cargo freight tonnes.
17. Number of containers/units (where applicable).
18. Number of livestock (where applicable).
19. Estimated time of arrival.
20. Actual arrival draft.
21. Tonnage to hatch.
22. Year built.
23. LCL containers and/or ships convenience containers.
24. Fumigation Certificates (vessel and cargo).
25. Ports of loading for Dammam discharge.
26. Economic speed of vessel
27. Vessel's position 48 hours before arrival.
28. Previous port prior to Dammam call.
29. Next port of call on departure from Dammam.
30. Vessel's Lloyd's Register Number.
31. Port of Registry.
32. Arms and ammunition for vessel's self-defence.
33. Declaration of all transit cargo calling at Dammam port.
34. Last 3 ports visited by vessel.
35. Ramp position (if any).
36. Has the vessel specialised container handling gear.
37. Does cargo include hazardous/toxic waste.

Radar Details

1. Name of the vessel.
2. Flag.
3. Vessel's agent (name and address, telephone, telex).
4. Economic speed of vessel.
5. E.T.A.
6. Type of radar.
7. Frequency.
8. Scan rate.
9. Pulse width.
10. Pulse peak power.
11. Pulse repetition frequency.
12. Beam width.

Radar details are required to be passed on to Dammam Port Management 48 hours prior vessel's arrival Dammam.

Vessels equipped with more than one radar should give the information in Items 6 to 12 for each radar.

The name of vessel *and radio code* should be given in every subsequent telex for reference.

The absence of any of the above information may delay the granting of an entry date to the subject vessel.

(b) The above information must be backed up by further confirmation of ETA at 5 days, 2 days and 1 day prior to arrival at each port of call in Saudi Arabia.

Note: Penalties may be imposed by the Saudi Ports Authority if the above rules are not strictly adhered to.

Berthing Arrangements: Providing the requirements above have been complied with, vessels will be allocated to berths, dependent upon type of cargo carried, prior to arrival. Berthing will then take place immediately upon arrival, weather permitting.

VHF: See "Radio".

TUGS: King Abdul Aziz Port has the necessary tugs, ranging from 460 h.p. to 4,600 h.p., mooring launches, pilot boats, fire fighting vessels, survey launch and specialised anti-pollution craft, booms and material, covering all the needs of marine operators and safety requirements.

Tugs operate within the Harbour Limits only for the purpose of assisting vessels in berthing and unberthing. Tugs join vessels inside the Inner Gate Beacons and normally require the use of ship's lines. Where the latter are considered inadequate, the tug's lines are used at the vessel's expense.

BERTHING: (Also see "Vessel Appointments").

The following categories of berth with a water depth from 9.0 m. to 14.0 m. are available, Ro-Ro, Container Terminals, Multi-Purpose, General Cargo, Grain, Explosives/Dangerous Cargo, Loading Fertiliser. The Bulk Cement Berth is leased to a private company, and there is also a bulk edible oil facility.

In the main port there are 39 working berths for deep-sea vessels. They are located on 4 quays as follows:

East Port: *West Quay:* (King Abdul Aziz Pier, total length 2,500 m. approximately).

Berth No.	*Nominal Length* (m.)	*Depth* (m.)	*Berth Facilities*	*Type of Operation*
1	240	13.2	Grain Silos & Flour Mill	Grain/Dir. Dly GC
2	240	12.9	Zone-Barn	General Cargo and Bulk Grain
3	240	12.2	Zone-Barn	General Cargo and Bulk Grain
4	180	10.8	Shed-Zone	General Cargo
5	180	11.0	Shed-Zone	General Cargo
6	150	8.4	Shed-Zone	General Cargo

Berth No.	Nominal Length (m.)	Depth (m.)	Berth Facilities	Type of Operation
7	150	8.0	Shed-Zone	General Cargo
8	150	7.8	Shed-Zone	General Cargo
9	179	8.1	Shed-Zone	General Cargo
10	215	9.4	Zone	Load Fertiliser
11	180	10.1	Zone	General Cargo
12	180	11.4	Shed-Zone	General Cargo
13	180	11.0	Shed-Zone	General Cargo

Notes: 1. Where there is a shed on the berth the distance from the quay edge to the shed is 30 m.

2. Berths No. 1 – 13 are rail connected.

3. There are 21 portal cranes on Berths 1 to 13, with capacities from 6 tonnes to 15 tonnes.

East Quay: (Total length 1,750 m. approximately).

Berth No.	Nominal Length (m.)	Depth (m.)	Berth Facilities	Type of Operation
14	180	11.3	Shed/Zone-Barn Ro-Ro Ramp	General Cargo/Ro-Ro
15	180	11.0	Shed-Zone-Barn	General Cargo
16	180	11.2	Shed-Zone-Barn	General Cargo
17	180	11.2	Zone	General Cargo
18	180	11.0	Shed-Zone-Barn	General Cargo
19	180	11.2	Zone	General Cargo
20	180	11.0	Shed-Zone-Barn	General Cargo
21	240	13.0	Zone	Multi-purpose
22	240	13.2	Zone/Ro-Ro Ramp	Multi-purpose

Notes: 1. Where there is a shed on the berth, the distance from the quay edge to the shed is 40 m.

2. Currently 28 portal cranes are in use on Berths No. 14 – 20 inclusive. Their capacities vary from 6 to 15 tonnes.

3. Berths No. 21 and 22 make up Dammam Multi-Purpose Terminal. The terminal is equipped with 2×30 tonne gantries.

West Port: *East Quay:* (Total length 2,800 m. approximately).

Berth No.	Nominal Length (m.)	Depth (m.)	Berth Facilities	Type of Operation
23	240	13.2	Zone Ro-Ro Ramp	Containers Ro-Ro
24	240	13.2	Zone	Containers
25	240	13.4	Zone	Containers
26	240	13.2	Zone	Containers
27	240	13.1	Zone	General Cargo
28	240	13.2	Zone	General Cargo
29	240	13.2	Zone	General Cargo
30	180	13.1	Shed-Zone-Barn	General Cargo
31	180	13.2	Shed-Zone-Barn	General Cargo
32	180	11.6	Zone	General Cargo
33	180	10.9	Shed-Zone-Barn	General Cargo
34	180	11.2	Shed-Zone-Barn	General Cargo
35	205	11.2	Cold Store Terminal	Reefer Cargo

Notes: 1. Where there is a shed on the berth, the distance from the quay edge to the shed is 40 m.

2. Berths No. 23 – 26 make up Dammam Container Terminal (DCT).

West Quay: (Total length 720 m.).

Berth No.	Nominal Length (m.)	Depth (m.)	Berth Facilities	Type of Operation
36	180	9.8		
37	180	10.4		
38	180	11.0	Silos/Bagging Plants	Bulk Cement/Edible Oil
39	180	12.5	Zone	Explosives/Dangerous Cargo

Notes: 1. The bulk cement berth is leased to an independent company.

2. All berths are rail connected.

3. The quay, North of Berth No. 39, can be extended by 2,200 m. when additional berths are required in the future.

Updated information on available depths within the Port Limits can be obtained from the Harbour Master's Office.

In addition to the berths in the main port, a Small Craft Harbour is situated to the South of the East Port where small vessels, dhows, fishing vessels and a considerable amount of barge traffic (mainly LASH) are handled. The depth of water varies from 6 m. to 4.5 m. The purpose-built facilities provide in excess of 1,600 m. of quay, large back-up areas and covered storage.

SPECIALISED CARGO HANDLING FACILITIES: *Grain Terminal*: This terminal (Max. draft 13.5 m.) provides purpose built facilities for discharging all types of grain. These can be distributed to silo storage, or delivered direct to road, rail or to the adjacent flour mills. Discharge rate 480 t.p.h. with 2 pneumatic unloaders.

Ro-Ro Berths: All Ro-Ro Berths have ramps fitted with bow or stern access.

Dammam Multi-purpose Terminal: This terminal provides facilities for handling multi-purpose vessels (i.e. Ro-Ro, containers and general cargo). It is equipped with 2 container gantries.

Damman Container Terminal (DCT): This comprises Berths No. 23, 24, 25, and 26.

The terminal has 6 container gantries and its own rail terminal, with 2 rail-mounted, wide-span gantries and container storage area.

Extensive covered facilities are available for Customs inspection and clearance purposes. A purpose-built container freight station (CFS) for handling LCL shipments is also available.

Bulk Cement: Dammam Port has 2 allocated berths for the handling of cement in bulk (Berth No. 37 for grey cement and Berth No. 38 for white cement).

The berth is leased to an independent company, providing facilities afloat and on the quay. The terminal is rail connected.

Fertiliser Loading Berth: A berth is allocated for loading urea which is manufactured locally by the Saudi Arabian Fertiliser Co. (SAFCO). The bagged urea is transported by rail from the factory to the quayside where it is loaded directly into the vessel alongside by ship's gear or quayside portal cranes.

Dangerous Cargo Terminal: This 180 m. long berth has a depth alongside of 12.5 m. It consists of an open quay fitted with blast walls for direct delivery only and is road and rail connected.

Refrigerated and Frozen Cargo Terminal: 2 spiral conveyors unload reefer cargo into a 6,000 tonne capacity Cold Store.

CRANES: See "Cargo Handling Equipment".

STORAGE AREAS: Adequate covered and open storage space is available in the form of warehouses, transit sheds, dangerous goods warehouses and zones, container terminals, container freight station, vehicle park and general cargo storage areas.

CARGO HANDLING DISCHARGE RATES: A strong and positive set of Port Rules is in operation. This guarantees high discharge rates and high standards of efficiency. Co-operation in observance of these rules by Shipowners and Agents makes a substantial contribution to the port's effectiveness. The most important of these rules are summarised below:

1. Every vessel calling at Dammam must make an appointment.
2. Every vessel, or Agent, must submit appropriate documentation prior to a vessel's arrival.
3. Any vessel over 15 years old shall obtain and submit a certificate issued by a competent and approved Authority that her cargo gear is in good working order before being allowed to discharge.
4. All cargo that is suitable shall be presented in unit loads on pallets or pre-slung.
5. No cargo shall be received into port premises in a damaged condition.
6. Every vessel shall be ready to discharge upon berthing. She shall continue discharging uninterrupted until all Dammam cargo is completed, whereupon she shall leave the berth without delay.
7. Overstowing Dammam cargo with cargo destined for another port is prohibited.
8. Transhipping cargo in Dammam for other ports is not allowed.
9. Cargo which is not removed from the Port by Consignees within 15 days is liable to be auctioned and sold.

The port's efficiency and handling rates are high, as indicated in the table below:

Indicative Handling Rates of Main Commodities during the Year 1993:

Cargo	*Weight Tonnes per Gang Hour*	
	Gross	Nett
Bulk Grain	4,000/6,000	4,000/6,000
	(per 24 hours)	
Timber	31.7	25.9
Bagged Cargo	23.8	17.1
Steel Pipes	52.3	39.5
General Cargo	29.3	21.2

STEVEDORES: Stevedoring operations on all berths except grain silo, bulk cement and the container terminal (DCT) are performed by 2 contracted stevedoring companies.

CARGO HANDLING EQUIPMENT: Dammam Port has an extensive fleet of equipment including:

Mobile Cranes up to 100 tonnes.
Gantry Cranes up to 30 tons with an outreach from the quay wall of 32 m.
Gantry Cranes up to 40 tons and a Floating Crane of 200 tons capacity.
Straddle Carriers, terminal tractors, towing tractors, trailers.

MEDICAL: Masters may obtain medical attention for ship's personnel from Port Doctor who may, in case of serious illness or injury recommend treatment to a local hospital. Normally the Port Doctor will treat minor illness on board ship.

Urgent hospitalisation can also be arranged via the ship's Agent. Masters of vessels at sea may use services of Dammam Port Radio to obtain medical advice at any time.

DENSITY: The average density (salinity) of the sea-water in the Port of Dammam is 1030.

WATER: Water is available. Vessels requiring a supply of water should make arrangements through their Agent.

FUEL: There are several private Bunkering companies who operate in Dammam Port. By arrangement through the ship's Agent, bunkers can be supplied by barge at anchorage or alongside. Various grades of fuel are available. Strict rules apply and severe penalties will be imposed should any oil spillages occur during bunkering operations or from any other cause. Anti-oil pollution equipment and dispersants are available.

Also see "Ras Tanura".

CONSULS: The U.S. Consulate General resides at Dhahran (approximately 20 km. inland from Dammam). A British Consular Official resides locally.

REPAIRS: King Fahd Ship Repair Yard (KFSRY), located within the port contains 2 floating dry docks, with capacities of 22,000 tonnes and 10,000 tonnes, together with all necessary facilities to provide a complete range of ship repairs and maintenance services.

Deep sea divers, operating from modern and well equipped diving boats, are available at Dammam.

Repair and maintenance services for electronic equipment are available at Dammam Port.

DRY DOCK: Main particulars:

Lifting capacity 22,000 tonnes.
Length overall 215 m.
Outside width 43 m.
Clear inside width 35 m.
Moulded depth to upper deck 16.30 m.
Immersion depth over keel blocks 7.55 m.

SURVEYORS: Available.

REPATRIATION: Possible, but not encouraged.

AIRPORT: Very good airline facilities are available from Dhahran Airport. Daily departures take place for many parts of the world.

CUSTOMS: All materials to be either exported from or imported into Saudi Arabia are subject to examination by Customs Authorities. The importation of the following articles is completely banned:

(a) Alcoholic beverages, including beer and wines.
(b) Narcotics.
(c) Pornographic material.

Trafficking of the above items between ship and shore is strictly prohibited, regardless of whether vessels are alongside at berths or at anchor. Consumption of alcoholic beverages is prohibited during a ship's stay in port. All alcoholic beverages must be placed in bond (Master's, officers, crews and bar).

The following articles can be imported after obtaining permission from the authorities concerned:

(1) Explosives.
(2) Firearms.
(3) Antiques.
(4) Religious material not pertaining to the Muslim faith.

TIME: GMT plus 3 hours all year round.

HOLIDAYS: Dammam Port offers continuous cargo handling operations through the year and sufficient manpower is always available.

All ships must be dressed if they are in port, or entering port, on the following official holidays or events:

1. Eid Al Fitr.
2. Eid Al Adha.
3. Saudi Arabian National Day.
4. Royal visits to the port.

Port staff will advise vessels in port prior to any forthcoming event, and vessels approaching port will be advised by the Port Radio Control.

EMERGENCY CO-ORDINATION: In the event of marine emergencies in the area, the Dammam Port Harbour Master should be contacted.

TELEPHONE: The port's telephone number is 833-2500 and is open for 24 hours. Expansion is planned which will include ship to shore communications at all berths.

STORING: Vessels may take stores on board and arrangements should be made through the ship's Agent.

SHORE LEAVE: Ship's personnel and passengers are not normally permitted ashore unless special permission is granted by Immigration and Police Authorities. The necessary arrangements can be made by ship's Agent upon receiving the Master's request and Seaman's Books. While in port, the vessel's personnel are under jurisdiction of the Law of Saudi Arabia.

WEATHER: The peninsula of Saudi Arabia is almost of an equatorial climate. Summertime rising to over 45°C. Rain is generally scarce. During major part of year, but especially during Summer, the relative humidity is high. From July to September it frequently exceeds 85%.

Winds in this area are not predictable for more than a few hours. They vary in strength and direction, although prevailing winds are from N.W.

TIDE: The Diurnal tide range at Dammam Port is approximately 2.00 m. – 2.45 m. at Springs, and 0.80 m. at Neaps. The flood tide sets to the S.E. across the harbour entrance and the ebb tide sets to the N.W. The rate of flow is very much dependent on the wind force and direction but seldom exceeds 2 knots.

AUTHORITY: Dammam Port Management, P.O.Box 28062, Dammam-31437, Saudi Arabia. *Tel:* (03) 833-2500 (24 hours). *Telex:* 800138, 801139 Dapm SJ. *FAX:* 857923. *Contact:* H.E. Mohammed Ali Bin Nasser Al-Ghaithy, Port Director-General. Captain Hassan Abounayyan, Assistant Port Director General.

AGENT: Gulf Agency Company Saudi Arabia, P.O.Box 335, Dammam 31411, Saudi Arabia. Cables: "Confidence Dammam". Ship-shore traffic via Dammam Radio/HZG. Telex: 801069 ("GAC SJ") Tel: 8328762-4, 8323425/7. Port Office 8583152, 8583196, 8583209; After office hours 8320877. Fax: 8323035.

DHUBA: 26.14 N. 36.28 E. (See Plan)

SHIPMASTER'S REPORT: May 1994.

LOCATION: Dhuba Tanker Terminal is situated on the Northern part of the West coast of Saudi Arabia in Red Sea.

DOCUMENTS:

5 copies Crew List.
2 copies Stores List.
2 copies Crew Declaration.

APPROACHES: Approach to the pilot boarding area is not difficult. For vessels coming from South, it is important to follow a course (approx. 031°) between An Nu'Man Island Reef and the reef situated at 4.5 nautical miles N.N.E. of 16 m. anchorage (B.A.Chart No. 8, Saudi Arabian Chart No. 13).

PILOTAGE: Compulsory. Pilot boards in the vicinity of the mooring buoys (Lat. 27° 19′ 18″ N., Long. 35° 43′ 48″ E.).

ANCHORAGE: Good anchorage available in depths of 16.0 m. to 45.0 m.

The anchorage in 16.0 m. is located at Lat. 27° 10′ 36″ N., Long. 35° 39′ 30″ E. No Pilot required for anchoring.

RESTRICTIONS: Mooring and unmooring during daylight only.

MAX. SIZE: 10,000 d.w.t. No draft limitation.

RADIO: Send ETA 72 hours, 48 hours and 24 hours before arrival.

VHF: "Aramco Dhuba" on Channel 11 throughout 24 hours.

TUGS: One small tug (1,200 h.p.) assists with mooring. Tug on VHF Channel 11.

MOORING: There are 5 mooring points (unlit). Three points are buoys anchored to the sea bottom and 2 points are piles on the reef. All ropes are from buoys and piles (See "Plan").

HOSES: There are 2×12 in. floating hoses, one for diesel and one for premium gasoline. The hoses are connected by ship's crew.

MEDICAL: No facilities.

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: No facilities.

REPATRIATION: No facilities.

SHORE LEAVE: Not permitted.

SERVICES: No telephone. No stores or provisions.

GIZAN (Jizan): 16.54 N. 42.32 E. (See Plan)

ALSO SEE "GENERAL" BEFORE FIRST PORT.

LOCATION: 390 nautical miles South of Jeddah and 360 nautical miles North of Aden.

PORT LIMITS:

Harbour Boundaries:

All shore-based port property enclosed by a fence following the shore line extending seawards to line running between the following points:

	Latitude	Longitude
Qarn Ash Shurra	16° 50′ 36″ N.	42° 33′ 00″ E.
Um al Kuthib	16° 48′ 30″ N.	42° 27′ 12″ E.
Jazirat Hibar	16° 54′ 12″ N.	42° 22′ 42″ E.
Ferafer Island	17° 00′ 00″ N.	42° 23′ 36″ E.
Qarn al Wada	17° 02′ 24″ N.	42° 28′ 18″ E.

DOCUMENTS: See "Health" and "General before first Port."

APPROACHES: The Northern Approach Channel, is 82 nautical miles long, marked by 18 light buoys and 3 beacons and provides a minimum depth of 24 m. between Gizan North and Buoys N.13/S.18.

Positioned navigational marks are in accordance with "IALA System A" and fitted with radar reflectors.

The Approach Buoy "Gizan North" Lat. 16° 56′ 45″ N., Long. 41° 17′ 28″ E. is fitted with Racon code "B". Beacon "No. 2" "Middle Beacon" Lat. 17° 16′ 47″ N., Long. 41° 33′ 25″ E. is fitted with Racon code "N". "North Ghurab Island" Beacon Lat. 17° 06′ 20″ N., Long. 42° 03′ 58″ E. is fitted with Racon Code "B".

"Sail Makawa Island" Beacon is equipped with white light Fl. 4 secs. and white daymark.

A range light, true bearing 096.5°, leads into the port basin through an inner fairway dredged to 13.5 m. depth. For further details refer to B.A. Chart No. 15 and Notices to Mariners.

Southern approach closed.

PILOTAGE: Compulsory, no offshore pilot station. Ships for Gizan should contact Gizan Port Control on VHF Channel 16, 2 hours before arrival.

Pilot Boarding Position:

Lat. 16° 53′ 48″ N., Long. 42° 27′ 00″ E.

ANCHORAGES: *Anchorages within the harbour boundaries:*

Anchorage A. (Cargo vessels).

Lat. 16° 56′ 00″ N.,	Long. 42° 27′ 00″ E.
Lat. 16° 54′ 30″ N.,	Long. 42° 27′ 00″ E.
Lat. 16° 54′ 30″ N.,	Long. 42° 25′ 48″ E.
Lat. 16° 56′ 00″ N.,	Long. 42° 25′ 48″ E.

Anchorage B. (Petromin tankers).

Lat. 16° 53′ 00″ N.,	Long. 42° 27′ 42″ E.
Lat. 16° 51′ 30″ N.,	Long. 42° 27′ 42″ E.
Lat. 16° 51′ 00″ N.,	Long. 42° 26′ 12″ E.
Lat. 16° 53′ 00″ N.,	Long. 42° 26′ 12″ E.

There are no anchorages outside the harbour boundaries.

ARRIVAL ADVICE: Send ETAs to Gizan Port Management, Telex: 911018 Ports Sj and 911030 Ports Sj.

MAX. SIZE: Max. Length 250 m., Max. Draft 11.75 m. at high tide,11.50 m. at any time. Max. Beam no limit.

HEALTH: All vessels should abide by Health Regulations and present necessary documents to the Authorities in accordance with International Laws. Quarantine signals must be displayed by all vessels approaching Gizan Port. These signals must be displayed continuously until Pratique is granted. These signals are:

Sunrise to sunset: Quarantine flag – Yellow.
Sunset to sunrise: Signal lights – Red over white.

RADIO: Masters should give their Agents an ETA not later than 48 hours before arrival. There is no radio station in Gizan Port.

VHF: A base station operates in Gizan Port using the call sign "Gizan Port Control". All calling should be on Channel 16. A 24 hours watch is maintained on Channel 16. Arriving vessels should contact "Gizan Port Control" entering the Northern Approach Channel. Working channels are 14, 12 and 9. Tugs are working on Channel 12 during operations.

RADAR: Harbour Radar System and Port Control Tower are under construction.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)	*Remarks*
1	205	12	Bulk Cement Terminal
2	176.5	12	
3	176.5	12	
4	171	10	
5	171	10	
6	184	10	
7	122	10	General
8	175	10	General and Ro-Ro
9	175	10	Cement
10	143	10	Container Terminal
11	217	12	Container Terminal
12	217	12	Ro-Ro Terminal

Total Shed Area: 12,000 sq.m.
Total Open Storage Area: 140,000 sq.m.
Weighbridges: 1×60 tonnes.

TUGS: Tugs are available, ranging from 800 h.p. to 2,500 h.p. Tugs usually join the vessel 3 miles West of breakwaters.

CONTAINER FACILITIES: Multi-purpose quay side cranes, capacity 45 tons. Equipment to handle containers available including straddle carrier, front loader and trailers. 48 power sockets for reefer containers.

BULK HANDLING FACILITIES: Mobile grain dischargers plus conveyors and hoppers for direct bulk delivery, bagging units for bagged delivery.

EQUIPMENT: *Floating Equipment:* Pilot Boats, Mooring Launches, Fire Fighting Launch, Buoy Maintenance Vessel, Anti-Pollution equipment. *Handling Equipment:* Floating Crane 200 tons capacity, Mobile Tower Cranes capacity 45 tons, Yard Cranes from 16 tons to 45 tons, Forklifts from 2 tons to 36 tons, Head Trucks, Trailers and Chassis.

STEVEDORES: Sufficient number of gangs available working 2 shifts of 12 hours, from 0700 hrs. to 1900 hrs., 7 days per week.

MEDICAL: Doctors and hospital are available. Agents should be advised in advance of any medical attention required.

DENSITY: Average 1026.

FRESH WATER: Available from quay only.

FUEL: Marine diesel available by road tanker. Advance notice to be given to Agent.

FIRE PRECAUTIONS: According to Rules and Regulations of Seaports.

CONSULS: None in Gizan. See "Jeddah".

REPAIRS: Minor repairs possible by local contractors.

SURVEYORS: The main Classification Societies are available in Jeddah.

GANGWAY/DECK WATCHMEN: 1 Coast Guard is stationed permanently on board. Coast Guards keep constant check on liquor seals and may search personnel going ashore.

CUSTOMS ALLOWANCES: The consumption of alcohol, including beer, is prohibited. Ship's bonded stores are sealed by the Customs after the vessel has been granted Free Pratique. Any alcohol found after this will be confiscated and a fine imposed of Riyals 1,000 per bottle and possible imprisonment for the offender(s).

AIRPORT: Situated approximately 3 km. North East of Gizan Port. Several domestic flights daily.

TIME: GMT plus 3 hours all year round.

HOLIDAYS: Gizan Port offers continuous cargo handling operations throughout the year and sufficient manpower is always available.

POLICE/AMBULANCE/FIRE: Emergency Telephone Numbers:

Fire Brigade	322 0555
Ambulance	322 1692/1930
Hospital	322 1205
Police	322 1872

BANKS: Almost all national banks available.

STORING: No ship chandlers available. Small quantities available through Agent.

SHORE LEAVE: Possible during daylight hours.

IDENTIFICATION CARDS: Shore passes issued on request.

DELAYS: There are no delays in berthing and discharging.

AUTHORITY: Gizan Port Management, P.O.Box 16, Gizan, Saudi Arabia. *Tel:* (07) 317–1000, 312–1145. *Telex:* 911018 and 911030 Ports Sj. *Cables:* Porta Gizan. *Contact:* Dr. Hammoud A. Saadi, Director General.

AGENT: Gulf Agency Co. Saudi Arabia. Telex: 601047 ("Gaship SJ"). Also see "Jeddah".

JEDDAH: 21.28 N. 39.10 E. (See Plan)

ALSO SEE "GENERAL" BEFORE FIRST PORT.

PORT LIMITS: *The boundaries of the harbour and anchorages of Jeddah Islamic Port:* The harbour boundaries are given below and include the tanker terminals and the adjacent waters between Ras Al Jahhas and Ras Al Aswad.

From an onshore position on Ras al Jahhas:

to	Lat. 21° 31′ 36″ N.	Long. 39° 07′ 54″ E.
	Lat. 21° 31′ 36″ N.	Long. 39° 06′ 00″ E.
	Lat. 21° 22′ 00″ N.	Long. 39° 06′ 00″ E.

To an onshore position on Ras al Aswad:

Lat. 21° 22′ 00″ N.	Long. 39° 07′ 50″ E.

DOCUMENTS: See "General" before first port.

Circular: Dated December 1983.

Vessels carrying dangerous cargo, arms, ammunition for discharge at Jeddah or any other ports in transit are requested to provide the following information:

(a) A prior notification including the following information:
  1. The name of the vessel, her flag and the Shipping Agent's name.
  2. ETA.
  3. Voyage number.
  4. The particulars and the types of dangerous cargo, ammunition, weapons.
  5. The quantity.
  6. Number of parcels or packages.
  7. The weight.
  8. Cell location and stowed.
  9. The Shipper's name.
  10. Port of loading.
  11. Consignee's name and address.
  12. Port of discharge.
  13. Next port for the vessel after departure Jeddah.

(b) The documents such as Manifest, Stowage Plan and Cell Number, Bay Plan, etc., are required to be submitted to the Port Authority 48 hours prior to arrival of vessel.

(c) In case vessel not carrying any dangerous cargo/arms/ammunition/weapons/Military hardware, the Agent should submit the written declaration as 'nil'.

(d) The Master of the vessel is also required to submit declaration for arms/ammunition/weapons to the Port Authority along with cell position, stowage position and how stowed. In case the vessel is not carrying above mentioned Cargo the Master is also required to submit same declaration as 'Nil'.

(e) The in-transit dangerous cargo/arms/ammunition should be stored separately so that Jeddah cargo can be discharged without disturbing in-transit cargo.

(f) The Port Management will hold you fully responsible for incorrect information.

Signed:
Acting Director General
Jeddah Islamic Port.

VESSEL APPOINTMENT SCHEME:

Vessels bound fo Jeddah Islamic Port with cargo must provide the following information:

AA. By telex or cable either directly or through the vessel's Agents on arrival at the first or sole loading port, before loading commences:

1. Radio Code (Call Sign).
2. Vessel's Name.
3. Owner and Line.
4. Nationality.
5. Agent.
6. Length Overall (m.).
7. Maximum Draft (m.).
8. Number of Hatches.
9. Gross Registered Tonnage.
10. Nett Registered Tonnage.
11. Deadweight Tonnage.
12. Previous Names (if any).
13. Type of Vessel.
14. Type of Cargo.
15. Total Cargo Weight Tons.
16. Total Cargo Freight Tons.
17. Number of Containers/Units (where applicable).
18. Number of Livestock (where applicable).
19. Estimated Date of Arrival.
20. Actual Arrival Draft.
21. Hazardous Cargo for Jeddah.
22. Hazardous Cargo in Transit for Other Ports.
23. Tonnage to Hatch for Jeddah Discharge.
24. Year of Construction.
25. Lloyd's Register Number.
26. All Ports at which Cargo has been loaded for discharge at Jeddah.
27. Number, Position and S.W.L. of Derricks and/or Cranes, and particulars and positions of ramps.
28. Economic Speed of Vessel.
29. Next Port of Call after Jeddah (irrespective of whether vessel has cargo for that port).
30. All other Ports at which the Vessel will have called between arrival at the first port of loading and arrival at Jeddah Islamic Port.
31. Last 3 Ports of Call before Jeddah.
32. (i) Type of Radar.
    (ii) Frequency.
    (iii) Scan Rate.
    (iv) Pulse Width.
    (v) Pulse Peak Power.
    (vi) Pulse Repetition Frequency.
    (vii) Beam Width.
33. Alcoholic cargo on board for optional ports enroute Jeddah.
34. Arms/Ammunitions/Weapons/Exlosives cargo on board in transit.
35. Arms and bullets with Master for self-defence.
36. Name of the Protection and Indemnity Club.
37. Terms of Discharge.

Both the Registered Owner and the Operating Line or Charterer must be shown in item 3. If these are the same company this fact must be confirmed.

All previous names of the vessel must be declared in item 12, or a 'Nil' declaration must be shown. Items 21 and 22 must include the tonnage of each. IMDG Class for discharge and in transit which will be on board the vessel at Jeddah.

On completion of loading cargo, items 15, 16, 17, 18, 19, 20, 21, 22, 23, 26, 29, 30 and 31 must be updated as necessary.

BB. A further notice of ETA is to be sent 5 days, 3 days, 2 days and 1 day prior to arrival at the port. The 3 day notice is to include the vessel's position (Latitude and Longitude or port) 48 hours before arrival.

CC. Vessels will not be cleared to call at Jeddah solely for the purposes of bunkering, taking stores or repairs unless the following information is supplied to the Port Management, *not less than 72 hours in advance of their arrival.* (Also see "Reports"):

1. Radio Code.
2. Vessel's Name.
3. Owner and Line.
4. Nationality.
5. Agent.
6. Length overall.
7. Maximum Draft (m.).
8. Gross Registered Tonnage.
9. Nett Registered Tonnage.
10. Deadweight Tonnage.
11. Previous Names.
12. Estimated Time of Arrival.

13. Actual Arrival Draft.
14. Hazardous Cargo in Transit for other Ports.
15. Lloyd's Register Number.
16. Expected Requirements for Bunkers and Water.
17. Economic Speed of Vessel.
18. Next Port of Call after Jeddah.
19. Last 3 Ports of Call before Jeddah.

Prior to the provision of any services being authorised an approval must be obtained from the Office of the Director (Traffic and Operations).

The final ship's Clearance Certificate will not be signed by the responsible Jeddah Port Management Officer prior to sailing unless it is accompanied by the original Advice Notice bearing Jeddah Port Management's stamp and the signature of the Clearing Officer.

DD. If the undermentioned information has not been previously given to the Port it is to be included in the Advices mentioned in AA and CC above:

(i) Type of Radar.
(ii) Frequency.
(iii) Scan Rate.
(iv) Pulse Width.
(v) Pulse Peak Power.
(vi) Pulse repetition frequency.
(vii) Beam Width.

If the vessel is equipped with several radars the characteristics of each radar must be given.

NOTE: With effect from 5th September 1986 all telex communications with Jeddah Islamic Port must be in Arabic.

EE. Master's Declaration of Arrival to be completed on berthing. A statement of all ports of loading for current voyage and all ports of discharge, including ports after Jeddah.

PILOTAGE: Pilotage is compulsory for all vessels above 150 n.r.t. entering, navigating within, or leaving the port, and is available 24 hours a day. Every vessel subject to compulsory pilotage and which requires a Pilot must:

(a) from sunrise to sunset hoist the International Code Flag 'G';
(b) from sunset to sunrise give the letter 'G' (– – ·) by a signal lamp;
(c) in the event of poor visibility caused by rain, fog or dust, sound the signal 'G' (– – ·).

Vessels equipped with VHF should call the Port Control Signal Station on Channel 12 or 16, 2 hours before arrival. Vessels having a Pilot on board must hoist the International Code Flag 'H'. The pilot boarding area is one mile West of the Middle Gate beacons in position Lat. 21° 28′ 00″ N., Long. 39° 06′ 00″ E. The pilot boat is orange hulled with white upperworks with the word "Pilot" painted in black letters along each side of the cabin.

The Master of every vessel, when approaching the pilot boat for the purpose of picking up a Pilot, must reduce speed to the minimum steerage way, maintain VHF contact with the pilot boat and provide a good lee if necessary. Vessels must have rigged and ready for use a pilot ladder in good repair and provided with reliable manropes and in accordance with the specifications and terms described in the International Convention for the Safety of Life at Sea 1974. The ladder is to be well illuminated between dusk and dawn, and a lifebuoy with a lifeline is to be available at the ladder for immediate use. A boat rope, ready rigged from the break of the forecastle to abaft the pilot ladder, must also be provided.

Once the Pilot is on board, the Master must advise him of:

(a) The draft, length, beam and manoeuvring speeds of the vessel. Such information is also to be displayed in a conspicuous place in the wheelhouse;
(b) Any peculiarity, defect or factor which may affect the manoeuvrability of the vessel;
(c) Any dangerous and/or hazardous cargo on board.

Vessels awaiting Pilot or documentation, anchor in "D" Anchorage. Vessels with dangerous and/or hazardous cargo on board anchor in "C" Anchorage. All tankers and vessels calling only for bunkers in "E" Anchorage.

PROHIBITED AREA: The area bounded by following positions:

A — 21° 29.0′ N., 39° 07.50′ E.
B — 21° 29.0′ N., 39° 06.40′ E.
C — 21° 31.6′ N., 39° 06.45′ E.
D — 21° 31.6′ N., 39° 07.90′ E.

ANCHORAGE: Anchorages A, B, W1 and W2 are within the pilotage area and vessels may not enter, or leave these anchorages without a pilot. The boundaries of the anchorages are as follows:

Anchorage A:

From	Lat. 21° 29′ 13″ N.	Long. 39° 08′ 40″ E.
To	Lat. 21° 28′ 18″ N.	Long. 39° 08′ 40″ E.
	Lat. 21° 28′ 18″ N.	Long. 39° 08′ 02″ E.
	Lat. 21° 29′ 13″ N.	Long. 39° 08′ 40″ E.

Anchorage B:

From	Lat. 21° 27′ 39″ N.	Long. 39° 06′ 54″ E.
To	Lat. 21° 27′ 39″ N.	Long. 39° 07′ 26″ E.
	Lat. 21° 26′ 04″ N.	Long. 39° 07′ 26″ E.
	Lat. 21° 26′ 04″ N.	Long. 39° 06′ 54″ E.
	Lat. 21° 27′ 39″ N.	Long. 39° 06′ 54″ E.

Anchorage W1: (Working anchorage).

From	Lat. 21° 27′ 46″ N.	Long. 39° 08′ 10″ E.
To	Lat. 21° 27′ 46″ N.	Long. 39° 08′ 42″ E.
	Lat. 21° 26′ 45″ N.	Long. 39° 08′ 42″ E.
	Lat. 21° 26′ 45″ N.	Long. 39° 08′ 22″ E.
	Lat. 21° 27′ 46″ N.	Long. 39° 08′ 10″ E.

Anchorage W2: (Working anchorage for explosive cargoes, one vessel only.

From	Lat. 21° 29′ 04″ N.	Long. 39° 07′ 16″ E.
To	Lat. 21° 29′ 04″ N.	Long. 39° 07′ 34″ E.
	Lat. 21° 28′ 27″ N.	Long. 39° 07′ 46″ E.
	Lat. 21° 28′ 27″ N.	Long. 39° 07′ 22″ E.
	Lat. 21° 29′ 04″ N.	Long. 39° 07′ 16″ E.

Anchorages outside the harbour boundaries:

Anchorage C: (Anchorage for vessels with dangerous cargoes).

From	Lat. 21° 28′ 00″ N.	Long. 39° 03′ 46″ E.
To	Lat. 21° 27′ 46″ N.	Long. 39° 04′ 40″ E.
	Lat. 21° 26′ 47″ N.	Long. 39° 04′ 22″ E.
	Lat. 21° 27′ 02″ N.	Long. 39° 03′ 28″ E.
	Lat. 21° 28′ 00″ N.	Long. 39° 03′ 46″ E.

Anchorage D: (Anchorage for dry cargo vessels).

From	Lat. 21° 28′ 16″ N.	Long. 39° 04′ 50″ E.
To	Lat. 21° 27′ 28″ N.	Long. 39° 05′ 58″ E.
	Lat. 21° 26′ 10″ N.	Long. 39° 04′ 29″ E.
	Lat. 21° 26′ 24″ N.	Long. 39° 04′ 15″ E.
	Lat. 21° 28′ 16″ N.	Long. 39° 04′ 50″ E.

Anchorage E (Tanker and bunkering anchorage):

From	Lat. 21° 23.5′ N.	Long. 39° 04.25′ E.
To	Lat. 21° 24.75′ N.	Long. 39° 05.00′ E.
	Lat. 21° 23.8′ N.	Long. 39° 06.00′ E.
	Lat. 21° 23.5′ N.	Long. 39° 06.00′ E.

Prohibited Anchorage Area:

From	Lat. 21° 23.5′ N.	Long. 39° 04.0′ E.
To	Lat. 21° 23.5′ N.	Long. 39° 06.0′ E.
	Lat. 21° 22.0′ N.	Long. 39° 03.35′ E.
	Lat. 21° 22.0′ N.	Long. 39° 06.00′ E.

APPROACHES: The lights of the new airport North of Jeddah shine brightly. These should not be confused with the correct approach to Jeddah port which is South of the airport.

RESTRICTIONS: There are no restrictions imposed upon entry for vessels of not more than 13.5 m. draft.

MAX. SIZE: The maximum permissible draft is 13.5 m. No restriction on beam. Vessels up to 300 m. in length are handled regularly at Jeddah Container Terminal and Bulk Animal Feed Berths.

HEALTH: Masters of vessels are required to notify Jeddah Port Health and Quarantine Department via Jeddah Radio prior to the vessel's arrival as follows:

(a) Vessel's name, ETA, purpose of visit;
(b) Complement and General Declaration of Health of crew:
(c) Declaraton of Vaccination Certificates held, if any;
(d) Declaration of Last Port and date of sailing;
(e) Possession of valid Deratisation Certificate or valid Deratisation Exemption Certificate.
(f) Any other certificate that may be required as determined by Health Authorities.

Additionally, the Agent is required to submit an arrival notice to the Port Health and Quarantine Department 48 hours prior to the vessel's expected arrival.

On arrival, the doctor boards and grants Free Pratique.

(a) *Yellow Fever:* All arrivals from infected or endemic areas are required to submit a valid Vaccination Certificate in accordance with International Sanitary Regulations.
(b) *Makkah:* All Muslim crew members who wish to visit Makkah and Madinah should have in their possession 2 recent Passport-size photos. These should bear the crew member's name and C.D.C. Number to enable Agent to obtain permission for the pilgrimage. Crew members must also have in their possession the above-mentioned medical certificates, otherwise permission may not be granted to them to visit Makkah and Madinah.

RADIO: The Coast Radio Station, Jeddah Radio, call sign HZH (Telex No. 603799 RDJD SJ), can be called up at any time on 500 kHz. All vessels send telegrams to Agents, receivers and Port Authorities, etc. through Jeddah Radio.

Jeddah Radio is also on VHF Channel 16 for telephone calls to Agents and Jeddah Ship Repair Yard.

VHF: Jeddah Port Control Signal Station has 4 VHF Channels:

(a) Channel 16 (international distress, safety and calling Channel);
(b) Channel 14 (Working Channel);
(c) Channel 12 (Working Channel);
(d) Channel 9 (Working Channel).

Vessels bound for Jeddah Islamic Port contact the Port Control Signal Station on Channel 16, then shift to a working Channel as advised to pass on ETA and other relevant information. When necessary, weather reports, notices regarding navigational aids etc., are broadcast to vessels on Channel 12 after having first been advised on Channel 16. In the event of distress or emergency, vessel traffic is controlled by the Port Control Signal Station as far as circumstances permit.

Control Tower: The Control Tower (height 132 m.) is situated on the North side of the Approach Channel to the port at the inner gate in position Lat. 21° 28.1′ N., Long. 39° 08.95′ E. with light characteristic Gp.Fl.(3) every 20 secs., distance 25 miles.

RADAR: A port surveillance radar system is in operation.

TUGS: There are tugs available operated by the Port.

Tugs operate within the harbour limits only for the purpose of assisting vessels in berthing and unberthing. Tugs join vessels inside the Inner Gate Beacons and normally require the use of the ship's lines. Where the latter are considered inadequate, the tug's lines are used.

BERTHING: The following categories of berth, with a draft range from 7.5 m. to 13.5 m., are available: Bulk Grain, Bulk Edible Oil, Ro-Ro, Container Terminal, Cold and Frozen Terminal, Livestock Terminal, Autocarriers, General Cargo and Passenger vessels.

Storage: Adequate covered and open storage space is available in the form of Warehouses, Transit Sheds, Livestock Sheds, Dangerous Goods Warehouses plus Reefer Points, Cool and Cold Stores, Container Terminals, Ro-Ro Terminal, Container Freight Station, Vehicle Parks, General Cargo Storage and edible oil Storage Facilities.

CRANES: Rail-mounted electrical level luffing cranes of up to 15 tons capacity are available with an outreach from the quay wall of 25 m.

The port also has available mobile cranes of up to 250 tons capacity, including a floating crane of 200 tons capacity. Other equipment includes forklift trucks of up to 33 tons capacity and trailers and chassis of up to 40 ft./200 tons capacity.

General cargo vessels must be adequately geared at each hatch. Port cranes may be hired on request or may otherwise be utilised at the Port Management's discretion.

BULK CARGO FACILITIES:

Bulk Grain (Common User Facility):

Max. permissible ship-draft:	13.5 m.
Unloading:	Gantry booms/vacuum pipes and conveyor.
Height of gantry boom:	16 m.
Outreach:	28 m.
Discharge capacity:	200 tons per hour per unit.

Bulk Edible Oil (Private User Facility):

Max. permissible ship-draft:	11 m.
Unloading point:	A pump station pit and manifold is located on the quay for hose connection.

SPECIALISED CARGO HANDLING FACILITIES:

Ro-Ro Terminal (Common User Facility):

Max. permissible ship-draft:	13.0 m.
Mobile cranes:	Up to 40 tons capacity.
Forklift trucks:	Up to 33 tons capacity.
Trailers/Chassis:	Up to 40 ft./200 tons capacity.

Jeddah Container Terminal East (Common User Facility): Transhipment and CFS facilities available.

Max. permissible ship-draft:	11.5 m.
Container cranes:	30.5 tons capacity with an outreach from the quay wall of 25.5 m./28.5 m.
Forklift trucks:	Up to 33 tons capacity.
Trailers/Chassis:	Up to 40 ft./200 tons capacity.
Electricity supplies:	'Plug in' points for 192 reefer containers.

Jeddah Container Terminal West (Common User Facility): (Ro-Ro facility also available).

Max. permissible ship-draft:	13.5 m.
Container cranes:	Up to 40 tons capacity with an outreach from the quay wall of 34.5 m.
Straddle carriers:	Sufficient number.
Forklift trucks:	Up to 25 tons capacity.
Head trucks:	Sufficient number.
Electricity supplies:	'Plug in' points for 360 reefer containers.

BRIDGES: There are no bridges or other restrictions to prevent access to the port by vessels of not more than 13.5 m. draft.

STEVEDORES: The port provides stevedoring services 24 hours a day, 7 days a week. For vessels wishing to discharge cargo at Jeddah Islamic Port, Shipowners or their Agents should provide ETA advice in accordance with the Rules and Regulations for Seaports, issued by the Co-operation Council for the Arab States of the Gulf, as follows:

(a) Before loading for Jeddah;
(b) On sailing last load port;
(c) At 5, 2 and 1 day intervals before the vessel's ETA;
(d) On revising the vessel's ETA.

MEDICAL: Full hospital facilities are available. The Agent should be informed of any medical attention required. Vaccination Certificates should be provided as previously specified (See "Health").

TANKERS: The Petromin facility has 2 berths in the oil basin and 2 in the inner harbour. Petromin provide their own tugs and launches.

The port does not have facilities for the handling of liquid chemicals or LPG carriers.

Jeddah Port Authority Circular: Vessel calling for bunkering supply or for repair will not be cleared/berthed unless following information is furnished to Jeddah Port Management before ship's arrival:

1. Radio Code.
2. Vessel Name.
3. Owner/Line.
4. Nationality.
5. Agent.
6. LOA.
7. Max. draft in metres.
8. G.R.T.
9. N.R.T.
10. D.W.T.
11. Previous Name.
12. ETA.
13. Arrival Draft.
14. Hazardous cargo transit.
15. Lloyd's Register Number.
16. Requirements bunker and fresh water (approx.).
17. Last 3 ports of call before Jeddah.

Before providing any facilities, a Permit Certificate has to be obtained from office of the Assistant General Manager for Traffic.

Ship will not be cleared by Port Authority unless above Permit Certificate attached with Original Arrival Notice signed and stamped by party concerned is submitted to Jeddah Port Management.

DENSITY: 1025.

FRESH WATER: Fresh water can be supplied by the port at all berths and at Livestock Terminal. Fresh water is also available from private suppliers.

FUEL: There are several suppliers in Jeddah who normally require between 1 and 2 weeks' notice of nomination, either through a broker or directly. All types of bunker oils are available and are supplied by tanker at varying rates of delivery.

If bunkering at anchorage, proceed to "Anchorage E".

Also see "Reports".

FIRE PRECAUTIONS: Special rules apply concerning fire precautions and fire-fighting. Reference is made to the Rules and Regulations for G.C.C. Seaports, Part 1, Section 7, and Part 3, Section 4.

CONSULS: Most countries are represented in Jeddah.

REPAIRS: Several local agencies provide all types of shipboard repair work in the mechanical, electrical, electronic and refrigeration / air-conditioning fields.

The Jeddah Ship Repair Yard has complete facilities for drydocking vessels, conversion work and all types of repairs to hull and machinery.

DRY DOCKS: Jeddah Ship Repair Yard:

	Dock 1	*Dock 2*
Max. d.w.t. (Approx.)	45,000	16,000
Lifting capacity (tonnes)	19,000	11,000
Length overall (m.)	215.00	165.00
Length over keel blocks (m.)	200.00	150.00
Clear width (m.)	33.50	25.00
Water depth over top of keel blocks (m.)	7.55	6.95
Pumping times (minutes)	90	90
Cranage (tons SWL × radius reach (m.)	2×7 tons ×20.5 m.	2×7 tons ×20.5 m.

SURVEYORS: The following Classification Societies are represented in Jeddah: Lloyd's, A.B.S., B.V., D.N.V., N.K.K., G.L. and RINA.

Cargo surveyors also available.

GANGWAY/DECK WATCHMEN: 1 Coast Guard is stationed at the foot of the gangway of vessels alongside. Coast Guards keep constant check on liquor seals and may search personnel going ashore.

HATCHES: The opening and closing of non-mechanical hatches is normally carried out by the Port's stevedores.

CUSTOMS ALLOWANCES: Alcohol must be kept in bond and is not allowed to be consumed or landed within the Kingdom. There are no restrictions on tobacco.

CARGO GEAR: Discharge of general cargo and containers at non-specialised facilities is by ship's gear. However, a wide range of mobile cranes are available for hire at short notice (see "Cranes").

REPATRIATION: There are approximately 30 international flights daily to and from Jeddah. A visa is required for entering or leaving the country.

AIRPORT: The King Abdul Aziz International Airport is located approximately 30 km. North of the port.

TIME: GMT plus 3 hours.

HOLIDAYS: Friday is the weekly day of rest and prayer. The Hegira calendar of 12 lunar months consisting of 354 days provides for two Government holidays. The first, lasting one week between the end of the ninth month (Ramadan) and the beginning of the tenth month (Shawwal), represents the celebration of the end of the month of Muslim fasting. The second is for 10 days, from the 5th to the 15th of the twelfth month (Dhu-al-Hijjah). This is the period when Saudi nationals and Muslims from all over the world come to perform the pilgrimage in the Holy cities of Makkah and Madinah.

The port, however, operates continuously throughout the year, 24 hours a day, 7 days a week.

POLICE/AMBULANCE/FIRE: Masters of vessels should contact the Port Control Signal Station on VHF Channel 16.

EMERGENCY CO-ORDINATION CENTRE: *Major Emergency Control:* In case of emergency, vessels should contact the Port Marine Control Tower on VHF Channel 16. Requirements will be relayed to the Port's Operations Co-ordination Centre.

TELEPHONES: Facilities are available for telephone connection at certain berths, although there are currently no arrangements for placing telephones on board.

Public pay phones are available in the port area.

SERVICES: *Tank Cleaning/Compass Adjusting/Life-Raft Servicing:* There are presently no facilities in Jeddah for tank cleaning or compass adjusting. Liferaft servicing facilities are available.

Fumigation: Fumigation services are available in Jeddah.

Garbage Disposal: The port has a waste incinerating vessel with one waste collection launch and one oil skimming launch. A charge is levied for this service at a rate of SR. 200 per vessel per day or part thereof. (These dues will be collected whether the vessel uses the service or not).

BANKS: All leading Saudi banks have branches in Jeddah.

STORING: Subject to approval from the Customs, Coast Guard and Health Authorities.

SHORE LEAVE: Permitted on Agent's application to the Immigration Authorities and the Coast Guard.

IDENTIFICATION CARDS: Shore passes are issued. However, Discharge Books or Passports must be left at the gate and collected when re-entering the port area.

GARBAGE DISPOSAL: Ships garbage is collected from vessels alongside or at anchor by a garbage boat. Garbage must be pre-packed in plastic bags. Charges SR.200 per day or part thereof, used or not used.

WASTE OIL DISPOSAL: Capacity: Slop tanks 2,000 tonnes. Waste oil tank 14 tonnes. Collection tanks 7 tonnes.
Vessel discharge rate: 100 tonnes/hour.
Contact Tel: (02) 6477781. Telex: 604237 JSRY. Fax: (02) 6485074.

SEAMAN'S CLUBS: None.

CURRENCY: Saudi Riyals (SR). U.S.$ 1.00 = SR 3.75 (fixed).

REGULATIONS: The Rules and Regulations for G.C.C. States Seaports are published in booklet form and are available on request from the Agent. Every vessel arriving at the port must have a copy on board or obtain one immediately on arrival.

Every vessel entering Jeddah Port must hoist the Flag of the Kingdom of Saudi Arabia and keep it flying at all times throughout its stay in the port.

Vessels wishing to unload cargo at Jeddah Islamic Port must apply to the Director-General by telex for a berthing appointment prior to loading for Jeddah.

DELAYS: Subject to the timely completion of clearance formalities, there are no delays in berthing, loading, discharging or bunkering.

GENERAL: *Other important information:*

(a) Mean height of quay surface from water alongside berth is 2.25 m.
(b) Width of fenders is 30 cm.
(c) Height between highest and lowest recorded tides is 1.02 m.
(d) For reference, please see BA. Charts No. 2599 and 2577 and Red Sea Pilot.

Other facilities include:

(a) Modern equipment to combat oil pollution, including an oil recovery vessel, oil separation barges and a full range of spraying equipment, absorbants, dispersants and oil containment barriers. Tugs with pollution control facilities are available.

(b) An integrated fire-protection and fire-fighting system incorporating a sophisticated control centre with electronic monitors for fire alarm and detection equipment, linked with a highly efficient network of sprinklers in all buildings, transit sheds and warehouses. In addition, the port has its own fire station equipped with a full range of appliances. Water-borne facilities are also available in the form of fire-fighting vessels up to 2,860 h.p.

(c) *Miscellaneous marine craft and equipment comprising:*

Flat-top barges of 400 tons carrying capacity.
Pilot boats.
Service launches.
Barge towing launches.
Mooring launches.

REPORT: May 1984.

Operational instructions for Owners and Masters of vessels taking offshore bunkers from Bakri Bunker Trading Co. at Jeddah:

1. *Radio Contact/Operating Position:*

"al Bakry" (call sign HZGH) maintains continuous watch on VHF Channel 16. VHF range in this area is 300-400 nautical miles and Masters should therefore establish contact at least 24 hours ahead of arrival Jeddah. Working channel will be agreed between Masters when contact established, and rendezvous point will be advised by the Master of the bunker vessel, well in advance.

Please note that Customs/Waterguard operate only during the hours of daylight. Customs launches leave quay at 0900 hrs. daily and clear vessels in order of arrival through approximately 1700 hrs. Vessels arriving too late are not cleared until following day.

2. *Notice:*

A. Wherever feasible vessels taking bunkers from Bakri Bunker Trading Co. must send a cable at least 120 hours prior to arrival off Jeddah to 'best service Jeddah' giving following information in accordance with port management instructions:

(1) Radio code, (2) vessel's name, (3) owner/line, (4) nationality, (5) Agent, (6) LOA, (7) max. draft in metres, (8) g.r.t., (9) n.r.t., (10) d.w.t., (11) all previous names, (12) Jeddah ETA, (13) actual arrival draft, (14) details of hazardous cargo in transit for other ports, (15) Lloyd's Register number, (16) Expected requirements of bunkers and water, (17) quarantine requirements of port doctor – name of last 3 ports of call/no. of crew and their state of health/validity of vaccination certificates for cholera and yellow fever, confirmation that none of the crew will go ashore.

Please note: Prior to the provision of any services being authorised, an approval must be obtained from the office of the Assistant Director General (Traffic and Operations.)

The final ship's Clearance Certificate will not be signed prior to sailing by the responsible Jeddah Port Management officers unless it is accompanied by the original advice notice bearing Jeddah Port Management's stamp and the signature of the Clearing Officer.

B. Owners must also send a telex minimum of 72 hours prior to their vessel's arrival off Jeddah to Bakri Bunker Trading Co. (Telex: Jeddah 401557 "Bakri SJ" or Jeddah 402125 Penta SJ) repeating the information contained in the cable sent from their vessel. This telex must also confirm that none of the crew of vessel will go ashore. Failure to provide the above information in time could delay clearance by Jeddah Port Management and result in vessel being delayed.

C. Both messages A and B must be updated 48 hours and 24 hours ahead of arrival.

3. *Operating/Manoeuvring:*

Will be advised by Master of "al Bakry" on VHF.

4. *Supplies:*

Supplies are made subject to the general terms and conditions for the sale of marine fuels of Bakri Bunker Trading Co. Ltd.

5. All vessels calling for bunkers with Bakri Bunker Trading Co., must comply with the laws of Saudi Arabia, including courtesy flag requirements.

Vessels have recently been delayed by boycott office and Port Authority in Jeddah due belated receipt particulars, especially Lloyd's number/all former names. If this data not received minimum 72 hours ahead vessel's arrival, delay will ensue.

NOTICES: 1986.

Agents Notices to Masters.

Dear Captain,

To avoid any inconvenience to yourself and to your crew and in order that your vessel is not penalised we are listing below those requirements which you must follow and those which you must avoid during your stay in the Port of Jeddah.

(A) WHAT YOU MUST DO:

1. The Master of every vessel arriving at any Saudi Port for discharging/loading of cargo is required to possess one copy of the book "Rules and Regulations for Saudi Arabian Seaports". If you do not have it, please order through our representative. The Port Inspectors make periodical inspections and in the event of non-possession of the said Rules Book by a vessel, she may be penalised. If you already have one or after you get one, it is recommended that you please do read pages 66-75, 163-172, 220-233 and 260.

2. The National Flag of the Kingdom of Saudi Arabia must be kept hoisted round the clock on all days of the week from the time of entering into and sailing from the port of Jeddah.

3. In order to arrange vessels inward/outward clearance, following documents should be delivered to our representative against signed receipt.

1. Certificate of Registry.
2. Safety Equipment Certificate.
3. Safety Construction Certificate.
4. Load Line Certificate.
5. Hull and Machinery Classification Certificate.
6. Safety Radio Telegraphy Certificate.

These documents will be returned to you with the Port Clearance prior to your departure. Vessels arriving at the ports of the Kingdom, with expired certificates, are liable to penal action.

4. All the time, from the time of arrival, your vessel must be in a condition to sail within one hour's notice from the Ports Authorities.

5. From the time of berthing and until its sailing from the berth the Coastguard Police will stay at the gangway entrance.

6. Rat guards must be fixed on all mooring ropes and wires on vessel's berthing.

7. Opening of the hatches (also tween decks, where applicable) and rigging of your vessel's gear should be conducted by your crew to enable the port's stevedores to commence discharging/loading operations immediately upon berthing.

8. The ship's gangway should be protected by guide ropes and proper nets. Safety rails should be erected in tween decks during discharging operations in lower holds. Whenever possible, lashing should be temporarily removed from the deck cargo to facilitate passage for the shore labour to work. Port's Safety Officers inspect vessel from time to time and any contravention of Port's Safety Regulations is subject to penal action.

9. The vessel should be self-sustaining and the gear in proper condition to carry out the discharging/loading operations round the clock. Any delay in discharging/loading as a result of winch stoppages, will be recorded against the vessel and charged at SR.200/– per gang hour or part thereof will be treated as one hour. In the event of frequent winch breakdown or a breakdown whose repair may take a long time, a shore crane could be employed by the port for account of the vessel in case the ship/Agent's themselves do not arrange one. To arrange a shore crane our representative will need your authority. For idle gangs, from the time of winch stoppage until the shore crane physically arrives and discharge is resumed, vessel will be charged at the rate mentioned above.

Please note that Port Authorities have the right to employ shore cranes for account of the vessel to expedite discharge even if ship's gear is fully operational. The cost is debited to the ship whether or not the requisition form is endorsed by the ship's Master.

10. Your Duty Officers are required to supervise discharging/loading operations and any irregularity in handling of the cargo by the stevedores must be notified in writing to stevedores' representative on board with copy to Port Authorities.

Stevedores are employed by the Port Authorities and work as follows:

General and Bagged Cargo: 0100 hrs. – 0600 hrs., 0700 hrs. - 1200 hrs., 1300 hrs. – 1800 hrs., 1900 hrs. – 0000 hrs.

Frozen Cargo: 0700 hrs. – 1200 hrs., 1600 hrs. – 0000 hrs.

Citrus: At present citrus cargo also handled same as general and bagged cargo.

11. Except crew members from Communist Bloc and countries with whom the Kingdom of Saudi Arabia does not have diplomatic relations, all others are allowed to go ashore escorted by the Agents of the vessel and with a valid Shore Pass issued by the Immigration Department of the Seaport. Shore passes are arranged by the Agent against Master's written undertaking that all crew members will return to the ship and that the Master holds himself fully responsible for all the consequences if any crew fail to return to the ship. The Authorities permit crew members to go ashore for a maximum period of 3 hours during the day only and the permission is granted between 0900 hrs. – 1600 hrs. except on Fridays. The crew members should return to the ship escorted by the Agents before 1900 hrs.

In order to arrange shore passes, we will need your written confirmation at least 18 hours in advance on our prescribed form together with one black and white photograph for each crew member who will go ashore.

12. Application for repatriation of crew is accepted by Immigration Authorities only when it is accompanied with a ticket in the name of the crew member with a confirmed seat for leaving the Kingdom not later than 72 hours from the date of application. In order to arrange confirmed seats we must get an advance notice of at least 48 hours.

13. Completion of discharge must be supervised by ship's Officers who should ensure that no cargo bound for Jeddah is left in the ship except the cargo whose discharge was not allowed by Port Authorities. On completion of discharge of all sound cargo, Jeddah Signal Station should be contacted at Channel 16/12 through VHF to request for a Pilot who is available at short notice. You can notify the Authorities to provide a Pilot as soon as you have on board, the Port Clearance and you are ready to sail. Normally 1 to 2 hours following completion of discharging/loading are allowed to prepare a vessel for sailing.

Following is the allocation of VHF Channels by the Jeddah Islamic Sea Port.

Channel 9 – Marine Pilots.
Channel 11 – Petromin Marine Operations.
Channel 67 – Pilots/Tugs/Berthing Operations/Safety in event of fire.
Channel 69 – Pilots/Tugs/Berthing Operations.

14. In order to keep the parties concerned informed of the daily progress of discharging/loading operations including any other details information, you will be required to fill-in the "daily position" form left with you by our representative upon your vessel's berthing. It should be kept ready every morning for collection by our representative at about 0800 hrs.

15. Personnel of our Operations Department will be in very close contact with you during vessel's stay in port and shall present to you the prescribed form for SERVICES REQUIRED THE FOLLOWING DAY. This form may be filled in and kept ready for delivery to the Officer on the evening shift who will collect it from you at about 1700 hrs. This procedure will apply from the day following the berthing of your vessel.

However, should the vessel berth before mid-day then our Boarding Officer can be asked to attend to services required the same day.

16. To ensure that ships under our Agency are attended to the satisfaction of our Principals, our Operations Department's Officers are advised to present to you the "Service Form" of the previous day, on the following day so that in case some service that you had asked for has not been rendered, then a remark to that effect could be endorsed on it by you to receive the attention of the Management. We shall greatly appreciate your co-operation in this regard and if for any reason this form is not presented to you for remarks then the Duty Officer may please be reminded of it.

(B) WHAT YOU MUST NOT DO:

1. Manoeuvring of vessels within the port limits without a local Pilot on board, is prohibited.

2. Immobilisation without valid permission from the relevant Authorities, is prohibited.

3. Engine repairs/burning/painting/chipping while at berth, is not allowed without prior permission.

4. Lowering of lifeboats while alongside berth or at anchorage, is not allowed except in an emergency.

5. Spillage of oil and disposal of garbage within the port limits, is prohibited.

6. Unauthorised photography is strictly prohibited.

7. Possession of spirits/alcoholic beverages, weapons, drugs, obscene literature or nude – semi-nude pictures is strictly prohibited which please note advise all your crew members accordingly. The Coastguard Authorities conduct searches and if any crew member is found in possession of any of the above articles, he would be liable to punishment as per local laws.

8. In case of shifting to anchorage, prior to your final sailing, you must inform the signal tower of your date and time of departure.

CIRCULAR: (1983). Please note the following Immigration Rules now prevail in the Port of Jeddah. Kindly see to it that these rules are strictly followed in order to avoid any problem to your crew and the vessel.

(AA) Shore Leave Pass Facilities:

1. Crew Shore Leave Pass will be issued by the Immigration Department for a maximum number of 10 crew members per day from any ship including crew requiring shore medical facilities and Master or other officers requiring consular service. Shore leave will be restricted to three hours only i.e. from 1100 hrs. to 1400 hrs.

2. Master should ensure that requisition for Crew Shore Leave Pass is handed-over to Agents' Crew Department in the afternoon of the preceding day so that necessary paper work is completed to avoid delay in obtaining permission next morning before 1100 hrs.

3. For vessels arriving during the day time, crew shore leave is not permissible the same day; passes will be issued the following day provided requisition is given to Agents as mentioned in No. 2 above.

4. For vessels arriving during the night, requisition must be given to Agents in the morning and passes will be arranged during the afternoon.

5. Emergency cases are exempted from the restrictions mentioned in 1, 2, 3 and 4 above.

6. In case of serious sickness of a crew member the Safety Department of the port of Jeddah must be informed immediately through Signal Tower instead of calling the Agents. Agents may also be informed for further assistance.

7. Crew shore leave is strictly prohibited after issuance of Sailing Permit.

(BB) Crew Sign-On:

1. Following particulars of crew arriving to join a vessel, must be communicated to the Agents at least 72 hours prior their date and time of arrival.

(a) Full name of seaman.
(b) Nationality.
(c) Seaman's Book Number, date and place of issue.

2. Clearance by Airport Immigration Department of crew arriving without visa on international passport is strictly forbidden.

3. Crew arriving without visa to join a vessel must possess Seaman's Book otherwise they cannot be cleared by Airport Immigration Department.

4. Clearance by Airport Immigration Department of crew as mentioned in No. 3 above is granted only if the vessel which they are coming to join, has already arrived in the Port of Jeddah. If the vessel has not yet arrived the crew will remain in transit in the airport.

5. Crew arriving at night to join a vessel already in port, cannot be signed-on until next day and as such will have to stay for one night in an hotel. Crew arriving during the day but before noon, may be signed-on the same day.

(CC) Crew Sign-Off:

1. Following particulars for crew to be signed-off, must be communicated to the Agents at least 72 hours prior anticipated time of departure.

(a) Full name of seaman.
(b) Nationality.
(c) Seaman's Book Number, date and place of issue.
(d) Destination.

2. Because 72 hours' prior notice is required, as mentioned in No. 1 above, crew sign-off will not be possible from a vessel staying for less than 72 hours in the port unless the required repatriation of any crew has been communicated to the Agents prior to arrival of the ship.

3. Signing-off of crew without Seaman's Book is not permissible.

4. Any crew not holding ticket with confirmed seat, cannot be signed off.

5. Crew already signed-off by the Immigration Department will be cleared by the Customs a maximum of 6 hours before the departure time. With this restriction crew departing between 0100 to 0800 hrs., cannot be repatriated.

6. Vessel completing discharge prior completion of repatriation formalities of any crew, will have to stay at anchorage in order to disembark the crew member after completion of formalities.

(DD) The above Rules and Regulations will also be applied to vessels calling Jeddah for bunkers and/or provisions only.

SHIPMASTER'S REPORT: November 1986.
Report on Visit to Jeddah for Bunkers Only:
ETA Advice: Send ETA 96, 72, 48, and 24 hours in advance of arrival also update if ETA varying by more than 1 hour after 24 hour Notice is sent. Contact by VHF as soon as in range of Port Control.
Approach: Approach to the Port can be difficult, especially at night. There are a great deal of works in progress in and around the Port, which renders identification of navigational marks and shore characteristics difficult. The best aid to position fixing approaching the Port is Mismari Reef, which has a Racon on it, and shows up well on the radar. Approach is also made difficult by the fact that there were many ships at anchor on the occasion of this visit. (Over 50 vessels).
Anchorage: There are designated areas marked on Admiralty Chart No. 2599 (Approaches to Jiddah). The designated anchorage for vessels bunkering is Anchorage 'E'. However, due to the large number of vessels at anchor, anchorage has to be effected wherever there is sufficient anchor berth for the size of the vessel. (Port Control did not give any directions with regard to anchoring position, and only asked to be given time of anchoring and bearing and distance from Qaham Beacon, of anchor position).
Formalities: Agent and Customs board from a small tug size vessel, apparently used specifically for this purpose. They boarded more or less on arrival. Forms, etc. required are as detailed in final 'Notes'. Pilot ladder was used to embark and disembark these Officials. A heavy swell was running on the occasion of this visit, and it would have been impractical to have used the accommodation ladder only, although a combination rig could have been used.
Bunkering: Bunker barges of about 3,000 d.w.t. are used. These vessels operate from a much larger 'mother' ship. The barge that delivered this vessel's bunkers was rigged to come alongside starboard side to; but it can be ascertained by calling the 'mother' ship before arrival. Barge used 6 in. bunker hose, and midship bunker connection. (it would not be practicable to have used the after connection on this ship, due to the length of the bunker barge). On completion of bunkering, Bunker Receipts are signed and stamped in the usual way. Port Clearance is issued by bunker barge after bunkering formalities completed. Port Control must be informed of Port Clearance Number, after which vessel may sail.
Notes: On the occasion of this vessel's visit, a rather heavy swell was running at the anchorage. This rendered taking of dips in the bunker tanks rather difficult, and also due to ranging of the bunker barge alongside, it was not possible to check barge by ship's staff. Quantity of bunkers delivered is effected by using a flow meter on the barge. It was discovered after vessel had sailed, that there was a shortage of some 45 tonnes (in a consignment of 1,400 tonnes). However, at the time of taking the bunkers, it had not been possible to accurately gauge the vessel's bunker tanks due to the swell. (It may well be that the barge's meter was inaccurate, but in the light of the above, it is therefore important to check as closely as possible calculated quantity taken by ship's measurements, and any shortage, or suspected shortage noted).
Arrival Message: To be supplied to Port Management, Jeddah. (Either direct or through Agents).

1. Radio call sign.
2. Vessel's name.
3. Owner and Line – Ex-Owners, Charterers or Operators (full address, telex, cable, postal).
4. Nationality – flag, port or registry.
5. Agent at Jeddah.
6. Length overall.
7. Maximum draft (metres).
8. Gross registered tonnage.
9. Nett registered tonnage.
10. Previous names.
11. Build – year and place.
12. Type of vessel.
13. Deadweight tonnage.
14. ETA – changes of ETA.
15. Actual arrival draft.
16. Hazardous cargo in transit for other ports.
17. Lloyd's Register Number or other Registration Number.
18. The expected requirements for bunkers and water.
19. Economic speed of vessel.
20. Next port of call after Jeddah.
21. Last port of call before Jeddah – cargo on board.
22. Names of ports vessel called before arriving Jeddah (within last 2 months).
23. Vaccination Certificates valid against cholera.
24. Number of crew and their state of health.
25. Statement of Owner/Master that the vessel was never blacklisted by Arab League.
26. Master's Declaration for any arms and ammunition carried on board for cargo in transit or purely for the purpose of self defence, at least 48 hours prior vessel's arrival (failure to comply with these procedures will result in heavy fines and seizure of arms).
27. The following is also required:
    (a) Type of radar.
    (b) Frequency.
    (c) Scan rate.
    (d) Pulse width.
    (e) Pulse peak power.
    (f) Pulse repetition frequency.
    (g) Beam width.
    If the vessel is equipped with several radars, the characteristics of each radar must be given.

Notes:

1. Send above as soon as possible after vessel receives orders for Jeddah.
2. No. 27, not required to be sent if this information has already been tendered on a previous occasion.
3. Above required even if making an off-limits bunkering call.
4. Vessels calling for bunkers only will also be required to submit the following Forms to Agent and Customs, who board on arrival.

4 Crew Lists.
2 Vaccination Lists.
2 Crew Effects Declarations.
2 Stores Lists.

All above documents can be presented on appropriate IMO Forms, except the Store Lists, which have to be on Saudi Arabian Forms for Customs. Forms will be provided if vessel not in possession.

5. Customs will seal bond and radio transmitter on clearing ship inwards.

SHIPMASTER'S REPORT: June 1988.

Vessel called in the Roads for bunkers.

The bonded stores are sealed. Crew are not allowed to have beer or personal refrigerators in their cabins. This includes the Master and all officers.

All beer and spirits must be placed in the bonded store prior to Customs boarding the vessel, otherwise severe fines may be imposed.

AUTHORITY: Jeddah Port Management, P.O. Box 9285, Jeddah 21188, Kingdom of Saudi Arabia. *Tel:* Jeddah (02) 6471200 (17 lines). *Telex:* (Arabic) 603446 SAEJ; (English) 601175 Ports SJ. *FAX:* (02) 6477411. *Cables:* Ports Jeddah. *Contact:* Mr. Mustafa M. Hariri, Director General. Mohd. Ali Algamdi, Marine Director.

AGENT: Gulf Agency Company Saudi Arabia, Algosaibi Centre, Andalus Street, Al Hamra, P.O.B. 2038, Jeddah 21451, Saudi Arabia. Ship-Shore traffic via Jeddah Radio/HZH. Tel: 6535060. Telex: 601047 ("Gaship Sj"). Fax: 6510860. Cables: "Gulfagency", Jeddah.

JU'AYMAH: 26.56 N. 50.03 W. (See Plan)

ALSO SEE "RAS TANURA – SECTIONS (A) AND (B)".

(A) JU'AYMAH CRUDE TERMINAL.
(B) LPG TERMINAL.

(A) JU'AYMAH CRUDE TERMINAL.

This section gives specific information regarding Ju'aymah Crude Terminal which includes the Single Point Mooring Berths and is to be read in conjunction with "Ras Tanura – Part A".

LOCATION: The Ju'aymah Crude Terminal loading facilities are located approximately 18 miles N.N.W. of the Ras Tanura Terminal and 7 miles offshore.

These facilities consist of an oil metering and manifolding platform, a terminal control platform and 6 Single Point Mooring Berths. The oil metering and manifolding platform is in the following position: Lat. 26° 54.8′ N., Long. 50° 01.2′ E.

Ju'aymah Crude Terminal: The terminal is a Saudi Aramco crude oil and fuel bunker loading facility designed for loading and topping-off deep draft tankers. The terminal consists of the following facilities:

An Oil Platform (130 ft. by 390 ft.) located in 50 ft. (15.24 m.) of water. This platform receives crude oil and fuel bunkers from the storage tanks on the shore to the S.S.W.

The platform is well lighted with general purpose lighting. In addition 1 fixed white light has been established on each corner of the platform with a range of visibility of approximately 5 miles. A Control Platform (70 ft. by 70 ft.) is located 150 ft. North of the oil platform and connected to it by a walkway bridge. This platform is marked by a fixed red aircraft warning light.

Single Point Mooring Buoys have been established between 1 and 4 miles to the N.E. of these platforms. Crude oil and bunkers are received at each buoy.

Each buoy is fitted with 2×24 in. floating crude loading hoses with 16 in. or 20 in. tail hoses and 1×12 in. floating bunker loading hose. The length of the string is approximately 1,100 ft. (335 m.).

When an SPM is removed ashore for maintenance, a marker buoy may be installed to indicate the position of the underwater pipeline and anchor chains.

PILOTAGE: *Pilot Boarding:* A Pilot/Mooring Master and an SPM Representative will board inbound vessels by helicopter if possible as advised.

They will advise the Master on all manoeuvres and operations relative to berthing, connecting and disconnecting hoses and unberthing. They will also provide all communications between vessels and shore during cargo loading and be the Saudi Aramco Representative with respect to safety observation and other requirements.

These two persons will remain on board the vessel throughout the loading and unmooring and suitable accommodation for them is to be provided.

Dependent on weather and other conditions, vessels will be advised by Ju'aymah Pilot/Radar to proceed to a position approximately 8 miles E.N.E. of Ju'aymah Platform and make a lee for the Pilot to board or for the launch carrying mooring and hose connecting equipment.

Pilot Boarding Position: Lat. 26° 53.5′ N., Long. 50° 05.6′ E.

INBOUND TRAFFIC PROCEDURE: See "Ras Tanura – Part B" – Traffic Regulations.

Vessels Proceeding Direct to Ju'aymah Crude Terminal: As per "Ras Tanura – Part A" – Navigation – Inbound Traffic Procedures to the Entry Buoy and to a position approximately 2.5 miles N.E. of Buoy 3A.

According to advice from Ju'aymah Radar should turn into the Ju'aymah Pilot Boarding Area to anchor or be berthed on arrival.

Vessels Proceeding from Northern Holding Anchorage to Ju'aymah Crude Terminal: Should enter the Separation Scheme under advice of Ju'aymah Radar and proceed as above.

Max. Draft in Arrival Channel: The max. draft is 70 ft. (21.34 m.) for vessels proceeding along the Inward Channel of the Ras Tanura Separation Scheme bound to Ju'aymah Crude Terminal.

Vessels Proceeding from Ras Tanura Terminal to Ju'aymah Crude Terminal: The vessel should then proceed, exercising due diligence, through the Caution Area and with the advice of Ras Tanura Port Radar and Ju'aymah Radar into the Ju'aymah Pilot Boarding Area either to anchor or be berthed on arrival.

Prohibited Area: No vessel shall enter the Prohibited Area without a Pilot on board. Under no circumstances shall anchors be used in the vicinity of the berths due to the existence of numerous submerged pipelines.

ANCHORAGE: The area West of Beacon No. 3 is used as a final holding anchorage and for vessels awaiting arrival clearance, cargo clearance, sailing documents, etc.

Vessels must leave the inbound route to the berths clear when selecting an anchoring position in this area.

RESTRICTIONS: Ships securing to Smit Mooring Brackets at Ju'aymah SPM Terminal will only be berthed in wind speeds of less than 25 m.p.h. Additionally, this parameter may be further reduced, at the discretion of the Berthing Pilot, should he consider that other forces, i.e. sea state, be prejudicial to a safe mooring operation.

MAX. SIZE: Max. arrival draft 21.34 m. No limitation on sailing.

HEALTH: *Pratique and Quarantine:* At Ju'aymah Crude Terminal, no person is permitted to board a vessel, nor is she permitted to proceed to the berth until inward clearance formalities have been completed and the Authorities have visited the vessel. Vessels topping off from Ras Tanura Terminal will already have completed these formalities.

However, during adverse weather conditions permission may be given by Government Officials for the Pilot to board and moor the vessel before clearance is given. If this occurs and weather conditions continue to preclude clearance during the loading operation, the vessel must when unmoored anchor and wait for clearance formalities to be completed.

RADIO: *Underway:* At all times when underway in the Arrival Channel and Pilot Boarding Area, vessels must maintain contact with Ju'aymah Radar on VHF Channel 13 and with Ju'aymah Pilots on Channel 16 or one of the following VHF working Channels: 10, 11, 12, 13, 14.

At Anchor: A good listening watch should be maintained on VHF Channel 16.

Vessels will be called by Ju'aymah Pilots or Ju'aymah Radar with berthing and other information and instructions.

Under Pilotage and at Berth: The Pilot/Mooring Master will carry a portable intrinsically safe multi-channel radio by means of which all communications regarding approach, mooring and cargo loading will be made. These radios are fitted with an emergency tag which activates an alarm at the Control Platform when removed.

He will also carry battery chargers for these radios during the vessel's stay in the terminal.

In addition, the vessel's VHF radio should be available on the bridge and in the Cargo Control Room for back-up communications.

BERTHING: *Preparations:* Line handling during mooring and unmooring is to be performed by the ship's staff under instructions of the Pilot Mooring Master.

Vessels assigned to the Ju'aymah Crude Terminal SPMs must be fitted as recommended in the OCIMF publication "Standards for Equipment Employed in Mooring of Ships at Single Point Moorings".

Mooring to strops secured to bitts is not permitted.

During the approach, while mooring and while secured in the berth, the vessel's anchors MUST be secured by stoppers to prevent accidental dropping with subsequent damage to the undersea pipelines and equipment.

Both port and starboard derricks should be rigged ready to lift the mooring and hose connecting equipment from the launch on either side. A trolley should be available to transport this equipment about the vessel's deck.

The following vessel's equipment should be ready on forecastle head:

(a) Two messenger lines 3 in. to 3.5 in. circumference (24 mm. to 28 mm. dia.) 500 ft. (150 m.) in length.
(b) Sledge hammer, large crowbar, large marlin spike, adjustable wrench/spanner.
(c) Bag of sawdust or sand.
(d) Large flashlight (for night mooring).

Procedure – Mooring:

(a) Saudi Aramco mooring and hose connecting equipment will be lifted aboard the tanker from the launch on either the port or starboard side by means of the ship's derrick.
(b) Ship's staff will prepare the forecastle head for the mooring operation at the instructions of the Pilot/Mooring Master.
(c) As the vessel approaches the berth, a mooring boat will bring the port hawser pick-up rope (10 in. circumference – 80 mm. diameter) and make it fast to the messenger.
(d) At the boat's signal, the pick-up rope is hove on deck and by means of this, the chafing chain is lifted in the bow chock and to the mooring bracket.
(e) Under the direction of the Mooring Master, the chafing chain is secured in the vessel's mooring arrangement.
(f) Ease back on the pick-up rope until the weight is taken up.
(g) Repeat for the second mooring hawser.

Procedure – Unmooring:

(a) Take the weight of the mooring assembly on the pick-up rope, using the windlass.

(b) Disconnect the chafing chain from the mooring arrangement.

(c) Slowly slack the pick-up rope until the support buoy is in the water and taking all of the weight of the chain.

(d) Pay out the pick-up line either to a mooring boat or as the ship clears the berth.

BERTHING FACILITIES: At the berths, cargo hose connections are 16 in. or 20 in. and bunker hose connections are 12 in. arranged to be connected abaft the crude loading connections. All flanges are 150 ASA.

In order to avoid delays, vessels should have reducers ready at the port side manifold to adapt to these sizes. Maximum crude loading rate is 130,000 bbls.p.h., and maximum bunker loading rate is 5,000 bbls.p.h.

Berth No.	*Lat.* N.	*Long.* E.	*Minimum Water Depth* (m.)
31	26° 55.6′	50° 02.4′	32.1
32	26° 56.49′	50° 02.15′	33.8
33	26° 57.0′	50° 02.7′	34.0
34	26° 56.6′	50° 04.3′	35.0
35	26° 55.6′	50° 03.6′	32.0
36	26° 55.6′	50° 04.9′	32.2

Note: The following crudes are available at Ju'aymah Crude Terminal: Arabian Light Crude, Arabian Medium Crude, Arabian Heavy Crude. Arabian Berri Crude is NOT available.

LOADING: *Loading Hose Connection and Disconnection:* In order to secure the floating hoses to the vessel's manifold, the manifold arrangements must be as recommended in the OCIMF publication – "Standard for Tanker Manifolds and Associated Equipment (May 1975)" and "Tanker Manifolds and Associated Equipment (3rd Edition 1981)".

Preparation – On the Port Side:

(a) Derrick rigged for maximum height and load lifting capacity (10 tons minimum for 16 in. hoses and 15 tons minimum for 20 in. hoses). If possible, the topping lift of the derrick shall be on its own winch.

(b) Two 16 in. or 20 in. 150 lb. ASA flange connections on selected cargo manifolds and one 12 in. 150 lb. ASA flange on the after bunker manifold.

(c) Drip trays, sawdust or sand, dispersant and fire fighting equipment in position.

(d) The following are normally supplied by Saudi Aramco but their presence will prevent delays in case of deficiency or malfunction: Chain block (not normally supplied), Handy Billy, heaving line, spare spanners, spare wire strop, spare bolts.

Procedure – Connecting Hoses: Connecting and disconnecting of cargo and bunker hoses is to be carried out by ship's staff under instruction of Mooring Master.

(a) Lower derrick hook to the mooring launch which will connect it first of all to the forward hose.

(b) Heave up until the blank flange is level with the hose rail.

(c) Unshackle hose snubbing wires and secure guy ropes to the flange.

(d) Continue heaving up the hose as directed by the Mooring Master.

(e) Secure snubbing wires in a manner to facilitate possible slackening as directed.

(f) Lower the hose to bring the hose flange to the manifold and check the alignment of the flanges.

(g) Lower the hose onto the drip tray and remove the blank flange.

(h) Using the nylon band sling supplied, lift the hose and connect it to the manifold. Never use a wire strop for lifting a cargo hose. USE ALL OF THE BOLT HOLES AND A GASKET.

The second cargo hose and the bunker hose are connected in the same way.

After all hoses are connected, the cargo hoses must be supported in way of the vessel's side rail by means of the nylon bands supplied and the vessel's derrick.

Procedure – Hose Disconnecting: On completion of loading cargo or bunkers manifold valves must NOT be closed until the Mooring Master directs. This is important for line clearing.

(a) Strop the after hose to the derrick hook, take the weight and disconnect the flange.

(b) Replace the blank flange using *all* of the bolts and a new gasket. Tighten the bolts in sequence to avoid uneven tension on the flange.

(c) Lower hose to deck and secure.

(d) Repeat with forward hose and wait until backfilling of the hoses is complete.

(e) Bunker hose should be disconnected and securely blanked as soon as bunkering is completed and secured on deck until cargo loading is completed. It should be lowered into the water during backfilling of the cargo hoses.

(f) When backfilling is completed, secure the derrick hook to the lifting hook of the after hose and raise the hose until the weight is taken off the snubbing wires.

(g) Release the snubbing wires, lower the hose to rail level and shackle the snubbing wire to the flange.

(h) Lower the hose end into the water and trip the hook to release.

(i) Repeat for the forward hose.

Return all Saudi Aramco tools and equipment to the steel basket, stow in a seamanlike manner and prepare for lowering to the launch on either the port or starboard side dependent on weather conditions.

Loading Procedures: The loading operation will be controlled by radio voice communications between the Mooring Master on the loading vessel and the Control Platform.

All operations including switching of tanks and topping-off must be directly and personally supervised by a ship's officer. Upon being informed by the loading vessel's personnel that the vessel is ready to start loading, the Pilot/Mooring Master will request the loading to proceed according to the previously agreed plan with respect to start-up rates, maximum loading rates and topping-off rates.

Under no circumstances is the flow to the vessel to be stopped by the vessel whilst switching tanks, etc. Need for emergency shutdown of loading aboard the vessel must be communicated by radio from the loading vessel to the Control Platform.

In the event of failure of the radio communications system, the vessel will sound five long blasts on the vessel's whistle followed by 1, 2, 3, 4, 5 and 6 short blasts for a vessel at Berth 31, 32, 33, 34 or 36 respectively.

Loading operations will be stopped and will not be resumed until communications have been re-established.

It is the responsibility of the vessel to advise the Mooring Master to shut down cargo and bunker loading when the vessel's cargo and bunker requirements are met.

Cargo Calculations and Release: The American system of cargo measurement in Barrels with temperatures in fahrenheit degrees according to the ASTM-IP is used by Saudi Aramco and the Saudi Arabian Government for cargo measurement purposes. Ship's cargo loaded figures should be available in these units. Generally, if the difference between average normal ship measurement and official cargo measurement is satisfactory the ship will be released to sail, and the Pilot/Mooring Master will leave after unmooring is complete. If the ship/shore difference is large, the Pilot/Mooring Master will survey the cargo according to laid down Saudi Aramco inspection procedures after unberthing and report his findings to Saudi Aramco Terminal Planners. The ship is required to stay until released by Saudi Aramco if ship/shore difference occurs.

Departure: Upon completion of unmooring, the vessel will make a lee for the mooring and hose connecting equipment to be discharged into the launch on either port or starboard side. Depending upon conditions, the Pilot/Mooring Master and SPM Representative may leave on the launch or later by helicopter. A separate departure channel has been provided for all vessels using the Ju'aymah facilities. The vessel will proceed via the Departure Channel between Beacon J1 and Buoy J2 and thence towards the Exit Buoy JE. The vessel should then set an Easterly course North of JD Buoy to the Ju'aymah Light Float.

EMERGENCY PROCEDURES: In addition to the general principles described in Part A of "RAS TANURA", the following apply to Ju'aymah Crude Terminal:

(a) Should a fire or explosion occur at a buoy mooring, the Oil platform or Control platform, all cargo operations will be stopped and all vessels should stand by to disconnect and unmoor when so instructed by the Pilot/Mooring Master or Port Captain, or when the need to take such action becomes self-evident.

(b) The local signal for emergency is a continuous ringing of the vessel's alarm bells supplemented by more than 6 short blasts followed by 1 long blast of the vessel's whistle. Assistance may be summoned on VHF Channel 16. Location, nature of emergency and type of assistance required should be given. (See "RAS TANURA" Part B – EMERGENCY SIGNAL).

BALLAST: *Arrival Ballast Condition:* Due to the exposed location at the Ju'aymah berths, tankers should arrive with sufficient clean water ballast for safe handling having due regard to the existing sea and weather conditions. Unless otherwise instructed, vessels must arrive with propellers just covered and trimmed not more than 8 ft. (2.44 m.) by the stern.

GENERAL: *Boarding Vessels at Berth:* Small craft are not allowed in the vicinity of the vessel and no one is permitted to board or leave a vessel while cargo loading operations are in progress. Should it become urgent to board or leave for any reason during cargo loading, the Pilot/Mooring Master must be contacted to request permission to shut down the cargo loading operation while the small craft is alongside.

S.P.M. Maintenance: In addition to the mooring boats a larger maintenance vessel works on hoses, buoys and sub-sea systems.

In bad weather, this work is extremely difficult and involves possible danger to personnel.

For this reason, vessels are requested to give as much assistance as possible by taking seamanlike care of the mooring and hose equipment and returning it to the water ready for the next tanker and in such condition as they would like to find it.

Hose/hawser maintenance is expensive and if Saudi Aramco judges that a vessel has misused any hose or hawser the vessel will be liable for the expenditure incurred in making repairs.

AUTHORITY: Saudi Arabian Oil Company (Saudi Aramco), Room N-2004, Ras Tanura, 31311 Saudi Arabia. *Tel:* 966-3-673-4252. *Telex:* 801220 ASAO SJ/Raspilot. *FAX:* 966-3-673-1669.
Contact: Captain A.K.Al Yami, Port Captain.

(B) LPG TERMINAL

This section gives specific information regarding Ju'aymah LPG terminal loading facilities and is to be read in conjunction with "Ras Tanura" – Part A.

PILOTAGE: *Pilot Boarding Position:*

In normal conditions of weather and traffic, an arriving vessel will be advised to proceed from the Ju'aymah Pilot Boading Area by a route South of Buoy J4 to a position 1.5 miles S.E. of SPM 36 to make a lee to pick up the Harbour Pilot. The Pilot will then advise on manoeuvring the vessel to the assigned berth.

Harbour Pilot and Assistant Harbour Pilot will remain on board to assist with efficient turnaround of vessel and will require accommodated and meals.

INBOUND TRAFFIC PROCEDURES: See "Ras Tanura – Part B" – Traffic Regulations.

Vessel Proceeding Direct to Ju'aymah LPG Terminal: As per "Ras Tanura – Part A – Navigation – Inbound Traffic Procedures" to the Entry Buoy and make for a point approximately 2.5 miles N.E. of Buoy 3A. Under advice of Ju'aymah Pilots and Ras Tanura Port Radar turn into the Ju'aymah Pilot Boarding Area to anchor or to be berthed on arrival.

Vessel Proceeding from Northern Holding Anchorage to Ju'aymah LPG Terminal: Enter the traffic separation scheme under advice of Ras Tanura Port Radar and Ju'aymah Pilots and proceed as above.

Vessel Proceeding from Ras Tanura Terminal to Ju'aymah LPG Terminal: Should depart Ras Tanura Terminal and follow the departure channel toward the mid-channel marker RT 1. The vessel should pass through the Caution Area with the advice of Ras Tanura Port Radar and Ju'aymah Pilots into the Pilot Boarding Area either to anchor or to be berthed on arrival.

ANCHORAGES: *Ju'aymah Pilot Boarding Area:* The area West of No. 3 Beacon is used as a final holding anchorage and for vessels awaiting arrival clearance, cargo clearance, sailing documents, etc. as for Ju'aymah Crude Terminal. Ships must only use this anchorage when directed to do so by Ju'aymah Pilots and must leave the inward route to the SPM berths clear when selecting an anchoring position in this area.

Ju'aymah LPG Anchorage: This anchorage has been laid out approximately 2.5 miles N.E. of the loading pier to provide a tank cooling area for gas tankers. The depth of water varies between 16 m. and 30 m. (52 ft. and 98 ft.) and holding ground is fair.

MAX. SIZE: Max. arrival draft 16.37 m. Max. sailing draft 23.00 m.

RADIO: *General:* The onshore production facilities of the LPG Terminal are known as the NGL (Natural Gas Liquids) Plant, etc. This name is often used in reference to the Terminal. No LNG (Liquefied Natural Gas) is exported from the Terminal.

Underway: In the arrival channel, vessels must maintain contact with Ju'aymah Radar on VHF Channel 13.

At Anchor: A good listening watch should be maintained on VHF Channel 16 for information and instructions from any of the following sources:

(a) Ras Tanura Pilots,
(b) Ju'aymah Pilots,
(c) Saudi Aramco Terminal Planners,
(d) Ju'aymah Radar.

Under Pilotage: The Harbour Pilots carry portable, intrinsically safe radios for contact with tugs which operate on Saudi Aramco dedicated mooring frequencies. In addition, the ship's main VHF radio should stand by on Channel 13 for back-up communication.

At Berth: A portable intrinsically safe radio will be supplied to the vessel by the terminal. This radio operates on a UHF frequency dedicated to each berth by means of which constant communication can be maintained during loading. This radio is fitted with a pull-off tag which, when removed, activates an alarm on the radio console in the Control Room and the Pilot Office.

BERTHING: *Mooring Procedure:* Mooring boats are not used at Ju'aymah LPG Terminal. Vessels should have heaving lines ready to take the shore messenger after landing alongside. The messenger is then made fast to the vessel's mooring line which is then hove ashore by a capstan. Heavy wires should be sent one at a time and ropes two at a time. Jetty crews are continuously on duty to handle mooring lines but will not handle mooring lines aboard vessels.

BERTHING FACILITIES: The 2 loading berths are situated on opposite sides of a platform aligned 335° true compass bearing. Berth 51 being the East (outer) berth and Berth 52 being the West (inner) berth. Minimum water depth at the berths is approximately 78 ft. (23.8 m.) at ISLW (Indian Springs Low Water). There are 4 breasting dolphins at each berth and 6 mooring dolphins. The tower crane located in the centre of the platform is used for moving operational and maintenance equipment. RLPG is loaded via 16 in. LPG loading arms. Maximum loading rate is 15,000 bbls.p.h. per arm. Therefore combined maximum for 2 grades is 30,000 bbls.p.h. Each berth is equipped with 4 LPG loading arms each of which may be used for butane liquid, propane liquid or vapour return. The loading arm connections can be adjusted to fit 12 in., 14 in. or 16 in. 150 ASA flanges. All LPG loading arms are fitted with quick connect/disconnect hydraulic couplers (QCDC). Each LPG loading line has an associated circulation return line. The bunker loading connections can be adjusted to fit 6 in. or 8 in. 150 ASA flanges. One bunker/black diesel loading arm is located at each side of the LPG loading station.

Both fuel oil bunkers and marine diesel oil are available at the Ju'aymah LPG berths. The nominal loading rate for fuel oil bunkers is 5,000 b.p.h. and for marine diesel oil is 600 b.p.h. These can be loaded through both of the 8 in. loading arms located on either side of the LPG loading station.

LOADING: *Trim and Stability:* During loading and deballasting operations, the vessel should at all times be adequately stable and in good trim to leave the berth at short notice in the event of an emergency. Excessive lists and trims are not permitted.

Loading Arm Connections: Jetty crews are on duty continuously to handle loading arms and make all connections and disconnections. All loading connections are equipped with electrical insulated flanges therefore ship to shore bonding wires are not required.

Due to the size and bulk of the QCDC couplers, a clear area around each manifold flange of at least 60 cm. (24 in.) is required. The vessel should have suitable 150 ASA reducers and spool pieces fitted to the manifolds it is intended to use.

Loading Procedures: Vapour line must be connected prior to loading LPG cargo of coolant. All excess vapour which cannot be handled by the vessel's recovery equipment will be metered to flare. It is the responsibility of the vessel to advise the jetty operators to shut down cargo and bunker loading when the vessel's requirements of cargo and bunkers are met.

Special regulations govern the acceptance and loading of gas tankers in the Port of Ras Tanura which includes Ju'aymah LPG Terminal.

Cargo Calculations: The American system of cargo measurement in BARRELS with temperatures in fahrenheit degrees according to the ASTM-IP is used for cargo measurement at this Terminal. An independent Inspection Agency is appointed by the Offtaker/Buyer to determine cargo quantity loaded aboard.

Departure: Upon completion of loading, cargo calculation and disconnecting cargo arms, the vessel will be unmoored and the Harbour Pilot will disembark. The vessel will then be free to leave the Port via the Ju'aymah Departure Channel if Early Departure Procedure is used and all relevant documentation is on board. Otherwise, the vessel will proceed to the Ju'aymah Pilot Boarding Area or Cooling Anchorage to await document delivery by the Agent, at the direction of the Pilot.

Contact with Ju'aymah Radar must be maintained on VHF Channel 13 when in the Ju'aymah Crude Terminal Approach Area.

GENERAL: *Emergency Procedures:* In addition to the general principles described in Part A of "RAS TANURA" the following apply to Ju'aymah LPG Terminal.

In the event of a fire or explosion at the pier or on board a vessel which is berthed alongside at the Terminal, the local alarm signal will be a series of 10 short blasts on the ship's whistle at which an Emergency Shutdown system will be activated to immediately stop all cargo loading to vessels at the berths. (See "RAS TANURA – Part B" EMERGENCY SIGNAL). In case of a situation requiring urgent removal of a ship from the berth, a system of sequential automatic loading arm disconnection is fitted. This system will only be activated after very careful evaluation of the situation by all parties.

Duty Harbour Pilot and Tugs: Whenever a vessel is at one of the berths at the LPG Terminal, a Harbour Pilot will stand by on the loading platform in constant communication with the vessel(s) and jetty staff by means of the dedicated UHF radios. Pilots on duty for 8 hours (0600 – 1400, 1400 – 2200 and 2200 – 0600 hrs.).

Tugs stand-by moored in sight of both loading berths.

AUTHORITY: Saudi Arabian Oil Company (Saudi Aramco), Terminal Pilotage and Services Division, Room N-2004, Ras Tanura, 31311 Saudi Arabia. *Tel:* 966-3-673-4252. *Telex:* 801220 ASAO SJ/Raspilot. *FAX:* 966-3-673-1669. *Contact:* Captain A.K.Al Yami, Port Captain.

AGENT: See "Ras Tanura".

JUBAIL: 27.01 N. 49.40 E. (See Plan)

ALSO SEE "GENERAL" BEFORE FIRST PORT.

(A) COMMERCIAL PORT.
(B) KING FAHD INDUSTRIAL PORT IN JUBAIL.

(A) COMMERCIAL PORT.

LOCATION: The Jubail Port Complex is located on the East Coast of the Kingdom of Saudi Arabia, approximately 80 km. North of Dammam. The Port Complex comprises 2 ultramodern facilities: The Commercial Harbour to the South and The King Fahd Industrial Harbour to the North. These harbours have separate entrances and are under separate port managements.

PORT LIMITS: The boundaries of the harbour and anchorages of King Fahd Industrial Port at Jubail and the Commercial Port of Jubail coincide and are given below:

Harbour Boundaries:

All Port property enclosed by a fence following the shore line and extending seawards to a line running between the following points:

Lat. 27° 00′ 00″ N., Long. 49° 40′ 00″ E.
Lat. 27° 00′ 00″ N., Long. 49° 43′ 12″ E.
Lat. 27° 03′ 00″ N., Long. 49° 44′ 00″ E.
Lat. 27° 04′ 10″ N., Long. 49° 46′ 00″ E.
Lat. 27° 11′ 10″ N., Long. 49° 53′ 45″ E.
Lat. 27° 14′ 10″ N., Long. 49° 59′ 00″ E.
Lat. 27° 16′ 00″ N., Long. 49° 58′ 00″ E.
Lat. 27° 17′ 45″ N., Long. 49° 55′ 30″ E.
Lat. 27° 15′ 20″ N., Long. 49° 51′ 30″ E.
Lat. 27° 12′ 50″ N., Long. 49° 52′ 30″ E.
Lat. 27° 09′ 00″ N., Long. 49° 46′ 00″ E.
Lat. 27° 04′ 40″ N., Long. 49° 44′ 00″ E.
Lat. 27° 07′ 00″ N., Long. 49° 44′ 00″ E.
Lat. 27° 07′ 00″ N., Long. 49° 41′ 00″ E.
Lat. 27° 05′ 43″ N., Long. 49° 41′ 00″ E.
Lat. 27° 04′ 00″ N., Long. 49° 36′ 30″ E.

DOCUMENTS: On arrival at the Port, the Master of the vessel shall present or make available for inspection the following papers and documents:

Log Book.
Registration Certificate.
Classification Certificate.
Load Line Certificate.
Building Safety Certificate.
Safety Equipment Certificate.
Radio and Wireless Certificate.
Cargo Gear Certificate.
Marine Health Declaration.
Vaccination List.
Derat Certificate.
Clearance from Last Port of Call.
Israel Boycott Declaration.
Ship's Stores List.
Grain Shipping Certificate (if the vessel is carrying a grain shipment).
Mail Transport Documents in accordance with the International Postal Treaty (if any mail is carried aboard).
5 copies of the Crew List.
5 copies of the Passenger List.
2 copies of the List of Personal Effects of Crew and Passengers.

To obtain Port Clearance the Master of the vessel shall present or make available for inspection the following papers and documents to Port Management:

Log Book.
Registration Certificate.
Classification Certificate.
Load Line Certificate.
Building Safety Certificate.
Safety Equipment Certificate.
Radio and Wireless Certificate.
Port Stevedore Outturn Report.
Receipt for payment of Custom's Duties.
Shipping Note and Cargo Manifest for any cargo loaded.

Cargo papers and documents: The following papers and documents must be submitted to the Port Management not later than 48 hours prior to arrival:

5 copies of the Cargo Manifests in English.
10 copies of the Original Manifests translated into Arabic.
2 copies of the Cargo Stowage Plan.
2 copies of the Hatch List or Bay Plan.
2 copies of the List of Dangerous/Hazardous Cargo for Discharge.
2 copies of the List of Dangerous/Hazardous Cargo in Transit.
2 copies of the List of Heavy and/or Awkward Cargo.
2 copies of the List of any Wine, Spirits and Narcotics, or in the absence of which a "Nil" return.
A Declaration of Type of Reefer Cargo.
An Application for Discharge Permit.

PILOTAGE: Pilotage is compulsory for all vessels of more than 150 n.r.t. Pilots available 24 hours a day, 7 days a week. Pilots will board in the vicinity of No. 7 Channel Buoy. Port Control Station is continuously manned, to be contacted on Channel 16, vessels requiring a Pilot shall use the International Signals. Notice of ETA refer to Rules and Regulations for Saudi Arabian Seaports, Part 1, Para 2.

Pilot Boarding Position:
Lat. 27° 07′ 00″ N. Long. 49° 47′ 00″ E.

ANCHORAGES: There are 3 anchoring places: Freighter Anchorage, Tanker Anchorage and Explosives Anchorage, areas between the following buoys and positions:

Freighter Anchorage:

Light Buoy "7/ANCH"	Lat. 27° 06′ 00″ N.	Long. 49° 45′ 19″ E.
"ANCH 4"	Lat. 27° 08′ 20″ N.	Long. 49° 45′ 11″ E.
"ANCH 3"	Lat. 27° 10′ 39″ N.	Long. 49° 47′ 00″ E.
"5/ANCH"	Lat. 27° 10′ 35″ N.	Long. 49° 50′ 00″ E.

Tanker Anchorage:

Light Buoy "3/ANCH"	Lat. 27° 12′ 47″ N.	Long. 49° 52′ 15″ E.
"ANCH 2"	Lat. 27° 15′ 28″ N.	Long. 49° 51′ 33″ E.
"ANCH 1"	Lat. 27° 17′ 25″ N.	Long. 49° 55′ 15″ E.
"1/ANCH"	Lat. 27° 16′ 15″ N.	Long. 49° 57′ 36″ E.

Explosives Anchorage:

Light Buoy "EXPL 1"	Lat. 27° 02′ 00″ N.	Long. 49° 50′ 22″ E.
"EXPL 2"	Lat. 26° 58′ 19″ N.	Long. 49° 51′ 02″ E.
"EXPL 3"	Lat. 26° 56′ 49″ N.	Long. 49° 52′ 47″ E.
"EXPL 4"	Lat. 26° 55′ 41″ N.	Long. 49° 51′ 35″ E.
"EXPL 5"	Lat. 26° 57′ 32″ N.	Long. 49° 49′ 20″ E.
"EXPL 6"	Lat. 26° 59′ 50″ N.	Long. 49° 49′ 56″ E.

RESTRICTIONS: The Port can be approached 24 hours a day.

MAX. SIZE: Berths No. 1 to 8: Max. acceptable draft 11.4 m.
Berths No. 9 to 16: Max. acceptable draft 13.6 m.

HEALTH: Quarantine Free Pratique as per International Rules and Regulations. Health Officer will board when the ship is moored.

VHF: Jubail Port Control continuous watch is maintained on Channel 16. Working on Channel 17. Radar Surveillance Channels 64 and 66.

RADAR: Surveillance and Control System Operational.
Position: Lat. 27° 11′ 39″ N., Long. 49° 57′ 26″ E.
Structure: Grey circular concrete tower with white radar scanners atop.
Height: 43 m. from ground to radar antenna.
Light: Fixed red warning light atop antenna.

Continuous radar surveillance is maintained by the Saudi Ports Authority over the whole extent of the modified Jubail Ports Approach Channel. All ships should inform Jubail Ports Control on VHF Channel 66 prior to entering or crossing this approach channel.

TUGS: Tugs ranging from 1,500 h.p. to 5,500 h.p. are stationed at Jubail, mooring launches assist in berthing manoeuvres. All tugs are fitted with fire fighting equipment.

BERTHING: The following categories of berth with a draft range from 12.0 m. to 14.0 m. are available — General Cargo, Multi-Purpose, Container Terminal, Ro-Ro for stern and quarter ramp vessels.

Adequate coverage and open storage space is available in the form of warehouses, transit sheds, container terminal with plug-in facilities for reefer and containers/trailers (480V, 60 Hz) Ro-Ro terminal, container freight station, vehicle parks, general cargo storage, empty container storage area.

Cargo Handling Facilities:
Forklifts ranging up to 35 tons.
Head trucks and tow motors.
Trailers.
Chassis and cargo dollies of up to 100 tons.
Weighbridges of 60 tons capacity.

Cranes:
Mobile Cranes up to 100 tons.
One crane 200 tons capacity.

Specialised Cargo Handling Facilities:
Container Gantry Cranes 30.5 tons under spreader.
Transtainers of 30.5 tons under spreader.
Container chassis.

STEVEDORES: First shift: 0700 – 1900 hrs., second shift: 1900 – 0700 hrs., 7 days a week. Sufficient gangs available to work 4 hatches on every vessel.

Minimum discharge rates breakbulk cargo: 1,000 tons per berth per day. Container terminal: 20 TEUs per workable crane per hour.

MEDICAL: Full hospital facilities available, arranged by the Agents.

DENSITY: 1030.

FRESH WATER: Available, arranged through Agent.

FUEL: Fuel oil, marine diesel and marine gas oil are available, arranged through Agent.

CONSULS: American Consul General at Dhahran.

SURVEYORS: International Marine Surveyors and Classification Society Surveyors are on call from Dammam.

GANGWAY/DECK WATCHMEN: The Coast Guard will station a guard at the gangway to prevent unauthorised boarding and landing.

CUSTOMS ALLOWANCES: Possession and/or consumption of alcoholic beverages including beer, table wines and liquors is strictly prohibited in Saudi Arabia. All alcoholic beverages, magazines and cameras are to be under lock and key during vessel's stay in port.

No restrictions on tobacco and cigarettes.

HATCHES: Opening and closing is carried out by stevedores.

AIRPORT: Dhahran Airport 90 km.

TIME: Local time is GMT plus 3 hours. All ETAs and other messages should be made in local time.

HOLIDAYS: No holidays apply for stevedores.

TELEPHONES: Available.

SHORE LEAVE: To be arranged through Agents.

REGULATIONS: See "Rules and Regulations for Seaports" issued by the Co-operation Council of the Arab States in the Gulf.

PORT PROCEDURES: Also see "General" before first port.

Notification to Jubail Port Management:

1. The Owners/Charterers of vessels bound for Jubail with cargo must give preliminary notice of the vessel's intended arrival to the Port Management by telex or cable either directly or through their Agents on arrival at the first or sole loading port, before loading commences. ETA and estimated quantity of cargo by type must be given with the preliminary notice.

2. On completion of loading cargo the following information must be sent to the Port Management by telex or by cable either directly or through the Agent.

(a) Vessel's name.
(b) Flag.
(c) Length overall.
(d) Expected draft on arrival.
(e) ETA.
(f) Cargo particulars, including nature, weight. tonnage and stowage by hatches.
(g) Any dangerous cargo being carried for other destinations.
(h) If dangerous cargo is being carried, the quantity and class in accordance with the IMDG Code whether to be discharged or in transit.
(i) Expected requirements for bunkers and water.
(j) Name of vessel's Agent.

3. A further notice of ETA is to be sent 5 days, 2 days and 1 day prior to arrival at the port.

Vessels Failing to give Required Notification:

Any vessel failing to comply with the requirements under paragraph 1, above, or arriving later than expected under the revised ETA, may lose its berthing registration.

Cargo Papers and Documents:

1. The following papers and documents must be submitted to the Port Management no later than 72 hours (for vessels with more than 200 Bills of Lading) or 48 hours (other vessels).

Prior to arrival:

(a) 5 copies of the Cargo Manifests for discharge, including any additions or amendments in English:
10 copies of the original Manifests translated into Arabic.
(b) 2 copies of the Cargo Stowage Plan.
(c) 2 copies of the Hatch List or Bay Plan.
(d) 2 copies of the List of Dangerous/Hazardous Cargo for discharge.
(e) 2 copies of the List of Dangerous/Hazardous Cargo in transit.
(f) 2 copies of the List of Heavy and/or Awkward Cargo which requires special equipment.
(g) 2 copies of the List of any Domestic Wine or Spirits or Cargo of such nature on the vessel and its location or, in the absence of which, a nil return.
(h) A Declaration of Type of Reefer Cargo.

2. All copies of the Manifests must be taken from the Master Manifest.

3. The List of Dangerous/Hazardous Cargo has to show:

(a) The technical name.
(b) The IMDG Class and UN number.
(c) The quantity of each consignment.
(d) The location on board respectively in each container or on each trailer or in each barge.

4. Non-compliance will lead to penalties and/or fines.

General Regulations for Cargo Stowage and Handling:

1. The stowage of cargo bound for ports in the Kingdom of Saudi Arabia must be arranged to ensure simultaneous and optimum rate of discharge from the maximum numbers of hatches compatible with the requirements of sea-worthiness.

2. Where practicable all general and bagged cargo of uniform type and size is to be stacked and secured on pallets to facilitate quick discharge.

3. Bundled steel, profile iron, rebars, etc. shall be fitted with slings or lifting points suitable for multiple handling.

4. Steel sheets shall be strapped and stacked in bundles of approx. 2 tonnes each. Wooden bearers and/or spacers shall be used in loading the bundles to facilitate discharge.

5. Masters and shipping Agents are to instruct their stevedoring contractors at loading port to execute complete separation by Bills of Lading and the Manifest, and will be held responsible for non-compliance with this regulation.

6. No damaged package or item is to be discharged from any vessel, barge, pontoon or handling craft until it has been repaired or repacked in such a manner as to permit it to be handled without further loss or damage to contents of the package or the item itself.

(a) Where the original outer carton, box or bag is replaced, the replacement carton, box or bag shall be made in the same manner to allow it to be identified with the Bill of Lading and the manifest.
(b) The Port Management has the right, after notifying Customs, Authorities and ship's Agent concerned, to get rid of or destroy damaged good which may cause harm to installations or public health at the expense of the Owner of the goods or the ship's Agent.

Out-turn Report:

1. After completion of the discharging operation of a vessel the Port will furnish an out-turn report which shall indicate the cargo discharged. The out-turn report must be signed by the ship or ship's Agent. Refusal to sign does not invalidate the report.

2. The ship's Agent has the option of conducting his own counter-tally. Where this is not done, the Port tally must be accepted. If an independent counter-tally is undertaken by the shipowner/Agent, the Port tally supersedes.

3. The cargo handed over into the custody of the Port shall remain at the entire risk and responsibility of the shipowner or its Agents or owner of the goods while on the port premises. The Port Management shall not be responsible in any way for any damage or loss that may occur to goods while within the port premises, whether such damage or loss was the result of accident or negligence on the part of the Owner of the goods or not, except in the case of wilful or gross negligence of port employees.

Storage of Goods:

1. The goods will be stored by the port in accordance with marks and numbers and in Bill of Lading lots in those areas stated in the out-turn report.

2. The Port may store suitable cargo in the open areas.

3. The Port may refuse the storage of goods if:

(a) There is insufficient space in the Port.
(b) The inherent properties of the goods render it dangerous or impossible.

4. Except for Customs purposes, no goods or materials stored in the Port are to be unpacked on Port premises without the special permission of the Port Management and Customs.

5. Consignees or their Agents shall remove their goods from the Port within 15 days of completion of discharge of the carrying ship or such period as may be announced by the Port Authority.

6. All cargo, irrespective of whether it has been cleared through Customs or not, which has not been removed from the Port within 15 days of completion of discharge of the carrying vessel may be moved to a special area. All such cargo may be sold by public auction 21 days after completion of discharge of the carrying vessel. These periods may be changed by an announcement of the Port Authority.

GENERAL:

Rubbish: It is strictly prohibited to throw any garbage, rubbish or food leftovers into the port and territorial waters of the Kingdom.

Every violation of the provision of this article shall cause the ship's Master to be penalised with a fine of up to 10,000 Saudi Riyals.

Vessels calling at Jubail Port will be supplied with plastic bags for garbage disposal.

The stevedore's Ship Superintendent must be contacted before the vessel has finished loading/discharging operations to take care of disposal of the bags.

The charge for garbage disposal service will be SR. 200 – per vessel per day, whether the vessel uses the service or not.

Documentation: Jubail Port Management will not permit any vessel to berth if documents have not been submitted as follows:

1. Manifest for vessels with more than 200 Bills of Lading at least 72 hours before arrival.

2. Manifest for all other vessels, Stowage Plans, Hatch List, etc., at least 48 hours before arrival.

Jubail Port Management will grant berthing permission subsequently not earlier than 72 hours after receipt of documents as per case 1 and not earlier than 48 hours as per case 2.

Vessels Discharging Cargo to Aramco Overseas Company (AOC) at the Commercial Port:

General Instructions and Communications Procedures.

1. When carrying vessel leaves loading port, details of tonnage aboard for discharge to AOC and tentative ETA at Jubail should be cabled/telexed to Saudi Arabia telex 601220 (ARAMCO SJ) commencing message "DHAMDDSB/AOC TRAFFIC DHAHRAN".

2. 10, 5, 3 days and 1 day prior to arrival, Master of carrying vessel must transmit updated ETA to "DHAMDDSB/AOC TRAFFIC DHAHRAN" via Saudi Aramco radio station (call sign HZY) which operates the following receiving schedules:

Frequency (kHz)	Approx. Range (miles)	Daily Operating Time (GMT)
500	500	Continuous
8480	2,000	0400 – 1800
12811	2,000	0600 – 1800
16960	2,000	1000 – 1100

3. Vessel must proceed initially to Jubail Pilot Boarding Anchorage, contacting the Jubail Harbour Master on VHF Channel 16 upon arrival. The anchorage is approached from Al-Jurayed (Lat. 27° 12′ N., Long. 49° 57′ E.) and is bounded by the following co-ordinates:

(1) 27° 03′ N., 49° 44.0′ E. (3) 27° 03′ N., 49° 47.5′ E.
(2) 27° 04′ N., 49° 45.5′ E. (4) 27° 02′ N., 49° 45.5′ E.

4. Pilotage is compulsory. Coast Guard Officials will normally board with the Pilot to commence initial clearance procedures. Customs and Health Authority will complete clearance once the vessel is alongside berth. For guidance the Port currently offers 14 m. water depth in the approach channel and 12 m. alongside the berths (by prior arrangement, it may be possible to utilise the container berths which offer a depth of 14 m. alongside).

5. The AOC Port Master at Jubail, or his authorised representative, will attend on board alongside berth, once clearance has been completed, in order to accept Notice of Readiness for the vessel. AOC staff will be available on board or at shipside throughout the discharge period to protect the safe discharge of AOC cargo and the AOC Port Master, or his representative, will again attend on board prior to sailing in order to countersign the Statement of Facts for the discharge.

6. AOC discharges at Jubail will generally be on a "free-out" basis but will be accomplished by the Ports Authority stevedores. Charges for stevedoring on AOC free-out cargo will be settled directly between AOC and Saudi Ports Authority. Agents must nevertheless notify the Ports Authority of expected vessel arrivals, booking berth space and stevedoring in accordance with the normal customs of the Port. In submitting Manifests for AOC cargo to be the Ports Authority, however, Agents should attach to each Manifest written advice that stevedoring charges will be settled by AOC.

7. Certain material to be discharged by AOC at Jubail will have been ordered from Saudi vendors and will be consigned "C&F Jubail Commercial Port Free-Out Discharge" with "Ultimate Consignee Saudi Aramco" included in the body of the Bill of Lading. Such cargo will be accepted by AOC at Jubail in exactly the same way as cargo consigned directly to AOC and Bills of Lading duly endorsed by the original consignee will be presented.

8. In addition to the normal tallying of cargo by the Ports Authority stevedores, AOC will be carrying out a counter-tallying operation in their own interest. This will be aimed at eliminating the possibility of shortlanding, and recording the factual circumstances of cargo damage and at prompt and accurate reconciliation of discharged and manifested quantities. The co-operation of all Masters and Agents is sought in this activity, particularly in the countersigning of any relevant damage or out-turn reports.

9. All requirements stated in this Notice are those of AOC and are *in addition* to any other procedures required by the Saudi Ports Authority. Any Saudi Ports Authority requirements mentioned herein are for guidance only and should be verified with Saudi Ports Authority.

10. Direct enquiries on operational matters to the Terminal Operations Co-ordination Desk or, failing a reply, to the Assistant Superintendent. Address enquiries on policy matters to the Assistant Superintendent or, in his absence, to the Superintendent. Local liaison at Jubail Commercial Port will be handled by the AOC Port Master or his deputy who will also handle all *urgent* enquiries at night, weekends and holiday periods. Telephone connection to the AOC Port Office is expected in the near future.

11. Until further notice, AOC will be handling only duty exempt cargo through Jubail. Cargo which is dutiable, or subject to import permit restrictions, will normally be routed to Dammam. Exceptionally, if isolated dutiable consignments are inadvertently laden to Jubail instead of Dammam, they will generally be handled at Jubail. Similarly small shipments of duty exempt cargo consigned in error to Dammam will generally be handled at that port. It should no longer be necessary under normal circumstances, therefore, for any cargo to be diverted for discharge to a port other than the one to which it was originally laden.

AUTHORITY: Saudi Arabia Ports Authority, Port of Jubail, P.O.Box 276, Jubail, Kingdom of Saudi Arabia. *Tel:* (03) 361-0600. *Telex:* 831005 Jubpt Sj. *FAX:* (03) 361-3337. *Cables:* Ports Jubail. *Contact:* Mohammed S. Al-Muhanna, Port Director General, Jubail Port Management.

(B) KING FAHD INDUSTRIAL PORT IN JUBAIL.

LOCATION: Lat. 27° 04′ N., Long. 49° 40′ E.
Also see "Commercial Port".

PORT LIMITS: See "Commercial Port".

DOCUMENTS: See "General" before first port, and "Radio" — "Vessel notification telex code from King Fahd Industrial Port to all Agents to be used henceforth".

PILOTAGE: Pilotage is compulsory for all vessels of more than 150 n.r.t. Pilot will board in the vicinity of Buoy No. 7 in position Lat. 27° 07′ N., Long. 49° 47′ E.

The Port Control Station (located at the Commercial Port) is continuously manned and is to be contacted on Channel 16. Vessels requiring a Pilot shall use the International Signals. Pilots will board from a fast launch and pilot boarding gear must comply with the International Convention for the Safety of Life at Sea (SOLAS) 1974. Vessels with a high freeboard must provide an accommodation ladder combined with a pilot ladder.

ANCHORAGES: See "Commercial Port".

RESTRICTIONS: The port is approachable and operational 24 hours daily throughout the year. Loaded LPG vessels are restricted to daylight movement only, within the entrance channel and harbour areas.

RADIO: Vessel Notification Telex code from King Fahd Industrial Port, Jubail to all Agents, to be used henceforth.

1. Call Sign.
2. Vessel's Name.
3. Owner/Line.
4. Nationality.
5. Agent.
6. LOA.
7. Max. Draft.
8. No. of Hatches.
9. G.R.T.
10. N.R.T.
11. D.W.T.

21. Tonnage to hatch.
22. Construction date.
23. Quantity of LCL containers.
24. Last 3 ports of call.
25. Beam of vessel.
26. Lloyd's Register Number.
27. Classification Society.
28. Crew number/Nationality.
29. Next port of call.
30. Hazardous cargo.
31. Is vessel gas free?
32. Inert gas system working.
33. Arms/Ammunition for self defence.
34. Economic speed of vessel.
35. Position 48 hours before arrival.
36. Radar details.

Items which do not apply should be answered N/A. All other items must be answered.

The telex, for vessels loading, should be sent 7/5/3/2/1 day in advance of expected arrival, or sooner. However for loading vessels sailing from ports or geographical positions near to King Fahd Industrial Port in Jubail, the telex should be received as soon as possible.

No Inward Clearance will be issued until the notification telex is received and processed.

Petromin Shell Refinery:

We quote below for Principal's information text of telex received from Petromin Shell Refinery Jubail in May 1988.

Quote

Please adjust PSRC arrival telex as quoted below. We like to stress the point that this information is required to ensure smooth export of products and expedite vessels. It will be appreciated if this information is passed on to PSRC as soon as possible.

1. Ballast on board.
2. Segregated ballast, if any.
3. Will vessel deballast ashore?
4. Quantity and type of slops, if any.
5. Will slops be discharged ashore?
6. Deballasting rate.
7. Can vessel deballast while loading.
8. Size and number of ship's manifold.
9. Indicate on which manifold what product will be loaded (number from stem to stem).
10. Maximum loading rate per connection.
11. Distance – manifold above deck.
12. Distance between manifold connections.
13. Height – manifold to rail.
14. Previous cargo.
15. Grade and approximate quantity to be loaded.
16. Can vessel load 2 grades concurrently, if required?
17. Preferred sequence of loading if grades cannot be loaded concurrently.
18. Is vessel fitted with I.G. installation?
19. Cargo tanks gas free or inerted on arrival.
20. Has vessel been instructed to arrive in gas free condition for visual tank inspection by either Charterers or independent surveyors?
21. Can vessel load and inert at same time?
22. Total time required for inerting.
23. Last port of call.
24. Sailing draft Jubail.
25. Any information relevant to this voyage/loading which vessel may want to convey.
26. The Port Authorities prohibit the discharge of any cargo tank ballast to sea. Clean cargo tank ballast to be pumped ashore on each occasion.

Unquote

MAX. SIZE: See "Berthing".

HEALTH: See "General Rules for Saudi Arabia" before details of individual ports.

VHF: The Jubail Port Control maintains a continuous watch on Channel 16. Within the Industrial Port area a continuous watch is maintained on Channel 67.

A new control tower in the Industrial Port became operational early in 1986.

RADAR: A Radar Surveillance and Control System is in operation.

TUGS: All tugs are provided with fire fighting capabilities.

Tugs normally join the vessel in the vicinity of Buoy No. 9 and tug's lines are used.

BERTHING: The port is laid out in 5 distinct sections, namely:

1. *Service Facility:* With 6.0 m. depth quay for port craft and others; a module-input facility, depth 8.0 m., capacity 2,000 tonnes; a 1,000 tonnes slipway and marine repair facility.
2. *Dry Bulk Terminal:* Depth alongside 14.0 m. Max. draft 12.6 m. (13.3 m. HW.) with berths totalling 2,300 m., quay wall and a Ro-Ro stern ramp.
3. *Petro-Chemical Quay:* Depth alongside 16.0 m. Max. drafts 14.4 m. (15.2 m. HW.). Each berth 330 m. length and can take vessels up to 100,000, max. displacement. Shore gangways on all berths.
4. *Breakwater Berths:* Depth alongside 16.0 m. Max. draft 14.4 m. (15.2 m. HW). Each berth 330 m. length and can take vessels from 10,000 – 100,000 max. displacement. Shore gangways on all berths.
5. *Offshore Tanker Terminal (OSTT):* Depths alongside 26.0 m. – 30.0 m. Max. draft 25.0 m. Each berth 350 m. length and can take vessels from 30,000 – 330,000 max. displacement. Shore gangway provided.

Saudi Lube Terminal: Breakwater Berth No. 52 (BWB 52). The following has been received from Petromin Lube Oil Blending and Grease Manufacturing Plant (Saudi Lube).

The purpose of this information is to acquaint the Owners, Charterers and Masters of vessels with Saudi Lube's (Petromin Lube Oil Blending and Grease Manufacturing Plant) terminal facilities at King Fahd Industrial Port in Al-Jubail, Saudi Arabia.

The Industrial Port facilities are owned by the Royal Commission for Al-Jubail, a Government Authority of the Kingdom of Saudi Arabia.

The causeway is 9.39 km. long and has a width of 300 m. The open sea tanker terminal extends a further 3.5 km. beyond the end of the causeway, a total distance of almost 13 km. from the original coastline.

Saudi Lube is owned by Petromin (General Petroleum and Mineral Organisation for the Kingdom of Saudi Arabia).

1. *Breakwater Berth (BWB) No. 52 Particulars:*
   Raw material unloading berth, handling different grades of base oil. One unloading arm enables handling of one base oil at a time.
   Berth Limitations: Max. LOA – 284 m.
2. *Oil Spillage/Slops:*
   Oil spillage incurred during the unloading operation cannot be discharged in the sea, instead the vessel must provide its own means of collecting all spilled oil. BWB 52 is equipped with a slops tank to collect berth spillage only.
3. *Time of Arrival Advice:*
   Initial ETA – 5, 3, 2, 1 days.
   Revised ETA – As any changes.
4. *Communications:*
   Contact "Jubail Port Control" on VHF Channel 16 when passing Jubail Fairway Buoy which is located in position:
   Lat. 27° 22′ N., Long. 50° 30′ E.
   or as soon after as radio reception conditions permit. Once alongside, a portable VHF radio will be placed onboard by Saudi Lube to enable contact between the vessel and the Jetty Operator on the control room, (see "Appendix D").
   Saudi Lube: Telex: 831168 Sublub SJ.
   Phone: 03-3416072 or 341573.
5. *Pilotage:*
   In the port area is compulsory, pilots boarding in position:
   Lat. 27° 07′ N., Long. 49° 47′ E.
   Vessels proceeding from the Fairway Buoy to the tanker anchorage may do so without a pilot, but should keep in contact with the Port Authorities on Channel 16 for traffic/anchoring information.
6. *Berthing Criteria:*
   Vessels will normally be berthed on arrival at BWB 52. If the berth is not available, anchoring instructions will be given by the Port Authority.
7. *Tugs:*
   Tugs are available to assist in the berthing and unberthing operation.
8. *Mooring Arrangement:*
   Vessels normally berth portside to on BWB 52 Jetty. Mooring requirements will be advised by the Pilot and follow the recommendation made in the O.C.I.M.F. publication "Guidelines and Recommendations for the Safe Mooring of Large Ships at Piers and Sea Islands". Vessels equipped with both wire and synthetic mooring lines should avoid "mixing" to the same shore mooring point.
9. *Unloading Arm:*
   On BWB 52, the unloading arm connection to the vessel manifold is a hydraulic coupler for 6 in. or 8 in. ANSI 150 FF, DIN 16 or BS 1560 flange. Suitable reducers conforming to this type of flange should be fitted prior to berthing.
   Assistance from the vessel will be required to make the flange connections. The arm is equipped with proximity switches that will give alarm once the "maximum reach envelope" is reached. Vessels with manifold connections outside of this "maximum reach envelope" cannot be connected to the unloading arm.

10. *Unloading Rates:*
The following unloading rates are available at BWB 52 (a booster pump on the berth will be used in series with the ship's pumps).

Base Oil Grade	*Unloading Rate* (cu.m.p.h.)
100 SN	430
150 SN	440
300 SN	430
500 SN	451
700 SN	445
160 BS	150

11. *Ship/Shore Safety Check List:*
A Safety Check List,based on the list recommended by the International Maritime Organisation, will be completed prior to the commencement of cargo operations.

12. *Overboard Discharge Valves:*
Prior to the commencement of the unloading operations, all sea valves connected to the vessel's cargo handling line system should be closed and secured.

13. *Emergency Signal:*
In the case of fire or other emergency, in addition to advising terminal staff and the Jetty Operator on the control room, vessel should sound a series of long blasts on the ship's whistle, each blast being not less than 10 seconds in duration. For cargo unloading emergency procedures, see "Appendix D".

14. *Emergency Towing Wires:*
Fire wires must be positioned on the offshore bow and quarter of the ship. The eyes of these wires should be hung off above the water line and their height adjusted as necessary during cargo operations. The inboard end should be properly secured to a bollard with 5 or 6 fathoms of slack between bollard and fairlead. Means must be provided to prevent the slack accidentally running into the water.

15. *Ship/Shore Access:*
A shore gangway will be provided and tended by shore staff.

16. *Shore Leave:*
Not permitted, except for medical or repatriation reasons.

Appendix "D":

To: The Master SS/MV ....
In Port

Dear Sir,

Routine and Emergency "Stop Unloading" Procedure.

Throughout the unloading operation, you will be supplied with a portable VHF set which will enable continuous contact to be maintained between the Cargo Officer on board and the Jetty Operator on the Control Room.

Any change in the unloading rate, or anytime there is a need to stop unloading, it should be communicated via radio to BWB 52 Control Room. The Cargo Officer on board should notify the Jetty Operator 60, 30 and 5 minutes prior to the completion of the unloading of each grade of base oil.

In case of emergency, wherein the unloading arm needs to be disconnected from the vessel's manifold, inform immediately the Jetty Operator to stop unloading and make an emergency disconnection. The unloading control panel is equipped with an "Emergency Disconnection" push button that will disconnect the unloading arm from the vessel manifold in case of emergency while unloading.

Under no circumstances should the vessel's manifold or tank valves be closed while unloading, such action results in possible damage to our pump or line systems.

During the unloading operation, a Jetty Operator in radio or telephone contact with the tank farm control room is continuously on duty to assist you.

Please acknowledge receipt of this letter by countersigning the attached copy.

.... For Petromin Lube Oil Blending and
Master Grease Manufacturing Plant (Saudi Lube)

SS/MV ______________
Date ______________
Time ______________
Date ....

CARGO HANDLING EQUIPMENT: The industrial Port is provided with a limited number of mobile cranes and cargo handling equipment which are adequate for the project cargo handled by the port.

BRIDGES: None, air draft unrestricted.

STEVEDORES: 24 hour continuous operations in two shifts from 0700 hrs. – 1900 hrs. and 1900 hrs – 0700 hrs.

MEDICAL: Full hospital facilities are available. Arranged through Agents. The Port also has a fully equipped dispensary with doctor and nurses in 24 hour attendance for emergencies only.

DENSITY: 1025 – 1034.

FRESH WATER: Available, but not to loading berths.

FUEL: Fuel oil, marine diesel and marine gas oil are available through Agents at anchorage. Pipeline supply to berths is planned for the future.

FIRE PRECAUTIONS: In view of the large volumes of cargo of a hazardous nature passing through the Port, great importance has been attached to all matters pertaining to fire and safety. Precautions to accepted international standards are practised and the Fire and Safety Department is on a 24 hour call out.

CONSULS: The American Consul-General resides at Dhahran. Other Consulates and Embassies are located in Riyadh and Jeddah.

REPAIRS: Minor repairs can be arranged through Agents.

DRY DOCKS: A slipway with 1,000 ton capacity is situated at the Services Quay.

SURVEYORS: International Marine Surveyors and Classification Society Surveyors are available. Arrangements through agents.

TANKERS: See "Berthing".

Cargo Handling Capacities:

Note: There are 5 arms on each Berth 51 and Berth 61. The arms marked * above can be used for either L.S. Gas Oil, Auto Diesel Oil, or Naphtha.

GANGWAY/DECK WATCHMEN: The Coast Guard station a guard at the gangway to prevent unauthorised boarding and landing.

HATCHES: Opening and closing of hatches is normally undertaken by the port users at their respective berths, stevedores can be provided if specially requested.

CUSTOMS ALLOWANCES: Possession and/or consumption of alcoholic beverages, including beer, table wines and spirits is strictly prohibited in Saudi Arabia. All alcoholic beverages are to be kept under lock and key during vessel's stay in port.

CARGO GEAR: See "Cargo Handling Equipment".

AIRPORT: International airport at Dhahran, distance 120 Km. A new airport is under construction at Jubail.

TIME: Local time is GMT plus 3 hours. ETA's and messages are to be expressed in LMT.

HOLIDAYS: The Industrial Port is fully operational for 365 days of the year.

POLICE/AMBULANCE/FIRE: Masters are acquainted with emergency telephone numbers upon arrival.

SERVICES: Limited services are available through Ship's Agents.

BANKS: There are a number of Middle East and foreign banks situated in Jubail.

STORES: Ship's stores available. To be arranged by the Agent. Supply of food items is limited and requires the approval of Coast Guard and Customs. Vessels should order fruit, vegetables and provisions in advance of arrival.

SHORE LEAVE: To be arranged by Agent.

REGULATIONS: See "General" before first port.

GENERAL: All vessels must ensure that they have on board upon arrival a copy of "The Rules and Regulations for Seaports", issued in March 1985 by The Co-operation Council for the Arab States of the Gulf.

SHIPMASTER'S REPORT: October 1990.

Berth: Vessel berthed portside alongside Berth No. 51 with the bow seaward.

Crew List: To be sent by telex or fax as soon as possible before ship's arrival. In absence of Crew List, port will not allow/grant permission to enter port area, and it will delay the vessel.

ETA: If possible, ETA to be sent 7/5/3/2/1 day before arrival.

VHF: As soon as contact is established with Jubail Port Control on Channel 16, we changed to Channel 64 and stayed on that channel until vessel was close to the port, in the vicinity of Buoy No. 7. At this point, we changed to Channel 67 and stayed on this channel to keep in touch with Jubail Pilots.

Docking instructions are received early from Jubail Port Control.

Mooring: The moorings were as follows:

3 headlines, 2 breastlines and 2 springs forward and 2 springs, 2 breastlines and 3 sternlines aft.

Mooring and unmooring was carried out with the assistance of 2 tugs, tugs lines used, and 2 mooring boats. Spring lines were sent ashore first by means of heaving lines. All other ropes were passed ashore by the mooring boats.

Meeting: On completion of clearance formalities, representatives from the suppliers and the Port Safety Department boarded the vessel for a planning meeting.

Tank Atmosphere: Cargo tanks to be inerted prior to commencement of loading products with flashpoint below 60°C. For other products, like gas oil and fuel, it is up to Master's discretion, in which condition ship arrives.

Gas freeing and/or inerting is not allowed alongside berth.

Loading: The vessel loaded Naphtha at a rate of 5,000 cu.m./hr. through 2×16 in. Chicksan arms. The loading rate can be increased to a maximum of 8,000 cu.m./hr., but in our case one of the shore pumps was broken.

On completion of loading, we discharged slops through a separate 16 in. shore arm. On completion of discharge of slops, the shore line has to be flushed with approximately 1,000 cu.m. of salt water, but on this occasion there was no need, as our slops did not contain any waxy material. The flush is to be pumped by the ship.

The connection and disconnection of both reducers and hoses is undertaken by ship's personnel. Lifting arrangements have to be provided by the vessel, in order that the reducers are not manhandled.

During loading (every hour plus 5 minutes) a radio check is carried out with the shore to compare the ship/shore figures.

EDP: No Early Departure Procedure is in force. Cargo documents are placed on board about 3 hours after completion of loading. The pilot boards soon afterwards.

Fuel: Bunkering is done at anchorage.

Provisions: Provisions/vegetables/fruits are available at very reasonable prices. To be ordered as early as possible.

Fresh Water: Available, but not at loading berth.

Customs: Prohibited items, alcohol, pornographic material, cameras under bonded store. Cabins/rooms are subject to inspection by Customs. If any arms/ammunition on board, these also to be kept under bond. Radioroom/radiotransmitter was sealed.

Ballast: Port Authorities prohibit discharge of any cargo tank ballast to sea. Clean cargo tank ballast to be pumped ashore.

Garbage: Plastic bags for garbage are supplied at 0900 hrs. In our case, vessel arrived at 0950 hrs. and was cleared by Customs 1050 hrs. These plastic bags did not come the same day, but should come the next day. However, as we left at 0110 hrs. next morning, the plastic bags never arrived, nor was garbage collected.

AUTHORITY: King Fahd Industrial Port in Jubail, P.O.Box 547, Al-Jubail 31961, Saudi Arabia. *Tel:* (03) 357-8000. *Telex:* 832031 – Jupipt Sj. *FAX:* (03) 357-8013. *Contact:* Muthanna Al Kurtass, Acting Director General.

AGENT: Gulf Agency Company Saudi Arabia, P.O. Box 12, Jubail – 31951, Saudi Arabia. Cables: "Confidence", Jubail. Ship-Shore traffic via Dammam Radio/HZG. Telex: 831030 ("GAC SJ"). Tel: 3611064, 3611052, 3613072. After office hours: 3613458. Fax: 3612816.

RABIGH: 22.44 N. 38.59 E. (See Plan)

Also see "General" before first port.

LOCATION: The Commercial Port of Rabigh is situated on the East coast of the Red Sea in Saudi Arabia, about 150 km. North of the Jeddah Islamic Seaport, with geographical coordinates Lat. 22° 44′ 02″ N., Long. 38° 58′ 57″ E.

The industrial area includes a Crude Oil Refinery, supported by the Port and a new community established 20 km. to the North of the Port.

PORT LIMITS: A vessel is considered an "arrived ship" as soon as she anchors at one of the two anchorages S.E. of Tanda Rock Beacon.

DOCUMENTS: *Arrival Documentation Requirements:* The Rules and Regulations for Saudi Arabian Seaports specify that Master must present or make available for inspection the following papers and documents:

Log Book.
Registration Certificate.
Classification Certificate.
Load-Line Certificate.
Building Safety Certificate.
Safety Equipment Certificate.
Radio and Wireless Certificates.
Cargo Gear Certificate.
Marine Health Certificate.
Vaccination List.
Rat-Free Certificate.
Clearance from last port of call.
Israel Boycott Declaration.
Ship's Stores List.
Grain Shipping Certificate, if the vessel is carrying a Grain Shipment.
Mail transport documents in accordance with the "International Postal Treaty", if any mail is carried aboard.
5 copies of the Crew List including name, nationality, date of birth, Passport Number, port of embarkation, port of disembarkation.
2 copies of the List of Personal Effects of crew and passengers.

In addition, the Rules and Regulations require that the Oil Record Book and the Certificate of Fitness (in cases of gas and chemical carriers) are available for inspection.

To obtain Port Clearance, the Master of the vessel shall present or make available for inspection the following papers and documents or copies of them to Port Management:

Log Book.
Registration Certificate.
Load Line Certificate.
Building Safety Certificate.
Safety Equipment Certificate.
Port Stevedore Outturn Report.
Radio and Wireless Certificates.
Receipt for payment of Custom's duties.
Shipping Note and Cargo Manifest for any cargo loaded.

Full details, regarding procedures and conduct of vessel and crew, must be checked with Rules and Regulations of Saudi Arabian Seaports. The vessel's Agent will provide all details of any changes in the Rules and Regulations.

APPROACHES: The Commercial Port of Rabigh is a deep water port protected by an offshore barrier reef running parallel to the coast.

The Entrance Channel has overall dimensions of 400 m. width and about 1,300 m. length.

The Deep Water Entrance Channel, with depth of 28 m. and width of 240 m., marked with lighted channel beacons, leads to the turning basin with depth 27 m. and diameter about 900 m.

The turning basin is also marked with lighted beacons.

The non-commercial area of the port extends Eastward, but at a depth of about 12 m.

The end of the port is marked by a special lighted marker beacon.

PILOTAGE: Pilotage is compulsory for all vessels entering and leaving the Commercial Port of Rabigh.

Pilots will be available on a 24 hours basis.

All vessels calling at Rabigh must comply with the international requirements concerning the reliable condition of the vessel's engines, equipment, etc., and have on board qualified officers and efficient crew.

The Pilot will board vessels by tug or pilot boat about 0.5 miles North of Tanda Rock Buoy.

Vessels will be accepted for berthing and unberthing only if they are in a very efficient ballast condition. Vessels, calling at Rabigh Port for loading products, should carry on board minimum quantity of ballast at least 30 % of the Summer deadweight, subject to further increase in case of weather deterioration as per Port Control instructions.

AIDS TO NAVIGATION: The following Aids to Navigation have been installed in order to facilitate the safe approach and navigation of vessels to and from Rabigh Port.

(a) Name : Shi'b Al Khamsa Beacon No.12:
Position : Lat. 22° 44.9′ N., Long. 38° 37.2′ E.
Characteristics : White light flashing (1) every 5 seconds (1 second on – 4 seconds off).
Elevation : 20.40 m.
Luminous Range : 16.00 miles.
Structure : Iron column 90 cm. diameter on concrete base, painted yellow above black, with round railing platform on top.
Remarks (i) : Radar Reflector.
(ii) : Racon X+S Band, code letter "O" (dash-dash-dash) every 48 seconds, 360°, range 20 miles, solar powered.

(b) Name : Shi'b Al Abiyadh Beacon No.13 (South Cardinal Mark).
Position : Lat. 22° 42.7′ N., Long. 38° 48.3′ E.
Characteristics : White light, very quick flashing (6) plus long flash every 15 seconds (6×(0.35+0.65)+1.5+7.5 = 15 sec.).
Elevation : 12.00 m.
Luminous Range : 10.00 miles.
Structure : Iron column 75 cm. diameter on concrete base, painted yellow above black, with round railing platform on top.
Top Marks : Two black cones.
Remarks : Radar Reflector.
Important Notice : Deep draft vessels should pass not less than 0.7 miles South of Shi'b Al Abiyadh Beacon No.13.

(c) Name : Tanda Rock Beacon No.14 (North Cardinal Mark).
Position : Lat. 22° 43.6′ N., Long. 38° 56.0′ E.
Characteristics : White light quick flashing 60 f.p.m. (0.3 seconds on – 0.7 seconds off).
Elevation : 10.20 m.
Luminous Range : 8.00 miles.
Structure : Iron column 74 cm. diameter on concrete base, with round railing platform on top painted black above yellow.
Top Marks : Two black cones.
Remarks : Radar Reflector.

(d) Name : Tanda Rock Reef Buoy No.15. (North Cardinal Mark).
Position : Lat. 22° 44.6′ N., Long. 38° 55.8′ E.
Characteristics : White light very quick flashing 100 f.p.m. (0.2 seconds on – 0.4 seconds off).
Elevation : 3.40 m.
Luminous Range : 4.00 miles.
Structure : Iron buoy painted black above yellow.
Top Marks : Two black cones.

(e) Name : Fairway Buoy (safe water mark) Mid-Channel Mark.
Position : Lat. 22° 43.4′ N., Long. 38° 58.0′ E.
Characteristics : White light flashing one long flash every 10 seconds.
Elevation : 4.0 m.
Luminous Range : 5 miles.
Structure : Iron Buoy, painted red and white vertical stripes.
Top Marks : Single red sphere.

(f) Name : Port Hand Channel Buoy (Lateral Mark).
Position : Lat. 22° 44.1′ N., Long. 38° 58.5′ E.
Characteristics : Flashing red.
Elevation : 4.0 m.
Luminous Range : 3 miles.
Structure : Iron can buoy, painted red.

MAX. SIZE: Max. permissible draft alongside berth is 23.5 m. Max. LOA 400 m. Minimum parallel body 66 m.

ANCHORAGES: The anchorage area for large vessels (VLCCs) is located South of the port entrance, and about 0.5 miles S.E. of the Fairway Buoy, where the average depth is 70 m.

Smaller vessels may anchor near to or S.E. of Tanda Rock Beacon, where depths of 10 m. – 30 m. are available.

RESTRICTIONS: *Equipment Requirements:* No vessel shall be allowed to navigate within the port, unless it complies with the following equipment requirements:

(a) Efficient VHF radio telephone capable of working on the port frequencies.
(b) Efficient steering gear with fully operational rudder and helm indicators.
(c) Efficient propulsion, both ahead and astern and fully operational tachometer.
(d) Both anchors capable of being released and raised by the vessel.
(e) Efficient winches and adequate mooring gear to secure the vessel safely; an efficient mooring stations communication system.
(f) Sufficient crew on board at all times to operate the vessel safely and efficiently, with all officers properly qualified and certificated, as required by the flag nation and Saudi Rules and Regulations.
(g) All secondary power or mechanical systems on the vessel to be in operation, and immediately available in the event of failure of any primary system.

If any vessel cannot comply with any of the requirements listed above, Rabigh Port Management Control must be advised prior to arrival or departure. The vessel will then be subject to inspection and possible delay.

Failure to comply, or to notify Rabigh Port Management Control, may result in the vessel being fined or refused entry/departure to or from the port or both.

Draft Requirements: Vessels will not be permitted entry to the port unless they arrive at a draft consistent with safe manoeuvring and reasonably trimmed, to the satisfaction of the Pilot.

HEALTH: A Doctor will board vessel on arrival at the berth, in order to expedite Quarantine Clearance.

International Certificates of Vaccination against cholera and yellow fever must be made available if required, in accordance with international or local health regulations.

Quarantine signals must be displayed upon approaching Rabigh Port in accordance with international practice, and shall be continously displayed until Pratique is granted. The signals shall be as follows:

Sunrise to Sunset – Quarantine Flag.
Sunset to Sunrise – Quarantine Signal Lights (Red over White).

VESSELS APPOINTMENT SYSTEM: The Saudi Arabian Ports Management requires Pre-Loading Advice on arrival at the first port of loading, and further notice of ETA with updated particulars of the cargo on sailing from the final loading port.

Revised ETA to be sent 5 days, 2 days and 1 day prior to arrival at the port.

Vessels in ballast bound for loading at Rabigh should follow the same ETA procedures.

Dry Cargo Vessels: The vessel must send the following information to Petromin Petrola Rabigh Refinery, Rabigh Port Management, Rabigh Port Authority and Vessel's Agent.

1. Radio Code (Call Sign).
2. Vessel's Name.
3. Owner/Charterer.
4. Nationality.
5. Agent.
6. LOA in metres.
7. Max. draft in metres.
8. Number of Hatches.
9. G.R.T.
10. N.R.T.
11. D.W.T.
12. Previous Name (if any).
13. Type of Vessel.
14. Type of Cargo.
15. Total Cargo Weight Tons.
16. Total Cargo Freight Tons.
17. Number of Containers/Units (where applicable).
18. Number of Livestock (where applicable).
19. E.T.A.
20. Actual Arrival Draft.
21. Hazardous Cargo for Rabigh.
22. Hazardous Cargo in Transit for other ports.
23. Tonnage to Hatch for Rabigh Discharge.
24. Year of Construction.
25. Lloyd's Register Number.
26. All Ports of Loading.
27. Number, position and S.W.L. of derricks and/or cranes and particulars and positions of ramps.
28. All Ports at which cargo will have been loaded for discharge at Rabigh.
29. All other ports at which the vessel will have called between arrival at the first port of loading and arrival at Rabigh.
30. All ports at which cargo remaining on board will be discharged after completion of discharge at Rabigh.
31. Last 3 ports ship visited before arrival, in proper order.
32. Economic Speed.
33. Total volume of vessel in tons.
34. Volume of hatches in cubic metres.
35. Reason of visit.
36. Estimated time and date of departure.
37. Ammunition and/or explosives in-transit to Rabigh.
38. Cargo of alcholic beverages in-transit to Rabigh.
39. Arms and ammunition on board, purpose of self defence.
40. Information relating to ship's radars (type of radar, frequency, scan speed, pulse width, pulse peak power, pulse repetition frequency and beam width).

The vessel's name and radio code should be given in every subsequent telex for computer reference.

The absence of any of the above information may incur delay to the vessel's port turnaround.

Questions not applicable to a particular vessel should be answered with the text "not applicable".

Tankers: As soon as the vessel receives orders to proceed to the port, the following information must be sent to Petromin Petrola Rabigh Refinery, Rabigh Port Management, Rabigh Port Authority and vessel's Agent.

1. Name of vessel.
2. Former Names.
3. Port of Registry, Flag, Call Sign.
4. L.O.A., G.R.T., N.R.T.
5. Summer d.w.t., Arrival d.w.t.
6. Draft on arrival, forward and aft.
7. ETA.
8. Last Port.
9. Cargo on board and flash point, destination of cargo.
10. Cargo requirements.
11. Previous cargo and quantity of residues on board for load-on-top.
12. IMO Class.
13. Whether gas free or in inert condition.
14. Port of loading ballast and amount.
15. Quantity of ballast loaded on passage.
16. Quantity of segregated ballast on arrival.
17. Quantity of cargo tank ballast on arrival.
18. Time for deballasting, can ship load/deballast simultaneously.
19. Special conditions-difficulties-defective equipment or gear which could present special hazards or difficulties when mooring unmooring or during cargo operations.
20. Agent's Name.
21. Maximum loading rate.
22. Topping-off rate.
23. Bunker Requirements.
24. Cargo manifold connection size.
25. Bunker connection size.
26. Derricks.
27. Arms and ammunition on board for self defence.
28. Information relating to ship's radars (type of radar, frequency, scan speed, pulse width, pulse peak power, pulse repetition frequency beam width).
29. Owners.
30. Operators.
31. Charterers.
32. Built.
33. Stowaways.
34. Alcoholic beverages as cargo on board.
35. Prohibited articles, if any, to be collected and placed in bonded stores prior to vessel's arrival.
36. P & I Club.
37. Master's name.

Gas Tankers: As soon as the vessel receives orders to proceed to the port, the following information must be sent to Petromin Petrola Rabigh Refinery, Rabigh Port Management, Rabigh Port Authority and vessel's Agent.

1. Name of vessel, indicating any former names.
2. Port of Registry, Flag, Call Sign.
3. L.O.A., G.R.T., N.R.T.
4. Summer d.w.t.; Arrival d.w.t.; Arrival draft, forward and aft.
5. Last Port, ETA Rabigh.
6. Quantity of ballast on arrival, where loaded.
7. Quantity of dirty ballast on arrival.
8. Total cargo capacity in cubic metres and cargo required.
9. Grades and quantities of any part cargoes or cargo residues and where loaded. Grade and quantities of product in deck tanks.
10. Are part cargoes to be commingled with loadings?
11. Gauge pressures top and bottom and mean temperatures of each cargo tank.
12. Quantity of coolant required in addition to cargo requirements.
13. Maximum allowable relief valve settings for all cargo tanks.
14. Have any cargoes other than LPG been carried during last 3 loaded voyages. Specify?
15. Maximum oxygen content by volume per cent of each warm or inerted cargo tank.
16. If tank purging required, specify whether:
    (a) Parallel or in series.
    (b) Liquid from shore direct to cargo tanks.
    (c) Liquid from shore to vessel's vaporizers, specify vaporizer throughput in RLPG/hour.
17. If cooling down tanks is required, specify maximum cooling rate in terms of temperature reduction per hour and maximum temperature differential permitted between any 2 points in cargo tank.
18. Available total capacity of ship's reliquefaction plant for each nominated cargo product.
19. Type of ship's reliquefaction system, i.e., direct, cascade or other.
20. Capacity of ship's gas blowers to shore vapour return line in volume per hour at reference temperature.
21. Maximum loading rate and approximate topping-off rate.
22. Bunker manifold size, bunker requirements.
23. Manifold presentation, function, A.S.A. rating, size, from forward.
24. Agent's Name.
25. IMO ship type, does vessel have valid Certificate of Fitness?
26. Special conditions, difficulties, defective equipment or gear which could present special hazards or difficulties when mooring - unmooring or during cargo operations.
27. Arms and ammunition on board for self defence.
28. Information relating to ship's radars (type of radar, frequency, scan speed, pulse width, pulse peak power, pulse repetition frequency beam width).

RADIO *Pre-Arrival Information and Requirements:*
The Rules and Regulations of Saudi Arabian Seaports require pre-loading advice, pre-arrival information from first loading port and further notification of ETA 5 days, 2 days and 1 day prior to arrival.

This information must be telexed to:

(a) Petromin Petrola Rabigh Refinery Co. Telex No. 612032 RABREF SJ.
(b) Rabigh Port Management.
(c) Rabigh Port Authority.
(d) Vessel's Agent.

either directly or through the vessel's Agent.

Vessels which fail to comply with this requirement may be delayed and/or be subject to a fine, as laid down in the Seaport Rules and Regulations.

VHF: All marine services and shipping movements within the Rabigh Port Area are monitored and controlled by Rabigh Port Control, which maintains VHF watch on Channel 16 and 66A.

Vessels should finally confirm their ETA and other particulars at least 3 hours before arrival.

VHF Channels 1, 3, 15, 16, 18A, 19A, 65A, 66A, 78A and 79A are continously available for use by the Rabigh Port Control.

In the event of a port emergency, Rabigh Port Control will designate a channel for use during the period of emergency.

RADAR: Port radar service not available.

TUGS: There are 5 Voith Schneider tugs available for berthing and unberthing operations, each of 4,700 h.p., bollard pull 52 tons. They are equipped with fire fighting equipment and remote controlled monitors for foam-water or water jet, ranging up to 70 m.

Two pilot boats are available.

Mooring boats will be utilised to run mooring lines to the mooring dolphins from the tankers.

BERTHING: Liquid Cargo Port: The Liquid Cargo Port is situated Southeastward of the turning basin with depth 26.5 m., width 690 m. and a length 960 m. at the East side and 760 m. at the West side of the port.

Berths and Equipment: Two berths (No.2 and No.3) are situated on the East side of the port, and are aligned 321°, with depth alongside the berths of 26.0 m. They are designed to service tankers from 30,000 d.w.t. to 325,000 d.w.t. The distance between the centre of the inner breasting dolphins is 66 m. The distance between the outer mooring dolphins is 430 m.

Each berth consists of a concrete platform with dimensions 30 m. × 50 m. at 3 m. above M.S.L., and a metal service platform on it at 6.75 m. above M.S.L. Each berth has 4 breasting dolphins with large flexible rubber fenders on the outer face and 6 mooring dolphins, all equipped with quick release hooks with electrically operated capstans. All quick release hooks can be remotely released from the berth control cabin.

There are 24 quick release hooks available for each berth with capacity ranging from 100 tons to 180 tons.

On each berth there is a multi-purpose tower with an automatic gangway and a 1.5 tons service crane.

Loading Arms: On each berth there are 8 FMC designed, hydraulically operated loading arms, with quick couplers which connect to the ship's flanges. Special adaptors for the 20 in. loading arms can be used for the connection to the 14 in. to 24 in. ship's flanges, as well as for the 10 in. loading arms for the connection to the 6 in. to 16 in. ship's flanges.

1×20 in. arm is dedicated exclusively for loading Jet Fuel.

2×20 in. arms for loading Naphtha or Gas Oil.

3×20 in. arms for loading Fuel Oil or unloading Crude Oil and for deballasting purposes.

2×10 in. arms for bunkering and deballasting.

The accepted minimum and maximum manifold heights above mean sea level are 2.5 m. and 28 m. respectively.

The maximum lateral drift is 3.5 m. forward and 3.5 m. aft, in the normal position of zero offset.

All loading/bunker connections are equipped with electrically insulated flanges. Therefore ship to shore bonding cables are not required.

Loading Rates: Product loading rates:

	Mimimum (cu.m.p.h.)	*Maximum* (cu.m.p.h)
Naphtha	600	5,400
Jet Fuel	600	3,600
Gas Oil	600	5,400
Fuel Oil	600	5,400
Bunker	200	1,150

Crude Oil maximum unloading rate is 16,000 cu.m.p.h.

Ballast maximum unloading rate is 10,000 cu.m.p.h.

Crude is sampled during unloading from automatic Jiskoot samplers, while volumetric measurements are made at the tanks with the usual dipping method. Products are metered with calibrated and Customs checked Smith Meters.

Water Supply: Potable water is available at about 50 cu.m.p.h.

Fire Fighting Equipment: The berths are equipped with 4 remote controlled monitors, two on each side, throwing water or a foam mixture a distance of 65 m., and capable of covering the manifold area of the largest tanker. Underneath each berth there are foam dispensers, and on each berth 4 foam-water hydrants. Loading arms, multi-purpose tower and the monitor tower have water sprinklers for cooling in case of fire.

The fire water line is always under pressure.

The berth monitors are remote controlled from the berth control cabin, as well as from a fire fighting tower situated onshore halfway between the two berths.

Operational and Berthing Criteria:

(a) Limiting conditions for the Pilot to board the vessel:
Wave height of 2.0 m. Wind over 25 knots (Beaufort Scale Force 6).
(b) Limiting conditions for berthing and mooring operations:
Wind speed over 25 knots (Beaufort Scale Force 6).
(c) Limiting conditions for loading/unloading operations:
Wind speed over 40 knots (Beaufort Scale Force 8).
(d) Limiting conditions not permitting unberthing:
Wind speed over 30 knots (Beaufort Scale Force 7).

However, vessels can remain alongside the berth even with a 60 knot wind speed (Beaufort Scale Force 11).

Maximum berthing velocity: 20 cm./sec.

Maximum approach angle: 7°.

Mooring Arrangements: Recommended mooring diagrams are shown in the "Plan Section". However, in order to ensure the safety of personnel, tankers and loading facilities, and to prevent accidental oil spillages, the Rabigh Port Management strongly recommends that tankers utilise the minimum mooring lines and mooring wires as follows:

Up to 45,000 d.w.t. – minimum of 16 mooring lines.

45,000 d.w.t. to 70,000 d.w.t. – minimum of 16 mooring lines to include 6 wire lines for springs and/or breast lines.

VLCCs must provide an all wire mooring arrangement of minimum:

70,000 d.w.t. to 160,000 d.w.t. – 12 mooring wires.
160,000 d.w.t. to 250,000 d.w.t. – 16 mooring wires.
250,000 d.w.t. to 350,000 d.w.t. – 16 mooring wires.
350,000 d.w.t. to 400,000 d.w.t. – 18 mooring wires.

For mooring VLCCs, it is recommended that as a minumum a 42 mm. diameter 6 × 37 class IWRC preformed heavily drawn galvanised wire line (minimum tensile strength of 180 kg./sq.mm.) with a typical MBL of 115 tonnes be specified.

Vessels equipped with both wire and synthetic lines must avoid mixing such lines to the same dolphin (and same direction).

Vessels must be moored to the entire satisfaction of the Pilot.

Any known defects of vessel's mooring system should be reported to the Pilot and terminal before arrival.

As soon as tankers are secured, manual brakes should be set on the winches, and they should not be left on automatic tension.

An efficient watch must be maintained on the vessel's moorings at all times, to ensure that all lines have the required tension and the vessel is kept well close alongside.

Vessels must be ready to put out more lines if required by weather changes or at the direction of the Rabigh Port Management and Terminal Operator.

Pioneer Port: The Pioneer Port is situated on the South part of the harbour and West of the Oil Cargo Port, with a depth of 15.0 m. and a width of 350 m.

Four concrete finger piers on piles, with depths of minimum 7.0 m. – maximum 15.0 m. are available on the South side of the Pioneer Port for tugs, pilot boats, mooring boats and small craft.

Dry Cargo Pier: The Dry Cargo Dock is situated on the South coast of the harbour, near the port entrance and has a depth alongside of 6.5 m. and a length of 80 m.

All loading and unloading operations of dry cargo are carried out through the Dry Cargo Dock.

Bagged sulphur is loaded from Dry Cargo Dock. Maximum permissible depth is 6.5 m., length 120 m. Shore cranes available.

Dry Cargo Port: Presently used as a Yacht and Coast Guard Port.

BALLAST: *Ballast Discharge:* All ship's dirty or clean ballast should be discharged to the Refinery's shore reception facilities. Maximum rate of discharge is 10,000 cu.m.p.h. Discharging of ballast at sea is strictly prohibited.

In very exceptional cases clean ballast may be discharged to sea, from permanent or segregated ballast tanks, but only with the permission of the Rabigh Port Management and Port Authority. In this event the Master must state in writing that the oil content in the water ballast does not exceed 5 p.p.m.

Slop residue and ballast contaminated by leaded gasoline cannot be discharged ashore.

Slops may only be discharged into the ballast system with the express approval of the Petromin Petrola Rabigh Refinery after sampling. Prior to arrival, vessel should advise the terminal of the quantity and quality of slops held on board, and confirm that no chemicals or emulsifying agents have been used in previous tank cleaning.

MEDICAL: There is a medical room for first aid in the Refinery and a hospital in the village of Rabigh.

FRESH WATER: Available.

FUEL: Bunkers presently not available alongside berths but will be available in the future (there are loading arms for bunkering fuel oil and mixtures).

Bunkering at roads may be available with small vessels ex-Jeddah, if arranged through Agents and Coast Guard (Not available April 1994).

REPAIRS: There is no repair facility in the port. Vessels can make repairs in the roads.

SURVEYORS: Classification Society Surveyors are available from Jeddah on request of the Master to the Agent.

GANGWAY/DECK WATCHMEN: Not required.

Coast Guard: One Coast Guard is placed on board and requires accommodation and food during the vessel's stay in port.

CUSTOMS: Customs may board the vessel at the berth or at the anchorage. All alcoholic beverages must be placed under seal. Cigarettes, cigars and tobacco in excess of normal consumption during the expected duration of stay are placed under seal. Spirits are strictly prohibited.

Prohibitions:

(i) No photographs shall be taken in port.
(ii) Radio will be sealed and is not to be used during vessel's stay in port.
(iii) The importation of the following items is strictly prohibited: Explosives and firearms, including air rifles; implements of war of any kind, including antiques; alchoholic beverages; religious matter not pertaining to the Moslem faith; pig meat and products; playing cards and gambling games or devices; narcotics and pornographic photographs or magazines carrying such pictures.

AIRPORT: Jeddah Airport, 150 km. South of Rabigh.

REPATRIATION: Arranged by Ship's Agent.

HOLIDAYS: Tanker terminal operates 365 days a year including hoilidays.

POLICE/AMBULANCE/FIRE Police: 4220300/4220304. Ambulance: 4221617. Fire 4221770. Coast Guard: 4223082/4221400.

TIME: GMT plus 3 hours.

SHORE LEAVE: Not permitted unless special arrangements are made through the Agents.

GARBAGE DISPOSAL: Garbage collection service is available for limited quantities after special Coast Guard permission obtained through ship's agent. Garbage should be collected in plastic bags and will be delivered by the vessel to a small craft carrying special bucket after the completion of Coast Guard formalities and provided that a 48 hours notice prior vessel's arrival has been given to the Marine Dept. of the refinery through the agent for approval.

WASTE OIL DISPOSAL: Slop residues and ballast contaminated by leaded gasoline cannot be discharged ashore. Slops may be discharged into the ballast system only with the express approval of the Petromin Petrola Rabigh Refinery after sampling. Prior to arrival vessel should advise the terminal of the quantity and quality of slops held on board and confirm that no chemicals or emulsifying agents have been used in previous tank cleaning.

SEAMAN'S CLUBS: None.

CURRENCY: Saudi Riyals (SR).

TELEPHONE: Not available for placing on board ship.

SAFETY: *Safety Inspections and Emergency Procedures:*

1. The Special Safety Regulations pertaining to tankers as quoted in the Regulations for Port Safety of the Rules and Regulations for Saudi Arabian Seaports as well as international regulations in respect of these matters should be strictly followed.
   - (a) Ship/Shore Safety Check List should be completed jointly by a ship's officer, Terminal personnel and a representative of Safety Department, as soon as possible after the vessel is alongside the berth, and prior to commencement of any cargo/bunker operations.
   - (b) Repeated safety inspections will be carried out by the Loading Master/Terminal Operator or Petromin's Safety Department during the vessel's stay alongside.
   - (c) The Master and officers will be advised immediately in the event of any infringement of safety requirement on board, in order to take corrective measures.
   - (d) If the violation continues, all operations on board may be suspended, the vessel may be ordered out of the berth and will be held responsible for all delays and consequences thereof. The Agent, Owner and Charterer will be advised accordingly.
   - (e) Gas freeing, hot work and engine repairs are strictly forbidden in port.
   - (f) Vessel's engines should be ready for use at all times.
2. Emergency procedures and actions which have to be taken, will be reviewed by the vessel's Chief Officer and the Loading Master or Terminal Operators, as soon as the vessel comes alongside the berth.

   An emergency situation may arise in the following cases:
   - (a) Fire on board or on shore.
   - (b) Pollution on board, around the vessel or on shore.
   - (c) Collision, grounding, sinking.
   - (d) Weather deterioration (strong wind and thunderstorm).
   - (e) High gas concentration.
   - (f) Any other serious event affecting the safety of personnel, the vessel or the port.
3. Emergency situations will be reported immediately to the Rabigh Port Control and Terminal Operator by:
   - (a) VHF Channels 16, 66A or 9 or any other designated channel.
   - (b) Telephone.
   - (c) Continuous sounding of the ship's whistle.
   - (d) Refinery Alarm System.
   - (e) Any other convenient means of communication.

All operations at the port and on board the vessels will be immediately suspended, and all tugs will stand by.

All vessels will comply with the emergency reporting procedures as per Rabigh Port Management and Port Authority instructions.

In the event of an emergency, the vessel's crew and terminal personnel should take immediate action to stop loading/discharging, disconnect the loading arms and place fire facilities on stand-by.

Preparation should be made for the vessel to leave the berth, and to limit, if possible, the hazard to personnel, ships and/or installations. At the same time all concerned should maintain contact with the Rabigh Port Management and Port Authority for further instructions and coordination.

An efficient crew watch should be maintained on deck throughout the vessel's stay alongside the berth.

Direct contact by VHF must be maintained with the Terminal Operator.

Inert Gas Requirement: Saudi Arabia is a signatory to the International Convention SOLAS 74 and its amendments.

Vessels which are required to be inerted under the above convention will be checked by the Terminal Representative before loading commences, in order to attain an oxygen content of 6% or below in their cargo tanks. Also see "Shipmaster's Report" dated May 1991.

Oil Pollution Prevention: Oil spillages are viewed very seriously by the Rabigh Port Authority, Coast Guard and Rabigh Port Management.

Spillages will be investigated by the Authorities, and the Master and/or Owner will be liable to prosecution and heavy penalties including the cost of cleaning. Delay to the vessel's departure could well arise. Masters are requested to ensure that every measure has been taken to prevent oil spillages at or outside Rabigh Oil Terminal and must advise the Rabigh Port Management, if their vessel has sustained any damage at any time which could lead to oil pollution. Suitable absorbent material or other materials or equipment should be readily available and suitably located on deck in order to clean any spillage.

Prior to entry into the port, the Master is required to sign the "Instructions to Vessels and Conditions of Use of all Berths", presented to him by the Pilot, regarding his or his Owner's responsibilities for pollution originating from his vessel.

WEATHER:

Climate: Tropical desert, hot climate with humidity very high during Summer months. Winter is mild and pleasant.

The weather conditions can be divided into 2 seasons:

(a) November to February with average temperatures 30° C. in daytime and 18° C. at nightime and average humidity 65%. Rain may be experienced very rarely during December or January, and does not normally last more than 2 hours. The rainfall varies between 10 mm. and 65 mm. and has a monthly average of 5 mm.

(b) March to October with average temperatures 38° C. in daytime and 25° C. at nightime with average humidity of 82%. August is the hottest month.

Wind – Sea Condition – Visibility: Generally the prevailing winds experienced in this area are North to Northwesterly which occur 70% of the time compared with winds from any other direction. The speed of these winds normally does not exceed Force 3 to Force 6, although rarely winds of higher speed have been recorded.

Usually the wind starts to blow at 1000 hrs., reaches its maximum strength at noon, and then reduces at about 1900 hrs.

The state of the sea with a Northwest wind is slight to moderate outside the port. Easterly wind can be experienced occasionally reaching Force 7.

Generally the port is not affected by the state of the sea and swell. Winds of gale force may occur between December and March. The direction of these winds is usually South to Southwest; velocity usually reaches Force 7, although winds of Force 11 have been experienced in the area.

Visibility at this time is usually limited to 1 mile due to sandstorms, and the state of the sea is rough to very rough.

The signs of impending storm are clouds which begin to appear from South or Southwest. The storm breaks suddenly followed by heavy rain and thunder.

Poor visibility due to fog is rarely experienced, only occasionally during the morning hours. However throughout the year dust storms may occur, obscuring the coastline.

Tides and Currents: The tide cycle is semi-diurnal. Elevation of the tide levels in relation to the mean sea level are as follows:

L.L.W.L.	−0.74 m.
H.H.W.L.	+0.74 m.
M.S.L.	0.00 m.
Mean Daily Tidal Range	0.34 m.

Local currents are affected by the general circulation of currents in the Red Sea. They usually flow in a N.W.'ly direction along the coast with a speed usually not in excess of 0.5 knots. The Rabigh Port is minimally affected by tides, and there are no significant currents produced by tidal flows.

Sea Temperature: Ranging from 22° C. to 29° C.

Sea Water Density: 1027.5 (Average).

GENERAL: *Charts and Publications:*

Charts:

(a) Saudi Arabian Charts	No.18, No.182
(b) British Admiralty Charts	No.63, No.926
(c) U.S.A. Chart (Omega)	No.62250

Publications:

(a) British Admiralty Tide Table, Volume 2, Atlantic and Indian Oceans.

(b) British Admiralty Red Sea, Gulf of Suez and Aden Pilot (plus supplement No.64.)

(c) British Admiralty List of Lights and Fog Signals, Volume E.

(d) Rules and Regulations for Saudi Arabian Seaports.

Rules and Regulations for Saudi Arabian Seaports: Full details regarding Port Rules and Regulations are included in the above book, which must be kept on board the vessel and in any case be obtained immediately on first arrival in a port of the Kingdom of Saudi Arabia.

The required procedure for the presentation of official papers and documents required are listed in "Documents", however, full details regarding procedures and conduct of vessel and crew must be checked with the above Rules and Regulations.

Government Entry Requirements: The Master will be responsible for complying fully with the requirement of Saudi Arabian Government Departments, Ministries, Agencies and Organisations. Particular attention should be paid to the requirements of Customs, Coast Guard, Immigration and Port Health Authorities. Masters requiring any advice on these requirements should contact their local Agents.

Instructions to Vessels and Conditions of use of all Berths: When the Pilot boards an inward-bound vessel, he will present the Master with a letter "Instructions to Vessels and Conditions of use of all Berths".

The Master is required to sign the letter, acknowledge receipt and agree to the instructions and conditions contained therein prior to entry into the Port.

No vessel will be allowed to enter the Port until this letter has been signed.

Agent: There are no Agents offices in Rabigh at the present time. Agent's business is carried out through Jeddah offices. For crew changes and other formalities, Agents should be contacted.

Provisions and Stores: May be available from Rabigh or Jeddah, on request to the Agents.

SHIPMASTER'S REPORT: July 1990.

Approaches: The port has made new charts and submitted them to publishers, but nothing official is available yet.

B.A. Chart No. 925 is inadequate, and has not been revised as yet. Nevertheless, it is not a difficult task to approach the port, and the existing aids and Port Handbook are sufficient.

On arrival, the pilot boards using a tug, 3 – 4 cables North of the Tand Rock Buoy, preferably from starboard side. Accommodation ladder can be used.

On departure, the pilot disembarks as soon as the vessel clears the buoyed channel, and even without chart, one has no difficulties sailing outward.

Anchorages: Considered safe and easily accessible without pilot. Vessel has only to clear Tanda Rock Buoy, leaving it to starboard, and pass the Fairway Buoy at 0.5 miles, and there is the anchorage for large vessels.

Inertion: The refinery requires vessels, in order to load, to be inerted to 6% or less of oxygen content. If visual inspection of the tanks needed, this is carried out at the anchorage. Then inertion must take place before the ship is admitted to berth.

The O_2 content is checked alongside.

N.O.R. is "received" upon being all fast.

Medical: Facilities available.

Repatriation: Possible via Jeddah. Seaman's Book mandatory.

Radio Free Pratique Message: Not required. Doctor boards upon berthing.

Personnel: Cooperation with Refinery personnel considered very good.

Cargo Documents: Time for Bills of Lading, etc., after loading is minimal. Difference in ship/shore figures is negligible.

Chandlers/Stores: None of the usual type of chandlers available. In case of need (with a long trip ahead), arrangements can be made through agents, in advance, and someone from the vessel can go to Rabigh town market and buy the goods.

SHIPMASTER'S REPORT: April 1991.

Our vessel was advised by Agent, only a few hours prior to arrival, that the oxygen content of the tanks should be less than 6%, and that the vessel should be ballasted to at least 30% of Summer deadweight.

SHIPMASTER'S REPORT: May 1991 (Updated 1994).

Location: Rabigh Refinery is located some 90 nautical miles South of Yanbu.

The Eastern coast of Saudi Arabia from Yanbu to Jeddah and at Gizan is well covered by strong Racons.

Approaches: Shi'b al Khamsa (a low lying coral-reef) was picked-up on the radar on a range of 42 miles (Racon "O"/ 3 cm. and 10 cm.). About 9 miles further East, Shi'b al Bayada (low lying reef) was picked-up on the radar at about 10 miles. After passing Shi'b al Bayada, a course of 055° takes the vessel well clear of Tanda Rock and the extensive coral-reef just off the coast.

If berthing on arrival, the pilot will meet the vessel just North of Buoy No. 15. There is no pilot boat. One of the large harbour tugs takes the pilot out to the vessels. A combination of pilot ladder and gangway was used on the starboard side.

If the vessel has to anchor, a pilot will board on request at Buoy No. 15, and then bring the vessel into the well protected anchorage behind the reef.

Pilot is not compulsory for anchoring, but 'Rabigh Port Control' (VHF Channel 16) must be contacted prior to moving into the Large Vessel Anchorage.

Anchorage: The Large Vessel Anchorage is divided into 6 equal anchor positions. Holding ground is good (sand and coral). Water depth is between 65 m. – 80 m.

Pilotage: Pilotage available 24 hours for berthing and unberthing.

Health: Health authorities (local doctor) check De-Rat Certificate and issues Free Pratique.

Tugs: For mooring and unmooring, we used 3 tugs. Tugs (Voith Schneider) have a minimum power of 6,000 h.p.

Berthing: Rabigh Refinery is located in a natural bay with 4 pairs of buoys leading to the two berths.

Water depth alongside both berths is 27.8 m.

The Refinery and Loading Terminal is operated by Greek consultants and technicians, and most of the Loading Masters are ex-ship masters. Cooperation with the Terminal was good and professional.

Vessels berth starboard side alongside.

Hose connections were 3×16 in. Chicksans, very quick to connect.

There are facilities for pumping ballast ashore.

Imports are crude oil and exports are fuel oil, naphtha and jet fuel.

Shore gangway used.

Moorings are 3/3/2 each end. Two mooring boats take lines to quick release hooks. Spring lines of wire with rope tails are sent ashore first.

After loading, documentation takes 1.5 hours – 2 hours to complete.

Fuel: Not available.

Repatriation: Only possible when prior arrangements have been made by owners and Agent. Wives leaving and joining the vessel require valid Seaman's Books.

Shore Leave: Not permitted, even for reading draft.

General: No documents sighted by Authorities or Agent.

Military guard checks that all bonded stores are properly closed.

AUTHORITY: Petromin – Petrola Rabigh Refinery Company, P.O.Box 180, Rabigh, 21911 Saudi Arabia. *Tel:* (02) 4223200. *Telex:* 612032 RABREF SJ. *FAX:* (02) 4221794. *Contact:* Mr. Hussein Bahaa, Chief Executive Assistant. Mr. Samy Saad, Refinery General Manager. Captain Iraklis Dairopoulos, Harbour Master. Captain Constantinos Kamateros, Asst. Harbour Master. Dr. H. Al-Makhzangi, Asst. General Manager. Mr. Dionissios Routsis, Superintendent, Offsites/on Shore Marine.

AGENT: See "Jeddah".

RAS AL-KHAFJI: 28.25 N. 48.32 E. (See Plan)

The onshore base lies in position approximately Lat. 28° 25′ N., Long. 48° 31′ E., and within a distance of 7 miles (13 km.) offshore, the Company has two four-buoy system berths and two single-buoy-mooring system berths for loading tankers, and also an anchorage area for dry-cargo ships. Outside of this distance there is an anchorage area for tankers. These berths and anchorage areas are situated in the territorial waters of the Kingdom of Saudi Arabia.

APPROACHES: The approaches to Ras Al-Khafji are marked on the appropriate U.S.N.O. and British Admiralty Charts, and deep enough for the majority of vessels visiting the Port to proceed with normal caution using the buoys (Buoys No. 1 and No. 2) as centre line and both side markers (Buoys No. 3 – No. 8). A single patch with a depth of 56 ft. (17.07 m.) marked by Buoy No. 4 exists close to the passage. A patch of minimum depth of water 70 ft. (21.34 m.) exists in the passage 0.6 miles S.S.E. of Buoy No. 7.

All the geographical positions shown are intended for reference purpose only. Users are reminded that certain differences are known to exist between the positions herein and those on the U.S.N.O. and British Admiralty Charts of the area.

The U.S.N.O. Charts No. 62451 and 62430 and B.A. Charts No. 3774 and 2882 are recommended for navigational use in this area.

For oil tankers arriving at Ras Al-Khafji without the necessary charts, the full information will be given by telex upon request to Terminal and Shipping, the Company's Field Office (841011 AAB, 841011 ARBOIL SJ) or telegram upon request to "ARABIAOIL KUWAIT" (via "Kuwait Radio Station 9KK") a few days before arrival. Alternatively, if the vessel has VHF, the buoy positions will be given to them upon request to "Ras Al-Khafji Terminal" as the vessel approaches, but prior notice of requiring this service should be given in the vessel's arrival message. The navigation message used reads as follows:

"ON REACHING NUMBER ONE LIGHT BUOY LATITUDE 28° 36.0′ NORTH LONGITUDE 49° 10.0′ EAST RWVS ISOPHASE WHITE TEN SECONDS 10 MILES RAREFL – THENCE STEER 270 DEGREES TRUE FOR 9 MILES TO NUMBER TWO LIGHT BUOY LATITUDE 28° 36.0′ NORTH LONGITUDE 49° 00.0′ EAST RWVS LONG FLASHING WHITE TEN SECONDS 10 MILES RAREFL – THENCE STEER 254 DEGREES TRUE FOR 9.5 MILES TO POINT 0.8 MILE NORTHWARD OF NUMBER FOUR LIGHT BUOY LATITUDE 28° 32.6′ NORTH LONGITUDE 48° 49.0′ EAST RED GPFL FIVE RED TEN SECONDS 6 MILES RAREFL – THENCE STEER 270 DEGREES TRUE ABOUT 2 MILES TOWARD NUMBER SEVEN LIGHT BUOY LATITUDE 28° 33.4′ NORTH LONGITUDE 48° 45.7′ EAST GREEN FLASHING GREEN THREE SECONDS 4 MILES RAREFL – THENCE STEER 243 DEGREES TRUE TOWARD FOR 8 MILES NUMBER NINE LIGHT BUOY LATITUDE 28° 29.5′ NORTH LONGITUDE 48° 37.8′ EAST YELLOW GPFL FOUR YELLOW TEN SECONDS 7 MILES RAREFL MARKS TANKER ANCHORAGE WEST CORNER STOP NUMBER ONE AND TWO LIGHT BUOYS MARK CENTRE LINE OF APPROACH WHICH IS WIDE AND DEEP STOP TWO SHOAL PATCHES NORTHWARD OF APPROACH ARE MARKED BY NUMBER THREE LIGHT BUOY LATITUDE 28° 34.9′ NORTH LONGITUDE 48° 51.5′ EAST YELLOW ABOVE BLACK QUICK FLASHING SIX PLUS LONG FLASHING WHITE FIFTEEN SECONDS 10 MILES RAREFL AND NUMBER FIVE LIGHT BUOY LATITUDE 28° 33.8′ NORTH LONGITUDE 48° 48.0′ EAST YELLOW ABOVE BLACK VERY QUICK FLASHING SIX PLUS LONG FLASHING WHITE TEN SECONDS 10 MILES RAREFL STOP TANKER ANCHORAGE AND PILOT GROUND IS WITHIN 1 MILE RADIUS OF LATITUDE 28° 29.5′ NORTH LONGITUDE 48° 39.0 STOP"

NAVIGATIONAL AIDS: *Conspicuous Marks:* The flare stacks in the offshore field and onshore are normally visible at a far distance, but may occasionally be extinguished, and a well structure located 4.5 miles Northward from Light Buoy No. 2 is conspicuous.

No. 1 Flare	Lat. 28° 28.3′ N.,	Long. 48° 57.0′ E.
No. 2 Flare	Lat. 28° 27.0′ N.,	Long. 48° 54.8′ E.
No. 3 Flare	Lat. 28° 29.8′ N.,	Long. 48° 56.0′ E.
No. 4 Flare	Lat. 28° 30.3′ N.,	Long. 48° 58.0′ E.
No. 5 Flare	Lat. 28° 28.5′ N.,	Long. 48° 55.9′ E.
Onshore Flare 1	Lat. 28° 24.5′ N.,	Long. 48° 32.4′ E.
Onshore Flare 2	Lat. 28° 23.7′ N.,	Long. 48° 32.1′ E.
Well Structure	Lat. 28° 40.4′ N.,	Long. 48° 57.8′ E.
Ex-Loading Dock	Lat. 28° 24.5′ N.,	Long. 48° 32.4′ E.
Valve Station Platform	Lat. 28° 26.9′ N.,	Long. 48° 35.8′ E.
Kaizu Maru Wreck	Lat. 28° 31.7′ N.,	Long. 48° 34.6′ E.

Ex-Loading Dock is out of use. Jetty structure with a light Fl.R. 3 sec.2M.RARE on tower at North end.

Valve Station Platform functions as berth loading control platform with a light Fl.R.10 sec.10M.RARE.

"Kaizu Maru" wreck is unlit.

DOCUMENTS: *(A) Clearance.* Master should submit following documents to Saudi Arabian Government through Agent (2 copies each):

Maritime Declaration of Health.
Health Condition of Crew.
Details of Air-conditioning.
Crew List.
Vaccination List.
Passenger List (if any).

Note: Forms 1 – 3 are supplied by the Agent.

(B) Cargo: All the documents listed below except the Ship's Statement of Cargo (Ullage Report) are prepared onshore, and this takes about 1.5 hours after loading completion. The tanker is requested to designate the type of documentation, either early departure or ordinary documentation by filling checkmark in the Designation of Documentation type. The Company usually recommends Early Departure Documentation. But ordinary documentation can also be requested. In this case, however, it takes a further 30 – 60 minutes before the documents arrive at the tanker. Whenever necessary, the Mooring Master will sign the documents on behalf of the Company.

The following cargo documents are usually to be prepared onshore except (4):

(1) Notice of Readiness
(2) Bill of Lading
(3) Tanker Time Sheet
(4) Ship's Statement of Cargo (Ullage Report)*
(5) Certificate of Discharge**
(6) Master's Receipt of Documents

Note: *Ship's Statement of Cargo includes the items for "Clean Ballast Declaration" and "Dry Inspection" both together in one form, and is to be completed always on board the tanker regardless of Early Departure Documentation.

**Certificate of Discharge should be handed over to the tanker's Agent at the port of discharge for certification by the Customs Authorities there. The Agent should then return the Certificates to the Company as soon as possible. Non compliance with this requirement could involve the tanker in serious difficulty as all the member states of the Arab League prohibit the export of any materials through their ports to Israel, and the purpose of the Certificates is to prove that the cargo was not discharged in Israel.

Masters are therefore advised to ensure that their Agents at each discharging port understand this and return the Certificates at the earliest possible moment.

The following is a copy of a letter to a ship's Agent from the Chief of Ras Al-Khafji Port. Dated September 1980.

We would like to advise you that effective 1st of Dhul-qadah, 1400 (September 10, 1980) in case you need a Port Clearance for any vessel under your agency please ensure that ship's Crew List consists of name, nationality, date of birth, place of birth, Passport/Seaman Book Number and rank. In the absence of this information we are unable to provide you with Departure Port Clearance and you will be held responsible for ship departure delays.

EARLY DEPARTURE DOCUMENTATION: This documentation system aims to assist ships to depart early from this port after they complete loading by saving time awaiting documents. For this reason, relevant tanker documents will be signed previously by ship's Master or signed by their Agents at this port, depending on Master's choice on the request sheet. Completed tanker documents, therefore, will not be despatched to ships after completion of loading.

It must be noted that this system is not compulsory at this port, but it is at Master's option on condition that ships can communicate on Harbour Service VHF Radio to receive shore figures any time before departure.

READINESS: The Master of each arriving tanker should present a Notice of Readiness to the Company's Mooring Master who will sign it on behalf of the Company. The Notice of Readiness should be tendered at the time of the tanker's arrival at the anchorage area, which is understood to be either the time of dropping the anchor in the anchorage, or if the tanker does not anchor, the time when the Mooring Masters board the vessel.

PILOTAGE: Pilotage is compulsory for arriving tanker's berthing and unberthing at Ras Al-Khafji and a Company's Mooring Masters will board the tanker at the anchorage area to take her to her assigned berth. The company shall assign 2 Mooring Masters for operation on the tanker for shipment. One is as Main and another is as Sub-Mooring Master. The Company's Mooring Master who is assighed on duty shall advise the tanker's Master on the manoeuvre and operations relating to berthing, unberthing, bunkering connecting and disconnecting the loading hoses, and communication between the tanker and Central Control Room (CCR) on shore. Necessary documents such as Ship's Statement of Cargo, Dry/Slop Certificates, Load-on-Top Certificate and Statement of Facts shall be signed by the Mooring Masters on behalf of the Company. After berthing, the Mooring Masters will remain onboard the tanker until she is unberthed and the cargo documents are completed.

Two separate cabins and food as per status to be provided to Mooring Masters during their stay on board.

Notwithstanding the presence of the Company's Mooring Masters onboard, the Master of the tanker remains responsible for his tanker at all times and in all respects.

In the event of any emergency, however, the necessary steps should be taken with the assistance of the Mooring Masters.

The Master of each tanker shall give the Mooring Masters all information necessary for the safe handling and the safe operation of the tanker while in the berth.

The Mooring Master will require the following information immediately on his boarding the tanker, to be relayed to CCR and Shipping Department prior to departure from tanker anchorage.

1. Name of Tanker.
2. Call Sign.
3. Flag.
4. Telex Number.
5. Summer D.W.T. in Long Tons.
6. N.R.T.
7. Arrival Time at Anchorage.
8. Notice of Readiness tendering time.
9. Arrival Draft.
10. Sailing Draft.
11. Documentation Type.
12. Cargo required in Net Barrels.
13. Maximum Loading Rate in Gross Barrels per hour.
14. Slow down time required.
15. Average ship/shore difference in Long Tons (Vessel Experience Factor).
16. Deballasting time prior to commencement of loading.
17. Master's Family Name and Initials.

BALLAST: *Prevention of Sea Pollution by Oil:* THE DISCHARGE OF DIRTY BALLAST and/or OIL RESIDUE, BILGE and WASTE OIL by any vessel in the GULF area is STRICTLY PROHIBITED. The Company strongly requests all vessels to observe this rule of sea pollution prevention by oil in conformity with the Saudi Arabian Government's policy objectives as well as their Ports, Harbours and Lighthouses Regulations along with the relevant rules, which are substantially as follows:

In the event of oil pollution of the sea by any vessel, Masters are liable to possible imprisonment and fine, in addition to the refundment of all clean-up costs and damages sustained by any party. Should Masters fail to comply, they may be detained by the Authorities. Shipping Agents will be required to warrant Master's compliance.

Since the terminal has no facilities to receive dirty ballast, oil tankers arriving with dirty ballast will be requested to collect dirty ballast into one tank of the tanker, otherwise load crude oil on top of oil residue.

Recommended Ballast Condition on Arrival: All tankers arriving at this port are required to have sufficient ballast to give a safe draft for manoeuvring in the port. Tankers arriving with insufficient ballast may be required to increase it if the Mooring Master considers it necessary to do so. In good weather conditions, the Mooring Master will permit arriving tankers to start deballasting as they approach the berth in order to save time.

BOARDING: For the benefit of people boarding at the anchorage area, vessels should provide a safe means of access on the lee side.

All vessels are required to provide a safe means of access for personnel boarding and leaving the vessel, and should have their accommodation ladder rigged on the port side. In the case of tankers assigned to Berth No. 3 or No. 4 an accommodation ladder which leads down forwards is liable to be blocked by the floating hoses, and in such a case the accommodation ladder should be rigged on the starboard side. An accommodation ladder leading aft is always suitable on the port side. Accommodation ladder should always be kept 5.0 m. above water and ready to be lowered whenever required. Pilot ladder is not required.

ANCHORAGE: *Ocean Tankers Anchorage Area:* The oil tankers anchorage area is designated within 1 mile radius from:

Lat. 28° 29.5′ N., Long. 48° 39.0′ E.

Two Light Buoys (No. 9 and No. 10) mark the Western limit and Southern limit of this area respectively. The depth of water varies from 70 ft. (21.34 m.) to 77 ft. (23.47 m.) with a good holding ground of clay mud. Oil tankers awaiting berthing should anchor as close as possible to these buoys.

Dry-Cargo Ships Anchorage Area: The anchorage area for dry-cargo ships is located about 5.5 miles to the S.W. of the oil tanker anchorage area, and is centred in position: Lat. 28° 26.8′ N., Long. 48° 33.4′ E. at which position a yellow Light Buoy (No. 14) showing a flashing yellow light every 3 seconds has been laid. Dry cargo ships should anchor within 0.5 mile radius of this buoy, where the depths are between 36 ft. (10.97 m.) to 50 ft. (15.24 m.) in a good holding ground of clay mud.

Prohibited Area from Navigation, Anchoring and Fishing: An area bounded by straight lines joining the following points is prohibited from anchoring and fishing.

The areas bounded by straight lines joining the following points are prohibited for anchoring and fishing, due to the presence of Wellheads, Flow Stations, Gathering Station, etc. and numerous pipelines and power transmission cables on the sea bed.

Additionally, the oil field areas A – C are prohibited from navigation of any oil tankers and vessels or crafts except these operating on direct instructions from the Company.

A. Khafji Oil Field area:

	Latitude	Longitude
(a)	28° 29′ 36″ N.	48° 52′ 45″ E.
(b)	28° 32′ 00″ N.	48° 54′ 00″ E.
(c)	28° 35′ 00″ N.	49° 00′ 00″ E.
(d)	28° 32′ 00″ N.	49° 04′ 00″ E.
(e)	28° 29′ 00″ N.	49° 04′ 00″ E.
(f)	28° 24′ 00″ N.	48° 52′ 00″ E.
(g)	28° 26′ 10″ N.	48° 52′ 00″ E.

B. Hout Oil Field and Dorra Gas Field area:

	Latitude	Longitude
(a)	28° 40′ 30″ N.	48° 54′ 30″ E.
(b)	28° 52′ 30″ N.	48° 59′ 30″ E.
(c)	29° 00′ 15″ N.	49° 07′ 00″ E.
(d)	28° 59′ 45″ N.	49° 13′ 00″ E.
(e)	28° 53′ 00″ N.	49° 08′ 30″ E.
(f)	28° 51′ 00″ N.	49° 04′ 00″ E.
(g)	28° 39′ 00″ N.	48° 59′ 30″ E.

However, the following area is exempted from prohibition of navigation.

(h)	28° 52′ 30″ N.	48° 59′ 30″ E.
(i)	28° 54′ 30″ N.	49° 01′ 15″ E.
(j)	28° 53′ 00″ N.	49° 08′ 30″ E.
(k)	28° 51′ 30″ N.	49° 05′ 00″ E.

C. Lulu Oil Field area:

The prohibited area from navigation is bounded within 1 nautical mile radius from the following locations.

	Latitude	Longitude
Well No. 1	28° 46′ 35″ N.	49° 28′ 36″ E.
Well No. 2	28° 38′ 51″ N.	49° 24′ 39″ E.

D. Area between Khafji Oil Field and Onshore Base:

	Latitude	Longitude
(1)	28° 24′ 48″ N.	48° 31′ 57″ E.
(2)	28° 25′ 33″ N.	48° 32′ 55″ E.
(3)	28° 29′ 00″ N.	48° 38′ 00″ E.
(4)	28° 27′ 15″ N.	48° 40′ 00″ E.
(5)	28° 29′ 39″ N.	48° 52′ 45″ E.
(6)	28° 26′ 10″ N.	48° 52′ 00″ E.
(7)	28° 22′ 55″ N.	48° 34′ 00″ E.
(8)	28° 23′ 25″ N.	48° 31′ 50″ E.

E. Area between Hout Oil Field and Khafji Oil Field:

	Latitude	Longitude
(9)	28° 32′ 50″ N.	48° 55′ 30″ E.
(10)	28° 39′ 40″ N.	48° 57′ 00″ E.
(11)	28° 39′ 20″ N.	48° 58′ 10″ E.
(12)	28° 33′ 30″ N.	48° 56′ 50″ E.

RESTRICTIONS: *Port Closure:* When the visibility is effected or when the weather and sea conditions develop worse than the below mentioned permissible criteria at the port, mooring operations normally become extremely difficult and unsafe. Therefore, in such circumstances, the Company advises that the port is closed to approaching tankers by VHF, and requests the tankers to wait at the Tanker Anchorage Area until the port is reopened.

The Company, however, reserves the right of selective berthing of some tankers with better manoeuvrability even during such period.

Permissible Criteria for all Berths:

Wind Velocity: Up to 20-25 knots depending on direction.
Sea Conditions: Up to 5 ft.
Visibility: Less than 1 mile.

MAX. SIZE:

Berth	*Depth of water at ISLW* (ft.)	*Max. Permitted draft* (ft.)	*Designed tanker size* (d.w.t.)
No. 1	53	47	100,000
No. 2	56	50	100,000
No. 3	62-64**	54*	300,000
No. 4	70-73††	64‡	300,000

*56 ft. permissible using rise of tide.
‡66 ft. permissible using rise of tide.
**59 ft. over the piplines.
††69.5 ft. over the piplines.

HEALTH: *Quarantine and Pratique:* Quarantine Office of the Saudi Arabian Government is maintained at the port, and a Quarantine Doctor or a Quarantine Officer may board the vessel, if he considers it necessary.

The Master is requested to submit the following documents for the Government filing through his Agent:

(a) Crew List
(b) Vaccination List
(c) Passenger List (if any)
} 3 copies each

All arriving vessels should despatch the following cable to Quarantine Office at the port 48 hours before their arrival at Ras Al-Khafji Port:

"QUARANTINE KHAFJI (ship's Agent cable address)
vessel's name ETA RAS AL-KHAFJI time and date
FLAG______ LAST PORT ______ DESTINATION ______
NO. OF CREW ______ NO. OF PASSENGERS______
ALL HEALTHY NO SICKNESS NO DEATH VALID CERTIFICATE REQUEST FREE PRATIQUE.
MASTER ____________"

Quarantine fee is collected from vessel according to her Nett Registered Tonnage other than tankers lifting hydrocarbon cargoes.

RADIO: *Notice of Arrival:* Arriving vessels should advise their ETA Khafji at least 72 hours before their arrival, (1) by telex to Terminal & Shipping, the Company's Field Office (841011 AAB, 841011 Arboil SJ) or (2) by telegram through Kuwait Radio Station (call sign: 9KK) via Singapore, Bombay or Bahrain Radio. Confirmation of ETA should be made well in advance before arrival by calling "Ras Al-Khafji Terminal" on Channel 16 VHF. Shorter notices may result in delays, and failure to give at least 24 hours notice will result in an addition to allowable laytime in the event a demurrage claim is filed against the Company. "Ras Al-Khafji Terminal" VHF station works 24 hours every day.

Radio Communications: All radio communications between the Company at Al-Khafji and the vessel are made directly to the Company's Field Office by Telex or Telegram, through the Kuwait Radio Station (9KK).

All Telexes and cables should be addressed to 841011 (AAB 841011 Arboil SJ) for telex or ARABIAOIL KUWAIT for cable. The first message should be sent according to the following form, but any items which are the same as a recent previous voyage to this port may be omitted.

(1) ETA Ras Al-Khafji.
(2) Last port.
(3) Deballasting time.
(4) Quantity and type of cargo and bunker required.
(5) Prefered order of loading when batch loading required.
(6) Maximum loading rate.
(7) Mooring equipment (Bow Chain Stopper or Bollard).
(8) Diameter of cargo and bunker connections.
(9) Distance from manifold to ship's side.
(10) Derrick capacity.
(11) Estimated sailing drafts – fore and aft.
(12) Port Rotation of Ras Al-Khafji.

VHF: Short-range communication can be made with Terminal Office by calling "Ras-al-Khafji Terminal" on VHF Channel 16. Working Channels are 6,14,67 and 75. Vessels should call Ras Al-Khafji Terminal several hours before arrival to confirm ETA and receive berthing instructions. After anchoring they should advise their anchoring time and then maintain watch on Channel 16 until the Mooring Masters board. Terminal VHF Station works 24 hours every day.

RADAR No services available.

TUGS: Tugs up to 4,200 b.h.p. are available for mooring and unmooring purposes.

Mooring boats are used for handling ropes and hoses.

BERTHING:

Berths No. 1 and No. 2:

(a) Sea-Berth No. 1:

Manifold position:	Lat. 28° 26′ 10″ N., Long. 48° 34′ 57″ E.
Depth of water:	53 ft. (16.2 m.) at ISLW.
Permitted draft:	47 ft. (14.3 m.) max.
Type of berth:	The berth is a conventional 4-buoy system where the tanker moors with 2 anchors and 1 buoy forward and to 3 buoys aft.
Length of berth:	The berth is designed for tankers of 800 ft. (244 m.) length but can be used by tankers of any size, although tankers of less than 650 ft. (198 m.) overall length sometimes experience difficulty in mooring if their lines are less than a full 720 ft. (220 m.).
Hoses:	From the manifold 2×10 in. rubber hoses for crude oil and 1×12 in. rubber hose for fuel oil are connected, approximately 270 ft. (82 m.) long and the maximum lifting weight of the 2 crude oil hoses together is 4.5 tons – 5.0 tons. For bunkering purpose one section of 6 in. hose is attached to the end of the 12 in. fuel oil hose.

(b) Sea-Berth No. 2:

Manifold position:	Lat. 28° 25′ 55″ N., Long. 48° 35′ 28″ E.
Depth of water:	56 ft. (17.1 m.) at ISLW.
Permitted draft:	50 ft. (15.2 m.) max.
Type of berth:	Same as Berth No. 1.
Length of berth:	Same as Berth No. 1.
Hoses:	From the manifold 2×10 in. rubber hoses for crude oil and 1×6 in. rubber hose for bunker are connected to the ship's manifold. All these hoses are approximately 360 ft. (110 m.) in length, and the maximum lifting weight of 2 crude oil hoses (2 lengths) together is about 5.0 ton and that of bunker hose is about 3.0 tons.

(c) Loading Rates:

Crude oil loading rate at Berths No. 1 and No. 2 is 30,000 bbls./hr. or 4,000 tons/hr.

Fuel oil loading rate at Berth No. 1 is 5,300 bbls./hr. or 800 tons/hr., and at Berth No. 2 is 2,700 bbls./hr. or 400 tons/hr.

(d) Preparation on Board before Berthing: Tankers assigned to Berth No. 1 or No. 2 should have the following ready:

(i) Both Anchors.
(ii) 3 ropes forward and 9 ropes aft. Minimum circumference 10 in., length 720 ft.
Some wires are acceptable in place of the equivalent number of ropes.
Neither ropes nor wires are available from the buoys.
All ropes and wires should be in good condition and preferably without splices.
(iii) Port derrick rigged for a minimum lift of 5 tons, using a wire runner and hook.
(iv) Two 10 in. ANSI 150 hose connections for crude oil, and 1×12 in. ANSI 150 at Berth No. 1 and 1×6 in. ANSI 150 at Berth No. 2 for fuel oil cargo, at the ship's port side manifold. If reducers are not available, the company should be advised before arrival.

(e) Mooring and Unmooring: Mooring operations at Berths No. 1 and 2 are restricted to daylight hours only to prevent accidents.

On approaching the berth a ship's line is passed to one tugboat from the centre fairlead aft. This hawser should be of good strength and made well fast on board.

When in position off the berth, the starboard anchor is let go and slacked away easily to about 9 or 10 shackles on deck. The port anchor is then let go and paid out easily as the tanker swings round into the berth using the tugs and engines as required. At the same time, the starboard anchor is hove in to about 6 or 7 shackles on deck and then made ready for slacking away again.

As the tanker backs down the berth the anchors are slacked away as necessary, and the ropes are sent to the forward (No. 4) Buoy. When the stern passes close to the starboard quarter (No. 1) Buoy the ropes are sent away to this buoy, hove in tight and then put on the bitts ready for slacking if necessary.

Ropes are then run to the port quarter (No. 3) Buoy, hove tight, and the lateral position in the berth adjusted between the port and starboard quarter buoys.

Lastly, ropes are run to the stern (No. 2) Buoy and the tug line also passes to this buoy. The fore-and-aft position is then adjusted between the anchors and the sternlines. A second tug is used to assist in the lateral positioning of the tanker, and 2 mooring boats are used for running the lines to the buoys, these normally taking 3 ropes at a time.

When properly positioned in the berth, the distance from the ship's side to the manifold marker buoy should be about 50 ft. – 66 ft. (15 m. – 20 m.).

One tug is on stand-by near berths as long as a tanker remains moored in berth.

When hose disconnection is completed, the tanker unmoors usually by letting go all the lines on Buoys No. 3 and No. 4, followed by those on Buoy No. 2 and lastly those on Buoy No. 1. The tanker then heaves both anchors as necessary until they are up and clear, and the tanker can leave the berth. The tugs are used as required to keep the tanker away from the manifold marker and the mooring buoys.

Mooring Masters may vary this procedure according to the prevailing weather.

(f) Hose Connection and Disconnection: After the completion of mooring, the mooring boat will pull the hose float buoys to the tanker, and connect them to the tanker's cargo hook of port derrick. The 2 crude oil hoses are lifted together from the seabed by the tanker's derrick, and connected directly to the manifold.

The fuel oil hose is lifted separately and connected in similar manner.

Derrick/Crane hook should be open type, suitable to slip through the ring of the float buoy. The inner diameter of ring is 8 in. Whenever derrick/crane hook is directly connected to lifting block, or when hook is of locking type, additional wire sling, length 6 ft., and open type hook of suitable S.W.L. is required to be provided by tanker.

The time taken for hose connection is about 1.0 – 1.5 hours depending on the number of hoses to be connected. Hose disconnection takes about 1 hour.

Connection and disconnection of the cargo and bunker hoses are to be performed by the crew of the loading tanker under the direction of the Mooring Master. Bolts, nuts, gaskets, reducers, etc. will be provided by the Company.

(g) Loading Restriction at Berth Nos. 1 and 2: (1) Due to only one crude oil pipeline being between the ex-loading Dock and the shore, it is not possible to load tankers with crude in Berths No. 1 and 2 simultaneously. (2) Due to refined products pipelines arrangement onshore, it is not possible to load tankers with fuel oil, bunker oil or crude comingled with refined products in Berths No. 1 and No. 2 simultaneously and also such loading in Berths No. 1 or No. 2 is not possible while those are being loaded in Berths No. 3 or No. 4.

Berth Nos. 3 and 4:

(a) Berth No. 3:

Position of buoy:	Lat. 28° 27′ 06″ N., Long. 48° 36′ 28″ E.
Depth of water:	62 ft. – 64 ft. (18.9 m. – 19.5 m.), but 59 ft. (18.0 m.) over the pipelines, at ISLW.
Permitted draft:	Normally 54 ft. (16.5 m.), but 56 ft. (17.1 m.) permissible using rise of tide.
Type of berth:	The berth is designed for a type of tanker of 300,000 tons d.w.t. and has a single-buoy-mooring system consisting of a buoy 36 ft. (11.0 m.) in diameter, moored to 6 pendant legs of 3.75 in. (95 mm.) rod diameter extra high strength chain of 720 ft. (220 m.) long, and having a rotating deck carrying the pipeline and mooring connections.
Mooring:	Mooring connection at SBM consists of 2.75 in. (70 mm.) rod diameter stud link chain extra high strength of 25 ft. (7.6 m.) long and breaking strength of 225 tons. Attached to the mooring connections on the buoy are 2 double 15 in. nylon ropes (120 mm. diameter, breaking strain 250 tons/line), these main ropes supported by floats are 160 ft. (49 m.) long, and have at their free end a 35 ft. (10.7 m.) long stud link chain which includes a "Sister-plate" and a "Slender-link" for connection directly to the tanker's bow chain stopper or for receiving the shackles used on the deck of the tanker. From the outer end of this chain there is connected a 10 in. (80 mm. dia.), polypropylene "Pick-up" rope about 165 ft. (50 m.) in length. The chain is hung by large iron buoys coloured red and green in the case of a tanker not equipped with the above chain stopper or a 12 in. nylon "Bollard rope" (97 mm. dia., breaking strain 150 tons/line) about 150 ft. (46 m.) in length is connected between each "Sister-plate" and ship's bollard while tankers moor in berth. Above bollard ropes and shackles are provided by the Company.
Submarine Pipeline and Hoses:	1×36 in. crude oil line and 2×12 in. fuel oil lines are laid approximately 30,000 ft. (9,140 m.) from the shore to a position, of the underwater manifold close under the buoy through the Valve Platform which is located at about 4,000 ft. (1,220 m.) Westward of the buoy. From the underwater manifold the crude oil goes to the buoy through 1×20 in. submarine hose; the fuel oil lines are joined at the underwater manifold and the fuel oil is led to the buoy through 1×10 in. submarine hose. From the deck of the buoy the 20 in. crude oil hose and the 10 in. fuel oil hose, which are floating, have a length of 720 ft. (220 m.) to a hose raft, at which position the crude oil hose is divided into 3 strings of 12 in. floating hoses. These, together with the fuel oil hose, extend for a further 150 ft. (46 m.) making a total length of 876 ft. (267 m.) including the raft of 6 ft. (2.0 m.). At their free end the hoses are connected to 4 large marker buoys each 3.3 ft. in diameter. The maximum weight of one crude oil hose (2 lengths) with hose float buoy and chain is about 6.5 tons, and that of bunker hose is about 3 tons.

(b) Berth No. 4:

Position of buoy:	Lat. 28° 27′ 54″ N., Long. 48° 38′ 36″ E.
Depth of water:	70 ft. – 73 ft. (21.3 m. – 22.3 m.), but 69.5 ft. (21.2 m.) above the pipelines, at ISLW.
Permitted draft:	Normally 64 ft. (19.5 m.), but 66 ft. (20.1 m.) is permissible using rising of tide.
Type of berth:	The berth is designed for a type of tanker of 300,000 Long ton d.w.t. and has a single-buoy-mooring system consisting of a buoy 33 ft. (10.0 m.) in diameter, moored to 6 pendant legs of 3.75 in. extra high strength chain of 855 ft. (261 m.) long, and having a rotating deck carrying the pipeline and mooring connections.
Mooring:	The particulars of mooring are exactly the same as those of Berth No. 3.
Submarine Pipelines and Hoses:	1×36 in. crude oil line and 2×12 in. fuel oil lines from onshore are branched at the Valve Platform, which is located at about 16,000 ft. (5,060 m.) Westward of the buoy, by 1×48 in. crude line and 1×16 in. fuel line to Berth No. 4. There is also 1×30 in. connecting crude line between the Ex-Loading Dock and the Valve Platform to raise up the loading rate at Berth No. 4. The above 1×48 in. crude line and 1×16 in. fuel line are laid from the Valve Platform to a position of underwater manifold close under the buoy. From there the crude oil goes to the buoy through 1×24 in. submarine hose, the fuel oil is led to the buoy through 1×10 in. submarine hose. From the deck of the buoy the 24 in. crude oil hose and the 10 in. fuel oil hose, which are floating hoses, have a length of 810 ft. (247 m.) to a hose raft, at which position the 24 in. hose is divided into 3 strings of 14 in. floating hoses. These, together with the 10 in. fuel oil hose, extend for a further 150 ft. (46.6 m.) including the raft of 6 ft. (2.0 m.). At their free end, these hoses are connected to 4 large marker buoys each 3.3 ft. in diameter. The maximum lifting weight of one crude oil hose (2 lengths) with hose float buoy and chain is about 7.5 tons, and that of bunker hose is about 3.0 tons.

(c) Loading Rates at Berths No. 3 and 4: The maximum loading rates of crude and fuel oil at Berth No. 3 are 45,000 bbls./p.h. (6,200 t.p.h.) and 2,700 bbls./p.h. (400 t.p.h.) respectively. At Berth No. 4 these are 62,000 bbls./p.h. (8,500 t.p.h.) and 3,400 bbls./p.h. (500 t.p.h.).

(d) Preparation Onboard before Berthing at Berths No. 3 and No. 4 The Company strongly recommends to the owners of tankers that the tankers to be assigned to Berth No. 3 or Berth No 4, shall be fitted with Bow Chain Stoppers recommended by OCIMF, or alternatively equipped with a pair of Smit Type Brackets in a correct position, which can be accepted in place of the Bow Chain Stoppers so far as tanker has the Chafe Chains to be connected between her Smit Type Bracket and a Sister Plate of our mooring lines.

Before arriving at the anchorage, tankers assigned to Berth No. 3 or No. 4 should have ready the following:

(i) Two mooring hawsers as messenger ropes forward, together with 2×20 ft. rope stoppers, and also 1 or 2 crowbars.

(ii) Port derrick rigged for 10 tons, swung out 2.0 m. beyond the ship's side.

(iii) 3×12 in. ANSI 150 at Berth No. 3 or 3×14 in. ANSI 150 at Berth No. 4 hose connections for crude oil, and 1×10 in. ANSI 150 for fuel oil at the port side manifold. If above reducers are not available, the Company should be advised before arrival.

(e) Mooring at Berths No. 3 and No. 4: The Mooring Masters will board from a tugboat which carries the mooring and hose connection materials. Tankers should have their crew stand-by to receive these materials, and should maintain a port lee until this is completed.

The Mooring Master will instruct the crew in the setting up of the forward moorings, where 12 in. bollard ropes are made fast round the port and starboard bollard posts with their attached shackles about 12 ft. (3.7 m.) inboard from the panama leads or fairleads as far forward as possible. The size of the Panama leads or the fairlead opening should be at least 14 in. vertical and horizontal to prevent the chain jamming in the Panama leads or the fairlead.

On approaching the berth, the tanker should lower a mooring hawser as messenger rope from each bow with rope stopper attached. The mooring boat will take any rope first, and connect it to the appropriate "Pick-up" rope which should be hove in while the boat returns to take the other rope for connection to its "Pick-up" rope. These 2 ropes are then hove in until the chains come through the Panama leads or the fairleads, and the shackles can be made fast to the "Sister-plates". The "Pick-up" ropes are then slacked back until the bollard ropes have the weight.

On tankers fitted with Bow Chain Stoppers, the pick-up ropes are hove in until the chains come through the Panama leads or fairleads and then through the Bow Chain Stoppers. The tongues or hinge bars of Bow Chain Stoppers are then set in position to secure chain within Bow Chain Stoppers. The Pick-up ropes are then slacked back until Bow Chain Stoppers have the weight. Mooring is then completed, and the usual time from sending away the first line until all fast is about 30 minutes.

Immediately after the tanker moors to SBM, her stern line shall be given to the stand-by tugboat through her middle fairlead to help maintain the tanker in safe position while the tanker is in the berth. For this purpose, a hawser of 12 in. circumference, and 720 ft. length is required.

(f) Unmooring from Berths No. 3 and No. 4: After hose disconnection is completed, the weight is taken on the "Pick-up" ropes, the stoppers of the Bow Chain Stoppers and unlocked or the bollard ropes are unshackled, and as the tanker backs off the berth the "Pick-up" ropes are slacked off and then dropped into the water. The tug will come alongside either before or after the tanker backs off the berth, whichever is convenient, and the bollard ropes and the two big shackles are passed to the tug. Unmooring time is usually 10 minutes.

(g) Hose Connection and Disconnection at Berths No. 3 and No. 4 After the completion of mooring, the mooring boat which has been holding the hoses clear during berthing, will bring the hoses to the port side of the tanker and connect the pontoon rope to the hose raft and then proceed to the manifold to connect the hook to one buoy having 1 hose, which is lifted aboard and connected directly to the tanker's manifold.

Derrick/Crane hook should be open type suitable to slip through the ring of the float buoy. The inner diameter of ring is 8 in. Whenever derrick/crane hook is directly connected to lifting blocking, or when hook is of locking type, additional wire sling, length 6 ft., and open type hook of suitable S.W.L. is required to be provided by the tanker.

The hoses are hung off on 2.625 in. diameter nylon ropes and lashed to the rail to prevent shock load due to wave action being transmitted to the manifold flanges.

After the first hose has been connected, the second buoy is lifted and the remaining hoses are connected in similar manner. If an arriving tanker requires a loading rate of 36,000 bbls./hr. (5,000 t.p.h.) or less at Berth No. 3, and 44,000 bbls./hr. (6,000 t.p.h.) or less at Berth No. 4 only 2 crude oil hoses are connected. Hose connection usually takes – 3 hours. Hose disconnection is done in a reverse manner to connection, and takes about 1.5 – 2.0 hours. Connection and disconnection of the cargo and bunker hoses are to be performed by the crew of the loading tanker under the direction of the Mooring Master. Bolts, nuts, gaskets, reducers, etc., will be provided by the Company *(h) Loading Restriction at Berths No. 3 and No. 4:* (1) Due to only one crude pipeline being between Valve Platform and shore, it is not possible to load tankers in Berths No. 3 and No. 4 simultaneously.

(2) Due to refined products pipeline arrangement onshore, it is not possible to load tankers with fuel oil, bunker oil or crude commingled with refined products in Berths No. 3 and 4 simultaneously, and also such loading in Berths No. 3 or 4 is not possible while those are being loaded in Berths No. 1 or 2.

LOADING: *Dry Inspection:* Upon completion of deballasting the Mooring Master will inspect the tanker's tanks. If the tanks are not satisfactory, he may require further pumping until they reach the required standard.

Loading Operations: Particulars of oil available for loading is as follows:

Grade	Estimated	Estimated	Temp. °F
	API	Summer	Winter
Khafji Crude	27 - 29	100	70
Khafji Blend	27 - 29	110	80
Khafji Special	27 - 29	110	80
Hout Crude	32 - 34	110	80
Hout Blend	32 - 34	110	80
Hout Special	32 - 34	110	80
Fuel	16 - 18	140	120
Naphtha	63 - 65	80	60

All submarine pipelines, submarine hoses and floating hoses meant for loading crude oil are at all times kept filled and pressurised with "Khafji Crude" oil. Pipeline contents of such "Khafji Crude" oil at each berth are as follows:

Berth 1	:	16,000 Gross Barrels.
Berth 2	:	16,000 Gross Barrels.
Berth 3	:	36,000 Gross Barrels.
Berth 4	:	68,000 Gross Barrels.

Whenever a tanker is to load any other grade, which does not have "Khafji Crude" oil, the tanker has to receive"Khafji Crude" oil pipeline contents according to berth, prior to commencement of any other grade which dose not have "Khafji Crude" oil.

Similarly, if the tanker is loading any grade other than "Khafji Crude" oil, the tanker has to receive final quantity of that grade equivalent to pipeline contents according to berth, as at that stage, "Khafji Crude" oil will be pumped into pipelines to keep all submarine pipelines, submarine hoses and floating hoses full of "Khafji Crude" oil by the time tanker receives final quantity.

The Mooring Masters on board will advise and guide tanker Master about procedure of such loading.

Fuel as cargo is loaded through bunker hose.

Pure Naphtha is not loaded.

When the tanker is ready in all respects for loading, the tanker's officer must inform the Mooring Master, who will transmit the necessary orders to the Central Control Room onshore.

Loading is started by one booster pump, at the rate of 10,000 bbls./hr., and after everything has been checked and found satisfactory on board, then the loading rate will be gradually increased by starting further booster pumps and then main pumps in sequence until the required loading rate is reached; provided always that the required loading rate is within the capacity of the pumps.

Loading rates can be varied at any time during loading upon 5 – 10 minutes advance notice to the Mooring Master on board. In case of EMERGENCY, the IMMEDIATE STOPPING of all loading can be accomplished.

During loading, any valve operation on the tanker should be reported to the Mooring Master in advance. Especially at the time of Topping Off, the tanker's officer on duty should request the Mooring Master to reduce loading rate prior to any valve closing, in order to avoid any pressure on rubber loading hoses.

When loading is completed, the rate is gradually reduced by stopping first the main pumps and then the booster pumps, one by one according to the request of the tanker's officer. At the final stage of loading only one booster pump should be on the line, and the tanker's officer should tell the Mooring Master to "Stand-by" at least 5 – 10 minutes before finishing loading.

Shore pumps will stop about 15 seconds after their control buttons are pressed, but the oil will continue to flow for several minutes.

Any stop notice of loading completion must be given by the tanker's officer as "Shore-stop" is NOT practised at this port.

Overflows and Spillage: In the event of an overflow or spillage during loading, loading will be stopped immediately and will remain stopped unless the Mooring Master is satisfied that all the overflowed oil has been cleared off the deck and there is no longer any unusual danger for resuming loading.

Ullaging and Gauging: After loading is completed, the Mooring Master will witness the final ullaging on board so that the tanker's figures can be calculated.

Onshore the Government and the Company gaugers will take manual gauges of the shore tanks before and after loading to calculate the figures of the Bill of Lading. Final API and Bill of Lading quantities will be communicated to the tanker Master by the Company through the Mooring Master prior to tanker's departure from port.

STEVEDORES: Dry-cargo vessels calling Ras Al-Khafji to give at least 72 hours notice to Agents to arrange labourers. Stevedores will be arranged from Kuwait. Ship's gear used for discharging which takes place at anchorage into barges.

MEDICAL: The Company has its hospitals at Ras Al-Khafji. Medical and dental treatment can be given in cases of emergency or serious illness or injury. Epidemic diseases or cases of serious injury or disease requiring operations, etc. are normally transferred to the hospitals in Dammam or in Kuwait. The Company's doctor will not normally attend on board unless the patient is incapable of attending the hospital. Requests for medical attention should be given to the ship's Agent as early as possible before arrival.

FRESH WATER: Not available except in cases of extreme emergency.

FUEL: *General Information:* Intermediate fuel oil (IFO) and marine diesel oil (MDO) are supplied as bunker oil to tankers calling at Ras Al-Khafji. Each loading berth has a pipeline which can deliver intermediate fuel oil. Marine diesel oil is supplied from a barge with a capacity of 200 tonnes for which no extra charge is made.

Bunker Nomination: Owners, Operators or Charterers should nominate their tankers' bunker requirements to the Company's Head Office in Tokyo.

Tankers are requested to confirm the grade and quantity of bunkers required to Terminal and Shipping, The Company's Field Office (841011, AAB 841011 Arboil SJ) by telex or telegram to "ARABIAOIL KUWAIT" via "9KK" through normal radio services at least 72 hours before arrival; or in cases where tankers receive their bunker instructions less than 72 hours away, they should advise their bunker requirements as soon as possible.

Bunkering Operation: Bunker supply to tankers in the berths is normally made while the tankers are discharging ballast and/or loading crude oil. MDO-supply from a barge will be done usually before loading cargo.

Tanker engineers are requested to give all necessary information and assistance to the shore staff attending the bunkering and to pay constant attention to the bunker supply.

Responsibility: Notwithstanding the presence of the shore staff attending the bunkering operation on board, the Master of the tanker remains solely responsible for his tanker at all times and in all respects.

Size of Bunker Connections and Bunkering Rates:

Berth	*IFO*	*MDO (supply from a barge)*
No. 1 (6 in.)	400/300 t.p.h.	80 t.p.h. (4 in.)
No. 1 (12 in.)	800/300 t.p.h.	80 t.p.h. (4 in.)
No. 2 (6 in.)	400/300 t.p.h.	80 t.p.h. (4 in.)
No. 3 (10 in.)	400/300 t.p.h.	80 t.p.h. (4 in.)
No. 4 (10 in.)	500/300 t.p.h.	80 t.p.h. (4 in.)

Note: In Winter time the rate for IFO decreases due to the low sea-water temperature which increases the viscosity of the oil.

Bunkering for Dry-Cargo Ships: Bunker supply to dry-cargo ships is not available at this port.

CONSULS: None.

CUSTOMS: *Customs Formalities:* Upon arrival, the Master is required to submit to the Customs a Manifest of any cargo to be landed at Ras Al-Khafji and to sign a declaration that no intoxicating liquor or drugs will be landed.

A Coast Guard accompanied by the ship's Agent boards to seal bonded stores. Dry-cargo ships are boarded by a Customs Officer, a Coast Guard and a Quarantine Officer for sealing stores, checking valid certificates and health inspections.

Import of the following articles is strictly forbidden:

(a) Alcoholic beverages, including beer, wine and liquor.
(b) Pornographic literature, photographs, pictures and films.
(c) Explosives.
(d) Firearms or implements of war of any kind.
(e) Religious matters not pertaining to the Moslem faith.
(f) Gambling devices.

The Saudi Arabian Laws and Regulations: The Saudi Arabian Laws and Regulations are strictly enforced, and Masters having any doubts concerning the interpretation of these regulations are urged to consult their Agent. While in port, whether at anchorage or in the berth, the vessel's personnel are under the jurisdiction of Saudi Arabian laws. Taking of photographs while the ship is in the Port of Ras Al-Khafji is prohibited by the Saudi Arabian Government.

All materials to be either exported from or imported into Saudi Arabia are subject to examination by Customs authorities. The import of certain articles is strictly prohibited and such articles include but are not limited to the following:

(1) Explosives and firearms, including air rifles.
(2) Implements of war of any kind, including antique weapons.
(3) Narcotics.
(4) Religious matter not pertaining to the Moslem Faith.
(5) Playing cards and gambling devices.
(6) Printed photographic matter or video tape depicting what could be considered pornographic.
(7) Alcoholic beverages of any description.

Items (4), (5), (6), and (7) of the above items on board any vessel calling at the port of Ras Al-Khafji shall be secured in appropriate locked store rooms which will be sealed by the authorities who may carry out inspections, to ensure that the seal is intact and that none of the above articles are in use. The seal must remain intact during the entire period of the vessel's stay in the port of Ras Al-Khafji, and must not be broken until after the vessel has finally departed for the port in another country.

Trafficking in any of the above articles between vessel or vessel's crew and shore personnel is strictly prohibited. The baggage of crew joining and leaving vessels will be inspected to ensure that it contains none of the prohibited articles.

Penalties are severe and major delays to vessels can be incurred due to the Goverment investigations of violations.

REPAIRS: Some minor repairs on board vessels may be made using shore assistance in case of extreme emergency, but such Company's assistance will be provided only on the Master's and the shipping Agent's acceptance for undertaking to pay to the Company all expenses incurred. Preferably all repairs should be carried out at the anchorage area. In all cases when shore assistance is required, the Master should notify the vessel's Agent well in advance.

WATCHMEN: The tanker always has to post at least 2 watchmen on duty: one on the forecastle head to watch and monitor the condition of the mooring ropes and the behaviour of the tanker by forces of wind and tidal current, and another on deck near or within sight of the manifold. They have to report to the Master and the Mooring Master whenever they observe the tanker drifting too close to the berth, or the loading hoses twisted or whenever they recognise anything unusual, so that the Master and the Mooring Master may properly manoeuvre the tanker and any mishap may be averted.

DRY DOCKS: None.
AIRPORT: Crew joining must be routed through Dhahran Airport (325 km.). Kuwait Airport 110 km.
TIME: GMT plus 3 hours throughout year.
TELEPHONES: No facilities for placing on board.
SERVICES: *Provisions, Deck Stores:* Provisions and deck stores are available from ship chandlers at the Port in limited kinds and quantities. In all cases the ship's Agent should be advised of the requests at the earliest possible time before arrival.
SHORE LEAVE: Not normally permitted by Authorities except by arrangement through the ship's Agent.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Saudi Riyal.
WEATHER: The local weather at Ras Al-Khafji is hot and dry with little cloud during the long Summer from May to September and considerably colder in December and January.

The mean monthly maximum temperature is in the range of 18° C. – 41° C., and the daily highest was 48.9° C., which was recorded in August 1987 and the daily lowest was −1.4° C. in February 1971.

Rainfall concentrates during the period from October to May and annual precipitation in the area is 104 mm. on an average.

The prevailing wind in this area is Northwesterly, however winds of varying strength may come from any direction. In Summer, the diurnal sea breeze is light Easterly at about 5 m. – 7 m. per second (10 – 14 knots), and only rarely it increases to 12 m. per second (23 knots). In Winter South-Southeasterly winds of up to 20 m. per second (39 knots) may last one or two days and then veer suddenly to the N.W., often accompanied by gusts or squalls in excess of 20 m. per second. On occasion a type of line squall passes over and winds up to as much as 30 m. per second (58 knots) may be experienced for a short time before settling down to blow for longer periods at 20 m. per second. Little or no warning of these strong squalls is given; they just appear suddenly, often accompanied by thick sand and dust.

In the area of the Sea Berths, the waves are prevented from developing by the short fetch of the Northwesterly wind, but waves up to 5 ft. – 6 ft. do occur from this direction. Southeasterly winds raise a short steep sea which quickly reaches 7 ft. – 8 ft. high. This lengthens and increases as the wind freshens and has been known to reach 14 ft. – 15 ft. in the area of the Sea Berths. When the Southeasterly wind veers the swell rapidly decreases but persists for about 24 hours thereafter.

Visibility in the area is generally good, but Northwesterly winds cause rising dust and sand which may reduce visibility to almost zero at times. Haze is common, and on calm hot days mirages are frequent. "Steam fog" may occur at times in the early morning hours resulting in very poor visibility.

TIDES/CURRENTS: The depths shown on the chart are based on ISLW. The diurnal rise of tide is approximately 5 ft. at the Springs and 4 ft. at Neaps, and the ISLW is 4 ft. below the Mean Sea Level.

The heights of both high and low water are considerably affected by the prevailing weather conditions. Northerly winds tend to reduce the heights of tides and retard them, and Southerly winds increase the heights slightly.

Near the Sea Berths the current flows roughly parallel with the shore, and reverses its direction about 1 hour earlier than the time of high or low water inshore at Ras Al-Khafji. The velocity of the current is approximately 1.5 knots at the maximum.

Both the direction and velocity of the tidal current are much affected by the prevailing weather conditions.

The tidal data for Ras Al-Khafji as compared with that of Mina Al-Ahmadi is given as follows:

Flood tide:	Occurs approximately 30 minutes later than Mina Al-Ahmadi.
	Height approximately 2.13 ft. less than that of Mina Al-Ahmadi.
Ebb Tide:	Occurs approximately 2 minutes later than Mina Al-Ahmadi.
	Height approximately 0.16 ft. less than that of Mina Al-Ahmadi.

"Tide and Current Table" published annually is available from the Company upon request.

AUTHORITY: Port of Ras Al-Khafji, Port Officer, Ras Al-Khafji 31971 Kingdom of Saudi Arabia. *Tel:* (03) 766 1016. *Telex:* 841057 PORT KSJ. *Contact:* Mr. Abdul Dalem, Port Office.

Arabian Oil Company Ltd., Terminal & Shipping Dept., P.O.Box 256, Al-Khafji 31971, Kingdom of Saudi Arabia. *Tel:* (03) 766 0555, Ext.2650. *Telex:* 841011 (ABB: 841011 ARBOIL SJ). *FAX:* (03) 766 2001. *Contact:* Mr. Abdullah I. Attwaijri, Assistant Manager, Terminal and Marine Department.

AGENT: See "Ras Tanura".

RAS AL MISHAB: 28.13 N. 48.43 E. (See Plan)

APPROACHES: Do not use the old recommended track to Bandar Mishab shown on British Admiralty Chart No. 3774 and U.S. Hydrographic Chart 62422 unless corrected. Ships arriving should follow Ras al Khafji Approach Channel Buoy No. 1 (Lat. 28° 36′ N., Long. 49° 10′ E.) and Buoy No. 2 (Lat. 28° 36′ N., Long. 49° 00′ E.). From Light Buoy No. 2 proceed on a course of 253°(T) for approximately 5 miles and the following is the new approach channel to the anchorage and entrance channel of Ras al Mishab.

The dredged channel of 4 miles is well marked by the buoys and 2 pairs of ranges that lead vessels in and out of the port.

PILOTAGE: Pilotage is compulsory and only available in daylight hours (0600 to 1700 hrs.) 7 days a week with short notice prior to vessel's arrival.

Vessels calling at Ras Al Mishab are requested to contact Ras Al Mishab Harbour Office on VHF – Channel 16 prior to arrival at Pilot Buoy, (Buoy No. 5 of Ras Al Mishab Approach Channel) which is located at Lat. 28° 13′ N., Long. 48° 43′ E.; do not proceed beyond this point before consulting with Ras Al Mishab Harbour Office, which is available from 0600 to 1700 hrs. every day except Friday.
ANCHORAGE: Anchorage area is between Buoys No. 4 and 5.
RESTRICTIONS: Daylight berthing and unberthing only.
MAX. SIZE: Max. allowed draft at present time is 33 ft. However, after completion of works on expansion of the port, which is under way, port expected to accommodate vessels up to 35 ft. draft regardless of length and/or tonnage.
VHF: See "Pilotage".
TUGS: The port has 2 tugboats available to assist vessels in docking and undocking as well as any other service to be rendered in case of need for assistance. Each tugboat is capable of generating 2,000 h.p.
BERTHING: Ras Al Mishab is a deep water sea port with 2,400 ft. of berthing space. The turning basin of 1,250 ft. radius provides safe manoeuvring.

The pier is 18 ft. high above the water and accordingly not suitable for Ro/Ro cargo operation, however, the harbour is well equipped for receiving any type and size of cargo including heavy lifts and bulk cement up to 24,000 tons. Silo capacity 25,000 tonnes.

The harbour is fully equipped with forklifts, discharging gear, spreaders for 20 ft. and 40 ft. containers. portable cranes up to 300 tons capacity, all handled by professional stevedores.
FRESH WATER: Not available.
FUEL: Not available.
GENERAL: Provisions not available at this port, and it is suggested that vessels calling to Ras Al Mishab, secure their needs at other ports. Only emergency medical attention shall be provided if requested by Master.

No shore leave is permitted in this port except for the Master for business purposes, the Port Regulations are to be strictly observed by all vessels.

Any other matters such as crew changes, emergency repairs provisions, etc., shall be handled through local Agent.

SHIPMASTER'S REPORT: September 1980.
Pilotage: Pilot boards 3 miles South of Buoy No. 5G.
Berthing: A new berth built 2 years ago at right angles to land with dimensions about 1,000 m. length and 250 m. wide, accommodating 8 ships, 4 on each side. 1 berth is for cement in bulk, having silo. (Sea Island berth is severely damaged and abandoned).
Stevedores: Working day and night in 3 shifts.
Clearance: Vessels are cleared any time during day whilst alongside. (We arrived alongside Thursday 1600 hrs. and we were cleared).
Tugs: 2 tugboats available.
Port facilities: 1 mobile crane 300 tons and 1 mobile crane 50 tons.
Agent: On VHF Channel 16.

AGENT: See "Dammam".

RAS TANURA: 26.39 N. 50.10 E. (See Plan)

ALSO SEE "JU'AYMAH" SECTIONS A and B.

(A) GENERAL INFORMATION
(B) REGULATIONS
(C) RAS TANURA TERMINAL

(A) GENERAL INFORMATION

This section contains important information for all ships proceeding to any Terminal in the Port of Ras Tanura (Ras Tanura Terminal, Ju'aymah Crude Terminal and Ju'aymah LPG Terminal).

NAVIGATION:
NAVIGATIONAL AIDS: In May 1981, the buoyage system in the Port of Ras Tanura was changed to the I.A.L.A. System (Region A).

Notices to Mariners have been promulgated concerning these changes.

INBOUND TRAFFIC PROCEDURES: All inbound vessels shall establish early radio contact with Saudi Aramco.

(a) A vessel with no special instructions or with instructions to proceed to the Northern Holding Anchorage should make for a position approximately 2 miles North of Ras Tanura Light Float (in position: Lat. 27° 05.6′ N., Long. 50° 57.5′ E.); enter the inward channel of the Separation Scheme and then pass the Approach Buoy and the Entry Buoy. The vessel should then proceed into the Northern Holding Anchorage and anchor. After anchoring, the vessel shall immediately advise Saudi Aramco by radio and Ras Tanura Pilots on VHF of anchoring time and keep a listening watch on VHF Channel 16 and traffic lists for further instructions.

(b) A vessel with instructions to proceed directly to Ras Tanura Terminal, Ju'aymah Crude Terminal or Ju'aymah L.P.G. Terminal should proceed as above to the Entry Buoy and as described under the individual terminal.

ANCHORAGES: The Port of Ras Tanura is an open roadstead but some protection is afforded by shoals and land to such an extent that vessels do not experience heavy movement.

Holding ground in all of the anchorages is fair and it is recommended that anchored vessels lie to a long scope of chain whenever the weather is unfavourable.

The Northern Holding Anchorage is located on the North side of the Ras Tanura Separation Scheme West of the Entry Buoy and North of No. 3 beacon (Racon). This anchorage covers an area of approximately 30 square miles with depths between 82 ft. and 150 ft. (25 m. and 46 m.).

This anchorage is intended as an initial holding area for incoming vessels which, because of berthing prospects, congestion or other reasons will not be berthed on arrival and for loaded tankers taking bunkers or adjusting departure sailing time into the Gulf. Anchorages for the individual terminals are described in Ras Tanura Section (B) and Ju'aymah.

MAXIMUM DRAFT IN ARRIVAL CHANNEL: See Section (B) for maximum arrival draft Ras Tanura Terminal (16.37 m. + Height of Tide). See Ju'aymah Section (A) for maximum arrival draft Ju'aymah Crude Terminal (21.34 m.). Masters of vessels arriving partly loaded or deeply ballasted should navigate with caution in the vicinity of position: Lat. 26° 50′ 30″ N., Long. 50° 10′ 30″ E.

RADAR SURVEILLANCE ADVISORY SYSTEM:

See "Regulations" – Traffic Regulations.

This system is available to provide information and to continuously monitor the movement of all ships in the Port of Ras Tanura.

In addition to identifying, tracking and monitoring ship movements to and from the Terminal areas by means of computer assisted radar and video tape recording, the following services may be provided to vessel Masters:

(a) Advice on channel and port conditions, congestion, weather, tides, navigational aids, etc.
(b) Advice upon the movement of other vessels, dangerous manoeuvring situations and vessels violating port regulations.
(c) Advice upon port regulations regarding the movement of deep draft vessels and the priorities of vessels movements. (It may be necessary for vessels arriving in ballast to reduce speed to permit safe passage for outgoing deep draft vessels).
(d) Advice on berthing prospects and anchoring conditions.

The service has been established in order to increase the safety of ships navigating in the Port of Ras Tanura. However, it is an information and advisory service only and in no way assumes control of or responsibility for ships navigating in the area.

CHARTS AND PUBLICATIONS: Surveys by American and British Authorities in recent years have resulted in the publication of a number of charts of the Port of Ras Tanura and its approaches:

U.S. 62414	or	B.A. 3788
U.S. 62415		B.A. 3777
U.S. 62416		B.A. 3776
		B.A. 3813

Vessels proceeding to the Port of Ras Tanura should be in possession of the latest issues of the above charts or their equivalent. "Sailing Directions" and "Lists of Lights" are published by American and British authorities; these publications should also be available on board.

Navigational Warnings and weather forecasts are broadcast by Saudi Aramco "HZY" Radio and by commercial radio stations in the Arabian Gulf.

These should be copied well in advance of arrival.

The Saudi Ports Authority is in charge of issuing navigational warnings and Notices to Mariners covering the Saudi Waters. These Navigational Warnings and Notices to Mariners are broadcast by Dammam Radio on a 24-hour basis. Updated copies of these Radio Navigational Warnings and Notices to Mariners are sent to the Agents for delivery to the Masters at their ports of arrival.

METEOROLOGICAL INFORMATION:

Winds in the area are not predictable for more than a very few hours and may come from any quarter at varying strength. The prevailing wind is from the N.N.W.

Winds of any strength tend to create short steep seas coming up quickly and calming down just as rapidly. Easterly winds however cause heavy seas and swells which can last for a considerable period. For a more complete description of the winds of the Arabian Gulf, refer to "Sailing Directions".

Visibility in this area of the Arabian Gulf is generally fair to excellent, but at times fine dust is held in suspension in the atmosphere and visibility is reduced to a very short distance. This phenomenon is more deceptive than fog in that mariners are apt to believe visibility to be greater than it actually is. Dense fog with or without sand or dust may occur in the morning hours.

Climate of Ras Tanura is comparatively favourable for the Arabian Gulf. The exposed position of the port permits the winds to mollify the heat of Summer. Temperatures have been recorded in previous years as follows: Absolute Maximum 45.6°C (114°F) in June, Mean Maximum 38.4°C (101.1°F) in August, Mean Minimum 12.5°C (54.5°F) in January, Absolute Minimum 0.0°C (32°F) in January.

During most of the year, the relative humidity is high and during late Summer and Fall it frequently exceeds 85%.

Proper precautions should be taken to avoid sunstroke and heat exhaustion particularly during the Summer and early Fall months. Air conditioning plants aboard ships should be in good working condition at these times in view of the necessity to close down accommodation whilst loading dangerous cargoes.

TIDES AND CURRENTS: The depths quoted in all "Sailing Directions" and charts of the Arabian Gulf and the datum used by Saudi Aramco is based on lowest astronomical tides (LAT) from 1st January 1986.

Locally the diurnal tide rise is approximately 8 ft. (2.44 m.) at Springs and 5 ft. (1.52 m.) at Neaps. More detailed description of tides and currents in the locality can be found in the "Sailing Directions".

Due to the configuration of the coastline, a system of tidal currents prevail with flood tide setting towards South or S.S.E. and ebb setting towards North or N.N.W.

DOCUMENTS:

GENERAL: All contact between ships and the Saudi Arabian Government and Officials is to be made through the ship's Agent who will advise on specific requirements and documentation.

The following sections are for guidance only.

ARRIVAL DOCUMENTS: The following must be available to the Agent and boarding Government Officials:

(a) Maritime International Declaration of Health.
(b) Valid Deratting or Exemption Certificate.
(c) Crew List (including supernumeraries) up to 6 copies. Agent to submit 1 copy of Crew List 48 hours prior to arrival.
(d) Valid Vaccination Certificates.
(e) Valid Inoculation Certificates against communicable diseases prevailing at previous ports of call.
(f) A complete set of log books for the period since the vessel's last visit to Ras Tanura OR for the period since new OR since April 25th, 1952.

NOTICE OF READINESS: At all terminals in the Port, to be addressed to Saudi Aramco Ras Tanura.

EARLY DEPARTURE PROCEDURE: Use of this special service is encouraged and should be requested at the earliest opportunity.

Close co-ordination with the Agent is required in order to expedite the delivery of the required documentation to the ship.

It is essential that Radio contact with Saudi Aramco be maintained after departure until cargo quantities are received and the Agent has been authorised to sign documents.

DEPARTURE DOCUMENTS: The following 3 documents MUST be on board before the vessel departs even though the ship has been RELEASED to sail by Saudi Aramco.

(a) Bill of Lading: Completed by Saudi Aramco except for the cargo quantities. The Agent will deliver a copy to the Master who will enter the quantities as advised by radio after departure. The Master will then authorise his Agent to sign the original on his behalf.

(b) Permit of Departure: Completed by Agents with information supplied in the quarantine radio message and delivered by them to the vessel prior to departure.

(c) Port Clearance (Sailing Report): Completed in Arabic with information gathered by the Agent and delivered by them to the vessel prior to departure.

PILOTAGE:

CHANNELS: The channels of the Ras Tanura Separation Scheme are marked by lighted radar-reflecting beacons and buoys. Channel Pilots are not provided.

BERTHING: The use of Harbour Pilots is compulsory for all vessels calling at the Port of Ras Tanura to use any of the terminal facilities.

Harbour Pilots moor, unmoor and supervise the movements of all vessels in the vicinity of the berths. Saudi Aramco Harbour Pilots are on duty continuously and at present their services are provided without charge for normal operations, although Saudi Aramco reserves the right to charge for these services.

PILOT BOATS: An 87 ft. steel hull dedicated launch with about 6 ft. freeboard is usually available to transfer Harbour Pilots to and from tankers using South Pier, North Pier, the Sea Islands and Ju'Aymah LPG Terminal. Transfer of Harbour Pilots to and from tankers using the Ju'aymah Crude Terminal is usually by helicopter.

Pilot boats carry regulation signals, are equipped with radar, VHF radio and are painted white with green hull.

Also see "Regulations".

RADIO COMMUNICATIONS AND MESSAGES: *General:* The Saudi Arabian Oil Company owns and operates a marine radio coast station, call letters HZY, Ras Tanura Radio. The station is maintained for transacting Company business with inbound and outbound vessels and operates 24 hours a day. Ship's Agents are not allowed to send messages to Masters via HZY Radio. There is no charge for incoming or outgoing message or radio telephone service. Personal messages or calls are not allowed.

HZY Transmitting Antenna: The coast station transmitting antenna is located at: Lat. 26° 18′ 36″ N., Long. 50° 07′ 12″ E.

Due to its inland location, Masters are strongly advised NOT to use this antenna for radio direction finding since inaccurate bearings will be obtained due to coastal refraction.

Required Arrival Information: Vessels must advise via Radio of estimated and/or actual arrival times at Ras Tanura Entry Buoy. It is required that vessels provide HZY with a minimum of three notices of ETA information: at about 72, 48 and 24 hours steaming time from Ras Tanura. Shorter notices may result in berthing delay. If loading part cargoes at other Gulf ports prevents a vessel from furnishing an accurate ETA, steps should be taken to advise by message (direct or through the ship's Agent) giving the best possible estimate. This message should then be followed by an accurate ETA immediately upon departure for Ras Tanura. Failure to give at least 24 hours' notice will result in an addition to allowable laytime. Vessels should advise last 3 ports of call and next port of call.

Standard Messages: Upon contact with all inbound tankers HZY Radio will transmit 2 standard messages:

MASTER RAS TANURA RADIO/HZY CONTACT HZY SOONEST ADVISING ONE ETA GMT RASTANURA ENTRY BUOY TWO ANY LATER CHANGES THREE AGENTS NAME AND REQUIREMENTS FOUR ARRIVAL DEPARTURE DRAFT FORE AND AFT FIVE ARRIVAL DISPLACEMENT TONNAGE SIX DEBALLASTING HOURS LOADING RATE IF CAN LOAD CARGO CONCURRENT WITH DEBALLASTING SEVEN MAXIMUM LOADING RATE AFTER DEBALLASTING EIGHT PREVIOUS CARGO AND IF CARGO OR RESIDUE ABOARD TO BE COMMINGLED WITH RASTANURA CARGO NINE IF LOADING MORE THAN ONE GRADE WHICH GRADE TO BE LOADED FIRST OR IF CAN LOAD SIMULTANEOUSLY AND LOADING RATE EACH GRADE TEN CARGO AND BUNKER REQUIREMENTS ELEVEN DOES THE VESSEL COMPLY WITH SOLAS CONVENTIONS REGARDING THE

SAUDI ARAMCO

It is important that the Master send a reply to the above 2 messages as soon as possible after receipt.

Advisory Notices sent by HZY Radio: Navigation Warnings, port closure information and hydrographic notices are broadcast on 430 kHz, 4308.5 kHz and 8480 kHz at 0430 GMT and 1630 GMT.

Port closure information is also broadcast on 430 kHz along with traffic list every odd hour when in force.

Weather for offshore areas is dual broadcast on 430 kHz, 8480 kHz and 12811.3 kHz at 0800 GMT and on 430 kHz, 4308.5 kHz and 8480 kHz at 0430 and 1630 GMT.

A tentative berthing schedule of ships is broadcast at 0700 GMT and 1900 GMT daily on 430 kHz. This schedule is not firm and subject to change at any time. MASTERS MUST NOT MAKE ANY VESSEL MOVEMENTS WITHIN THE PORT BASED ON THIS SCHEDULE. The Saudi Aramco Pilot will individually alert vessels for final berthing instructions.

Aircraft Radio Beacon: There is an aircraft radio beacon transmitting on 335 kHz located at: Lat. 26° 37′ 36″ N.,)Long. 50° 09′ 47″ E. The beacon call sign is – RT.

HZY Coast Station Procedures – MF and HF: HZY Ras Tanura Radio provides W/T service in accordance with the schedules shown on CHART – 1 and CHART – 2. Traffic lists are transmitted on working frequencies after a preliminary announcement on 500 kHz on the MF band and on the working frequency in the HF band. Ships may begin calling HZY when the traffic list is completed.

During watch periods, HZY monitors 500 kHZ in the MF band and Common Channels 5 and 6 in the scheduled HF band. When HZY is open for service on HF, the identifying signal CQ CQ CQ DE HZY HZY HZY is transmitted approximately every 30 seconds. Ships may call on Channel 5/6 at any time.

HZY also provides HF Radio Telephone service in accordance with the frequency assignment in CHART – 3. The mode of operation is simplex using upper sideband. This service is restricted to telephone calls with Saudi Aramco representatives. Initial contact to establish service is via W/T. HZY will designate the frequency for radio telephone use at the time contact is made on W/T.

VHF Radio Communications with Saudi Aramco: Ras Tanura Pilots maintain a listening watch on VHF Channel 16 which is used as the calling channel. The following VHF working channels are available – 11, 13, 14, 18, 20, 78.

Saudi Aramco Terminal Planners monitor VHF Channels 13, 14 and 16 and can also be contacted via Ras Tanura Pilots.

VHF contact with Ras Tanura Pilots should be established within 100 miles of the port (or more in good propagation conditions) and maintained when anchored.

Use of VHF at the berths in the Port of Ras Tanura to contact Saudi Aramco Terminal Planners, Pilots or Agents is permitted.

VHF radio services are provided as a separate service and not from the HZY Radio Ras Tanura facility.

Communications with Saudi Aramco – Other than via HZY Radio: In the event that difficulties are encountered in communicating with Saudi Aramco via HZY Radio, a coast station is available at Bahrain Radio, call sign A9M. Messages are forwarded to Saudi Aramco via International Telex facilities. All such messages are at the ship's expense and subject to a delay of one day or more. There is a Saudi Arabian Government Maritime Coast Radio Station at Dammam call sign HZG.

Vessels calling at Ras Tanura or Yanbu Ports can contact HZY on Telex No. 801919 SHEIKO SJ, using Marisat. HZY does not initiate any call to contact vessels by telex.

Radio Silence at Berth: The use of Wireless Telegraphy and Radio Telephone transmitting equipment (with the exception of VHF equipment) is prohibited when secured to any Saudi Aramco Terminal facility.

Departure from Ras Tanura: It is important that for several days after departure from Ras Tanura vessel maintains communications with and copy HZY traffic lists.

Saudi Aramco NGL Terminal Yanbu: Vessels bound for the Saudi Aramco NGL Terminal at Yanbu should address radio messages to "SAUDI ARAMCO RAS TANURA/YANBU" and communicate with HZY on HF channels only.

CHART – 1:
HZY W/T Watch and Answer Frequencies

Listening Frequency Ships Transmit	*Reply Frequency HZY Transmit*	*Scheduled Times GMT*
—	430 kHz	H24
500 kHz	500 kHz	H24
—	521 kHz	On Request
*4181.6 to 4182.4 kHz	4308.5 kHz	1600 – 0600
†4186.8 to 4187.2 kHz		
—	4230 kHz	On Request
—	4275.5 kHz	On Request
*8632.2 to 8364.8 kHz	8480 kHz	1400 – 1000
†8373.6 to 8374.4 kHz		
*12544.8 to 12547.2 kHz	12811.3 kHz	0600 – 1600
†12560.4 to 12561.6 kHz		
*16726.4 to 16729.6 kHz	16960 kHz	1000 – 1400
†16747.2 to 16748.8 kHz		

*Corresponds to common Channel 5/6

†Corresponds to common Channel 18, monitored immediatel following lists until all ships cleared.

Notes: (1) HF transmit frequencies are HZY working frequencies.
(2) During watch periods, CQ CQ CQ DE HZY HZY HZY transmitted, indicating band is open for service.

CHART – 2
HZY W/T Working Frequencies and Traffic List Times

Frequencies HZY Transmit	*Schedule*	*List Times GMT*
430 kHz	H24	Every Odd Hour
521 kHz	On Request	—
4308.5 kHz	1600 – 0400	Every Even Hour
4230 kHz	On Request	—
4275.5 kHz	On Request	—
8480 kHz	1400 – 0800	Every Even Hour
12811.3 kHz	0600 – 1400	Every Even Hour
16960 kHz	1000 – 1200	1000 and 1200

Lists are broadcast on the odd or even hour.

CHART – 3
HZY Radio Telephone Frequencies

Carrier Frequency	*Assigned Frequency*
4143.6 kHz	4145 kHz
6218.6 kHz	6220 kHz
8291.1 kHz	8292.5 kHz
12429.2 kHz	12430.6 kHz
16587.1 kHz	16588.5 kHz
22124.0 kHz	22125.5 kHz

Notes: (1) HZY maintains a constant listening watch on internationa distress and calling frequency 2182 kHz.
(2) Initial contact via W/T, Channels are not monitored.
(3) HZY transmits on upper side band, A3A/A3J.
(4) Ships may specify their own authorised send frequency desired.

TUGS:

DESCRIPTION OF TUGS: Saudi Aramco operates the following tugs

1 single screw conventional tug of 4,000 h.p. with Bollard Pull 55 tons.

3 twin screw flanking rudder tugs of 6,000 h.p. with Bollard Pull 72 tons.

3 Voith Schneider propulsion tugs of 4,000 h.p. with Bollard Pull 40 tons.

METHOD OF USE: These tugs may be encountered at any of th terminals in the Port of Ras Tanura.

Tug's lines are used but vessels should have good quality rope available to supplement these in periods of bad weather.

At present no charge is made for the tugs when used in norma mooring and unmooring operations but a charge is made for additiona or unusual services.

BERTHING:

FACTORS: Vessels calling at the Port of Ras Tanura are assigne berths based on a variety of factors including but not limited to th following: nomination date, time of arrival, product to be loaded, vess size, available berths and loaded draft. If there are no immediate berthin prospects vessels will be directed to anchor in the Northern Holdin Anchorage.

DOUBLE BERTHING: Saudi Aramco reserves the right to advis vessels at which berth or berths and/or Terminals the loading will sta and finish.

MOORINGS: All arriving vessels of 75,000 d.w.t. and over shall comp with the wire mooring line requirements detailed in Part "B" – Moorin Regulations.

During periods of unsettled weather, arriving vessels of under 75,00 d.w.t. fitted with wire moorings are preferentially berthed.

BALLAST: Vessels shall complete the deballasting operation promp after berthing in order to minimise time at berth. Simultaneous loadi and deballasting is permitted provided that the vessel has positi segregation between the two operations. Owners/Operators Charterers of vessels requiring time to deballast in excess of what Sau Aramco considers standard will be so notified by letter with a copy the Master.

No facilities for the reception of dirty ballast are available in the Po of Ras Tanura.

HELICOPTER OPERATIONS:

GENERAL: Helicopter operations in the Port of Ras Tanura are carri out according to the "International Chamber of Shipping – Guide Helicopter/Ship Operations" All ships using the service should have copy of this information and the Safety Check List on board.

DESCRIPTION OF HELICOPTERS: The helicopters used to transp Saudi Aramco personnel and equipment to and from tankers in the Po of Ras Tanura are Bell Model 212 and 214 which are twin-engine kerosene fuelled, carry 11 to 18 passengers.

They are fully equipped for night operations and operate both day and night, with capability for either landing or winching operations as required and permitted.

In addition to being fitted with radar and radios which operate on aeronautical frequencies, the helicopters are fitted with International Marine VHF Ship/Shore Channels 11, 12, 13, 14 and 16.

SHIP INFORMATION: The following ship information should be available to the pilot of the helicopter:

1. Ship's name and call sign.
2. Owner.
3. Port and Country of Registry.
4. Type and Size.
5. Inert gas system installed.
6. Type of deck operating area provided for helicopters.
7. Type, size, markings and location of "Manoeuvring Zone" and "Clear Zone" provided for helicopters.
8. Obstacle types, sizes, markings and locations within and adjacent to helicopter operating area including antennae, handrails, davits, catwalks, valves, piping, etc,
9. Floodlight locations and wattage.
10. Communication frequencies available and those which are guarded continuously.
11. Special conditions, limitations and precautions applying to the particular vessel.

This information is kept on file in the Helicopter Dispatch Office and will be regularly updated.

If the conditions aboard the ship do not agree with the file, the differences must be resolved before a helicopter is dispatched to a ship.

COMMUNICATIONS:

(a) **The Initial Contact** will be made by the helicopter Pilot with the ship on VHF Channel 16 and the working Channel 12 as soon as practicable to confirm the rendezvous time and location, type of service intended, etc.(b) In the event of **Radio Communication Failure** the helicopter will circle the ship and the ship should reply by signalling lamp with:

1. Steady white light: Ready to receive helicopter
2. Series of short flashes: Reception of helicopter delayed for a period not greater than 15 minutes.
3. Prolonged series of "N" signals: Reception of helicopter delayed for a period in excess of 15 minutes. In this case the helicopter will return to base.

(c) **Initial Navigation Contact.**

The helicopter Pilot will at the appropriate time use the agreed VHF working frequency to request the ship to transmit its call sign on 410 kHz and then to transmit a continuous signal (locked Key) for a sufficient time to determine the bearing to the ship and identify it on the radar.

SAFETY: The Port of Ras Tanura maintains a vigorous cargo handling safety programme.

Saudi Aramco is a member of the Oil Companies International Marine Forum (O.C.I.M.F.) and as such follows the procedures and safety practices recommended by this international organisation.

As is the practice in other Arabian Gulf Ports, each ship's Master is presented with a form entitled "Declaration by Master" which lists Saudi Aramco safety regulations. After a detailed review of each safety item with the Saudi Aramco Safety Representative, the Master must sign the form. Prior to start of loading and later at several times during the loading, Saudi Aramco Safety Representative will visit the ship and accompanied by one of the ship's officers will check to ensure that safe loading practices are being observed by both the ship and the shore crews.

In cases of blatant or repeated infringements of the Safety Regulations ships will be removed from the berth and will not be reberthed until a thorough inspection has been satisfactorily carried out by a Saudi Aramco Safety Representative.

Also see "Safety Regulations".

EMERGENCY PROCEDURES: The course of action to be followed by Saudi Aramco Personnel in the event of a fire or explosion on board a vessel while berthed in this Port will be dictated by the particular facts and circumstances of the incident. Although it is impossible to indicate exactly what practices will be applied during an emergency before an evaluation of the specific situation can be made by the responsible Saudi Aramco representative, his decisions will be based on the following principles:

1. An evaluation of the particular emergency will be made by the responsible Saudi Aramco Representative to determine the course of action to be taken. His decision as to the course of action will take into account the location, type and extent of fire or explosion, the berth location and proximity of other vessels, and the tidal and wind conditions.
2. A burning vessel will not be permitted to remain at the berth. Where possible, the fire will be fought with available berth fire-fighting facilities until the arrival of tugs. After hook-up of the tugs to the vessel's fire wires, if the fire is not controllable or extinguished, the vessel will be released or cut free and removed from berth under controlled conditions.
3. Where communication facilities permit, the Master or responsible ship's officer will be advised prior to releasing or cutting free a vessel from berth. The Master should designate a responsible senior ship's officer with whom the senior Saudi Aramco Representative present can communicate in case of a fire or explosion aboard the vessel. Where possible, this officer will be advised of the actions to be taken in releasing or cutting the vessel free from the berth.
4. Although a vessel may have no power it may be released or cut free from the berth prior to arrival of the tugs and hook up to the vessel's fire wires, if in the opinion of the senior Saudi Aramco Representative present it is a greater hazard at the berth than drifting free. Normally, however, a burning vessel will be removed by tug boats under controlled conditions.

NOTE: The above mentioned Principles are intended to provide the guidelines of action to protect terminal personnel and facilities, and other vessels at the Saudi Aramco loading berths.

The handling of gas tankers loading LPG at Saudi Aramco berths is governed by separate sets of rules with the mnemonic "Gasrul 9:86", copies of which are provided to all gas tankers.

POLLUTION: Saudi Aramco adopts a vigorous policy of pollution prevention, detection, and clean-up which is required and supported by the Saudi Arabian Government.

Vessels using terminals operated by the Company are required to observe the IMO conventions relating to the pollution of the sea by oil and are advised that violations will involve the Master/Owner/ Agent/ Operator in severe penalties.

Saudi Aramco does not tolerate pollution and will clean oil spills with whatever men, equipment, and material that are required considering the size of the spill, time of day, sea state and weather conditions. The Master, Owners and Operators shall be liable for all expenditure incurred by Saudi Aramco.

The equipment and material used in the clean up effort is dictated by on site judgement of qualified professional personnel whose goal is to protect the environment and prevent hazardous conditions.

Masters of vessels involved in a pollution incident shall immediately contact their Agent who will arrange the necessary Government contact.

Also see "Pollution Regulations".

SHIP'S AGENTS: Vessels calling at any terminal in the Port of Ras Tanura should address all messages concerning ship's business to their Agents. Matters concerning provision supply, minor repairs, local medical or hopital services, mail, crew changes, etc., are to be handled by the ship's Agent.

SURVEYORS: Independent oil inspection service is available at the terminals in the Port of Ras Tanura by the following companies:

(a) Redwood Petroleum Division,
1 Place des Alpes,
1201 – Geneve 1, Switzerland.
Telephone: 312250
Telex: 22140 SGS CH
(for local information contact Gulf Agency Company)

(b) Caleb Brett & Son Limited,
International House, Mitre Square, 26-28 Greenchurch Lane,
London EC3A 5ED

(c) E. W. Saybolt and Co. S.A.
400, Swenson Drive,
Kenilworth, New Jersey 07033, U.S.A.

(d) Watson Gray (Saudi Arabia) Limited,
c/o Yusuf Bin Ahmed Kanoo,
Saudi Aramco Box 711 or P.O.Box 71,
Ras Tanura, via Dhahran, Saudi Arabia.
Telephone: (03)6670180/6670903
Telex: 651012 KANOO SJ

(e) Services et Transports,
Route du Hoc, Gonfreville L'orcher,
Harfleur 76700, France.
Telephone: (35) 26 40 18
Telex: 190634 F.

(f) SPACO (Saudi Petroleum Analytical Company)
c/o SNAS, P.O.Box 5641, Riyadh, Saudi Arabia.
Telephone: (01)4766589
Telex: 201406 SJ

Marine and Engine Surveyors of various companies are available locally. They may be contacted through the vessel's Agent.

INERT GAS REQUIREMENTS – CARGO TANKS: All vessels are required to be fitted with an inert gas system under the provisions of the SOLAS Convention 1974 and its 1978 Protocol shall have the cargo tanks in the inerted condition prior to berthing at any Saudi Aramco Terminal in the Port of Ras Tanura.

The Berthing Pilot will check the oxygen content of cargo tanks with a ship's officer using ship's equipment. If the oxygen content of any tank exceed 8% by volume, the vessel shall not be berthed until the oxygen content of all tanks meet the requirements of the convention.

The Saudi Aramco Form "Inert Gas System – Check List" must be satisfactorily completed prior to berthing.

FACILITIES:

BUNKERS: Saudi Aramco fuel bunkers are available at all berths in the port. Black diesel is not available at the Ju'aymah Crude Terminal. Vessels taking only bunkers are urged to call at Ras Tanura *prior* to loading elswhere to avoid delays caused by draft and berthing assignment problems.

Non-Saudi Aramco bunkering services are available. Vessels employing these services are generally required to carry out their bunkering operations at the Northern Holding Anchorage.

FRESH WATER: Drinking and boiler water are NOT available in the Port of Ras Tanura. In cases of emergency, ships' Agents may be able to arrange delivery by barge of small quantities.

LUBRICATING OILS: Lubricating oils are available in limited quantities of drums if ordered through ship's Agents well in advance.

STORES: The shipping of any stores at Saudi Aramco berths is prohibited.

REPAIRS: Repair services are available from local business concerns. Saudi Aramco will not assist in making emergency repairs on vessels.

It is suggested that Masters discuss repair charges with the ship's Agent prior to requesting or authorising repair work.

DIVERS: Deep sea divers, operating from modern and well-equipped boats are available. Ship's Agents must be contacted for this service.

MEDICAL/HOSPITAL FACILITIES: No medical facilities are available at any of the terminals in the Port of Ras Tanura. Requirements for medical assistance or hospital services must be made through the ship's Agent, who can arrange treatment at one of the government or private clinics or hospitals in Rahima, Al Khobar or Dammam.

The ship's Agent is able to arrange for the Port Doctor to visit vessels to treat minor injuries or illnesses. In serious cases requiring hospitalisation the Port Doctor must attend to certify the necessity. Saudi Aramco medical facilities are made available in emergencies only when other facilities are not available.

A charge will be made for all such services furnished by Saudi Aramco. The Saudi Aramco radio station "HZY" may be used at any time without charge by vessels at sea to obtain medical advice.

REPATRIATION/SHORE LEAVE: All matters relating to crew changes, repatriation of crew personnel or shore leave are to be arranged through the ship's Agent. There is no Seaman's Recreation Centre at any terminal in the Port of Ras Tanura.

DRY CARGO AND FREIGHT: No dry cargo facilities exist in the Port of Ras Tanura and all Saudi Aramco freight is handled through Saudi Arabian Government Ports in the area.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Saudi Riyals (SR). U.S.$ 1.00 = SR 3.75 (fixed).

(B) REGULATIONS

The regulations shall be observed by all vessels proceeding to any terminal in the Port of Ras Tanura.

The Rules and Regulations for Ras Tanura Port (and Ju'aymah) are published by the Co-operation Council for the Arab States of the Gulf (March 1985).

Every vessel which arrives in Ras Tanura or Ras al Ju'aymah must have a copy of these Regulations on board, or must obtain a copy immediately on first arrrival.

Neither non-possession nor ignorance of these Regulations will be considered a reason for non-imposition of a penalty for violation of these Regulations.

EXTRACTS FROM SAUDI ARABIAN GOVERNMENT REGULATIONS:

Saudi Arabian Government Regulations are strictly enforced and Masters having any doubts concerning the interpretation of these regulations are urged to consult their agent. At all times while in the Port of Ras Tanura whether at anchor, at the berth in any terminal or in transit between terminals, the vessel and its personnel are under the jurisdiction of Saudi Arabian laws.

QUARANTINE SIGNALS: Quarantine signals shall be displayed by all vessels approaching the Port of Ras Tanura in accordance with International practice. These signals shall be displayed continuously until Pratique is granted.

Sunrise to Sunset – Quarantine flag (Q)
Sunset to Sunrise – Red over White signal lights.

SAUDI ARABIAN FLAG: The flag of The Kingdom of Saudi Arabia shall be flown from the foremast of the vessel by day and by night while in the Port of Ras Tanura. The flag shall be clean and in good condition. Masters should obtain this flag before arrival but if circumstances render this impossible a flag must be obtained from the ship's Agent. Vessels not correctly flying the flag of Saudi Arabia will not be berthed. The flag is properly displayed when the Arabic writing appears on the top and the sword on the bottom.

PROHIBITED ARTICLES: All materials to be either exported from or imported into Saudi Arabia are subject to examination by Customs Authorities. The import of certain articles is strictly prohibited and such articles include but are not limited to the following:

Explosives and firearms including air rifles.
Implements of war of any kind including antique weapons.
Religious matter not pertaining to the Moslem faith.
Playing cards and gambling devices.
Narcotics.
Printed, photographic matter or video tapes depicting what could be considered pornographic.
Alcoholic beverages of any description.

Any of the above items on board any vessel calling at the Port of Ras Tanura shall be secured in appropriate locked storerooms which will be sealed by the Authorities who may carry out inspections to ensure that the seals are intact and that none of the above articles are in use. The seals must remain intact during the entire period of the vessel's stay in the Port of Ras Tanura and must not be broken until after the vessel has finally departed for a port in another country.

Trafficking in any of the above articles between vessels or between vessel's crew and shore personnel is strictly prohibited.

The baggage of crews joining and leaving vessels will be inspected to ensure that it contains none of the prohibited articles.

PHOTOGRAPHY: The use of photographic equipment of any kind is strictly prohibited within the Port of Ras Tanura. Cameras are liable to seizure by the Authorities.

SHORE LEAVE: Vessel's personnel are not permitted ashore nor on the wharves for ANY PURPOSE WHATSOEVER (this includes reading the vessel's draft) until pratique is granted and then only if actually engaged in operational duties. No visiting between vessels at berths is permitted. Shore leave is not normally granted and ship's Agents must be consulted for advice.

PENALTIES: Penalties for violations of Saudi Arabian Government Regulations are severe and considerable fines and/or delays to vessels may be incurred.

Note: Saudi Aramco fully endorses and complies with these Rules and Regulations. Questions concerning these Rules and Regulations, from Ship Owners or Masters using Saudi Aramco Marine Terminal Facilities, should be addressed to the appropriate Authority through the ship's Agents.

SAFETY REGULATIONS: Prior to arrival at berth the Master must make a Safety Declaration of the conditions he will maintain when the vessel is at berth. (Saudi Aramco Form 8812 – 2/84) – See "Appendices" – Master's Safety Declaration.

RESPONSIBILITY FOR SAFETY: The vessel's Master and crew shal be responsible at all times for the safety of the vessel and shall make provision to exercise all necessary precautions.

Saudi Aramco Terminal personnel are authorised to suspend oi handling operations in the event that any of the Safety Regulations are violated or if any other hazardous situation is observed.

SAFETY REQUIREMENTS:

Notes:

(a) All of these requirements shall be complied with at all times that a vessel is berthed at any Saudi Aramco facility.
(b) Requirement No. 14 is to be complied with at other times as stated.
(c) The title of each requirement is numbered to correspond with the questions in the Safety Check List.
(d) Guidance on methods of complying with these requirements is contained in the ICS/OCIMF publication "International Safety Guide for Oil Tankers and Terminals"

1. *Moorings:* Moorings shall be frequently monitored and carefully tended to maintain the vessel in position and alongside at all times. (See "MOORINGS REGULATIONS").

Anchors shall be effectively secured in the hawse pipe to prevent letting go accidentally.

2. *Emergency Towing:* Towing off wires shall be made fast to bitts as far forward and aft as practicable on the side of the vessel opposite to the cargo connections. The wires shall be in good condition of not less than 3.5 in. in circumference (28 mm. diameter) and secured with a minimum of 5 turns on the bitts.

The wire shall lead directly to the chock with no slack on deck and a heaving line made fast to the eye shall be used to maintain the eye of the wire between 3 ft. and 6 ft. (1 m. and 2 m.) above the water at all times.

3. *Ship/Shore Access:* Personnel shall use only the designated access. Gangways shall be carefully tended at all times and safely illuminated at night.

4. *Readiness To Move:* The vessel's boilers, main engines, steering machinery and other equipment essential for manoeuvring shall be maintained so as to enable the vessel to be unberthed under full engine power at short notice.

A suitable trim shall be maintained for the same reason.

5. *Deck Watch:* A responsible Ship's Officer and sufficient crew shal be on watch to attend to the safe operation of the vessel.

A member of the crew shall be continuously on watch on the loading deck in view of the manifold and access to the vessel.

6. *Ship/Shore Communications:*

(a) A reliable communication system shall be established and tested for control of the cargo handling operation. This shall consist of suitable UHF/VHF radios, telephone or direct voice communication.
(b) The responsible Ship's Officer and the shore operator shal confirm with each other that the communications system and signals for controlling the operations are understood by them and by other personnel on duty at the start of operations and at each change of watch or shift.
(c) A responsible member of the vessel's crew with adequate command of the English language shall man the agreed communication medium.

7. *Operating Procedures:* The procedures for cargo, bunker and ballast operations shall be agreed in writing by the responsible Ship's Officer and the Terminal Representative.

8. *Emergency Shutdown:* Whenever an emergency situation develops aboard the vessel which may require that the cargo loading operation be suspended the vessel's tank/manifold valves shall not be closed against the flow rate under any circumstances until the berth operator has been advised. In order to prevent pressure surges in the loading system the period of valve closure shall be not less than 30 seconds and to prevent accidental closure of power operated butterfly valves they shall be locked or otherwise secured in the open position.

9. *Fire Fighting Equipment:* Fire fighting and emergency equipment shall be kept in readiness at all times.

Vessel's fire hoses fitted with combination jet/spray nozzles shall be connected to the fire main and laid out on deck forward and abaft the loading manifold.

If practicable, a pump shall maintain pressure on the fire main otherwise the fire pump shall be on standby ready for immediate use.

Monitors shall be ready for use and portable fire extinguishers preferably of the dry powder type shall be available in the proximity of the manifold area.

10. *Loading Connections:*

(a) The Master shall ensure that cargo and bunker hoses or arms are visually inspected and in good condition.
(b) The Master shall ensure that the loading connection is made to his satisfaction.
(c) Adequate safe fixed lighting arrangements shall be provided at the manifold at night to ensure a safe working area for personnel engaged in making the connection and to detect any leakage or spillage of cargo.
(d) Cargo hoses and arms at Saudi Aramco loading facilities are fitted with insulating flanges or joints. Ship/shore bonding cables shal *NOT* be used.

11. *Cargo Spillage and Leakage:*

(a) All deck scuppers shall be effectively plugged and cemented if necessary to prevent spilled oil from escaping overside.
(b) Accumulations of water shall be periodically drained and the scuppers secured immediately after the water has been drained. A crew member shall be in attendance during this operation.
(c) All cargo pipeline and pumproom valves when not in use shal be closed.
(d) Adequate drip trays shall be provided at the loading connections.
(e) Loading rates shall be regulated to avoid oil being drawn into the gas venting system.

(f) If leakage occurs from a pipeline, valve, hose or arm, or any connection, operations through that system shall be suspended until the cause has been ascertained and the defect remedied. If a pipeline, hose or arm ruptures or if there is an overflow, all cargo and bunker operations shall be stopped immediately and shall not be restarted until the fault has been rectified and all hazards from the released oil or product eliminated.

(g) In the event of any spillage of cargo on deck or overside, the Representative of the Terminal Superintendent shall be notified immediately.

12. *Unused Cargo and Bunker Connections:*

(a) All unused cargo and bunker connections shall be properly blanked, fitted with a gasket and bolted with one full-size bolt in every hole.

(b) The stern discharge line if fitted shall be isolated forward of the after accommodation by blanking with a spectacle piece or by removal of a spool piece.

(c) Unused inert gas system connections to machinery spaces shall be properly sealed to prevent entry of cargo or vapour.

(d) Any part of a crude oil washing or slop transfer system which extends into machinery spaces shall be securely blanked and isolated on the tank deck.

13. *Sea Valves:*

At the start of and at regular intervals throughout deballasting and loading, a deck watch shall be maintained to ensure that oil is not escaping through sea and overboard discharge valves (Also see "Pollution Regulations").

When not in use, sea and overboard discharge valves connected to the cargo or ballast systems shall be closed and lashed. When lashing is not practicable as with hydraulic valves, a suitable means of locking shall be used to indicate that the valves are to remain closed. (For further guidance refer to the ICS/OCIMF publication "Prevention of Oil Spillage through Cargo Pumproom Sea Valves").

14. *Tank Lids:*

(a) All cargo tank lids ullage and sighting ports shall be securely closed **before berthing or unberthing operations commence.** To maintain watertight integrity **when manoeuvring in the loaded condition** all cargo, ballast and bunker tanks, cofferdams and pumproom entrances shall be securely closed.

(b) During cargo handling operations all cargo, ballast and bunker tank lids and tank washing openings shall be securely closed.

15. *Tank Venting:*

(a) All vessels shall ensure that vapour displaced by cargo shall be vented in accordance with the written agreement with the Terminal Representative.

(b) All vessels fitted with an Inert Gas System shall ensure that the oxygen content throughout the atmosphere of cargo tanks has been reduced to 8 per cent or less by volume.

(c) Flame arrestors will be employed in accordance with the design features of the venting system.

(d) The loading rate shall be controlled to prevent excess pressure in the cargo tanks.

(e) If ullage ports are required to be open for operational purposes the opening shall be protected by efficient flame arrestors. Ullage ports shall not be left partly covered but shall be fully open in such a way that vapour may leave the tank in the form of a vertical unimpeded jet.

(f) In vessels not fitted with automatic ullaging devices ullage ports may be opened intermittently for short periods for the purpose of ullaging or sighting only.

16. *Hand Torches and Battery Powered Equipment:*

(a) Battery operated flashlights shall be in good condition and of a type certified to be safe for use in hazardous locations.

(b) Portable domestic radios, photographic flash equipment (See "Prohibition of Photography"), portable electronic calculators, recorders and other battery-powered equipment of non-approved type shall not be used on deck or in any place where petroleum vapour may be encountered.

17. *Portable Radio Transceivers:* Portable VHF/UHF transceivers shall be of an intrinsically safe type which is approved by a competent authority. When used this equipment shall be in good condition.

18. *Radio and Radar Transmitters:*

(a) Main radio equipment shall not be used and main transmitting aerials shall be disconnected and grounded.

(b) Radar scanners shall be switched off.

(c) The servicing of radio and radar equipment shall not be permitted without written agreement of the Terminal Representative.

19. *Electrical Equipment:*

(a) The use of portable electrical equipment on flexible leads is prohibited on the tank deck. Supply cables for such equipment shall be disconnected and removed from the tank deck.

(b) All electrical installations on board vessels shall be in good condition. Modifications which have not been approved by an appropriate authority shall not be accepted.

20. *Amidships Accommodation:* All doors, ports and windows in amidships accommodation shall be closed and every effort shall be made to prevent entry of petroleum vapour into this accommodation.

21. *Aft Accommodation:*

(a) All doors, ports and openings in the after accommodation (other than pumproom) which lead directly to the loading deck or which overlook the loading deck at any level shall be kept tightly closed.

(b) Doors that are required to be closed shall be clearly marked but under no circumstances shall they be locked.

(c) Machinery space openings by means of which petroleum vapour may enter shall be closed.

(d) Consideration shall be given to the suspension of cargo operations when weather conditions support the entry of petroleum vapour into spaces which cannot be closed.

22. *Air Conditioning Intakes:*

(a) Central air conditioning or mechanical ventilation systems shall be adjusted to prevent intake of petroleum vapour if possible by recirculation of air within enclosed spaces so that a vacuum is not created.

(b) Any intake within the range of possible petroleum vapour release shall be closed.

(c) If at any time it is suspected that petroleum vapour is being drawn into the accommodation, central air conditioning and mechanical ventilating systems shall be stopped and intakes closed or covered.

23. *Window Type Air Conditioning Units:*

Window type air conditioning units shall be disconnected from the power supply.

24. *Smoking:*

Smoking shall only be allowed in places in the after accommodation which have been jointly approved in writing by the Master and the Terminal Representative and suitable notices shall be posted at the entrance to designated smoking rooms.

No place will be considered suitable for smoking unless:

(a) It is in enclosed accommodation abaft the cargo tanks.

(b) It has no doors which open directly onto the outside deck.

(c) It has no doors or ports which open directly onto or over the cargo deck or onto decks overlooking cargo spaces.

(d) All ports are kept closed and doors into passageways are kept closed except when in use.

25. *Galley Stoves and Cooking Appliances:*

(a) Galleys which use only steam or immersed electric heaters shall be considered suitable for use.

(b) The use of galley stoves and cooking appliances with non-immersed elements such as electric hot plates and toasters may be permitted in galleys and properly designated pantries with the written agreement of the Terminal Representative.

(c) Approved galleys and pantries shall be situated in the after accommodation and shall have no doors or ports which open directly onto the cargo deck.

(d) All galley and pantry doors and ports shall be kept closed.

(e) Ventilator trunkings and filters of extractor fans in galleys shall be kept clean and free from accumulated oil and fat.

26. *Naked Lights:*

Open flames or fires, exposed incandescent material and any other unconfined sources of ignition are prohibited on deck and in other places where there is a risk that petroleum vapour may be present.

27. *Emergency Escape:*

Means for emergency escapes shall be provided on the side of the vessel opposite to the loading connections. For security reasons such means is to be stowed at deck level in such a manner as to be ready for expeditious use in an emergency. Such means shall be of adequate length to reach the water at all times.

VOLATILE AND NON-VOLATILE PETROLEUM:

Due to the variety of petroleum products available for loading at Saudi Aramco facilities in the Port of Ras Tanura, all vessels arriving to load crude oil or any petroleum product whether volatile or non-volatile at any berth shall be required to observe the Safety Regulations.

See also "Gasrul 9:86" for Saudi Aramco Rules governing the handling of gas tankers at berth.

PRECAUTIONS AGAINST STATIC IGNITION: Tanks not properly inerted (See "Safety Requirement") prior to loading static accumulator oils (kerosene, kerosene type jet fuel, white diesel and under certain conditions heavy naphtha and gasoline type jet fuels) shall be gas free within 40% of the lower flammable limit. The following restrictions shall also apply to vessels loading static accumulator oils:

(a) Tanks and pipelines shall be free of water.

(b) Loading overall (splash filling) shall not be permitted.

(c) No conducting equipment (ullage tapes, sample cans, thermometers) shall be introduced into a cargo tank until 30 minutes have elapsed after loading has been stopped to that tank.

(d) No loose floating objects shall be present in tanks to be loaded.

(e) Initial loading rates shall not exceed 1,000 bbls.p.h. per tank. Above soundings of 20 ft. loading rates of up to 1,500 bbls.p.h. shall be permitted.

(f) Properly bonded and grounded automatic ullaging equipment may be used at any time.

Vessels with tanks which are properly inerted (See "Safety Requirement") shall not be required to comply with the specific requirements for loading static accumulator oils. However, normal safety precautions shall be observed.

HYDROGEN SULPHIDE HAZARDS: Saudi Aramco crudes may contain dissolved hydrogen sulphide (H_2S) in concentrations which may be hazardous. It is recommended that Owner's instructions and the ISGOTT recommendations in respect of H_2S hazards are reviewed.

EMERGENCY SIGNAL: In the event of a fire or other emergency, the vessel shall sound a series of 10 short blasts on the ship's whistle.

GAS FREEING: No gas freeing or tank washing shall be carried out at berth.

BOILER TUBE CLEANING: Funnel uptakes and boiler tubes shall not be cleaned while the vessel is at berth. Every precaution shall be taken to ensure that sparks do not escape from the funnel.

REPAIRS: Repairs or maintenance of any kind which may produce a source of ignition shall not be undertaken without the agreement in writing of the Terminal Representative.

PENALTIES: Disregard of or failure to fully comply with any of the Safety Regulations or any safety regulations generally accepted and practised in the marine transport industry will result in the suspension of all operations and the vessel may be required to leave the berth.

Vessels presented for loading with deficient equipment or machinery whether by design or by lack of maintenance will not be berthed. If such deficiency becomes apparent after berthing the vessel will be removed from the berth.

Safety violations due to negligence on the part of the vessel's personnel will result in the suspension of loading operations for investigation and correction. Repeated violations may result in a vessel being removed from the berth.

Removal from the berth as a result of safety violations or deficiencies will be at vessel's expense and Saudi Aramco will not accept responsibility for any resulting delay to the vessel.

Vessels with unacceptable safety performances will not be permitted to berth at Saudi Aramco facilities on future visits.

POLLUTION REGULATIONS: Vessels using the Port of Ras Tanura shall exercise every precaution to prevent the pollution of the sea by oil.

1. A crew member shall be stationed on deck to sight the overboard discharge during deballasting operations to ensure that no oil or oil-based products escape into the sea.
   Particular vigilance shall be exercised at any time that a change of operation takes place, e.g. starting of stripping pumps or eductors, change of tanks, commencement of loading, etc.
2. At sea island type berths, all ballast shall be discharged from the side of the ship nearest the berth.
   At pier berths, all ballast shall be discharged from the offshore side of the ship.
   At night, the discharge and the sea area in its vicinity shall be adequately illuminated.
3. No domestic or other rubbish shall be dumped into the sea.
4. In the event of an oil spill the Master shall notify the Terminal Representative on duty.
5. Excessive smoke from the funnels or exhaust gas lines of vessels is prohibited.

PILOTAGE REGULATIONS:

BOARDING ARRANGEMENTS: In order to permit the harbour Pilot to safely embark and disembark from a vessel a pilot ladder shall be provided in accordance with the following requirements:

1. The ladder shall be kept clean and in good order and shall be of adequate length and strength.
2. The vertical distance between the steps must not exceed 15 in. The outboard edge of the step shall project from 5 in. to 6 in. from the hull. Ladders shall be so constructed that the steps will remain flat at right angles to the hull while supporting the weight of a person.
3. Spreaders at suitable intervals shall be provided to prevent the ladder from twisting and the ladder shall be properly secured with the steps level.
4. The deck in the vicinity of the ladder shall be clean and free of oil and grease or other slippery substances.
5. When possible, on vessels so equipped, the pilot ladder shall be made fast next to an area where there is a break in the rail or an opening in the bulwark. Otherwise, suitable arrangements for safe access to the deck from the top of the pilot ladder shall be provided.
6. The boarding position should be as near amidships as possible so that the whole length of the ladder rests against the ship's flat side, clear of all possible discharges from the ship.
7. Adequate lighting shall be provided at night so that the pilot ladder and the deck area close by the head of the ladder shall be adequately and properly illuminated.
8. Manropes, a safety line and lifebuoy with self igniting light should be rigged ready for use if required.
9. The rigging of pilot ladders and the embarkation and disembarkation of Pilots thereby shall be supervised by a responsible deck officer of the vessel.
10. The vessel's propeller shall be stopped during the approach of the pilot boat and the embarking of the Pilot.
11. Whenever the distance from the water to the deck of the vessel exceeds 30 ft. (approximately 9 m.) the pilot ladder shall be rigged in combination with the accommodation ladder.
12. In any small vessel in which the bulwark rails are below the level of the deck of the pilot boat (approximately 6 ft. or 2 m.) a safe boarding position on each side of the forward end of the poop shall be provided and equipped with manropes.
13. Pilot hoists of the double drum, double-wire type are permitted after inspection and approval by Ras Tanura Pilots.

Failure to provide a safe method of boarding for the Pilot will result in the vessel being ordered to anchor until the fault is rectified.

REMOVAL OF WRECKS AND OBSTRUCTIONS: If any vessel founders or otherwise becomes in the opinion of the Company, an obstruction or danger to navigation in the Port of Ras Tanura and its Owner or his Agent fails to remove the obstruction or danger so caused within the period of written notice served by the Port Captain, or immediately in an emergency, the Company may, for the purpose of safeguarding the Port, take action to remove the obstruction or danger.

The Owner of any vessel at the time of its becoming an obstruction or danger to navigation in the Port of Ras Tanura shall be liable for the expense incurred in removing the obstruction or danger to navigation.

Also see Standard Terms and Conditions where Master requests Saudi Aramco to provide assistance to refloat vessel stranded in waters of the Arabian Gulf.

Also see "Appendices" – Refloating/Stranding.

TRAFFIC REGULATIONS: The following regulations apply to all vessels entering or leaving the Port of Ras Tanura or Dammam by way of the Ras Tanura Channel.

The separation zones and routes shown on the charts of the Ras Tanura Channel are approved by IMO. Violators of the routeing recommendations will be reported to their Owners/Operators/Agents/Charterers.

1. All vessels shall monitor VHF Channel 10 when under way in the Ras Tanura Channel and its vicinity and in the anchorage areas of Ras Tanura Terminal.
2. All vessels using the inbound or outbound channels shall have an underkeel clearance of at least 5 ft. (1.52 m.).
3. Under no circumstances shall inbound vessels navigate in the departure channel nor shall outbound vessels navigate in the arrival channel.
4. Inbound vessels shall:
   (a) report to Ras Tanura Port Radar on VHF Channel 10 when passing Beacon No. 3 and Buoy No. 7.
   (b) not exceed a speed of 5 knots after passing Buoy No. 9.
   (c) not overtake and shall mantain a distance of one mile from vessels proceeding in the same direction after passing Buoy No. 9.
   (d) navigate with extreme caution and give way to vessels departing from the berths and anchorages.
5. Outbound vessels:
   (a) departing from Ras Tanura Anchorage shall advise Ras Tanura Port Radar on VHF Channel 10 of their intentions 30 minutes before weighing anchor.
   (b) shall not overtake and shall maintain a distance of at least one mile from vessels proceeding in the same direction until both vessels have passed clear of Buoy No. 5.
6. Vessels manoeuvring in the area between the South extremity of the Tanker Anchorage and the entrance to the Departure Channel (Buoys 17 and 18) shall limit speed to a maximum of 5 knots.
7. Vessels bound to and from the Port of Dammam shall keep to the Eastern part of the Tanker Anchorage and avoid the manoeuvring area from the anchorage to the sea islands and piers. Outbound vessels from Dammam shall, when passing Dammam Channel Buoy No. D 37, alert Ras Tanura Port Radar of their ETA at the Southern extremity of the Tanker Anchorage.

MOORING REGULATIONS:

GENERAL: The use of nylon or other highly elastic mooring ropes is discouraged.

If a vessel with synthetic mooring ropes is alongside when squall conditions arise, loading to that vessel shall be stopped and loading arms disconnected until weather conditions improve and it is judged safe to resume the loading operation.

Vessels shall be moored to the entire satisfaction of the Harbour Pilot and shall be ready at all times to put out more lines as required by terminal personnel and as may be dictated by weather conditions.

All vessels at berth shall have all deck winches in readiness for immediate use.

All vessels with tension winches shall set the manual brakes on these winches.

MIXED MOORINGS: Vessels equipped with both wire and synthetic lines shall avoid mixing moorings to the same bollard or dolphin.

WIRE MOORINGS: In order to ensure the safety of personnel, vessels and loading facilities and to prevent accidental oil spillages, the following requirements (used as springs and breast lines) are mandatory for all vessels permitted to use the Saudi Aramco fixed berth loading facilities.

Vessel Size	*Required*	*Recommended*
75–160 m.d.w.t.	8 wires	12 wires
161–250 m.d.w.t.	10 wires	12 wires
251–300 m.d.w.t.	12 wires	14 wires
301–350 m.d.w.t.	12 wires	16 wires
351 m.d.w.t. and above	14 wires	16 wires

The wire size, winch power and winch braking power shall in all cases be adequate for the size of the vessel. All lines shall be properly reeled onto winch drums and the winch brakes shall be set to hold to a minimum load of 60% of the minimum breaking load of the line.

After obtaining the permission of the Port Captain, vessels may use mooring lines other than wire, constructed of a substitute material provided that the elongation of the substitute material does not exceed 3% at 55% breaking load. Tails, if used, should preferably be made of nylon line (3 strand construction should not be used) about 11 m. long overall, and have a breaking strength at least 25% greater than the MBL of the wire to which they are attached. They should be replaced at least every 18 months unless experience and/or inspection indicates more or less frequent replacement is necessary.

Additional information is contained in the O.C.I.M.F. publication "Guide Lines and Recommendations for the Safe Mooring of Large Ships at Piers and Sea Islands".

All vessels shall utilise all of the wire mooring lines with which they are equipped unless the number exceeds that recommended above.

APPENDICES:

SHIP/SHORE SAFETY CHECK LIST

VESSEL:...

BERTH:...

Instructions for completion:

The safety of operations requires that all questions should be answered affirmatively after checking by both ship and terminal representatives. If an affirmative answer is not possible, the reason should be given and agreement reached upon appropriate precautions between the ship and the terminal.

Questions	Yes/No	Remarks
1. Is the ship securely moored and anchors secured?		
2. Are emergency towing wires correctly positioned?		
3. Is there safe access between ship and shore?		
4. Is the ship ready to move under its own power?		
5. Is there an effective deck watch in attendance on board?		
6. Is the agreed ship/shore communication system operative?		
7. Have the procedures for cargo, bunker and ballast handling been agreed?		
8. Has the emergency shut down procedure been agreed?		
9. Are fire hoses and fire fighting equipment ready for immediate use?		
10. Are cargo and bunker hoses and/or arms in good condition and properly rigged?		
11. Are scuppers effectively plugged, and drip trays in position?		
12. Are unused cargo and bunker connections, including the stern discharge line, if fitted, blanked?		

Questions	Yes/No	Remarks
13. Are sea and overboard discharge valves, when not in use, closed and lashed?		
14. Are all cargo and bunker tank lids closed?		
15. Is the agreed tank venting system being used?		
16. Are hand torches of an approved type?		
17. Are portable VHF/UHF transceivers of an approved type?		
18. Are the ship's main radio transmitter aerials earthed?		
19. Are electric cables to portable electrical equipment disconnected from power?		
20. Are all external doors and ports in the amidships accommodation closed?		
21. Are all doors and ports in the after accommodation leading on to or overlooking the tank deck closed?		
22. Are air conditioning intakes which may permit the entry of petroleum gas closed?		
23. Are window-type air conditioning units disconnected?		
24. Are smoking requirements being observed?		
25. Are the requirements for the use of galley and other cooking appliances being observed?		
26. Are naked light requirements being observed?		
27. Is there provision for emergency escape?		

Declaration

We have checked with each other the items listed on this Check List in the course of a joint inspection, and have satisfied ourselves that the entries we have made are correct to the best of our knowledge.

INSTRUCTIONS TO MASTERS AND CONDITIONS OF USE OF PORT
SAUDI ARAMCO Form 3032 (6/84)
Ras Tanura Terminal
Port of Ras Tanura, Kingdom of Saudi Arabia

Pilot Boarded: . . . . .Local Time Date . . . .
To the Master S.S./M.V. . . . .

1. Your vessel; will be moored to Berth No. . . . . .North/South Pier/Sea Island Port/Starboard side to the berth.
2. The Local Time is GMT plus 3 hours.
3. Low water will be at approximately . . . . Local Time and will be approximately . . . . ft./m. above LAT.

BERTHING/UNBERTHING AND MANOEUVRING

1. All movements of vessels to and from berths and in the proximity of Saudi Aramco facilities shall be under the direction of a Saudi Aramco Harbour Pilot.
2. All tank openings, ullage and sighting ports shall be closed before berthing or unberthing operations commence.
3. Saudi Aramco tugs shall assist in berthing and unberthing.
4. Steering gear, engine room telegraph, whistle and all navigational and communications equipment shall be tested before any manoeuvring to or from the berth is commenced.
5. Full main engine power shall be available for berthing and unberthing.
6. Any special conditions present in the vessel which may effect manoeuvring, berthing or cargo handling capability shall be notified to the Harbour Pilot before operations commence.
7. The Harbour Pilot shall refuse to berth vessels with unsatisfactory equipment.
8. The vessel shall be moored to the entire satisfaction of the Harbour Pilot.
9. The crew of the vessel shall be ready to employ additional mooring lines as required by weather changes or as requested by the Harbour Pilot or terminal personel.
10. Winches shall be ready at all times for immediate use.
11. No mooring lines shall be cast off except in emergency without the permission of the Harbour Pilot.
12. When at berth the vessel shall be ready in every respect to leave the berth at short notice with full engine power.
13. The Master of every vessel shall in circumstances which threaten the safety of the vessel, its crew, or the port installations be prepared to unberth the vessel subject to the advice of the Port Captain with or without a Harbour Pilot on board.
14. The Harbour Pilot will board on completion of loading and/or bunkering and the vessel shall vacate the berth immediately after the disconnection of hoses or arms.
15. The expenditure incurred in any delay or towage resulting from failure to comply with any of the provisions of these instructions shall be the liability of the Master and Owners of the vessel concerned.

KINGDOM OF SAUDI ARABIA

1. The National Flag of the Kingdom shall be displayed by day and night in the appropriate position on every vessel when in local waters.
2. The International Quarantine signals shall be exhibited until the vessel is granted Free Pratique.
3. All prohibited items shall be secured before entering the territorial waters of the Kingdom. Contravention will entail severe penalties.
4. Ship's personnel are NOT permitted ashore nor on the wharves FOR ANY PURPOSE WHATSOEVER (this includes the reading of the ship's draft) until Pratique is granted and then are allowed on the wharves only if actually engaged in duties connected with ballast and cargo handling operations.
5. Shore leave is not permitted except by special arrangement with Government officials through the Agent of the vessel.

CONDITIONS OF USE OF PORT

1. The Master of the vessel shall remain solely responsible for the safety and the proper operation of the vessel at all times. Neither Saudi Aramco nor its personnel shall be responsible for any loss or damage arising in consequence of any assistance or advice given or tendered in respect of the vessel.
2. The use of Saudi Aramco premises, facilities and equipment is subject to the express understanding and condition that Saudi Aramco and its personnel shall be held harmless from all liability, loss or claim thereof arising out of such use. In amplifications of the foregoing, the vessel, its Owners and/or Charterers shall be liable to and shall reimburses Saudi Aramco promptly and in full for any Saudi Aramco liability to third parties and any cost, loss, delay, or expense incurred by Saudi Aramco as a consequence of any breach or non-compliance with these Instructions to Masters and Conditions of Use of Port on the part of the vessel, its Master, Owner(s) and/or Charterer(s).
3. All vessels transiting the "Deep Water Departure Channel" shall maintain a minimum of 5 ft. keel clearance.
4. The Harbour Pilot is provided upon the condition that when boarding or assisting the vessel he becomes the Agent and Servant of the Owner and/or Charterers of the vessel in every respect. Saudi Aramco shall not be responsible and shall be held harmless from all liability for any damages resulting from or caused by any action taken, order given, or decision made (for any omission thereof) by the Harbour Pilot or in respect of his handling of such vessel.
5. When the assistance of tugs is provided, the Master and crews of tugs shall, in the performance of such services as they render to the vessel, become and be deemed to be the Agents and Servants of the Owners and/or Charterers of the vessel assisted, and Saudi Aramco shall not be responsible and shall be held harmless from all liability for any damage that may be done by the tugs or their crews while assisting the vessel, whether occasioned by any act or omission of the tug Master or crew by defect or inadequacy of the tug, its machinery or gear. This condition shall not, however empower the Master to detain such tugs should Saudi Aramco require their services elsewhere.
6. Vessels and the Owners and/or Charterers of vessels from which oil, oily residue, oily ballast water or any other pollutant escapes or discharged for any reason at any location within the Port shall be liable to and shall reimburse Saudi Aramco promptly and in full for the cost of all clean-up, containment and removal measures taken in response to such escape or discharge by or on behalf of Saudi Aramco which, in Saudi Aramco's sole discretion, are prudent or necessary in order to protect human life, vessels, installations and the environment. Such cost shall constitute a joint and several debt due from the vessel and the Owners and/or Charterers to Saudi Aramco. Further, the vessel and her Owners and/or Charterers shall be jointly and severally liable for all and any loss, damage and expense sustained by Saudi Aramco by reason of such escape or discharge and shall hold Saudi Aramco harmless from and indemnify Saudi Aramco against any and all claims related to or arising out of such escape or discharge.
7. Repair to the main engines or deck machinery shall not be permitted when the vessel is secured to any berth.
8. Harbour Pilots shall not berth any vessel at Saudi Aramco facilities without the Master's signature of acknowledgement.

MASTER'S ACKNOWLEDGEMENT

I hereby acknowledge receipt of a copy of this document and agree to the instructions and conditions set out therein.

(DATE)	(MASTER)
(HOUR LOCAL TIME)	(VESSEL)

INSTRUCTIONS TO VESSELS AND CONDITIONS OF USE OF **JU'AYMAH** LOADING FACILITIES

THE MASTER S/S — M/V

1. Vessel will be moored at Ju'aymah Berth No. . . . .
2. Discharge into sea of oil base products in combination with ballast water is not allowed. Ships which release oil or oily ballast water in either the berth or anchorage area will be held responsible for all clean-up costs.
3. Prior to loading, the Pilot/Mooring Master will inspect the vessel for conformity with safety requirements and will review in detail each item on Saudi Aramco Form 5626 "Declaration by Master". This form will be acknowledged and signed by the Master.

MOORING AND MANOEUVRING

1. Full power must be available for manoeuvring in and out of the berth. Manoeuvers with other than full power available shall be performed only after the consent of both the Port Captain and Pilot/Mooring Master have been obtained.
2. The Pilot/Mooring Master will advise the Master during the mooring and unmooring of the tanker and will supervise the connecting and disconnecting of cargo and bunker hoses by the tanker's crew. The loading operation will be performed to the complete satisfaction of the Pilot/Mooring Master.
3. Mooring will be accomplished with the assistance of marine craft assigned to the vessel by Saudi Aramco.
4. All tank tops, ullage plugs and sighting ports shall be closed before berthing.

5. The vessel's Master shall notify the Mooring Master of any special conditions, difficulties, defective equipment or gear which could impose special hazards when mooring, unmooring or loading cargo.
6. All navigational equipment such as the engine, telegraph, whistle, steering gear, etc., shall be tested prior to getting underway to moor and unmoor. Testing of the tanker's engine when berthed shall be done only after the Pilot/Master has been duly informed and his consent has been obtained.
7. The Mooring Master may decline to moor a vessel with unsatisfactory mooring equipment.
8. No repairs are permitted while the vessel is berthed. The engine and deck machinery will be kept ready to permit the vessel to get underway on an emergency basis.
9. Any vessel delay resulting from failure to comply with any of the provisions of this document shall be for the vessel's account.
10. Upon completion of loading and the disconnection of hoses, the vessel will be unmoored and, if using Early Departure Procedures, the Master should make ready to depart as soon as possible. Otherwise, vessels are to await cargo and Port Clearance documents while lying in stream.

SAUDI ARABIAN GOVERNMENT PORT REGULATIONS

1. Quarantine signals must be displayed upon entering the coastal waters of Saudi Arabia and approaching Ju'aymah in accordance with international practice and shall be continuously displayed until Pratique is granted. These signals shall be as follows:
   Sunrise to Sunset – Quarantine Flag
   Sunset to Sunrise – Quarantine Signal Lights
   (Red over White)
2. The Saudi Arabian flag must be flown from the foremast while your vessel is in the coastal waters of Saudi Arabia. Such flags are available from the ship's agent. The Saudi Arabian flag is properly displayed when the writing appears on top and the sword on the bottom.
3. Importation and/or use of liquor or contraband items, or trafficking in such items, is absolutely prohibited. The Saudi Arabian Government rigidly enforces these regulations and penalties are severe. In the event of violation considerable delay to the vessel involved could occur.
4. Ship's personnel are not permitted to leave their vessel.

CONDITIONS OF USE OF PORT

1. The Master of the vessel shall remain solely responsible for the safety and proper operation of the vessel at all times. Neither Saudi Aramco nor its personnel shall be responsible for any loss or damage arising in consequence of any assistance, instructions or advice given or tendered in respect to the vessel.
2. The use of Saudi Aramco premises, facilities and equipment is subject to the express understanding and condition that Saudi Aramco and its personnel shall be held harmless from all liability, loss or claim thereof arising out of such use.
3. The Pilot/Mooring Master is supplied upon the condition that when boarding or assisting the vessel he becomes the agent and the servant of the owners and/or charterers of the vessel in every respect. Saudi Aramco shall not be responsible and shall be held harmless from all liability for any damage resulting from or caused by any action taken, order given, or decision made (or any omission thereof) by the Pilot/Mooring Master or in respect to his handling of the mooring or cargo loading operations.
4. When the assistance of small craft is supplied (mooring launches and/or a utility boat), the craft, Master and Crew thereof shall, in the performance of such services as they render to the vessel, become and be deemed to be the agents and servants of the owners and/or charterers of the vessel assisted. Saudi Aramco shall not be responsible and shall be held harmless from all liability for any damage that may be done by or to the craft or their crews while assisting the vessel, whether occasioned by any act or omission of the crafts or their crews or by any defect or inadequacy of the craft or the craft's machinery or gear. This shall not give the tanker's Master the right to detain such craft for duties other than mooring, unmooring or hose work nor shall this prevent the craft from being reassigned during mooring, unmooring or hose work.
5. No vessel may berth without a Saudi Aramco Pilot/Mooring Master on board.
6. Pilots/Mooring Masters will not assist in the mooring of any vessel unless they have the Master's signature on the acknowledgement below.

MASTER'S ACKNOWLEDGEMENT

I hereby acknowledge receipt of a copy of this document and agree to the instruction and conditions set forth therein.

HOURS (VESSEL)

REFLOATING/STRANDING

SAUDI ARABIAN OIL COMPANY
Ras Tanura, Saudi Arabia

MASTER
S.S./M.V. . . . .

The Saudi Arabian Oil Company hereinafter referred to as Saudi Aramco has been requested to provide assistance to refloat your vessel which is stranded in the waters of the Gulf.

Saudi Aramco is prepared to provide personnel and such equipment and materials as may be available to assist in the refloating of your vessel subject to the following conditions:–

1. That you as Master shall have sole responsibility for your vessel at all times.
2. That Saudi Aramco and any personnel, equipment or crafts that may be provided shall be deemed to be the Agents and Servants of you as Master and the Owners and/or Charterers of your vessel.
3. That you will accept liability on behalf of the Owners and/or Charterers of your vessel for all the expenditure incurred by Saudi Aramco in providing assistance to your vessel.
4. That Saudi Aramco shall not be responsible for and shall be held harmless from and against any damage that may be done by any personnel and equipment, including tugs and their crews, whether occasioned by any action or omission of Saudi Aramco personnel or by any defect or deficiency of Saudi Aramco equipment and is hereby released from any such liability.
5. That Saudi Aramco shall not be responsible for any oil pollution damage that may result from the stranding and/or refloating of your vessel and any oil pollution clean-up expenditure that may be incurred shall be the liability of you as Master for the account of the Owners and/or Charterers of your vessel.
6. That in the event that the assistance provided by Saudi Aramco proves to be inadequate to refloat your vessel you will expeditiously arrange and obtain on your own such assistance as may be necessary to refloat your vessel as soon as possible.
7. That Saudi Aramco will move in immediately without further permission other than this letter and take whatever corrective action is deemed necessary to respond to pollution, fire or any other kind of incident that may endanger your ship, Gulf environment or other vessels and facilities in the area, or to effect rescue of endangered people. You as Master and the Owners and/or Charterers of you vessel will be charged for all expenditures incurred by Saudi Aramco for the above services.

DECLARATION BY MASTER

I agree to the terms and conditions set out hereto.
Master . . . .
SS/MV . . . . For SAUDI ARABIAN OIL CO.
Date . . . .

MASTER'S SAFETY DECLARATION
SAUDI ARAMCO Form 8812 (2/84).
I DECLARE THAT WHEN MY VESSEL IS AT BERTH:

1. MOORINGS AND ANCHORS – the vessel will be moored in accordance with the standards of the port and the anchors will be secured in the hawsepipes.
2. TOWING WIRES – towing wires for emergency use will be rigged at the forward and after ends of the vessel in accordance with the standards of the port. The eyes of the towing wires will be maintained at a height of 3 ft. – 6 ft. (one to two metres) above the water at all times.
3. GANGWAYS – the gangway will be tended and maintained in a safe condition throughout.
4. MAIN ENGINES – the main engines will be ready for use at short notice to leave the berth in the event of an emergency condition. A suitable trim will be maintained for the same purpose. At SBM berths the main engines will be on continuous stand-by.
5. DECK WATCH – an effective deck watch will be maintained.
6. COMMUNICATIONS – an effective ship/shore communications system will be agreed to efficiently control the cargo handling and bunkering operations throughout.
7. CARGO, BUNKER AND BALLAST OPERATIONS – the procedures for cargo, bunker and ballast handling operations will be agreed with the Terminal Representative.
8. EMERGENCY SHUTDOWN – the emergency shutdown procedures will be agreed with the Terminal Representative.
9. FIREFIGHTING EQUIPMENT – all firefighting equipment will be ready for immediate use and fire hoses equipped with jet/spray nozzles will be prepared for use one forward and one abaft the manifold.
10. CARGO AND BUNKER CONNECTIONS – cargo and bunker hoses or arms will be inspected to confirm that they are in good condition and correctly connected.
11. SCUPPERS AND DRIP TRAYS – scuppers will be effectively plugged or otherwise secured (except when the vessel is a gas tanker) and drip trays will be in position.
12. UNUSED CARGO AND BUNKER CONNECTIONS – all unused cargo and bunker connections will be effectively blanked.
13. SEA AND OVERBOARD DISCHARGE VALVES – all sea and overboard discharge valves when not in use will be effectively closed and lashed.
14. CARGO BUNKER AND BALLAST TANK LIDS – all cargo, bunker and ballast tank lids will be closed and secured except as may be permitted by the Terminal Representative.

15. VENTING AND INERT GAS
    (a) Venting Agreement – the method by which tanks will be vented during cargo and ballast operations will be in accordance with that contained in the written agreement with the Terminal Representative.
    (b) Flame Arresters – flame arresters will be employed in accordance with the design features of the venting system.
    (c) Ullage Ports – ullage ports will be fitted with efficient flame arresters on every occasion when they are not secured in the closed position.
    (d) Inert Gas – all cargo tanks will be maintained in an inert condition if the vessel is equipped with an inert gas system. In gas tankers the cargo tanks will be inerted and/or purged.
16. HAND TORCHES – hand torches will be in good condition and approved for use in hazardous zones.
17. PORTABLE TRANSCEIVERS – portable UHF/VHF transceivers will be in good condition and certified as being intrinsically safe.
18. RADIO AND RADAR AERIALS – radio transmitting aerials will be earthed and radar scanners will be switched off. The servicing of such equipment will not be undertaken without the permission of the Terminal Representative.
19. PORTABLE ELECTRICAL EQUIPMENT – all portable electrical equipment on deck will be disconnected from the power supply.
20. DOORS AND PORTS AMIDSHIP ACCOMMODATION – all external doors and ports in the amidship accommodation will be closed and every effort will be made to prevent the entry of dangerous gas.
21. DOORS AND PORTS AFTER ACCOMMODATION – all doors and ports in the after accommodation, which overlook or are adjacent to the tank deck or other potentially hazardous zones, will be maintained in the closed position.
22. CENTRAL AIR CONDITIONING – any central air conditioning or fresh air intakes which may permit the entry of petroleum gas will be closed.
23. WINDOW TYPE AIR CONDITIONING UNITS – all window type air conditioning units will be disconnected from the power supply.
24. SMOKING – smoking will be prohibited except in those spaces which have been jointly approved with the Terminal Representative.
25. GALLEY AND COOKING APPLIANCES – the use of cooking appliances wherever situated will require the approval of the Terminal Representative.
26. NAKED LIGHTS – naked lights will not be used on the tank deck or in other hazardous zones.
27. EMERGENCY ESCAPE – provision for emergency escape will be provided.
28. GAS FREEING – gas freeing will not be undertaken under any circumstances.
29. WATER BALLAST – water ballast discharged will be free of oil or any other contaminant which may pollute the waters of the port.
30. REPAIRS – repairs or maintenance of any kind which may produce a source of ignition will not be undertaken without the agreement in writing of the Terminal Representative.
31. BOILER TUBE CLEANING – boiler tubes will not be cleaned and every precaution will be taken to prevent the emission of sparks from the funnel.
32. EMERGENCY SIGNAL – in the event of a fire or other emergency arising, the emergency signal consisting of TEN (10) SHORT BLASTS will be sounded on the ship's whistle.
33. PENALTIES – any failure to observe the safety requirements contained in this declaration will entail the following penalties:
    (a) A suspension of all cargo handling, bunkering and ballast operations, and
    (b) the vessel may be required to vacate the berth until such time as corrective action has been undertaken to the satisfaction of the Terminal Representative.

All infringements will be brought to the attention of the vessel's Owners, Operators and/or Charterers.

MASTER'S SAFETY DECLARATION (TERMINAL RECEIPT)

.... Master M.V./S.S. ....

BERTH............................ DATE .... TIME ....

(C) RAS TANURA TERMINAL

This section gives specific information regarding RAS TANURA TERMINAL which includes Sea Island, North and South Piers and is to be read together with **Part (A) and (B).**
NOTE: Sea Island No. 1 is presently not in use.

LOCATION: The Ras Tanura Terminal, refinery and tank farms are located on a peninsula, the Southern end of which forms a sand spit, the tip of which is officially known as (RA'S) AT TANNURAH.
South Pier: The South Pier is connected to the East side of the peninsula by a causeway and trestle 2,300 ft. in length. The "T" Pier has 4 berths (1 to 4) and is 1,200 ft. long and 105 ft. wide.
North Pier: The North Pier is located about 0.75 miles to the North of the South Pier. This Pier is 2,645 ft. long and 110 ft. wide and comprises 6 berths (6 to 11). Crude oil, products and RLPG are available at North Pier.
Sea Islands: A complex of 4 Sea Islands interconnected by walkways is located approximately 5,600 ft. N.E. of the North Pier. Each of the 4 sea islands consists of 2 berths with a loading station on the platform, 4 to 6 mooring dolphins and 2 to 4 breasting dolphins per berth. The lengths of each pair of berths between outer mooring dolphins are (from South) Sea Island 1, 1,250 ft., Sea Islands 2 and 3, 1,400 ft., Sea Island 4, 1,750 ft.

The berths are numbered from South, on the East side 12, 15, 17, 20, on the West side 14, 16, 18, 19.

The loading stations at each of the Sea Island berths are equipped with steel, hydraulically operating loading arms and all berths are equipped with quick release hooks.
Refrigerated Liquefied Petroleum Gases (R.L.P.G.): Facilities for loading refrigerated liquefied Butane and Propane are located at the North Pier, Berths 6, 8 and 10.

PILOTAGE: *Vessel from Arrival Channel:* Pilot will normally board South of Buoy 17 and 18, as advised by Port Radar.
Vessel at Tanker Anchorage: After heaving anchor, the vessel will be advised by Port Radar towards a position approximately 1.5 miles S.E. of the South end of Sea Island dependent on weather and tidal conditions.

Vessels must not approach any closer than 1.5 miles to the piers or Sea Islands without a Pilot on board due to the tidal streams in the area.
Sea Island Pilots: Saudi Aramco maintains Pilots on continuous Duty on the Sea Islands. They are stationed on the Sea Islands by Saudi Aramco to provide marine advice to the Loading Masters, to assist in the safe and efficient mooring and loading of vessels berthed at this facility and carry out emergency unmooring. Masters of vessels may contact the Sea Island Pilot through the Pier Operator or by calling the Ras Tanura Pilot Office on VHF Channel 16. Masters of all vessels berthed at the Sea Islands are encouraged to discuss any vessel-related problems with the Duty Sea Island Pilot.
Informing Pilots of Finishing Time: As an aid to planning and expediting ships' movements and also to give adequate notice to vessels scheduled to berth, vessels loading at the berths in Ras Tanura shall call the Ras Tanura Pilot Office on VHF Channel 16 one hour before completion of loading.

INBOUND TRAFFIC PROCEDURE: (See Part B) – "Traffic Regulations".
Vessels proceeding direct to Ras Tanura Terminal: As per Inbound Traffic Procedures in Part (A) "Navigation" to the Entry Buoy and following the separation scheme to Buoys 17 and 18 according to advice from Port Radar and Pilots either to anchor in the Ras Tanura Tanker Anchorage or to berth on arrival.

From Northern Holding Anchorage to Ras Tanura Terminal enter the separation scheme under the advice of Port Radar and follow the channel as above.
Maximum Draft in Arrival Channel: The maximum draft for transit of channel immediately South of Buoy No. 5 is 16.46 m. plus predicted rise of tide up to a maximum draft of 18 m.

See "Berthing – Depths of Water at Berths".

Masters of vessels arriving partly loaded or in deep ballast should navigate with caution in the vicinity of Channel Buoys No. 5 and 7.
From East Holding Anchorage and East Channel: Follow the buoyed route to RTE 7 and RTE 8. Turn North into the Tanker Anchorage at Port Radar and Pilot's advice.
East Channel Caution: It is recommended that vessels of over 800 ft. (244 m.) length or 35 ft. (10.67 m.) draft do not use the East Channel.
Sea Islands' Submerged Pipe-lines: All traffic must pass East of the Sea Islands due to the existence of numerous submerged oil pipelines between all of the Sea Islands and the shore.
Abu Safa Submerged Pipe-line: All vessels are urged to navigate with caution between Channel Buoys 9 and 11 in the arrival channel and are forbidden to drop anchor in their vicinity due to the existence of the submerged oil pipeline which crosses the channel.

ANCHORAGES: *Tanker Anchorage:* The Tanker Anchorage lies approximately 2 miles East of the Sea Islands and is used as a final holding area for vessels which have immediate berthing prospects or for vessels awaiting cargo clearance, release, sailing documents, etc. and whose draft does not exceed 60 ft. (18.3 m.). Under normal circumstances, no more than 10 vessels are allowed to use this anchorage at one time.
Freighter Anchorage: This anchorage, South East of the "SPIT" buoy is used as holding ground for coastal tankers intended to load at South Pier and miscellaneous small vessels and craft inbound for Saudi Aramco Marine facilities at the West Pier.
Deep Draft Anchorage: Vessels whose draft is 60 ft. or more and which are required to anchor upon completion of loading must normally do so in the area approximately 0.7 miles North of the Sea Islands. This anchorage has a swept depth of 72 ft. (21.9 m.) and holding ground is only considered fair due to variations in character of the bottom. It is recommended that vessels lie to a long scope of chain in adverse weather. No more than 2 vessels are allowed to use this anchorage at one time.

RADIO: COMMUNICATIONS WITH THE TERMINAL.
Under Way: At all times when under way in the arrival channel and anchorage areas with no Pilot aboard, vessels must watch VHF Channel 10 to keep in contact with Port Radar.
At Anchor: A good listening watch should be maintained on VHF Channel 16. Vessels will be called by Ras Tanura Pilots with berthing and other information and instructions. Port Radar should be called on VHF Channel 10 prior to heaving anchor.
Under Pilotage: Pilots carry portable, intrinsically safe radios which operate on Saudi Aramco dedicated mooring Channels for contact with tugs and jetty staff. In addition, the vessel's VHF Radio should stand by on Channel 13 for back up communication.
At Berth: An exchange of intrinsically safe portable radios will be made between vessel and jetty personnel in order to assist constant communication whilst loading.

BERTHING:
Mooring Procedures: Mooring boats are not used at Ras Tanura Terminal.

Vessels should have heaving lines ready to take the shore messenger after landing alongside. The messenger is then made fast to the ship's mooring line which is hove ashore by means of a capstan. Heavy wires should be sent one by one and ropes two at a time. Jetty crews are on duty continuously to handle mooring lines. Mooring lines on board vessels will not be handled by Saudi Aramco Personnel.

BERTHING FACILITIES:
Safe Loading Depths: If at any time a vessel's draft approaches to within about 3 ft. (1 m.) of the depth of water at the berth at North and South Piers, loading will be suspended until a rising tide increases the depth to permit resumption of loading and provide for a safe draft of the fully loaded ship on departure.

At the Sea Island Berths, the maximum sailing draft is 19.48 m. plus the height of tide at the time of transitting the Deep Water Channel.
Depths of Water at Berths:

Pier	*Berth* No.	*Depth at LAT* (m.)	*Max. Draft Arrival* (m.)	*Max. Draft Sailing* (m.)
South Pier	1	10.1	9.0	9.1+tide
	2	10.1	9.0	9.1+tide
	3	10.1	8.0	9.1+tide
	4	9.0	8.0	8.0+tide
North Pier	6	14.2	13.2	13.1+tide
	7	12.0	8.84	11.0+tide
	8	14.8	13.8	13.8+tide
	9	13.0	8.84	12.0+tide
	10	15.0	14.0	14.0+tide
	11	14.5	8.84	13.5+tide
Sea Islands	12 14 15 16 17 18 19 20	26.0	17.98	19.48+tide

Gangways: At North and South Pier, all vessels are required to provide their own gangways which should be ready prior to berthing.

At the Sea Islands, shore gangways are provided at each berth.

LOADING:

	Berth No.	*Product*	*Manifold Size* (in.)	*Maximum Loading Rate* (bbls.p.h.)
Sea Islands	12 to 18	Crude	16	40,000 to 280,000
	19 and 20	Crude	16 to 24	
	12 to 18	Bunker Fuel Oil	10	12,000
	12 to 18	Bunker Diesel	10	900
	19 and 20	Bunkers	12 to 16	12,000
North Pier	6 to 11	Crude	12	15,000 to 90,000
	6 to 11	Fuel Oil (Cargo)	12	12,000 to 22,000
	8, 9, 10	White Diesel	12	12,000
	8, 9, 10	Kerosene	12	6,500
	6 to 10	Naphtha	12	30,000
	6 to 11	Bunker Fuel Oil	8	5,000
	6 to 11	Bunker Diesel	8	1,200
	6, 8, 10	RLPG	12	30,000
South Pier	1 to 4	Fuel Oil (Cargo)	8	12,000 to 15,000
		Black Diesel (Cargo)	8	5,000
		White Diesel	8	8,500 to 15,000
		Gasoline	8	6,000
		Kerosene	8	6,500
		Jet Fuel	8	10,000
		Bunker Fuel Oil	6	5,000
		Bunker Diesel	6	1,200

Notes:

1. All vessels calling at Ras Tanura Terminal should be equipped with reducers to fit these loading connections which all have 150 lb. ASA flanges. These reducers should be fitted before berthing to help expedite ship turnaround time.

2. It is expected that most vessels will be able to accept any cargo as fast as it can be delivered. Officers in charge of loading must have due regard for all safety precautions as well as for individual vessel hazards.

If loading of crude or products is too slow, Saudi Aramco will so advise the vessel.

Should a demurrage claim be filed against Saudi Aramco, the slow loading rate may result in an addition to allowed lay time.

3. Special regulations govern the acceptance and loading of Liquefied Petroleum Gas tankers in the Port of Ras Tanura. (See GASRUL 9:83).

4. The following types of crude oil are available at Ras Tanura Terminal: ARABIAN BERRI (sometimes incorrectly referred to as Light Extra Light) CRUDE, ARABIAN LIGHT CRUDE, ARABIAN MEDIUM CRUDE, ARABIAN HEAVY CRUDE.

Loading arm connection: Jetty crews are on duty continuously to handle hoses/arms and will make connections and disconnections.

All loading connections are equipped with electrical insulating flanges therefore ship to shore bonding cables are not required.

Loading procedures: All operations in connection with the starting of loading, discharging, switching of tanks and topping off must be directly and personally supervised by the ship's officer.

It is the responsibility of the vessel to advise shore personnel to shut down cargo and bunker loading when the vessel's cargo and bunker requirements are met.

Upon completion of loading the vessel will normally be required to leave the berth immediately after disconnecting hoses/arms to awai clearance in the Tanker Anchorage.

Cargo Calculations and Release: The American system of cargo measurement in BARRELS with temperatures in fahrenheit degrees according to the ASTM – I.P. is used by Saudi Aramco and the Saud Arabian Government for Cargo measurement purposes. Ships cargo loaded figures should be available in these units. Generally, if the difference between average normal ship measurement and official cargo measurement is satisfactory the ship will be released to sail by Saud Aramco under E.D.P. Unusual differences will be investigated by Saud Aramco while the vessel waits in the Tanker Anchorage.

BALLAST: *Arrival Ballast Condition:* Vessels arriving at Ras Tanura Terminal shall retain sufficent clean water ballast on board to permit safe handling of the vessel in the prevailing weather conditions. A maximum stern trim of 15 ft. with the propeller just covered is recommended.

Ballast pumping equipment should be ready to commence discharging ballast as soon as the vessel is secured in the berth.

DEPARTURE: See "Inbound Traffic Procedure" – East Channel Caution.

Deep Water Departure Channel: Has a clear swept depth of 21 m. at LAT.

Maximum departure draft from Ras Tanura Piers and Sea Islands is 19.48 m. plus predicted rise of tide so that there is a minimum keel clearance of 1.52 m. maintained during transit of Departure Channel. (See Saudi Aramco form "Maximum Sailing Draft – VLCC, 1st March 1986").

Departure Pilotage: On departure from Ras Tanura, Masters of vessels 150,000 d.w.t. and above with draft of 60 ft. (18.28 m.) or more, may request additional pilotage assistance to line up for the Deep Water Departure Channel. Such pilotage assistance is compulsory for vessels with a draft of 68 ft. (20.73 m.) or more. In such instances the Harbou Pilot will remain on board until the vessel is aligned on a safe course for the Departure Channel, provided the Pilot can disembark safely. In certain cases it may be possible to arrange for the Pilot to leave by helicopter (See Part "A" – Helicopter Operation). The additional pilotage is also available when it is necessary for a VLCC to proceed to anchor to await a favourable tide or other reasons. The Pilot will remain on board until the vessel arrives in the anchorage, however, the Master will be responsible for the actual anchoring of the vessel. During adverse sea and weather conditions, a proper lee must be made so as to allow the Pilot to safely disembark.

Vessel proceeding from Ras Tanura Terminal to Northern Holding Anchorage: The vessel should leave Ras Tanura Terminal and follow the Departure Channel observing the separation scheme to the Northern Holding Anchorage under advice of Port Radar.
SEE Part "B" TRAFFIC REGULATIONS
The vessel should advise Ras Tanura Pilots of its anchoring time.

REPORT: *More stringent safety checks:*
Quote:

Due to recent accidents involving tankers at terminals, Saudi Aramco have tightened up their safety checks and closely follow the issued safety regulations.

Saudi Aramco, as terminal operator of Ras Tanura/Ju'aymah, inspect all vessels before loading. Anything found not up to the standard of guidelines and recommendations compiled by Oil Companies International Marine Forum are noted, the Master is given a letter of protest, and the Owner is advised to correct deficiencies. At the same time all remarks and recommendations are computer-stored for easy access in the future.

Saudi Aramco have found that many recommendations are neglected and some vessels are repeatedly given the same remarks.

To prevent this, new actions are being taken by Saudi Aramco. Vessels which in the past have received recommendations and not followed the same have recently been refused permission to load at Ras Tanura/Ju'aymah.

That a vessel was allowed to load at her last call is not a guarantee that she will be allowed again.
Unquote.

Further to the above, we have been advised that since these deficiency letters do not allow these vessels to berth at the Ju'aymah Terminal's SBMs, vessels will be diverted to either of the three suitable berths at Sea Island. Time lost from berth available at Ju'aymah to berth available at Sea Island will be on the vessel's account.

This will affect vessels between 200,000 d.w.t. – 275,000 d.w.t.

GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Saudi Riyals (SR).

YANBU (See Plan)

(A) COMMERCIAL PORT: 24.05 N. 38.03 E.
(B) INDUSTRIAL PORT: 23.57 N. 38.13 E.

NOTICE: British Admiralty Notice No. 3553(P)/86.
Red Sea – Saudi Arabia, West Coast – Madinat Yanbu As Sinaiyah – King Fahd Port – New Approach Channel.

1. A new Southern Approach Channel for vessels calling at King Fahd Port, Madinat Yanbu As Sinaiyah, opens to shipping on 1st December, 1986. Pilotage is compulsory for all vessels using this channel.

2. The following have been established:

	Feature	*Position*
(a)	Yanbu South Light, Fl. W.R. 10 sec. 34 m. 20/17 M. (Red/white circular tower with radar reflectors) and radar beacon Racon (B).	23° 28.13′ N., 38° 25.52′ E.
(b)	Starboard-hand light beacon with topmark, Fl. (3) G. 10 sec. 12 m. 8 M. S3.	23° 31.02′ N., 38° 29.90′ E.
(c)	Port-hand light beacon with topmark, Fl. (4) R. 12 sec. 12 m. 8 M. S6.	23° 38.38′ N., 38° 25.16′ E.
(d)	Starboard-hand light beacon with topmark, Fl. (4) G. 12 sec. 12 m. 8 M. S7.	23° 41.17′ N., 38° 28.64′ E.
(e)	Blue/White striped beacon with radar reflector, SR1.	23° 31.65′ N., 38° 25.92′ E.
(f)	Blue/White striped beacon with radar beacon, SR2 Racon (TG).	23° 34.66′ N., 38° 27.71′ E.
(g)	Blue/White striped beacon with radar beacon, SR3 Racon (X).	23° 42.86′ N., 38° 23.22′ E.
(h)	White cardinal pillar light-buoy, Q(9), 15 sec. S1.	23° 26.30′ N., 38° 29.22′ E.
(i)	Port-hand can light buoy with topmark, Fl. (2) R. 5 sec. S2.	23° 27.96′ N., 38° 25.86′ E.
(j)	Port-hand can light buoy with topmark, Fl. (2) R. 10 sec. S4.	23° 34.55′ N., 38° 28.22′ E.
(k)	White cardinal pillar light buoy Q(9) 15 sec. S5.	23° 35.31′ N., 38° 31.41′ E.
(l)	Port-hand can light buoy with topmark, Fl. R. 5 sec. S8.	23° 44.47′ N., 38° 23.15′ E.
(m)	Starboard-hand conical light buoy with topmark, Fl. G. 5 sec. S9.	23° 45.46′ N., 38° 25.25′ E.
(n)	N. cardinal pillar light buoy, Q. S10.	23° 49.08′ N., 38° 17.82′ E.
(o)	Starboard-hand conical light buoy with topmark, Fl. (2) G. 10 sec. S11.	23° 51.15′ N., 38° 19.44′ E.
(p)	Pilot boarding place.	23° 26.60′ N., 38° 27.20 E.

Charts Affected: 63, 4704, 4071.
Light List Vol. E/86, 6050.63 and (Remarks), 6050.64 and (Remarks).
Admiralty List of Radio Signals, Vol. 2, 1986: 8511.2, 8511.4, 8511.6.
Saudi Ports Authority Notice "A" 170/86. (H. 2579/79).

(A) COMMERCIAL PORT

ALSO SEE "GENERAL" BEFORE FIRST PORT.

LOCATION: Yanbu Commercial Port is on Red Sea coast, about 168 nautical miles N.N.W. of Jeddah.

PORT LIMITS:
Harbour Boundaries:
All shore-based port property enclosed by a fence following the shore line extending seawards to a line running between the following points:

Lat. 24° 06′ 00″ N.	Long. 38° 00′ 00″ E.
Lat. 24° 06′ 00″ N.	Long. 37° 57′ 30″ E.
Lat. 24° 03′ 30″ N.	Long. 37° 57′ 30″ E.
Lat. 24° 03′ 30″ N.	Long. 38° 05′ 30″ E.

CHANNEL: Ships entering port pass through a channel of the following measurement: Length 1,647 m., width 200 m.

BEACONS:
1. Schermo Beacon: A Racon is established on Schermo Reef in position: Lat. 24° 03′ 20″ N., Long. 37° 51′ 60″ E. Code letter: "Y".Cycle: 75 seconds. Range: Approximately 12 nautical miles.

2. Entrance Beacons: Two Beacons, 1 & 2 at entrance of port channel. Height: 4.0 m. Range: 5 nautical miles.

Beacon No. 1: Starboard – hand beacon (Green), green flash every second (Q.G.).

Beacon No. 2: Port – hand beacon (Red), red flash every second (Q.R.).

Beacon No. 6: 795 m. from channel entrance on port side there is another beacon height 4.0 m. (Red), red flash every second (Q.R.). Range: 5 nautical miles.

APPROACHING: A cement factory has been established in position: Lat. 24° 16.1′ N., Long. 37° 33.2′ E.

The factory provides a strong radar echo and emits a very bright glow at night.

It has been reported that this has confused seafarers who have taken it for the town of Yanbu.

Seafarers are strongly advised to amend their sea charts accordingly.

Masters proceeding to Yanbu Commercial Port should follow strictly the Channel and traffic separation scheme as clearly as delineated in formal charts in force (e.g., British Admiralty Charts 327 and 328.)

The Ports Authority, Kingdom of Saudi Arabia, advise that ships proceeding outside the Approach Channels, or contravening the Rules of the Traffic Separation Scheme in order to save time, will be fined and the Masters held individually responsible.

BUOYS: Channel is buoyed with red and green port and starboard-hand buoys.
Starboard-hand buoys: 7 buoys, odd number: 1A, 3, 5, 7, 9, 11, & 13. Buoy shape: Cone. Light characteristic: Green flash every 2 seconds (Fl. G. 2 secs.).

Port-hand Buoys: Number of buoys: 2, even numbers: 4, 8. Buoy shape: Can. Light characteristic: Red flash every 2 secs (Fl. R. 2 secs.).

DOCUMENTS: All ships bound for Yanbu Commercial Port should have the following documents prepared for the relevant authorities and the original certificates as specified ready for inspection by the Port Authority's Boarding Officer.

Crew List, original plus 4 copies.
Passenger List, original plus 4 copies.
Personal Effects of Crew, original plus 1 copy.
Vaccination List, original plus 1 copy.
Marine Health Declaration, original plus 1 copy.
Israel Boycott Declaration, original plus 2 copies.
Ship's Stores List, original plus 1 copy.
Logbook.
Certificate of Registry.
Certificate of Classification.
Load Line Certificate.
Safety Construction Certificate.
Safety Equipment Certificate.
Radio & Wireless Certificate.
Cargo Gear Certificate.
Derat Certificate.
Port Clearance – Last Port of Call.

PILOTAGE: Pilotage is compulsory. Vessels bound for Yanbu Commercial Port should call Yanbu Port Control on VHF Channel 16 at least 2 hours prior to arrival.

North Channel: Pilots will normally board in position Lat. 24° 04′ N. Long. 38° 01′ E. approximately 5 miles West of Schermo Beacon. Pilot boats are painted orange with "Pilot" written in black on white superstructure.

Vessels should exhibit international code flag "G" by day or flash "G" by night. On approaching the Pilot Boarding Area, a pilot ladder should be rigged, reaching approximately 1 m. above sea level. Vessels should ensure a good lee for boarding of the Pilot.

South Channel: Ordering of Pilotage Service for Vessels Arriving at the South Channel: Due to the extra length of the South Channel compared to the North Channel, the Port Control Tower will require 5 hours notice prior to pilot boarding time at the South Pilot Station. Requirements for the North Pilot Station remain unchanged.

Way Points in South Channel: You are informed that the following way points are now established in the South Channel for use with the Control Tower and movement of vessels within the South Channel:

South Pilot Station	23° 26.6′ N., 38° 27.2′ E.
S-1	23° 34.3′ N., 38° 29.6′ E.
S-2	23° 46.2′ N., 38° 23.4′ E.
CSZ	23° 52.0′ N., 38° 16.8′ E.

Also see "Notice" before Section A.

ANCHORAGES: There are no areas suitable for the safe anchorage of vessels in the vicinity of Yanbu Commercial Port.

RESTRICTIONS: The port is open 24 hours per day and vessels may enter and leave port at any time.

MAX. SIZE: There is no restriction as to length or breadth of vessels but a draft restriction of 34 ft. is in force for all vessels to all berths other than those cement vessels nominated specifically for discharge at Berth No. 3 or No. 9 where a 36 ft. draft limit is allowed.

HEALTH: Quarantine formalities are effected after vessels are berthed except in the case of passenger/pilgrim vessels which will be anchored inside the harbour for quarantine and immigration clearance.

RADIO: Vessels bound for Yanbu from the North should route their ETA cables through Port Said Radio.

Vessels bound for Yanbu from the South should route their ETA cables through Bahrain Radio.

ETA cables are transmitted to the local Saudi PTT Yanbu Office and thence distributed to concerned parties by telex.

VHF: Yanbu Port Control keeps a radio watch on Channel 16 VHF, 24 hours per day. VHF Channels 14, 12 and 9 are available for standard communications. VHF Channel 14 is normally used by Pilots and tugs for manoeuvring purposes.

RADAR: There is no port radar facility at Yanbu Commercial Port.

TUGS: Tugs normally meet incoming vessels off Channel Buoy No. 8 abeam of the port Coast Guard station. Tugs' lines are used for berthing and unberthing operations.

Tugs range from 800 h.p. – 2,500 h.p.

BERTHING: The following categories of berth, with a draft range from 10.0 m. to 12.0 m. are available: Bulk Cement, Bulk Grain, Ro-Ro (stern to), General Cargo and Passengers.

Storage: Adequate covered and open storage space is available in the form of warehouses, transit sheds, container freight stations, vehicle parks.

CARGO HANDLING EQUIPMENT: Mobile cranes of up to 200 tons capacity are available.

40 tons tower cranes are equipped with container spreaders. One crane is equipped with container lifting capacity 70 tons.

Head trucks, Mafi trailers, container handlers up to 35 tons, forklifts up to 25 tons are available.

BULK HANDLING FACILITIES: *Bulk Cement Terminal:* One Bulk Cement Berth with an annual capacity of about 1 million tons is available. *Bulk Grain Units:* Mobile discharging machines with handling capacity 200 t.p.h./machine, no bulk storage facility. Bulk grain is normally handled at Berth No. 5 and Berth No. 8.

STEVEDORES: Contracted for an integrated cargo handling operation, and work continuously 24 hours per day, 7 days per week.

MEDICAL: Assistance can be given by local general hospital and/or by a small private clinic via the Agents.

No vaccinations are required, but Malaria precautions are recommended.

DENSITY: 1025.
FRESH WATER: Available via mains direct to berth at a delivery rate of approximately 25 t.p.h. Costs as per current tariff.
CONSULS: At Jeddah.
REPAIRS: No facilities, however minor repairs are possible in local workshops via the Agents.
DRY DOCK: Not available.
SURVEYORS: Available via Jeddah.
GANGWAY/DECK WATCHMEN: Service not necessary and not available. Port area is fenced and guarded by Saudi Arabian Coast Guard, and guards are posted on each individual vessel in port.
HATCHES/CARGO GEAR: To vessel's advantage if all hatches and gear are prepared by ship's crew, however stevedores do assist.
CUSTOMS ALLOWANCES: In all Saudi Arabia, possession of any alcoholic beverages is strictly prohibited.
AIRPORT: Regular flight service on direct flights to Jeddah and Riyadh by Saudia. Other Saudi destinations and international destinations via Jeddah and Riyadh.

Yanbu domestic airport is located approximately 15 km. from the port.
TIME: GMT plus 3 hours.
HOLIDAYS: Public holidays do not affect port's activity. But all government offices, banks, etc., are closed to the public during Ramadan and Haijh holidays which change annually by the Higirian calendar.
TELEPHONE NUMBERS:

Police (Coast Guard):	Ext. 1000
Fire	Ext. 1313
Ambulance – via Port Safety or Traffic Department	Ext.1026/7 Ext.1317

TELEPHONES: There are pay phones in the port.
SERVICES: Services like tank cleaning, etc., are not available.
SHORE LEAVE: By Agent's request permitted.
IDENTIFICATION CARDS: Seamen's Discharge Books are sufficient.
REGULATIONS: Refer to Rules and Regulations for Seaports issued by the Co-operation Council for the Arab States of the Gulf, 1985.
DEVELOPMENTS: Future port developments include an additional 7 berths and a control tower. No time has yet been fixed for implementation of these projects.
AUTHORITY: Yanbu Port Management, P.O.Box 1019, Yanbu Port, Yanbu, Al Bahr, Saudi Arabia. *Tel:* (04)322 1163, 322 2470. *Telex:* 661005 Port SJ and 661096 Port SJ. *Cables:* Ports Yanbu (via Port Said or Bahrain). *Contact:* Abdul Rahman Ahmad Al-Khateeb, Port Director-General.
AGENT: See Section (B).

(B) KING FAHD INDUSTRIAL PORT, YANBU

At present the King Fahd Industrial Port consists of 7 Terminals listed as follows:

Crude Oil Terminal
NGL Terminal
Al Muajjiz Terminal.
Bulk Terminal
Yanbu Petromin Refinery Terminal
Petromin – Mobil Refinery – PEMREF.
General Cargo and Container Terminal

PORT LIMITS: Seaward boundaries of King Fahd Industrial Port are enclosed by the following boundaries:

1. Lat. 24° 03.50′ N., Long. 38° 05.50′ E.
2. Lat. 24° 03.50′ N., Long. 38° 02.00′ E.
3. Lat. 24° 07.00′ N., Long. 37° 53.67′ E.
4. Lat. 24° 07.00′ N., Long. 37° 45.00′ E.
5. Lat. 24° 01.50′ N., Long. 37° 45.00′ E.
6. Lat. 23° 50.00′ N., Long. 38° 12.00′ E.
7. Lat. 23° 25.00′ N., Long. 38° 20.00′ E.
8. Lat. 23° 25.00′ N., Long. 38° 40.00′ E.

Thence along the coast to No. 1 (above).
FLAG: Every vessel entering King Fahd Industrial Port at Yanbu must hoist the Flag of the Kingdom of Saudi Arabia from the foremast and keep it flying *at all times* throughout the vessel's stay in Port. The Flag of the Kingdom of Saudi Arabia is to be in good condition and is properly displayed when the Arabic writing appears at the top and the sword at the bottom.
DOCUMENTS: Also see "Radio".
Arrival Documentation Requirements: The Rules and Regulations for Seaports specify that Masters must present or make available for inspection the following papers and documents:

Log Book.
Registration Certificate.
Classification Certificate.
Load-Line Certificate.
Building Safety Certificate.
Safety Equipment Certificate.
Radio and Wireless Certificate.
Cargo Gear Certificate.
Maritime Health Declaration.
Vaccination List.
Derat Certificate.
Clearance from last Port of call.
Israel Boycott Declaration.
Ship's Stores List.
Grain Shipping Certificate if the vessel is carrying a grain shipment.
Mail Transport Documents in accordance with the "International Postal Treaty" if any mail is carried aboard.
5 copies of the Crew List including name, nationality, date and place of birth, Passport number, port of embarkation, port of disembarkation.
2 copies of the List of Personal Effects of crew and passengers.
5 copies of the Passenger List including name, nationality, date and place of birth, passport number, port of embarkation, port of disembarkation.

In addition, the Rules and Regulations for King Fahd Industrial Port require that the Oil Record Book and the Certificate of Fitness (in cases of gas and chemical carriers) are available for inspection.
CLEARANCE: *Basic Procedure for Clearing a Ship:* On arrival of the ship at anchor or berth, and given that all the pre-entry requirements have been fulfilled, the ship will be boarded by the following for completion of the required formalities:

Immigration Authorities.	Port Health Officer.
Coast Guard.	Customs Officer.

In the case of dry cargo vessels, on completion of these formalities the Agent will collect the discharge permit from the Customs Authorities, having provided a copy of the manifest well in advance. The Customs Authorities then issue a Discharge Permit, one copy of which is given to the stevedores while the other is given to Port Management.
Basic Procedures for Clearing a Ship Outward: When a vessel completes cargo, the Agent is responsible for issuing a letter of notification to the Customs Authorities. The letter is endorsed by the Customs and copies given to the following:

(i) Immigration Department.
(ii) Criminal Investigation Department.
(iii) Yanbu Port Authorities.
(iv) Intelligence Department.
(v) Coast Guard.

The Coast Guard issues a letter to the Quarantine Department, in their capacity as Port Health Authority stating:

(i) They have received the clearance letter from Customs.
(ii) The vessel's name.
(iii) The vessel's flag.
(iv) The name of the Agent.

and requesting them to issue the Departure Permit.

The Departure Permit, duly signed and stamped, is taken to the Immigration Department who will dispatch one of their Officers to the vessel. This Officer checks the Crew List against the Passports and obtains assurances from the Master that the crew is the same as on arrival, apart from any agreed repatriation, and that no crew member has been involved in any mishap. Once the Immigration Officer is satisfied he gives one copy of the Departure Permit to the Master and one copy to Port Management, concluding the formalities.
EARLY DEPARTURE PROCEDURE: Early Departure Procedure is available at the crude oil terminal and should be requested through the ship's Agent.
PILOTAGE: *Instructions to Vessels and Conditions of Use of all Berths within King Fahd Industrial Port:* When the Pilot boards an inward bound vessel he will present the Master with a letter "Instructions to Vessels and Conditions of Use of all Berths within King Fahd Industrial Port". The Master is required to sign the letter, acknowledging receipt and agreeing to the Instructions and Conditions contained therein prior to entry into the Port. No vessel will be allowed to proceed into the Port until this letter has been signed.
Pilotage: Pilotage is compulsory for all vessels entering, navigating within, or leaving the port limits of King Fahd Industrial Port.

Orders for Pilots must be received at least 5 hours before their services are required.

Vessels under 150 n.r.t., pleasure craft, vessels operated by the Saudi Arabian Government and the SEAPA and any craft employed solely within the port limits are exempt from Pilotage. These vessels must keep clear of the fairway.

There are two pilot boarding positions, one off Schermo Reef Lt. (Lat. 24° 02.6′ N. Long. 37° 45.2′ E.) and the other off Yanbu South Lt. (Lat. 23° 26.6′ N. Long. 38° 27.2′ E.), as shown on charts. Pilots will embark and disembark from twin screw, steel pilot vessels. When approaching the pilot boat the Master of every vessel must reduce speed to a minimum for steerage way, maintain VHF contact with the pilot boat, and provide a good lee.

Every vessel picking up a Pilot must have rigged and ready for use a safe, clean, properly secured pilot ladder or combination of gangway and pilot ladder. The Pilot boarding arrangements must comply with the current IMO codes of practice concerning pilot boarding. A lifebuoy, with lifeline attached, and a boat rope must be provided ready for immediate use, and, in addition, between sunset and sunrise the pilot boarding area must be well illuminated. The rigging of pilot ladders and the embarkation and disembarkation of pilots must be supervised by a responsible deck officer.

Any vessel which overcarries a Pilot to another Saudi Arabian Port must pay all repatriation expenses. Under no circumstances may a Pilot be overcarried to a Port outside the Kingdom of Saudi Arabia, due to visa restrictions. If weather, or other conditions preclude the disembarkation of a Pilot from a vessel, bound to a Port outside the Kingdom of Saudi Arabia, then that vessel will be delayed, at the vessel's expense, until such time as disembarkation is possible. Any such vessel so delayed may arrange, at their own expense, for the Pilot to be disembarked by helicopter.

The length of Pilotage from the Schermo Pilot boarding position is approximately 33 miles, with a minimum surveyed depth of 32 m. and from the Yanbu South boarding station about 37 miles, with a minimum surveyed depth of 41 m. In general, channel depths are rarely less than 100 m. and in places exceed 400 m.

Also see "Section A" and "Notice" before "Section A".
APPROACHES: Masters of deep draft vessels will be aware that there are extensive unsurveyed areas between the main shipping lanes and the approaches to Yanbu. Two approach corridors to the present pilot boarding area off Schermo Reef were surveyed early in 1981. The Northern approach corridor, some 48 miles long and 3 miles wide extends in a Westerly direction from just West of Schermo Reef, at approximately Lat. 24° 03′ N., Long. 37° 45.2′ E. to Lat. 24° 04′ N. Long. 36° 53′ E. Depths range in general from 650 m. inshore to 950 m. offshore, but two isolated domes were discovered with least depths of 132 m. and 184 m. at approximately Lat. 24° 04′ N., Long. 37° 36′ E. and Lat. 24° 07′ N., Long. 37° 36′ E. respectively.

The Southern approach corridor some 43 miles long and 3 miles wide extends in a South-Westerly direction from just West of Schermo Reef at approximately Lat. 24° 03′ N., Long. 37° 45.2′ E. to Lat. 23° 22.5′ N., Long. 37° 28.5′ E. No hazards were discovered with depths generally 650 m. inshore to 790 m. offshore.

The surveyed approach corridor for the South Pilot station runs in a Northeasterly direction to Yanbu South Lt., a distance of some 40 miles with a width of 3 miles. Depths obtained are in the range of 550 m. to 780 m.

ANCHORAGES: The bearing and distance shown below is calculated *from Beacon 2C* and indicates position of the anchoage.

Anchoring Points	*Beacon 2C Bearing*	*Max. Distance*	*Draft*
N1	101°	1.06 miles	15.0 m.
N2	110°	1.26 miles	16.0 m.
N3	098°	1.56 miles	22.0 m.
N4	117°	1.80 miles	22.0 m.
N5	123°	2.15 miles	22.0 m.

Anchorages "N4" and "N5" will be utilised for fully laden VLCCs.

Masters of vessels are advised of the following conditions for the use of the anchorage:

1. No repairs of any kind are permitted at the anchorage unless authorised by the Harbour Master.
2. Main engines to be in a state of readiness at all times to leave the anchorage at short notice.
3. A continuous listening watch on VHF Channel 16 should be maintained.
4. Anchor watches to determine vessel's anchor position at reasonable intervals is recommended.

There are no anchorages considered suitable for deep drafted vessels without local knowledge in the vicinity of either Pilot Boarding Station. In any case, vessels not cleared to enter King Fahd Industrial Port are required to remain outside the territorial waters of Saudi Arabia.

An inner anchorage has been established approximately one mile S.W. of the Port Control Tower (27° 57.4′ N., 38° 13′ E.) within the Controlled Navigation Zone of the port. Five vessels can be accommodated in this anchorage. The minimum depth in the anchorage is 35.0 m. and the holding ground is considered to be good. A SEAPA Pilot will conduct vessels to a designated anchorage position on request.

RESTRICTIONS: *Equipment Requirements:* No vessel shall navigate within the Port, unless the vessel complies with the following equipment requirements:

Efficient VHF Radio Telephone capable of working on the Port frequencies.

Efficient steering gear with fully operational rudder and helm indicators.

Efficient working radar.

Efficient propulsion both ahead and astern and fully operational tachometer.

Both anchors capable of being let go and capable of being raised by the vessel.

Efficient winches and adequate mooring gear to secure the vessels safely, and an efficient mooring stations communication system.

Sufficient crew on board at all times to operate the vessel safely and efficiently and all officers properly qualified and certificated as required by the flag nation.

All secondary power or mechanical systems on the vessel to be in operation and immediately available in the event of failure of any primary system.

If any vessel cannot comply with any of the requirements listed above, King Fahd Industrial Port Control must be advised prior to arrival or departure. The vessel will then be subject to inspection and possible delay. Failure to comply or to notify King Fahd Industrial Port Control may result in the vessel being fined or refused entry to the Port or both.

Permission to Enter the Port: All Masters of sea going vessels must have prior permission of the King Fahd Industrial Port Control to enter the Port. Such permission may be subject to special restrictions or conditions if:

The vessel arrives before or after the given ETA.

The vessel is in danger of sinking.

The vessel or its cargo is on fire or if there is any possibility of a fire or if after a fire it is uncertain whether that fire is completely extinguished.

The vessel is overloaded or, on account of the condition of the cargo, the vessel is dangerous or has deck cargo which extends beyond her sides.

The vessel has been involved in a collision or has grounded.

The vessel is leaking.

The vessel has a list.

The vessel is in an unstable condition.

Draft Requirements: Vessels will not be permitted entry to the Port unless they arrive at a draft consistent with safe manoeuvring and reasonably trimmed, to the satisfaction of the Pilot.

RADIO: *ETA Requirements:* In addition to the Pre-Arrival Information Requirements below, further notification of ETA is required 5 days, 72 hours, 48 hours and 24 hours prior to arrival at the Port and should be sent by telex: 662360 ("PORTCT SJ") for information of the Director General. Changes in ETA in excess of one hour must be notified thereafter. On coming within range of King Fahd Industrial Port Control, the ETA must be confirmed by VHF.

Vessels which fail to comply with these requirements may be delayed and or subject to a fine as laid down in the Rules and Regulations.

Government Entry Requirements: The Master will be responsible for complying fully with the requirements of Saudi Arabian Government Departments, Ministries, Agencies and Organisations. Particular attention should be paid to the requirements of the Customs, Coast Guard, Immigration and Port Health Authorities. Masters requiring any advice on these requirements should contact their local Agents.

PEMREF: PEMREF requires a *minimum* of 96/72/48/24 hours notice of a vessel's arrival. The full pre-arrival message should accompany the 96 hour ETA. Where a vessel is arriving from a port less than 96 hours away, an ETA must be sent as soon as the vessel leaves that port.

The above requirements are a *minimum* and Masters should be encouraged to keep PEMREF well advised at an early stage regarding all aspects of their call. Failure to provide the required information in a timely manner will result in delays in berthing and loading, which will be for Owner's account.

PRE-ARRIVAL INFORMATION REQUIREMENTS: The Rules and Regulations for Seaports of the G.C.C. Member States cover King Fahd Industrial Port and these specify that certain information must be received either directly or through the vessel's Agent before that vessel arrives at the port. Vessels which fail to comply with this requirement may be delayed and/or subject to a fine as laid down in the Rules and Regulations.

Dry Cargo Vessels: The following information must be sent to the Director General as soon as that vessel has completed loading cargo at her previous port:

1. Call Sign.
2. Name of vessel.
3. Owner's/Charterer's name and address.
4. Nationality.
5. Agents.
6. LOA.
7. Maximum draft.
8. No. of hatches.
9. G.R.T.
10. N.R.T.
11. D.W.T.
12. Previous Names.
13. Type of Vessel.
14. Type of Cargo.
15. Total cargo weight tons.
16. Total cargo freight tons.
17. No. of containers/units.
18. No. of Livestock.
19. E.T.A.
20. Actual Arrival Draft.
21. Hazardous Cargo for Yanbu, including quantities and classes.
22. Hazardous Cargo in Transit for other ports, including quantities and classes.
23. Tonnage to Hatch for Yanbu Discharge.
24. Year of Construction.
25. Lloyd's Registered Number.
26. All Ports of Loading.
27. Ship's Derricks.
28. Speed.
29. Next Port.
30. Route.
31. Last 3 Ports of Call.
32. Bunker Requirement.
33. Liquor Cargo in Transit with container number.
34. Arms and Ammunitions on board.

Tankers: The following information must be sent to the Director General as soon as the vessel receives orders to proceed to the port. It is requested that the information should also be sent to the relevant Terminal Operator.

AA Name of vessel.
BB Former names.
CC Port of registry, flag, call sign.
DD LOA, G.R.T., N.R.T.
EE Summer D.W.T., arrival D.W.T.
FF Draft on arrival forward and aft.
GG ETA. (To be advised 5 days, 72 hours, 48 hours, 24 hours and any later changes).
HH Last port.
II Cargo on board and flash point, destination of cargo.
JJ Cargo requirements.
KK Previous cargo and quantity residues on board for load on top.
LL IMO Class.
MM Whether gas free or in an inert condition (Oxygen content of atmosphere throughout tank to be less than 8% by volume).
NN Port of loading ballast and amount.
OO Quantity of ballast loaded on passage.
PP Quantity of segregated ballast on arrival.
QQ Quantity of cargo tank ballast on arrival.
RR Time for deballasting: Can ship load/deballast simultaneously?
SS Special conditions, difficulties, defective equipment or gear which could present special hazards or difficulties when mooring, unmooring or during cargo operations.
TT Agent's name.
UU Maximum loading rate.
VV Topping-off rate.
WW Bunker requirements.
XX Cargo manifold connections size.
YY Bunker connections size.
ZZ Derricks.
11. Ship shore comparisons for last 5 voyages.
22. Year built.
33. Master's full name.
44. Discharge port.
55. Next port of call.
66. Number of crew.
77. Vessel's economical speed.
88. Vessel's position when 48 hours from pilot station.

(See also "Appendix").

Gas Tankers: The following information must be sent to the Director General and Terminal Operator as soon as the vessel receives orders to proceed to the port.

AAG	Name of vessel, indicating any former names.
BBG	Port of registry, flag, call sign.
CCG	LOA, G.R.T., N.R.T.
DDG	Summer D.W.T., arrival D.W.T., arrival draft forward and aft.
EEG	Last port, ETA Yanbu.
FFG	Quantity of ballast on arrival: where loaded.
GGG	Quantity of dirty ballast on arrival.
HHG	Total cargo capacity in cubic metres. Cargo required.
IIG	Grades and quantities of any part cargoes or cargo residues and where loaded. Grade and quantities of product in deck tanks.
JJG	Are part cargoes to be comingled with Yanbu loadings?
KKG	Gauge pressures; top, bottom and mean temperatures of each cargo tank.
LLG	Quantity of coolant required in addition to cargo requirements.
MMG	Maximum allowable relief valve settings for all cargo tanks.
NNG	Have any cargoes other than LPG been carried during last 3 loaded voyages? Specify.
OOG	Maximum oxygen content by volume per cent of each warm or inerted cargo tank.
PPG	If tank purging required specify whether: (a) Parallel or in series. (b) Liquid from shore direct to cargo tanks. (c) Liquid from shore to vessel's vaporisers. Specify vaporiser throughout in RLPG tonnes/hour.
QQG	If cooling down tanks is required, specify maximum cooling rate in terms of temperature reduction per hours and maximum temperature differential permitted between any two points in cargo tanks.
RRG	Available total capacity of ship's reliquefication plant for each nominated cargo product.
SSG	Type of ship's reliquefication system i.e., direct, cascade or other.
TTG	Capacity of ship's gas blowers to shore vapour return line in volume per hour at reference temperature.
UUG	Maximum loading rate and approximate topping off rate.
VVG	Bunker manifold size. Bunker requirements.
WWG	Manifold presentation; function, ASA rating, size, from Forward.
XXG	Agent's name.
YYG	IMO ship type. Does vessel have valid certificates of fitness?
ZZG	Special conditions, difficulties, defective equipment or gear which could present special hazards or difficulties when mooring, unmooring or during cargo operations.
111.	Deballasting time, specify concurrent loading or not.
222.	Year built.
333.	Master's full name.
444.	Discharge port.
555.	Next port of call.
666.	Number of crew.
777.	Vessel's economical speed.
888.	Vessel's position when 48 hours from pilot station.

(See also "Appendix").

HEALTH: *Quarantine:* In accordance with International practice, quarantine signals must be displayed by all vessels approaching the port. These signals must be displayed continuously until Pratique is granted.

Sunrise to Sunset – Quarantine Flag
Sunset to Sunrise – Signal lights – Red over white

VHF: *Port Control:* All the marine services and shipping movements within King Fahd Industrial Port Limits are monitored and controlled by "King Fahd Port Control", which is situated at Lat. 23° 57.4′ N., Long. 38° 13′ E. The station is manned 24 hours a day and maintains a continuous VHF watch. Information can be provided to Masters and Pilots on all navigational aspects, including wind and visibility, navigational aids and shipping movements within the port area. The station will also provide a liaison with the Terminal Operators and Emergency Services.

The following VHF channels are continuously available for use by King Fahd Port Control.

Channel Designator	*MHz Frequency*	*Service*
16	156.800	International Calling and Distress
10	156.500	Port Operations – 3
11	156.550	Port Operations – 1
13	156.650	Port Operations – 4
68	156.425	Port Operations – 2
67	156.375	Pilotage/Berthing Operations
69	156.475	Pilotage/Berthing Operations
71	156.575	Pilotage/Berthing Operations
73	156.675	Pilotage/Berthing Operations
74	156.725	King Fahd Port Operations – Private

In the event of a Port Emergency, King Fahd Industrial Port Control will designate a channel for use during the period of the emergency.

RADAR: Harbour Surveillance Radar is installed in the Port Control Tower.

A second surveillance radar is being erected (1990) on a 30 m. tower in position Lat. 23° 42′ N. Long. 38° 29′ E., remote reading at the Port Control Tower.

TUGS: There is no requirement for Masters to order tugs in King Fahd Industrial Port. The number of tugs to be used during berthing and on departure will be specified by the Harbour Master. If the Master wishes to appeal against the number of tugs allocated, he will do so to the Harbour Master, who will make the final decision.

Any tug whether owned, hired or chartered by the Ports Authority, when used for assisting a vessel, shall be deemed to be under the order and control of the Master, Owner or Charterers of the vessel being assisted. The Ports Authority shall not be liable for damage of any description or any consequential loss suffered by, or to, the tugs or their crews while assisting vessels, whether occasioned by any act or omission of Tug Master or crew or by any defect or inadequacy of the tug, machinery or gear.

Towing lines will be provided by the Ports Authority. Tugs will rendezvous with vessels bound for Port Terminals in the vicinity of Buoy No. 14. or further South as appropriate for the terminal.

All tugs are fitted with foam and water monitors for fire fighting and spray booms for pollution dispersal work.

15 tugs up to 87 tons bollard pull. Pilot launches and mooring launches are available.

Most tugs are VSP Water Tractors.

CRUDE OIL TERMINAL:

Saudi Aramco Berth Particulars:

Berth No. 61:

Tanker Size (approx.)	80,000 – 275,000 d.w.t. (See Note)
Deck Level of Loading Platform	40 ft.
Depth Alongside Berth No. 1	92 ft. ISLW
Max. Draft	81 ft.
Loading Arms (number and size)	4×20 in.
Quick Disconnect Coupling Size	16 in. 20 in., 24 in.
Bunker Fuel Arms (number and size)	2×12 in.
Quick Disconnect Coupling Size	8 in., 10 in., 12 in.
Max. Rate Per Loading Arm	32,500 b.p.h.
Max. Rate Per Bunker Arm (Off-loading)	8,900 b.p.h.
Number of Breasting Dolphins	4
Number of Mooring Dolphins	4
Available Mooring Hooks	24 (SWL @ 70 M/T)
Distance Between Centre of Inner Breasting Dolphins	239 ft. (73 m.)

Berth No. 62:

Tanker Size (approx.)	275,000 – 500,000 d.w.t. (See Note)
Deck Level of Loading Platform	40 ft.
Depth Alongside Berth	105 ft. ISLW
Max. Draft	95 ft.
Loading Arms (Number and Size)	4 × 20 in.
Quick Disconnect Coupling Size	16 in. 20 in., 24 in.
Bunker Arms (Number and Size)	2 × 12 in.
Quick Disconnect Coupling Size	8 in., 10 in., 12 in.
Max. Rate per Loading Arm	32,500 b.p.h.
Max. Rate per Bunker Arm (Bunkering)	10,000 b.p.h.
Number of Breasting Dolphins	2
Number of Mooring Dolphins	6
Available Mooring Hooks	26 (SWL @ 70 M/T)
Distance Between Centre of Breasting Dolphins	449 ft. (137 m.)

Note: Tankers of less than 275,000 d.w.t. may be accepted if the light water line flat side forward and aft of the manifold is at least 75 m. (246 ft.)

Berth No. 63: (Also see "Shipmaster's Report" – dated October 1985)

Tanker Size (approx.)	120,000 – 275,000 d.w.t. (See Note)
Deck Level of Loading Platform	40 ft.
Depth Alongside Berth	90 ft. ISLW
Max. Draft	81 ft.
Loading Arms (Number and Size)	4 × 20 in.
Quick Disconnect Coupling Size	16 in., 20 in., 24 in.
Bunker Arms (Number and Size)	2 × 12 in.
Quick Disconnect Coupling Size	8 in. 10 in., 12 in.
Max. Rate per Loading Arm	32,500 b.p.h.
Max. Rate per Bunker Arm (Bunkering)	10,000
Number of Breasting Dolphins	2
Number of Mooring Dolphins	5
Available Mooring Hooks	23 (SWL @ 70 M/T)
Distance Between Centre of Breasting Dolphins	420 ft. (128 m.)

Note: Tankers of less than 120,000 d.w.t. may be accepted if the light water line flat side forward and aft of the manifold is at least 70 m. (230 ft.).

Berth No. 64: In 1990 a fourth berth for vessels of 80,000 d.w.t. to 500,000 d.w.t. was under construction.

Only two berths of the Crude Oil Terminal can be loaded at the same time. Maximum loading rate to two crude berths simultaneously is 260,000 b.p.h. through 8 × 20 in. loading arms.

Environmental Monitoring System: An environmental monitoring system is installed at Berth No. 61 dock control room with repeater units located in dock control rooms at Berths 62 and 63. The system indicates wind velocity and direction, atmospheric pressure and temperature, current velocity and direction, and wave height and period.

Berthing Criteria:

Max. berthing velocity:	20 cm./sec.
Max. approach angle:	7°

For berthing and unberthing purposes, wind, sea, and current conditions have to be within acceptable limits, so that during the final docking the maximum berthing velocity and maximum approach angle is not being exceeded.

Mooring Arrangements: Each mooring dolphin, breasting dolphin, and loading platform is equipped with either double or triple quick-release mooring hooks and with a mooring capstan.

The terminal will furnish a required mooring arrangement for the loading berth to which the vessel is nominated. The mooring diagram shows the number of mooring hooks provided for each berth consecutively numbered from North to South. These mooring hooks are designed to service one mooring line per hook.

Port mooring launches will be used to assist during mooring operations.

The terminal will provide suitable messengers for heaving in lines.

In order to ensure the integrity of the offshore terminal facilities, it is recommended that VLCCs provide an all wire mooring arrangement and that tankers in the 50 to 160 MDWT range provide mooring wires at least for their spring mooring lines and breast mooring lines. The recommended minimum number of wire moorings is as follows:

50,000 – 160,000 d.w.t. tankers:	8 mooring wires
160,000 – 250,000 d.w.t. tankers:	10 mooring wires
250,000 – 350,000 d.w.t. tankers:	12 mooring wires
350,000 plus d.w.t. tankers:	14 mooring wires

VLCCs with an all synthetic mooring system will be accepted if the synthetic mooring lines consist of low elasticity material.

All mooring lines should be of similar size and material and must be in good condition. Manual brakes have to be set and to be secured on all tension winches once the tanker is moored. Ship's crew must tend all moorings to keep the ship in position and mooring lines have to be taut at all times.

Each loading berth is equipped with a mooring load monitor/hook release system. The system is designed to monitor the loads on each mooring hook and to provide an alarm should the loads on a mooring hook exceed the system's set points. Berth operating personnel will monitor the mooring loads and, based on the read-outs they will advise the responsible officer who is expected to immediately correct any undesirable mooring situation.

The mooring load monitoring system does not relieve the vessel's Master from his responsibility to ensure adequate and safe mooring at all times when berthed alongside the Crude Oil Terminal.

Report: 1989.

King Fahd Industrial Port Authorities and Saudi Aramco have reminded us to ensure that Owners and Masters, of all vessels berthing at the Crude Oil Terminal and NGL jetties, are made fully aware of the mooring requirements, which are a minimum of 16 lines arranged as follows:

3 head lines
3 forward breast lines
2 forward back springs
2 after back springs
3 after breast lines
3 stern lines.

Further, please take note of Saudi Aramco's minimum wire mooring line requirement as under:

Vessel Size	*Required*	*Recommended*
75,000 – 160,000 d.w.t.	8 Wires	12 Wires
161,000 – 250,000 d.w.t.	10 Wires	12 Wires
251,000 – 300,000 d.w.t.	12 Wires	14 Wires
301,000 – 350,000 d.w.t.	12 Wires	16 Wires
351,000 d.w.t. and above	14 Wires	16 Wires

Gangway: The Crude Oil Terminal will provide a gangway to the ship at each berth.

Each loading platform has a gangway tower equipped with a self-adjusting gangway. The gangway provides access to and from the tanker and is the only permissible means for any personnel to enter or leave the ship.

Loading: *Loading Arms:* There are 4×20 in. crude oil loading arms at each of the loading platforms at Berth Nos. 61, 62 and 63. Each crude oil loading arm is capable of handling 32,500 bbls.p.h. maximum. The maximum flow rate per berth is 130,000 bbls.p.h., using 4 arms.

The hydraulic controls for the loading arms are located at the control desk on the loading platform adjacent to the loading arms. All loading arms are fully hydraulic powered and counter-balanced when empty. Each loading arm is fitted with a "Quick Disconnect Cargo Coupler" and a minimum distance of 18 in. is required between the lowest point of the ship loading line flanges to the upper level of the working platform of the spill tank.

All loading/bunker connections are equipped with electrical insulating flanges. Therefore, ship to shore bonding cables are not required.

Loading Plan Agreement: Prior to loading, the Terminal Supervisor will contact the officer in charge for the loading operation on board the tanker and discuss and agree on the loading plan.

The loading agreement consists of:

(a) Maximum acceptable loading rates, starting rates, topping-off rates, and standby notice requirements. (During loading, all anticipated changes in cargo transfer rates are to be communicated in a timely manner to ship or shore).
(b) Cargo quantities required by tanker's Master and comparison with terminal loading instructions.
(c) Cargo characteristics, required samples and tests.
(d) Assignment of cargo to vessel tanks and preferred order of loading.
(e) Details of last cargo, condition of tanks and pipelines, and ballast conditions and deballast time. Inspection of all cargo tanks prior to loading and signing of the Dry Certificate.
(f) Load-on-top procedures.
(g) Quantity of slop oil on board and quantity of free water in slops.
(h) Quantity of bunkers ordered prior to arrival.
(i) Estimated loading time required and estimated departure time.

Crude Oil Characteristics:

Arabian Light

Temperature	120°–150°F
API Gravity	33.2–33.8
Reid Vapour Pressure	3.6–5.0 PSIA
Pour Point	Below 20°F
Viscosity	57 SUS @ 70°F
BS&W	Less than 0.05%
H_2S	Less than 10 PPM

Hydrogen Sulphide Hazards (H_2S): Arabian crude loaded at the Offshore Marine Terminal has been treated for H_2S removal prior to shipping.

However, the crude oil may still contain Hydrogen Sulphide in concentrations which may be harmful to personnel. Personnel on board tankers who may be exposed to concentrations of H_2S gas should observe safety precautions applicable to harmful gases.

Slop Residues: Slop residues cannot be discharged ashore at Petromin's crude oil terminal.

Cargo Tank Inspection: Cargo tanks onboard the tanker will normally not be inspected by the Terminal Offshore Supervisor. If the Owner/Charterer of the ship requests an independent oil inspection company to inspect cargo tanks, the Offshore Supervisor will witness the tank inspection.

Tankers which arrive with all tanks inerted must enable ullage inspections of all cargo tanks to be carried out prior to start of cargo transfer operations and after completion of cargo transfer operations.

If the tanker requests load-on-top procedures, measuring of the quantity of oil and water in the slop tank(s) will be witnessed by the Terminal Supervisor (Also see "Appendix").

Loading Signal: During loading the international code flag "B" shall be displayed during daylight hours. During darkness a red loading light shall be displayed.

Watches: During the entire stay of the vessel alongside the Crude Oil Terminal, a deck watch is required.

Bunkering: Bunkering fuel is available at all berths at the Crude Oil Terminal, and 2 bunker loading arms are located on each loading platform, size 12 in. Maximum flow rate per bunker loading arm is 14,500 bbls./p.h. To avoid any delays to tankers, bunkering has to be accomplished concurrently with cargo transfer operations.

NGL TERMINAL: The NGL Terminal is a Saudi Arabian Government owned, Saudi Aramco operated facility designed to load refrigerated liquid petroleum gas (propane and butane) and naphtha product for export. LPG carriers range in size from approximately 25,000 cu.m. to 200,000 cu.m. Naphtha carriers range from 20,000 to 280,000 d.w.t.

Terminal Facilities: The 2 loading berths are situated on the offshore side of the base of the "L". Berth 71 is the Southerly berth and Berth 72 is the Northerly berth. Berth alignment is 290° true bearing. A tower crane is located in the middle of each loading platform. Reading from North to South the 7 loading arms are designated for the following service; Naphtha, ship's fuel, LPG (4 arms), and ship's fuel. All LPG arms are universally manifolded to permit propane or butane liquid loading; or propane, butane or contaminated vapour return. Bunker fuel or black diesel can be loaded through either or both 12 in. ship's fuel arms which flank the LPG loading station. The naphtha arm is capable of delivering naphtha product and receiving small amounts of naphtha slop, which will be disposed of onshore. There are no shore-based ballast handling facilities.

Berth Particulars: No. 71 and No. 72.

Tanker size (approx.):	16,000 – 200,000 cu.m.
Deck Level of Loading Platform:	56 ft. ISLW
Depth Alongside Berths (min.):	60 ft. ISLW
Max. Draft:	53 ft. 02 in. (16.2 m.)

Loading Arms:

	Number/Size		*Number/Size*
(a) Ships' Fuel	2×12 in.	(c) LPG	4×16 in.
(b) Naphtha	1×16 in.		

Quick Disconnect Coupling Sizes: 8 in., 10 in., 12 in., 14 in. and 16 in.

Maximum loading rate:

(a) Ships' Fuel	
1. Diesel	650 bbls.p.h.
2. Bunker Fuel	5,000 bbls.p.h.
(b) Naphtha	30,000 bbls.p.h.
(c) LPG	30,000 bbls.p.h.

Number of Breasting Dolphins:	2
Number of Mooring Dolphins:	6
Available Mooring Hooks:	42
Distance between centre of Breasting Dolphins:	300 ft.

Condition of Ship's Products Tanks: The Saudi Aramco facilities for loading LPG are not designed for loading pressurised cargoes and LPG will not be loaded into a tanker which does not have adequate shipboard refrigeration capacity and chilled tanks.

Mooring Lines and Arrangements: In order to ensure the safety of personnel, tankers and loading facilities, and to prevent accidental oil spillages, Saudi Aramco strongly recommend that tankers of 75,000 d.w.t. and larger which moor at NGL Terminal berths utilise a minimum of 8 to 12 wire mooring lines (breasts and springs) in accordance with the following:

75,000 to 160,000 d.w.t.	: 8 wire lines
161,000 to 250,000 d.w.t.	: 10 wire lines
Greater than 250,000 d.w.t.	: 12 wire lines

Vessels equipped with both wire and synthetic mooring lines must avoid mixing such lines to the same dolphin. During periods of unsettled weather, arriving vessels fitted with sufficient wires will be preferentially berthed whereas vessels equipped with synthetic lines or too few wire lines will not be berthed until the weather improves. If a ship with synthetic lines is already moored and squall conditions arise, loading to that vessel will be stopped and the loading arms disconnected until weather conditions improve and it is judged safe to resume the loading operation. The use of nylon or other highly elastic line is prohibited.

Each mooring dolphin and breasting dolphin is equipped with triple quick-release mooring hooks and with a mooring winch.

Vessels must be moored to the entire satisfaction of the Pilot. Vessels must be ready at all times to put out more lines as required by the Harbour Master or pier personnel, or as dictated by weather changes. All vessels moored to the piers must have deck winches in readiness for immediate use. All vessels moored with automatic tension winches will set the manual brakes on these winches.

Pier crew are on duty continuously to handle loading arms and mooring lines. Mooring lines on board vessels will not be handled by shore personnel.

All loading connections are equipped with electrical insulating flanges. Therefore, ship to shore bonding cables are not required.

Gangway: The NGL Terminal will provide a gangway to the ship at either berth. Each berth has a gangway tower equipped with a self-adjusting gangway for access to and from the ship, and this is the only permissible means for any personnel to enter or leave the ship.

Loading Plans: After a tanker is secured at the berth and prior to the beginning of any loading operation, the Master (or a ship's officer designated by him) will meet with the NGL Terminal senior shiftoperations representative in order to discuss and prepare the vessel's loading plan. Items to be discussed will include, but not be limited to, the following:

1. Temperature and pressure of each of the ship's tanks.
2. Product to be loaded in each tank and the sequence of tank loading.
3. Quantity and type of product, if any, in each ship's tank, and whether it is a part cargo or residue required for tank cooling.
4. Loading rates of each product.
5. Safety procedures and safe loading practices.

All clean excess vapours which cannot be handled by the tanker's vapour recovery equipment will be metered to the shore-based vapour recovery system and reprocessed. Contaminated vapours will be metered to the flare.

Refrigerated LPG: Refrigerated LPG is loaded via 16 in. loading arms. The maximum loading rate for each product is 30,000 bbls.p.h. Each berth is equipped with 4 LPG loading arms which may be used for butane liquid, propane liquid or vapour return to a ship's vapour recovery unit, or contaminated vapours to flare. All 8 LPG loading arms are fitted with quick connect/disconnect couplers. Each LPG loading line has an associate circulation return line. Loading lines must be on circulation at least 4 hours prior to commencement of loading. No 2 ships are loaded from one loading line simultaneously.

The NGL Terminal facilities ARE NOT designed for loading pressurised LPG and NO LPG will be loaded into ship's tanks that are not equipped with refrigeration facilities and are not adequately chilled.

Vapour line MUST be connected prior to loading LPG cargo. This also includes those vessels loading coolant.

Before being transferred from the loading line to the loading barrel and arms, the propane and butane products are metered. The metering system is designed for loading rates between 100 bbls.p.h. and 30,000 bbls.p.h. for each product.

A 3 in. turbine type meter with a capacity of 79 bbls.p.h. – 929 bbls.p.h is provided for low loading rates such as cooldown and topping off.

An 8 in. turbine type meter with a capacity of 679 bbls.h.p. – 7,420 bbls.p.h. is provided for full flow rates.

Every vessel loading LPG at the NGL Terminal will be required to have a copy of SAUDI ARAMCO GASRUL 9:83 on board. When a copy is not on board prior to arrival Saudi Aramco and the Agent of the vessel shall be so advised. Extracts of the regulations are included for information as follows:

1. *Propane Loading:*
   (a) The cargo tank bottom is cooled down to a maximum mean temperature of −38°F or −39°C.
   (b) The maximum mean temperature above the mid-depth of the cargo tank, in the range between two-thirds and three-quarters of the Maximum Allowable Tank Filling Level (MATFL), and excluding any temperature indicated in the cargo tank dome vapour space, is −13°F or −25°C.
   or
   The maximum mean temperature at the top of the cargo tank and at or immediately below the MATFL and excluding any temperature indicated in the cargo tank dome vapour space is −8°F or −22°C.
2. *Butane Loading:*
   (a) The cargo tank bottom is cooled down to a maximum mean temperature of +32°F or 0°C.
   (b) The maximum mean temperature above the mid-depth of tha cargo tank, in the range between two-thirds and three-quarters of the MATFL and excluding and temperature indicated in the cargo tank dome vapour space, is +57°F or +14°C.
   or
   The maximum mean temperature at the top of the cargo tank and at or immediately below the MATFL and excluding any temperature indicated in the cargo tank dome space is plus 62°F. or plus 17°C.
3. The cargo tank gauge pressure not more than 1.0 p.s.i. or 70 MBS or 0.07 kg./sq.cm. on arrival at berth. During cargo operation the pressure of any cargo tank shall be maintained within the range between zero gauge minimum (atmospheric pressure) and a maximum which shall not exceed 70% of the maximum allowable relief valve setting for that cargo tank or such other lesser maximum percentage as may be determined by Saudi Aramco for a particular vessel.
4. Butane may be loaded into ship tanks containing residue up to 10% of the cargo to be loaded.
5. Propane may be loaded into ship tanks containing propane residue up to 10% of the cargo to be loaded.
6. Butane or propane may be loaded into ship tanks containing part cargo of the same grade only by authorisation of the offtaker. Quantities of over 10% of the cargo to be loaded shall be considered part cargo.
7. Should the vessel be unable to comply with the provisions of paragraphs 3 and 4, Saudi Aramco operations management representatives shall confer with the vessel Master and/or Responsible Loading Officer to develop a loading procedure for the safest possible loading for the tank(s) containing dissimilar residue. The procedure shall be in writing, agreed to by both parties and take into consideration loading rates, temperatures, pressures and all possible safeguards to ensure minimising the dangers to ship and shore installations. It must be understood that this procedure will involve delays to the vessel and will impose additional workloads on the shore and ship personnel.
8. IN NO CASE WILL LOADING BE PERMITTED INTO SHIP TANKS CONTAINING LIQUID PRODUCT OF A DIFFERENT GRADE IN EXCESS OF TEN TONS.
9. When a vessel requires special handling, as described above, the vessel shall be given a letter of protest, with copies to Owners and Operators.
10. Refrigerated LPG vessels with warm cargo tanks can be handled at the Saudi Aramco NGL Terminal. When special circumstances warrant, new ships and other vessels with warm tanks may be accommodated but will be subject to specific conditions.
11. Vessels with part cargo on board of products other than A-140 Propane or A-160 Butane must be equipped to keep any liquid or vapour completely self-contained from those cargo parcels. There must be no return of non-compatible vapour to atmosphere while at berth. *No mixing of dissimilar refrigerated liquids is allowed at berth.*
12. Vessels loading either propane or butane are expected to use the appropriate vapour return line but only for *excess* vapour which the vessel's vapour recovery equipment cannot handle. Excessive vapour will be metered to a shoreside ship's vapour recovery system. If the excess vapour cannot be handled by using both systems, the vapour will be sent to flare. If the situation cannot be corrected promptly aboard ship, the loading shall be shut down. Loading shall be resumed only after the loading plan has been reviewed with the Master or Responsible Loading Officer by the senior shift operations representative and corrective action has been agreed upon.
13. In the event of a spill of liquid propane or butane on board the vessel, shore loading shall be shut down until corrective action to clean up the spill and to avoid future recurrence has been agreed upon by the Master or Responsible Loading Officer, the shift operations staff and the Harbour Master.
14. There are no facilities at the NGL Terminal for the return of either liquid propane or liquid butane cargo. Vessels must pay strict attention not to overload either of these grades.

Emergency Procedures: In the event of a fire or explosion at the pier, or on board a vessel which is berthed alongside at the Terminal, the alarm signal will be a one minute undulating signal on the siren and an Emergency Shutdown System will be activated to shutdown immediately all cargo loading to vessels at the berths. The course of action to be followed by Saudi Aramco Terminal personnel will be dictated by the particular facts and circumstances of the incident. It is impossible to indicate exactly and completely what practices will be applied during an emergency before an evaluation of the specfic situation can be made. Masters are advised to familiarise themselves with the Port and Terminal Emergency Procedures.

YANBU PETROMIN REFINERY: This is the domestic refinery for Saudi Arabia and is operated by Saudi Arabian Marketing and Refining Company (SAMAREC).

Terminal Facilities: There are 4 berths at the terminal, 2 for vessels of 20,000 d.w.t. to 80,000 d.w.t. capacity (Berths No. 91 and 92) and 2 for vessels of 1,000 d.w.t. to 20,000 d.w.t. capacity (Berths No. 93 and 94).

The smaller berths are located inside the harbour basin and the two larger berths on the seaward side of the causeway dogleg extending to the South Eastward of the main causeway.

Berth structures consist of a central loading platform and mooring and breasting structures connected by a trestle for vehicular access. Platform and trestle are of concrete, and the loading platforms connected to the mooring dolphins by steel walkways.

For the two larger berths, there are 4 semi-flexible breasting dolphins for each berth, two each side of the platform. The berths have been dredged to a depth of 16 m. below LAT.

For the two smaller inside berths, a semi-flexible breasting beam is installed in front of the platform, designed to absorb the berthing energy of vessels up to 20,000 d.w.t. tonnes. The turning circle with a diameter of 760 m. and the approach to the inner basin has been dredged to 13.5 m. below LAT; the berths themselves dredged to 11.5 m. below LAT.

All berths are equipped with double or triple quick release hooks. All hooks can be released remotely in an emergency.

The two larger berths are equipped with a berthing approach system, which monitors and records approach velocity, distance off and angle of approach; visible readout boards are installed for vessels' use.

A ballast water treatment plant is capable of receiving ballast at a maximum rate of 3,000 tonnes per hour prior to loading. Ballast water is passed through the facility's spearator system, clean water is then passed to retention ponds prior to being released to sea. The discharge of ballast water from the facility is monitored to ensure compliance with current environmental standards.

Bunkers (fuel and diesel oil) and potable fresh water are available at each berth.

Berth Particulars:

Berths No. 91 and 92:

Min./Max. tanker size	20,000 to 80,000 d.w.t.
Loading platform height above LAT	6.0 m.
Minimum water depth alongside	16.0 m.
Maximum draft allowed	14.2 m.
Breasting dolphins	4
Maximum LOA	260 m.
Usual side alongside	Starboard
Shore gangway	Yes

Berths No. 93 and 94:

Min./Max. tanker size	1,000 to 20,000 d.w.t.
Loading platform height above LAT	5.0 m.
Minimum water depth alongside	11.5 m.
Maximum draft allowed	9.8 m.
Breasting dolphins	4
Maximum LOA	175 m.
Usual side alongside	Starboard
Shore gangway	Yes

Product Loading Rates:

Berths No. 91 and 92:

Product	*Max. Rate per Arm* cu.m./hr.	*Design Pumping Rate* t.p.h.	*No. of Arms*
Fuel Oil (cargo)	1,500	2,360	3
Marine Diesel (cargo)	1,500	1,570	2
Regular Gasoline	1,500	1,570	2
Premium Gasoline	1,500	1,570	2
Motor Diesel Oil	1,500	1,570	2
Kerosene	1,500	1,570	2
Naphtha	440	300	1
JP4	240	182	1
Fuel Oil (bunker)	800	760	1
Marine Diesel (bunker)	550	450	1
Ballast Water (discharge)	1,500	3,000	3
Fresh Water	—	25	Hose

Berths No. 93 and 94:

Product	*Max. Rate per Arm* cu.m./hr.	*Design Pumping Rate* t.p.h.	*No. of Arms*
Fuel Oil (cargo)	1,000	2,360	3
Marine Diesel (cargo)	1,000	1,570	3
Regular Gasoline	1,500	1,570	2
Premium Gasoline	1,500	1,570	2
Motor Diesel Oil	1,500	1,570	2
Kerosene	1,500	1,570	2
Naphtha	440	330	1
JP4/JP1	240	182	1
L.P.G.	60	30	1
Caustic (discharge)	15	20	1
T.E.L. (discharge)	23	40	Hose
Fuel Oil (bunker)	800	760	1
Marine Diesel (bunker)	250	205	1
Ballast Water (discharge)	1,000	1,500	3
Fresh Water	—	25	Hose

Loading Arms: Loading arms on all berths are numbered from right to left when facing the berth from the deck of a vessel. Loading arm numbers are prefixed with berth identity number.

Berths No. 91 and 92:

Loading Arm (No.)	*Diameter* (in.)	*Coupling Sizes* (in.)	*Products Handled*
1	10	10 – 14	Fuel oil (cargo), Marine diesel (cargo), Fuel oil (bunker), Marine diesel (bunker), Ballast
2	10	10 – 14	Fuel oil (cargo), Marine diesel (cargo), Fuel oil (bunker), Marine diesel (bunker), Ballast
3	10	10 – 14	Motor diesel, Kerosene
4	10	10 – 14	Motor diesel, Kerosene
5	10	10 – 14	Regular gasoline, Premium gasoline
6	10	10 – 14	Regular gasoline, Premium gasoline
7	10	10 – 14	Fuel oil (cargo), Marine diesel (cargo), Fuel oil (bunker), Marine diesel (bunker), Ballast
8	8	8, 10, 12	JP4, Napatha

Berths No. 93 and 94:

Loading Arm (No.)	*Diameter* (in.)	*Coupling Sizes* (in.)	*Products Handled*
1	8	8 – 12	Fuel oil (cargo), Marine diesel (cargo), Fuel oil (bunker), Marine diesel (bunker), Ballast
2	8	8 – 12	Fuel oil (cargo), Marine diesel (cargo), Fuel oil (cargo), Marine diesel (cargo), Ballast
3	10	10 – 14	Motor diesel, Kerosene
4	10	10 – 14	Motor diesel, Kerosene
5	10	10 – 14	Regular gasoline, Premium gasoline
6	10	10 – 14	Regular gasoline, Premium gasoline
7	8	8 – 12	Fuel oil (cargo), Marine diesel (cargo), Fuel oil (bunker), Marine diesel (bunker), Ballast
8	8	8 – 12	JP4/JP1, Naphtha
9 (Berth 94 only)	4	4	L.P.G.
10 (Berth 94 only)	4	4	Caustic
X (Berth 94 only)	6	Hose	T.E.L.

Quick Disconnect Couplers: Each loading arm is fitted with a "quick disconnect" coupler. These are hydraulically operated from a centrally located operating panel. A pendant control lead is available for local control of loading arms when connecting to the ship's manifold.

Gangway: Each of the four berths is equipped with hydraulically operated shore/ship gangways, which will normally be used. It is the vessel's responsibility to ensure that the ship end of the gangway is placed in such a position as to be clear of all obstructions. A gangway watch is to be maintained to ensure no fouling of the gangway occurs during loading/discharging. At no time is the gangway to be made fast to any part of the vessel.

Mooring Arrangements: Each mooring dolphin, outer breasting dolphin and/or loading platform is equipped with double or triple quick release mooring hooks, each grouping is fitted with a 2.5 tonnes SWL Capstan. The terminal will provide the required mooring hooks arrangement for the vessel on each berth. The mooring hooks are designed to handle one mooring line per hook only. Mooring boats will run moorings from the ship to the dolphins. The terminal will provide suitable messenger lines.

Working Areas: Under no circumstances may the longitudinal or lateral movements of a vessel exceed the limited working envelopes of the connected loading arms.

Each berth is equipped with a mooring hook load monitor. The system is designed to monitor the load on each mooring hook and provide warning, should the load exceed the set parameters. Berth operating personnel will warn ship's Officers of discrepancies of load between mooring lines. The ship's responsible Officer is required to immediately correct any undesirable situation. The mooring load monitoring system does not relieve the vessel's Master from his responsibility to ensure adequate and safe mooring at all times while berthed.

Deballasting: Deballasting connections are provided at all four berths and their use is mandatory, except in the case of ballast in segregated ballast systems. Discharge of ballast from SBT is only to be permitted after inspection by Port Authority Inspectors.

Bunkering: Bunkering fuel and diesel oil is available at all berths. Whenever possible, bunkers should be taken during deballasting operation.

LPG Loading System: The LPG system is designed to load LPG to pressurised carriers. In the case of vapours returned by a vessel during loading, these can be condensed and pumped back into the vessel's tanks.

Slop Residue: "Slop" oil may be discharged to the ballast reception facility, subject to content restrictions and with the approval of the terminal representative. Slop residues containing chemicals or emulsifying agents may not be accepted. Samples may be taken for testing before slops are accepted.

Bonding: All cargo/bunker loading connections are equipped with insulating flanges, and therefore ship-to-shore bonding is not necessary.

Communications: A telephone connected to the refinery PABX system is installed at the gangway ship side for use of operations or emergencies only.

Emergency Shut-Down System: At the end of the gangway (ship side), an emergency shut-down push button is installed. This may be activated by ship's responsible Officers, in case of emergency on board the ship.

Valve Closure: Ship's valves will not be closed off against shore pumps.

Loading Plan Agreement: Prior to loading, and especially in the case of multi-parcel cargoes, the Marine Terminal Supervisor will meet the Officer-in-Charge of the loading operation to discuss and agree on the loading plan, offering the safest and most expeditious method of loading. Items to be discussed will include, but not be limited to, the following:

1. Grades and quantities of cargo/bunkers required.
2. Loading rates and quantities per grade for start, maximum and topping-off.
3. Stand-by time for parcel completed.
4. Ballast quantity to be discharged to sea or shore.
5. Slop residues to be discharged to facilities.
6. Manifold connections/loading arms to be used for each operation.
7. Sequence of loading different products.
8. Expected loading time.
9. Information regarding communications, emergency shut-down procedures, tank venting system, and maximum pressures allowed.
10. Ship/shore Check List.

PETROMIN – MOBIL REFINERY – PEMREF: The Export Refinery Terminal has 2 separate loading facilities.

A tanker loading facility consisting of 3 berths for bulk petroleum liquids is operated under a lease agreement by PETROMIN-Mobil Yanbu Refinery Company Limited (PEMREF).

A chemical loading facility with one berth is likewise operated under a lease agreement by Saudi Yanbu Petrochemical Company (YANPET).

Pemref Standard Pre-Arrival Message:

Pemref have requested Agents in Yanbu to transmit this telex as a standard procedure to vessels calling at the Pemref Terminal for the *first time*.

Format of the telex is:
Quote
1. To provide ETA messages 72, 48 and 24 hours prior to arrival. Changes of 2 hours or more should be updated in separate message.
2. In addition to the standard port pre-arrival message to advise with the 72 hour ETA or as soon as possible thereafter:
(AA) Where due to load more than one grade/parcel of cargo, the preferred order of loading and configuration of grades/manifolds from forward.
(BB) Ship's maximum draft on sailing.
(CC) Max. height of manifolds above water-line at completion of deballasting.
(DD) If shore reducers required and sizes.
(EE) Whether slops are chemical free.
(FF) On first call at Pemref Terminal (or where not previously given), distance of parallel hull section forward and aft of manifold centre line in light ship condition.

Berth Information: Pemref operates three berths, all equipped with shore gangways and deballasting facilities. Shore reducers available, but require ship's gear for lifting on board. Designated service of loading arms given below from West to East.

Berth No. 42: Vessels berth port side to jetty facing West. Max. depth water 13.5 m. Loading arms: Fuel oil or ballast/fuel oil or ballast/jet/ADO or gasoline/jet/ADO or gasoline. Twelve inch except fuel oil/ballast arms which ten inch.

Berth No. 54/55: Vessels berth starboard side to berth facing West. Max. depth water 18.5 m. Loading arms: Fuel oil or ballast/fuel oil or ballast/ADO or gasoline/gasoline/jet/ADO or gasoline/gasoline all 16 in.

Ballast/Slops: Sea discharge of cargo tank ballast not permitted. Adequate shore ballast reception facilities available, but cannot accept chemicals.

Inert Gas: Saudi Arabia is signatory to IMO Solas Regulations, requiring fitted vessels to have cargo spaces fully inerted prior to loading volatile petroleum products.

Mooring Arrangements: Minimum moorings required:
Forward – Three headlines/three breastlines/two spring lines.
Aft – Three stern lines/three breastlines/two spring lines.

Mixed mooring not permitted. All mooring in same direction, and service must be of same material and type.

Cargo Information: Generally density and temperature not available until soon after commencement. Loading cargo is blended directly to vessel, therefore typical densities for grade/product being loaded should be used until actual available. Cargo is metered at jetty, and quantity, density and temperature available from Control Operator.

Cargo nomination and berthing information will be advised separately.
Pemref Terminal
Unquote.

PEMREF Facilities Particulars:

1. Berth No. 42 is located in the inner basin. It consists of a fixed loading platform with semi-flexible mooring and breasting dolphins. The berth will accommodate tankers from 5,000 d.w.t. to 35,000 d.w.t.

2. A ballast water treatment facility is located adjacent to Berth No. 42 and is capable of processing ballast water from tankers loading at the Export Refinery Terminal including the Chemical Berth.

3. The inner basin has been dredged to a depth of 13.5 m. below LAT. A turning basin with a diameter of 400 m. allows for ready access to the basin.

4. There is a jetty trestle with 2 outer loading berths connected to the shore by a free standing trestle and causeway. The 2 loading berths are fixed structures with fixed loading platforms and semi-flexible mooring and breasting dolphins. These berths are numbered 54 and 55. They are capable of handling tankers up to 150,000 d.w.t. in size. The water depth alongside these 2 berths has been dredged to 18.5 m. below LAT.

PEMREF Berth Particulars: Berth No. 42:

Min. Size Vessel:	5,000 d.w.t.
Max. Size Vessel:	35,000 d.w.t.
Deck Level of Loading Platform:	5.0 m./16.4 ft.
Depth Alongside Berth:	13.50 m./44.28 ft.
Max. LOA:	220 m.
Max. Draft:	12.15 m./39.85 ft.
Loading Arms (number and size):	2×10 in. – Black Products/Ballast 4×12 in. – White Products
Quick Disconnect Coupling Size:	6 in., 8 in., 10 in., 12 in., 16 in.
Bunker Fuel Arms (number and size):	2×6 in.
Quick Disconnect Coupling Size:	6 in., 8 in., 10 in.
Max. Rate per Loading Arm:	10 in. – 1,430 cu.m./hr. 12 in. – 1,590 cu.m./hr.
Max. Rate per Bunker Arm:	Heavy Fuel 480 cu.m./hr. Diesel Fuel 160 cu.m./hr.
Number of Breasting Dolphins:	4
Number of Mooring Dolphins:	4
Available Mooring Hooks:	20
Distance between Centre of Inner Breasting Dolphins:	33.0 m./108.25 ft.
Normal Shipside to Berth:	Port
Shore Gangway Provided:	Yes
Water to Manifold	
Max. Height:	12.80 m./42 ft.
Min. Height:	2.59 m./8 ft. 6 in.
Max. Approach Velocity:	0.25 m./sec.
Max. Approach Angle:	±5 degrees

Berths No. 54 and 55: (Also see "Shipmaster's Report" – March 1985).

Min. Size Vessel: (see Note No. 1)	30,000 d.w.t.
Max. Vessel Size:	150,000 d.w.t.
Deck Level of Loading Platform:	7.0 m./22.96 ft.
Depth Alongside Berth:	18.50 m./60.28 ft.
Max. LOA:	300 m.
Max. Draft:	16.65 m./54.60 ft.
Loading Arms (number and size):	7×16 in.
Quick Disconnect Coupling Size:	6 in., 8 in., 10 in., 12 in., 16 in.
Bunker Fuel Arms (number and size):	2×10 in.
Quick Disconnect Coupling Size:	6 in., 8 in., 10 in., 12 in.
Max. Rate per Loading Arm:	Heavy Fuel – 4,378 cu.m./hr. White Products – 1,590 cu.m./hr.
Max. Rate per Bunker Arm:	Heavy Fuel 1,590 cu.m./hr. Diesel Fuel 160 cu.m./hr.
Number of Breasting Dolphins:	4
Number of Mooring Dolphins:	4
Available Mooring Hooks:	20
Distance between Centre of Inner Breasting Dolphins:	56.0 m./183.7 ft.
Normal Shipside to Berth:	Starboard
Shore Gangway Provided:	Yes
Waterline to Manifold	
Max. Height:	19.00 m./62 ft. 4 in.
Min. Height:	4.50 m./14 ft. 9 in.
Max. Approach Velocity:	0.18 m./sec.
Max. Approach Angle:	±5 degrees

Note 1: Tankers of less than 30,000 d.w.t. may be accepted at the Berth Nos. 54 and 55 if the light water line flat side forward and aft of the manifold is at least 34.0 m./111.5 ft., and subject to weather conditions.

YANPET Facilities Particulars: There is one chemical berth, No. 41 located in the inner basin. It can accommodate tankers from 5,000 to 35,000 d.w.t. The turning circle into the inner basin is 400 m. in diameter and is dredged to 13.5 m. below LAT.

The facilities are designed for the export and import of petrochemical products; these include: mono-ethylene glycol (MEG), di-ethylene glycol (DEG), glycol blackflush, hexene, vapour return, propylene, process water, and caustic soda.

YANPET Berth Particulars:

Minimum vessel size:	5,000 d.w.t.
Maximum vessel size:	35,000 d.w.t.
Maximum LOA:	200 m.
Maximum beam:	No restriction.
Deck level of loading platform:	5 m.
Depth alongside berth:	13.5 m.
Maximum draft:	12.2 m.

Loading arms:

Size	*Product*	*Max. Loading Rate*
6 in.	Hexene	50 cu.m.p.h.
6 in.	Propylene	
10 in.	Ballast water	
	HFO & DO (bunkers)	
10 in.	M.E.G.	750 cu.m.p.h.
6 in.	Glycol backflush	
6 in.	D.E.G.	113 cu.m.p.h.
4 in.	Caustic Soda	50 cu.m.p.h.
6 in.	HFO & DO (bunkers)	

Quick disconnect coupling size – various adaptors available
Number of breasting dolphins – 4
Number of mooring dolphins – 4
Available mooring hooks – 20
Distance between centre of inner breasting dolphins – 33 m.
Daylight berthing only. No restrictions for unberthing.
Normal shipside to berth – Starboard.
Shore gangway provided.
Waterline to manifold Maximum height – 12.8 m.
Minimum height – 2.59 m.
Maximum approach velocity – 0.25 m./sec.
Maximum approach angle – ±5°
Fresh water available upon request.
Bunkers currently not available.

Ballast Water Facility: The Export Refinery Terminal incorporates a ballast water facility which is capable of processing ballast water from vessels loading at the 3 berths at the terminal and from the Chemical Berth, No. 41.

The facility has 3 initial storage tanks of 50,000 cu.m. each, which will receive ballast water direct from the tankers.

Ballast water is passed through the facility's separator system; clean water is then passed to retention ponds prior to being pumped to sea, and recovered oil is passed to the recovered oil system.

All ballast water handled at the facility is monitored to ensure compliance with current environmental standards and requirements.

Vessels loading at Crude, NGL and Chemical Berths will not be able to discharge slops to the shore facility.

Bunkers: Not available alongside but may be obtained at the anchorage from barges.

Berthing Criteria: Max. Berthing Velocity:

Chemical Berth No. 41	0.25 m./sec.
Berth No. 42	0.25 m./sec.
Berth No. 54	0.18 m./sec.
Berth No. 55	0.18 m./sec.
Max. approach angle:	±5 degrees

Environmental conditions such as current, wind speed and sea state should be considered in ensuring the above maximum criteria is not exceeded at final docking stage.

Mooring Arrangements: Each mooring dolphin, outer breasting dolphin and loading platform is equipped with either double or triple quick release mooring hooks, each combination of double or triple hooks having a mooring capstan with safe working load of 3 tons.

The terminal will provide a required mooring arrangement for the loading berths. The mooring arrangement shows the number and position of the mooring hooks provided on each berth. The mooring hooks are designed to handle 1 mooring line per hook.

Mooring boats will be utilised to run mooring lines to the mooring dolphins from the tanker. The terminal will provide suitable messenger lines for heaving the mooring lines to the hooks.

In order to ensure the integrity of the berth facilities it is recommended that tankers in the 50,000 d.w.t. to 150,000 d.w.t. range provides mooring wires at least for their spring and breast mooring lines. The recommended minimum for tankers from 50,000 d.w.t. – 150,000 d.w.t. is 8 mooring wires each end.

Tankers with the recommended mooring wire systems will be given berthing preference during adverse or unsettled weather conditions.

All mooring lines should be of similar size and material and should be in good condition. Manual brakes must be set on tension winches when mooring is completed. The ship's crew must tend moorings at all times to maintain the ship's position at the berth.

Under no circumstances may the longitudinal or lateral movements of a vessel exceed the limited working envelopes (working areas) of the connected loading arms.

Docking Monitoring System: A system of velocity and distance indicating and recording instruments are provided for the 4 berths. The transducers are positioned on the berth structure with electronic equipment housed in the control room. An illuminated display is located on the berth structures to provide an indication of fore and aft ship distance and approach speed to the ship's Pilot.

Gangway: The Export Refinery Terminal will provide a gangway to the ship at each berth. Each berth is equipped with a hydraulically operated self adjusting gangway. The gangway provides the only permissible means of access to and from the tanker.

Ballast Water: Tankers arriving at the Export Refinery Terminal with clean ballast, which meets the current environmental standards of King Fahd Industrial Port, will be allowed to discharge the ballast water direct to the sea.

The discharge of clean ballast water into the sea from cargo tanks will only be permitted with the approval of the Harbour Master or his designated representative.

A monitoring procedure will be employed during the discharge of clean ballast to ensure quality is maintained.

Tankers arriving with "dirty ballast" or ballast which does not meet the port requirements must discharge ballast to the Terminal's ballast facility.

Details of this operation will be agreed with the Terminal operator when 'operation agreement' is made.

Slop Residues: Slop oil may be discharged to the ballast reception facilities consistent with content restrictions. Slop residues containing chemicals or emulsifying agents may not be accepted.

Prior to arrival at the Terminal, vessel's Master must request use of this facility giving following details:

1. Total quantity to be discharged.
2. Quantity of oil.
3. Quantity of water.
4. Type of chemicals contained if any.

Loading Arms – Chemical Berth – Berth No. 41: The Chemical Berth is equipped with 8 loading arms, 2×10 in. diameter, 5×6 in. diameter and 1×4 in. diameter as detailed below:

Arm Size	*Product*
6 in.	Hexene.
6 in.	Propylene.
10 in.	Heavy Fuel Oil (Bunkers)/Diesel Fuel Oil (Bunkers)/Ballast Water.
10 in.	Mono-ethylene Glycol (MEG).
6 in.	Glycol Backflush.
6 in.	Die-ethylene Glycol (DEG).
4 in.	Caustic Soda.
6 in.	Heavy Fuel Oil (Bunkers)/Diesel Fuel Oil (Bunkers)

Each loading arm is fitted with a quick disconnect coupler. Adaptors are available to fit a range of ships' manifolds.

The loading arms and quick disconnect couplers are hydraulically controlled from a central operating location. A wandering control lead is available for local control on board the vessel for connecting by the berth operator.

Loading Arms – Berth No. 42: The berth is equipped with 6 loading arms, 4×12 in. and 2×10 in. as detailed below. 2×6 in diameter bunker loading arms are also provided.

Arm Size	*Product*
10 in.	Marine Heavy Fuel Oil/Ballast Water.
10 in.	Marine Heavy Fuel Oil/Ballast Water.
6 in.	Heavy Fuel Oil Bunker/Diesel Fuel Oil Bunker/Bunker Cutter Stock.
12 in.	Jet Fuel.
12 in.	ADO/Leaded Gasoline.
12 in.	Jet Fuel.
12 in.	ADO/Leaded Gasoline.
6 in.	Diesel Fuel Bunkers/Heavy Fuel Bunker.

Each loading arm is fitted with a quick disconnect coupler. Adaptors are available to fit a range of ships manifolds from 6 in. to 16 in. ASTM.

The loading arms and quick disconnect couplers are hydraulically controlled from a central operating location. A wandering control lead is available for local control on board the vessel for connecting by the berth operator.

Loading Arms – Berth Nos. 54 and 55: The berths are each provided with 7 loading arms of 16 in. diameter and 2 bunker fuel loading arms of 10 in. diameter, as shown below:

Arm Size	*Product*
16 in.	Marine Heavy Fuel Oil/Ballast Water.
16 in.	Marine Heavy Fuel Oil/Ballast Water.
10 in.	Heavy Fuel Oil Bunker/Diesel Fuel Oil Bunker/Bunker Cutter Stock.
16 in.	Naphtha/ADO.
16 in.	Leaded Gasoline/Unleaded Gasoline.
16 in.	Jet Fuel.
16 in.	ADO/Naphtha.
16 in.	Leaded Gasoline/Unleaded Gasoline.
10 in.	Diesel Fuel Oil Bunker/Heavy Fuel Oil Bunker.

Each loading arm is fitted with a quick disconnect coupler. Adaptors are available to fit a range of ships' manifolds from 6 in. to 16 in. ASTM.

The loading arms and quick disconnect couplers are hydraulically operated from a centrally located operating panel. A wandering control lead is also available for remote use when connecting arms to ship's manifold.

Grounding: All cargo/bunker loading connections are equipped with electrical insulating flanges, and therefore ships to shore bonding is not necessary.

Maximum Loading Rates:

Berth No. 42		
Heavy Fuel Oil	2,860 cu.m./hr.	18,000 bbls./p.h.**
Leaded Gasoline	3,180 cu.m./hr.	20,000 bbls./p.h.**
Automotive Diesel Oil	3,180 cu.m./hr.	20,000 bbls./p.h.**
Jet Fuel	3,180 cu.m./hr.	20,000 bbls./p.h.**
Heavy Fuel Bunker	480 cu.m./hr.	3,000 bbls./p.h.
Diesel Fuel Bunker	160 cu.m./hr.	1,000 bbls./p.h.
Berth Nos. 54 and 55		
Heavy Fuel Oil	8,756 cu.m./hr.	50,000 bbls./p.h.**
Leaded Gasoline	5,170 cu.m./hr.	32,500 bbls./p.h.
Unleaded Gasoline	5,170 cu.m./hr.	32,500 bbls./p.h.
Naphtha	5,170 cu.m./hr.	32,500 bbls./p.h.
Automotive Diesel Oil	5,170 cu.m./hr.	32,500 bbls./p.h.
Jet Fuel	5,170 cu.m./hr.	32,500 bbls./p.h.
Heavy Fuel Bunker	1,590 cu.m./hr.	10,000 bbls./p.h.
Diesel Fuel Bunker	160 cu.m./hr.	1,000 bbls./p.h.

Note: Loading rates for products marked ** are for 2 loading arms availability; rates should be halved to indicate rate per loading arm.

PEMREF Operational Agreement: Prior to any operational activity after a tanker is moored, an "Operational Agreement" will be made between the ship's responsible cargo Officer and the terminal representative. The Operational Agreement requires an exchange of information between the ship and terminal covering the following items:

1. Grades and quantities of cargo/bunkers required.
2. Loading rates and quantities per grade for start, maximum and topping off.
3. Standby time required for stopping loading and slow down for each grade.
4. Ballast quantity to be discharged to sea or ballast facility.
5. Slop residues to be discharged to facility.
6. Manifold connections/loading arms to be used for each operation.
7. Sequence of loading different grades/products.
8. Estimated time required to carry out each operation, to give total expected load time.
9. Information regarding (a) Communications, (b) Emergency Shutdown Procedures, (c) Tank Venting System, (d) Maximum pressures allowed, etc.
10. Has Ship/Shore Safety Check List been completed. (Also see "Appendix").

Inert Gas Requirements:

All vessels scheduled to load at PEMREF which are fitted with an inert gas system, must comply fully with the rules, and arrive, where applicable, with tanks fully inerted to below 8% Oxygen content.

Vessels which do not comply with the Rules will face delays in berthing, removal from the berth and possible rejection for loading.

Ship/Shore Safety Check List: Prior to operations on board tankers at the Terminal berths a 'Ship/Shore Safety Check List' will be completed by both ship and Terminal representatives who will together inspect the necessary items listed. Further checks will be made at intervals throughout the vessels time at the berth.

Safety Requirement Letter: The Master of each tanker will be given a letter concerning safety requirements. Receipt of the letter has to be acknowledged by signing and returning a copy of the letter to the Terminal representative.

Sea Valves: All sea-valves and overboard valves connected to the tanker's cargo system have to be closed and lashed prior to commencement of cargo transfer operations.

Loading Signal: During loading the international code flag "B" shall be displayed during daylight hours. During darkness a red loading light shall be displayed.

Shore Emergency Signals: Continuous sounding of vessel's fog signal.

Emergency Towing Wires: While at the Terminal, tankers have to provide emergency towing wires of adequate strength to move the tanker off the dock. The towing wires are to be positioned on the offshore bow and stern quarter of the tanker and the outboard eye should be maintained approximately 1 m. above water level at all times.

Emergency Pilot Boarding: A pilot ladder of sufficient length should be at all times on standby at the offshore side of the tanker's main deck. In an emergency the pilot ladder should be lowered to 3 ft. above the water line to enable boarding of the Pilot if this should become necessary.

AL MUAJJIZ TERMINAL: Lat. 23° 29′ N., Long. 38° 24′ E.
Location: 15 miles South of King Fahd Industrial Port Control tower and 21 miles from S2 Buoy.
Pilotage: All vessels intending to load cargo at Al Muajjiz Terminal are required to embark the Port Pilot at the South Channel Pilot Station in position Lat. 23° 27′ N., Long. 38° 27′ E., and on the outward passage they must disembark the Pilot at the South Channel Pilot Station.
Berthing:

	Berths No. 101 & 103	*Berth No. 102*
Tanker size (approx.)	35,000 d.w.t. – 300,000 d.w.t.	100,000 d.w.t. – 500,000 d.w.t.
Max. LOA	347 m.	412 m.
Max. draft	26.2 m.	29.6 m.
Loading Arms	4 × 20 in.	4 × 20 in.
Quick Disconnect coupling size	16 in., 20 in., 24 in.	16 in., 20 in., 24 in.
Max. Rate per Loading Arm	30,000 b.p.h.	30,000 b.p.h.
Number of Breasting Dolphins	4	4

The Terminal consists of a jetty trestle with 3 loading berths connected to a shore causeway. All 3 loading berths are fixed structures with fixed loading platforms, breasting dolphins and mooring dolphins. The terminal has 10 shore tanks, each of 1,000,000 bbls. capacity.

So far there is no shore metering system available and therefore Bill of Lading figures are determined by using ship's figures.
Notice to Mariners: No. 223/1990.

A new oil loading terminal facility has been built South of King Fahd Industrial Port as Ras Al Ma'ajjiz (as spelt on the relevant chart). Details as follows:

1. From a position on the coast of 23° 48.870′ N., 38° 24.355′ E., a causeway extends for 0.391 nautical miles on a bearing of 225°.
2. The terminal jetty consists of a line of dolphins connected by catwalks extending from 23° 48.633′ N., 38° 23.923′ E., for 0.751 nautical miles on a bearing of 135°. A catwalk extends from the end of the causeway to the jetty.
3. Navigation lights and loading platforms as follows:

	Position	*Depth Alongside*	*Characteristic*
North End	–	–	Morse (U).G.
South End			Morse (U).G.
Berth 103	23° 48.528′ N. 38° 23.984′ E.	28.8 m.	Morse (U).R.
Berth 102	23° 48.347′ N. 38° 24.183′ E.	32.5 m.	Morse (U).R.
Berth 101	23° 48.163′ N. 38° 24.381′ E.	29.0 m.	Morse (U).R.

Ballast: No facilities for dirty ballast.
Authority: King Fahd Industrial Port, Yanbu.

GENERAL CARGO AND CONTAINER TERMINAL: This facility is situated to the North of the Crude Oil Terminal. It has 7 berths along a 1,784 m. wharf. These include berths for Ro-Ro, heavy lift, conventional general cargo and cellular container vessels. The channel inside the barrier reef has been dredged to 14 m. below LAT and there are 2 turning basins at either end of the 2 km. berth frontage.

The Ro-Ro facility, adjacent to Berth No. 1, situated at the Northern end of the berth frontage, with a dredged depth of 14 m. below LAT is operational. A permanent ramp with a 1:25 gradient and an overall width of 34 m. is located at right angles to the berth frontage. Horizontal "Sumimoto" fendering is fixed to the ramp face at a height of 0.75 m. above LAT. The deck of the ramp is 2.0 m. above LAT rising to 2.36 m., 3.0 m. inshore from the ramp face. Three bollards, each rated at 90 tonnes are positioned either side of the ramp deck, providing a clear width of approximately 31 m. Additional bollards, also rated at 90 tonnes, are situated on the berth frontage, the first 30 m. South of the ramp face and thereafter at approximately 30 m. intervals. "Sumimoto" 'pie' type fendering, spaced at 10 m. intervals, is provided on the berth frontage.

The maximum uniform live loads on the Ro-Ro ramp is 6.25 tonnes/sq.m. The maximum concentrated load is 1,100 tonnes when used on a Scheurle platform trailer, which provides for a 28 tonnes maximum axle load with a maximum load on a contact area of 200 m.×455 mm. of 7 tonnes: or 60 tonnes on 0.3 m.×0.3 m. (as from 20 ft. containers stacked 3 high): or, 91 tonnes on 0.6 m.×0.5 m. (as from 40 ft. containers stacked 3 high): or, 80 tonnes front axle load of a container fork lift truck.

Cargo work is carried out by SEAPA stevedores and is continuous 7 days a week, 24 hours a day with 2 × 1 hour breaks. There are 3 container gantry cranes always available.

Particulars of the container cranes are:

Safe working load	40 tons
Outreach	34.5 m.
Hoisting height above rail	26.0 m.
Elevation of wharf above Maximum HW	3.17 m.

Cycle time is 90 secs. or 40 containers per hour.

The 3 container cranes are numbered 1, 2 and 3 from the Ro-Ro ramp end, container tracks continuous over 500 m. (Berth Nos. 1 and 2). The berthing arrangements are:

		Length of Wharf
Berth No. 1	Ro-Ro Terminal	200 m.
Berth No. 2	Container Terminal	300 m.
Berth No. 3	General Cargo	200 m.
Berth No. 4	Heavy Lift	180 m.
Berth No. 5	General Cargo	180 m.
Berth No. 6	General Cargo	180 m.
Berth No. 7	General Cargo	180 m.

A minimum clearance of 15 m. between vessels at adjacent berths is required during berthing/unberthing operations.

BULK TERMINAL: The Bulk Terminal consists of a wharf 500 m. in length with 2 dry bulk berths, Nos. 21 and 22. The wharf is 33 m. wide and can accommodate bulk carriers up to 60,000 d.w.t. The water off the wharf is dredged to 15.5 m. below LAT. The maximum draft allowed is 13.9 m. (46 ft. 07 in.).

PEMREF's sulphur loading equipment is located at the Bulk Terminal's "Sulphur Berth" (Berth No. 21) and is capable of loading prilled sulphur at a maximum rate of 420 t.p.h.

A slewing arm loader is designed to operate along the face of the sulphur dock to any hold of vessels up to 30,000 d.w.t., without requiring movement of the ship.

Ships mooring at the Bulk Terminal will be required to provide gangway access to ship.

BALLAST: The discharge of ballast water containing quantities of oil, or high levels of mineral or chemical pollutant, into the water of the Port is prohibited.

The discharge of ballast water from segregated or permanent ballast tanks into the waters of the Port will be permitted provided that the Master signs a declaration that the permanent ballast is clean and not affected by any pollutants.

The discharge of clean ballast water, from cargo tanks, into the waters of the Port will only be permitted if the oil content of the ballast water does NOT exceed 10 parts per million. Cargo tank ballast water will be sampled on the arrival of the vessel and measurements taken to determine the total oil concentration in the water. Subject to the results of the measurements being within the prescribed limits, the Harbour Master, or his deputy, will approve the start of deballasting. Throughout the cargo tank ballast discharge the oil concentrations in the discharged water will be closely monitored and the results reported to the Harbour Master, or his deputy, who will decide when such discharge shall stop.

MEDICAL: Medical facilities are available for the treatment of emergency cases only. Masters should, if possible, provide advance notice, to their Agent, of their requirements, together with name, rank, nationality, passport or seaman's identity book number including date of issue and place of issue.

FRESH WATER: Potable fresh water is available at the General Cargo and Container Terminal, Bulk Terminal and Export Refinery Terminal. Fresh water is not presently available at the Crude Oil Terminal and NGL Terminal. Fresh water is also available in small quantities at the anchorage from a tug. Masters should contact their Agent well in advance to establish availability.

FUEL: Bunker fuel is available from a bunker barge at the anchorage or from a bunker barge alongside at the General Cargo and Container Terminal.

CONSULS: At Riyadh and Jeddah.

REPAIRS: While alongside berths, engines and propulsive machinery must be ready at all times to leave the berth at 10 minutes' notice, under full power.

No repairs of any kind are permitted alongside any berth unless mutually agreed by the Master, Harbour Master and Terminal Manager.

Any repairs involving "Hot Work" will be subject to special conditions contained in the "Hot Work Permit" which must be obtained from the Harbour Master.

SURVEYORS:

TIME: The Time Zone is GMT plus 3 hours.

CUSTOMS: *Import/Export Prohibitions:* All goods to be imported into, or exported from, the Kingdom of Saudi Arabia are subject to examination by the Customs Authorities. The importation of certain articles is strictly prohibited, for example:

Explosives and Firearms, including air rifles
Implements of war of any kind, including antiques
Alcoholic beverages of any kind
Religious matter not pertaining to the Moslem faith
Pig meat or pig products
Playing cards and gambling games or devices
Narcotics
Pornographic material.

Trafficking in these items between ships, and between ships' crews and shore personnel, is strictly prohibited. Also see "General".

SHORE LEAVE: Ship's personnel are NOT permitted ashore, nor on the wharves FOR ANY PURPOSE WHATSOEVER (this includes the reading of the ship's draft) until Pratique is granted, and then are allowed on the wharves only if actually engaged in duties in connection with operations of discharging, deballasting or loading.

All shore leave is contingent upon compliance with Saudi Arabian Quarantine and Passport Regulations. For current details concerning these regulations and shore leave restrictions the ship's Agents must be consulted.

SAFETY/POLLUTION: *Safety Requirements:* A letter concerning safety requirements will be given to the Master of each vessel by the Terminal Supervisor at the Crude Oil Terminal.

Receipt of the safety requirement letter has to be acknowledged by countersigning and returning a copy to the Terminal Supervisor.

Ship/Shore Safety Check List and Precautions: Terminals in King Fahd Industrial Port follow the recommended safe practice for loading, discharging and related operations as contained in the International Oil Tanker and Terminal Safety Guide and the International Chamber of Shipping's Tanker Safety Guides for Chemicals and Liquefied Gas, or other comparable Guides.

Prior to commencement of any cargo/bunker transfer operations, a ship/shore check list is to be completed and signed by responsible personnel from ship and shore. Each item should be positively verified before it is ticked and, if necessary, a physical check will be performed.

Regular inspections by the Terminal Staff will be made with the ship's Master, or his deputy, to ensure that the relevant safe practices are strictly adhered to. The Harbour Master or his deputies may also carry out inspections. If any infringement of the recommended safe practices is observed, the attention of the person in charge will be drawn to the fact and, if the situation is not resolved immediately, all operations must cease. In the event of continued and blatant disregard of the regulations, the vessel may be ordered off the berth for appropriate action to be taken by the Charterers and Owners concerned.

Tank cleaning and/or gas freeing is only permitted with the approval of the Terminal Manager and Harbour Master and only if tank washings can be discharged into reception facilities (Also see "Appendix").

Crude Oil Terminal Emergency Procedures: Emergency procedures, both on board and offshore, shall be introduced in the event that normal operational practice has to be interrupted or suspended as a result of an unforeseen incident that would create unsafe conditions while loading crude oil at one of the berths of the Crude Oil Terminal.

Crude Oil Terminal Emergencies which would require immediate action by terminal personnel or shipboard personnel are:

1. Electrical storm.
2. Electrical power failure.
3. Mechanical failure.
4. Leakage, spill.
5. High gas concentration.
6. High winds exceeding 35 knots.
7. Fire.

Actions to be taken shall be determined by the type and severity of the incident and are:

(a) Stop loading.
(b) Comply with emergency reporting procedures.
(c) Disconnect loading/bunker arms.
(d) Fire facilities standby.
(e) Standby for unmooring.
(f) Departure from berth.

Emergency actions should be initiated by offshore personnel when an emergency is detected onshore or on board that tanker. It is important that the first able-bodied person or persons at the scene of the emergency should take whatever action is appropriate and necessary to protect personnel, minimise the hazard and to limit the extent of damage.

All Crude Oil Terminal personnel have to be familiar with the King Fahd Industrial Port Emergency Plans and, on declaration of an emergency for the Port, follow the procedures as listed in these emergency plans. The King Fahd Industrial Port Emergency Plans apply to all areas within the port limits as defined by the Rules and Regulations for King Fahd Industrial Port.

Oil Pollution Prevention: Any oil pollution of the waters of the King Fahd Industrial Port will be treated as a very serious matter. In order to prevent oil pollution, the Port Authority carries out continuous surveillance of the Port area. If any vessel is seen, or there is evidence to suggest a vessel is polluting the water of the Port, instructions will be given for all loading/discharging/deballasting operations to cease. A detailed investigation will be carried out and any vessel held responsible for pollution, will be required to pay the costs of all clean up operations and any fines that may be levied.

Masters, Owners and Charterers are reminded:

A. That before any vessel enters the Port, the Master is required to notify the Pilot of any special conditions, difficulties or peculiarities such as defective equipment, lines or gear, which might impose special hazards in connection with handling, mooring or loading/discharge of vessels ("Instruction to vessels and conditions of use of all berths within King Fahd Industrial Port").
B. In addition to (A) above, tankers and gas carriers are obliged to give a similar undertaking in their pre-arrival information.
C. All tankers, gas carriers and any vessels bunkering are required under the Rules and Regulations for Seaports of the G.C.C. Member States, Part 3, Section 4, to ensure all alarms and safety trips are tested and working, and that all pipes, valves, hoses or other apparatus shall be in good condition and free from leakage. Drip pans and deck scuppers shall be in position and plugged.
D. Suitable sorbent material or other materials or equipment should be readily available on deck in order to clean up any spillage.

GENERAL: *Emergency Plans:* Information will be supplied to each vessel arriving at the various terminals in the port detailing action to be taken in the event of an emergency situation arising. Masters, officers and crew should familiarise themselves with this information.

A Port Emergency may be declared in the event of:

a fire on a terminal or ship;
a pollution incident occurring from a terminal or ship;
a collision, grounding, sinking or other major incident occurring within the Port area.

A Port Emergency can only be declared and terminated by the Harbour Master who will make a broadcast on VHF to this effect. Instructions will also be issued to inform all vessels that a Port Emergency has been declared. It is vital, therefore, that all vessels should have their VHF available for immediate operation and that provision is made for a continuous listening watch to be maintained in the event of a Port Emergency being declared.

The alarm may be raised by:

Contacting King Fahd Industrial Port Control by VHF Channel 16,
or by continuous sounding of fog signalling apparatus, or
by visual means, or
if ashore by whatever means is available.

Initial action should be taken by those persons at the scene until the arrival of assistance.

The control of all operational activities afloat, and the movement of vessels during a declared Emergency will be exercised by the Harbour Master who will undertake the direction of these activities through King Fahd Port Control and will liaise with the Port Authority.

All loading or discharging of dangerous and/or flammable goods in the Port must cease immediately a Port Emergency is declared.

Port Regulations: Every vessel which arrives at the port must have a copy of the Rules and Regulations for Seaports issued by the Co-operation Council for the Arab States of the Gulf on board. On first arrival at the port, these Rules and Regulations must be obtained.

Saudi Arabian Government Regulations: Saudi Arabian Government Regulations are strictly enforced, and Masters having any doubts concerning the interpretation of these regulations are urged to consult their agent. While in Port, whether at anchorage or at a berth, the vessel's personnel are under the jurisdiction of Saudi Arabian Laws.

The taking of photographs while the ship is in port is strictly forbidden by the Saudi Arabian Government.

All alcoholic beverages, including beer, table wines and liquors, are to be under lock and key during a vessel's stay in port. The possession and/or consumption of alcoholic beverages is prohibited in Saudi Arabia. Penalties are severe and major delays to vessels can be incurred due to Government investigations of violations.

Provisions: Frozen meat (except pig meat), fish and fresh vegetables are available locally, however Masters are advised to contact their Agent well in advance to establish availability and prices.

Stores: Local availability of chandlery items is limited and Masters should contact their Agents well in advance to establish availability. Storing not permitted alongside Saudi Aramco berths.

Pilot Books: British Admiralty Red Sea and Gulf of Aden Pilot, (and supplements) N. 64.

Lights: British Admiralty List of Lights and Fog Signals – Volume "E".

WEATHER:

Climate: The climatic conditions affecting King Fahd Industrial Port are seasonal. In Winter onshore, air temperatures range from 25°C during the day to about 12°C at night. In Summer air temperatures range from 35°C during the day to 25°C at night. Extreme air temperatures recorded in recent years in the area have been 49°C in May and 6°C in February. Temperatures offshore are generally several degrees lower. Relative humidity varies throughout the year with average values between 65% and 70% in Winter and 50% to 55% in Summer, however values of 100% may occur for short periods around dawn. The average annual rainfall taken over a 4 year period is 3.2 mm.

Winds: A diurnal sea breeze/land breeze cycle occurs almost daily throughout the year and causes wind speeds of 10 knots and above to occur from the N.W. during the late afternoon. Storms occur as frequently as every 5-10 days and sometimes can last as long as 2 weeks. Although there is little drop in barometric pressure and very rarely any precipitation during these storms, wind speeds of up to 30 knots may occur from the North or N.W.

Tides and Currents: The mean tidal range is about 0.34 m., but fluctuations due to non-tidal effect, caused by storms, can be up to about 0.50 m. with a drop in mean sea level during the storm and a significant increase after the storm or as it subsides. Generally tides are semi diurnal with a period of 12 hours 25 minutes. Information to date suggests that the following datums be adopted:

Datum	*Elevation above PLAT* (m.)
Provisional Highest Astronomical tide (PHAT)	1.14
Mean High Water Springs (MHWS)	0.80
Mean High Water (MHW)	0.74
Mean High Water Neaps (MHWN)	0.67
Mean Sea Level (MSL)	0.57
Mean Low Water Neaps (MLWN)	0.47
Mean Low Water (MLW)	0.40
Mean Low Water Springs (MLWS)	0.34
Indian Springs Low Water (ISLW)	0.32
Provisional Lowest Astronomical Tide (PLAT)	0.00

Currents in the area are influenced by local wind conditions, tide, and the general circulatory pattern of the Red Sea. Generally currents within the port have been observed at less than 0.5 knots and run parallel to the coast. However, they are considerably influenced by surface wind activity.

Sea Conditions: Sea conditions can vary considerably within the Port limits. Wave heights in the port area are usually lower than 40 cm. during sea breezes, but during storms, waves in excess of 2 m. are common outside the offshore reefs while waves exceeding 1 m. are common in the inner port area. There is no distinct seasonality in this respect.

Sea Salinity and Sea Water Temperatures: Sea water temperatures are similar to air temperatures and range between 25°C (77°F) and 31°C (88°F). Salinity varies between 37 and 39 parts per thousand.

Visibility: The incidence of fog is rare, but, should it occur, it is more likely during the period November to April. During the summer months from May to September the incidence of poor visibility (less than 5 miles) can be quite high due to mist and haze, or dust particles held in suspension in the atmosphere. However, throughout the year, dust storms may occur obscuring the coastline.

APPENDICES:

APPENDIX "C"

SOLAS Convention – Ratification:

The Government of Saudi Arabia has ratified the SOLAS Convention of 1974 and its 1978 Protocol on 29th May, 1984. Therefore, Saudi Aramco is now obliged to enact the provisions of the said Convention as soon as possible.

Please inform all Shipowner/Operator clients of the following:

1. Effective 1st January, 1985, all vessels of 70,000 d.w.t. and larger calling at any of Saudi Aramco's terminals to load crude/product cargoes must be equipped with an operable inert gas system in use.
2. Effective 1st March, 1985, all vessels of 20,000 d.w.t. and larger calling at any of Saudi Aramco's terminals to load crude/product cargoes must be equipped with an operable inert gas system in use.

Vessels not so equipped will not be accepted for loading as of the effective dates mentioned above.

The SOLAS Convention of 1974 represents a significant contribution to safety of tankers and oil installations and Saudi Aramco recommends that Shipowners take immediate steps to comply with the provisions of this convention as soon as possible and no later than the effective dates mentioned above. No exceptions will be allowed except in the most unusual circumstances.

Signed:

Manager, Oil Supply Planning and Scheduling Dept., Dhahran

APPENDIX "D"

Flammability Check of Ships' Fuel Tanks.

S.P.A. Circular No. 15335/85

Dated: 14.7.1405H/04.04.85G

With immediate effect you are advised to inform all concerned parties that the Port Management of all S.P.A. ports will require additional flammability checks on fuel tanks of OBO carriers and tankers excluding tankers engaged solely in the transport of chemicals.

The purpose of this extra precaution is to deter the use of cargo oil as fuel supplement and will be required on a random basis as advised by the Port Operations Department. The results are to be incorporated (when applicable) on the Gas Free Certificate.

When such a random test is required by the Port Management it will be necessary for the ship's Agent to arrange for the services of a Surveyor.

For your information if the atmosphere in any fuel oil bunker tank be discovered at more than 15% (LEL) then the ship's Master will be required to engage a Surveyor to provide an exact flashpoint analysis of the tank contents.

Furthermore, should the flashpoint be less than the prescribed limits stipulated in Regulation 33 of SOLAS, the Port Management reserves the right to remove the ship from the berth.

Signed:

President and Chairman of the Board Ports Authority,
Kingdom of Saudi Arabia.

SHIPMASTER'S REPORT: March 1985.

Note: Vessel was chartered at very short notice, hence problems experienced are not typical.

Arrival: As soon as vessel was ordered to Yanbu, a pre-arrival information list was telexed to Agents, as per format in "Guide to Port Entry". (Referred to locally as the AA to ZZ List). Unfortunately, these Agents turned out to be in Jeddah, and the list was not forwarded to Yanbu until at least 1200 hrs. on the following day, by which time the vessel had been instructed to repeat the message to a Telex No. given by the Port Control by VHF (who turned out to be the local sub-Agent).

On approach to the pilot station, the vessel was instructed, when 24 miles from the pilot station, to remain 3 hours steaming from the pilot station, to await orders. (When the Pilot eventually boarded, this instruction was discussed with him and it transpired that the Port Radio operators invariably say this although the intention is to remain WITHIN 3 hours steaming of the pilot station).

Vessel was brought from sea to the inner anchorage. Anchorage positions have been established as follows:

N1	Lat. 23° 56.64′ N.,	Long. 38° 11.65′ E.
N2	Lat. 23° 56.47′ N.,	Long. 38° 11.86′ E.
N3	Lat. 23° 56.44′ N.,	Long. 38° 12.14′ E.

Depths at these anchorages, as per chart 328, vary from 35 m. to 45 m.

Vessel was berthed between 0116 hrs. and 0333 hrs. next day, on Berth No. 55 (Suez East). Tug Masters are of doubtful ability regarding tug handling, although the tugs themselves are quite powerful. Language difficulties seem to be a part of the cause.

The berth is intended for use by vessels up to 150,000 d.w.t., and a depth of 20 m. alongside was measured by echo sounder.

On berthing at night, quarantine lights are required.

After berthing, no transmissions, except from low power walkie-talkies, are permitted, not even main VHF on low power.

Despite "OO" through "RR" of the pre-arrival message being correctly sent, the Terminal was unaware that the vessel had ballast in cargo tanks. Once they discovered this, the vessel had to be moved 70 m. to use deballasting lines. Contrary to advise in the port information book supplied by King Fahd Port Control, ONLY SEGREGATED BALLAST is permitted to be discharged into the sea.

Cargo: 2 Cargo Surveyors were appointed: S.G.S. on behalf of PEMREF and Watson Gray on behalf of MOBIL. Both were most helpful.

It is understood that, from March 1985, all petroleum cargoes, of any sort, will have to be loaded into INERTED tanks.

We had no difficulty in obtaining loading rates requested, or in reducing rate for topping-off.

Throughout loading, the gangway was attended by an armed guard, and ship's personnel were not permitted on the jetty at any time, not even for the purpose of reading draft.

Loading lines are 16 in. (400 mm.) rigid booms (total of 7) and 2×10 in. (250 mm.) rigid booms for bunkers.

Apparently, it is not uncommon for cargo contamination to occur within the shore tank farm and a number of cargoes, found to be 'off spec' when loaded, have had to be discharged and sound cargo loaded.

Delays: Pilots require 2 hours' notice for sailing; Agent will not in any case order Pilot until shore figure for cargo has been obtained; this takes 1.5 hours, thus minimum of 3.5 hours between completion and sailing, officially. In fact, Pilot boarded on this occasion 3 hours before completion and a further delay was occasioned only due to cargo papers not being ready.

Port Facilities: Much as described by "Guide to Port Entry". All port installations, except the domestic refinery terminal (Chart 328), are now complete, however, utilisation of these installations appears to be low; only one berth on Container Wharf was in use and product and crude jetties had berths empty for protracted periods.

SHIPMASTER'S REPORT: October 1985.

The port is approached from the West, or the S.S.W., in specifically marked channels which have been surveyed. Water is very deep and though many ships were seen passing through the uncharted regions, none were VLCCs and the Pilots at the port recommend the use of the proper lanes.

Accurate positions can be obtained, when approaching from the West, by fixes on the land at Ras Baridi and more particularly by radar and visual fixes of the industrial complex to the South of this point which is marked on the charts as a silo. There are actually numerous chimneys and buildings there. When closer, the beacon at Scherbo Reef and the adjacent buoys all show up well on radar though the Racon on the beacon was not working in October 1985. The beacon is not easy to see visually even when quite close.

There was no apparent current in the approaches to the pilot station. Note that the Pilot does not board at the position marked on the charts but at a point due North of Scherbo Beacon and so ETAs should be calculated to this point. He also leaves there when outbound.

King Fahd Port Control listens on VHF Channel 16 and ETAs should be sent to them at least 4 hours and 2 hours before arrival so that the pilot boat knows when to leave the shore to rendezvous at the above point. The boat listens on VHF Channel 74. The Pilot wants a speed of about 8 knots at time of boarding and a combination ladder on the lee-side. A speed of about 13 knots was requested on 15 minutes' notice of reduction and this will usually be maintained for about one hour.

There are 3 berths for VLCCs and the allocation criteria is deadweight and the amount of flat side. Berth 61 takes 80 – 260,000 d.w.t. and requires a flat side of at least 400 ft. Berth 62, takes 275 – 500,000 d.w.t. and a flat side of 460 ft., and 63 takes 120 – 280,000 d.w.t and flat side of 420 ft. There are occasional queues for No. 61 as the majority of ships fit this berth. No. 62 is frequently unoccupied.

4 tugs meet the ship as she swings in from the approach channel towards the berths. They are all about 3,400 h.p. and most are Voith-Schneider. Tugs' wires are used and they have good messengers already attached so that only a heaving line is needed from the ship.

All ships berth starboard side alongside with moorings of 3, 3, 2 and springs are sent away first. The tugs hold the ship alongside until mooring is complete. The berths lie about 130°/310° and the prevailing wind is from the W.N.W. up to Force 6/7.

Vessel berthed at No. 63 as she would not fit any better on the other berths. Masters should push for their headlines to be put on the Southernmost hooks for No. 62 berth, if available, as this gives good leads and the Supervisor says it is possible.

The berths were originally designed for SBT tankers and so have no dirty ballast lines (though other berths in the port have this facility). However, since Saudi Aramco took over the berths there have been talks and lines may be fitted.

Arrival ballast must be able to pass very stringent laboratory tests otherwise the ship will be refused and ordered to sail. *At least one ship per month suffers this.*

There is a large desalination plant North of the port making water for most of the area. Pollution costs and fines are HEAVY.

The ballast requirements are a maximum of 8 p.p.m. and an average of 8 p.p.m.. Samples are taken of the top (skim), middle and bottom of the cargo ballast tanks and an oil absorbent cloth is then dragged over the surface in each tank. All deck openings must be available as well as the tank lid and they utilise most of them. Shore also reserves the right to test the permanent ballast tanks. Samples are taken ashore and the results known before any deballasting is permitted. A small boat is stationed at the ship's side adjacent to the ballast discharge throughout and hourly samples are taken at the pumps. On this vessel the part flow system was operating and shore were much impressed with this as it permitted them to constantly monitor the ballast. They took the hourly samples from there (in fact they trusted the ship to take them for most of the time as the gangway had to be removed due to airdraft). Shore at present only requests that at least 30 cm. is left in each tank but this will soon become a regulation for further protection. They are also upset by rust and IG discoloration of the ballast. It is recommended that ballast is changed as near to arrival time as possible to lessen this.

This vessel had a maximum content of 4 p.p.m. and an average of 1 p.p.m. and would appear to be ideally suited to the port as the ballast is normally very clean.

The Agent, Customs and Port Health board first on arrival at the berth and the "Q" signal must be lowered as soon as Pratique is granted as no-one else will board until this is done.

There are 6 Chicksans at each berth, 2 of which are for bunkers, and the cargo ones are designed for 24 in. connections but all reducers are available ashore and in fact the 16 in. size is more or less permanently attached. The shore line is 56 in. and the distance from the tank farm is about 8 km.

For Basrah Crude, the maximum loading rate is 150,000 bbls.p.h. Shore will try to insist that the ship maintains her full loading rate until one hour prior to completion and a close check must be kept on the rate as vessel's request for a reduction may not be heeded! It is suggested that this is clarified before start of loading and cargo stopped if reduction is not heeded, later.

There is a storage capacity of some 3 million barrels for Basrah (they call it Iraq Light) Crude and a maximum pipeline throughput of 2 million barrels per day though the average is only about 500,000 barrels. The maximum is used when they have a ULCC and need to maintain stock which is seldom. The average API is 33.5.

Incidentals: All cameras must be placed in bond. No one is allowed on the jetty for ANY reason. If there is a crew change then 2 new Crew Lists will be required, incorporating all changes, for outward clearance. Incoming members' baggage was searched three times and one man had some family photos removed as a girl had an off-shoulder dress. There is of course no argument. Agent's office is 40 km. away and he is often difficult to contact.

Generally speaking the shore personnel are friendly and helpful. There is only this 'problem' of the loading rate which must be sorted out.

SHIPMASTER'S REPORT: October 1986.

Approaches: The cement silo in approximate position Lat. 24° 16.35′ N., Long. 37° 33.55′ E. (near Ra's Baridi) gave a good strong echo at 48 miles. This was in sufficient time to ascertain the vessel's position for the alteration of course into the Northern Approach Channel.

Documents: Papers required by the Agent:

10 Crew Lists (standard IMO Form 5 acceptable).
1 Vaccination List.
2 Personal Manifests.
2 Stewards Stores Lists.
*3 Health Declarations.
*4 Arrival Details.
*2 Passport Control Office Arrival Details.
*1 Customs Declaration.
*1 Arrival Report.
*1 Customs Alcohol and Tobacco Declaration.
*Forms supplied by local Agent.

Telex Numbers:

Aramco, Yanbu: 662333 Aramco Sj. 661052 Aramco Sj.

Port Management: (Tankers only) 662360 Portct Sj. (Others) 661096 Portct Sj.

SHIPMASTER'S REPORT: June 1990.

All cargo tanks must be below 8% oxygen before vessel may enter port. 02 content checked on arrival alongside.

A fire hose must be rigged on the poop.

Manifold drip trays must be free of oil.

Pilot boarded from tug about half way between reporting Positions "A" and "B", due to weather conditions being rough.

Three tugs for berthing 70,000 d.w.t. vessel, one tug each end with tug's line and one tug pushing, but does not make fast.

Moorings consisted of 3, 2 and 2 each end. Springs first by ship's heaving line and shore messenger, breasts and stern/head lines by boat.

Fire wires to be turned up on bitts with at least 5 turns, then eye to be suspended 1.0 m. – 2.0 m. above the water with heaving lines attached.

Please note that the pilot boarding position given in the "Guide" is not the same as on B.A. chart, which gives the position as 24° 2.5′ N., 37° 45′ E. However, it seems the pilot will normally board inside, and usually disembarks as soon as possible.

Senegal

DAKAR: 14.40 N. 17.26 W. (See Plan)

PORT LIMITS: *North:* From the point of Bel-Air by a parallel from N.E. of the N.E. Jetty of the harbour, to 1 mile N.E. by a meridian passing 2,900 m. East of the Round-Point determined by the crossing of Felix Eboue and Avenue de la Jetee Nord and by the parallel passing 2,060 m. North of Goree Island.

East: By the meridian passing 1 mile East of Goree.

South: By a line joining the Cape Manuel from the South point of Goree prolonged until it encounters the meridian passing 1 mile East of Goree.

DOCUMENTS: Vessels carrying hazardous and/or strong smelling cargoes must declare to the Harbour Master, at least 48 hours before ship's arrival, the nature/quantity/packing of these goods, as well as their stowage on board. Same applies for Arms and Ammunitions.

Health:
2 Crew Lists.
1 Sanitary Declaration.
2 Lists of Date of Vaccinations.
(Valid vaccination for Yellow Fever for all persons)

Customs:
3 Crew Lists.
2 Stores Lists.
2 Personal Effects Declarations.
2 Slop Chest Lists.
1 Arms and Ammunition List.

Immigration:
4 Crew Lists.
2 Lists of Ports of Call with dates of arrival/departure.

Agents:
1 Crew List.
1 Personal Effects Declaration.
1 Slop Chest List.
2 Lists of Arms and Ammunition.

Papers required on arrival: Bills of Lading for cargo to be discharged and Master's copy. 2 copies of Cargo Manifests for cargo to be discharged.

Great care should be taken in completing all Store Lists, Slop Chest Lists and Personal Effects Lists as Customs check all stores, including fridge spaces. All paints onboard must be declared.

Customs also board vessels at anchor and inside territorial waters, inflicting heavy fines in cases where stores, etc. are not prepared and ready for inspection. Also, heavy fines are imposed for any discrepancies. Even when calling at port for emergencies (e.g. Medivac) a full set of documents must be prepared before entering territorial waters.

No vessel is allowed to leave Dakar without having received on board an outward manifest duly visaed by the local Customs Authorities. Vessels leaving without such a manifest will be heavily fined.

PILOTAGE: Pilots meet vessels off the North point of the Island of Goree in a naturally sheltered area.

RESTRICTIONS: During the rainy season, all vessels with a draft of more than 32 ft. 6 in. could be delayed, due to the effects of swell, at anchorage in outer roads and await meteorological conditions permitting their entry into the harbour.

Use of whistle signals to call Pilot is forbidden between 2200 hrs. and 0600 hrs. The harbour area is dredged to a depth of 10 m. to 11 m.

Dangerous Cargo: Vessels are allowed to have the following dangerous cargo on board:

For Discharging	*North Area*	*South Area*
I.M.O. 1	20 tons	10 tons
I.M.O. 2	50 tons	25 tons
I.M.O. 3	80 tons	25 tons
In Transit	*North Area*	*South Area*
I.M.O. 1	25 tons	20 tons
I.M.O. 2	50 tons	25 tons
I.M.O. 3	80 tons	40 tons

MAX. SIZE: Ships of 30 ft. draft are able to enter at all stages of the tide by day and night. Vessels up to 36 ft. draft may enter at high tide except possibly during the stormy season, between mid August and mid October.

HEALTH: Health Officials board vessel immediately after berthing alongside. For passenger vessels, these formalities are effected before berthing to avoid delays. Vessels at sea may obtain medical advice by VHF or telex via Dakar Radio.

Inoculation/Vaccination can be arranged through Agent during weekdays.

Free Pratique can be granted via radio by Agent, by using international Code Words "MIBDU/MIJMA".

RADIO: ETA advice should be sent 96 hours, 48 hours and 12 hours prior to arrival including cargo to discharge, drums to discharge (if any), draft on arrival, expected draft on departure, last port and next port of call. Agents should be notified of tug requirements, VHF Channel 8.

VHF: The Port Captain's Office, pilot station and tugs are equipped with VHF, with the following Channels: Channel 16 used by vessels approaching to contact pilot station or Port Captain's Office; Channel 12 used during manoeuvres for communications between Pilots and tugs; Channel 6 used only by the tug station.

TUGS: Operated by a private company, 3 tugs available up to 2,000 h.p. (bollard pull 24 tons). Compulsory for loaded tankers.

CRANES:
1 Mobile crane × 20 tons.
1 Mobile crane × 60 tonnes.
1 Mobile crane × 25 tonnes.
1 Floating crane × 30 tonnes.
1 Mobile crane × 100 tonnes.
1 Mobile crane × 70 tonnes.

BERTHING: 10,000 m. of quay length available of which more than half has depths of 8 m. to 11 m. alongside.

The Northern area has 5 wharves with depths of 23 ft. – 36 ft.

Dock 4: Length 572 m.

Berth 41: Draft 33 ft. Equipped for discharging bulk grain with private equipment (rate of 4,000 tonnes per day) and load ground nuts.

Berth 42 – 43: Draft 33 ft. Used for the discharge of rice.

Berth 45: Length 120 m., draft 23 ft. Used for the discharge of liquified gas.

Dock 5: Berth 52 (Taiba Phosphate Quay): Length 170 m. Max. draft 36 ft. Loading at an average of 900 tonnes per hour (Air draft 35 ft.).

Dock 6: Length 634 m.

Berth 61: Length 210 m. Used for wine and ground nut oil tankers with a draft of 27 ft.

Berth 62 – 63: Length 425 m. Max. draft 36 ft. A new terminal of containers with area of 50,000 sq.m.

Dock 7: Berth 708 (Thies Phosphate Quay): Length 215 m. Max. draft 32 ft. Loading at an average of 200 tonnes per hour.

Dock 8: Total length of 265 m. and depth of 32 ft.

Berth 81: New terminal with gantry crane/conveyor belt enabling a daily discharging/loading rate of 7,000 tonnes (bulk sulphur, fertiliser, etc.).

Berths 82 – 85: For bunkers, general cargo, logs, scrap iron, bulk grain, etc.

The South area has 3 wharves with a depth of 26 ft. – 33 ft.

Dock I is 460 m. long.

Berth	No.	12	Draft	26 ft. 3 in.
"	"	13	"	28 ft. 7 in.
"	"	14	"	28 ft. 7 in.
"	"	15	"	33 ft.
"	"	17	"	33 ft.

Dock II

Berth	No.	21	Draft	27 ft. 3 in.
"	"	22	"	26 ft. 11 in.
"	"	24	"	26 ft. 3 in.
"	"	25	"	25 ft. 11 in.

Dock III is 350 m. long. Max. draft of 32 ft. 10 in. Reserved for trade with the Republic of Mali.

Mole de Peche: 1,461 m. of quays, supplied with water and bunkers. Areas for spreading out fishing lines and nets.

CONTAINER FACILITIES: Containers handled at Mole 1.

STEVEDORES: Normal working hours, weekdays from 0800 to 1200 hrs. and from 1400 to 1800 hrs. Saturdays from 0800 to 1200 hrs. Overtime, weekdays from 0500 to 0800 hrs.; from 1200 to 1400 hrs.; from 1800 to 2200 hrs.; from 2200 to 0500 hrs. Holidays and Sundays from 0000 to 0500 hrs.; from 2200 to 2400 hrs.

MEDICAL: *Vaccinations:* Possible from 0800 to 1200 hrs. and 1500 to 1700 hrs. Sundays and holidays excluded.

Doctors: All kinds of specialists available.

Hospitals: With qualified doctors and good equipment.

TANKERS: The Petroleum Basin is dredged to a depth of 10 m. to 11 m. 2 jetty berths can receive tankers up to 200 m. length, max. draft 32 ft. 6 in. Petroleum Wharf which has 4 berths, depth alongside 12 m. (depth in approaches 11 m.) can receive tankers up to 250 m. length with a draft of 36 ft.

Black products handled at all berths (6 in., 8 in. and 10 in. hoses). White products at Berth, 2 only (8 in. hoses). Distance to tank farm about 5 km. Water to be pumped between grades.

Ship to Ship transfer (STS) is carried out across Petroleum Wharf using 2 × 8 in. hoses. Standard practice – discharging tanker starboard side alongside Berth No. 93 and loading tanker port side alongside at No. 92 Berth. Transhipment supervised by Iransen and Shell.

M'bao Refinery sealine buoy berth is situated 3 miles N.E. of Goree Island. Vessel berths using both bow anchors, stern is secured to 4 buoys using 4×5 in. wires from buoys stern. Ship's ropes not used. Hose connection on port side using 12 in. (300 mm.) hoses. Vessel's derrick to have an SWL of at least 5 tonnes.

FRESH WATER: All quays are fitted with water hydrants. Water supplied by 3 hoses simultaneously, with a rate from 60 – 100 cu.m.p.h. Can also be supplied by barge up to 400 tons capacity but minimum order 150 tons.

FUEL: All grades can be supplied from the quays up to 1,000 t.p.h. Fuel can also be supplied by barge. Also see "Shipmasters' Report".

REPAIRS: All types of repair can be effected by the Naval Arsenal or by private companies.

DRY DOCKS: At the Naval Arsenal, one dry dock length 189 m., width 23 m., depth up to 9.50 m.

Syncrolift, max. weight acceptable, 1,200 tons.

New Floating Dock will take vessels up to 60,000 d.w.t. Lifting capacity 28,000 tons. Acceptable dimensions 235 m. × 38 m.

REPATRIATION: Seamen can be repatriated to Europe without delays by air.

AIRPORT: International airport with regular services to Europe.

TELEPHONES: All berths are equipped with telephone apparatus which is placed on board vessels without charge.

HOLIDAYS: New Year (1st January); Tabaski (Variable Date); National Day (4th April); Easter (Variable Date); Labour Day (1st May); Ascension Day (7th May); Whit Monday (Variable Date); Maouloud (Variable Date); National Day (14th July); Assumption (15th August); All Saints' Day (1st November); Korite (Variable Date); Christmas (25th December).

GARBAGE DISPOSAL: Collection service is available and is supplied by the Port Authority. Collection services may also be supplied by ship's agent or private companies.

WASTE OIL DISPOSAL: Collection service is available through private company SRH (Societe de Precuperation des Huiles).

SEAMAN'S CLUBS: Seaman's Club not available.

CURRENCY: CFA Franc (Fr.CFA). Fixed against French Franc (F.Fr.). F.Fr. 1.00 = 50Fr.CFA.

GENERAL: Several cases of assault have been reported against crew members returning to their ships during the hours of darkness. For this reason, the delivery of cash from Agents is suspended during the night hours. Although Port Authorities and Security are aware of the situation, it is advisable to acquaint all on board with this.

DEVELOPMENTS: A container and Ro-Ro terminal has been constructed between Mole 6 and Mole 8. Length of berth 430 m.

SHIPMASTER'S REPORT: With a draft in excess of 15 m. it is not possible to anchor in the inner roads due to the swell. The swell is worse from July to October (rainy season).

The Pilot directed us to an anchorage 0.5 miles N.E. of Island of Goree but in my opinion it is a little too close. However, the nearer a vessel can anchor N.E. of Goree the better. The holding ground is very good.

It is possible to talk to Mory Fuel Company direct on VHF Channel 2. They have a barge which is able to deliver fuel oil and diesel oil, capacity 500 tons.

Three tugs available, be sure to order one well in advance before completion of bunkering or the vessel may have to wait. Bunkering undertaken day and night.

SHIPMASTER'S REPORT: October 1983.

Documents: Separate Bonded Stores List (4 copies) required by Customs.

Pilotage: Pilots will board 0.2 miles from breakwater entrances.

Health: Advise Port Health Authorities of health state, also vaccinations required. They attend on arrival but do not acknowledge messages.

Fresh Water: Fresh water supply at piers averages 20 t.p.h.

Security: There have been many cases recently of anchored and stationary vessels being boarded by thieves and mooring ropes, etc. purloined. Vessels on regular run to Dakar do *not* stop in port approach areas until daylight. Gangway watchman essential. Shore traders to be confined to one area under supervision if allowed on board.

SHIPMASTER'S REPORT: March 1989.

Port Officials: Immigration and Port Health boarded on arrival alongside. Customs did not board until the next day.

The Agent advised that particular attention should be paid to declaring the paint on board and also that the Stores Declaration should be made out after the usual "presents" had been given out.

The Customs search was a quick look at the bond locker and the question "Is it as declared?" is asked. When the answer was in the affirmative and a "present" handed over the locker was sealed, no other area of the vessel was searched.

Normally, all stores are checked and any discrepancies will result in a fine, the minimum reported to be U.S.$500.00.

Ship's standard papers are accepted, except for the Health Declaration where the Port Authority form is required, copies placed on board for next call.

Papers required:

Health Declaration	1 copy
Crew Declaration	2 copies
Ports of Call List	5 copies
Vaccination List	2 copies
Drugs List	3 copies
Crew List	6 copies
Stores List	3 copies
Hazardous Cargo List	2 copies
Passenger List	4 copies
Stowaway List	4 copies
Arms and Ammunition List	4 copies
Animals List	4 copies
Cargo Manifest	4 copies

"Nil" declarations are required when appropriate.

The quantity of forms required varies slightly from visit to visit but this would appear sufficient to cover most calls.

The standard vaccination list included Cholera, and the Port Health advised that one of these was out of date, however Cholera is not required for Dakar and no problems were experienced.

An Inward Clearance Certificate is issued by the Port Authority and also a certificate of Free Pratique by the Port Health.

Outward Clearance is stamped by the Customs on copies of the Cargo Manifest.

Approaches: B.A. Chart 1001 was found to be as charted. Arrival was in daylight and lights could not be verified.

Buoy No. 1 is painted white and was difficult to see in the hazy conditions prevailing at the time.

Buoy No. 12 has a double black ball topmark as indicated in the Light List and not a single ball as appears on the chart.

Approach to the harbour entrance can be made either between the buoy just North of Goree Island and Buoy No. 12 or between Buoy No. 1 and Buoy No. 12.

Pilots: On arrival the Pilot will board at the charted position or closer to the harbour entrance from a large launch.

On departure, call the pilot station on VHF 1 hour before estimated departure time and confirm 10 minutes before vessel is ready to leave. The Pilots employed were competent and spoke good English.

Shifting ship: It is not necessary to use a Pilot for warping the vessel along the dock. For this operation linesmen are obtained by calling the Pilots on VHF.

Radio: The Port Authority require 96 hours, 48 hours and 24 hours notice of arrival according to the Radio Signals List. An attempt was made to pass this information using the telex number from the Radio Signals, but the telex remained undelivered, so contact was made by W/T through the local coast station.

Agents were also asked to advise the Port Authority and Pilots. The message must have been received as we were expected.

Pilots can be contacted on VHF as soon as within range and will advise berthing or anchoring prospects, the English spoken is generally good.

Pilots will advise on VHF, any vessel movements and give directions for approach.

Tugs: Two tugs were used for berthing as there was a strong wind on to the berth and there was another vessel on the berth astern, however, probably one tug would be sufficient under similar conditions in future.

The pilots carry portable VHF for communication with the tugs.

Tugs lines are used when required and are in good condition.

Berthing: All berths are fitted with fenders, but some are in a poor condition. In February 1989 the vessel berthed on Berth No. 85, the fendering here is good.

There are 2 sets of boat landing steps set into the face of the dock along this side of Pier No. 8 which would cause a problem if the vessel was positioned with either of these close to the foot of the gangway.

The vessel was later moved astern to Berth No. 84.

There is a clear working area alongside Berths No. 85 and 86, but dockside sheds and stored cargo made the loading area alongside Berth No. 84 somewhat cramped.

Loading: Vessel loaded 6,600 tonnes of ground nut pellets.

The loading is by portable belt elevators, supplied by tipper trucks.

Four elevators were used and positioned variously at hatches, depending on the distribution required.

Working hours are 0800 hrs. – 1800 hrs. every day.

Starting in the morning is slow, the first truck arriving at about 0830 hrs. and sometimes as late as 0915 hrs.

Hoppers are then constructed at the ends of the elevators by filling bags with the first of the delivered cargo, the hoppers are to give a good feed to the elevators. The last truck of the day arrives at about 1700 hrs. and when that is emptied the hoppers are dismantled and the contents of the bags are emptied on to the elevators and any remaining sweepings on the dock are shovelled on afterwards.

The day's work is usually completed by 1730 hrs.

The loading rate is governed by the availability of trucks and the rate of filling them at the silos.

The Agents are also the stevedores and their equipment was used.

Daily tonnage sheets are produced but are slow in coming forth, no record was kept of the tonnage per hatch, only the total loaded.

Gross elevator hours	284	Gross rate	23.24 t.p.h.
Net elevator hours	243.17	Net rate	27.14 t.p.h.

Approximate rate of 250 tonnes per elevator per day.

Fresh Water: Available at berth, the watermen supply their own hoses.

Repairs: Permission is required to immobilse the main engines. There are no other restrictions.

The repair firm Dakar Marine did a fair job of supplying and fitting new bolts to the rudder of another vessel alongside, but I suspect repair work is expensive.

Watchmen: It is best to employ two shore watchmen, one permanently on gangway duty and one on patrol. Theft is common and firefighting and lifesaving equipment are favourite items.

General: Fumigation: The holds were fumigated on arrival and left overnight, loading starting the next morning. The cargo was also fumigated on completion of loading.

Presents: Everyone expects either cigarettes or soft drinks for services rendered but can generally be persuaded to go away empty-handed, however a reasonable supply is required to take care of deserving cases.

Dust: For some days before arrival visibility was reduced by dust haze caused by sand from the desert, the whole of Dakar is covered in dust and when loading commenced this was made considerably worse.

Disbursements through Agents: The Agents prefer to draw cash and hand it to the Master to pay any accounts direct to the supplier, which is not the easist way of doing things.

Ensure that the Agent advises you of which items they will pay and which are expected to be paid by the vessel.

Laundry: Can be arranged by the ship chandler, but it is expensive.

Shore labour: All forms of cleaning and painting are possible, however at a cost of U.S.$20.00 per man per day would appear to be rather expensive, especially as the workers also expect to be fed.

Garbage collection: Recommended by the Agents and is carried out at intervals specified by the vessel (daily, every 2 days, etc.).

Ship Chandlers: A large number will present themselves as soon as the vessel arrives alongside, also a number of businessmen with everything from fish to watches for sale. The businessmen are best kept off the ship, as apart from their prices generally being the same or more than the Chandlers, they are likely to pick up anything that can be moved and spirit it away under their robes.

Prices of all items are high. Most foodstuffs have been imported and nothing except fish seems to be produced locally, although some good produce was seen on the market stalls in town.

M.N. Thoumas, United Shipchandlers, had been used before by the vessel and his prices compared favourably with other chandlers, he also seems to have an efficient organisation. Some of his fresh produce was returned as being poor and replacements were made.

AUTHORITY: Port Autonome de Dakar, 21 Boulevard de la Liberation, B.P. 3195, Dakar, Senegal. *Tel:* 23-45-45. *Telex:* 21404. *FAX:* 21.36.06. *Cables:* Porcomer Dakar. *FAX:* 213606. *Contact:* Mr.Sall, Director General. Captain E. Sarr, Harbour Master. J.B.G. Diatta, Commercial Director.

AGENT: Socopao Senegal, 47 Avenue Albert Sarrault, B.P. 233, Dakar, Senegal. Tel: 23.10.01/21.46.31. Telex: 51444 Freight SG. Fax: 23.47.49. Cables: "Freight Dakar".

Fish Department – Tel: 23.59.43, 23.10.01. Telex: 21496 Freight SG. Fax: 23.47.69, 23.56.14.

Sub-Agency at Kaolak. Tel: 41.19.07. Telex: 74060.

KAOLACK: 14.09 N. 16.06 W.

DOCUMENTS:
2 Crew Lists.
2 Stores Lists.
2 Manifests (tobacco, wine, etc.). Agents deposit at Customs office.

PILOTAGE: Pilot taken on board, and lands in Dakar. When vessels do not require tank-washing, the Pilot disembarks in roadstead.

ANCHORAGES: Sufficient for three vessels only. About 6 m. deep.

RESTRICTIONS: Night navigation forbidden in River Saloum. Depth available 3.0 m.

MAX. SIZE: Length 105 m. (because of River Valor).

HEALTH: Agent signals to Harbour Master. Provisionally vessels quarantine in Dakar.

TUGS: No tugs. (Only from Dakar.)

BERTHING: Signals by flag when berth available. Vessels enter at flood tide so that they can turn at anchorage to be ready for sailing.

Private Berth: Saltworks Wharf, length 52 m. Owned by S.S.S.I.M. Tel: 411904. Telex: 7472 SG.

MEDICAL: Yellow fever vaccinations only at Dakar. No hospital facilities.

DENSITY: 1025 – 1035.

FRESH WATER: Available at 10 t.p.h.

FUEL: Not available.

GANGWAY/DECK WATCHMEN: Arranged by Agent.

OPENING/CLOSING HATCHES: By stevedores.

CUSTOMS ALLOWANCES: Tobacco, no restrictions; Customs control on board (Declaration on manifest). Crew going ashore only allowed cigarettes marked "Vente au Senegal". Wine and/or Spirit, not limited, Customs controlled.

CONSULS: None (Dakar only). French Consulate Agent: Leon Masfrand, Tel: 412176.

REPATRIATION: Not possible (Dakar only).

AIRPORT: None.

TIME: GMT throughout year.

HOLIDAYS: Independence Day (4th April) no loading. Tabaski (dependent on moon phase).

FIRE: Tel: 324.

TELEPHONES: Not possible to place on board.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Not necessary.

REGULATIONS: Vessels must hoist Senegalese flag and notify Agent before entering port.

AUTHORITY: Harbour Master, Rue de la Residence, Kaolack, Senegal. *Tel:* 411915.

AGENT: See "Dakar".

NOTES

Republic of Seychelles

PORT VICTORIA, Mahe: 04.37 S. 55.28 E. (See Plan)

PORT LIMITS: *Outer Harbour:* The area in Victoria Harbour between limits of the inner harbour and a line from Cedre Point to Long. 55° 29.84′ E., thence South to St.Anne Island Shore, thence S.S.W. until Rochon Bridge bears West, then West until Victoria Lighthouse bears North.

DOCUMENTS:

Maritime Declaration of Health – forms obtainable from Medical Officer/Chief Environmental Health Officer.
Derat Certificate.
5 Crew Lists and Passengers' Lists.
Dangerous Cargo List.
Ship's Register.
Crew Declaration Form.
Declaration of Stores and high dutiable goods.
Parcels List.
Firearms List.
List of Animals remaining on board (Pets included).
Un-manifested Cargo List.
Cargo Manifests.
Clearance from last Port.

APPROACHES: *Notice to Mariners No. 1013(P)/86:*

Indian Ocean – Seychelles – Mahe – Port Victoria – Routeing System.

The following announcement has been made by the Ministry of Tourism and Transport, Port and Marine Services Division, Seychelles.

"A routeing system for approaches to Port Victoria, Mahe, Seychelles has been adopted.

All vessels calling to and from Port Victoria are required as far as practicable to stay within an area bounded by lines joining the following Geographical points. Points (1), (2), (3), (9) and (10) demark the Northern Approach and Points (3), (4), (5), (6), (7) and (8) demark the Southern Approach."

(1)	3° 43.0′ S., 55° 33.0′ E.	(6)	5° 13.0′ S., 55° 23.0′ E.
(2)	4° 26.0′ S., 55° 32.0′ E.	(7)	4° 48.5′ S., 55° 34.5′ E.
(3)	4° 30.0′ S., 55° 39.0′ E.	(8)	4° 37.0′ S., 55° 33.5′ E.
(4)	4° 51.0′ S., 55° 42.5′ E.	(9)	4° 33.0′ S., 55° 26.0′ E.
(5)	5° 16.5′ S., 55° 30.0′ E.	(10)	3° 43.0′ S., 55° 25.0′ E.

Charts affected: 742, 740, 721.

Harbour Master, Ministry of Tourism and Transport, Seychelles. (H. 5775/82.)

PILOTAGE: Compulsory in Inner and Outer Harbour for any vessel of or exceeding 150 g.r.t.

24 hours' notice, giving draft and length. Telegraphic address "Demarine" through Cable & Wireless (on schedule 500 kHz and 8714 kHz. Schedule published in Radio List. Harbour Control equipped with VHF Channels 16, 12 and 6).

Pilot Boat: White hull with white cabin, orange top, flying "H" flag.

Signals for Pilot: "G" by flag and/or whistle.

Pilot Boarding Ground: The Pilot boards vessels about 6 cables Northward of the outermost buoy (Fairway buoy) in position 4° 35.7′ S., 55° 29.6′ E. There is no night pilotage. Pilot can board in almost any weather. While awaiting Pilot; vessel can anchor in any suitable anchorage in the pilotage area. Vessels should call "Victoria Harbour Control" on VHF, Channel 16, 2 hours before arrival.

ANCHORAGES: Masters of all vessels are requested not to anchor on the leading marks or in any other position so as to block the entrance channel.

The following anchorages are available in the Outer Harbour.

(i) Victoria Lighthouse bearing 238° True. Distance 9.75 cables in depths of 20 m. to 22 m.
(ii) Victoria Lighthouse bearing 232° True. Distance 1 mile in depths of 22 m.
(iii) Victoria Lighthouse bearing 224° True. Distance 1.4 miles in depths of 18 m. to 20 m.
(iv) Victoria Lighthouse bearing 212° True. Distance 1.5 miles in depths of 20 m. to 22 m.

Super tankers and large vessels anchor outside the Fairway Buoy in any suitable anchorage. The Master should always contact Harbour Master for anchorage instructions.

RESTRICTIONS: All shipping movement in Inner Harbour to take place during daylight hours only. In Outer Harbour, night movement at discretion of Master after consultation with Harbour Master. No tide restrictions.

There is berthing space available for vessels with draft over 9.5 m., but not exceeding 12.0 m. This is between bollards No. 12 and No. 20, a distance of 123 m., at the Southern end of the quay. Vessels exceeding 123 m. with draft of 9.5 m. to 12.0 m. overhang the quay to the South and lines are made fast on shore bollards.

Under these circumstances vessels which overhang come starboard side to and the port anchor is used. This system is mainly used for tankers as the connecting discharge pipe ashore only needs to be in line with the ship's manifold. Cargo ships coming in at a deeper draft than 9.5 m. and less 12.0 m. can be docked. However it must be noted that cargo cannot be discharged from all hatches that overhang and the ship will have to be turned at a certain stage of discharging.

HEALTH: "Q" Flag or international red over white. Medical Officer/Environmental Health Officer may board vessels at anchor and before entering Inner Harbour. Crew Lists with vaccination dates against yellow fever and cholera if vessel from infected places. Health clearance given at Port Victoria only, health clearance may be given at Assumption Island by prior arrangement. Hospital facilities available. Vessels proceeding to the Inner Harbour may be disinsectised. Radio Pratique may be granted on request to "Port Health" – Ministry of Health.

No animal/pet of any description is permitted to be landed ashore or on the wharf as per Seychelles Quarantine Regulations. Necessary action will be taken against any Master who disregards these instructions in addition to the possibility of destroying any such animal or pet found ashore. Emphasis is made on the need to keep the Seychelles free from major animal diseases.

RADIO/VHF: Cable and Wireless, Port Victoria, Mahe. Call sign ZCQ. The Harbour Master's Office, call sign, "Harbour Control" keeps a 24 hour watch on VHF Channel 16 and Channel 12. Any further information can be obtained by calling up Harbour Control on Channel 16. Other Channels available – 12 and 6.

TUGS: 2×1,200 b.h.p. twin screw tugs and 1×2,000 b.h.p. twin screw tug in operation. Vessels of up to 800 ft. are able to berth alongside.

BERTHING: Due to limited space no berth can be reserved either alongside or at anchorage. All assistance given to position every ship in best available place.

Mahe Quay is in full operation. Two vessels can berth alongside. Berth No. 1 is allocated to oil and cement tankers and Berth No. 2 to cargo and passenger ships. Total length 374 m. Maximum depth of water at all berths is 35 ft. There are connections for fuel, fresh water and telephones at all berths. Port Offices, Customs and Health are situated at the New Port area.

Masters and Officers of vessels moored at the 2 above mentioned places are reminded of the importance of tending moorings at frequent intervals. Rat guards are deemed essential. Slack lines present a hazard to the safety of vessels moored alongside.

In the case of tankers and bulk carriers discharging or loading, the hourly difference in draft can be considerable. It is therefore recommended that regular routine checks on moorings be carried out by the Duty Officer.

Movement of Vessels Moored at Mahe Quay, Commercial Port, Fishing Port or at Anchorage. No movement of any vessel moored at the above mentioned places is permitted without authorisation from the Harbour Master. Ship's boats or lifeboats are not to be used as plying boats or on excursions to nearby islands. Use of ship's own craft for any reason including exercises must be cleared and authorised in the first instance.

Loading and discharging by ship's gear. Equipment available to handle 20 ft. and 40 ft. containers.

STEVEDORES: ETA advice required two to three days before ship's arrival in port. Loading and Discharging: General Cargo: average 8 to 10 t.p.h. per gang (subject weather conditions). Bagged Cargo: average 10 to 15 t.p.h. per gang (subject weather conditions). Containers: 10 to 12 boxes per hour. All stevedoring undertaken with ship's own gear.

TANKERS: Max. LOA 210 m., max. beam 30 m. Discharge throughout 24 hours. Discharge lines 8 in. and 6 in. (Bulk white petroleum products and bulk cement).

DENSITY: Average 1025 at all states of tide.

FRESH WATER: In good supply. By mains when alongside. No water barge currently available. All water supplied is chlorinated. Vessels should request water at least 72 hours before arrival through respective Agents.

FUEL: Gas oil Kinematic CS at 40°C. = 3.63. Due to limited stock, it is advisable to give one week's notice, preferably through nomination addressed to Seychelles Petroleum Co. (Seypec).

Intermediate Fuel oil now available on North end of berth only. (Fuel oil 180 centistoke). Pour point 70 max. – Kinematic 180 max. – restriction on flow of delivery pending improvement of facilities.

CONSULS: *Embassies:* China, Cuba, France, Russia, U.S.A.

High Commissions: Great Britain, India.

Consuls: Belgium, Cyprus, Denmark, Finland, Germany, Greece, Italy, Malagasy Rep., Mauritius, Morocco, Netherlands, Norway, Spain, Sweden, Switzerland.

REPAIRS: Slipways for vessels under 300 g.r.t. Mechanical engineering and fabrication. Electronic and electrical engineering. Commercial diving services (hull cleaning, inspection and repairs). Shipchandling (marine equipment).

DRY DOCKS: None, but being considered.

GANGWAY/DECK WATCHMEN: Customs Officer on duty at all times if vessel is discharging cargo.

OPENING/CLOSING HATCHES: Normally carried out by ship's own crew.

CUSTOMS ALLOWANCES: At Custom Officer's discretion.

CARGO GEAR: All cargo slings and gear supplied by ship.

REPATRIATION: Crew changes possible. Undertaken by Agents in connection with Immigration Authorities.

AIRPORT: In operation. Several flights weekly.

TIME: GMT plus 4 hours, throughout year.

HOLIDAYS: New Year (1st and 2nd January); Good Friday; Labour Day (May 1st); Corpus Christi (June 2nd); Liberation Day (June 5th); National Day (June 18th); Independence Day (June 29th); Assumption Day (August 15th); All Saints' Day (November 1st); Immaculate Conception (December 8th); Christmas Day (December 25th).

POLICE/AMBULANCE/FIRE: Emergency: Ring 999 otherwise Police 322011 and Hospital 324400.

SERVICES: No tank-cleaning equipment, no facilities for discharge of tank washing, no compass adjusting, radar or radio engineer available for small repairs.

SHIP SUPPLY SERVICE: Ship Supply Services can be made by prior arrangements with any shipping Agencies by using fast hire crafts, which are allowed to operate within a range of 60 miles Mahe to any given rendezvous.

List of Shipping Agents:

M/S Union Lighterage Co. Ltd., P.O.Box 38, Victoria, Mahe, Seychelles. Fax: (248) 224734.

Hunt Deltel & Co. Ltd., P.O.Box 14, Victoria, Mahe, Seychelles. Fax: (248) 225367.

Mahe Shipping Co. Ltd., P.O.Box 336, Victoria, Mahe, Seychelles. Fax: (248) 322978.

Harry Savy & Co. Seychelles (Pty) Ltd., P.O.Box 20, Victoria, Mahe, Seychelles. Fax: (248) 321421.

M/S Allied Agencies Ltd., P.O.Box 345, Mahe, Seychelles. Fax: (248) 224226.

TELEPHONES: A telephone is placed on board ships alongside. Vessel may arrange for additional telephones.

SHORE LEAVE: All members of the crew are allowed ashore. No limit to shore leave. Crew to be in possession of identity card or discharge book.

IDENTIFICATION CARDS: See "Shore Leave".

DELAYS: Berthing: Limited berth. Loading or discharging: Weather conditions. Bunkering: Space alongside.

SAFETY: There shall be no smoking on board vessels carrying petroleum products, chemicals or LPG except in such safe places as may be approved jointly by the Master and Harbour Master. Responsibility for ensuring that the crew of the vessel are informed of the safe places so approved, and that the regulations are complied with, rests with the Master. Such vessels when berthed alongside a quay must have the eye of a wire hanging over the outside bow and quarter to enable tugs to connect up readily in an emergency. The said wire must be suitable for such purposes and shall have sufficient scope on deck for free running.

Engines are not to be immobilised whilst the vessel is berthed alongside the wharf without prior authorisation from the Harbour Master.

Any unsafe condition or action observed on board a vessel will result in immediate cessation of cargo or bunkering operations until such condition or action is corrected. Continued or blatant disregard of these requirements by any ship will result in the removal of the ship from berth or quay at the cost of the vessel and the Owners/Operators/Charterers informed of the circumstances.

Use of radar and radio transmitter forbidden whilst alongside the wharf. Walkie-Talkies not permitted outside port area.

Portable R/T sets or transceivers must be of an approved design and those used on tankers must be intrinsically safe.

POLLUTION: All ballast discharged over the side must be clean and entirely free from petroleum products of any description in accordance with the Marine Pollution Regulations of 1981. No dirty ballast is to be pumped overboard as per Laws of Seychelles Cap. 210 Section 18. This includes brine from fish tanks in which fish have been stored. All Masters are advised to familiarise themselves, through their respective Agent, with the Marine Pollution regulations 1981. The Master of a vessel found guilty under these Regulations is liable to imprisonment for five years and to a fine of two hundred thousand Seychelles Rupees in addition to costs for cleaning up operations, environmental damages and commercial loss.

Whilst transferring fuel and/or taking bunkers all scuppers must be effectively plugged to prevent accidental discharge of oil into the sea.

GARBAGE DISPOSAL: A small fee is charged by the port daily for use of port bins meant to cater for empty bottles and cans. These must be packed in plastic garbage bags.

Garbage from the galley and remnants of food are not permitted ashore. These are cleared by Waterborne Licenced Garbage Contractors for a fee. Regular disposal of garbage is compulsory.

WASTE OIL DISPOSAL: No facilities exist at the moment.

It is hoped that such facilities will be provided in the not too distant future.

SEAMAN'S CLUBS: None. Several popular bars, restaurants and night clubs are available in the town centre, some 10 – 15 minutes walk from the port.

CURRENCY: Seychelles Rupee. No restrictions on foreign currency, although coins are not readily acceptable.

AUTHORITY: Ministry of Tourism and Transport, Port and Marine Services Division, P.O.Box 47, Mahe, Seychelles, Indian Ocean. *Tel:* (248) 224701. *Telex:* 2329. *Cables:* Demarine. *FAX:* (248) 224004. *Contact:* S.A.G. Andrade, Port Director. Captain Robert Morgan, Senior Harbour Master – Pilot.

NOTES

Please also advise Shipping Guides Ltd.

Sierra Leone

FREETOWN: 08.30 N. 13.14 W. (See Plan)

DOCUMENTS:
5 Crew Lists.
5 Ports of Call Lists.
5 Passengers in Transit Lists.
5 Passengers Landing Lists.
1 Crew Declaration (signed by crew members).
1 Stores List.
1 Arms & Ammunition List.
1 Port Health Declaration.
1 Vaccination List (cholera and yellow fever).

Port Health Declaration, Crew Declaration Form and Arms and Ammunition List, all special forms, which obtained from boarding party or, if required, mailed in advance to ship's Owners.

1. *For Vessels Working Cargo (Discharging):*
   - *(a)* From each port of loading, by air mail to vessel's Agent: 2 copies of Cargo Manifest, 1 copy of Freighted Manifest.
   - *(b)* On arrival: 5 copies of Cargo Manifests, 1 copy each Bill of Lading (non-negotiable).

Note: Customs and Port Authority insists on documents in English, and that Manifests should show weights and measurements. Non-compliance with these instructions places vessel's Agent in difficult position, and vessel may not discharge without payment of fine.

2. *Required by Port and Stevedores for Vessels Working Cargo:*

4 copies Stowage Plan, 4 copies Hatch Lists. List of all lifts over 3 tons.

PILOTAGE: Vessels may at present enter and leave port anchorage without Pilot. Pilotage only compulsory for vessels berthing alongside Queen Elizabeth II Quay, Kissy Oil Jetty, vessels over 20,000 tonnes Summer deadweight and vessels over 30 ft. draft. Upon Master's request, Pilot available at Fairway Buoy with 24 hours' notice. Normally only during daylight hours. Port entrance is between Cape Sierra Leone to South and Fairway Buoy to North. Is approx. 1 mile wide and minimum draft 38 ft. To West harbour is protected by sand shoals, nearest to entrance is O'Farrell Shoal about 1.5 miles North of Cape Sierra Leone.

Pilots board from a launch painted black, with "Pilot" in black on both sides of superstructure on a white background.

Pilot Office will give an anchorage to every vessel arriving or, if a vessel is berthing on arrival, will advise where the Pilot is boarding. This is normally off the quay. The Signal station is equipped with VHF, standing-by on Channel 16, switching to Channel 12 for communication.

The Pilot Office, Queen Elizabeth II Quay, is also equipped with VHF, standing-by on Channel 16, switching to Channel 12 for communication. The Port Operations Manager is available on VHF Channel 10.

ANCHORAGE: With Falconbridge Point Beacon bearing as follows (all bearings true): Note: Falconbridge Point Beacon circular steel tower 8 ft. high, painted white with 2 horizontal black bands; Fl. white every 2 seconds.

Anchor Berth	*Bearing (T)*	*Distance (Cables)*	
E. 3	138	10.5	
E. 4	154	9	
E. 5	180	8	
E. 6	207	8	
F. 5	136	7	
F. 6	154	6	
F. 7	184	5	
F. 8	210	5	
F. 9	232	7	
F. 10	242	9	
F. 11	249	11	
G. 1	099	15	
G. 2	100	12	
G. 3	104	7	
G. 4	126	3	
H. 1	184	2	
H. 2	234	3	
H. 3	252	5	
H. 4	258	7	
B. 1	236	11	(Vessels bunkering ex-barge)

With Cline Point bearing as follows:

Anchor Berth	*Bearing (T)*	*Distance (Cables)*
D. 1	232	5.5
D. 2	253	7
D. 3	253	3
D. 4	273	5.5
C. 1	244	4
C. 2	270	5
B. 2	280	7.25

With Kissy Oil Jetty bearing as follows:

Anchor Berth	*Bearing (T)*	*Distance (Cables)*
B. 2	235	1 mile

No draft restriction at anchorage, also no length and beam restrictions and vessels can arrive and sail any hour day and night.

RESTRICTIONS: *Draft Limits for Deep Laden Vessels:*
Draft Limits: 38 ft. (11.6 m.) plus height of tide to a maximum of 48 ft. (14.6 m.).

Time Limits:
1. From 5 hours Flood Tide to HW.
2. From LW to 1 hour Flood Tide.
3. During hours of daylight only.

Vessels of 36 ft. draft and over must keep to the time limits.

Vessels of under 36 ft. draft may navigate the channel at any time but attention is drawn to the strong cross currents.

(H.M.S. Hydra has commented strongly on this danger).

HEALTH: Pratique by radio or on boarding. See "Agent's Cable Requirements".

RADIO: *Freetown Radio, Coast Station:* Watch is maintained on 500 kHz from 0700 – 2200 hrs. GMT on week-days, and 1200 – 1400 hrs. GMT on Sundays and Public Holidays.

The working frequency is 421 kHz and traffic lists are broadcast on this frequency after preliminary announcements on 500 kHz at 0730, 0830 hrs., etc.: up to 2130 hrs. GMT. On Sundays and holidays, traffic lists are broadcast at 0800, 1200 hrs. and 1700 hrs. GMT.

Time GMT	*9LL Freq.*	*Search-band for reply*
0800 – 0900 hrs.	6411	6 MHz
1300 – 1430 hrs.		
1700 – 1830 hrs.		
0900 – 1000 hrs.	8710	8 MHz
1200 – 1300 hrs.		
1830 – 2000 hrs.		
1000 – 1100 hrs.	13042.5	12 MHz
1530 – 1700 hrs.		

On Sundays and other holidays the H.F. Schedules are as follows:—

0830 – 0900 hrs.	8710	8354 to 8374 kHz
0930 – 1000 hrs.	13042.5	12531 to 12561 kHz
1330 – 1400 hrs.	6411	6 MHz
1600 – 1630 hrs.	13042.5	12531 to 12561 kHz
1700 – 1730 hrs.	8710	8354 to 8374 kHz

Traffic lists are broadcast at the commencement of every HF Schedule and repeated at intervals during the Schedule.

Ship's Radio Telephone and Harbour Service: Watch is kept on 2182 kHz for casual R/T traffic from 0800 – 2000 hrs. GMT on weekdays, and 0800 – 1730 hrs. GMT on Sundays and holidays.

Ships are advised to arrange their calls in advance by W/T where possible so it can be ensured that the called party is available. Calls can be connected to or from any number on the Freetown Telephone Exchange. Longer range contacts should be in the 8 MHz maritime band, the frequency of 9LL in this band being 8768.9 kHz.

Other Services: Navigational warnings issued from time to time by the Harbour Master are broadcast on W/T. Spoken telegrams are accepted at ordinary W/T rates on RT.

VHF: *Freetown Radio:* A 24-hour watch is kept on Channel 16 switching to Channel 26 for communication. Calls can be connected to the Freetown Exchange. Masters are advised the fullest use should be made of this service, particularly after office hours and during the early hours of the morning or late at night when no cable service is available. The Authority tugs are also equipped with VHF, watch being kept on Channel 16 switching to Channel 12 for communication.

Signal Station	Channel 16
Pilot Office (Freetown Pilot)	Channel 16
Harbour Master	Channel 16

AGENT'S CABLE REQUIREMENTS: Masters requested cable ETA as early as possible. Following information required:

(a) For vessels working cargo: 1. Discharge or Loading Hatch distribution. 2. Gangs required. 3. If Explosives on board for Freetown or in transit.

(b) For vessels bunkering: Bunkers and water required.

(c) For Tankers discharging: 1. Total Displacement. 2. Draft. 3. Cargo particulars (quantity and grade).

(d) For vessels embarking/disembarking Krooboys: 1. If Krooboys provisions required and for how long. 2. Cash requirements. 3. If service on arrival if arriving between 2200 hrs. and 0700 hrs., bearing in mind the high costs for Customs overtime and port service.

(e) In general: 1. Cash requirements. 2. Water requirements. 3. Medical attendance, if required on arrival.

When ETA received and confirmed Agent will cable vessel informing despatch prospects and if not berthing on arrival, anchor berth.

Note: For vessels returning to Freetown from round trip to coast, information should be cabled if any over-carried cargo, etc., to be discharged.

TUGS: 1 seagoing tug available, *Sewa* (2,200 h.p.). Tug has twin-screw with diesel engine and is equipped for salvage having fire-fighting equipment and a 10 ton derrick. Normally tug used for berthing and unberthing operations. Charges for berthing and unberthing include use of a tug, whether required or not.

BERTHING: All alongside berths: between hours of 0630 and 2230. Vessels may request berthing after 2230 hrs. from Harbour Master's office. Kissy Oil Jetty; max. displacement – 46,000 tons, max. draft 39 ft., berthing flood-tide only.

Queen Elizabeth II Quay No. 1: Berthing length: no restriction; breadth: no restriction; max. draft 31 ft. 6 in. At this draft vessels must be 180 ft. from steps East end of quay. Vessels up to draft not exceeding 24 ft. may berth as far East as steps. Unberthing not permitted from 1 hour after HW until 1 hour after LW.

Berth No. 1A: As for Berth No. 1, max. draft 31 ft. 06 in.

Berth No. 2: Berthing and unberthing, length and breadth no restrictions. Max. draft 31 ft. 06 in. No tidal restrictions.

Berths No. 3 and 4: Max. draft 32 ft. 06 in.

Berth No. 5: Max. draft 31 ft. 06 in. – 32 ft. 06 in.

Berth No. 6: Max. draft 24 ft.–25 ft.

Facilities for loading palm kernel oil available only at Berth No. 1.

Bulk Grain: Berth No. 1 is equipped for discharging grain in bulk through a conveyor built on Shed No. 1 to the Flour Mill. The actual discharge is effected by mobile vacuvators. Four such units are available with total potential of 80 t.p.h., though a more realistic figure would be in the region of 60 – 70 t.p.h. Grain vessels are worked around the clock.

King Tom Jetty: Berthing *not* allowed.

Dispensation will only be granted in exceptional circumstances to berth or unberth vessels before 0600 hrs. and after 2330 hrs.

During discharging and/or loading, Customs Officers, normally 2, as well as 2 Port Authority Discrepancy Clerks (only when discharging) will be on board.

Sherbro River: Anchorage daylight only. Length of vessel up to 470 ft. Breadth, no restrictions. Max. draft, 24 ft. 06 in. The passage between Buoy No. 1 and Buoy No. 8 and between No. 1 Buoy and Yangsai Anchorage must be navigated in daylight hours only.

The Channel between Buoy Point and Yangsai must be navigated only during period 2 hours to H.W., and on a rising tide, buoy point being area which restricts draft. Bagru River Anchorage Buoy No. 8, length and breadth unlimited. Max. draft 24 ft. 06 in. Limitations as regards vessel's dimensions, drafts and times at which movements may be carried out should not be deviated from without prior permission of the Harbour Master.

MECHANICAL EQUIPMENT:

Type	*Capacity*	*Complement*
Portal quay cranes	3 tons	2
Portal quay crane	5 tons	1
Mobile crane	15/30 tons	1
Mobile cranes	4 tons	9
Mobile cranes	5 tons	2
Mobile cranes	7 tons	2
Fork truck	10 tons	1
Fork trucks	4,000/5,000 lbs.	34
Tractors	—	15
Trailers	6 tons	17
Trailers	8 tons	1
Trailers	10 tons	12
Trailers	20 tons	18
Trailers (Pole)	10 tons	2
Fire engine		1
Container handlers	26 tons	3

Berths No. 3 to 6 are not equipped with portal cranes.

DANGEROUS CARGO: Dangerous cargo, explosives, small arms, ammunition, *must not* be unloaded alongside unless Port Authority has been notified on approved form, and has given permission for cargo to be discharged. Vessels should cable prior arrival if dangerous cargo for discharge on board.

STEVEDORES: (See "Agent's Cable Requirements") ETA as soon as possible. Discharge/loading hatch distribution. Gangs required. Bunkers and water requirements, information re explosives. For tankers discharging – total displacement and draft. Work ashore undertaken by Sierra Leone Ports Authority on cargo quay, Queen Elizabeth II Quay, whilst work on board as well as discharging and/or loading to or from vessels at stream undertaken by Sierra Leone Ports Authority stevedoring division.

Working hours alongside quay: Normal working hours from 0800 hrs. to 1200 hrs. and 1330 hrs. to 1700 hrs. Monday to Friday.

No meal-break but the hour 1200 hrs. to 1330 hrs. counts overtime.

Working at Stream: Discharging and/or loading to or from vessels effected 24 hours a day. Gangs can be arranged at anytime between 0730 hrs. and 1800 hrs. week-days. On Sundays and holidays work must be arranged on the previous day.

MEDICAL: Hospital facilities available.

TANKERS: *Kissy Oil Jetty:* In order that berthing/unberthing operations at Kissy Oil Jetty are carried out without delay Agencies are requested to furnish to the Harbour Master the following particulars, of vessel using Kissy Oil Terminal.

ETA: At least 24 hours' notice to be given.

Displacement and deadweight: The max. permitted displacement is 46,000 tons.

Draft forward and aft: Max. draft 11.90 m. (39 ft.).

Length overall: No restriction.

The time of berthing will be at the discretion of the Port Authority, dependent on tidal and weather conditions, and vessel's draft. This is normally on a flood tide and during daylight hours only.

Notice: Port Authority Circular No. HM/241/354 dated 14th January 1981.

Oil Tankers Berthing Kissy Oil Jetty: In view of the strain experienced on the forward back springs during ebb tide on above-named jetty, vessels are to moor using double or more forward back springs.

This is necessary to avoid any damage to the discharge/loading arms on jetty.

Agents are advised to inform shipping companies that vessels are required to carry the necessary extra mooring ropes or wires.

Port Authority Pilots are to ensure prior to berthing vessels that sufficient moorings are onboard for extra forward back springs and separate bollards on jetty head are used for each spring.

DENSITY: 1018 to 1025.

FRESH WATER: Good fresh water is available at all quay berths and at Kissy Oil Jetty.

(Supply Rates:	Old berths	Approx. 20/25 t.p.h.
Dependent on	New berths	Approx. 40/50 t.p.h.
Ship's intake)	Kissy Oil Jetty	Approx. 15/20 t.p.h.

FUEL: Available at Kissy Oil Jetty and Q.E.II Quays. Gas oil available by tanker truck.

CONSULS:

Belgium	250143	Japan	222721
China (People's Republic)	231797	Lebanon	222353

REPAIRS: All repairs if spares supplied.

DRY DOCKS: No dry docks in Freetown. Slipway of 600 tons capacity.

SURVEYORS: Mining and General Services Limited, P.O.Box 68, Freetown. Telex: 3226. Cables: Mags. They are Lloyd's Agents and undertake cargo surveys.

A Lloyd's Register approved surveyor is available.

GANGWAY/DECK WATCHMEN: Strongly recommended, available through Agent. It is suggested that gangway is raised after close of work. The Port Authority operates a patrol boat with security personnel to combat piracy.

Piracy: Acts of piracy have taken place alongside and whilst vessel approaching Pilot. Crew members have sustained injuries.

OPENING/CLOSING HATCHES: By stevedores, except mechanical hatches.

CERTIFICATES:

Ship's Register.
Derat Certificate.
Deck Passengers Certificate.
Radio Certificate.

CUSTOMS ALLOWANCES: Tobacco, 40 cigarettes *or* 0.25 lb tobacco. Wine and/or Spirits, 0.25 bottles of spirit. Master — 200 cigarettes and 1 opened bottle of spirit.

REPATRIATION: Can be arranged.

AIRPORT: By bus and ferry to Lungi Airport. Served by regular airlines.

Hovercraft from Aberdeen to Lungi Airport takes 30 minutes.

Sera Link operates a catamaran service between Freetown and Conakry (2.5 hours).

TIME: GMT throughout year.

HOLIDAYS: Several religious and anniversary holidays. Port works every day except Good Friday and Christmas Day.

POLICE/AMBULANCE/FIRE: For all emergencies dial 009.

EMERGENCY CO-ORDINATION CENTRE/S.A.R. LINK: Sierra Leone Ports Authority. Telex: 3262. Cables: Portman Freetown.

TELEPHONES: Not available for placing on board.

SERVICES: Tank cleaning. Tank and hull scaling.

BANKS: Barclays Bank of Sierra Leone, P.O.Box 12, Siaka Stevens Street, Freetown.

Standard Bank Sierra Leone Ltd., Lightfoot Boston Street, Freetown.

STORING: Moderate quantities of stores are available and can be taken ex-quay. However no bonded stores' facilities exist.

SHIP SUPPLY SERVICE: Contact: Offshore Services Ltd., P.O.Box 376, Freetown.

SHORE LEAVE: Allowed. Identity cards must be carried.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Collection service available. Skips are provided alongside by SLPA on arrival of vessels. Charges as per SLPA tariff.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: Stella Maris, Blackhall Road, Freetown, Sierra Leone. Facilities include postage, telephones in the port. Football matches and church services could be arranged, likewise minibus collection.

CURRENCY: Leone (Le). No local currency restrictions up to Le 25,000.00.

Forex Bureau available at Siaka Stevens Street.

DELAYS: No delays experienced.

GENERAL: Always confirm time of entering harbour with the Aberdeen Hill Signal Station to ensure turn for berthing. Draft should be indicated.

DEVELOPMENTS: It is the Port Authorities' intention to surface the front and rear stacking areas at Berths No. 5 and 6 for use as a container park.

AUTHORITY: Sierra Leone Ports Authority, P.M.Bag 386, Freetown, Sierra Leone. *Tel:* 50989, 50033 and 50111. *Telex:* 3262. *Cables:* Portman Freetown. *FAX:* 50616. *Contact:* Captain P.E.M. Kemokai, Harbour Master and Director of Maritime Affairs. Captain Helmut Friedrichs, Harbour Master.

AGENT: Sierra Leone Shipping Agencies Limited, P.O.Box No. 74, Freetown, Sierra Leone. Tel: 50881/50528. Telex: 3260/3225. Fax: 50400. Cables: "Seaborne Freetown".

PEPEL: 08.34 N. 13.04 W.

LOCATION: On Sierra Leone River, 15 miles upstream from Freetown. Approach Channel between Freetown anchorage and Pepel is fully buoyed. No night navigation.

DOCUMENTS: See "Freetown".

PILOTAGE: Private pilotage undertaken by mining Company's Pilots who board at Freetown Anchorage. 48 hours ETA required, cable "Mags Freetown Sierra Leone", giving ETA Fairway Buoy, quantity water/fuel required, asking for Free Pratique, and if Pilot required to Freetown Anchorage.

ANCHORAGE: See "Freetown".

RESTRICTIONS: Draft only, decided at discretion of Berthing Master. Entry daylight hours only. Channel between Pepel and Freetown is now deepened so that depth in channel is 38 ft. plus height of tide. According to official tide tables, range of high tides is approximately 7 ft. to 11 ft. above Admiralty Chart Datum.

MAX. SIZE: Length 840 ft., beam 128 ft., water depth 38 ft.* plus height of tide which ranges from 7 ft. to 11 ft. above Chart Datum. September to December additional draft restrictions due channel silting.

*The channel has not been maintained since 1975. Dredging is to take place.

HEALTH: See "Freetown". 48 hours advance warning for Free Pratique.

TUGS: Not used.

BERTHING: Milton Margai Pier only. Loading up to 3,000 t.p.h. according to size of vessel.

New dolphin mooring system installed to permit handling larger ships. Depth alongside 45 ft. Shiploader max. boom height when in horizontal position is 71 ft. above Chart Datum, with max. outreach 87 ft. from berthing line. Loading rate 4,000 t.p.h. Under the new conditions, limiting dimensions for ships (which must be equipped with satisfactory mooring equipment): LOA 840 ft. Moulded breadth 128 ft.

Permissible sailing draft with allowance made for safe navigation, of all ships will, as at present, remain absolutely at discretion of Berthing Master at Pepel or his deputy. It is possible that during the months of September to December every year an additional draft allowance will have to be imposed by reason of seasonal silting of the channel, but it is intended to carry out annual maintenance dredging.

Company will be prepared to consider acceptance of ships having dimensions in excess to those above but only after specific approval of fully detailed plans of each ship concerned and, in any event, not in excess of dimensions: LOA 870 ft., moulded breadth 136 ft., moulded depth 73 ft.

Berthing displacement 63,000 tons on an even keel ballast draft of 23 ft. forward and aft on berthing.

STEVEDORES: Available.

FRESH WATER: Available, 48 hours' notice required.

FUEL: Limited supplies available, 48 hours' notice required.

TIME: GMT throughout year.

TELEPHONES: None available.

SHORE LEAVE: Not allowed. Customs and Immigration regulations prohibit any member of crew from disembarking at jetty or other works.

DELAYS: First come first served.

GENERAL: See "Freetown" for all general information.

PSA (The Port of Singapore Authority): Arms and Explosives, and Dangerous Goods and Petroleum Declaration.

Shipmaster's Report: August 1987.

In order to obtain vessel's clearance the agent requires – Last Port Clearance, Load Line, Safety Radio, Safety Equipment and Safety Construction Certificates; Articles of Agreement; Safe Manning Certificate; Certificates of Competency (Panamanian and Liberian ships only – not photocopies), a British Certificate will suffice if Liberian/ Panamanian Certificate has not arrived; C.L.C.

Shipmaster's Report: November 1988.
2 copies Passenger List.
2 copies Crew List.
2 copies Stores List.
1 copy Stowaways List.
1 copy Arms/Ammunition List.
1 copy Vaccinations List.
1 copy Maritime Declaration of Health.

Vessels arriving to take stores and make crew changes: See "Notices" – Circular No. 121/87.

ANCHORAGES: Also see "Notices".
REVISION OF ANCHORAGES

1. *EASTERN SECTOR*

1.1 *Awaiting Pilot Anchorage* is renamed *Changi General Purposes Anchorage* and is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 20.000′	104° 03.167′
01° 20.000′	104° 03.706′
01° 18.880′	104° 04.820′
01° 18.880′	104° 04.281′
01° 19.550′	104° 03.667′

Purpose: For general purposes on prior permission of the Port Master.

1.2 *Eastern Explosives Anchorage* is withdrawn.

1.3 *Eastern Petroleum 'B' Anchorage* is relocated and is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.500′	103° 59.083′
01° 17.650′	104° 01.200′
01° 16.629′	103° 59.313′
01° 16.629′	103° 59.082′

Purpose: For vessels of less than 10,000 g.r.t. loaded with Petroleum and Non-Gas-Free Vessels.

1.4 *Eastern Special Purposes Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.979′	103° 56.617′
01° 18.300′	103° 57.438′
01° 18.300′	104° 00.450′
01° 17.650′	104° 01.200′
01° 17.500′	103° 59.083′
01° 16.629′	103° 59.082′
01° 16.633′	103° 56.617′

Purpose: For vessels under Arrest, Damaged Vessels, Deep-Draft Vessels requiring repairs and other vessels on prior permission of the Port Master.

1.5 *Laid-up Vessels Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.784′	103° 56.117′
01° 17.979′	103° 56.617′
01° 16.633′	103° 56.617′
01° 16.633′	103° 67.117′

Purpose: For vessels laid-up in port.

1.6 *Small Craft Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.388′	103° 55.106′
01° 17.784′	103° 56.117′
01° 16.633′	103° 56.117′

Purpose: For harbour tugs, pontoons, barges and other small craft.

1.7 *Eastern Petroleum 'A' Anchorage* is bounded by the following co-ordinates:

	Latitude (N)	*Longitude (E)*
(31)	01° 15.433′	103° 53.917′
(32)	01° 16.121′	103° 54.991′ (Timor Bn.)
(33)	01° 15.319′	103° 55.851′
(34)	01° 14.687′	103° 54.685′

Purpose: For vessels loaded with Petroleum and Non-Gas-Free Vessels or as directed by Port Master.

Please see "Plan". The numbers in brackets provide positional reference.

Eastern Holding Anchorage is created and will be bounded by a line connecting the following geographical positions:

	Latitude (N)	*Longitude (E)*
(34)	01° 14.687′	103° 54.685′
(33)	01° 15.319′	103° 55.851′
(37)	01° 15.046′	103° 56.143′
(38)	01° 14.687′	103° 55.481′

Purpose: For vessels to temporarily anchor as directed by Por Master.

Please see "Plan". The numbers in brackets provide positional reference.

1.8 *Eastern Quarantine and Immigration Anchorage* is bounded by the following co-ordinates: (Not in use).

Latitude (N)	*Longitude (E)*
01° 14.683′	103° 52.783′
01° 15.125′	103° 53.459′
01° 14.450′	103° 54.167′
01° 14.000′	103° 53.383′

Purpose: For vessels arriving from the East and seeking Quarantine and Immigration Clearance.

1.9 *Man-of War Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 16.517′	103° 54.553′
01° 16.517′	103° 53.417′
01° 17.004′	103° 53.417′
01° 17.004′	103° 54.015′

Purpose: For visiting warships.

1.10 *Eastern Explosives Lighters Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.004′	103° 53.650′
01° 17.133′	103° 53.650′
01° 17.133′	103° 54.015′
01° 17.004′	103° 54.015′

Purpose: For small craft loaded with explosives. The maximum amount of Hazard Division 1.1 type explosives allowed on board each craft is 8 tonnes Nett Explosives Quantity (NEQ).

1.11 *Eastern Working Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.004′	103° 53.417′
01° 16.517′	103° 53.417′
01° 16.517′	103° 54.553′
01° 16.123′	103° 54.988′
01° 14.683′	103° 52.783′
01° 14.683′	103° 52.283′
01° 15.040′	103° 51.871′
01° 16.017′	103° 51.767′
01° 16.567′	103° 52.533′
01° 16.443′	103° 52.598′
01° 16.623′	103° 52.820′
01° 16.683′	103° 52.733′
01° 17.004′	103° 53.200′

Purpose: For general purposes such as working cargo, receiving stores, water and bunkers or awaiting berth.

2. *WESTERN SECTOR*

2.1 *Western Quarantine and Immigration Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 13.583′	103° 49.696′
01° 13.150′	103° 50.033′
01° 12.800′	103° 49.850′
01° 12.750′	103° 49.133′
01° 13.133′	103° 48.683′

Purpose: For vessels seeking Quarantine and Immigration Clearance during the North-East Monsoon.

2.2 *Western Petroleum Anchorage* is bounded by the following co-ordinates:

	Latitude (N)	*Longitude (E)*
(71)	01° 14.813′	103° 46.684′
(72)	01° 15.223′	103° 47.637′
(73)	01° 14.490′	103° 48.470′
(74)	01° 14.028′	103° 47.399′

Purposes: For vessels loaded with Petroleum and Non-Gas-Free vessels or as directed by Port Master.

Please see "Plan". The numbers in brackets provide positional reference.

2.3 *Western Petroleum 'B' Anchorage* – Withdrawn.

2.4 *Western Working Anchorage* is bounded by the following co-ordinates:

	Latitude (N)	*Longitude (E)*
(74)	01° 14.028′	103° 47.399′
(73)	01° 14.490′	103° 48.470′
(72)	01° 15.223′	103° 47.637′
(78)	01° 15.459′	103° 48.188′
(79)	01° 14.567′	103° 49.202′
(80)	01° 13.583′	103° 49.696′ (Selegi Bn.)
(81)	01° 13.132′	103° 48.684′
(82)	01° 12.983′	103° 48.350′

Purpose: For general purposes such as receiving stores, water and bunkers or awaiting berth, or as directed by Port Master.

Please see "Plan". The numbers in brackets provide positional reference.

Triton Petroleum Anchorage is created and will be bounded by a line connecting the following geographical positions:

	Latitude (N)	*Longitude (E)*
(135)	01° 15.622′	103° 39.600′
(136)	01° 16.271′	103° 39.560′
(137)	01° 16.629′	103° 40.273′
(138)	01° 16.245′	103° 40.615′

Purposes: For licensed Port Limit Tankers or as directed by Port Master.

Please see "Plan". The numbers in brackets provide positional reference.

NOTE: Triton Petroleum Anchorage: With the closure of Western Petroleum 'B' Anchorage, Port Limit Tankers are now to use Triton Petroleum Anchorage or Sultan Shoal Petroleum 'B' Anchorage. Mariners proceeding to anchor at Triton Petroleum Anchorage are recommended the use of the following transits to assist their positioning:

(a) Gul Beacon in line with Long Shoal Buoy.
(b) Pioneer Beacon in line with Triton Beacon.
(c) Pesek Buoy 4 in line with Esso Berth 5 Dolphin Light.

Sultan Shoal Petroleum 'B' Anchorage is bounded by a line connecting the following geographical positions:

	Latitude (N)	*Longitude (E)*
(131)	01° 14.335′	103° 39.035′
(132)	01° 14.600′	103° 39.325′
(133)	01° 14.270′	103° 39.955′
(134)	01° 13.733′	103° 39.850′

Purposes: For licensed Port Limit Tankers or as directed by Port Master.

Please see "Plan". The numbers in brackets provide positional reference.

2.5 *Western Reserved Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 16.170′	103° 47.170′
01° 15.600′	103° 46.700′
01° 15.830′	103° 46.290′
01° 16.400′	103° 46.680′

Purpose: For LASH Ship operations.

2.6 *Western Dangerous Goods Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 16.250′	103° 45.640′
01° 16.710′	103° 45.050′
01° 17.020′	103° 45.020′
01° 16.550′	103° 45.640′

Purpose: For vessels loading or discharging Explosives or Group 1 Dangerous Goods or vessels in transit with such cargo onboard. The maximum amount of Hazard Division 1.1 type explosives allowed on board each vessel is 50 tonnes Nett Explosives Quantity (NEQ).

2.7 *Pasir Panjang Coastal Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 16.400′	103° 46.680′
01° 15.830′	103° 46.290′
01° 16.120′	103° 45.820′
01° 16.250′	103° 45.640′
01° 16.550′	103° 45.640′
01° 17.020′	103° 45.020′
01° 17.300′	103° 45.000′
01° 17.300′	103° 45.280′
01° 17.060′	103° 45.280′

Purpose: For vessels working cargo overside by means of lighters.

2.8 *Pasir Panjang Lighter Mooring* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.133′	103° 45.383′
01° 17.283′	103° 45.450′
01° 17.267′	103° 45.583′
01° 17.350′	103° 45.817′
01° 17.350′	103° 46.167′
01° 17.150′	103° 46.533′
01° 17.017′	103° 46.700′
01° 16.717′	103° 46.500′
01° 17.050′	103° 45.933′

Purpose: For the mooring of licensed wooden lighters.

2.9 *Selat Pauh Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 13.183′	103° 45.617′
01° 12.817′	103° 44.650′
01° 12.817′	103° 43.666′
01° 13.050′	103° 43.033′
01° 13.583′	103° 42.783′
01° 13.783′	103° 43.150′
01° 13.483′	103° 43.850′
01° 13.317′	103° 45.017′
01° 13.417′	103° 45.567′

Purpose: For vessels under Arrest, Laid-up or other vessels on prior permission of the Port Master.

3. *JURONG SECTOR*

3.1 *Sultan Shoal Quarantine* and *Immigration Anchorage* is withdrawn.

3.2 *West Jurong Petroleum Anchorage* is renamed *Sultan Shoal Petroleum Anchorage* and relocated to an area bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 13.919′	103° 37.257′
01° 14.511′	103° 38.811′
01° 13.733′	103° 39.850′
01° 13.350′	103° 39.058′

Purpose: For vessels loaded with Petroleum and for Non-Gas-Free vessels.

3.3 *LNG/LPG/Liquefied Chemical Gas Carriers Anchorage* is relocated and is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 14.900′	103° 36.500′
01° 14.900′	103° 36.800′
01° 14.205′	103° 36.775′
01° 14.367′	103° 36.500′

Purpose: For Non-Gas-Free Liquefied Petroleum Gas Carriers, Liquefied Natural Gas Carriers and Liquefied Chemical Gas Carriers.

3.4 *Tuas Explosives Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 16.295′	103° 36.500′
01° 16.295′	103° 37.525′
01° 15.643′	103° 37.525′
01° 15.643′	103° 36.500′

Purpose: For vessels loading or discharging Explosives and Group 1 Dangerous Goods or vessels in transit with such cargo on board. The maximum amount of the Hazard Division 1.1 type explosives allowed on board each vessel is 500 tonnes Nett Explosives Quantity (NEQ).

3.5 *Tuas Explosives Lighters Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.000′	103° 36.500′
01° 17.000′	103° 36.716′
01° 16.295′	103° 36.716′
01° 16.295′	103° 36.500′

Purpose: For small craft loaded with explosives. The maximum amount of the Hazard Division 1.1 type explosives allowed onboard each craft is 60 tonnes Nett Explosives Quantity (NEQ).

3.6 *West Jurong Anchorage* is bounded by the following co-ordinates:

Latitude (N)	*Longitude (E)*
01° 17.000′	103° 36.716′
01° 17.000′	103° 38.800′
01° 14.900′	103° 38.800′
01° 14.900′	103° 36.500′
01° 15.643′	103° 36.500′
01° 15.643′	103° 36.525′
01° 16.295′	103° 37.525′
01° 16.295′	103° 36.716′

Purpose: For vessels awaiting berth, working cargo, vessels under repairs, or for the mooring of oil rigs.

PILOTAGE: 1. *GENERAL*

1.1 In exercise of the powers conferred by subsection (1) of Section 84 of the Port of Singapore Authority Act (Cap. 236), it is directed that all vessels specified in in paragraph 4 below, unless exempted by the Authority, are to be under pilotage by an Authority Pilot when moving within the Pilotage District.

1.2 Vessels belonging to or operated by the Port of Singapore Authority and the Republic of Singapore Navy are not subjected to this directive.

2. *DEFINITIONS*

2.1 *Pilotage District*

The Pilotage District is described in the Port of Singapore Authority (Pilotage District) Notification 1980. For the purpose of this circular, the Pilotage District is divided into four areas viz., "A", "B", "C" and "D". These areas are defined in Annex I and depicted in Annex II (See "Plan").

2.2 *Height:* The height of vessel referred to in this circular shall be the height of the vessel measured vertically from the waterline of the vessel to the highest point of the vessel including its cargo, structures or equipment on board.

2.3 *Beam:* Beam of vessel referred to in this circular, shall be the maximum breadth of the vessel including protruding structure(s) on the side(s), if any.

3. *COMPULSORY PILOTAGE*

3.1 Compulsory pilotage will be applicable to all liquefied gas carriers and chemical carriers. For purpose of compulsory pilotage, a chemical carrier means any vessel which is carrying or has previously carried as a whole or part of the last cargo in bulk any of those hazardous liquid cargoes listed in Chapter 17 of International Maritime Organization International Code for the Construction and Equipment of Ships Carrying Dangerous Chemicals in Bulk. In the case of a vessel having previously carried as a whole or part of the last cargo in bulk, she shall remain considered as a chemical carrier so long as any of her cargo tanks or cargo system is not completely cleared and removed of any residual cargo.

3.2 Besides liquefied gas carriers and chemical carriers, other vessels to which compulsory pilotage applies, when moving within a particular area of the Pilotage District, are as indicated in Table I.

Table I

Area of Movement	*Vessels to which compulsory pilotage applies*
"A"	Every vessel of 300 g.r.t. and above.
"B"	Every vessel of 5,000 g.r.t. and above.
"C"	Every vessel of 300 g.r.t. and above or overall length exceeding 45 m.
"D"	Every vessel of 300 g.r.t. and above or of a height exceeding 30 m.

4. *PILOTAGE EXEMPTION*

4.1 Vessels to which pilotage exemption may be granted for movement within a particular area of the Pilotage District are as indicated in the Table II below:

Table II

Area of Movement	*Vessels to which pilotage exemption may be granted*
"A"	A vessel of: (a) *Less than 300 g.r.t.:* A blanket exemption is granted unless otherwise specified by the Port Master. (b) *300 g.r.t. and above but less than 2,000 g.r.t.:* Exemption may be granted provided that the vessel is fitted with a VHF radio-telephone which is in good working condition and capable of communicating at all times on the required VHF Channel(s). To seek exemption, the vessel is required to call the appropriate control station by VHF radio-telephone on the designated Channel (See Annex III). (c) *2,000 g.r.t. and above but less than 5,000 g.r.t.:* Exemption may be granted subject to the following conditions: (i) The vessel is fitted with a VHF radio-telephone which is in good working condition and capable of communicating at all times on the required VHF Channel(s) (See Annex III). (ii) In the case of a sea-going vessel, the registered Master shall have brought the vessel into and out of Area "A" on at least 6 occasions within the 12 months immediately preceding the date of application for exemption. For subsequent exemptions, the Master shall have entered and left Area "A" on at least 2 occasions. However, the last of the 2 occasions shall not be more than 6 months prior to the date of application of renewal of exemption. (iii) In the case of a licensed harbour craft, the registered Master shall have served onboard as Master for a period of at least 3 months prior to the application for exemption (iv) In all cases requiring exemption the registered Master shall have satisfied the Port Master of his knowledge of local waters, regulations, etc.
"B"	Normally no exemption from compulsory pilotage. See paragraph 4.2.
"C"	Normally no exemption from compulsory pilotage. See paragraph 4.2.
"D"	A vessel of: (a) *Less than 300 g.r.t. and of a height of more than 30 m.:* Blanket exemption is granted provided the vessel does not enter, leave or transit the Traffic Information Area promulgated in Port Circular No. 90 of 1987 as shown. (See "Plan" – Annex IV.) (b) *300 g.r.t. and above but less than 2,000 g.r.t. and of a height of 30 m. or less:* Exemption may be granted provided that the vessel if fitted with a VHF radio-telephone which is in good working condition and capable of communicating at all times on the required VHF Channel(s). To seek exemption for the intended movement the vessel is required to call the appropriate control station by VHF radio-telephone on the designated Channel (See Annex III); (c) *300 g.r.t. and above but less than 2,000 g.r.t. and of a height of more than 30 m.:* Exemption may be granted provided that the vessel does not enter, leave or transit the Traffic Information Area promulgated in Port Circular No. 90 of 1987 as shown (See "Plan" – Annex IV) and is fitted with a VHF radio-telephone which is in good working condition and capable of communicating at all times on the required VHF Channel(s). To seek exemption, the vessel is required to call the appropriate control station by VHF radio-telephone on the designated Channel (See Annex III). Remarks: All Masters of vessels not under pilotage are reminded of the height restrictions in the various areas of the Port indicated in the navigational charts.

4.2 Vessels engaged in Marine Projects (e.g. Dredging, Reclamation and Port Development projects) to which pilotage exemption may be granted for movement within a particular area of the Pilotage District are as indicated in the Table III below:-

Table III

Area of Movement	*Vessels Engaged in Marine Projects (e.g. Dredging, Reclamation and Port Developments) Which May be Granted Pilotage Exemption.*
"A" or "B"	*A vessel of 5,000 g.r.t. or above but less than 10,000 g.r.t.:* (a) The vessel must be engaged in marine projects which require her to move frequently within this area of the pilotage district. (Marine projects include dredging, reclamation, laying of cable, etc.). (b) The vessel is fitted with a VHF radio-telephone which is in good working condition and capable of communicating at all times on the required VHF channel(s). (See Annex III). (c) The registered Master shall have brought the vessel into and out from the area concerned under pilotage for at least a total of 6 occasions immediately prior to application for exemption. (d) In the case of a sea-going vessel, the registered Master shall have brought the vessel into and out of the area concerned on at least a total of 12 occasions under pilotage within the 12 months immediately preceding the date of application for exemption. For subsequent exemptions, the Master shall have entered and left the area concerned on at least a total of 4 occasions. However, the last of the 4 occasions shall not be more than 3 months prior to date of application for renewal of exemption. (e) The registered Master of the vessel shall follow the route laid down under the conditions for exemption. (f) In all cases requiring exemptions, the registered Master shall have satisifed the Port Master of his knowledge of local waters, regulations, etc.
Area of Movement	*Vessels Engaged in Marine Projects (e.g. Dredging, Reclamation and Port Developments) Which May be Granted Pilotage Exemption.*
"C"	*A vessel of 300 g.r.t. or above or of overall length exceeding 45 metres:* (a) The vessel must be engaged in marine projects which require her to move frequently within this area of the pilotage district. (b) For navigating the Main Channel under the Benjamin Sheares Bridge at the entrance to Kallang Basin, the displacement of the vessel must not exceed 2,500 tonnes and for navigating the Middle Channel under the Benjamin Sheares Bridge at the entrance to Marina Bay the displacement of the vessel must not exceed 2,000 tonnes. (c) In the case of a tow proceeding through the entrance to Kallang Basin, the total displacement of the tug and tow must not exceed 2,500 tonnes and in the case of a tow proceeding through the entrance to Marina Bay, the total displacement of the tug and tow must not exceed 2,000 tonnes. (d) The vessel or the tug, in the case of a tow, to be fitted with a VHF radio-telephone which is in good condition and capable of communicating at all times on the required VHF channel (s). (See Annex III). (e) In the case of a vessels proceeding to or from Kallang Basin, the conditions stipulated under Port Circular No. 76 of 1987 are to be complied with and in the case of a vessel proceeding to or from Marina Bay the conditions stipulated under Port Circular No. 75 of 1987 are to be complied with. (f) The registered Master shall have brought the vessel under pilotage into and out of this area on at least a total of 12 occasions immediately preceding the date of application. (g) In the case of a sea-going vessel, the registered Master shall have brought the vessel under pilotage into and out of the area on at least a total of 24 occasions within the 12 months immediately preceding the date of application for exemption. For subsequent exemptions, the Master shall have entered and left the area on at least a total of 4 occasions. However, the last of the 4 occasions shall not be more than 3 months prior to date of application for exemption. (h) The registered Master of the vessel shall follow the route laid down under the conditions for exemption. (i) In all cases requiring exemption, the registered Master shall have satisfied the Port Master of his knowledge of local waters, regulations, etc.
Area of Movement	*Vessels Engaged in Marine Projects (e.g. Dredging, Reclamation and Port Developments) Which May be Granted Pilotage Exemption.*
"D"	*A vessel of 300 g.r.t. or above but not less than 10,000 g.r.t. requiring to enter, leave or transit the Traffic Information Area:* (a) The vessel must be engaged in marine projects which require her to move frequently within this area of the pilotage district. (b) The vessel is fitted with a VHF radio-telephone which is in good working condition and capable of communicating at all times on the required VHF channel(s). (See Annex III). (c) The registered Master shall be conversant with the reporting procedure required under Port Circular No. 90 of 1987. (d) The registered Master shall have brought the vessel into and out of the area under pilotage, for at least a total of 12 occasions immediately prior to application for exemption. (e) In the case of a sea-going vessel, the registered Master shall have brought the vessel into and out of the area on at least a total of 24 occasions under pilotage, within the 12 months immediately preceding the date of application for exemption. For subsequent exemptions, the Master shall have entered and left the area on at least a total of 4 occasions. However, the last of the 4 occasions shall not be more than 3 months prior to date of application for exemption. (f) The registered Master of the vessel shall follow the route laid down under the conditions for exemption. (g) In all cases requiring exemption, the registered Master shall have satisfied the Port Master of his knowledge of local waters, regulations, etc.

4.3 All vessels except those vessels with a height exceeding 100 m., liquefied gas carriers and chemical carriers, when leaving, entering or shifting within the Changi General Purposes Anchorage are exempted from Pilotage.

4.4 Exemption, when granted, is for the movement other than berthing and unberthing. For berthing and unberthing, the express permission of the Owners/Operators of the berth is also required.

4.5 All exempted vessels, when underway within the Pilotage Areas are to display by day the International Code Flag "N".

4.6 All Masters of vessels are advised not to hamper large or deep draft vessels in the restricted channels of the Port.

4.7 Application forms for pilotage exemption for vessels can be obtained from Port Master's Department, 20th Storey, Tanjong Pagar Complex, Singapore 0208.

5. *TOWAGE WITH PILOTAGE EXEMPTION:*

5.1 Only tugs with harbour craft licence and which are not required to be under pilotage or which have been granted exemption are permitted to tow vessels subject to the following conditions:

(i) For movement within Area "A", the aggregate g.r.t. of the tug(s) and tow(s) is less than 2,000.

(ii) For movement within Area "B", the aggregate g.r.t. of the tug(s) and tow(s) is less than 5,000.

(iii) For movement within Area "D", the aggregate g.r.t. of the tug(s) and tow(s) is less than 2,000 and the height of either is 30 m. or less (Where the tug(s) and tow(s) are required to enter, leave or transit the Traffic Information Area in Port Circular No. 90 of 1987 (See "Plan" – Annex IV) and when either the height of the tug(s) or tow(s) is more than 30 m., compulsory pilotage shall apply).

(iv) Provided that for tow(s) with aggregate GRT exceeding 1,000, the total horse power of tug(s) should not be less than 600 b.h.p.

(v) Compliance with Regulation 49 (3) of the Singapore Port Regulations 1977.

6. *PILOTAGE EXEMPTION FOR VESSELS LESS THAN 2,000 GRT BERTHING/UNBERTHING AT TANJONG PAGAR TERMINAL (T1-K14) OR KEPPEL TERMINAL*

6.1 Owners, Agents and Masters of vessels of less than 2,000 g.r.t. are advised that they may apply for exemption for their vessels from being under pilotage when berthing or unberthing at the Tanjong Pagar Terminal (TPT) Berths No. T1 to K14 or Keppel Terminal.

6.2 Owners, Agents and Masters wishing to apply for the above mentioned pilotage exemption must comply with the following requirements:

(i) The Master of the vessel must have berthed/unberthed the vessel at TPT on at least 3 previous occasions over the last 12 months.

(ii) The Master of the vessel must be capable of communicating with the Berthing Supervisor and tug crew in English.

(iii) The Master of the vessel must be familiar with the location of the various berths (See "Plan").

(iv) The Master of the vessel must be familiar with the details of the quay cranes with regard to positioning, height clearance and outreach. The said details are available under "Berthing Facilities".

(v) The Owner, Agent and Master of the vessel must comply with the requirements set out in the "Pilotage Exemption Procedures for Vessels less than 2,000 g.r.t. Berthing/Unberthing at Tanjong Pagar Terminal (TPT) Berths No. T1 to K14 at Keppel Terminal or at Marina Terminal".

7. *PILOT BOARDING AND DISEMBARKATION GROUNDS*

7.1 The 5 Pilot Boarding Grounds for vessels coming into port are:

(i) Eastern Boarding Ground "A" – in position Lat. 01° 13.52′ N., Long. 103° 53.55′ E.

(ii) Eastern Boarding Ground "B" – in position Lat. 01° 15.50′ N., Long. 103° 57.50′ E. This boarding ground is to be used by all tankers requiring pilots when arriving from the East and proceeding to the appropriate anchorages in the Eastern sector of the port. Other vessels may also use this boarding ground to pick up pilots provided special arrangement has been made with Port Operations Centre. Anchoring is strictly prohibited at this boarding ground as it is within the submarine cable area.

(iii) Southern Boarding Ground in position Lat. 01° 11.60′ N., Long. 103° 49.60′ E. (To be used only through prior arrangement with Port Operations Centre).

(iv) Western Boarding Ground – in position Lat. 01° 13.73′ N.,Long. 103° 36.50′ E.

(v) East Johor Strait Boarding Ground – S.E. of Johor Shoal Buoy in position Lat. 01° 18.00′ N., Long. 104° 05.50′ E.

7.2 The 10 Pilot Disembarkation Grounds are in positions as follows:

No. 1: Lat. 01° 18.47′ N., Long. 104° 05.72′ E.
No. 2: Lat. 01° 16.95′ N., Long. 103° 59.77′ E.
No. 3: Lat. 01° 15.50′ N., Long. 103° 56.90′ E.
No. 4: Lat. 01° 14.25′ N., Long. 103° 54.78′ E.
No. 5: Lat. 01° 13.48′ N., Long. 103° 53.30′ E.
No. 6: Lat. 01° 15.50′ N., Long. 103° 51.87′ E.
No. 7: Lat. 01° 11.75′ N., Long. 103° 49.45′ E.
No. 8: Lat. 01° 10.68′ N., Long. 103° 46.98′ E.
No. 9: Lat. 01° 12.80′ N., Long. 103° 39.28′ E.
No. 10: Lat. 01° 13.97′ N., Long. 103° 37.37′ E.

Vessels may, at the discretion of Port Operations Centre, be directed to make use of the nearest disembarkation grounds.

8. *PILOTAGE ORDERS*

8.1 When placing orders for pilotage service, as much advance notice as possible should be given.

8.2 Pilotage service orders may be placed by the following means in order of priority:

Means of Placing Order	*For Sembawang/East Johor Strait*	*For All Other Areas*
Telex	Sembawang Control Telex RS 35962 Ans. back – SEMCO	Telex Port Operations Centre No. RS 34970 RS 22896 Ans. Back PORTPM
Telephone	Sembawang Control No. 5427112 5427113	Port Operations Centre No. 2233631 2233633
VHF Radio Telephone	Channel 21	Channel 12 or 20

8.3 When placing orders through telex, telephone or VHF radio-telephone, the following information should be provided:

(a) Agent's name and valid PSA account number.

(b) Name of vessel, her call sign and nationality.

(c) Vessel's g.r.t., length overall and height of the vessel. For vessel moving into and out of Area "C", berthing at Sembawang Port Basin, or Tanjong Pagar Terminal, state the maximum beam of the vessel.

(d) Date, time and description of pilotage service required and name and contact number of the person whom Pilot Office should contact.

(e) For arriving vessels, state whether Health/Immigration Clearance is required. State also the applicable Pilot Boarding Ground or if the vessel is at the anchorage, her location in grid reference (refer to Singapore Chart GSP1. Area references are also printed on Nautical Charts G 300, G 301, G 302 and G 303).

Full information on placing of pilotage orders is contained in Port Circular No. 56 of 1986 dated 1st September 1986.

8.4 Personal application for pilotage service is necessary for companies which do not have accounts with the Port of Singapore Authority. The application should be made at the Pilotage Section of Port Master's Department, 20th Storey, Tanjong Pagar Complex, Singapore 0208.

8.5 Vessels are to confirm to Port Operations Centre their ETA at the specified boarding grounds, 2 to 3 hours before arrival. For those bound for the East Johor Strait, confirmation should be made to Sembawang Control, 3 hours before arrival.

8.6 Vessels at anchor and requiring Pilots at night shall exhibit 3 all-round lights in a vertical line. The highest and middle lights shall be white and the lowest light shall be red. By day, the vessels should fly the flag 'G' of the International Code of Signals 1969.

8.7 The Authority reserves the right not to accept orders for Pilot service for vessels at the anchorages, with the exception of the Quarantine/Immigration Anchorages, if the vessels have not reported their anchoring position to Port Operations Centre. All vessels above 300 g.r.t. must report their final anchoring position in the port in terms of bearing and distance from the following reference points:

(i) Eastern Sector	Amber Beacon (in position: Lat. 01° 17.876′ N., Long. 103° 54.450′ E.)
(ii) Western Sector	Tg Rimau Beacon (in position: Lat. 01° 15.60′ N., Long. 103° 48.50′ E.)
(iii) West Jurong and Selat Pauh Anchorages	Sultan Shoal Lighthouse (in position: Lat. 01° 14.38′ N., Long. 103° 38.98′ E.)

9. *TRAFFIC INFORMATION SYSTEM*

Masters of vessels intending to enter, transit or leave the East Johor Strait are to refer to the Port Circular No. 90 of 1987 on Traffic Information System for Ships Transiting The Serangoon Harbour and where applicable, comply with the directives given therein.

10. *ACCESS TO VESSELS*

10.1 Mariners are reminded that Pilots and other Government Officers may, on grounds of personal safety, refuse service unless a safe and satisfactory means of access to the vessel is provided. The safety requirements in respect of pilot ladders, shall be in accordance with Regulation 17 of Chapter 5 of the SOLAS Convention 1974.

10.2 In the case of accommodation ladders and shore gangways, the following should be complied with:

(i) *Accommodation Ladders*

(a) The embarkation and disembarkation of Pilots and Government Officers are to be supervised by a responsible Officer of the ship.

(b) The accommodation ladder is to be in good condition, secured and properly illuminated at night. The landing platform is to be properly adjusted to provide safe access.

(c) A manrope is to be attached to the lower bridge in order to provide a good handhold for boarding, and a lifebuoy with self-igniting light is to be available close to the upper platform.

(d) Discharges in the way of the accommodation ladder are to be properly covered or stopped while the ladder is in use.

(ii) *Vessel and Shore Gangways*

(a) Where a vessel's gangway or a shore gangway is used when the vessel is berthed alongside a wharf, the gangway is to be landed squarely onto the vessel and wharf. No person other than those engaged in the rigging of the gangway should be permitted to embark or disembark before it is properly secured.

(b) Where the gangway is landed onto the ship's bulwark, steps and adequate handholds are to be provided for safe and convenient access.

(c) The gangway shall be adequately illuminated at night and tended by a watchman.

(d) When a shore gangway is used, Masters are advised not to permit it being landed onboard before crew members of the vessel are available to receive it.

Annex I:
PILOTAGE DISTRICT AREAS

1. Area "A" – is defined as that part of the Pilotage District Westwards of the line joining the following positions including the area up to the causeway in the Johor Strait:

(a) Lat. 01° 16.27′ N., Long. 103° 51.43′ E.
(b) Lat. 01° 15.03′ N., Long. 103° 51.87′ E.
(c) Lat. 01° 14.68′ N., Long. 103° 52.28′ E.
(d) Lat. 01° 14.68′ N., Long. 103° 52.77′ E.
(e) Lat. 01° 13.35′ N., Long. 103° 51.87′ E.
(f) Lat. 01° 12.73′ N., Long. 103° 52.12′ E.

2. Area "B" – is defined as that part of the Pilotage District excluding Area "C" Marina Bay and Kallang Basin, Eastward of the line joining the positions referred to in paragraph 1 above up to the line joining the following positions:

(a) Lat. 01° 20.55′ N., Long. 103° 59.80′ E.
(b) Lat. 01° 20.00′ N., Long. 104° 02.80′ E.

3. Area "C" – is defined as follows:

From a position	Lat. 01° 17.890′ N.	Long. 103° 51.980′ E.
by a straight line to a position in	Lat. 01° 17.770′ N.	Long. 103° 51.970′ E.
thence by a straight line to a position in	Lat. 01° 17.658′ N.	Long. 103° 51.974′ E.
thence by a straight line to a position in	Lat. 01° 17.303′ N.	Long. 103° 52.034′ E.
thence by a straight line to a position in	Lat. 01° 17.309′ N.	Long. 103° 51.733′ E.
thence by a straight line to a position in	Lat. 01° 17.186′ N.	Long. 103° 51.733′ E.
thence by a straight line to a position in	Lat. 01° 17.184′ N.	Long. 103° 51.805′ E.
thence by a straight line to a position in	Lat. 01° 17.063′ N.	Long. 103° 52.110′ E.
thence by a straight line to a position in	Lat. 01° 16.927′ N.	Long. 103° 52.305′ E.
thence by a straight line to a position in	Lat. 01° 16.720′ N.	Long. 103° 52.467′ E.
thence by a straight line to a position in	Lat. 01° 16.567′ N.	Long. 103° 52.533′ E.
thence by a straight line to a position in	Lat. 01° 16.683′ N.	Long. 103° 52.733′ E.
thence by a straight line to a position in	Lat. 01° 16.811′ N.	Long. 103° 52.680′ E.
thence by a straight line to a position in	Lat. 01° 16.941′ N.	Long. 103° 52.508′ E.
thence by a straight line to a position in	Lat. 01° 17.333′ N.	Long. 103° 52.150′ E.
thence by a straight line to a position in	Lat. 01° 17.630′ N.	Long. 103° 52.050′ E.
thence by a straight line to a position in	Lat. 01° 17.760′ N.	Long. 103° 52.030′ E.
thence by a straight line to a position in	Lat. 01° 17.850′ N.	Long. 103° 52.040′ E.
thence by a straight line to the point of origin.		

4. Area "D" – is defined as that part of the Pilotage District Northwards of the line joining the following positions up to the causeway in the Johor Strait.

(a) Lat. 01° 20.55′ N., Long. 103° 59,80′ E.
(b) Lat. 01° 20.00′ N., Long. 104° 02.80′ E.
(c) Lat. 01° 20.00′ N., Long. 104° 03.17′ E.
(d) Lat. 01° 19.55′ N., Long. 104° 03.67′ E.
(e) Lat. 01° 18.75′ N., Long. 104° 04.40′ E.
(f) Lat. 01° 18.30′ N., Long. 104° 05.63′ E.
(g) Lat. 01° 19.30′ N., Long. 104° 05.78′ E.

Annex II: See "Plan".
Annex III:
REPORTING STATIONS

Station	*Function*	*VHF Channel*	*Frequency (MHz)*
Port Operations Centre	General Reporting	12	156.60
	Pilotage Service and Information	20	157.00 161.60
Sembawang Control	Reporting Station for East Johor Strait	21	157.05 161.65
Jurong Control	Reporting Station for Jurong Area	21	157.05 161.70

RESTRICTIONS:
Navigational Channels:

Name	*Controlling Depth*
Johor Shoal Buoy to Johor Port Water Front	12.4 m.
Johor Port Water Front to Sembawang Shipyard	11.4 m.
Sembawang Shipyard to Ordnance Reach	10.9 m.
Approach Channel to Tg. Pagar Container Terminal	14.0 m.

West Jurong Fairway (Triton to Tembuan)	11.0 m.
Selat Sakra	12.0 m.
Pasir Panjang Fairway	11.5 m.
Sultan Fairway	13.6 m.

Also see "Bridges".

MAX. SIZE: See "Berthing" and "Tankers".

HEALTH: Also see "Notice".

INWARD HEALTH CLEARANCE FOR VESSELS ARRIVING SINGAPORE:

1. All vessels arriving Singapore are required to have a valid Derat Certificate/Derat Exemption Certificate.
2. Only the following vessels need to notify Port Health Office (4-12 hours in advance) for inward Health Clearance prior to arrival.
   (a) Vessels have been in plague infected area within 60 days prior to arrival in Singapore.
   (b) Vessels with illness on board.
   (c) Vessels with death on board.
   (d) Vessels with dead rodents on board.
   (e) Vessels with refugees on board.
3. Outward Health Clearance is not required for any vessel.
4. For detailed information, please refer to the Port Circular No. 42 of 1985 or call the Port Health Office at:

7 Keppel Road, 02-14 Tanjong Pagar Complex, Singapore 0208.
Tel: 2226924, 2222585.

IMMIGRATION CLEARANCE: Also see "Notices".

Port of Singapore Authority – Port Circular No. 70/87. Dated 15th September 1987.

IMMIGRATION CLEARANCE:

The Immigration Department has informed us that the contents in Port Circulars Nos. 87 of 1984 and 21 of 1987 regarding Immigration Clearance have been revised. We reproduce below the contents of the revised circulars. Port Circulars Nos. 87 of 1984 and 21 of 1987 are hereby superseded.

INWARD CLEARANCE **Appendix 'A'**

Physical Clearance: Owners/Agents requesting clearance for vessels are required to contact the appropriate offices and to follow the procedures as outlined below:

Location for Clearance	*Office covering the Location*	*Telephone No./ VHF Channel*
Eastern/Western Quarantine and Immigration Anchorages, PSA Wharves, Western Sector Anchorages	The Seaman's Section World Trade Centre	2730527/VHF Channel 14 } 24 hours
Jurong Fishing Port	Immigration Office at the Jurong Fishing Port	2652818
Sembawang Port	Immigration Woodlands Checkpoint	2692531

The Owners/Agents contacting the Immigration Office regarding the ETAs of their vessels are required to give the following information. Such ETAs should be given at least 12 hours before the arrival of their vessels. The office for this purpose provides a 24-hour service.

(i) Name of Vessel;
(ii) Location for clearance of the Vessel;
(iii) Expected time of arrival (ETA);
(iv) Last/Next Port of Call;
(v) Agent of Vessel;
(vi) Owner of Vessel;
(vii) Number of Passengers, if any, on board;
(viii) Stowaway/Unauthorised persons/survivors, if any, on board.

Any vessel arriving in Singapore, excluding those vessels which have been granted Advance Immigration Clearance, must proceed to the prescribed Immigration and Quarantine Anchorage for Immigration Inward Clearance.

Such a vessel on arrival must exhibit the necessary signal for easy identification and speedy clearance. The Immigration signal is:

(a) by day, the flags in the International Code of Signals corresponding to:
   (i) the numerals "25" in respect of vessels not carrying passengers; or
   (ii) the numerals "34" in respect of vessels carrying passengers.
(b) by night, in every case, 2 green lights mounted vertically, 6 ft. apart, visible all-round the horizon for a distance of at least 2 miles.

Owners/Agents and Masters must ensure that their vessels have proper and secure gangways which are ready on arrival so that Immigration Officers can board their vessels immediately. The use of rope-ladders is discouraged. Co-operation in this regard will enable Immigration Officers to grant fast clearance.

Procedure on Board:

The Master is required to submit 6 copies of the Crew List and if there are passengers, 4 sets of the Passenger List to the Clearing Officer who boards the vessel. The Master has to certify on the original Crew List that the details in the lists submitted are correct and that there are no stowaways or unauthorised persons on board.

If requested by the Clearing Officer, Seaman's Books/travel documents will have to be produced. Crew members may be required to present themselves before the Officer.

All passengers shall present themselves before the Clearing Officer. Disembarking passengers shall complete the Disembarkation Forms (IMM 23A). Agents may obtain the forms from the Immigration Field Division Headquarters.

The Master shall execute the Seaman's Security Bond, bonding crew members (except the Master) for $1,000/–each. If there are persons who are refused entry by the Clearing Officer, the Master shall execute the Security Bond, bonding such persons who are refused entry, for not less than $2,000/– each.

Summary action will be served on the Master giving him the names of all those who have been refused entry, and/or the breakdown figures of the transit passengers and disembarking passengers.

When clearance has been granted, the Master shall haul down the Immigration signal upon the Immigration Officer leaving the vessel.

OUTWARD CLEARANCE **Appendix 'B'**

Physical Checkout: Agents requiring physical checkout of vessels should contact the following offices:

Location of Vessel	*Office of Contact*	*Telephone No./ VHF Channel*
Eastern/Western Quarantine and Immigration Anchorages PSA Wharves, Western Sector Anchorages	The Seaman's Section World Trade Centre	2730527/VHF Channel 14 } 24 hours
Jurong Fishing Port	Immigration Office at the Jurong Fishing Port	2652818
Sembawang Port	Immigration Woodlands Checkpoint	2692531

Procedure:

Vessels requesting Immigration Outward Clearance must either fly the "Blue Peter" in addition to the "25" or "34" signals during the day. By night to display 2 green lights in every case mounted vertically 6 ft. apart, visible all-round the horizon for a distance of at least 2 miles. This is to assist the Officers in locating the vessel.

The Master is required to submit 2 sets of Crew Lists and if applicable 3 sets of Passenger Lists to the Checking-Out Officer. The Master should certify on the Crew Lists that all crew are on board. Passengers if any and persons who have been refused entry will have to be presented to the Checking-Out Officer.

INWARD CLEARANCE **Appendix 'C'**

Advance Immigration Clearance:

Procedure in Respect of Vessels which are Eligible for AIC.

(i) The Advance Immigration Clearance (AIC) facility is extended to merchant vessels over 75 n.r.t. and which are carrying not more than 12 passengers, but excluding fishing vessels.

(ii) Applications to be submitted at least 6 hours before arrival of vessel.

(iii) The Owner/Agent of the vessel shall obtain from the Master by radio or post the requisite information as outlined below.

(iv) The Owner/Agent shall submit 5 Crew Lists, Transit Passenger Lists (if any), Disembarking Passenger Lists (if any), in quadruplicate to the Immigration Checkpoint, Finger Pier Building, South Quay. All lists must be inserted with the necessary details and must be duly signed by the authorised representatives of the Owner/Agent of the vessel.

(v) If AIC is granted, one copy of each of the Crew List, Transit Passenger List, and Disembarking Passenger List bearing the appropriate Immigration endorsements can be collected by the Owner/Agent on execution of the relevant documents such as Seaman's or other Security Bonds. If any person is not permitted to land, the Owner/Agent will be required to inform the Master of the vessel accordingly and upon the ship's arrival must ensure that such person in fact does not disembark from the vessel.

(vi) After the arrival of the vessel, it shall be the responsibility of the Owner/Agent to submit immediately the Master's copy of the Crew List and/or Passenger List to the Immigration Finger Pier Checkpoint, bearing the signature of the Master of the vessel certifying that the details previously submitted through the Owner/Agent are correct. Whenever required, travel documents and Seaman's Books of the crew and/or passengers must be handed over to the Immigration Finger Pier Checkpoint, for checking within 4 hours of the vessel's arrival. Passengers will not land until their passports have been endorsed with the appropriate passes.

(vii) If the vessel is arriving from an infected port, provisional Radio Pratique should first be obtained from Port Health Authorities before AIC can be considered.

INWARD CLEARANCE **Appendix 'D'**

Advance Immigration Clearance for supply vessels plying between Singapore and oil rigs:

1. *Description of Vessels:* Supply vessels based at Singapore which ply between Singapore and oil rigs situated in waters near the neighbouring countries.

2. (a) *A supply vessel arriving without change of crew:* The Owner/Local Agent of a supply vessel, after receiving from the oil rig Superintendent by radio, must submit 2 copies of the vessel's Crew List to the Immigration Officer at the Immigration Finger Pier Checkpoint at least 2 hours before the vessel arrives at the Port Limits. The Crew List should bear a written certification by the Owner/Local Agent that the vessel will be arriving at Singapore without any change of crew since its last departure from Singapore.

After submission of these certified Crew Lists, the Owner's/Local Agent's representatives will be required to execute the usual documents such as Seaman Security Bond.

(b) *A supply vessel arriving with a change of crew:* If the Owner/Local Agent is able to communicate with an arriving supply vessel, and if there has been a change of crew, the Owner/Local Agent must submit 5 copies of the Arrival Crew List to the Immigration Officer at Immigration Finger Pier Checkpoint, at least 12 hours before the vessel's arrival at the Port Limits. If Advance Immigration Clearance is given, the Owner's/Local Agent's representatives will execute the usual bonds and inform the vessel accordingly.

(c) *A supply vessel arriving with passengers:* No Advance Immigration Clearance is available.

(d) *A supply vessel arriving in Singapore from oil rigs located on the high seas or South China Sea:* No Advance Immigration Clearance will be granted.

(e) Any Advance Immigration Clearance for a vessel requiring Health Clearance will be subject to the condition that Health Pratique is provided by Port Health Authorities.

Shipmaster's Report: August 1987.

A Crew List is to be sent to the Agent in advance of the vessel's arrival and is to include – name, rank, nationality, Seaman's Book number and date and place engaged.

RADIO:

Radiotelegram Services to Ships (Radiotelephony):

Singapore Radio Working Schedules for MF/HF Radiotelephony:

1. The following schedules of watch-keeping will be operated by the Singapore Coast Station:

Singapore Radio	*Transmit Frequency* (kHz)	*Hours of Watch* (UTC)	*Ship Transmit Frequency* (kHz)	*Remarks*
9VG4	2182	Continuous	2182	Call, Reply and Safety
9VG87	4125	Continuous	4125	
9VG88	6215.5	Continuous	6215.5	
9VG89	8780.9	Continuous	8257	Common Calling Frequencies
9VG90	13162.8	Continuous	12392	
9VG91	17294.9	Continuous	16522	
9VG5	2760	Continuous	2527	Working Frequencies
9VG60	4369.8	Continuous	4075.4	
9VG63	8728.2	Continuous	8204.3	
9VG67	13156.6	Continuous	12385.8	

2. Singapore Radio maintains a continuous watch on Call, Reply, Safety and Common Calling Frequencies.

Navigational Warnings and Weather Bulletins:

1.Navigational Warnings and Weather Bulletins for shipping are broadcast from Singapore Radio at the following times:

Singapore Radio	*Frequency* (kHz)	*Times* (UTC)	*Remarks*
9VG 5 9VG63	2760 8728.2	0145	Navigational Warnings and Weather Bulletin.
9VG 5 9VG63	2760 8728.2	0405 0805	Navigational Warnings only.
9VG 5 9VG60	2760 4369.8	1345	Navigational Warnings and Weather Bulletin.

2. The broadcast will normally be made on the two listed frequencies simultaneously except during transmitter maintenance periods when the broadcast will be made on the two frequencies consecutively.

Traffic Lists:

1. Singapore Radio will transmit Traffic Lists on the following two listed frequencies simultaneously except during transmitter maintenance periods when the list will be broadcast on the two frequencies consecutively:

Singapore Radio	*Frequency* (kHz)	*Times* (UTC)
9VG 5 9VG63	2760 8728.2	0005, 0405, 0805 and 1205
9VG 5 9VG60	2760 4369.8	1605

Medical Advice to Ships:

1. A radio Medical Advice service is available to ships of all nationalities and no charge is made for this service.

2. Radiotelegrams requesting medical advice should state briefly and clearly the symptoms of the illness of the person affected and contain a brief description of the contents of the medical chest carried by the ship. Such telegrams should be in English Language, be signed by the Master of the ship and addressed "Radiomedical Singapore".

3. In very urgent cases, the urgency signal (PAN) may be used in order to ensure priority over all other communications, with the exception of those relating to distress calls.

MF and HF Telephone Service:

1. General. The MF and HF radiotelephone service is available continuously to ships at sea, subject to radio propagation conditions, and provided that the ships are suitably equipped.

Ships wishing to contact Singapore Radio may do so on any of the calling carrier frequencies listed under "Radio Working Schedules" above.

After establishing contact, the call will be booked. Both the coast and ship station will then change over to any one of the following frequencies as agreed upon by both stations (depending on the position of the vessel and the time of day) prior to connecting the telephone subscriber.

Singapore Radio	*Transmit Frequency (kHz)* *Coast*	*Ship*	*Remarks*
9VG52	2780	2685	Connection to the telephone system on demand
9VG61	4376	4081.6	
9VG62	6509.5	6203.1	
9VG64	8762.3	8238.4	
9VG65	8790.2	8266.3	
9VG66	13147.3	12376.5	
9VG68	17270.1	16497.2	
9VG69	17356.9	16584	
9VG70	22630.1	22034.1	

Maritime Radiotelex service available.

Enquiries regarding the Maritime Mobile Services may be made to the Supervisor at either Singapore Radio or the International Telephone Exchange as appropriate, or in writing to Telecoms, Comcentre, Exeter Road, Singapore 0923.

VHF: VHF Radio Telephony transmitting and receiving Channels used within the Port of Singapore. All the stations offer a 24-hour service.

Station	*Frequency* (MHz)	*Channel*	*Functions*
Singapore Port Operations	156.60	12	VHF Channels for reporting ETAs, departures and location of ships within the Port.
Singapore Port Operations	157.00 161.60	20	Pilotage Service and information.

Notice: *Port Marine Circular No. 6 of 1990:*

(A) NOTIFICATION OF ARRIVAL AND VHF REPORTING PROCEDURE FOR ARRIVAL AND DEPARTURE VESSELS.

(B) VESSEL TRAFFIC INFORMATION SERVICE.

1. This Port Marine Circular (No. 6 of 1990) comes into effect on 1st October 1990 and supersedes Port Circular No. 88 of 1987 and Port Marine Circular No. 5 of 1990.
2. The directives and requirements stipulated in Part A of this Circular regarding the notification of a vessel's arrival and a vessel's VHF confirmation of Arrival Report are made pursuant to Regulation 3 of the Singapore Port Regulations 1977.
3. This Circular is in 2 parts. Part A revises the arrival and departure vessel VHF reporting requirements to include operation of the Vessel Traffic Information Service (VTIS). Part B introduces the VTIS operation to the shipping community. Designated control centres, use of VHF frequencies and position reference points are contained in the Appendices to this Circular.
4. For the purpose of this Circular. Notification of arrival is the advance notice given to the Port Master of a vessel's intention to enter the Port of Singapore. Confirmation of arrival is the VHF report given to the Port Master confirming a vessel's intention to enter the Port when it is within VHF radiotelephone range.

PART A NOTIFICATION OF ARRIVAL AND VHF REPORTING PROCEDURE FOR ARRIVAL AND DEPARTURE VESSELS

5. *NOTIFICATION OF ARRIVAL*

5.1 *APPLICATION*

The Owner, Agent and Master or person-in-charge of every vessel of 500 g.r.t or more which intends to enter the Port of Singapore shall notify the Port Master at least 12 hours before the arrival of such vessel by any of the following means: -

(a) Radio Telegram: Addressed to "Portmaster Singapore".
(b) Telex: Addressed to "Portmaster". Telex: RS 34970. Answerback PORTPM RS 34970.
(c) Telefax: Addressed to "Portmaster". Fax: 3212016.
(d) Portnet: Through pilot order transaction.

5.2 The Owner, Agent, Master or person-in-charge of such a vessel, coming from a nearby port with less than 12 hours steaming time to Singapore, shall immediately on departure from such port notify the Port Master by any one of the means of communication mentioned above in paragraph 5.1.

5.3 *FORMAT – NOTIFICATION OF ARRIVAL*

The Owner, Agent, Master or person-in-charge of the vessel shall provide the information in the following format:

Format	*Explanation*
(A) NAME	Name of vessel.
(B) CALL SIGN	Call Sign.
(C) FLAG	Nationality.
(D) TYPE	Type of vessel.
(E) GRT	Gross registered tonnage.
(F) AGENT	Name of local shipping agency.
(G) ETA	Date and estimated time of arrival.
(H) LAST PORT	Last port of call.
(I) NEXT PORT	Next port of call.
(J) DRAFT	Draft of vessel.
(K) HEIGHT	Height of vessel which shall be the height measured vertically from the water line of the vessel to the highest point of the vessel including its cargo, structure or equipment onboard.
(L) LOCATION	Required location within the port.
(M) PORT SERVICE	Whether or not pilot service is required on arrival.
(N) TRACK-CHEM	Dangerous chemicals in bulk. This item shall apply to a vessel carrying those dangerous chemicals listed in Chapter 17 of the International Maritime Organisation's (IMO) International Code for the Construction and the Equipment of Ships Carrying Dangerous Chemicals in Bulk (IBC Code). See Port Circular No. 87 of 1987, entitled "Tracking of Chemical Carriers".
(O) REMARKS	If any.

The following remarks, when applicable, shall always be given:

(i) Condition affecting the navigation of vessel such as defective propulsion machinery, defective steering equipment, defective thruster, excessive list and awkward tows.
(ii) Fire or hazards onboard of including carriage of dangerous goods.
(iii) Damaged vessels.
(iv) Vessels damaged by bombs and other ordnances.

6. *CONFIRMATION OF ARRIVAL – VHF (VERY HIGH FREQUENCY) RADIOTELEPHONE REPORT*

6.1 *APPLICATION*

The Master of every vessel of 300 g.r.t or more or every tug engaged in towing or pushing, if the combined GRT of the tug and tow or vessel(s) being pushed is 300 g.r.t. or more, or any passenger vessel intending to enter the Port of Singapore, shall with effect from 1st October 1990 report by VHF the confirmation of arrival to the Singapore Vessel Traffic Information Service (VTIS).

6.1.1 For ease of reporting, the VTIS operational area is divided into VTIS East and VTIS West. Further details of the VTIS can be found in Part B of this Circular.

6.2 *VHF ARRIVAL REPORTING POINTS*

6.2.1 *REPORTING VIA VTIS EAST*

Masters of such vessels arriving in the Port of Singapore via the VTIS East operational area shall report their confirmation of arrival to VTIS East operator on Channel 10 when:

(a) Arriving from the East (South China Sea):
When abeam of Horsburgh Lighthouse (Lat. 01° 19.817′ N, Long. 104° 24.444′ E.).
(b) Arriving from the South via Selat Riau:
When abeam of Karang Galang Light (Lat. 01° 09.580′ N, Long. 104° 11.470′ E.).
(c) Arriving from East Johor Strait:
When abeam of Johor Shoal Buoy (Lat. 01° 18.880′ N, Long. 104° 04.992′ E.).

6.2.2 *REPORTING VIA VTIS WEST*

Masters of such vessels arriving into the Port of Singapore via the VTIS West operational area shall report their confirmation of arrival to VTIS West operator on Channel 10 when:

(a) Arriving from the South via Selat Durian:
When abeam of Pulau Jangkat Beacon (Lat. 00° 05.920′ N, Long. 103° 42.730′ E.).
(b) Arriving from the West (Malacca Strait):
When abeam of Pulau Iyu Kechil (Lat. 01° 11.470′ N, Long. 103° 21.240′ E.).

6.2.3 Master of vessels approaching from a location not mentioned in (a) – (e) above shall on approaching the VTIS operational area call the VTIS East or VTIS West operator as appropriate and provide the vessel's position by bearing and distance from one of the 7 conspicuous reference points listed in Appendix II of this Circular.

6.3 *VESSELS WITH ORDER FOR PILOT SERVICES ON ARRIVAL*

6.3.1 Masters of all vessels arriving at a Singapore Pilot boarding ground shall confirm their ETA on VHF Channel 10 by calling VTIS East or VTIS West as appropriate. They shall do so when passing the reporting points mentioned above in paragraph 6.2 or when at least 2 hours prior to arrival at the pilot boarding ground, whichever is earlier.

6.3.2 In confirming the ETA at pilot boarding ground, the Master shall also report for Confirmation of Arrival by providing the information required in Paragraph 6.4. If this report is made before crossing the reporting point, then the Master need only report the vessel's name and position when passing the reporting point.

6.4 *CONTENTS OF VHF CONFIRMATION OF ARRIVAL REPORT*

The VHF Confirmation of Arrival report shall contain the following information:

(a) Name of vessel.
(b) Call sign.
(c) Present location with reference to any one of the designated reporting points described in Paragraph 6.2, e.g. abeam of Horsburgh Lighthouse.
(d) I. For vessel not requiring pilot services on arrival, then the name of the first destination in the Port, i.e. name of anchorage or berth, and the estimated time of arrival (ETA) at that destination.
    II. For vessels requiring pilot services on arrival, then in lieu of I., the name of the pilot boarding ground and the ETA at that boarding ground.
(e) Height of vessel as defined in Paragraph 5.3(K) above.
(f) Maximum draft of vessel.
(g) Remarks, if any (e.g. damaged vessel, unusual trim).
(h) For deep draft vessel and VLCC as defined in the "Rules for Vessels Navigating through the Straits of Malacca and Singapore", then the estimated time and place of crossing or joining the Singapore Strait TSS.

6.4.1 Where there are no changes to the information contained in (e) to (g) above from the Notification of Arrival made under Paragraph 5, the Master shall affirm that it is so and the repetition of such information in the Confirmation of Arrival report shall not be necessary.

7. *REPORTING ARRIVAL IN THE PORT*

The Master of an arrived vessel, fitted with VHF radiotelephone, shall report as soon as practicable to the appropriate designated control centre on VHF Channel 12, 21 or 22, when such a vessel is anchored or moored within the port limit of Singapore. The report shall contain the date, time and the location of the vessel.

8. *ANCHORED POSITION REPORT*

For the reporting of an anchored location, the report shall be in the form of a bearing and distance from one of the following position reference points:

(a) *Eastern Sector*	*Reference Point*
Eastern Special Purposes Anchorage (A) Eastern Special Purposes Anchorage (B) Small Craft Anchorage Laid-up Vessels Anchorage Eastern Petroleum Anchorage (B) Eastern Petroleum Anchorage (C) Man-of-War Anchorage Eastern Working Anchorage Eastern Petroleum Anchorage (A) Eastern Quarantine and Immigration Anchorage Explosives Anchorages for Lighters and Barges	Amber Beacon Lat. 01° 17.876′ N. Long. 103° 54.450′ E. (all anchorages)

(b) *Western Sector*	
Western Working Anchorage Western Petroleum Anchorage (A) Western Petroleum Anchorage (B) Western Quarantine and Immigration Anchorage Reserved Anchorage Pasir Panjang Coastal Anchorage Dangerous Goods Anchorage	Rimau Beacon Lat. 01° 15.598′ N. Long. 103° 48.496′ E. (all anchorages)

(c) *Jurong Sector*	
Sultan Shoal Petroleum Anchorage (B) Sultan Shoal Petroleum Anchorage West Jurong Anchorage Chemical/Gas Carriers Anchorage Selat Pauh Anchorage Tuas Explosives Anchorage Tuas Explosives Lighter Anchorage	Sultan Shoal Lighthouse Lat. 01° 14.381′ N. Long. 103° 38.985′ E. (all anchorages)

(d) *East Johor Strait*	
Changi General Purposes Anchorage	Johor Shoal Buoy Lat. 01° 18.880′ N. Long. 104° 05.992′ E.

9. *REPORT FOR INTRA-PORT VESSELS MOVEMENTS*

Prior to moving a vessel within the port limits of Singapore, the Master shall as soon as practicable report such event or intention to the designated control centre giving the following:

(a) Name of vessel.
(b) Call sign.
(c) Present location.
(d) Destination.
(e) Draft.
(f) Height.
(g) Remarks, if any.

10. *VHF REPORT FOR DEPARTING VESSELS*

10.1 PRIOR TO DEPARTURE

The Master of every vessel, as specified in Paragraph 6.1 intending to leave Singapore, shall inform the appropriate designated control centre prior to departure, and shall give the information as specified in Para 9 above. In addition, the Master shall advise the departure reporting points he intends to use. Departure reporting points are contained in Paragraph 10.3 below.

10.2 *ON DEPARTURE*

The Masters of such vessel leaving Singapore shall report to the Singapore VTIS East or West on VHF Channel 10 when passing any of the departure reporting points.

10.3 *VHF DEPARTURE REPORTING POINTS*

10.3.1 *REPORTING VIA VTIS EAST*

Master of such vessels departing from the Port of Singapore and joining the Singapore Strait traffic via the VTIS East operational area shall report to VTIS East operator on Channel 10 when:

(a) Departing from the East Johor Strait:
When abeam of Johor Shoal Buoy (Lat. 01° 18.880′ N., Long. 104° 04.992′ E.).
(b) Departing from the Eastern Petroleum B Anchorage:
When abeam of Airway Buoy (Lat. 01° 17.650′ N., Long. 104° 01.200′ E.).
(c) Departing from the Eastern Fairway:
When abeam of Lagoon Beacon (Lat. 01° 16.637′ N., Long. 103° 57.529′ E.).
(d) Departing from the Corridor Fairway:
When abeam of S.W. Corridor Buoy (Lat. 01° 14.450′ N., Long. 103° 54.167′ E.).
(e) Departing from the East Keppel Fairway:
When abeam of Tembakul Beacon (Lat. 01° 13.343′ N., Long. 103° 51.858′ E.).

10.3.2 *REPORTING VIA VTIS WEST*

Master of such vessels departing from the Port of Singapore and joining the Singapore Strait traffic via the VTIS West operational area shall report to VTIS West operator on Channel 10 when:

(f) Departing from the Jong Fairway:
When abeam of Sebarok Beacon (Lat. 01° 11.841′ N., Long. 103° 462′ E.).
(g) Departing from the Sinki Fairway:
When abeam of Ajax Shoal Buoy (Lat. 01° 13.733′ N., Long. 103° 39.850′ E.).
(h) Departing from the Sultan Fairway:
When abeam of Sultan Shoal Lighthouse (Lat. 01° 14.381′ N., Long. 103° 38.985′ E.).
(f) Departing from the West Jurong Anchorage, the Gas and Chemical Anchorage and the Sultan Shoal Petroleum Anchorage:
When abeam of Western Beacon (Lat. 01° 12.720′ N., Long. 103° 35.883′ E.).

10.3.3 Master of vessels departing from a departure point not mentioned in (a) to (i) above shall, on approaching the Singapore Strait traffic area, call the VTIS East or VTIS West operator as appropriate, and provide the vessel's position by bearing and distance from one of the 4 reference points listed below:

Sultan Shoal Lighthouse	01° 14.381′ N., 103° 38.985′ E.
Raffles Lighthouse	01° 09.609′ N., 103° 44.552′ E.
Sakijang Beacon	01° 13.308′ N., 103° 51.378′ E.
Bedock Lighthouse	01° 18.548′ N., 103° 56.068′ E.

10.4 *CONTENTS OF DEPARTURE REPORT TO VTIS*

The departure report to the Singapore VTIS shall contain the following information:

(a) Name of vessel.
(b) Call sign.
(c) Current location passing which departure point, e.g. abeam Tembakul Beacon.
(d) Bound East, West or South.
(e) Remarks, if any.

11. *MALFUNCTION OF VHF RADIOTELEPHONE EQUIPMENT*

11.1 When it is not possible to operate the VHF radiotelephone equipment carried on board a vessel, compliance with Paragraphs 6, 7, 8, 9 and 10 above shall be made as soon as practicable by any available means.

11.2 The Master shall at the earliest opportunity restore such VHF radiotelephone carried on board his vessel to working condition and report to the designated communication centre accordingly.

PART B SINGAPORE VTIS (VESSEL TRAFFIC INFORMATION SERVICE)

12. The Port of Singapore Authority is establishing a Vessel Traffic Information Service (VTIS) which will commence operations on 1st October 1990. It is hoped that with the operation of the system, it will be possible to inform participating vessels of dangers affecting their navigation. The VTIS operation is part of the PSA's Port Operation Centre.

13. *OBJECTIVES OF THE VTIS*

The objectives of the VTIS are as follows:

(a) Improve safety of navigation in the Singapore Strait.
(b) Facilitate the safe flow of shipping in and out of the Port of Singapore.
(c) Provide navigational information to vessels using the Singapore Strait.

14. *VTIS OPERATIONAL AREA*

The VTIS will assist marine traffic within the Singapore Strait Traffic Separation Scheme (TSS) bounded by Long. 103° 25.0′ E. and Long. 104° 23.0′ E. The VTIS coverage is divided into two areas, namely VTIS East and VTIS West, by Long. 103° 51.2′ E.

14.1 *VTIS EAST*

Vessels East of Long. 103° 51.2′ E. shall communicate to the VTIS East operator.

14.2 *VTIS WEST*

Vessels West of Long. 103° 51.2′ E. shall communicate to the VTIS West operator.

15. *VTIS RADAR POSITIONS*

The 5 radars are located at the following positions:

	Site	*Latitude*	*Longitude*
(a)	Horsburgh	01° 19.818′ N.	104° 24.456′ E.
(b)	Bedok	01° 18.845′ N.	103° 57.327′ E.
(c)	St. John	01° 12.832′ N.	103° 51.201′ E.
(d)	Raffles	01° 09.641′ N.	103° 44.575′ E.
(e)	Sultan Shoal	01° 14.386′ N.	103° 38.998′ E.

16. *VTIS VHF COMMUNICATION FACILITIES*
VHF transmitters and receivers are located at the Horsburgh Lighthouse, Bedok Lighthouse, Jurong Control Station and the Sultan Shoal Lighthouse. The VHF frequencies operated by the Singapore VTIS are:
(a) Primary VTIS operation frequency 156.500 MHz Channel 10.
(b) Secondary VTIS operation frequency 156.675 MHz Channel 73.

VHF Channel 10 will be used for the calling and working of the VTIS. The secondary channel will be used for prolonged communication. An invitation to listen to Channel 73 will be broadcast on Channel 10, after which the navigational warnings will be transmitted on Channel 73.

17. *VTIS PARTICIPANTS*
All vessels and tows of 300 g.r.t. or more and all passenger vessels intending to enter or depart from the Port of Singapore in reporting as required in Part A of this Circular are participating in the VTIS.

All vessels transitting the Singapore Strait and not calling at Singapore should also participate by following the procedure and reporting the applicable information to the VTIS as contained in Paragraph 6 of this Circular.

18. *REPORTING POINTS FOR PARTICIPATION*
These are the same as those contained in Paragraph 6 of this Circular.

19. The effectiveness of the VTIS is to an extent dependent on the accuracy of the information provided and timely reporting by Masters. As with all other similar reporting systems in the world, Masters, in providing or receiving information to/from VTIS, are not relieved from the duties and responsibilities required by any international regulations and local rules that are in force.

APPENDIX I

Designated Communication Centre	*Channel*	*Usage*
VTIS East/VTIS West	10	Reporting of arrival by vessels on approaching the VTIS operational area. Report by departing vessels on reaching the port limit. Confirmation and Amendments of ETA at pilot boarding ground. Primary calling and working channel of the VTIS and provision of marine traffic information.
	73	Radio broadcasting of marine traffic and navigational warnings. Secondary VHF channel for VTIS participants.
Singapore Port Operations	12	Request of pilotage service. Reporting of anchored positions, intra-port movements for vessels and pre-departure calls, as well as navigational or shipping information.
	20	Request of pilotage service.
Jurong Control	22	Reporting of anchored positions, intra-port movements, and pre-departure calls, as well as navigational or shipping information within the Jurong areas.
Sembawang Control	21	Request of pilotage service, intra-port movements and pre-departure calls, as well as navigational or shipping information within the East Johor Strait.

APPENDIX II

Fixed Reference Points: The 7 fixed reference points are as follows:

Reference Name	Latitude	Longitude
Pu Iyu Kechil Light	01° 11.470′ N.	103° 21.240′ E.
Sultan Shoal Lighthouse	01° 14.381′ N.	103° 38.985′ E.
Raffles Lighthouse	01° 09.609′ N.	103° 44.552′ E.
Sakijang Beacon	01° 13.308′ N.	103° 51.378′ E.
Bedok Lighthouse	01° 18.548′ N.	103° 56.068′ E.
Tg. Setapa Light	01° 20.570′ N.	104° 08.240′ E.
Horsburgh Lighthouse	01° 19.817′ N.	104° 24.444′ E.

Source: PMC No. 6 of 1990.

TUGS: PSA has a fleet of 12 tugs, they are:

Name	*Horsepower*	*Bollard Pull* (tonnes)
VST 1	2×1,276	21.5
VST 2	2×1,276	21.3
VST 3	2×1,276	21.0
VST 4	2×1,276	22.1
Victory (V5)	2×1,500	26.0
Vigilant (V6)	2×1,500	32.0
Valiant (V7)	2×1,500	29.0
Vanguard (V8)	2×1,500	32.5
Vertex (V9)	2×1,500	28.5
Valour (V10)	2×1,500	28.5
Viking (V11)	2×1,500	30.0
Alpha 1	2×1,300	26.0

Shell operates 2 tugs approximately 1,500 b.h.p. A number of privately owned salvage tugs make the port their base.

Tugs join anywhere in port limits by pre-arrangement with Pilots. Normally ship's line used. All PSA and Shell tugs carry tow ropes for use if required. PSA charge for use of tow rope.

BERTHING: Vessel's Agents should submit to Authority a Schedule "A" (Application for Berth) giving overall length, maximum draft alongsid cargo particulars, ETA and ETD of, and Dangerous Cargo Declaratio listing out dangerous cargo (including petroleum products an explosives) on board vessel at least 48 hours before berth required.

BERTHING FACILITIES:

NOTE: All depths are reduced to Chart Datum unless otherwise state

† Only controlling depths that are shallower than the depths alongsid are listed.

STEVEDORES: Labour should be ordered by 0900 hrs. for 2nd shift (1500 to 2300 hrs.) on same day and by 1300 hrs. for 1st shift (0700 to 1500 hrs.) for next day, by 1100 hrs. for 3rd shift (2300 to 0500 hrs.) on same day.

Under normal circumstances no work is performed during meal hours, 1100 – 1200 hrs. and 1830 – 1930 hrs. unless the ship is classified as a "key" vessel or the Agent orders work during the meal hours.

MEDICAL: When infectious disease not suspected, permission will be granted by Port Health Officer to Agent to take doctor on board and remove the patient, if necessary, to hospital. Preferably as much notice as possible. Several hospitals, General Hospital, Gleneagles, Mt. Alvernia to name a few. Cholera, plague, etc., are not endemic in Singapore.

Also see "Radio" – Medical Advice to Ships.

TANKERS: Bunkering and discharge facilities available at Eastern and Western Petroleum Anchorages or installations at Pulau Bukom, Pulau Ayer Chawan, Tanjong Penjuru, Tanjong Berlayer, Jurong and Pulau Merlimau.

PSA operates a Slop and Sludge Reception and Treatment Centre at Pulau Sebarok with facilities for the disposal of slops, sludge, tankcleaning, water and dirty ballast. Also see "Pollution".

Smoking not permitted during period tanker alongside PSA wharves. Grades permitted for discharge along PSA wharves:

(a) Marine diesel oil,
(b) Fuel oil.

Shell: (Lat. 01° 14.0′ N., Long. 103° 46.3′ E.).
Pulau Bukom, 4.6 km. off the S.W. coast of Singapore – 10 berths and a single buoy mooring (01° 11.47′ N., 103° 47.53′ E.). Depth of water in approach is 18.3 m. LWOST. Fresh water, fuel oil, gas oil and diesel oil available.

Tank cleaning is carried out alongside or in Roads, as arranged wi Pulau Bukom.

Shore tankage for slops/dirty ballast is limited to 15,000 cu.m. for al purposes. Each vessel is normally limited to 400 cu.m., although large quantities *may* be accepted by prior arrangement, giving preferabl 7 days' notice. Waxy slops are only received on Wharves 6, 7 and 8 When waxy slops are on board for discharge, vessels are requested t advise Pulau Bukom 48 hours in advance in which case quantity mus be stated. Waxy slops should be segregated if other slops are carried

The refinery has a refining capacity of 23 million tonnes per annum It manufactures LPG, petrol, aviation turbine fuel, kerosene, gas oi diesel fuel, solvents, fuel oil, lub oil and bitumen for local and overseas markets. There are 200 oil storage tanks with over 3 million tonnes capacity. All grades of bunkers are available 24 hours a day.

Notes:
(1) P.S.A. will not berth vessels with actual displacement exceed that stipulated.
(2) For guidance only. Actual length is governed by a minimum separation of 150 ft. from the adjacent vessels.
(3) Includes height of manifolds above deck.
(4) P.S.A. required an U.K.C. of 1.0 m. whilst manoeuvring.
(5) For guidance only. Actual number of tugs is dictated by prevaili conditions and assessment of P.S.A. pilot.
(6) Vessels up to 140,000 d.w.t. *on spot basis only*, provided oth parameters are met.

Operating Limits for the Singapore Esso/Mobil SBM: July 1989.

1. *Vessels from 80,000 d.w.t. to 150,000 d.w.t.:*

(1.1) Vessels up to 280 m. LOA, and with an arrival draft of 15.0 m. (49 ft.) or less, can be moored at any time during day or night under any tidal direction and strength.

(1.2) Vessels with an arrival draft exceeding 15.0 m. (49 ft.) but less than 20.4 m. (67 ft.), can be moored during the day or night provided the tide is flooding.

(1.3) Vessels with an arrival draft up to 20.4 m. (67 ft.) salt water are accepted all year round.

(1.4) Vessels shall be fitted with at least one set of OCIMF's standard tongue type bow chain stopper (AKD) for securing 76 mm. (3 in.) diameter SBM mooring chafe chain(s).

(1.5) Timely use of vessel's segregated ballast tanks (SBT) is to be maximised, so as to minimise the vessel's freeboard. The vessel must maintain a midship draft of not less than 7.0 m. (23 ft.), a trim below 6.1 m. (20 ft.) and a forward draft of not less than 4.0 m. (13 ft.) at all times.

(1.6) If ballast capacity in the SBT alone cannot maintain the drafts and trim as stated in (1.5), then timely ballasting into cargo oil tanks (COT) concurrent with cargo discharge shall be carried out with double valve segregation, at both suction and discharge sides of the cargo.

2. *Vessels from 150,000 d.w.t. to 252,000 d.w.t.:*

(2.1) Vessels up to 280 m. LOA and with an arrival draft of 15.0 m. (49 ft.) or less, can be moored during day or night under flood or ebb tide. However, vessels shall be programmed to reach the SBM and moor with tidal rates not exceeding 1.5 knots.

(2.2) Vessels with an arrival draft exceeding 15.0 m. (49 ft.) but less than 20.4 m. (67 ft.) can be moored during the day or night provided the tide is flooding, and the vessels shall be programmed to reach the SBM and moor with flood tidal rates not exceeding 1.5 knots.

(2.3) Vessels with an arrival draft up to 20.4 m. (67 ft.) salt water are accepted all year round.

(2.4) Vessels shall be fitted with 2 sets of OCIMF's standard tongue type bow chain stoppers for securing 76 mm. (3 in.) diameter SBM mooring chafe chains.

(2.5) Timely use of SBT is to be maximised, so as to minimise the vessel's freeboard. The vessel must maintain a midship draft of not less than 7.0 m. (23 ft.), a trim below 6.1 m. (20 ft.) and a forward draft of not less than 4.0 m. (13 ft.) at all times.

(2.6) If ballast capacity in the SBT alone cannot maintain the drafts and trim as stated in (2.5), then timely ballasting into COT concurrent with cargo discharge shall be carried out with double valve segregation at both suction and discharge sides of the cargo.

3. *Vessels from 252,000 d.w.t. to 285,000 d.w.t.:*

(3.1) Vessels with an arrival draft up to 20.4 m. (67 ft.) salt water, and an arrival displacement up to 330,000 metric tons (324,803 long tons) are accepted all year round.

(3.2) Vessels can be moored during the day or night provided the tide is flooding, and the vessels shall be programmed to reach the SBM and moor with flood tidal rates not exceeding 1.5 knots.

(3.3) Vessels shall be fitted with 2 sets of OCIMF's standard tongue type bow chain stoppers for securing 76 mm. (3 in.) diameter SBM mooring chafe chains.

(3.4) Throughout the vessel's stay at the SBM during the *Northeast Monsoon Season (November 1st to April 30th),* the vessel must maintain a midship draft of not less than the vessel's sailing draft in light ballast condition or 7.9 m. (26 ft.), whichever is deeper. Also, the vessel's trim must not exceed 6.1 m. (20 ft.), and its forward draft must not be less than 4.9 m. (16 ft.) at all times.

(3.5) Throughout the vessel's stay at the SBM during the *Southwest Monsoon Season (May 1st to October 31st),* the vessel must maintain a midship draft of not less than the vessel's sailing draft in heavy ballast condition or 9.1 m. (30 ft.), whichever is deeper. Also, the vessel's trim must not exceed 6.1 m. (20 ft.), and its forward draft must not be less than 6.1 m. (20 ft.) at all times.

(3.6) Timely use of SBT is to be maximised, so as to minimise the vessel's freeboard. If ballast capacity in the SBT alone cannot maintain the drafts and trim as stated in (3.4) or (3.5), then timely ballasting into COT concurrent with cargo discharge shall be carried out, with double valve segregation at both suction and discharge sides of the cargo.

4. *Vessels from 285,000 d.w.t. to 303,000 d.w.t.:*

(4.1) Vessels with an arrival draft up to 20.4 m. (67 ft.) salt water and an arrival displacement up to 330,000 metric tons (324,803 long tons) are accepted all year round.

(4.2) Vessels can be moored during the day or night provided the tide is flooding, and the vessels shall be programmed to reach the SBM and moor with flood tidal rates not exceeding 1.5 knots.

(4.3) Vessels shall be fitted with 2 sets of OCIMF's standard tongue type bow chain stoppers for securing 76 mm. (3 in.) diameter SBM mooring chafe chains.

(4.4) Throughout the vessel's stay at the SBM, the vessel must maintain a midship draft of not less than the vessel's sailing draft in heavy ballast condition or 9.1 m. (30 ft.) whichever is deeper. Also, the vessel's trim must not exceed 6.1 m. (20 ft.), and its forward draft must not be less than 6.1 m. (20 ft.) at all times.

(4.5) Timely use of SBT is to be maximised, so as to minimise the vessel's freeboard. If ballast capacity in the SBT alone cannot maintain the drafts and trim as stated in (4.4), then timely ballasting into COT concurrent with cargo discharge shall be carried out with double valve segregation at both suction and discharge sides of the cargo.

5. *Engine Readiness:*
The vessel must be ready to move under its own power during her stay at the SBM. Use of engine may be necessary during tidal change or wind shift.

6. *Tug Assistance:*
All tug assistance, for the berthing and unberthing of the vessels to and from the SBM, shall be provided by the Port Authority of Singapore on the vessel's account. In the event of an emergency, the SBM Operations Superintendent shall have the right to order tug assistance on behalf of the vessel, to safeguard the safety of the vessel and the SBM on the vessel's account.

7. *Ore/Bulk/Oil (OBO) Carriers:*
For OBO carriers discharging at the SBM, the vessel's Master and/or its Chief Officer must ensure that the vessel maintains stability within its safe operating limits (taking into account the effects of free liquid surfaces on stability) at all times during the vessel's stay at the SBM.

Note: The word "d.w.t." refers to the original design deadweight of a vessel in long tons, as built and not to any subsequent 'remarked' deadweight.

Cautionary Advices

To prevent damage to the SBM anchor legs and submarine pipeline, use of anchors is prohibited in the SBM manoeuvring area. The vessel's anchors should be properly secured with chain-stoppers prior to approaching the SBM.

The SBM is located in a confined position with very limited space to swing a vessel. There is a 16 m. (chart datum) shallow patch marked by Bujor Buoy at a distance of 900 m. Southward of the SBM. In the SBM area, except for the approaching sector, there are spots of only 15 m. depth. The condition of the sea bottom is mainly sand and shells with scattered hard rocks and an aborted berthing at an advanced stage of the approach poses the risk of a grounding. Speed should not exceed 3 knots when approaching the Esso SBM. Cautious approach speed is necessary to control the vessel's motion with a minimum use of astern engine.

Berthing Restrictions: In view of the depth of the approach channel, the maximum permissible draft is limited to 67 ft. irrespective of the height of the tide. The tidal currents set 260° during flood tides with maximum rates of 2.3 knots occurring during ebb tides with maximum rates of 1.7 knots occuring during August and September. The specific gravity of sea water at the SBM varies between 1.019 and 1.022.

Berthing Procedure: From the pilot boarding location, vessels normally proceed slowly on an Easterly heading toward a point about 1 mile S.W. of the Ajax Shoal Light Buoy where the heading is changed toward the SBM manoeuvring area. Tugs normally join off Ajax Shoal and assist the vessel in slowing down and aligning her port bow to the SBM, heading the current.

The SBM Operation Superintendent, stationed on the forecastle, advises the bridge by walkie-talkie of the vessel's distance from SBM.

Mooring: The mooring consists of 2×150 ft. long×18 in. circumference nylon hawsers with chafing chains and pick-up lines.

A mooring boat takes the messenger lines from the ship and connects to the pick-up lines. (See "Plan"). Vessels are acceptable only if their fairleads or Panama chocks can receive the chafing chains and are installed in accordance with OCIMF guidelines. In this case the chafing chains are secured by means of shackles and snotters fastened to mooring bollards. Vessels of this kind should give ample notice to enable Esso Refinery to make the necessary arrangements.

Hose Connection: 2×16 in. over-the-rail hoses are connected to the ship's port side manifold by the mooring gang assisted by a winchman from the ship's crew.

Each hose has a butterfly valve and a standard 16 in. ASA flange. A clear working space of at least 20 in. is needed between the manifold and the deck, drip pan or other structure.

A minimum 13 tons SWL derrick is needed for disconnecting the hoses from a 250,000 d.w.t. tanker is light condition. The 16 in. tail hoses are 35 ft. long.

Caltex: (Lat. 01° 17.7′ N., Long. 103° 44.5′ E.).

B.P. Refinery: (Lat. 01° 15.8′ N., Long. 103° 48.5′ E.).

Refinery with 3 berths situated at Tanjong Berlayer. Small jetty inside harbour known as Jetty No. 2 can receive small vessels up to 1,000 tonnes (Max. LOA 100 m.) as water depth only 6.3 m. below ACD.

Jetty No. 1 at S.W. side of Tanjong Berlayer can accommodate vessels up to 33,000 tons (Max. LOA 210 m. – 263 m.) at off-shore mooring where dredged channel 11.0 m. below ACD. Berthing cannot be effected for 43 days of year due strong tidal currents.

At Jetty No. 1A which is Northwards extension from Jetty No. 1 trunkway, vessels up to 5,000 tonnes (Max. LOA 140 m.) can be berthed; water depth 7.6 m. below ACD. Simultaneous mooring of vessels at Jetties No. 1 and 1A not allowed as floating hose used to connect Jetty No. 1 to ship at mooring buoys.

Bunkers and fresh water available.

Singapore Refining Co. Pte. Ltd.:
(Lat. 01° 17.6′ N., Long. 103° 43.2′ E.).

Provides 6 berths for bunkering and other services on Pulau Merlimau, an island off the S.W. coast of Singapore. The marine berth can accommodate vessels up to 85,000 d.w.t. and 14 m. loaded draft, refining capacity 170,000 barrels per day. Night time berthing at Pilot's discretion. Fresh water available ex-pipeline. Bunkers available by barge or pipeline.

S.B.M. located 2.4 km. S.E. of Sultan Shoal Lighthouse in Selat Sinki. Max. size 320,000 d.w.t.

Discharge of crude oil to S.R.C. Refinery. 2 flexible hoses of 600 mm. diameter.

SRC's SPM Questionnaire:

The following questionaire required to be answered by the Master of the vessel for discharging at SRC's SPM.

Answers must be provided at least 72 hours prior arrival.

(AAA) ETA and draft Western pilot boarding ground 2.5 miles W.S.W. of Sultan Shoal Lighthouse.
(BBB) Grade, pour point, quantity, stowage and discharge plan of cargo.
(CCC) Does charter party require COW. If COW to be performed crude wash line must be prepared and tested before arrival.
(DDD) If vessel has AKD bow stoppers for mooring.
(EEE) Distance of fairlead to nearest mooring bitts. 2 sets mooring bitts required.
(FFF) If vessel can provide dead slow engine movements on immediate order whilst secured to buoy.
(GGG) If inert gas system and analysers fully operational.

Please prepare:

(HHH) Port derrick maximum SWL (minimum requirement 10 tons).
(III) (1) 2×16 in. manifolds on port side with flanges minimum 35 mm., maximum 40 mm. thick.
(2) Supply of compressed air at 6 kg./sq.cm. minimum during whole discharge operation near gangway.
(JJJ) Gangway on starboard side.
(KKK) Cargo tanks depressurised on arrival for ullaging, sampling, etc., Conducted by SRC Officials. Therefore grateful for their refreshments or/meals.
(LLL) Accommodation and meals for TMS Mooring Master during entire period of discharge.

Be advised that:

(MMM) Immobilisation of engines not permitted during stay at SPM.
(NNN) Radar and log required for berthing.
(PPP) Bunkering not permitted if no inert gas system.

Please advise:

(QQQ) By VHF to SRC on Hague Plan Channel 5 your confirmed ETA at least 6 hours before.
(RRR) Free water in individual cargo compartments.
(SSS) Slops amount and if loaded on top.
(TTT) If slops required to be discharged.
(VVV) Next Port of Call.

Berth No. 2 in position 01° 14.38′ N., 103° 45.1′ E. Length of jetty 320 m. Depth alongside 17.2 m.

†See "Berthing Facilities".

DENSITY: Usually between 1019 and 1022, unaffected by tide or temperature variations. Variation due to periodic heavy run-off of rain water.

FRESH WATER: Fresh water available at any point of PSA's wharves. PSA also has a fleet of 9 waterboats to supply fresh water to ships anchored within the port limits.

Port of Singapore Authority Port Circular No. 95/87.
Dated 9th November 1987.

SUPPLY OF FRESH WATER TO VESSELS WITHIN SINGAPORE PORT LIMITS

1. Shipowners and Shipping Agents of vessels in need of fresh water are requested to place their orders for water through the telephone, telefax or telex. The details are as follows:–

Telephone No.:	3212906 or 321907
Telefax No.:	3212017
Telex No.:	RS 42075
	Answer Back: WBSERV 42075

2. When placing the orders, the following information is necessary for the provision of Waterboat Services.
   a. Name of Vessel.
   b. Call Sign.
   c. Flag.
   d. Type.
   e. g.r.t.
   f. Freeboard.
   g. ROI (Vessels's Rate of Intake).
   h. Date/Time Service Required.
   i. Quantity.
   j. Location.
   k. ETA (Estimated Time of Arrival).
   l. ETD (Estimated Time of Departure).
   m. Agent.
   n. A/C No. (Agent's Credit Account No.).
   o. Contact Person and Tel. No:
      Office:
      Residence:
3. Shipowners and Shipping Agents are to note that, as vessels are serviced on a first-come first-served basis, they are advised to place the orders as early as possible.
4. Master, Owners or Agents of vessels waiting for water supply may contact the Waterboat Office on the VHF Channel 18 to confirm the arrival of the waterboat. Vessels are requested to keep a listening watch on the same VHF Channel so that the Waterboat Office can inform them of any changes on the arrival time of the waterboat.
5. To facilitate the waterboats in locating the vessels requiring water, Masters of vessels are requested to display the following port signals prior to the scheduled time of supply.
   (a) DAY – International Code Flags "CD ZERO"
   (b) NIGHT – At or near the masthead, 2 all round lights in a vertical line, not less than 2 m. apart, the upper being green and the lower white.
6. Port Circulars No. 58 of 1983, 21 of 1985 and 22 of 1985 are hereby superseded.

FUEL: All grades available alongside PSA wharves and ex-installation, otherwise by barge. Marine diesel oil. Heavy fuel oil at 180 cst to 380 cst. Blended fuel from 60 cst to 180 cst.

FIRE PRECAUTIONS: Normal precautions with respect to cargo vessels, vessels under repair, etc. Fire boats available. Oil companies apply own regulations at installations.

CONSULS: Consuls, Embassies and High Commissions. Arab Republic of Egypt, Argentina, Australia, Austria, Bangladesh, Belgium, Brazil, Bulgaria, Canada, People's Republic of China, Denmark, Finland, France, Germany, Great Britain, Greece, India, Indonesia, Ireland, Israel, Italy, Japan, Democratic People's Republic of Korea, Republic of Korea, Malaysia, Myanmar (Burma), Netherlands, New Zealand, Norway, Pakistan, Panama, Philippines, Poland, Romania, Russia, Saudi Arabia, Spain, Sri Lanka, Sweden, Switzerland, Thailand, U.S.A.

REPAIRS/DRY DOCKS: All types of repairs (hull, engine and electrical including navigational aids) carried out. Facilities also available for repairs out afloat while vessel in anchorages.

†See "Berthing Facilities" – Note.

SURVEYORS: A.B.S., B.V., Det Norske Veritas, Lloyd's Register, N.K.K., G.L., Polski Register Stratkow, China Corporation Register of Shipping and Salvage Association.

GANGWAY/DECK WATCHMEN: Recommended, particularly in Roads. Agents normally arrange. Cost varies.

Piracy: Vessels have been boarded by pirates whilst travelling at full speed.

On one occasion 5 hooded people armed with machetes boarded the vessel and made their way into the Master's cabin. The Master at that time was on the bridge but came down to his cabin for a moment, when he was seized by the gang and repeatedly hit with machete's handles. Fortunately the Master only suffered minor injuries.

After a short time, having tried unsuccessfully to force the ship's safe, the group of pirates abandoned the vessel, stealing only relatively small items like binoculars, the Master's Passport, etc.

The Master reported the incident to the Singapore Authorities.

Report: February 1987.

At 0230 hrs. one of our vessels was boarded by 6 pirates when passing the Philip Channel in Singapore Strait. The pirates were armed with cutlasses and stole cash and other valuable items. The Master and the crew did not attempt any resistance and nobody was harmed. The pirates disembarked immediately after stealing whatever they could carry.

OPENING/CLOSING HATCHES: Conventional hatches by stevedores. Mechanical hatches usually by ship's crew.

CERTIFICATES: If dangerous drugs on board, an export authorisation from country of origin and an import authorisation from country to which drugs being conveyed should be available for sighting and endorsement.

All vessels	Certificate of Registry, Tonnage Certificate, Certificate of Insurance or other financial security as applicable under CLC '69 and International Loadline Certificate or equivalent.
Passenger Ships	Passenger Safety Certificate issued under SOLAS Conventions.
Cargo Ships	Safety Equipment Certificate (if over 500 g.r.t.) or equivalent. Safety Radiotelegraphy Certificate or Radiotelephony Certificate whichever is applicable.

CUSTOMS ALLOWANCES: Tobacco: For crew and adult transit passengers – first day of arrival 50 cigarettes or 15 cigars or other tobacco 60 gms.; and for each subsequent day to the maximum of 7 days. 25 cigarettes or 7 cigars or other tobacco 30 gms.

Wines: 1 bottle per day to maximum of 8 days. Spirits: 0.875 bottle (in opened bottles) on first day of arrival and 0.125 bottle per day for rest of 7 days.

CARGO GEAR: Possession of valid test certificates. At PSA wharves all cargo gear should be inspected by an Authorised Port Officer before use.

REPATRIATION: Ships' Agents responsible for repatriating seamen. Mercantile Marine Office undertakes repatriation of distressed British seamen on behalf of Board of Trade, United Kingdom, whenever necessary. Seamen who hold proper documents which ensure entry into their countries of origin, citizenship and destination are normally granted Special Passes after discharge for purpose of repatriation.

AIRPORT: 20 km. from city. Regular and frequent services to all parts of the world.
TIME: GMT plus 8 hours. No seasonal change.
HOLIDAYS: Work can be arranged on all Public Holidays. New Year's Day; Chinese New Year; Hari Raya Haji; Good Friday; Labour Day (1st May); Vesak Day; National Day (9th August); Deepavali; Hari Raya Puasa; Christmas Day.
POLICE/AMBULANCE/FIRE: City Police 999; Fire/Ambulance only, 328111; Flag signal: CB3. VHF Channels 12 or 16. PSA Police 2712211 ext. 2222; Fire ext. 2209 or ext. 2333; Ambulance 2712211.

We quote the contents of Port Circular No. 123 of 1984 issued by the Port of Singapore Authority:
Ships Requiring Police Assistance:
1. The shipping community is hereby reminded that vessels within Singapore waters can directly contact Marine Police for assistance on those matters falling within police jurisdictions.
2. For such assistance, vessels should establish radio contact on:

	VHF Channel	Hours	Ship Tran./Rec. Frequencies	Call sign (Voice)
	21	24	157.05/161.65 MHz	Marine Police
or	7	24	156.350/160.950 MHz	Marine Police

Giving the following information:
(a) Name of vessel.
(b) Location of vessel.
(c) Nature of emergency.
(d) Nature of police assistance required.
3. Vessels within the port and requiring immediate police assistance shall display following signals in a conspicuous position to facilitate easy identification by the Marine Police:
By Day: International Code "CB3".
By Night: Red-Red-White (Red on top).
4. Vessels may in addition sound on their whistle or siren at intervals of about 1 minute three prolonged blasts to attract the attention of Marine Police personnel in the vicinity.
5. The shipping community is advised to illuminate and step up surveillance onboard its vessels, particularly those moored just outside the outer limits of the port, to discourage unauthorised boarding of its vessels.
TELEPHONES: Available on board vessel at PSA wharves only.
SERVICES: Following additional services available: Cleaning and preparing ship's tanks. Cleaning, scaling and painting. Insulation. Interior decorating and furnishing. Refrigeration and air-conditioning. Chemical cleaning of boilers, etc. SCAMP underwater cleaning service. Compass adjusting and DF Calibration. Radar and Radio servicing depots.
SHORE LEAVE: No restriction on crews landing after Immigration and Health formalities have been satisfactorily completed. With rare exception (Communist Country Crews), all *bona fide* crew of a vessel allowed shore leave on strength of their passports, discharge books or identification cards.

The following circular was issued in May 1973 by the Singapore Port Authority.

"In line with the Government's decision that action should be taken to deal with the 'long-hair' problem as part of a campaign against undesirable alien influences, the Port of Singapore Authority would be most grateful for your co-operation in implementing this decision by advising all your employees, including ships' officers and Crew members, wishing to come ashore to be more tidy in their general appearance.

"To assist you to decide whether an individual's hair is long, the following definition of long hair may be used as a guide:
(i) Hair reaching below an ordinary shirt collar;
(ii) Hair covering the ears;
(iii) Hair falling across the forehead and touching the eyelashes."
Shipmaster's Report: July 1987.

There is a good hovercraft service from Pulau Bukom to Pasir Panjang, also a less frequent ferry service.
IDENTIFICATION CARDS: Sect. 22 (1) (c) of Ordinance provides for issue of Seamen's Identification Card as set out in First Schedule to the Immigration Regs. 1966, but rarely issued nowadays. Normally accept Passports, Discharge Books or any identification cards issued by Masters of vessels for purpose of granting shore leave to Crew members, provided these documents sufficiently identify person concerned

Gate Passes issued against Crew List at wharves and installations. No passes required from roads, although some form of identification advisable.
GARBAGE DISPOSAL: Garbage collection service is provided daily to all ships in the anchorages. Charges are incorporated in port dues. No drums or skips are provided on board. Service only accepts galley refuse which must be collected in plastic bags at time of disposal.
WASTE OIL DISPOSAL: Collection service is provided by the Port of Singapore Authority Slop Reception Centre. Barges of 1,200 cu.m. to 2,000 cu.m. are normally deployed to receive discharges from tankers at the Western Quarantine & Immigration Anchorage.
Charges:

% Oil/Water	S$ per cu.m.
more than 12%	Nil
9 – 12%	S$ 3
6 – 9%	S$ 6
3 – 6%	S$ 9
0 – 3%	S$ 12

Barge Freight: S$ 10/cu.m., minimum charge S$2,000.
Disposal of sludge and other oil residues: S$ 300/tonne or part thereof.
Various cancellation, delay and demurrage fees can also apply.
SEAMAN'S CLUBS: Singapore Mariner's Club, a division of the National Maritime Board, provides recreational facilities and information service for seafarers of all nationalities. The club is housed within a 12-storey building which is centrally located at Cantonment Road near to the port precinct. To gain entry into the club, seafarers should bring Passport, Discharge Book or other form of identification.

Facilities and services available include serviced apartments for seafarers who wish to extend their stay in town, Mariner's Corner Restaurant and Bar, Seafarers' Lounge, video corner, games room, billiard tables, Maritime Medical Centre - medical and dental treatment exclusively for seafarers, international telephone service, information service on a wide range of subjects, including tour services and travel advice, minibus transport service to shopping areas and places of interest, and shop. Contact Singapore Mariners' Club, Maritime House, 120 Cantonment Road, Singapore 0208. Tel: 2227311. Fax: 2251176. Opening Hours: Club facilities 1000 – 2300 hrs. Apartments 24 hours.

Under the auspices of the National Maritime Board, a liaison office has been set up on the 2nd level of Maritime House for use by the various seamen's missions and welfare organisations. This liaison office is open mainly in the evenings to cater to the welfare needs of seafarers outside of the normal operating hours of the seamen's missions/welfare organisations. Contact Seamen's Welfare Organisations-Liaison Office, at the above address. Tel: 2227311, ext. 8424.

Six other seafarers' centres exist around the city. They provide various services and facilities and their details are listed below. A leaflet detailing all the various centres and their facilities is available through the centres. It also provides maps of the city and information of general interest to seafarers.

Dansk Somandskirke Singapore, (Danish Seamen's Church & Danish Government Seamen's Service), 10 Pender Road, Singapore 0409. Tel: 2746344. Telex: RS 28970 DSCS. Fax: 2729123.

Dutch Seamen's Mission, "De Waaierpalm", 1 Pender Road, Singapore 0409. Tel: 2725000.

Japan Seamen's Center, 20 Peck Seah Street 03-00, Singapore 0207. Tel: 2218261/2218262. Fax: 2220887.

Norwegian Seamen's Mission, 300-A Pasir Panjang Road, (like ved Haw Par Villa). Tel: 7757835. Telex: RS 37354 NORMIS. Fax: 7789498.

Stella Maris Catholic Maritime Club, 510 Kampong Bahru Road, Singapore 0409. Tel: 2260545.

The Missions to Seamen, 291 River Valley Road, Singapore 0923. Tel: 7372880. Fax: 2353391.

In addition, a one-week International Sportsweek for Seamen is held annually for all seamen in port. They can participate in soccer, volleyball, table-tennis and various track and field events. The International Swimming Carnival for Seamen is also held annually with the objective of encouraging healthy recreational activities among seafarers and to foster friendly relations amongst seafarers from all parts of the world.
CURRENCY: Singapore Dollar (S$).
POLLUTION: No oil or mixture containing oil shall be discharged into Singapore waters from any vessel. The Master or person in charge of the vessel committing such an offence shall be liable on conviction to a fine not less than 500 dollars and not exceeding 500,000 dollars or to imprisonment for a term not exceeding 2 years or to both such fine and imprisonment.

No refuse, garbage, waste matter, substance of a dangerous or obnoxious nature or trade effluents to be discharged from any vessel into Singapore waters. The Master or the person in charge of the vessel committing such an offence shall be liable on conviction to a fine not exceeding 10,000 dollars or to imprisonment for a term not exceeding 2 years or to both such fine and imprisonment.

If any oil or mixture containing oil is discharged into Singapore waters
(a) for the purpose of securing the safety of the vessel or of preventing damage to the vessel or her cargo, or of saving life; or
(b) is found to be escaping, or to have escaped into Singapore waters from a vessel in consequence of damage to the vessel, or by reason of leakage, the Master or the person in charge of the vessel shall report the occurrences to the Director of Marine and the Port Master. Failure to do so shall be an offence and shall be liable on conviction to a fine not exceeding 5,000 dollars.
Slop Reception: The P.S.A. Slop and Sludge Reception and Treatment Centre at Pulau Sebarok has a total tank capacity of 82,000 cu.m.

Berthing facilities consist of 2 piers – Piers 1 and 2. Depths alongside Pier 1 – 12.8 m., Pier 2 – 11.0 m.

The Centre can accommodate vessels up to an overall length of 264 m. and a displacement of 45,800 tonnes

7 barges with a total capacity of 8,500 cu.m. are used for the reception of slops/tank cleaning water at anchorages and transported to the Centre for disposal.

Communications: VHF Station Channel 61.

Safety and security at the island is well provided and maintained by both the Authority's Police Force and Fire Brigade.

Also see "Shipmaster's Report" and "Tankers – Shell".
DELAYS: Normally none. Occasional congestion due to prolonged rainy weather or other abnormal conditions.
NOTICES: *Port of Singapore Authority – Port Circular No. 20 of 1993 Dated 3rd April, 1993.*
CHANGE OF ANCHORAGE FOR HEALTH/IMMIGRATION CLEARANCE AND USE OF ANCHORAGES FOR VESSELS ARRIVING FROM EAST AND WEST
1. *Health/Immigration Clearance*

Masters, Owners and Agents of vessels are hereby informed that with effect from 0600 hrs. on 7th April 1993, the use of the Western Quarantine/Immigration Anchorage for Health/Immigration Clearance will cease until further notice.

Vessels arriving from the East or West requiring Health and/or Immigration Clearance are to make use of the Eastern Quarantine Immigration Anchorage.
2. *Use of Anchorages in the Eastern and Western Sectors*

With effect from 7th April 1993, vessels arriving from the East may continue to make use of the appropriate anchorages in the Eastern or Western Sector, and likewise vessels arriving from the West may make use of the appropriate anchorages in the Eastern or Western Sector. In all cases, where Health or Immigration Clearances are required, they should proceed to the Eastern Quarantine and Immigration Anchorage.

3. *Use of Controlled Anchorages*

Masters/Owners/Agents requiring to anchor their vessels in any of the following anchorages are to obtain prior permission from the Enforcement Section of the Port Master's Department:

(a) Tuas Explosives Anchorage
(b) Western Dangerous Goods Anchorage
(c) Laid-up Vessels Anchorage
(d) Selat Pauh Anchorage
(e) Eastern Special Purpose Anchorage
(f) Western Reserved Anchorage
(g) Changi General Purposes Anchorage

Each application should be made in advance by letter or telex stating the name, g.r.t. and maximum draft of the vessel, the name of the required anchorage, the purpose and the period of stay at the anchorage. Vessels intending to use the Eastern Special Purpose Anchorage are to declare the highest point of the vessel/cargo above waterline.

4. *Pilotage*

Vessels requiring pilotage services are required to use the appropriate Pilot Boarding Grounds specified below:

(a) Vessels from the East/West proceeding directly to Singapore Cruise Centre with Advance Health and Immigration Clearance or with Immigration boarding at Pilot Boarding Ground	Southern Boarding Ground
(b) Vessels from the West proceeding directly to Anchorages in the Eastern Sector (with Advanced Health and Immigration Clearance)	Eastern Boarding Ground A
(c) Vessels from the West proceeding directly to Berth/Anchorages (with Advanced Health and Immigration Clearance)	Eastern Boarding Ground A or Western Boarding Ground
(d) Vessels from the East proceeding directly to Berths/Anchorages (with Advanced Health and Immigration Clearance)	Eastern Boarding Ground A or B as arranged with the Pilotage Section.
(e) Vessels from the East or West requiring Health/Immigration Clearance	Eastern Boarding Ground A

5. The foregoing directives are issued pursuant to Section 67 of the Port of Singapore Authority Act (Cap 236).

6. Port Marine Notice No. 71 of 1992 will be cancelled with effect from 7th April 1993.

Port of Singapore Authority – Port Circular No. 56/86
Dated 1st September, 1986.

PLACING OF PILOTAGE ORDERS.

1. This circular supersedes Port Circular No. 125 of 1984 with effect from 1st October, 1986.

2. To reduce the congestion of telephone/VHF calls, shipping Agents are requested to place pilotage orders and any amendment by telex. However, the pilot office will accept orders/amendments by telephone if the orders/amendments are placed after normal office hours or during weekends and public holidays, for the convenience of shipping Agents. In cases where Agents are unable to send the orders by telex, they may also place the orders by telephone.

3. The telex and telephone numbers for placing of pilotage orders/amendments are as follows:

Service Area	*Telex*	*Telephone*
East Johor Strait	RS 35962	5427112/
	Answer back SEMCO 35962	5427113
All other areas	RS 22896	3211764/
in the port	Answer back PORTPM 22896	3211765/
	RS 34970	3211766
	Answer back PORTPM 34970	

4. A "hands-on" operation to replace the present system of processing pilotage orders has been designed to enhance services to port users through more efficient means of capturing, processing and dissemination of shipping information. The system will enable direct entry of pilotage orders received through telephone/telex/VHF into the computer. When implemented, this will eliminate the present 'chit' system and pave the way for more use of PSA Databox facility, by which port users may be able to place their orders or amendments through their own personal computers linked to PSA mainframe computer. Users will also be able to benefit from real time information. (More details on the PSA Databox facility will be released at a later date). Operationally, the "hands-on" system will change the present flow in the processing of pilotage orders. Replies to pilotage orders placed through telephone/telex will be standardised.

5. With effect from 1st October, 1986, the current practice of confirming pilotage orders by telephone while the Agent holds on to the telephone line will be discontinued. Upon receipt of a pilotage order by telephone, the pilot office will process and return the call by telephone or telex. Agents are required, as in telex orders, to standby for up to 30 minutes for the confirmation of acceptance of the order from the pilot office. The pilot office will also provide a *reference number* for an accepted pilotage order which is replied through the telephone. In exceptional circumstances where no confirmation is received after 30 minutes, the Agents are required to call the pilot office to check on the orders.

6. With effect from 1st October 1986, Agents need only provide full information for pilotage orders for the *first pilotage move of the vessel in the port*. For *all subsequent moves of the vessel within the same call*, reduced information is required. Other particulars such as flag, type, g.r.t. and length need only be given if there are changes.

7. We are also pleased to inform that the following waivers of pilotage amendments charges for amendments to vessel's ETAs by Masters will be given:

(a) For the *first* amendment/confirmation to ETA (of less than 6 hours notice) which is within half an hour of the service required time.

(b) For subsequent amendments, which are within 15 minutes of the *first* confirmed ETA.

8. To take advantage of the waivers, it is recommended that Masters/Agents update vessels' ETAs, if required about 6 to 7 hours before service is required. Masters/Owners/Agents are advised that amendments to ETAs other than that stated in paragraph 7 (a) and (b) giving less than 6 hours notice will be chargeable.

9. For pilotage service to berths/terminals other than the Port Authority's wharves, Agents are required to ensure the availability of such berths/terminals by liaising closely with the respective private operator.

Port of Singapore Authority – Port Marine Circular No. 11/1993.

PORT CLEARANCE FORMALITIES FOR ARRIVING AND DEPARTING VESSELS

1. For expeditious processing and clearance, the Shipping Community is advised to check and ensure that the following documents are in order when submitting the Arrival or Departure Declaration.

2. ARRIVING VESSEL
   Within 24 hours of arrival of a vessel in port, the Owner, Agent or Master or a vessel is to submit (to the Port Clearance Office) the following documents for inspection or retention:
   2.1 Vessel's Port Clearance from her last port.
   2.2 General Declaration Forms for Arrival, duly completed in duplicate. No column/space in these forms is to be left blank (Portnet subscribers can make their declaration via Portnet).
   2.3 Vessel's Certificate of Insurance or other Financial Security in respect of Civil Liability for Oil Pollution Damage (CLC Certificate) for vessel carrying in bulk a cargo of more than 2,000 tons of persistent oil.
   2.4 Vessel's International Pollution Prevention Certificate for the Carriage of Noxious Liquid Substances in Bulk or the Certificate of Fitness issued under the Bulk Chemical Code or the International Bulk Chemical Code as appropriate for ship carrying bulk noxious liquid substances or unassessed liquid substances.

3. DEPARTING VESSEL
   The following documents are to be submitted for inspection or retention:
   3.1 General Declaration Forms for Departure, duly completed in duplicate. No column/space in these forms is to be left blank (Portnet subscribers can make their declaration via Portnet).
   3.2 Vessel's Certificate of Registry/Nationality.
   3.3 Vessel's Load Line Certificate.
   3.4 Vessel's Cargo Ship Safety Construction Certificate.
   3.5 Vessel's Cargo Ship Safety Equipment Certificate.
   3.6 Vessel's Cargo Ship Safety Radiotelegraphy or Radiotelephony Certificate.
   3.7 Vessel's Cargo Ship Safety Certificate as an alternative to the certificates referred to in Paragraphs 3.4, 3.5 and 3.6.
   3.8 Crew List in duplicate. If there is any change of crew after port clearance has been obtained, to submit to the Port Clearance Office such amendments (in duplicate) before the vessel departs Singapore.
   3.9 Passenger List, if applicable, in duplicate. If there is any change of passengers after port clearance has been obtained, to submit to the Port Clearance Office such amendments (in duplicate) before the vessel departs Singapore.
   3.10 Vessel's Passenger Ship Safety Certificate for a passenger ship.
   3.11 Vessel's International Oil Pollution Prevention (IOPP) Certificate for Oil Tanker of 150 tons gross tonnage and above and any other ship of 400 tons gross tonnage and above.
   3.12 Vessel's International Pollution Prevention Certificate for the Carriage of Noxious Liquid Substances in Bulk (NLS) or the Certificate of Fitness Issued under the Bulk Chemical Code or the International Bulk Chemical Code as appropriate for ship carrying bulk noxious liquid substances or unassessed liquid substances.
   3.13 Vessel's Certificate of Insurance or other Financial Security in respect of Civil Liability for Oil Pollution Damage (CLC) Certificate for vessel carrying in bulk a cargo of more than 2,000 tons of persistent oil.

4. The attention of the Shipping Community is drawn to the certificate, namely the Passenger Ship Safety Certificate, the Cargo Ship Safety Equipment Certificate, the Cargo Ship Safety Radio Certificate and the Cargo Ship Safety Certificate issued under the Provisions of the International Convention for the Safety of Life at Sea, 1974, as modified by the Protocol of 1988 Relating thereto shall be Supplemented by a Record of Equipment.

5. The vessel's certificates mentioned in Paragraphs 2 and 3 shall be originals, but in their absence, the Port Clearance Office is prepared to accept certified true copies authenticated by the appropriate Authorities.

6. The Shipping Community is further reminded that any vessel which fails to leave port within 48 hours, after obtaining the port clearance, shall within 6 hours after the expiry of the 48 hours, return the port clearance to the Port Clearance Office, and if so required, obtain a fresh port clearance for the vessel.

7. If you require any clarification, please call the Port Clearance Office at One Stop Document Centre (OSDC), Tanjong Pagar Complex, Tel: 3211423, 3211550 or 3211548.

8. This Port Marine Circular supersedes Port Circular No. 17 or 1987.

Port of Singapore Authority – Port Circular No. 87/87
Dated 30th October 1987.

TRACKING OF CHEMICAL CARRIERS.

1. For the purpose of this Port Circular, a chemical carrier means any vessel which is carrying or has previously carried as a whole or part

of the last cargo in bulk any of those dangerous chemicals listed in Chapter 17 of the International Maritime Organisation's (IMO) International Code for the Construction and Equipment of Ships Carrying Dangerous Chemicals in Bulk (IBC Code).

Note: A vessel shall remain to be considered as a chemical carrier so long as any of her cargo tanks or cargo system is not completely cleared and removed of any such residual cargo.

2. Pursuant to Regulation 3 of the Singapore Port Regulations 1977, the Owner, Agent, Master or person-in-charge of a 'chemical carrier' as defined in paragraph 1 above, is hereby directed that with effect from 1st December 1987, he shall notify the Port Master as follows:
   (a) For an arriving vessel, the notification shall be given under paragraph 3 (1) of Port Circular No. 88 of 1987 (See "VHF"), entitled "Notification of Arrival and VHF Reporting Procedure", and in the manner as described in paragraph b (iv) below; or
   (b) For a vessel in port which intends to load any of those dangerous chemicals referred to in paragraph 1 above, the notification shall be given by Telex No. RS 34970 or by Facsimile No. 3212016. Such notification shall contain the following information in the format shown below:

TRACK CHEM
(i) Name of vessel.
(ii) Gross registered tonnage (g.r.t.).
(iii) Place of loading e.g. GATX Terminal Berth.
(iv) Indicate "Chemical (s) under IBC Code" – if vessel intends to load or has on board any of those dangerous chemicals listed in Chapter 17 of the IMO IBC Code; or
indicate "NA" if vessel does not have such cargoes or is not considered as a "chemical carrier". (See Note in paragraph 1.)

3. For your reference, we enclose the list of dangerous chemicals (13 pages in all)(Editor's note – not reproduced due to length of list), which appear in Chapter 17 of the IMO IBC Code (1986 Edition). You are advised to keep the list updated. If you have any queries on this subject, please call 3212295 or 3211185 or write to:

Port Master's Department,
No. 21-07 Tanjong Pagar Complex,
7B, Keppel Road,
Singapore 0208.
Telex: RS 34970.
Fax: 3212016.

TRACKING OF CHEMICAL CARRIERS

1. Owners, Agents or Masters of "Chemical Carriers" are reminded to comply with the procedures on the tracking of chemical carriers as mentioned in the Port Marine Circulars No. 87 of 1987 (See above) and No. 6 of 1990.
2. The above mentioned Port Marine Circulars have explained the requirements for the Owner, Agent or Master of a "Chemical Carrier" to notify the Port Master in the following ways:
   (a) Tracking of an Arriving Chemical Carrier:
   The notification of arrival is to be sent by radio telegram, telex, telefax or Portnet. The format must be in accordance to that given in Port Marine Circulars No. 6 of 1990 and No. 21 of 1992. For vessels carrying any chemical listed in Chapter 17 of the International Maritime Organisation's (IMO) International Code for the Construction and Equipment of Ships carrying Dangerous Chemicals in Bulk (IBC Code), the name(s) of the chemical(s) must be indicated in Item (N) of the notification of arrival. If the notification of arrival is sent by Portnet, the information is to be provided in the "Remarks" column.
   (b) Tracking of a Chemical Carrier in Port:
   If a vessel intends to load or has on board any chemical listed in Chapter 17 of the IMO IBC Code in the port waters, the Port Master must be informed of *each movement* by *telex or telefax* (and not by other means, e.g. telephone). The format of notification as given in Port Marine Circular No. 87 of 1987 should be used.
3. Compulsory Pilotage for Chemical Carriers:
   Compulsory pilotage is required for a vessel, including those below 2,000 g.r.t., which has on board or has loaded chemical(s) as listed in Chapter 17 of the IMO IBC Code. The Port Master must also be provided with the information in the prescribed format.
4. Pilotage Exemption for Chemical Carriers below 2,000 g.r.t.:
   When a vessel does not carry any chemical listed in Chapter 17 of the IMO IBC Code or is cleaned of such residual cargo when she calls at or while in the port, the Master should inform the Port Operations Control Centre by VHF of the vessel's status and request for pilotage exemption for the intended movements.

Source: PMC 2/1993.

Port of Singapore Authority – Port Circular No. 105/87.
Dated 19th November 1987.

HEIGHT RESTRICTED AREA OFF CHANGI/BEDOK

1. Pursuant to Section 67 (c) of the Port of Singapore Authority Act (Cap 236), 1985, the Port Master hereby directs that with immediate effect, no vessel whose height measured vertically from the waterline of the vessel to the highest point of the vessel including its cargo, structure or equipment on board, exceeds 15.0 m. shall enter, transit or anchor in the sea off Changi/Bedok Area.
2. The area referred to above is bounded by the following co-ordinates:

	Latitude	Longitude	Buoy
From a position at	01° 18.433′ N.	103° 56.433′ E.	
to a position at	01° 17.500′ N.	103° 59.083′ E.	'Padang'
to a position at	01° 17.650′ N.	104° 01.200′ E.	'Airway'
to a position at	01° 21.100′ N.	104° 03.117′ E.	'Angler'
to a position at	01° 23.200′ N.	104° 00.400′ E.	
to a position at	01° 23.350′ N.	104° 00.050′ E.	

thence along the coastline to the point of origin.

Port of Singapore Authority – Port Circular No. 116/87.
Dated 7th December 1987.

TALL VESSELS' MOVEMENTS SOUTH OF CHANGI AIRPORT

1. This is a repetition of Port Circular No. 25 of 1987 with amendments shown by a line in the margin (Not shown). Port Circular No. 25 of 1987 is hereby cancelled.
2. The Civil Aviation Authority of Singapore (CAAS) has requested that Shipyard Operators and Masters, Owners or Agents of vessels with heights exceeding 100 m. intending to conduct intra-port movements (within port limits) which require to transit, leave or move between Longitude (A) 103° 54′ E. and Longitude (B) 104° 05′ E., South and East of Changi Airport, to notify CAAS at least 3 working days in advance of such movements (See "Plan"). This is to allow CAAS to issue a NOTAM (Notice to Airmen) in order to keep aircraft pilots informed of such tall vessels' movements. The following procedure will come into effect on 1st May 1987.
3. *Prior to Movement*
   (a) When notifying CAAS as requested above, the following information is to be provided:
   (i) Vessel's Registered Name/Call Sign.
   (ii) Height of Vessel above waterline.
   (iii) Intended Route/Timings (with drawings of routes if possible).
   (iv) Point of Origin/Final Destination.
   (b) The information should be sent by mail, telex or telefax to the following:

Operations Officer (Air Navigation Services)
Operations Division,
Civil Aviation Authority of Singapore,
P.O.Box 1, Singapore Changi Airport
Singapore 9181.
Telex: RS 21231 AVIATEL.
Fax: 5421231.

4. For clarification or urgent cases, please contact:
   (a) Office Hours — Operations Officer, (Air Navigation Services), Operations Division, CAAS. Tel: 5412403 or 5412434.
   (b) Outside Office Hours — Supervisor, Changi Control Tower, CAAS. Tel: 5412410 or 5412416.
5. *On Passage*
   (a) Masters of vessels with heights exceeding 100 m. above waterline intending to enter, transit or leave the area defined in Paragraph 1 of this circular are also required to report to Sembawang Control on VHF Channel 21 when passing the longitudes "A" or "B" mentioned above, or when entering or leaving the Traffic Information Area of Serangoon Harbour.
   (b) When entering the area, the report required to be made shall contain the following information:
   (i) Vessel's Registered Name/Call Sign.
   (ii) Height of Vessel above water line.
   (iii) Direction of Movement (Eastwards or Westwards).
   (iv) Actual time of crossing Longitudes "A" and estimated time of crossing Longitude "B" or vice versa;
   or*
   Actual time of crossing Longitudes "A" or "B" and estimated time of entering Traffic Information Area of Serangoon Harbour;
   or*
   Actual time of leaving Traffic Information Area of Serangoon Harbour and estimated time of crossing Longitude "A" or "B".
   (*whichever is applicable).
   (c) When leaving the area, a second report shall be made containing the following information:
   (i) Vessel's Registered Name/Call Sign.
   (ii) Actual time of crossing Longitude "A" or "B" or entry into Traffic Information Area of Serangoon Harbour.
6. For the purpose of this circular, the height referred to shall be the height of the vessel measured vertically from the waterline of the vessel to the highest point of the vessel including its cargo, structure or equipment on board.
7. In addition to the above reporting procedure, Shipyard Operators, Masters, Owners or Agents are reminded that every vessel of gross registered tonnage of 2,000 tons or above or of a height of more than 30 m. above her waterline are to comply with the Traffic Information System for vessels navigating in Serangoon Harbour stated in Port Circular No. 90 of 1987.

Port of Singapore Authority – Port Circular No. 18 and 109/88.
Dated 3rd March 1988.

HEIGHT RESTRICTION FOR VESSELS ENTERING, TRANSITING OR ANCHORING IN THE EASTERN SPECIAL PURPOSES "A" AND THE EASTERN PETROLEUM "B" AND "C" ANCHORAGES.

1. Pursuant to Section 67 (c) of the Port of Singapore Authority Act (Cap 236), 1985, the Port Master hereby directs that no vessel whose height, measured vertically from the waterline of the vessel to the highest point of the vessel including its cargo, structure or equipment on board, exceeds 49 m. shall enter, transit or anchor in the height restricted area in the Eastern Special Purposes "A" and the Eastern Petroleum "B" and "C" Anchorages. (See "Plan")
2. The height restricted area referred to above is bounded by the following co-ordinates:

	Latitude	Longitude	Buoy
From a position at	01° 18.300′ N.	103° 56.617′ E.	
to a position at	01° 18.300′ N.	103° 56.750′ E.	
to a position at	01° 17.500′ N.	103° 59.083′ E.	'Padang'
to a position at	01° 17.650′ N.	104° 01.200′ E.	'Airway'
to a position at	01° 16.633′ N.	103° 59.317′ E.	
to a position at	01° 16.633′ N.	103° 56.617′ E.	

thence to the point of origin.

NOTES

Please also advise Shipping Guides Ltd.

PIRACY: Despite strong efforts by some local governments and authorities in the area, piracy continues.

Please see three separate reports below.

1. A 68,000 d.w.t. bulk carrier was attacked on 1st July 1990 at a position 14 miles off Mangaki Island whilst on passage through the Strait.

   The assault took place at 0100 hrs. local time and the four pirates armed with guns and knives left the ship after having spent more than 20 minutes on board holding the Master and senior officers at gunpoint.

   The pirates stole money and personal belongings but fortunately no one was harmed.

   The Master, prior to approaching the Strait, had taken precautions to prevent pirates from entering the accommodation by locking all doors. The pirates, however, were able to open the doors with skeleton keys.

   The pirates approached the ship from the stern in a small wooden speedboat but were not observed by the officer on duty on the bridge.
2. An owner has reported that a vessel was attacked by pirates while passing the Phillip Channel. The ship had reduced speed due to dense fog.

   The lookout on the poop was overpowered, tied up and taken to the bridge, where the officer on duty was also overpowered. The 5 pirates, armed with knives and swords, forced the Master to open the ship's safe. After tying up the Master and the two other crew members, the pirates abandoned the ship taking money and personal belongings.

   The Singapore Marine Police were informed and boarded the vessel to investigate.
3. After a few days on Singapore Roads for repair, a bulk carrier of 42,000 d.w.t. left Singapore on 18th October 1990 at 0030 hrs. en route from Australia to the Gulf. Shortly after departure at a position Lat. 1° 08.3′ N., Long. 103° 43.6′ E., four armed pirates boarded the ship via the poopdeck from a small motorboat. The Master, on the way from the bridge to his office, was overpowered by the pirates and was forced to open the ship's safe. The pirates got away with a substantial amount of cash and private belongings, such as watches, cameras, etc.

GENERAL: Master of any vessel in territorial waters of Singapore shall obey any signal from a preventive vessel and any instruction from Officers of Customs. Customs Officers shall have free access to any part of vessel and have powers to mark, lock or seal any dutiable goods on import including sea stores.

SHIPMASTER'S REPORT: September 1983.
Ballast: Slop reception barges cannot receive slops at more than about 250 t.p.h. Message should be sent to Port Master 1 day before arrival with ETA and height above water and same information repeated to Port Operations Channel 12 three hours before arrival.

RADIO OFFICER'S REPORT: September 1990.
Documents:
Agent:
2 copies Crew List.
1 copy Stores List.
Pre-Arrival Clearance possible. If coming from Australia, fax Crew List from last port.
Pilot: Pilot requires one copy of vessel's Check List for piloted movements.
Customs: Customs will only attend if coming from an Indonesian port (check for drugs).
Customs Allowances: 200 cigarettes or 250 gm. of tobacco, 7 bottles of wine, 1 bottle of spirits and 1 case of beer.
Shore Passes: Passport is sufficient.

SHIPMASTER'S REPORT: May 1991.
Pilot: Pilot outward has to be booked by Agent, 4 hours in advance. If vessel is then delayed, advise Port Control, either before pilot boards, or advise pilot when he boards. If the sailing delay is more than 30 minutes, the pilot will have to be re-ordered, which means another 4 hours.
Immigration: Indian nationals may not sign-off outside harbour limits, unless they have a visa. Indian nationals leaving a vessel inside harbour limits may be permitted to stay up to 3 days after the vessel has departed, but their flights must be confirmed before they sign-off.
Customs: The old United Kingdom style, of having to declare the length of the vessel's next intended voyage, and the number of persons on board before purchasing bonded items, i.e. cigarettes and liquor, has been rescinded. Vessels may now purchase unlimited quantities of bonded items.

AUTHORITY: Port of Singapore Authority, PSA Building, 460 Alexandra Road, Singapore 0511. Postal Address: P.O.Box 300, PSA Building Post Office, Singapore 9111, Republic of Singapore. *Tel:* (65) 2747111. *Telex:* RS 21507. *FAX:* 2744677. *Cables:* "Tanjong" Singapore. *Contact:* Port Master's Department, Tanjong Pagar Complex. Tel: 3211168. Telex: RS 34124. Fax: 3211549.

AGENT: Jardine Shipping Agencies, 200 Cantonment Road, No. 12-05, Southpoint, Singapore 0208, Republic of Singapore. Tel: 2218011, 2241052 (24 hour answering service, No. 7318909). Telex: 24179, 28950 Jarship. Fax: 2257355. Cables: "Jarship".

Slovenia

KOPER: 45.31 N. 13.44 E. **(See Plan)**

PORT LIMITS: The seaward boundaries of the port are between "Debeli Rtic" (Punta Grossa) and Rt. Vilizan.

DOCUMENTS:
- 5 Crew Lists.
- 5 Passenger Lists.
- 8 Cargo Manifests.
- 2 Freighted Manifests.
- 2 Bills of Lading.
- 2 Stores Lists.
- 1 Crew Effects List.
- 1 Cargo Gear Certificate.
- 1 Derat Declaration.
- 1 Health Certificate.

PILOTAGE: Pilot station may be contacted on VHF Channels 16 and 8 throughout 24 hours. Pilot boards 1 mile from entrance in roads or at anchorage. Definite notice to be sent by telex 24 hours before vessel's arrival in port area through its Agent in Koper. In case of bad weather, ship must wait for a Pilot at anchorage.

ANCHORAGES: Port area, depth 17 m., sandy bottom. Safe anchorages in case of S.E. wind near Rt. Vilizan and in case of N.E. wind near Debeli Rt. (Punta Grossa).

RESTRICTIONS: Vessels enter port by day and night, tankers can also enter during daylight hours and at night.

MAX. SIZE: General cargo and container vessels drawing up to 32 ft. and tankers with 40 ft. draft. No length restrictions.

HEALTH: Ship must have Health Declaration and in this case Pratique is automatic. In the event of any suspected disease or fever on board, Master must advise Harbour Master or Agent by VHF Channel 16 or by telegraph. Harbour Master's Office on VHF Channel 16 continuously.

VHF: Communication on Koper Roads on Channel 16 (Channels 8, 10, 12 and 14 can also be used). Channel 10 for mooring/unmooring and Channel 14 for Pilots.

RADAR: No service available.

TUGS: 4 tugs available (750 h.p. – 1,500 h.p.). If additional tugs required, they can be ordered from Trieste.

As per Harbour Master's Regulations, the following number of tugs are compulsory:
- For vessels up to 500 g.r.t. – no tug needed.
- For vessels up to 3,000 g.r.t. – one tug compulsory.
- For vessels from 3,000 to 20,000 g.r.t. – 2 tugs are compulsory.
- For vessels from 20,000 to 30,000 g.r.t. – 3 tugs are compulsory.
- For vessels from 30,000 to 50,000 g.r.t. – 4 tugs are compulsory.
- For vessels over 50,000 g.r.t. – 5 tugs are compulsory.

BERTHING:

Terminal for General Cargo: Quays 833 m., depth from 7 m. to 12 m. Number of Berths 6. Roofed warehouses 140,000 sq.m., of which: air-conditioned warehouses, with a possibility of moisture and temperature regulation from 0°C to 20°C, 7,500 sq.m. Refrigerated rooms (freezing to −20°C) 23,502 cu.m. Special warehouses for cotton and hides 12,500 sq.m. 2 shore cranes, 1×20 ton mobile crane, 1×30 ton mobile crane, 1×40 ton mobile crane, 170 forklifts. Terminal capacity 750,000 tons annually.

Terminal for Timber: Quays 250 m., depth 6 m. – 12 m. Number of Berths 2. Terminal area 25 ha., sheltered storage area 36,120 sq.m., 1 shore crane, 1 bridge crane, 22 forklifts, 21 towing units.

Terminal for Container and Roll-on/Roll-off Traffic: Quays 500 m., depth 12 m. 3 berths for container vessels, 3 Ro/Ro ramps. Terminal area 20 ha. Closed warehouses 10,800 sq.m. Railway tracks 2×562 m. 164 electric connections for reefer containers. 3 container cranes (450kN). 2 reach stackers. 4 transtainers. 11 forklifts. 21 towing units. Terminal capacity 150,000 TEU annually.

BULK HANDLING FACILITIES:

Terminal for bulk and liquids: Cargoes handled: Ores, coal and coke, Cereals and oilseeds, Liquid cargo (wine, edible oils, palm oil, latex, phosphoric acid and chemicals).

Capacities for ores, coal and coke: (Max. granulate size 200 mm.) Length of quay 200 m., depth at the quay 17 m. Number of berths 1, open storage 300,000 tons, 2×20 tons capacity shore cranes (at outreach 36 m.) and a bridge crane (35 tons capacity). Yearly throughput of the terminal 1.5 million tons. Unloading capacity on the quay 1,500 t.p.h. Loading capacity from the ship or from depot 5,000 tons/day. Possibility of berthing vessels up to 130,000 d.w.t. Daily despatch per railway 10,000 tons.

Capacities for phosphates, fertilisers, borates and bauxite: Length of quay 273 m., depth at the quay 14 m. Number of berths – 1, sheltered warehouse (ground floor) 30,000 tons, 2×20 tons capacity shore cranes (15 tons at 24.0 m.). Silo for borates 1,100 tons and silo of 20,000 tons for alumina with special unloader (rate 250 t.p.h.). The quay is equipped with moving belts and connected to the warehouse with a closed conveyor system.

Capacities for cereals, oilseeds and oilseeds after industrial output/silo: Length of quay 183 m., depth at the quay 14 m. Number of berths – 1, storage capacity (24×2,250 tons and 11×580 tons) 60,000 tons. Discharging/loading capacity for vessels 500 t.p.h., discharging/loading capacity for vehicles 500 t.p.h. The grain silo is a technological closed system with its own quay, rails, wagon loading/discharging station and the corresponding road connections.

Capacities for other bulk cargoes: Depth at the quay 7.0 m.-14.0 m. Number of Berths 3, open storage area 12,000 tons (2×6,000 tons). In addition to the special quay equipment with conveyor systems the Port of Koper has 3 additional berths for dispatching of bulk cargoes direct.

Capacities for liquid cargoes: Wine 2,492 cu.m., palm oil 4,710 cu.m., chemicals 12,350 cu.m., phosphoric acid 7,145 cu.m., latex 1,320 cu.m., edible oil 20,604 cu.m.

BRIDGES: None.

STEVEDORES: Gangs ordered from "Luka Koper" who are stevedores, by Agents and forwarding Agents in Koper.

MEDICAL: Medical assistance and hospital available.

TANKERS: Tanker berth for crude oil with max. draft 40 ft., equipped with 3×8 in. arms.

FRESH WATER: Available from any pier. Rate of delivery about 15 t.p.h.

FUEL: Available from Trieste (Italy).

FIRE PRECAUTIONS: Usual precautions.

CONSULS: Italy.

REPAIRS: Small repairs can be carried out at Koper. In Izola, 2 miles from Koper, is wharf "2nd October". The repair service for containers is in the Port.

DRY DOCKS: In Izola for vessels up to 16,000 d.w.t.

SURVEYORS: In Koper – Jugoregister. In Trieste all representatives.

GANGWAY/DECK WATCHMEN: Available at ship's request.

OPENING/CLOSING HATCHES: If not performed by crew, then by stevedores.

CUSTOMS ALLOWANCES: 200 cigarettes for each member of crew and 1 bottle of spirits per week and reasonable quantity of wine per man per day.

REPATRIATION: By bus, by railway from Koper or by air from the airports.

AIRPORT: Ljubljana (Brnik) – 120 km. Rijeka – 100 km. Pula – 100 km. Ronchi (Italy) – 80 km.

TIME: GMT plus 1 hour. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Days (1st, 2nd January), Slovene Cultural Holiday (8th February), 27th April, May Days (1st and 2nd May), State Holiday (25th June), 1st November, 25th December, Independence Day (26th December).

POLICE/AMBULANCE/FIRE: Police No. 92, Ambulance No. 94, Fire No. 93.

TELEPHONES: From anchorage it is possible to telephone through Rijeka Radio or Trieste Radio.

SHORE LEAVE: Allowed after clearing inwards (Free Pratique).

IDENTIFICATION CARDS: Shore pass issued by local police (without photograph).

GARBAGE DISPOSAL: Garbage collection service is available each day from 0700 hrs. to 1500 hrs. and is compulsory. Special plastic bags are provided on board each day. Charges depend on vessel's tonnage and are from U.S.$ 31 to U.S.$ 61 for each collection. Contact Tel: 66-23837 or 33111 HIDRO KOPER.

WASTE OIL DISPOSAL: Waste oil is collected by a boat with capacity of 15 – 20 cu.m. In case of larger quantities a tanker-barge can be provided. Collection can be done on all berths in the Port of Koper. Contact Tel: 66-23837 or 33111. Actual price is U.S.$ 80/tonne.

SEAMAN'S CLUBS: None.

CURRENCY: Slovene Tolar.

DEVELOPMENTS: *Bulk Terminal:* (2nd stage) Extension of the quay by additional 200 m., depth of the whole basin 18.0 m., 2 unloading bridges, capacity 2×1,200 t.p.h. Enlargement of depot also to be undertaken.

SHIPMASTER'S REPORT: June 1981.

According to Pilot they do not have VHF in their office but use the set in the Harbour Master's Office. We found we could not contact the Pilots until after anchoring and when the Pilot boarded he said it was only because he happened to be in the Harbour Master's Office at the time.

Tankers always berth port side to and do not normally sail after dark as they have to move out of the channel stern first and then swing.

Moorings usually 4 head ropes and 1 backspring with similar aft. After ropes go to 2 buoys and require lashings. After backspring and forward moorings go to bollards ashore.

There is a telephone, for local calls, in the office on the jetty.

Use tug's lines berthing and ship's lines sailing.

Vessel is inspected by Harbour Master and they are very particular about ship's documents especially the Certificate of Insurance or other financial security in respect of civil liability for oil pollution damage.

If wishing to visit Consul it is apparently easy to cross the border to Trieste but best to allow boarding Immigration Officer to examine your passport. A long gangway is required (no shore gangway) as jetty is low.

AUTHORITY: Port of Koper – Slovenia, Ukmarjev Trg. 2, 66000 Koper, Slovenia. *Tel:* 066-22-664, 066-21-216. *Telex:* 34-235. *Cables:* Pristaniska Kapitanija Koper. *FAX:* 066-21-447. *Contact:* Captain Valter Kobeja, Harbour Master.

AGENT: Jadroagent International, Pristaniska 45, P.O. Box 70, 66000 Koper. Tel: 066-38630, 38502. Cable: Jadroagent Koper. Telex: 34234 34778 Yu Jadrag. Fax: 066-38706, 38538.

Society Islands

BORA BORA (Vaitape): 16.31 S. 151.45 W.

DOCUMENTS: All vessels arriving in French Polynesia must first call for clearance at Papeete, pilotage is compulsory. See "Papeete" for documents required.
PILOTAGE: There is no pilotage station at Bora Bora; a Pilot will be provided at Papeete. Vessels are requested to advise their Agents at least 15 days before arrival of their ETA, length and draft of ship. In addition, Masters should confirm their ETA to the Port Captain of Papeete at least 3 days before arrival. Telegraphic address is Capitaine de Port, Papeete.
ANCHORAGES: Vessels may anchor in the port roads in depths of 34 m. – 21 m. Good holding ground in sand and coral.
RESTRICTIONS: Night pilotage is practicable, weather permitting. There are 2 buoys at the entrance and a light beacon.
MAX. SIZE: Length 220 m., beam 30 m., draft 9 m.
HEALTH: Vessel should ask for Free Pratique by radio message to Sante Maritime Papeete, via coast station Mahina. This message to be sent 24 hours before arrival. Alternatively Free Pratique can be accorded by the Pilot.
RADIO: Mahina Radio, call sign FJA, operating 24 hours a day on 500, 2182 and 8279 kHz.
TUGS: No tugs available at Bora Bora.
BERTHING: One quay, (Quai de Farepiti) 132 m. length, situated in Faanui Bay. Depth alongside 7.30 m. Only used by small warships, coasters and yachts. One other quay (Quai de Vaitape) 40 m. long and with depth alongside 4 m. Situated at Vaitape. Used by barges.
MEDICAL: Doctor available and there is a local infirmary.
FRESH WATER: Not available.
FUEL: Not available.
CUSTOMS ALLOWANCES: No restrictions for crew members, but all tobacco and alcohol must be declared. Crew men going ashore may not take more than 2 packets of cigarettes.
AIRPORT: Situated 7 km. from Vaitape, only inter-island services.
TIME: GMT minus 10 hours. No change during the year.
HOLIDAYS: See "Papeete".
SHORE LEAVE: Allowed.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Franc Pacifique (FCP).
AUTHORITY: Port Autonome de Papeete, B.P. 9164, Papeete, Tahiti, French Polynesia. *Tel:* (689) 505454. *FAX:* (689) 433612. *Contact:* Edgar Blouin, Harbour Master.

PAPEETE: 17.33 S. 149.34 W. (See Plan)

DOCUMENTS:
Required by Port Health:
Maritime Declaration of Health (form provided by the Pilot).
Required by Immigration (1 copy of each):
Crew List.
Lists of Passengers Disembarking.
Lists of Passengers in Transit.
Required by Customs (2 copies of each):
Manifest of Cargo for Discharge.
Provisions List.
Mail List.
Crew Personal Effect List.
Bonded Stores List.
Ship's Spares List.
Crew List.
List of Passengers Disembarking.
List of Passengers in Transit.
List of Animals to be Unloaded.
List of Animals in Transit.
List of Plants.
Complete Cargo Manifest.
Required by Merchant Marine Authorities:
1 Declaration of Safe Rules on board ship (form supplied by Pilot).
Required by Port Captain (1 copy of each):
Entry Declaration (form supplied on arrival).
Crew List.
List of Passengers Disembarking.
List of Passengers Embarking.
List of Passengers In Transit.
List of Cargo to be Loaded, Unloaded or Transhipped.
Dangerous Cargo: If carrying dangerous cargo for Papeete (or in-transit) send cable to Port Captain prior to arrival.
On arrival give list of dangerous cargo to Pilot.
APPROACHES: The entrance channel is marked by occulting green range lights mounted on red and white striped towers which are aligned 149° T. This range is normally visible at approximately 11 miles, although sometimes obscured by floodlights from the nearby public swimming pool.

The barrier reef on the East side of the pass can easily be seen. Entrance to the harbour, through the barrier to the East, and shoal water to the West, is marked by lighted buoys, during bad weather there is often a heavy sea on the shoals (5 m. deep).

In the pass itself, the current generally sets outward. When Northeasterly winds are particularly strong, the water level in the lagoon can rise considerably. Northwest or Westnorthwest setting currents may attain strengths of up to 5 knots, creating dangerous, if not impossible navigating conditions for small craft. No warning signals concerning permission to enter or leave the pass exist.

In case of doubt regarding tidal conditions in the pass, contact can be established with the Harbour Master's Office on VHF Channel 12, or HF, frequency 2638 kHz.

Interior reefs are marked. Passage once into the harbour is marked by a pair of occulting green range lights mounted on red and white towers. This range is aligned 087° T.
PILOTAGE: Compulsory. Vessels are requested to advise their Agents at least 3 days before arrival giving their ETA, length, width and max. draft of the ship; tonnage of cargo for discharge and breakdown by hold; dangerous articles and/or explosives on board and amount of fuel and water needed. In addition, Masters must give their ETA 24 hours before arrival to Capitainerie du Port, Papeete. Pilot station and pilot launches are equipped with VHF and must be contacted on Channel 12 when within 30 miles. Pilot launches have grey painted hull with a white band, with wheelhouse on the fore part. International code flag signals are used to call Pilot. Pilot boards about 1.5 miles from the entrance channel. There is no anchorage outside the port for ships awaiting a Pilot.

Pilotage available 24 hours.
ANCHORAGES: Vessels up to 170 m. length can anchor in the port roads in depths of 18 m. – 25 m. Good holding ground in mud.
RESTRICTIONS: Ships coming from a country infested by "Oryctes Rhinocerus Strategus" (coconut beetle) can be fumigated by the Department of Agriculture and can stay alongside at night. Advise agent 3 days prior to arrival if fumigation is required.
Entrance Channel: Width 110 m. Max. depth 11.30 m.
MAX. SIZE: Length 250 m., beam 32 m., draft 34 ft. The Q.E. II, length 294 m. entered and docked in 1985, 1988, 1989 and 1991.
HEALTH: Vessels with a doctor on board should ask for Free Pratique by radio to Sante Maritime Papeete, via Coast Station Mahina Radio. This message should be sent earliest 24 hours and latest 18 hours before arrival. Vessels having no doctor on board will be inspected in Papeete by the Maritime Public Health Service. All formalities concerning maritime sanitation regulations can be carried out at this time. Pratique is automatic for vessels coming from another Polynesian port. Also see "Restrictions".
RADIO: Mahina Radio, call sign FJA, operating 24 hours per day on 500, 2182, 8279 kHz, and on VHF Channel 16.

GMT 0118 hrs. —	8461 kHz	FJA 8	A1	W/T
GMT 0733 hrs. —	17040.8 kHz	FLA26	A1	W/T
GMT 0433 hrs. —	8461 kHz	FJA 8	A1	W/T
GMT 0503 hrs. —	17040.8 kHz	FJA26	A1	W/T
GMT 0903 hrs. —	4298 kHz	FJA41	A1	W/T
GMT 0933 hrs. —	8461 kHz	FJA 8	A1	W/T
GMT 1333 hrs. —	8461 kHz	FJA 8	A1	W/T
GMT 1733 hrs. —	4298 kHz	FJA41	A1	W/T
GMT 2018 hrs. —	8461 kHz	FJA 8	A1	W/T
GMT 2048 hrs. —	17040.8 kHz	FJA26	A1	W/T

Since 1st March 1992 ship stations should transmit/receive on the following frequencies:

Transmit	2182 kHz	Receive	2182 kHz
	2435 kHz		2620 kHz
	4110 kHz		4402 kHz
	8279 kHz		8803 kHz
	16372 kHz		17254 kHz

Local weather broadcasts are made in French language by Mahina Radio at the following local times:

1100 hrs. 8803 kHz and VHF Channels 26/27.
1200 hrs. 2620 kHz and VHF Channels 26/27.
2040 hrs. 8803 kHz and VHF Channels 26/27.
2100 hrs. 2620 kHz and VHF Channels 26/27.

VHF: The Port Captain's Office is equipped with VHF. Watches are kept on Channel 12 when a ship is expected. Vessels must contact Harbour Master's office one hour prior to arrival.
TUGS: Tugs join ships as soon as they are in the entrance channel. Generally, tow-lines are not required, as tugs push the vessels only. There are three tugs available up to 1,200 h.p. belonging to the Port Authority, and in addition, there are 4 naval tugs up to 750 h.p. which may assist if required.

Use of tugs is compulsory for vessels over 3,000 cu.m. The volume is calculated as follows: Length × Width × Maximum Draft.
BERTHING: Passenger Ship Quay: 233 m. length, 2 berths, depth alongside 9.5 m.

Cargo Quay: 450 m. length, depth alongside 10.50 m.

Fishing Boat Quay: 100 m. length, depth alongside 5.50 m.
STEVEDORES: Cargo information should be confirmed to the Agents with ETA 48 hours before arrival.
MEDICAL: Advance notice required if medical attendance needed on board. 2 hospitals available. Passengers disembarking must present a valid vaccination certificate.
TANKERS: One tanker berth, 105 m. long. Max. allowed draft 33 ft. Discharging hoses are: Mobil Oil 8 in., Total Oil 6 in.

One gas tanker berth, at Pont de Taunoa, accessible via Taunoa Channel. For vessels max. LOA 85 m., max. breadth 13.80 m., max. draft 6.0 m.

There is an additional tanker berth used by Mobil, Total and Shell with length 79 m. and permissible draft 34 ft. Berthing is not safe at the time of Northerly swell (November to March).
FRESH WATER: Available from pipelines on all quays. Loading rate is 50 t.p.h. at passenger and cargo quays and 30 t.p.h. at the tanker berth. It is recommended that water be sterilised for drinking.
FUEL: Three companies distribute bunker products: Tahiti Petroles (Total products), Mobil (Mobil products) and Shell.

Tahiti Petroles – Telex OLITAHI 304 FP. Service Mobil – Telex SERMOBIL 238 FP. Polypetroles et Shell – Telex Polyshell FP 400.

Refuelling with gasoline, diesel oil, marine diesel oil and light fuel is possible. Taxes may be waived on these products for foreign vessels.

A 700 ton barge operated by Mobil may be used by transit vessels for bunkering if notified 24 hours in advance.

CONSULS: The following countries maintain representatives at Papeete:

Austria
Belgium
Chile
Denmark
Finland
Italy
Korea
Netherlands
Norway
Sweden

REPAIRS: Woodwork, electrical and welding repairs can be effected.

SURVEYORS:

Classification Societies:

Bureau Veritas. Tel. 42.80.86.
Lloyd's Register. Tel. 42.63.93.

Surveyors:

Maurice Bourrat. Tel. 42.67.06.
Bernard Baudry. Tel. 43.04.47. Telex. 210 FP.

DRY DOCKS: There is 1 floating dock for vessels up to 3,500 tons which belongs to the Navy.

GANGWAY/DECK WATCHMEN: Services of shore watchmen are necessary.

OPENING/CLOSING HATCHES: Hatches opened and closed by crew if they are of mechanical type, otherwise the stevedores will perform this operation.

CUSTOMS ALLOWANCES No restrictions for crew members but all tobacco and alcohol must be declared. Crew members going ashore must not take more than two packets of cigarettes. Passengers disembarking may take 200 cigarettes or 50 cigars or 400 grammes of tobacco and one bottle of alcohol.

REPATRIATION: Can be effected.

AIRPORT: Tahiti — Faaa Airport is situated 6 km. from the port. Regular international flights.

TIME: GMT minus 10 hours. No alterations during the year.

HOLIDAYS: Stevedoring services are available on all work days in 3 mandatory shifts. Longshoremen do not work on the following days unless otherwise stated: 1st January, 5th March, Good Friday, 1st May, 14th July, 1st November, 24th December (after 1100 hrs.), 25th December and 31st December.

Work carried out on other holidays or "local legal holidays" is considered as overtime work and will be paid as such: Easter Monday, 8th May (VE day), Ascension Day, Whit Monday, 29th June (Fete de l'Autonomie Interne), 15th August (Assumption Day) and 11th November (Armistice Day).

POLICE/FIRE/AMBULANCE: Police 17; Fire 18; Ambulance 2 96 74.

EMERGENCY CO-ORDINATION CENTRE: Contact Amiral Commandant la Zone Maritime. Telex: 269 FP. Tel: 42.55.30.

TELEPHONES: Can be installed on board vessels at all quays.

SERVICES: Provisions of all sorts (fresh, frozen, canned) may be bought in bulk from certain local merchants. It is possible to obtain duty-free cigarettes and alcohol. All heavy laundry can be done rapidly at several specialised cleaners.

BANKS: Banque de Polynesie, Branch of Societe Generale France, Telex: 230 Polybank FP, - B.P. 530, Papeete. (Joined to Credit Cards Visa system).

Banque de Tahiti, Branch of Bank of Hawaii, Honolulu. Branch of Credit Lyonnais, Paris. Telex: 237 FP - B.P. 1602, Papeete.

Banque Indosuez, Branch of Indosuez Paris, Telex: 232 FP and 244 PF - B.P. 120 Papeete.

STORING: Vessels can be stored by truck, which can proceed alongside the berth. Forklift trucks can be used. Special Customs Regulations in use.

SHIP SUPPLY SERVICE: The off-shore ship supply services are operated by the Pilot launches belonging to the Port Authority within 24 hours notice for ship-to-shore transport of personnel, essential stores and sick crew members.

SHORE LEAVE: Allowed without restriction.

GARBAGE DISPOSAL: Collection service available. Skips provided alongside. Contact Port Autonome, Tel: 43.60.60, Ext. 436/7 or ship's agent. Collection time arranged through ship's agent. Charge 5,730 FCP per tonne or cu.m.

WASTE OIL DISPOSAL: No collection service available.

SEAMAN'S CLUBS: None.

CURRENCY: Franc Pacifique (FCP).

AUTHORITY: Port Autonome de Papeete, B.P. 9164, Papeete, Tahiti, Polynesie Francaise. *Tel:* (689) 505454. *Cables:* Capitaine Port Papeete. *FAX:* (689) 433612. *Contact:* Edgar Blouin, Harbour Master.

Agents

1 Transit Passenger Manifest.
1 Landing Passenger Manifest.
1 Crew List.

APPROACHES: Approaches free from dangers provided vessels keep at least 2 cables off Point Cruz Beacon, identified by quick flashing red light. On foreshore in front of Shell Oil Storage Tanks is beacon with fixed green light, and above on Vavaya Ridge is white light flashing every 5 seconds from Tower on radio station building. When in line these 2 lights give correct approach to anchorage in 20 fathoms on, or East of, the line. Prevailing winds during S.E. monsoon season blow from N.E. direction sometimes reaching Force 4 to 5 in early afternoon. During N.W. monsoon season direction and force variable generally between North and West up to Force 4 and occasionally Force 5.
PILOTAGE: 24 hours' notice of ETA stating number of passengers, dangerous cargo, etc., to Harbour Master, Honiara, via Honiara Radio. Usual signals. Pilot boards from launch about 0.75 miles N.E. Pelope Shoal. Vessels normally berthed port side to. Pilot uses port gangway in calm weather.
ANCHORAGES: East of Port Main Leading Lights. Fl. white and fixed green, in about 20 fathoms; coral bottom.

Local boats are available for transporting crew from anchorage to the shore. The landing stage is at Joanna Jetty on the East side of the main pier at Point Cruz. Height above water level is 2 ft. at high tide and 4 ft. at low tide.
RESTRICTIONS: Berthing in daylight hours only – departure any time.
MAX. SIZE: New Wharf is 115 m. long and depth 9.14 m. Old Wharf, up to 200 ft. long and max. 13 ft. draft. Tankers, mooring at buoys, 600 ft. long and 27 ft. 6 in. draft.
HEALTH: Pratique can be obtained by radio. Cable Port Health. Suspect vessels should inform Health Authorities and Harbour Master by radio for doctor to board on arrival.

Cable to Quarantine Officer Honiara between 12 hours and 4 hours before arrival the following message: "Request Radio Pratique negative answers all health questions Maritime Declaration of Health. Master." Normally, the P & T Radio Officer may grant Pratique immediately whilst he is in radio contact with the ship. After arrival the Health Officer will check for rhinoceros beetle and will clear.
RADIO: Radio Honiara VQJ. Watch continuous. 6204 kHz, 2182 kHz, 500 kHz. GMT Schedule 0020 – 0030 transmits 11560 kHz, receives on 8 MHz or 16 MHz.
VHF: Channels 6, 12 and 16.
TUGS: There is a small 100 h.p. tugboat assisting with mooring when necessary.
BERTHING: One deepwater berth at Point Cruz for containers, general cargo and Ro-Ro vessels.
STEVEDORES: At least 24 hours' notice, usually 3 gangs, indicate any extra gangs required. To facilitate quick turn around advisable have cargo in middle holds evenly distributed not at extreme end or massed in one hold only.
Working Hours: 0730 hrs. – 1200 hrs., 1300 hrs. – 1800 hrs. and 1900 hrs. – 2300 hrs.
MEDICAL: Notice should be given in advance if medical attendance required on board. Inoculations available at clinic on Fridays only. Limited hospital facilities available.

Cholera: Required if arriving from infected area. Vaccination Certificates are checked individually for those passengers permanently disembarking.

For all other passengers and the crew ship's doctor must provide a statement advising that all passengers and crew comply with the health regulations and vaccinations required.

In case some passengers have for health reasons not been vaccinated, a letter from their doctor giving reason why no vaccination given must be produced. Passengers will be allowed to go ashore.

Central Hospital, Tel: 23600.
Emergency and Ambulance, Tel: 22200.
Dental Clinic, Tel: 23600.
Private Doctors:
Dr.T. Eritara, Tel: 22790.
Dr.P. Ogatuti, Tel: 23277.
Dr.H. Posala, Tel: 22029.

TANKERS: Tanker buoys, 8 in. pipeline, max. draft 32 ft. New Wharf, 4 in. pipeline, max. draft 27 ft. 6 in. Old Wharf, 4 in. pipeline, (ADO), max. draft 13 ft. Dirty ballast facilities available.
DENSITY/TIDE: Approx. 1025. Tidal range about 3 ft.
FRESH WATER: At wharf by hoses. 40 t.p.h.
FUEL: Diesel and gas oil available. 48 hours' notice, butane gas.
FIRE PRECAUTIONS: Normal fire precautions, with gang standing by with fire pump.
CONSULS: Australia, New Zealand, Papua New Guinea, Sweden and United Kingdom.
REPAIRS: Limited facilities only.
DRY DOCKS: None.
GANGWAY/DECK WATCHMEN: Watchmen to be recommended. Customs provide a preventive officer for duty at a charge.
OPENING/CLOSING HATCHES: Stevedores assist crew. Crew to rig gear.
CERTIFICATES: Certificate of Registry.
CUSTOMS ALLOWANCES: 200 cigarettes or 0.5 lb. tobacco per crew member. 3 quart bottles of beer per crew member.
REPATRIATION: Facilities available.
AIRPORT: Situated approximately 10 miles from the wharf. Air Niugini have 2 flights per week from Sydney via New Guinea, and Solomon Airlines have 2 flights to Vila, 1 flight to Nandi, 1 flight to Port Moresby and 2 flights to Brisbane, each week.
TIME: GMT plus 11 hours all year round.
HOLIDAYS: Cargo work can be arranged on all holidays except Christmas Day and Easter period.
POLICE/AMBULANCE/FIRE: Emergency phone numbers: Police 22999; Ambulance 22200; Fire 20235.
SERVICES: Labour can be hired for assistance with painting and cleaning. Other services not normally available. 24 hours' notice required.
SHORE LEAVE: Permitted.
IDENTIFICATION CARDS: Required.
VISAS: Transit passengers: not required. Disembarking passengers: require visa for a stay over 48 hours. Visa can be obtained from nearest British Consul.
LANDING CARDS: Only permanently disembarking passengers need special Landing Cards which can be obtained from Immigration Officer on arrival.
WEATHER: Cyclone season December to April, winds N.W. to variable, Force 0 – 5. From April to November winds are from N.E., Force 4 – 5.
DELAYS: Nil, except when other ships being worked.
DEVELOPMENTS: Copra Wharf, length 100 m., to be constructed.
AUTHORITY: Solomon Islands Ports Authority, P.O.Box 307, Honiara, Solomon Islands. *Tel:* 677-646. *Telex:* 66348. *Contact:* Harbour Master.

MALLOCO BAY: 07.36 S. 156.37 E.

LOCATION: The wharf is located in position Lat. 07° 35′ 42″ S., Long. 156° 36′ 52″ E. in Malloco Bay on Vella Lavella Island.
DOCUMENTS: 3 copies of all documents including "Nil" sheets of Crew Lists, Passenger Lists, Customs, Health Manifests, Bills of Lading, Ship's Particulars, Ship's Certificates.

Quarantine Boarding Officer requires the following:
List of Provision Store, both wet and dry.
Crew List.
Last Ports of call and the next Port of call.
List of disembarking passengers.
Plants and Animals List.

APPROACHES: The approach is deep, through a pass in the fringing reef. Port and starboard reefs are marked. There are no navigation lights.
PILOTAGE: Company officials provide pilotage. Boarding point is at Port of Entry, Gizo Island, Lat. 08° 06′ 00″ S., Long. 156° 50′ 36″ E. Vessels should anchor outside the fringe reef and call "Allardyce" on VHF Channel 16, or 6365 kHz.

ANCHORAGE: The anchorage is protected from all quarters and affords good holding (See Aust. Chart No. 683).
RESTRICTIONS: As no lights are available, all entries are made during daylight hours.
MAX. SIZE: LOA 115 m., max. draft 7.2 m.
HEALTH: Pratique granted on board on arrival. If any suspected or confirmed disease or fever on board notify the Health Inspector immediately on arrival. He will advise procedure. Pratique is automatic when arriving from another Solomon Islands port.
RADIO: Gizo Base 6365 kHz. Malloco Bay 6365 kHz.
VHF: See "Pilotage".
RADAR: No radar facilities.
TUGS: A small tug/line boat is available.
BERTHING: The wharf is 100 m. in length. Minimum depth at the South end is 8.0 m. and at the North end 10.0 m. Loading and discharging is by ship's gear. There are 2 loaders on the wharf.

Cargo is S.I. round logs which are exported.
CRANES: None.
BULK CARGO FACILITIES: None.
SPECIALISED CARGO FACILITIES: None.
BRIDGES: None.
STEVEDORES: The stevedores are company personnel and available immediately ship is berthed and cleared.
MEDICAL: Local clinic about 4 km. from port. Limited medical and dental facilities.
TANKERS: No facilities.
FRESH WATER: Not available.
FUEL: Not available.
FIRE PRECAUTIONS: None.
CONSULS: None.
REPAIRS: No facilities.
DRY DOCKS: Not available.
SURVEYORS: Not available.
WATCHMEN: Not necessary.
HATCHES: Opening and closing by ship's crew.
CUSTOMS ALLOWANCES: 2 litres spirits, 200 cigarettes.
REPATRIATION: Not possible.
AIRPORT: Light plane strip 1 km. from port. 2 flights a week (Monday and Thursday) to Honiara.
TIME: GMT plus 11 hours.
HOLIDAYS: Christmas Day, New Year's Day, Good Friday, Easter Monday, 7th July (Independence Day), Queen's Birthday and Whit Monday in June.
POLICE/AMBULANCE/FIRE: Not available.
EMERGENCY CENTRE: Honiara.
TELEPHONES: Not available.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None.
CURRENCY: Solomon Islands Dollar (SB$).
REGULATIONS: Normal Customs, Immigration and Health requirements.
DELAYS: Normally straight onto berth after Pilot on board.
GENERAL: Shippers' Office may be contacted on SSB 6365 kHz at 0700 hrs., 1200 hrs. and 1630 hrs. local time.

Shortland Harbour also serves as Port of Entry for Fauro Island.
DEVELOPMENTS: None planned.
AUTHORITY: Allardyce Lumber Company Limited, P.O.Box 164, Honiara, Solomon Islands. *Tel:* (677) 30133. *Telex:* HQ 66343 Alcol. *Cables:* Alcol. *FAX:* (677) 30669. *Contact:* John Beverly, General Manager. Peter Cole, Shipping Manager.

Regional Office: Allardyce Lumber Co., P.O.Box 44, Gizo, Western Province. Tel: 60074. Fax: 60075. Contact: Edward Daga, Gizo Base Manager.

Malloco Bay: Charles McPhee, Manager.

PORT NORO: 08.13 S. 157.12 E.

SHIP'S OFFICER'S REPORT: August 1991.

VESSEL: LOA 145.5 m., max. draft 6.3 m. and 10,511 g.r.t
DOCUMENTS: See "Honiara".
APPROACHES: Approach was free of any dangers and in deep water at all times. Even whilst alongside the echo-sounder showed 20.0 m. below the keel.

Sosomboeke Island was sighted at 7 miles.

Wind and sea are usually calm but rain can impair visibility.
PILOTAGE: Berthing in daylight hours only. Pilot boards in position Lat. 08° 11′ S., Long. 157° 12′ E. Pilot boat "Wra" has white hull with "Pilot" in blue letters on side.
VHF: Call "Noro Port" 4 hours before arrival on Channel 16. Contact was made when approximately 19 miles from Tonguivili Point.
TUGS: None.
BERTHING: *Cutter Point Quay*: Length of quay 70 m. Depth under keel when alongside was 20.0 m. Head lines and stern lines were run to bollards on the shore by a mooring boat. Vessel berthed starboard side alongside.

Port was found to be safe but gangway was lifted at night and all doors kept closed.

STEVEDORES: Foremen, winchmen, hatchmen and tallymen are onl special people employed. Stevedores are picked up in the village. Ship' crew attend to all lashings.

Gangs work from 0730 hrs. – 1200 hrs., 1300 hrs. – 1730 hrs. an 1900 hrs. – 2230 hrs. No overnight gangs available.
MEDICAL: Limited hospital facilities. Two crewmen visited the docto on a Sunday.
FRESH WATER: Not available.
FUEL: Not available.
SHORE LEAVE: Permitted. No passes required.
GENERAL: Pilot is in overall charge at the port.

On completion of cargo operations in the evening shift, vessel cou not sail as Immigration Officer will not board after 2000 hrs.

Accommodation is required for 2 persons.

SHORTLAND HARBOUR: 07.04 S. 155.52 E.

Port not operational. All lumber operations moved to Malloco Bay o Vella Lavella Island.

YANDINA: 09.04 S. 159.14 E.

The Port of Yandina lies on the Southern shore of Renard Sound whic is a deep inlet on the Eastern coast of Banika Island, part of the Russel Group of islands.

It is the headquarters of Levers Solomons Ltd. (LSL) who own th wharf, shore facilities, adjoining airstrip and plantations.
Note: The cable area marked on BA Chart No. 2975 and the remark in the Pacific Island Pilot Vol 1, page 375, line 10, does not exist. Th cable was removed some years ago.

LSL Managers report that in the past, vessels anchoring in the Soun itself have fouled their anchors on wartime scrap which lies on the se bed.

The Sound is steep-to with depths of 90 m. in the centre. There is fringing coral reef along both the Northern and Southern shore lines which extend further out the farther into the Sound a vessel penetrates Two small coral spits project out into the Sound for about 100 m. fro the northern shoreline, one each end of the wharf.
DOCUMENTS: If Yandina is first port of entry, the following document are required:

2 copies Crew List (Solomon Island Forms only).
2 copies Personal Manifest.
2 copies Stores List (Solomon Island Forms only).
2 copies Passenger List ("Nil" returns required).
2 copies Unmanifested Cargo List ("Nil" returns required).
1 copy Maritime Declaration of Health.
Last Port Clearance.

APPROACHES: The Russell Island Group is sighted visually from th South at 30 miles on an approach course of 007° (T). Good reliable rada fixes are obtained at 18 miles from Alokun Island (150 ft.). This is durin the late afternoon in fine, clear weather.

Vessels can enter the group between Keogh Island and Lamon Islan during darkness with good radar representation for navigationa purposes. The least depth in the channel is recorded at 270 fathoms.

Entering the Russell Group from the South, one passes between Lou and Louin Islands. The Channel here is narrow, but steep to and fre from dangers. However, on this approach to Yandina, the wharf is no visible until the vessel is practically into Renard Sound and a long blas on the whistle when within sound distance, is recommended to alert lin handlers, etc.

The Northern entrance is to be recommended, particularly t newcomers, as the wharf can be seen much earlier and a direc approach can be made. Entering from the North, vessel passes betwee Lanalau and Kurimarau Islands.
PILOTAGE: Not available.
HEALTH: Radio Pratique is obtained from Honiara.

Not more than 24 hours and not less than 8 hours prior to arrival, health message is to be sent, and provided there are no cases infectious diseases on board, Radio Pratique will be granted. Th message should be addressed to "Port Health, Honiara" and should b phrased "Request Radio Pratique Stop Negative answers to all heal questions Maritime Declaration of Health" signed Master.
RADIO: There are 3 radio telephone channels in operation at Yandin the Post Office, the Police Station and LSL private. H/F frequency t their Honiara Office which has Telex and Fax facilities.

There is a post office which offers a telegram service.
TUGS: A mooring boat assists when berthing.
BERTHING: Entry is made between Lanalau Island and Kurimara Island and then a direct course towards Renard Sound. At slow spee all the way in, no offsetting current is experienced.

The vessel is given a direct parallel approach to the wharf and bert port side alongside.

One mooring boat is used concurrently under very efficient supervisio from ashore.

On occasions a current is suspected to run from North into Rena Sound as the stern tends to set towards the shore whilst berthin however it cannot be depended upon as Masters have reported th current running from the South and the stern tending to set off whilst berthing.

It is essential to approach at the slowest possible speed consistent with keeping on track heading for the wharf. With an offshore breeze, by the time the vessel arrives abeam of the wharf, it often happens that although the bow is in a good position, the stern has become angled out considerably. To take care of this, the officer in charge aft should have his first stern line fleeted out on the poop deck ready for quick slacking away without any kinks or holdups (which frequently result from trying to slack away quickly from a coiled rope). He should also have a second good rope already joined on with a strong lashing, because even with the launch running the stern line smartly, it is a long haul to the shore bollard and the stern may be slowly blown further out as the line is run. It is useless to wait and see if a second rope joined will be needed. The vital time lost lashing ropes together could spoil the whole manoeuvre.

The officer in charge forward should have the starboard anchor ready for letting go, whether it is intended to use it or not.

Years ago the use of an anchor off the wharf was not recommended due to possible fouling on old wartime wreckage, but sometimes the use of the anchor is essential and any subsequent fouling is a chance that has to be taken.

Berthing starboard side to is not recommended and can be hazardous. The large scale plan of Renard Sound on BA. Chart No. 2975 gives a false impression to a stranger as to its width. In fact, the average safe width of the Sound is little more than two cables (about 2 ships' lengths for "Corabank"/"Cloverbank" Class of ship). Several large vessels attempting to turn short round in the Sound to try and berth starboard side to have found themselves in difficulties due mainly to drifting steadily up the Sound (under the influence of the wind and possibly current) while backing and filling in the limited space. The deep water in the middle of the Sound (30–40 fathoms) is not very handy for using an anchor to assist in turning round, but if dropped (with plenty of chain) abeam of the wharf where the Sound is widest, it might prevent drifting up the Sound.

The line of approach to the wharf from the West (starboard side to) is not as straight as might appear from the coastline on the chart. There is shallow water and old piles extending quite a way out just Westwards of the wharf (not shown on the chart plan) and a vessel would have to come in to the wharf at a very awkward angle to avoid the reef. There appears to be no advantage at all berthing starboard side to.

BERTH: The main wharf which lies 2.5 cables Westward of Nikoria Point is of a concrete and steel construction and 53.5 m. long, with a minimum depth alongside of 6.1 m. There are 2 mooring bollards (connected to the shore) in line with the seaward face of the wharf. The Eastern bollard is 24.4 m. away and the Western one 41.2 m. away from their respective wharf ends.

A small wooden jetty is situated 21 m. to the West of the main jetty, (between the jetty and the mooring bollard). The jetty measures 10.1 m. across the face, and has a minimum depth alongside of 1.1 m. (at chart Datum).

To overlap the wharf too much at either end (but particularly the Eastern end) is dangerous; there is nothing to prevent the ship grounding with an on-shore wind or if anything went wrong with the moorings, and at such extreme positions, the bow and stern line leads to the mooring bollards would be impracticable.

On "Corabank"/"Cloverbank" Class vessels, only Nos. 3 and 4 hatches can be loaded with copra conveniently and possibly No. 2 (after end of hatch only) at a stretch.

A copra bulk loading system by bottom opening bins is in use at this port.

UNBERTHING: The stern can be sprung off and vessel backed out into the Sound. A light Northerly breeze blows and the vessel tends to set slightly towards the wharf, but no difficulty is experienced. However, with any strength in this breeze, sailing would be hazardous until it fell away or shifted, also it is safe to sail at night. Vessels turn to starboard when clear and leave the Group by the Northern route. All reefs show up well and the light structure on Lanalau Island is clearly seen over the trees.

If the anchor has been used for going alongside, it should be picked up first before leaving the berth, otherwise picking it up after letting go throws the ship out of the angled-off position.

MEDICAL: A trained local medical orderly gives medical attention when required. There is no doctor.

TANKERS: Mobil Wharf close West of main wharf. 2 oil tanks available (1×500 tons, 1×300 tons).

FRESH WATER: Not available.

FUEL: Not available.

REPAIRS: Levers possess a limited machine shop and fabrication shop capable of handling small ship repairs.

SURVEYORS: *Hold Inspection:* Compartments to be loaded are inspected by a Government Agricultural Department Inspector.

AIRPORT: Solomon Island Airways and Western Pacific Airlines run a domestic service between Yandina and Honiara.

Distance to Honiara is 65 miles.

GARBAGE DISPOSAL: No facilities.

WASTE OIL DISPOSAL: No facilities.

SEAMAN'S CLUBS: No Seaman's Clubs.

The Banika Club is licenced and has snooker, tennis court and swimming pool.

Churches, general stores, post office and telephone available nearby.

GENERAL:

Transport: There is no local public transport or car hire facility.

Stores: There are 2 general trading stores, one privately run and one run by a Co-operative Society. Both supply general household items including rice and tinned fish. Also there is a fisheries marketing centre where local fresh frozen fish can be purchased.

Market: Fresh vegetables and local fruits available twice a week, very cheap and very good.

Levers have their own butchery where fresh beef is obtainable at reasonable price. If requiring such meat, it is best to cable the Agent in advance, advising the quantity required.

Laundry: Not available.

Facilities: There is a small Social Club at Yandina, having tennis court, billiards and a small swimming pool. Ship's Officers are welcome.

The Club Manager is pleased to arrange a football match with local teams for those who are interested.

Charts: BA. 2975 and BA. 1469.

Weather & Currents: See Pacific Island Pilot, Volume 1.

AUTHORITY: Lever Solomons Ltd., P.O.Box 134, Yandina, Russell Islands, Solomon Islands. *Tel:* Yandina 677-21779. *FAX:* 677-21785.

Contact: The Chief Engineer.

NOTES

Please also advise Shipping Guides Ltd.

Somali Democratic Republic

GENERAL:

REPORT: *Immigration Regulations:* According to new Somali Immigration Instructions, no foreigner of any sort (including seamen, supercargo or Owners' Representative) shall be allowed to enter into Somalia without a visa.

No transit visa will be allowed for seamen joining their vessels in Somali ports.

Anybody arriving at Somalia should first obtain entry or transit visa from the Somali Consulates in their respective countries.

BERBERA: 10.26 N. 45.01 E. (See Plan)

DOCUMENTS:
6 Crew Lists.
2 Stores Lists.
2 Lists of Articles owned by Crew i.e. tobacco, wine/spirits, cameras, binoculars, wrist-watch, radio, firearms/swords etc.
1 Cargo Manifest (must be made out in accordance with original Bill of Lading issued. In the column "Consignees" the name of the party to be notified must be mentioned complete with full postal address. Should specify weight in kilos and measurements in cubic metres). 6 copies to be sent in advance unfreighted; 2 copies to be sent in advance freighted; 2 copies to be sent by the ship's box.
1 Copy Non-Negotiable Bill of Lading for each Bill of Lading issued.
2 Lists Transit Cargo (total number of packages and total weight for each destination).
6 Lists of Passengers to be Disembarked.
2 Lists of Passengers In-Transit.
1 Health Document will be prepared on arrival of the vessel in port, on special local form.

PILOTAGE: Compulsory for vessels over 200 n.r.t. Vessels await Pilot on the Outer Roads, 5 – 10 cables S.W. of Raastamar Lighthouse. In case of stormy weather and rough seas, it is permitted to wait for Pilot on the Inner Roads.

ANCHORAGES: Outer anchorage 5 – 10 cables S.W. from Raastamar Lighthouse. Inner anchorage limited by the line between 10° 26′ 16″ N., 45° 00′ 14″ E. and between perpendiculars from the ends of this line towards Cape of Raastamar.

RESTRICTIONS: All ships should anchor in such a position that with any wind they should lie on the leading line, or Southward from it, or opposite the deep water pier.

MAX. SIZE: Draft 28 ft., length/breadth no restrictions.

HEALTH: Pratique granted after Port Authorities, including doctor, board vessel. Any suspected contagious illness aboard to be reported immediately to the doctor on arrival. Vessels calling from other Somali Ports subject to same procedure.

RADIO: Cable Agents giving ETA, draft, length and cargo via port radio station – 6OY call and reply in the frequency 500 kHz, working 450 kHz. Working hours from 0700 to 1700 hrs. local time. Traffic list 3 times a day at 0800, 1200 and 1600 hrs.

TUGS: Use ship's lines. There is one tug of 1,200 h.p. and one of 700 h.p. to assist vessels in berthing and unberthing.

BERTHING: Depth at pier 28 ft., length of pier 700 m. Ro/Ro facilities available.

Transhipment of cargo is allowed with exemption of Harbour Tax and Warehouse Dues. Only handling charges are levied according to port tariff.

STEVEDORES: Vessel must give accurate ETA at least 24 hours in advance to enable Agent to order gangs. No shore facilities, all cargo to be loaded and unloaded with ship's gear.

Working Hours: Normally 0700-1400 hrs., but loading to and discharging from vessel is performed day and night.

MEDICAL: General hospital facilities available, but specialised treatment and surgery is not. Yellow fever and cholera vaccination certificates inspected on arrival.

TANKERS: Discharge at mooring buoys with connecting hoses of American and British standards.

DENSITY: Salt water at all times.

FRESH WATER: Available alongside quay through hoses. Rate 15/20 t.p.h.

FUEL: Not available.

CONSULS: None.

REPAIRS: Port Management own a well-equipped workshop where minor repairs for ships can be carried out.

GANGWAY/DECK WATCHMEN: Gangway watchmen services carried out by Customs Police, food on vessel's account. Ships are also supplied with local watchmen through Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedores with the help of the crew. Vessel's crew may, if required by the vessel do so. Crew may close hatches prior to sailing.

CUSTOMS ALLOWANCES: 200 cigarettes, 2 packets of cigars and 5 bottles of wine. Cigarettes and spirits trafficking alongside and between vessels and shore strictly prohibited.

TIME: GMT plus 3 hours all year round.

HOLIDAYS: See "Mogadiscio".

TELEPHONES: No possibility for placing telephones on board.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Crew to carry Passport or Seamen's Book whilst ashore.

REGULATIONS: Livestock vessels are given priority.

GENERAL: Vessels should not dispose of any waste into harbour o on to quays, lower lifeboats or use radio station without prior permission

DEVELOPMENTS: The present two berths have been extended by a further two berths.

SHIPMASTER'S REPORT: June 1981.

References: Guide to Port Entry, British Admiralty Chart BA 3530. Re Sea and Gulf of Aden Pilot. (NP64) 12th Edition 1980.

Documents:
2 Crew Lists.
2 Stores Lists.
2 Lists Personal Effects.
Cargo Manifest.
Copy Non-Negotiable Bill of Lading for each consignee.
2 Lists of Transit Cargo.
2 Passenger Lists. "Nil" declaration required.
1 Health Document filled in on berthing on special local form.
1 Copy Arrival Report on special local form.
1 Copy Ship's Record and Master's Report on special local form.

Pilotage: Two Somali Pilots available. Pilot boards at Outer Anchorage from tug "Saaxil" which has black hull, white upperworks, funne markings: blue funnel with white star. Tug has VHF Channel 16. Pilo can also be contacted via Somali Shipping Agency on VHF Channel 16 call sign "Somship Berbera". Agents can usually only be contacted from 0900 – 1200 hrs. and 1600 – 1800 hrs.

Anchorage: Good anchorage obtained in Outer Anchorage shown o BA 3530. Somali Harbour Regulations forbid anchoring in such a wa as to obscure leading and other lights.

Radio: Normal 72, 48 and 24 hour notice to Agents via Aden Radio Berbera Radio (6OY) not heard.

Fresh Water: Only supplied alongside at Commercial Wharf. No wate barge available and tug "Saaxil" unable to deliver water at Oil Berth o Anchorages.

Tugs: One tug "Saaxil", 1,100 b.h.p., fitted with VHF Channel 16. No tu lines, all ship's lines.

Gangway/Deck Watchmen: Two watchmen are compulsory unde Somali Harbour Regulations. Ship has to provide food and accommodation. Charges for watchmen:
45 Somali shillings for 12 hours (daytime).
55 Somali shillings for 12 hours (night time).

Fridays 50% additional and 26th June 50% additional. 1st July and other public holidays 100% additional.

Customs Allowances: 200 cigarettes or 0.5 lb. tobacco or 0.5 lb. cigars 1 bottle of spirits.

Airport: The landing ground shown adjacent to the Oil Tank Farm o BA Chart 3530 has now been taken over for extension of the tank farm and is no longer in use.

A new military airfield is situated 2 miles S.W. by W. from the o landing ground.

All commercial flights are from Hargeisa, 160 km. S.W. of Berbe with 3 flights weekly to Mogadiscio.

Time: GMT plus 3 hours all year round.

Agency: Somali Shipping Agency. Tel: Berbera 142. Cables: Somshi Berbera. No telex facilities available and all cables have to be sent t Somali Shipping Agency, Mogadiscio, for transmission out of Somalia

Somali Shipping are the only Agency allowed in Berbera, being a Government Agency.

Berthing: Superceded by later "Reports".

Fuel: None available.

Repairs: Minor repairs can be carried out but nothing that could not b carried out by ship's staff.

Weather: During the ship's stay at Berbera the "Kharif" blew as follows
0000 hrs., S.W., Force 3.
0400 hrs., S.W. by S., Force 6.
0800 hrs., S.W., Force 6 to 8.
1200 hrs., S.W., Force 5.
1600 hrs., S.W. by S., Force 3.
2000 hrs., Calm.

SHIPMASTER'S REPORT: June 1983.

Restrictions: All navigational lights are extinguished.

Pilotage: Only during daytime. Departure at night can be discussed wi the Pilot.

Radio/VHF: Coastal radio station is out of order and will not be repaired No VHF port radio station but sometimes Pilot or Agent will call using VHF from vessel in port.

Medical: Cholera and yellow fever vaccinations are inspected on arriva

Tankers: Max. draft for tankers is 35 ft. and berthing will be effected wi 2 anchors forward and 6 ropes to the mooring buoys, i.e. 2 stern ropes and 1 breast rope on each side. Distance from stern to jetty about 20 m – stern discharge. Tankers up to 24 ft. – 25 ft. draft can berth betwee the buoys and use their manifold. In both cases a 6 in. shore hose i hauled up to the ship's connection, max. back pressure allowed is 3 ba and discharge rate of white products about 250 cu.m./hour. After each grade, water has to be pumped to clear the shoreline. Position of o jetty Lat. 10° 26.18′ N., Long. 45° 00.8′ E., and a steel constructio framework pier runs from this position in direction 146° to the shore Loading arms at pier are in state of deterioration. When berthing sounding by hand is advisable and have tidal heights available.

SHIPMASTER'S REPORT: January 1986.

Details concerning lights, berths and buoys considerably different from Admiralty charts. No information forthcoming from Port Authori concerning changes, so positions and distances only approximate an obtained by radar. 4 light buoys laid on approaches to Berbera harbou limits, as these buoys not laid by the Port Authority there is no guarante that they will be maintained, either lit or in position.

R.W. Fairway Buoy, unlit, 306°×0.88 miles from Raastamar Light.
R. buoy Fl.R., approx. 4 secs., 208°×0.25 miles from Raastamar Light.
R. buoy Fl.G., approx. (3) 10 secs., 262.5°×0.58 miles from Raastamar Light.
R. buoy Fl.G., characteristics and position not ascertained, but is South of leading lights and Eastwards of outer anchorage.

2 mooring buoys in inner anchorage, 102°×0.64 miles and 115°×0.5 miles from Raastamar Light. Wreck in inner harbour now has quick flashing red light on the top of its funnel. Leading lights into the harbour are now flashing white lights. Mooring buoys around the end of the tanker terminal appear as shown on the Admiralty chart.

In the tank farm new white tanks, for United States' forces, stand out very well, their position not ascertained, but they have been built at the Western end of the tank farm. Tank farm now very well illuminated, lights show very well out to sea. These lights far better than town lights on night approach, town lights very often shut off in evenings. Raastamar Light was sighted at a distance of 15 miles, but Pilots state that it is still only 6 mile light.

Main quay has been extended Westwards, on same line as old quay, by approximately 180 m. New section well fendered with heavy rubber sections on chains. Old section of quay, the facing is badly damaged throughout most of its length, ships will require fenders to keep well off it. No sheds built on new section, but small compound for U.S. Forces use in S.W. corner. A concrete Ro/Ro ramp built at extreme Western of new quay, for vessels to berth with 2 anchors out, ramp steel-faced and steeply angled. Only livestock seen using this ramp. An additional causeway has been built out to the new section, but not seen in use and kept locked up. Shaab Quay still in use, but only for dhows and small local coasters.

During period spent in Berbera (15 days), all ships were kept at outer anchorage until required, inner anchorage not used at all. Only vessels to come to port during this time were livestock carriers, loading sheep, goats and camels for Jeddah; and one passenger/cargo ship from Jeddah.

Winds consistently freshened every afternoon from Northeasterly direction, up to Beaufort Force 6 at times and then dying away to a flat calm by midnight. Harbour very sheltered from this direction and slight sea caused no problems.

Shore watchmen compulsory, and if pilferable cargo on board, it is possible vessel will have armed Customs/Port Police as well. Vessel to supply all with meals and sleeping place if possible.

Garbage collection compulsory, but vessel does not have to accept this every day, can specify whether periodic collection required.

Fresh water appeared of satisfactory quality, no apparent restriction on quantity.

No laundry facility available.

Chandler available, but expensive and did not appear interested in supplying small quantities.

Communications very poor externally, no telex available at Agents. All overseas telephone calls routed via Mogadiscio, this line unreliable. American base at airfield has telex and satellite telephone, but use of these facilities expensive and not always available. However, it is possible to get permission to use the ship's radio equipment for communications, though when vessel first arrived the authorities were intending to seal radio equipment.

Local maritime station out of order.

Crew have to hand Passports/Discharge Book/I.D. card in at gate when going ashore. No pass issued or receipt given. No known curfew, but police very nervous after dark and gate should be approached with caution, as police are armed, so that crew member can be identified.

On approaching port, vessel called continuously on Channel 16 from 0530 hrs. local time onwards, but got no reply, so vessel anchored in outer anchorage. Berbera Port came on the air at 0900 hrs. local time, no reply from Pilots at all, though they assured me that they operated from about 0700 hrs. to dusk. Vessels should be careful when approaching outer anchorage in darkness as ships may be encountered at anchor without lights. One Ro/Ro ship is alleged to have been there, abandoned, for at least a year; there only being a shore watchman onboard. Vessel cleared by Authorities whilst at anchor, quarantine doctor wanted to see that all crew members had current yellow fever and cholera certificates. Customs sealed bond by glueing piece of paper over door. Radio was supposed to have been sealed, but because no separate radio room they decided not to do so. Application in writing through Agents for water, engine trials, boat in water, painting from quay, etc.

No photography in port area and this included onboard vessel, but despite this did not find that anyone stopped crew members taking photos of livestock being loaded on other vesssels.

2 small tugs in harbour, but only one seen in use. This takes Pilot out to incoming vessels, Pilot informed that this tug, the oldest one, is only suitable for pushing and not towing. Pilot does not necessarily take vessel out at night, gave instructions for departure and then acted as boatman for letting go vessel.

Nearby airfield has civilian flights every 2 days linking Berbera with Mogadiscio and Jeddah, but it wasn't clear whether seats could be obtained for these flights or whether passengers had to travel to Hargeisa to fly, about 2 hours drive. From there flights go to Mogadiscio and Djibouti. However, I imagine repatriation from this area to be a lengthy and tedious business only to be attempted in an emergency.

AUTHORITY: Somali Ports Authority, Berbera.

CHISIMAIO (Kismayu): 00.22 S. 42.34 E.

DOCUMENTS:
6 Lists of Crew.
2 Stores Lists.
2 Lists of articles owned by Crew, i.e., tobacco, wine/spirits, camera, wrist-watch, radios, binoculars, firearms/swords, etc.
1 Cargo Manifest (must be made out in accordance with original Bill of Lading issued. In the column "Consignees" the name of the party to be notified must be mentioned complete with full postal address. Should specify weight in kilos and measurement in cu.m.). 6 copies to be sent in advance unfreighted; 2 copies to be sent in advance (freighted). 2 copies to be sent by ship's box.
1 copy non-negotiable B/L for each B/L issued.
2 Transit Cargo (total number of packages and total weight for each destination).
6 Lists of Passengers to be Disembarked.
2 Lists of Passengers in Transit.
1 Health Document will be prepared on the arrival of the vessel in port, on special local form.

PILOTAGE: Compulsory for vessels over 200 n.r.t. Vessel picks up Pilot at approximate position Lat. 0° 24′ S., Long. 42° 34′ E., 2 miles S.E. of Fairway Buoy.

ANCHORAGES: In the port basin, from 27 ft. to 30 ft. deep, excellent holding ground.

RESTRICTIONS: Entrance channel about 200 m. wide, marked by buoys. Entrance effected during daylight hours only. Port closed for vessels from 1800 hrs. to 0600 hrs.

MAX. SIZE: Max. draft 28 ft. at LLT.

HEALTH: Pratique granted after Port Authorities, including doctor, board vessel. Any suspected contagious illness aboard to be reported immediately to the doctor on arrival. Vessels calling from other Somali ports subject to same procedure.

RADIO: No local coastal radio operating at present. Cables to Agent could be sent through normal postal R/T and W/T services.

TUGS: Two tugs of 800 h.p. each are available to assist ships in berthing and unberthing. Ship's lines used.

BERTHING: Port consists of 2 L-shaped quays, one 340 m. length, the other 280 m. No specific requirement to berth in the port. Vessels entering port basin after 1745 hrs. will berth next day at 0630 hrs. Vessel must sail before 1730 hrs. otherwise sailing will be postponed to next day at 0630 hrs.

STEVEDORES: Vessel must give accurate ETA at least 24 hours in advance to enable Agent order necessary gangs.

No shore facilities, all cargo to be loaded and unloaded with ship's gear.

Working Hours: Normally 0700 hrs. – 1400 hrs. but loading to and discharging from vessels is performed day and night.

MEDICAL: Hospital facilities available, but specialised treatment and surgery is not. Yellow fever and cholera vaccination certificates inspected on arrival.

TANKERS: See "Shipmaster's Report".

FRESH WATER: Available at wharf through hoses, rate 15/16 t.p.h.

FUEL: Not available.

CONSULS: Italian Consul only.

REPAIRS: No facilities available.

GANGWAY/DECK WATCHMEN: Gangway watchmen service carried out by the Customs Police. Food on vessel's account; ships are also supplied with local watchmen through Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedores with the help of the crew. Vessel's crew may, if required by the vessel, do so. Crew may close the hatches prior to sailing.

CUSTOMS ALLOWANCES: 200 cigarettes, 2 packets of cigars and 5 bottles of wine. Cigarettes and spirits trafficking alongside and between vessels and shore strictly prohibited.

REPATRIATION: Air communication via Mogadiscio.

AIRPORT: About 6 km. N.W. of the port.

TIME: GMT plus 3 hours all year round.

HOLIDAYS: See "Mogadiscio".

TELEPHONES: No possibility for placing telephones on board.

IDENTIFICATION CARDS: Crew to carry Passport or Seaman's Book whilst ashore.

SHORE LEAVE: Permitted.

REGULATIONS: Banana and livestock vessels are given priority.

GENERAL: Vessels should not dispose any waste into harbour or on to quays, lower lifeboats or use radio station without prior permission.

DEVELOPMENTS: Facilities to be improved to enable port to handle liquids, livestock and general cargo.

SHIPMASTER'S REPORT: September 1985.

Vessel: 19,000 d.w.t. Discharged gas oil.

General Remarks: ETA messages and Notice of Readiness to be sent via Djibouti Radio, using telex to Agents at Mogadiscio. (Mogadiscio Radio not working). Port of Kismayu not fitted with VHF. The port was constructed in 1967 with approach channels dredged to 8.0 m. chart datum. (Learned from Pilot that no dredging was performed in the channels after 1967).

Approaches: Safe approach is only possible by using Passo Nord, using the leading line N.E. Serpenti-Collina Rotonda Beacon (see Chart 1052 Baia di Chisimaio), which are clearly visible by daylight. All navigational lights are extinguished by night. Sailing from Kismayu also through Passo Nord. Passo Levante is very dangerous and strongly afffected by cross currents.

Anchorage: Safe anchorage can be obtained 1 mile S.E. of Serpenti Lighthouse in 9 – 10 fathoms of water with good holding ground. The anchorage however is exposed to swell causing the vessel to roll during the anchoring period. During the S.W. monsoon this anchorage can be unsafe.

Pilotage: The Pilot boards in a position 0.7 miles S.E. from Serpenti Lighthouse.

Harbour and Approaches: The harbour of Kismayu is artificial, constructed by rocks seawards and concrete jetties inwards, enabling to receive vessels up to 210 m. long with a maximum draft of 28 ft. Berthing daylight only. From the pilot area to the port entrance the route is via Passo Interno steering to a buoyed channel using the leading line Scoglio Pilone-Collina del Segnole (Chart No. 1052). The outer channel is effected by swell, however after passing I. Favatu the swell will cease when entering the inner channel.

As the approaches are effected by swell and the charts are not very accurate, it is not advised to enter or leave the port at LW even with drafts less than 24 ft.

We arrived with a max. draft of 24 ft. 01 in. and entered the channel approximately 2 hours after LW with a moderate swell from S.E. running into the bay. The echosounder was switched on during the whole operation. On entering the channel the reading fell to zero and a huge amount of mud was observed.

After entering the port the vessel is stopped and swung around by using 1 tug of 350 h.p., approaching the berth head on. Starboard anchor is used to swing the vessel again by using the tug to berth portside alongside with 4 head and stern lines and 2 springs fore and aft.

Documents: Papers required on arrival:

6 Crew Lists.
3 Stores Lists.
3 Personal Effects Lists.
International Declaration of Health.
Vaccination List.
Copy of Bills of Lading.

Discharge Facilities: One long flexible hose of 8 in. connected to 8 in. pipeline. Distance to shore tanks approximately 3,200 m. Max. allowed back pressure 4 kg. – 6 kg. depending on Loading Master.

Port Facilities: Drinking water can be obtained from the jetty, but is not recommended, as this water is pure river water. Other facilities nil.

Remarks: The tug is fitted with VHF and the Pilot will use this VHF to contact ships only if the tug is manned. Vessels are warned immediately after berthing that permission to sail is not given until all bills and duties have been paid by the Agents, indicating that some vessels have been delayed for 4 days.

AUTHORITY: Somali Ports Authority, Chisimaio.

MOGADISCIO: 02.02 N. 45.20 E. (See Plan)

DOCUMENTS:

2 Lists of Crew.
2 Stores Lists.
2 Lists or Declarations of Crew's Baggage, i.e. tobacco, wine/spirits, camera, wrist-watch, radio, binoculars, firearms/swords, etc.
Vessels calling from other Somali ports subject same procedure.

Cargo Manifest (must be made out in accordance with original B/L issued. In the column "Consignees" the name of the party to be notified must be mentioned complete with full postal address. Should specify weight in kilos and measurement in cubic metres). 6 copies to be sent in advance unfreighted; 2 copies to be sent in advance freighted and 2 copies to be sent by ship's box.

2 Lists Transit Cargo (total number of packages and total weight for each destination).
6 Lists of Passengers to be Disembarked.
2 Lists of Passengers in Transit.
1 Health Document will be prepared on the arrival of the vessel in port, on special local form.

PILOTAGE: Compulsory for vessels over 200 n.r.t. Pilot joins vessel at anchorage about 0.5 miles offshore. Pilot can be requested by International Code signals or through VHF using Channels 12, 14 or 16.

ANCHORAGES: About 0.5 miles offshore in depths up to 45 ft., in open roadstead. Because of occasional heavy swell maximum recommended draft 31 ft.

RESTRICTIONS: Berthing/unberthing of vessels is restricted to daylight hours. Max. draft permissible is 10 m. at general cargo berths and 12 m. at tanker berths.

HEALTH: Pratique granted after Port Authorities including doctor, board vessel. Any suspected contagious illness aboard to be reported immediately to the doctor on arrival. Vessels calling from other Somali ports, subject to same procedure.

RADIO: No local coastal radio operating at present. Cables to Agent could be sent through normal postal R/T and W/T services.

TUGS: Tugs join vessels at anchorage or as directed by the attending Pilot. Vessel's lines normally used. No extra charge for tug's lines.

Two tugs of 1,400 h.p. each available and 1 tug of 4,000 h.p. available for salvage and rescue operations.

BERTHING: Incoming vessels are assigned berths on a turn basis subject to operational requirements.

Harbour: Alongside deepwater port protected by 820 m. strong breakwater.

Berths: 5 berths. Berth lengths vary from 170 m. – 200 m. with depths alongside 8 m. – 12 m.

BULK CARGO FACILITIES: None.

STEVEDORES: Vessel to give accurate ETA at least 24 hours in advance to enable Agent order necessary gangs. No shore facilities, all cargo to be loaded and unloaded with ship's gear.

Working Hours: Normally 0700 hrs. – 1400 hrs., but loading to and discharging from vessels is performed day and night.

CRANES: Only ships' derricks are used. No portal cranes at quay but a number of mobile cranes are available for handling and stacking cargo with maximum lifting capacity of 50 tons. No floating cranes available.

MEDICAL: No advance notice for medical attention required. Hospita facilities available but specialised treatment and surgery is not. Yello fever and cholera certificates inspected on arrival.

TANKERS: One berth available for tankers with a draft of 12 m.

DENSITY: Salt water at all times.

FRESH WATER: Available alongside through hoses at a rate of 15 - 20 t.p.h.

FUEL: Fuel oil only may be available, check with Agent.

FIRE PRECAUTIONS: Fire engines situated within easy reach of doc 24 hours per day. The tugboats are also equipped with fire fightin appliances.

CONSULS: Algeria, Belgium, Peoples' Republic of China, Egyp France, Germany, India, Iran, Iraq, Italy, Kenya, People's Democrat Republic of Korea, Kuwait, Libya, Netherlands, Nigeria, Pakistan, Qata Romania, Russia, Saudi Arabia, Sudan, Syria, U.A.E., U.K., U.S.A Yemen, Yugoslavia.

REPAIRS: No facilities available.

DRY DOCK: None available.

GANGWAY/DECK WATCHMEN: Gangway watchmen services carrie out by the Customs Police, food on vessel's account. Ships are als supplied with local watchmen through Agent.

OPENING/CLOSING HATCHES: Normally carried out by stevedore with the help of the crew. Vessel's crew may, if required by the vesse do so. Crew may close the hatches prior to sailing.

CUSTOMS ALLOWANCES: 200 cigarettes, 2 packets of cigars an 5 bottles of wine. Cigarettes and spirits trafficking alongside and betwee vessels and shore strictly prohibited.

REPATRIATION: Facilities available.

AIRPORT: About 5 km. to the West.

TIME: GMT plus 3 hours all year round.

HOLIDAYS: Idul Fitr, (1st & 2nd Shawaal); Idul Adha, (9th & 10th Dilhija Prophet Mohammed Birthday, (12th Rabiul Awal); International Labou Day, (1st May); Independence Day N. Region, (26th June Independence & Union Day, (1st July); Revolution Festivals, (21st an 22nd October).

POLICE/AMBULANCE/FIRE: Police 28088; Ambulance 30000; Fir 85055.

TELEPHONES: Arrangement for placing telephones on board is no available.

IDENTIFICATION CARDS: Crew to carry Passport or Seaman's Boo whilst ashore.

SHORE LEAVE: Permitted.

DELAYS: Nil, except when other ships are working alongside.

GENERAL: Vessels should not dispose of any waste into harbour o on to quays, lower lifeboats, or use radio station without prior permissio

Tidal Range: 2.5 m.

Shipchandling: Available.

Major Exports: Fresh bananas, livestock, hides and skins an frankincense.

Imports: General cargo, crude oil, etc.

DEVELOPMENTS: New wharf with Ro/Ro terminal recently complete Container yard and freight station to be constructed.

SHIPMASTER'S REPORT: March 1981.

Documents:

1 Declaration of Health (Local Form).
1 Set Vaccination Lists.
5 Crew Lists.
6 Landing Passenger Lists.
In-Transit Passenger Lists.
Ship's Record and Master's Report (Form A).
Arrival Report (NSL Form).
Application for Temporary Use of New Harbour (Local Form).
1 Set Cargo Manifests.
2 Sets Discharging Cargo Plans.
Stores List (Company Form).
Crew Declarations.

Notes: Application for use of Harbour Form contains highly objectiona liability clause 4(c).

No mail or telex service, no Agency assistance.

Health: Radio Pratique not available.

SHIPMASTER'S REPORT: June 1981.

Documents:

2 Crew Lists.
2 Stores Lists.
2 Personal Effects Lists.
Cargo Manifest.
Copy Non-Negotiable Bill of Lading for each consignee.
2 Transit Cargo Lists.
2 Passenger Lists. "Nil" declaration required.
1 Health Document filled in on berthing on special local form.
2 Copies Declaration of Ship's Details and Cargo Carried for Po Harbour Master on special local form.
4 Copies Pilotage Declaration on special local form.

Pilotage: Pilots listen 0600 hrs. to 1200 hrs. on VHF Channels 16 an 12. At other times the pilot station is usually manned. Pilot boards fro a large pilot cutter at the vessel's anchorage position. Pilot cutter ha black hull, white upperworks with "Pilot" in black letters. Manropes a essential for use on the pilot ladder due to the normal heavy swe running.

Anchorage: Good anchorage in sandy bottom in 10 – 11 fathom (approx.), 4 cables South of New Port Breakwater. Monsoon cause currents of up to 4 – 5 knots during S.W. monsoon. (Ref: Admira Publication, Africa Pilot Volume III, and latest supplement.

The whole bottom area is foul due to cargo lost during time port wa operated as a surf port. An anchor and cable is reported to lie close t the intersection of the 311° and 278.42° leading lines.

Somali Harbour Regulations forbid anchoring in such a position as t obscure leading and other lights.

Health: Local doctors available.
Radio: Normal 72, 48 and 24 hour notice to Agents via Aden or Mombasa Radio. Mogadiscio Radio not heard during vessel's stay in Mogadiscio.
Fresh Water: Available from Berth Nos. 1, 2, 3, 4 and 5 at approximately 20 t.p.h.
Stevedores: Rigging of derricks and opening/closing hatches are the responsibility of ship's crew.
Gangway/Deck Watchmen: Two watchmen per vessel. Ship has to provide accommodation and food.
Customs Allowances: 200 cigarettes, or 0.5 lb. tobacco or 0.5 lb. cigars. Spirits 1 bottle. Bond sealed on arrival but Customs very good and will come down to give issue whenever required.
Airport: Regular international flights from airport situated 8 km. from port. No problems with repatriation. Crew members joining are issued with entry visas at Mogadiscio Airport providing Agents are informed in sufficient time. Mogadiscio is the only international airport of entry. There are local flights approximately 3 times a week to Kisimayu and Berbera.
Time: GMT plus 3 hours all year round.
Berths: Ras Sif Oil Terminal, Lat. 2° 01.05′ N., Long. 45° 20.05′ E.

This is a sea berth 1 cable S.W. of Ras Sif. (See "Plan"). During the S.W. monsoon, vessel secures with both anchors down on a heading approximately 210° (true) about 1 cable offshore. On this vessel's call 10 shackles were put out on each cable position "A" shown on plan. On vessel's approach to the berth no tugs were available for assisting in berthing as fuel for tugs had run out and our vessel had the new supplies on board. Three attempts were made to secure at the Discharge Berth. Final position was that shown in position "A". In this position vessel was heading 185° (true), 10 shackles out on each cable, 3 ship's lines to shore and 2 shore lines to ship. The vessel at this time rode to the wind at 180° – 185° and did not take up a heading into the S.W. monsoon at any time. The effects of the Somali current during vessel's stay was negligible at the berth. The normal berth off Ras Sif is that shown in position "B". I consider this position dangerous at this time of the year as the wind being mainly Southwesterly swings the vessel's stern up towards the shore, far closer than in position "A".

Lines: 2×4 in. floating hoses provided for connection to stern discharge manifold from red painted structure close South of the B & W truncated pyramid on Ras Sif. Maximum discharge pressure3 kg./sq.cm. (approx. 150 t.p.h.). Height of tanks 24 m., distance to tanks 350 m. 1×6 in. line is available for midships manifold but this is only suitable for small ships. Shore requires water plug prior to commencement of discharge, on completion of each grade and on completion of final grade. Shore staff connect pipelines.

Maximum draft on berth 40 ft.

On the evening of 12th June the S.W. monsoon blew very strongly accompanied by a very heavy 15 ft. – 20 ft. swell. Vessel being light was moving a great deal and was eventually forced to carry out an emergency departure after jettisoning pipelines following a water plug through and cutting all ship's lines. This berth is wide open to the effect of the S.W. monsoon and when the monsoon is blowing strongly the weather conditions combined with the very poor unmooring facilities render the berth untenable. For these reasons this berth was declared by the Master to not be a "Safe Berth" within the meaning of the relevant Charter Party.

Mogadiscio New Port: Following Ras Sif being declared an unsafe berth arrangements were made for all floating hoses in possession of the Oil Terminal to be led via storm drains to Berth No. 5 following suggestions made by the ship. Vessels berthed stern up to Berth No. 4 or Berth No. 5 and cargo discharged via stern manifold to Ras Sif Oil Terminal.

Berth No. 5: Maximum draft 27 ft. Berth is well fendered with old tyres. Due to length of berth vessel berthed with starboard anchor down, 6 shackles on same, as maximum vessel length on berth 180 m. This berth is at present being extended by a further 200 m. Maximum discharge pressure 3 kg./sq.cm., maximum discharge rate 150 t.p.h. for products.

Berths No. 1, 2, 3: Maximum draft 32 ft. All cargo discharged by ship's gear. On Berth No. 3 there is one 8 in. pipeline to the refinery 10 miles South of Mogadiscio for crude oil only. Booster pumps for this line are provided at the Ras Sif Oil Terminal.

Berth No. 4: Drafts alongside from 27 ft. – 32 ft. and is provided with a bridge for landing of livestock although to date this bridge has not been used. This berth is normally used by fishing vessels and smaller ships as a lay-by berth.

Tugs: Two tugs available. "Xamar 1" and "Xamar 2". Both fitted with VHF, 1,500 b.h.p. No tug lines. Ship's lines used for all operations.
Bunkers: Not available.
Repairs: Not available.
Somali Port Regulations: Notice to all ships, Mogadiscio Port. Abstracts from Somali Ports Authority Regulation No. 67 of 15-4-1978.

1. All ships must keep their VHF open and standby when approaching the Port and while remaining berthed alongside, on Channel 16.
2. All ships having on board persons suffering from contagious diseases must hoist the quarantine flag when anchoring and keep it hoisted until inspected and instructions given by the Port Health Officer.
3. While anchored in the roads, ships must keep clear from bearing directly obstructing leading lights and beacons on shore.
4. Ships having an n.r.t. exceeding 200 must engage harbour Pilots and tugs while berthing or unberthing at the deep water berths.
5. Ships are not allowed to throw any kind of refuse, dirt or oil spillage into the harbour waters.
6. Ships are not allowed to carry out engine repairs without permission from the Port Manager, while at berth.
7. Ships anchored in the roads or berthed alongside must keep the Somali national flag hoisted at a height clearly visible for a reasonable distance.
8. All ships lying alongside berths must engage the garbage service provided by the authorised garbage group of the harbour.
9. Oil tankers must have on board their own facilities for the retention of oil drainage and sludge, dirty ballast and tank washings.
10. It is prohibited to discharge oil, oily mixtures and any chemical residues at any distance less than 50 nautical miles from the shore line.
11. Officers of the Port Management are authorised to inspect the efficiency of facilities provided on board vessels for the retention of dirty substances, solid or liquid.
12. All ships at anchor or berthed alongside must take sufficient precautionary measures to fight fire outbreaks.
13. All ships berthed alongside must provide ratguards for their mooring lines.
14. Rigging of ship derricks and opening and closing of hatches are the responsibility of the ship's Master and crew.
15. Crew members of all vessels berthed alongside or anchored in the roads are not allowed to go ashore later than 2300 hrs.
16. Crew members going ashore and wishing to return to their ships are not allowed to enter the Port later than 2300 hrs.

Signed – Port Manager

AUTHORITY: Somali Ports Authority, P.O.Box 935, Mogadiscio, Somalia. *Tel:* 30081/3. *Telex:* 708. *Cables:* Somport, Mogadiscio.

NOTES

Please also advise Shipping Guides Ltd.

South Africa

GENERAL:

NOTICES: Following is an extract of British Notices to Mariners No. 1647(1979).

Routeing of Laden tankers off the coasts of South Africa (West):

Laden tankers in the Summer months should pass not less than 10 miles South of Alphard Banks (Lat. 35° 02′ S., Long. 20° 50′ E.)(See *Africa Pilot Vol. III)* and then keep 25 miles off the following points:

Cape Agulhas	(Lat. 34° 50′ S., Long. 20° 01′ E.).
Quoin Point	(Lat. 34° 47′ S., Long. 19° 39′ E.).
Cape Point	(Lat. 34° 21′ S., Long. 18° 30′ E.).
Slangkop Point	(Lat. 34° 09′ S., Long. 18° 19′ E.).
Cape Columbine	(Lat. 34° 50′ S., Long. 17° 51′ E.).

During the Winter, laden tankers should maintain the recommended distance offshore until the Winter Load Line Zone is reached and then keep as close to that line as possible. This will entail passing North of Alphard Banks and then about 12 miles off Quoin Point and Cape Point.

Vessels proceeding to the Replenishment Area (Lat. 33° 55′ S., Long. 18° 15′ E.). off Cape Town should maintain the above distances off shore until in a position where course can be safely altered to approach the Replenishment Area crossing the main traffic flow as nearly at right angles as possible.

Routeing of Laden tankers off the coasts of South Africa (East):

Laden tankers in the Summer months should pass 25 miles off the following points:

South Sand Bluff	(Lat. 31° 20′ S., Long. 29° 58′ E.).
Bashee River	(Lat. 32° 14′ S., Long. 28° 55′ E.).
Hood Point	(Lat. 33° 02′ S., Long. 27° 54′ E.).
Cape Recife	(Lat. 34° 02′ S., Long. 25° 42′ E.).

and then steer to pass 10 miles South of Alphard Banks (Lat. 35° 02′ S., Long. 20° 50′ E.).

During the Winter, laden tankers should maintain the recommended distances off shore until the Winter Load Line Zone is reached and then keep as close to that line as is possible. Between Cape Recife and Cape Agulhas this will entail passing North of Alphard Banks. It is recommended to pass about 6 miles North of these banks.

CAPE TOWN (Table Bay): 33.56 S. 18.26 E. (See Plan)

PORT LIMITS: Westwards by a straight line between Green Point and Robben Island Lighthouses, and Northwards by a straight line from Robben Island Lighthouse East (true) to the Eastern shore of Table Bay, thence Southwards along high water mark, so as to include the foreshore to the Castle, thence back to Green Point Lighthouse.

DOCUMENTS:

Customs:
- *Form DA.1, Report Inwards/Outwards for Ships.
- *Form DA.3, Certificate of Clearance for Ships.
- *Form DA.4, Transire – for a destination in the R.S.A.
- *Form DA.5, List of Sealable Goods on board ship.
- Ship's Crew List (Customs Department) 6 copies.

Post Office:
- *P1/27, Certificate of Departure of Vessel.
- P1/8, Post Office Certificate (Declaration).

Port Health:
- Maritime Declaration of Health.
- Crew List with last vaccination dates.
- Derat Certificate.

Port Authority:
- T908, Light Dues Certificate.
- T942 Clearance Certificate
- *T962, Departure/Shifting Notification.
- Ship's Manifest.
- *Completed by Agent.

Shipmaster's Report: March 1981.
- Declaration of Health (Form GES-22)
- Set Vaccination Lists. 1st port only; even with Radio Pratique.
- Derat/Derat Exemption (if boarded).
- 2 Crew Lists.
- 2 In-transit Passenger Lists.
- 4 Landing Passenger Lists (Form D1-35).
- Crew Sealable Goods (Form DA-5).
- Crew Declarations (Company Form).
- Inventory of Slop Chest (Company Form).
- Register and Set of Ship's Certificates (used by Agent for clearing and returned).
- Arrival/Departure Record (Form B1-55) (Disembarking passengers only).
- Livestock Form (if nil, write on top of DA-5).
- Ship's Mail Declaration (Form P1/149) (if nil, write on top of DA-5; if mail aboard, cable Postmaster details free message, and forms will be presented by Agent at boarding).
- Certificate of Medical Officer, Master . . . (Form D1-67).
- Report of Arrival (Form T958) (to Pilot).
- Leaving Certificate (Form B1-86).

Notes: Fly "I" flag entering all ports, "B" if flammable cargo aboard. Include ship's entertainment TVs, radios, etc., cameras and walkie-talkies on DA-5. Although part of DA-5, addition of tobacco/spirits on Crew Declarations (Company Form) will allow same form to be used in Mozambique and Somalia.

PILOTAGE: Compulsory. One hour advance notice to be given to th Port Captain through VHF radio, call sign "Port Operations", or Channel 16, working Channel 12. Pilot boat fitted with multi-chann VHF. Two motor pilot boats, one with black hull and white upperwork and one with an orange hull and white upperworks. Pilot taken aboar at position: Main Breakwater bearing 155° (T) × 2.5 miles.

ANCHORAGE: Area to the N.E. and East of pilot boarding statio (Fairway Buoy) in depth 20 m. – 25 m.

RESTRICTIONS: Vessels not permitted to enter unless Agents hav been appointed. Oil tankers and ships carrying explosives or dangerou goods restricted to daylight hours.

Depths:

Depth at Entrance Channel – 15.9 m.
Entrance to Victoria Basin – 11.6 m.
Entrance to Duncan Dock – 13.4 m.
Entrance to Ben Schoeman Dock – 14.0 m.

MAX. SIZE: Max. LOA 370 m., max. beam 87.0 m. and max. dra 12.0 m. (Duncan Dock) and 12.8 m. (Ben Schoeman Dock).

HEALTH: Pratique granted at first port of entry in South Africa. Pratiqu message 24 hours prior to arrival to "Port Health" at port of entry. Radio Pratique not granted "Q" flag to be flown until ship has bee cleared. Valid certificates must be held for yellow fever. Ships fro Eastern ports must also have valid certificates for cholera and typho

RADIO: Cape Town Radio, call sign ZSC. VHF and R/T 2182 kHz.

VHF: Port Control on Channel 16 throughout 24 hours.

TUGS: Join vessel approximately 0.25 miles from harbour entrance. 4 diesel Voith Schneider tugs with a bollard pull of 43 tons. All tug are fitted for firefighting and salvage. Tug's wires used at no ext charge.

Stand-by tugs compulsory for tankers discharging crude.

STEVEDORES: *Working Hours:* Conventional Quays: Monday to Frida (not public holidays) 0600 hrs. to 2200 hrs. Limited labour is availab for working overtime on request beforehand.

Container Operations: 24 hour service, 7 days a week.

BERTHING: Chart datum is that referred to in the South African Tid Tables published by The Hydrographer of South African Navy.

Roll-on/Roll-off Facilities: Available at Berths 500 and 501, as well as at "L" and "M" Berths. Berths "A" and "J" for ships with slew ramps only.

Cold Store: Blue Continent Cold Storage Co. (Pty) Ltd. Tel: (021) 511-0620. Telex: 527232. Fax: (021) 511-9632. Operates cold store with capacity of 17,000 tonnes at −30°C.

Pre-Cooling Store: International Harbour Services. Tel: (021) 212461. Telex: 527718/526771. Fax: 212469. Operates 8 pre-cooling chambers with capacity of 10,000 cu.m. (approx.) at D-Shed.

Container Terminal: Area – 97 hectares; Ground slots – 4,858 TEU's; Reefer points – 190 plug points; Refrigerated holding store – 500 slots. Equipment: Container gantry cranes, straddle carriers, haulers and trailers.

CRANES: *Floating Cranes:* One floating crane lifts 200 tons at 21.5 m.

BULK HANDLING FACILITIES: *Grain Elevator:* 1 terminal grain elevator of 27,220 tons storage capacity, with loading conveyors to the Collier Jetty. Continuous intake capacity of elevator, 750 t.p.h.; shipping capacity, 1,000 t.p.h. (Leased for private use: Loading conveyors only now usable, subject to considerable mechanical overhaul).

Other bulk cargoes handled at general cargo berth with shore crane. No LPG facilities.

MEDICAL: Unrestricted hospital facilities. Medical assistance must be arranged through Agents.

TANKERS: Tanker Basin to accommodate two tankers simultaneously, one of max. overall length of 256.0 m. and one of 240.0 m. overall length. Max. permissible draft 13.1 m., subject to a minimum of 0.9 m. on tide gauge.

Slop tank: Capacity 1,500 tons, available for oily ballast from tankers back loading white oil.

Ballast Requirements: Vessels should be sufficiently ballasted to navigate safely within the harbour.

Vessels with certain categories of hazardous cargo on board may not enter or sail during hours of darkness.

Recommended draft for tankers over 240 m.: 8.00 m. forward and 10.0 m. aft.

DENSITY: 1025.

FRESH WATER: Delivery by hose ex-wharf hydrants. 50 t.p.h.

FUEL: 48 hours' notice required. MFO, IFO and Gas Oil available.

Shipmaster's Report: November 1987.

All grades of fuel are not available at all times.

DRY DOCKS:

Sturrock Graving Dock: Situated at S.E. end of Duncan Dock:

Dimensions:	Overall docking length	360.0 m.
	Length on keel blocks (first to last keel block)	338.3 m.
	Length on bottom (dock floor)	350.4 m.
	Width at coping	47.5 m.
	Width at entrance top	45.1 m.
	Maximum width at bottom	38.4 m.
	Depth on entrance sill, HWOST	13.7 m.
	Depth on inner sill, HWOST	15.1 m.

A docking length of 369.6 m. can be obtained by placing the caisson in the emergency stop at the entrance.

The dock can be divided into 2 compartments of either 132.5 m. and 216.1 m. or 205.7 m., and 142.9 m. respectively.

1×50 ton and 1×10 ton electric cranes on 7.6 m. gauge track and 6×4 ton electric cranes on 4.9 m. gauge track are available.

The dock can be emptied in 4 hours.

A landing wharf 548.6 m. in length is provided on the port side of the graving dock to facilitate the dry-docking of ships.

A repair pier 457.5 m. in length is provided off "M" Berth. 2×15 ton electric cranes on 9.1 m. gauge track is available.

Robinson Graving Dock: Situated in Alfred Basin:

Dimensions:	Overall docking length	161.2 m.
	Length on keel blocks (first to last keel block)	142.6 m.
	Length on bottom	152.4 m.
	Width at coping	27.4 m.
	Width at entrance top	20.7 m.
	Maximum width at bottom	17.2 m.
	Depth on entrance sill, HWOST	7.9 m.

3×4 ton electric cranes on 4.1 m. gauge track and 1×15 ton electric crane, on 4.1 m. gauge track are available.

The dock can be emptied in 3 hours.

Syncrolift: Situated in Alfred Basin:

Dimensions:	Lifting capacity	1,750 tons
	Maximum length of vessel	61 m.
	Maximum width of vessel	15 m.

REPAIRS: All types of repairs can be undertaken.

SURVEYORS: Lloyd's, BV, N.V., N.K.K. and ABS.

GANGWAY/DECK WATCHMEN: Ship's Agent makes necessary arrangements.

OPENING/CLOSING HATCHES: Mechanical hatches opened/closed by crew. Other types of hatches by stevedores.

CERTIFICATES:

Safety Certificates in respect of construction and gear.
Radio Certificate.
Load Line Certificate.
Derat Certificate.
Certificates of Competent Officers (passenger ships only).

CUSTOMS ALLOWANCES: The Master, officers and other members of the crew who remain on the ship during its stay in port may each be allowed to retain in his possession the following quantities (to cover 4 days) of the undermentioned sealable goods:

	Tobacco in any form grammes	Potable spirits in any form litre	Wine litres	Beer or stout litres
The Master/Pilot	230	1	3	3
Officers (including pursers, surgeons, chief stewards, wireless operators and serangs)	175	1	3	3
Other members of the crew	115	nil	3	nil

Where the Master, officers or other members of the crew remain on board the ship for more than 4 days, the Controller of Customs and Excise may on request authorise the issue from under seal, for consumption on board, of the following further quantities per day:

	Tobacco in any form grammes	Potable spirits in any form millilitres	Wine litres	Beer or stout litres
The Master/Pilot	30	100	1	1
Officers (including pursers, surgeons, chief stewards, wireless operators and serangs)	25	100	1	1
Other members of the crew	15	nil	1	nil

CARGO GEAR: All cargo handling equipment must be in good condition and certificates available for inspection.

REPATRIATION: All facilities available.

1. *Vessels Docking:*
   - *(a)* Any personnel arriving to join a vessel at Cape Town should possess a valid travel document and a brief letter of introduction. Entry Permits can be extended if the vessel is late in arriving.
   - *(b)* Application to spend time (longer than 48 hours) in South Africa prior to repatriation should be made to the local Immigration Authorities.
2. *Vessels Calling Off Port Limits:*
   - *(a)* The same requirements apply as for 1(a) with the exception of personnel who have entered the country from a vessel calling off Port Limits.
   - *(b)* The following applies to all personnel disembarking from vessels calling off Port Limits.
     (i) Repatriation must be made within 48 hours from time of signing off.
     (ii) In order to comply with local Immigration Authorities the Agent requires the following details, for each individual, at least 72 hours before disembarkation:
     - *(a)* Full name and nationality.
     - *(b)* Rank and, if Technician, name of employers.
     - *(c)* Passport number, place and date of issue.
     - *(d)* Place and date of birth.
     - *(e)* Destination and class of travel.
     - *(f)* If air ticket held on board, full details of routing.
     - *(g)* Reasons for disembarkation.

In the case of personnel transferring from one company vessel to another, the same conditions apply except the maximum time permitted for such transfer is 78 hours. If they have not joined the vessel within this period, repatriation must be arranged forthwith.

There are no difficulties for any personnel disembarking for medical reasons.

AIRPORT: D.F. Malan Airport – 20 km. from harbour. Daily flights to Johannesburg connecting with overseas flights by regular airlines.

TIME: GMT plus 2 hours.

HOLIDAYS: New Year's Day (1st January); Founder's Day (6th April); Good Friday; Family Day; Ascension Day (date varies); Republic Day (31st May); Kruger Day (10th October); Day of the Vow (16th December); Christmas Day (25th December); Day of Goodwill (26th December). Cargo is not worked on Christmas Day or New Year's Day.

POLICE/AMBULANCE/FIRE: Police, 419-4870; Ambulance, 51-5151; Fire, 218-2805.

TELEPHONES: Telephones can be supplied at all berths. Arrange through Agents.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

SEAMAN'S CLUBS: Missions to Seamen, Duncan Road, Port of Cape Town. Tel: 411-93117/8.

SHIP SUPPLY SERVICES:

Helicopter Service: Available for mail and small items of stores for vessels not wishing to enter harbour. Court Helicopters: Tel: 934-0560. Fax: 934-0568.

Launch Service: For vessels not wishing to enter harbour, Agent may arrange launch service for mail, stores, etc. In this case service only permissible in area North and West of position at least 5 miles due West of Robben Island.

Supplied by:

Court Helicopters (Pty) Ltd. P.O.Box 2546, Cape Town 8000. Tel: 934-0560. Fax: 934-0568.

Ocean Ferries (Pty) Ltd., P.O.Box 6426, Roggebaai 8012. Tel: 47-7115.

Sealink Ltd., P.O.Box 4962, Cape Town 8000. Tel: 25-4480. Fax: 419-7072.

Also see "Shipmaster's Report".

DEVELOPMENTS: *Chemical Tank Farm:* Approximately 50,000 sq.m. of land is to be reclaimed at the Eastern Mole for the purpose of a Chemical Tank Farm.

The first phase is to be a joint venture between Portnet and Richards Bay Bulk Storage (Pty) Ltd.

Styrene monomer will be stored in 3 tanks with a capacity of 1,250 cu.m. each. For the storage of toluene, xylene and benzine, one tank of 1,000 cu.m. and two tanks of 500 cu.m. will be available.

Cold Store: The newly formed Duncan Dock Cold Storage (Pty) Limited is a partnership venture between Portnet and the Cold Storage Division of Oceana and ICS. The project involves the construction of a new 10,000 ton cold storage complex on the quayside at "K" Berth (Cold store commissioned in 1992). Land is available for future expansion.

The total capacity of 10,000 tons will comprise 2,000 tons at −60°C and 8,000 tons at −30°C.

The bulk of the capacity will be available for pre-export storage of fish, fruit and vegetables, eggs and other products at various temperature levels. The −60°C facilities will be used for sashimi, a traditional Japanese delicacy, fish served raw. Acceptable quality of frozen product can only be maintained at an ultra low temperature of −60°C. The store will also have an 80 ton blast freezing facility.

There will be docking space for 6 vessels at any one time with provision to load and unload 3 vessels simultaneously, and 9 docking bays for road transport. The plant will incorporate the latest technology, and handling and storage systems will be among the most modern in the world.

Duncan Dock Cold Storage will be licensed for handling and storing frozen product destined for EEC countries. With its strategic geographical location, the complex is geared to provide a sophisticated service to export customers. Furthermore, the store will have specialised facilities for fish processing and packing, whilst highly trained and skilled personnel have proven expertise in handling a wide range of perishable products and temperature chain maintenance of cargoes.

SHIPMASTER'S REPORT: *Off limits launch and helicopter service:*

Port, Immigration, Customs and Health Authorities have made it clear that this service is a privilege and not a right. It is therefore of the utmost importance that the regulations are strictly adhered to.

The Agent must apply to the Port Captain for permission to service the vessel and the following details must be submitted. Name of vessel, time and date of arrival, draft, where from, where to, stores required and other reasons for call.

Launch is only allowed to be alongside vessel for 1 hour maximum otherwise vessel will have to enter port limits and incur port dues.

If personnel embarking, Immigration Authorities require name of vessel, tonnage, whether ballast or loaded and names of persons embarking. If persons disembarking then full names, dates and places of birth, nationality, Passport or Discharge Book number and expiry date, whether South African visa held and comprehensive reason for leaving vessel, arrangements made for departure from South Africa (usually 24/48 hours allowed), and flight number. This does not apply to medical cases. Guarantee from Agent accepting full responsibility and liability regarding maintenance and repatriation expenses. Persons disembarking must report immediately to Passport Control. Failure to report or leave South Africa on the booked flight is an offence and in addition to any fine or imprisonment the Owners will be refused any further off limits service for *any of their vessels.*

Port Health require application for Radio Pratique 48/24 hours before arrival. Customs require all bonded stores loaded to be signed for and ship's stamp applied. Stores or spares being landed must have prior notification to Agent and an accompanying letter giving full description and disposal instructions.

Agents require 168, 96, 48, 24, and 12 hours' notices followed by any amendment to ETA. Stores requirements should be sent at least 96 hours before arrival. Three copies of Crew List to be sent ashore with launch (or helicopter).

Services operate 24 hours per day and usual rendezvous position is 5 miles West of Green Point Lighthouse for launch (and 12 miles West for helicopter). Launch can carry up to 30 tons stores (and helicopter up to 2,000 kg.). Vessels should not anchor but provide a good lee and have derrick rigged. Contact should be made with the launch (or helicopter) 1 to 2 hours before arrival rendezvous point using Channel 16.

AUTHORITY: Portnet, P.O.Box 32696, Braamfontein 2017, Johannesburg, South Africa. *Tel:* (011) 7734250. *Telex:* 424205. *FAX:* (011) 4032398. *Contact:* The Chief Executive.

Cape Town: P.O.Box 4245, Cape Town 8000. *Telex:* 550178 Porcap. *Contact:* Port Manager Tel: (021) 218-3790. Fax: (021) 25-2656. Commercial Manager Tel: (021) 218-2405, or Port Captain Tel: (021) 218-3413.

(3) to the East, a line joining the seaward positions in (1) and (2).

DOCUMENTS: The following documents should be prepared and rea on berthing:

Immigration:

2 Crew Lists.

Customs:

2 Crew Lists.

List of Narcotics on board.

1 Ship's Stores List.

1 Crew Declaration of Crew's Personal Effects.

1 Customs Form D.A.5.

N.B. Possession of pornographic material is a serious offence.

Port Health:

1 Maritime Declaration of Health.

1 Vaccination List.

1 Crew List.

Valid Derat Certificate.

Agent:

2 Crew Lists.

Load Line Certificate.

Safety Radio Certificate.

Safety Equipment Certificate.

Note: The above documents are required at each South African por regardless of vessels which are coasting.

PILOTAGE: Compulsory. As much advance notice as possible to b given to Port Captain through VHF radio – Port Operation – callin Channel 16, working Channel 12. Call Pilot by Aldis lamp if necessar Pilot boats fitted with multi-channel VHF.

Motor pilot boats – hulls painted black, white housing. "Pilot-loo painted in black on housing. Pilot taken aboard at Pilot Boarding Are situated approximately 2 miles N.N.E. of South breakwater light.

Vessels not to approach closer than 2 miles from entrance until conta has been made with pilot boat.

RESTRICTIONS: Vessels not permitted to enter unless Agents hav been appointed. Oil tankers and ships carrying explosives or dangerou goods restricted to daytime hours. The depth of the inner and oute channels is 12.8 m. above chart datum.

Hazardous Cargoes: Details of all hazardous cargo for discharge loading at Durban and hazardous cargo remaining on board during vessel's stay, are to be made known to the authorities through th vessel's Agent, not less than 72 hours prior to vessel's arrival.

Information required: Commodity, packaging, weight and volume, IM group and stowage on board.

Vessels having on board more than 10 tons of hazardous cargo, w require to maintain a fire watch manned by qualified shore firemen an in addition, have an emergency shore telephone on board.

MAX. SIZE: The draft permitted is 39 ft. (11.9 m.) The length of 245 is exceeded with the Port Captain's approval.

Size of vessels permitted to enter during the hours of darknes Vessels exceeding 200 m. in length and 26 m. in beam may be broug into port at night provided weather conditions are suitable. Vesse whose beam exceeds 35 m. are brought into port only when weath conditions are suitable.

HEALTH: Radio advice to "Port Health Durban", direct through Durba Radio, to be given between 24 hours and 48 hours prior to arriva advising ETA, last port, date sailed, number of crew, full innoculatio and vaccination status, and state of health of crew, and requesting Rad Pratique. Port Health will cable vessel directly, either granting pratiqu or requesting further details.

Shipmaster's Report: Valid Yellow Fever Certificate not required.

RADIO: Radio advice to "Port Captain Durban", direct through Durba Radio, 48 hours prior to arrival, advising ETA, draft, freeboard an reason for calling at Durban.

VHF: Port Control office manned 24 hours, calling Channel 16, workin Channel 12.

TUGS: 6×30 ton bollard pull tugs available. Join vessels in entran channel. Tug's wires used at no extra charge.

Stand-by tugs compulsory for tankers discharging crude.

* All berths and channels are subject to shoaling from time to time. The depths shown are only available immediately after dredging to depth has been completed, and do not refer to the actual depths available at any time.

BULK HANDLING FACILITIES: *Bluff Mechanical Appliance:* Operators: Rennies Bulk Terminals. Berths No. 1 – 4 equipped with electrically driven appliances for the loading of coal. 1 belt loader with capability of loading at the rate of 6,000 t.p.d. and 2 bucket transporters with an aggregate capacity of 4,000 t.p.d. are available. Concrete bins are provided for ground storage with a capacity of 30,000 tons of anthracite. All exports are brought in by rail trucks. Overall productivity 4,000 tons per 24 hours. There is no work between 1100 hrs. Saturday and 0700 hrs. Sunday.

Coal Anthracite Storage Facilities: Concrete ground storage bins of 18,290 tons capacity at Causeway Road.

Island View 3: Operators: Durban Bulk Shipping Co. (Pty) Ltd. Max. draft 10.64 m., max. length 167.5 m., max. reach 9.4 m., dolphin max. height 13.1 m.

Products:	Pelletised maize products, minerals, ores and vegetable oils.
Storage Capacity:	Pelletised maize products (all silos dedicated) 50,000 tons; Andalusite 8,000 tons; Monocalcium phosphates 8,000 tons; Coal 33,500 tons; Chrome ore 24,000 tons; Vegetable oils 4,956 cu.m.
Handling Rate:	Shipping up to 13,000 tons per day.

Maydon Wharf 2 – Sugar Terminal: Operators: S.A. Sugar Association. Exports of bulk and bagged sugar. Max. draft 9.84 m., max. reach 15 m., max. throw 15 m., max. height 14 m. Max. wharf length of continuous gantry: 131 m. Storage in 3 silos with 520,000 tons capacity and warehouse for 57,000 tons of bagged sugar.

Loading is facilitated over 2 appliances, but only one operated at a time with a rate of 1,000 t.p.h. 24 hour operation if required. Stowage Factor: 43.

Maydon Wharf 5 – Multi-Product Installation: Operators: Rennies Bulk Terminals. Max. length 189 m., max. draft 9.84 m.

Products:	Wheat, maize, rice, barley, pelletised protein feeds, soda-ash, coal and fluorspar.
Storage Capacity:	Agricultural products 30,500 tons; Mineral products 100,000 tons; Soda-ash 21,000 tons.
Handling Rates:	Shipping 500 – 1,200 tons per hour; Discharge 250 – 330 tons per hour; Bagging 750 tons per day.

Hours of Operation: 24 hours per day, 7 days. Normal Monday – Friday 0600 – 1800 hrs. Balance at overtime rates.

Trimmer and Boom: Max. height of loading MSL +7.2 m., minimum depth of lowest bulkhead MSL + 1 m. Max. distance from quay 19 m. Minimum distance from quay 9.2 m. Max. throw 12 m. Rotation 360°.

Maydon Wharf 8 – Grain Terminal: Operators: Portnet. Loading of bulk grain. Max. draft 9.84 m. Vessels have loaded up to 10.6 m. on a rising tide but the Master must take full responsibility and prior permission must be obtained from the Port Captain. Loading through 4 spouts. Storage capacity 34,560 tons (maize) and 14,000 tons (sun flower seed). Loading rate (maize) 1,290 t.p.h. Bagging rate 3,000 bags per day.

Hours of Operation: Ordinary time Monday – Friday 0600 – 1400 hrs.

Max. length: Wharf 171.7 m. Gantry 133.56 m. between outermost shipping spouts. Max. beam with elevator spouts extended 27.43 m. Max. height from water level to top of coaming 14 m.

Average Stowage Factors	*Lower Hold*	*Tween Decks*
Conventional Vessels:		
Sorghum	49	51
Yellow Maize – Grade 1	46	47
Yellow Maize – Grade 2	47	48
Bulk Carriers:		
Sorghum	45.5	
Yellow Maize – Grade 1	46.5	
Yellow Maize – Grade 2	46.5	

Maydon Wharf 9 – Bulk Molasses: Operator: Pure Cane Molasses. Max. length 180 m., max. draft 9.84 m., storage capacity 48,000 tons, shipping rate up to 500 t.p.h. Piping and flanges available from operator. Shipping of Molasses in bulk.

Maydon Wharf 13 – Grindrod Forest Products Terminal:

Storage Capacity:	20,000 tons. Covered area 20,580 sq.m.
Handling Rate:	Supply 16,000 tons per month.

Maydon Wharf 14 – Bulk Soda Ash Appliance: Operator: I.C.I. Max. draft 9.84 m., max. length 190 m., max. reach 17 m.

Discharge of bulk soda ash through 2 vacuum operated suckers simultaneously to shore storage facility of 28,000 tons. Hours of operation 24 hours – 7 days. Rate of discharge 80 t.p.h. – 90 t.p.h. Max. 2,000 tons per 24 hours.

Maydon Wharf 15 – Rennies Forest Products Terminal:

Storage Capacity:	Pulp and paper 60,000 tons; Terminal "A" – 13,000 sq.m.; Terminal "B" 28,000 sq.m.
Handling Rate:	Shipping and pulp – 10,000 tons per day. Paper – 3,000 tons per day.

Point, Berth A – Keeley Granite Terminal:

Storage Capacity:	50,000 tons.
Handling Rate:	3,600 tons per day.

CRANES: *Floating Cranes:* Two self-propelled floating cranes:

"Indlovu": 200 ton: 200 ton at 21 m. radius.
125 ton at 35 m. radius.
"Imvubu": 60 ton: 60.9 ton at 6.1 m. radius
40.6 ton at 16.2 m. radius.

Also see "Berthing".

Mechanical Appliances: For general cargo handling: 1×30 ton mobile crane. Forklift trucks: 108×3 ton, 87×4 ton, 15×7 ton, 18×12 ton, 5×15 ton and 10 forklift trucks with a capacity greater than 16 tons. Shunting tractors and haulers: 47.

CONTAINER HANDLING FACILITIES: A major container/Ro-Ro terminal comprising 6 deep sea berths (200-205) and 2 coaster berths (108-109) is equipped with 7×40 ton wharf container cranes at deep sea facility and 1×30.5 tonne unit at Berth 108/109.

The entire complex covers some 102 hectares and provides very substantial stacking areas backed up by a large terminal building with computer control, workshop complex and a road/rail transfer terminal to handle unit trains conveying 100 TEUs. This rail terminal is served by 2 rail/road transfer cranes of 35 ton capacity each, covering 3 rail tracks and 2 traffic lanes. The back-up system operates on a combined trailer/straddle carrier system comprising 25×30 ton, 8-wheeled straddle carriers and 66 terminal tractors augmented by a substantial fleet of 190 terminal haulers and trailers as well as a large cartage fleet operated for the local delivery of containers. A Ro-Ro shed with an under cover storage area of 8,500 sq.m., where cargo pre-assembly and container packing/unpacking is carried out, is situated behind Berths No. 108/109.

A very modern stuffing and re-stuffing depot located on a 13 hectare site immediately adjacent to the harbour terminal is operated by private enterprise (Messrs. S.A. Cargo Depots). The depot is fully equipped with re-stuffing sheds and container handling equipment to cater for LCL traffic.

The container terminal operates a 24 hour day, 7 days a week service.

PRE-COOLING FACILITIES: *Pre-cooling Stores:* South African Co-operative Citrus Exchange Limited: Tel. 012-282181. Telex: 321391. Storage facilities comprise 10 holding chambers of 7,776 pallets (176,204 cu.m.), 72 rapid cooling tunnels of 3,456 pallets (7,831 cu.m.), a container area of 1,040 pallets (2,356 cu.m.), a re-pack holding area of 888 pallets (2,012 cu.m.). Handling rate: Shipping rate of 2,000 pallets per day (average 2,600 tons per day).

STEVEDORES: Stevedoring undertaken by private enterprise stevedores appointed by ship's Agent.

Port Working Hours:

The port is a 7 day, 24 hour port as far as berthing and pilotage are concerned.

Cargo working hours at conventional berths are:

Monday – Friday (2 shifts)	0600 – 1400 hrs.
	1400 – 2200 hrs.
Sunday	0715 – 1515 hrs.

Limited labour is available for overtime and Saturday and Sunday working, whilst 3 shift working consisting of 3×8 hour shifts is provided for at the Pier No. 1 area, albeit on a limited basis.

Container Terminal: Continuous work 7 days a week with shift changes at 0600 hrs., 1400 hrs. and 2200 hrs., except Christmas Day.

MEDICAL: Unrestricted hospital facilities. Medical assistance must be arranged through Agents.

TANKERS: *SBM:* An off-shore single buoy mooring, suitable for crude dischargers between 70,000 and 300,000 d.w.t., is situated in position 30° 00.5′ S., 30° 58.5′ E. A Mooring Master will board in position 2 miles Eastward of the SBM. A starboard derrick, capacity 10 tons should be ready and crew available to lift mooring equipment on board from launch. A good lee on the starboard side is desirable.

Mooring to the buoy is with 2 lines provided by the terminal but vessels are required to provide a rope messenger, available on the forecastle. The mooring operation is carried out by shore personnel, assisted when necessary by ship's crew.

Pipe-line manifold should be ready to connect two 16 in. discharge hoses ASA 150 flanges. Connection by terminal personnel. The hose connection team remain onboard throughout the discharger's stay at the SBM.

No bunkers, or water are available from the SBM. Vessels using the buoy and receiving water or stores ex-launch may only do so prior to berthing or after leaving the SBM and at a distance of more than 2 miles from the buoy.

Port Tanker Berths: There are 7 tanker berths for vessels of max. length 244 m., max. draft 12.3 m. at Island View.

Slop tank facilities with a capacity up to 4,000 tons are available. Requirements in excess of this volume should be made known to the vessel's Agents with as much prior notice as possible.

Crude oil discharge through 10 in. hoses, white oil 8 in. hoses and loading products through 8 in. hoses.

Bunkers and fresh water available ex-berth.

Chemical tankers, with double skin, up to 183 m. are permitted to berth at Island View during hours of darkness. Agent to advise Port Control in advance that SOLAS and Classification Certificates are valid.

2 tugs required for shifting and all tanks to be sealed.

DENSITY: 1025.

FRESH WATER: Delivery by hose ex-wharf hydrants. Rate of delivery 50 t.p.h.

FUEL: Fuel and diesel oil are available ex-pipeline at Pier No. 1, Container Terminal and Island View Berths. Gas oil ex-pipeline is only available at Island View Berths No. 4, 5, 6, 7 and 8, and blends are available at Island View Berths No. 2, 3, 4, 5, 6, Pier No. 1, Pier No. 2 and Container Terminal.

The Maydon Wharf Point and Bluff Berths are served with fuel oil, diesel oil, gas oil and blends from a bunker barge (see below). No bunkers are supplied outside the harbour.

There is a self-propelled bunkering barge called the "Durban Servicer" with a capacity of 140 tonnes of gas oil, 650 tonnes fuel oil and 280 tonnes diesel.

DRY DOCKS: *Prince Edward Graving Dock:*

Dimensions—	
Overall docking length	352.04 m.
Length on keel blocks	327.66 m.
Length on bottom	352.04 m.
Width at coping	42.21 m.
Width at entrance top	33.52 m.
Maximum width at bottom	33.52 m.
Depth on entrance sill at MHWS	12.56 m.
Depth on inner sill at MHWS	13.17 m.

A docking length of 364.44 m. can be obtained by placing the caisson in the emergency stop at the entrance.

The dock can be divided into 2 compartments:

Outer 206.90 m. and inner 138.68 m.

The dock can be emptied in 4 hours.

Electric Cranes:

No.	*Lifting Capacity* (tons)	*Radius* (m.)	*Rail Centres* (m.)
1	50/10	28.00/30.00	7.92
2	10	27.43	7.92
2	8	27.43	4.57

Floating Dock No. 3:

Dimensions—	
Extreme length	106.68 m.
Length on bottom	106.68 m.
Length on keel blocks	104.54 m.
Extreme width	26.82 m.
Width at entrance	19.48 m.
Height on keel blocks	1.21 m.
Draft on keel blocks at HWOST	5.40 m.
Lifting capacity	3,000 tons
Crane	3 tons

Durban Slipway: Overall length 19.81 m. Width 5.00 m. Displacement (max.) 50 tons.

CERTIFICATES:

Safety Certificates in respect of construction and gear.
Radio Certificate.
Load-line Certificate.
Derat Certificate.
Certificate of competent officers (passenger ships only).

OPENING/CLOSING HATCHES: Mechanical hatches opened/closed by crew. Other types of hatches by stevedores.

CUSTOMS ALLOWANCES: See "Cape Town".

CARGO GEAR: All cargo handling equipment must be in good condition and certificates available for inspection. Under normal conditions vessels are obliged to use shore cranes.

REPATRIATION: All facilities available. Also see "Cape Town".

AIRPORT: Louis Botha Airport – 15 miles from harbour. Daily flights Johannesburg connecting with overseas flights by regular airlines.

TIME: GMT plus 2 hours.

HOLIDAYS: New Year's Day (1st January); Founder's Day (6th Apri Good Friday; Family Day; Ascension Day (date varies); Workers Da (1st May); Republic Day (31st May); Kruger Day (10th October); Day o the Vow (16th December); Christmas Day (25th December); Day o Goodwill (26th December). Cargo is not worked on Christmas Day.

POLICE/AMBULANCE/FIRE: Police, 310-2714; Ambulance, 6233 Fire, 62333 or 4502222.

TELEPHONES: Telephones can be supplied at all berths. Arrang through Agents. Also see "Restrictions" – Hazardous cargoes.

SERVICES: Tank-cleaning facilities, divers, compass adjustments an repairs to all electronic gear can be undertaken.

SHIP SUPPLY SERVICE: Crew changes are permitted by helicopter o launch at Durban and can be arranged with prior permission fro Immigration and Customs Authorities provided vessel has been grante Radio Pratique.

Helicopter Services: A single engine Sikorsky S62 helicopter i available for crew changes and supply services to vessels passing o Durban. The above helicopter is available for daylight service onl except in emergencies.

Normal Service: Within 15 nautical miles of Cooper Light.

Note: Normal Rendezvous area is 10 nautical miles off the coas Bearing (160°T) from Cooper Light. (For service where more tha one flight is required the ship MUST route through the 10 nautica miles rendezvous position).

Launch Service: A Company operates launches suitable for servicin vessels off port limits. Up to 20 tons of stores and/or provisions and a maximum of 14 passengers can be carried. The condition of transpo is that same is performed solely at Owner's risk.

The costs involved are R100 per half hour or part thereof and nomina charges are raised for the use of the launch's 1.5 ton hydraulic cran and steel cages to carry stores.

Communication can be established with the launch 1 hour prior to th ship's arrival at the Rendezvous position, on either VHF Channel 16 o 2182 kHz. The normal Rendezvous is five miles East of the Durba Harbour breakwater, but this can be easily varied.

The following two private companies have small craft licensed at th port to serve vessels off limits:

1. Messrs. Offshore and Ships Supplies (Pty) Ltd., P.O.Box 2913 Maydon Wharf 4057.

2. Messrs. Southern Offshore Supplies (Pty) Ltd., P.O.Box 3801 Point 4069.

Helicopter service provided by: Helicopter Services (Pty) Limited P.O. Louis Botha Airport, Durban 4029. Tel: 426101/42619 Telex: 564246 SA.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Required, otherwise National Identity Cards if available.

GARBAGE DISPOSAL: Collection service is available via agent. Drum are placed alongside. No charge for service. Collections daily.

SEAMAN'S CLUBS: Missions to Seamen. Tel: (031) 375328; Sailor Society. Tel: (031) 3014380.

CURRENCY: South African Rand (R). U.S.$ 1.00 = R 3.43 (25.3.94)

GENERAL: A copy of the Regulations for the Republic of South Afric supplied gratis to Masters on arrival.

DEVELOPMENTS: A new Ro-Ro shed to cater for deep sea and coasta Ro-Ro traffic.

The renewal of wharf cranes over a 4 year period. The current lig weight fleet will be replaced by fewer higher capacity cranes, as an when the need arises.

Additional container gantries and replacement of the straddle carrie fleet with both stacking cranes and modern straddle carriers.

New specialised break-bulk terminals.

New offices at Ocean Terminal.

SHIPMASTER'S REPORT: September 1980 (Updated 1994).

Pilotage: Pilot ladders should be provided with manropes, uncovere manila, not less than 32 mm. diameter and without knots at the end.

Container Handling Facilities: The terminal has been complete General cargo vessels with 10 containers or more have to handle thes through the container terminal and shift berth later for handling of genera cargo.

Bunkers: On Maydon Wharf and Point Berths, no bunker facilitie bunkers to be taken by barge. Sometimes vessels have to shift to bunke pier for bunkering.

SHIPMASTER'S REPORT: June 1979 (Updated 1994).

Approaches: Decca Chain 10C, can be erratic, especially at night. 'Blu shows up at 48 miles on radar. Cooper Point D/F continuous.

Pratique: Send message to "Porthealth" Durban 36 hours before arriva If no complications free Pratique given quickly from Durban Radio.

Anchorage: Satisfactory if good weather, within about 4 miles N.E. o breakwaters, however if Southerly winds and swell build up it can b dangerous and it is often best to lie off.

Pilots: Send message to 'Port Captain Durban' 24 hours before arriva ship's particulars, type, cargo, length, draft and Agent's name. Conta Durban Harbour Radio at least 1 hour before arrival. Pilot boards fro large black fast cutter, nearly always on vessel's starboard sid (landward side).

Must have fixed ladder with manropes, if vessel has large freeboa (in excess of 9.0 m.) gangway required at half height. Pilots disli hoists.

Entry: Due to swell and cross currents around breakwater vessel has t be "driven" through breakwater entrance which requires full harbou speeds and sometimes more if heavy swell conditions, once well insi breakwaters speed is reduced.

VHF: Durban Harbour Radio and Pilots generally work Channel 12 bu numerous other Channels available.

For public correspondence use Durban Radio which usually works Channel 26, but very busy in the morning.

Tugs: 6 large powerful tugs fitted with firefighting and salvage capabilities are on station. Tugs are all diesel powered and comprise Schottel, Z-Peller and Voith propulsion systems with bollard pull varying from 23 tons to 40 tons. Very manoeuvrable and excellent stopping power. For most ships two tugs used inward and one outward, tug's wires used. A 20,000 h.p. ocean going tug is usually on station at Durban.

Tugs join vessels just inside breakwaters. For large vessels will accompany vessel on either side from anchorage area and then connect up when swell slackens inside.

Berth: For bunkers, Island View, Starboard side to. Swing in turning basin. For oil transfer of any kind use gantry 'Sheepbridge' with flexible pipes. Shock absorbing fenders. For vessels of 207 m. in length at No. 7, 8 and 9 Berths the straight section of the ship's side lay along the quay. FW available from quay.

Lines: Three head and stern lines. Two backsprings either end to the jetty. Mooring boat used.

Bunkers: Meter pump. Stop on meter at quantity stemmed. Rate up to 200 t.p.h.

Stores: Have to be taken from roadway down to the jetty. Generally local labour has to assist.

General: D/F calibration can be easily undertaken off Cooper Light, good continuous beacon from red tower near water tower, generally little traffic.

Customs/Immigration: Papers as per 'Guide to Port Entry'. Immigration require 'I' flag flown until Immigration Clearance granted.

AUTHORITY: Portnet, P.O.Box 32696, Braamfontein 2017, Johannesburg, South Africa. *Tel:* (011) 7738300. *Telex:* 424205. *FAX:* (011) 7738304. *Contact:* The Chief Executive.

Portnet, P.O.Box 1027, Durban 4000, South Africa. *Tel:* (031) 361-8721 (Port Captain); (031) 361-8838 (Port Manager). *Telex:* 6-21567 SA. *FAX:* (031) 361-8835. *Contact:* Port Manager.

AGENT: King & Sons (Pty.) Ltd., P.O.Box 1 (18th Floor, 477 Smith Street), Durban 4000. Tel: (031) 301-0711. Telex: 620211. Fax: (031) 306-0212. Cables: Baronet Durban.

EAST LONDON: 33.02 S. 27.55 E. (See Plan)

PORT LIMITS: The area of the sea bounded by a line drawn from the Nahoon Point in position: Lat. 32° 59′ 50″ S. Long. 27° 57′ 07.5″ E. in a 114° direction for 1,852 m. to a position: Lat. 33° 00′ 13.9″ S. Long. 27° 58′ 12.8″ E. thence in a 216.5° direction to a position: Lat. 33° 03′ 14.46″ S. Long. 27° 55′ 37.18″ E. and thence in a 295° direction to the coast in position Lat. 33° 02′ 36″ S., Long. 27° 53′ 57″ E. (All bearings are true.)

For Charter Party purposes: An "arrived ship" is when she enters the Port Limits.

For Harbour Revenue purposes, a vessel "arrives" when it passes into the harbour proper or upon first contact at anchorage whilst waiting for berth.

DOCUMENTS: See "Cape Town".

Immigration: Produce their own forms which are:

(a) Arrival and Departure forms.
(b) Prohibition Notice – which states all crew must sail with vessel unless officially signed off through Immigration.
(c) Medical Certificate.
(d) Advice letter from last South African port – if applicable.

They require Crew Lists and the "I" flag to be flown until vessel cleared by Immigration Officer.

Also see "Cape Town" – *Shipmaster's Report,* March 1981. Same Documentation except 3 Crew Lists and 1 copy "nil" Livestock Form.

PILOTAGE: Compulsory. One hour advance notice to be given to Port Captain through VHF radio – Port Operation – calling Channel 16, working Channel 12. Pilot boats fitted with multi-channel VHF. Motor pilot boat – black hull, white housing "Pilot-Loods" painted in black on housing. Pilot taken aboard at outer anchorage. Pilots prefer pilot ladder and manrope system for boarding and disembarking.

RESTRICTIONS: Vessels not permitted to enter unless Agents have been appointed.

Port operates from: Mondays to Fridays 0600 to 2200 hrs., Saturdays 0600 to 1200 hrs. and outside these hours at special request. Tankers are docked in daylight only and can sail during normal working hours of port.

MAX. SIZE: Tankers: Max. length 204 m. overall, draft 9.9 m.

Passenger and dry cargo vessels: Max. length 245 m. overall, draft 10.4 m. (Tidal).

HEALTH: Pratique granted at first port of entry in South Africa. Pratique message 24 hours prior to arrival to "Port Health" at port of entry. If Radio Pratique not granted "Q" flag to be flown until ship has been cleared. Valid certificates must be held for yellow fever. Ships from Eastern ports must also have valid certificates for cholera and typhoid.

Vessels will not be brought into harbour until Radio Pratique has been requested/granted, if this is first port of call on the South African range.

RADIO: East London Radio, call sign ZSA.

TUGS: 2 diesel Schottel tugs fitted with fire fighting and salvage capabilities with bollard pull of 34 tons each are available. Join vessel in entrance channel. Tug's wires used at no extra charge.

Stand-by tugs compulsory for tankers with hazardous cargo on board.

MEDICAL: Unrestricted hospital facilities. Medical assistance must be arranged through Agents.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)	*Cranes* *No.*	*Cranes* *Capacity* (tonnes)
L	253	10.7	4 1	4 15/4
K (Ro/Ro)	253	10.7

O	83	10.4		
P	183	9.0		
R	106	9.0		
S	194	10.4		
T (Grain Elevator)	194	10.4		
OW (Tankers)	259	10.4		

Containers handled at "L" Berth. Stacking area designed for 312 TEU ground slots and 38 reefer points.

Equipment: Straddle carriers, haulers and trailers.

Ro/Ro vessels handled at "I" and "K" Berths. Stacking area 1.8 hectares (18,000 sq.m.).

CARGO HANDLING FACILITIES: One berth equipped for bulk loading of maize. One berth equipped for discharging bulk petroleum products and LPG. All other berths for general cargo. Grain elevator: Storage capacity 75,986 tons; loading rate 1,650 t.p.h. through 4 spouts.

STEVEDORES: No Saturday work except at Port Manager's discretion.

TANKERS: One tanker berth suitable for vessels of 204 m. length with maximum draft 9.9 m. Diameter of hoses, 300 mm. LPG Tankers accepted, hose diameter 150 mm.

DENSITY: 1025.

FRESH WATER: Delivery by hose ex-wharf hydrants. Rate of delivery 60 t.p.h.

FUEL: 48 hours' notice required. Heavy Oil and Gas Oil available.

CONSULS:

Belgium
Denmark
France
Germany
Italy
Netherlands
Portugal
Transkei
United Kingdom

REPAIRS: All types of repairs can be undertaken.

DRY DOCKS: *Princess Elizabeth Graving Dock:*

Dimensions–	
Overall docking length	198.5 m.
Length on keel blocks	193.1 m.
Length on bottom	198.5 m.
Width at coping	31.2 m.
Width at entrance top	27.2 m.
Maximum width at sill level	22.9 m.
Depth on entrance sill, HWOST	10.2 m.
Depth on inner sill, HWOST	10.2 m.

A docking length of 209.2 m. can be obtained by placing the caisson in the emergency stop at the entrance. Maximum beam admitted depends upon draft.

Two 15 ton and one 5 ton electric cranes on 4.9 m. gauge track are available.

The dock can be emptied in 4 hours.

SURVEYORS: General cargo surveyors available.

Rennie Murray & Co. Ltd. Tel: 29612. Telex: 75–0711 as local Agent for Lloyd's Register, B.V., U.S. Salvage and Salvage Association.

OPENING/CLOSING HATCHES: Mechanical hatches opened/closed by crew. Other types of hatches by stevedores.

CUSTOMS ALLOWANCES: See "Cape Town".

CARGO GEAR: All cargo handling equipment must be in good condition and certificates available for inspection.

CERTIFICATES:

Safety Certificates in respect of Life Saving Equipment and gear.
Radio Certificate.
Load-line Certificate.
Derat Certificate.
Certificate of Competent Officers (passenger ships only).

REPATRIATION: All facilities available.

AIRPORT: Ben Schoeman Airport – 8 km. from harbour. Daily flights to Johannesburg connecting with overseas flights by regular airlines.

TIME: GMT plus 2 hours.

HOLIDAYS: See "Cape Town".

POLICE/AMBULANCE/FIRE: Police 442223 or 51616; Ambulance 53316; Fire 2-1212. National Sea Rescue 22555. Harbour Police 442032.

EMERGENCY CO-ORDINATION CENTRE: Contact Port Captain: Tel: 44-2300 or 44-2142. Telex: 250774.

TELEPHONES: Telephones can be supplied at all berths. Arrange through Agents.

STORING: See "Prelims".

1. Truck only.
2. Not applicable.
3. Truck may proceed alongside unless explosives being handled. Vehicles not permitted at tanker berth. (Distance to gate – 200 m.)
4. Yes, except tanker berth.
5. Ship chandler places entries for bonded stores.
6. Ship chandler supplies labour.

SHORE LEAVE: Allowed. No shore pass required.

IDENTIFICATION CARDS: Required, otherwise National Identity Cards, if available.

GARBAGE DISPOSAL: No collection service available, but agents can arrange for either drums or skips to be placed alongside the vessel and the garbage removed. Contact Waste-Tech (Pty) Ltd. Tel: 45-1621.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: Flying Angel Seaman's Club, 2 Buffalo Street, East London. Tel: 24126. Facilities available include shop, international telephone service, church service, minibus collection, postage service and games.

CURRENCY: South African Rand (R). U.S.$ 1.00 = R 3.46 (1.3.94).
AUTHORITY: Portnet, P.O.Box 32696, Braamfontein 2017, Johannesburg, South Africa. *Tel:* (011) 7738300. *Telex:* 424205. *FAX:* (011) 7738304. *Contact:* The Chief Executive.

MOSSEL BAY: 34.10 S. 22.09 E. (See Plan)

PORT LIMITS: Within a line drawn from Cape St. Blaize Lighthouse to the mouth of the Little Brak River, thence along the high water mark so as to include the foreshore between these points, together with Seal Island, the estuary of the Little Brak River as far as the tide flows.
DOCUMENTS: Refer to "Cape Town".
PILOTAGE: Compulsory. 1 hour advance notice to be given to Harbour Master and Pilot through VHF radio. Port operation calling Channel 16, working Channel 12. Motor pilot boat – black hull, white housing. International pilotage signals used. Pilot boards about 1 mile North of Cape St. Blaize Light.
ANCHORAGE: Open anchorage with unlimited depth.
RESTRICTIONS: Vessels not permitted to enter unless Agents have been appointed. No night berthing or sailing for tankers.
MAX. SIZE: Anchorage: No restrictions.

Tanker mooring: Up to 32,000 d.w.t.

Harbour: Max. draft 6.5 m. Max. displacement 5,000 tons. Max. LOA 130 m.
HEALTH: Pratique granted at first port of entry in South Africa. Pratique message 24 hours prior to arrival to "Port Health" at port of entry. If Radio Pratique not granted "Q" flag to be flown until ship has been cleared.

Valid certificates must be held for yellow fever. Ships from Eastern ports must also have valid certificates for cholera and typhoid.
RADIO: Cape Town Radio, ZSC. Port Elizabeth Radio, ZSQ.
TUGS: 1 twin-screw workboat with a bollard pull of 10 tons available, equipped with VHF and R/T.
BERTHING:

		Cope	Depth at		Cranes	
		Level	Chart	Datum	(electric)	Lifting

No. 5 Quay	170	2.30	4.0	4.0		

*Suitable for small fishing craft only.
MEDICAL: Cape St. Blaize lighthouse on 24-hour watch. Requests for medical assistance passed through lighthouse to Harbour Master and Pilot. Hospital facilities available. Vessels in port should arrange medical facilities through Agent.
TANKERS:
CBM: *Position:* Lat. 34° 08′ 35.5″ S., Long. 22° 07′ 47″ E.
Name: Mossgas Voorbaii Tank Farm.
Location: Mossel Bay Terminal for the export of alcohol is an open, unsheltered roadstead, approximately 1.5 nautical miles Northward of the Eastern end of the protection pier of Mossel Bay Harbour or alternatively Cape St.Blaize Lighthouse. From the berth, Cape St.Blaize bears 152° × 2.88 nautical miles.

Sound and sandy mooring bottom. Depth of water 18 m. – 21 m.
Charts: Refer to U.S. Hydrographic Office Charts, British Admiralty Chart No. 639 (Africa South Coast – Mossel Bay) and S.A.N. Chart No. 1020.
Navigation Aids: Prior to proceeding to the berth, ships should await the boarding of the Pilot approximately 1.2 nautical miles Eastwards of moorings in approximately 25 m. of water.

The position is Lat. 34° 09′ S., Long. 22° 10′ E., and from here the berth will bear 288° × 2.0 nautical miles and Cape St.Blaize 192° × 2.2 nautical miles.
Land Marks: Refer to Hydrographic Chart No.639, S.A.N. Chart No. 1020 and plan (See "Plan Section"). Cape St.Blaize Lighthouse is most prominent point and is also assisted with shore beacons.

Radio control is also available on international frequency.
Terminal Information/Requirements:
CBM: Maximum draft 12.0 m. Maximum size of vessel allowed in berth 32,000 d.w.t.
Bow: Both anchor winches capable of working independently of one another.
Stern: Sufficient winches capable to connect 6 ropes from the stern of the vessel (2 to each buoy astern of the vessel). Vessel must have winches forward of accommodation on each side to handle breast ropes.
Ropes required:

10 full coils (220 m.) 64 mm. diameter polyprop.

Minimum breaking strain 64 tons or comparable floating ropes.
Ballast condition: At all times a minimum of 25% of Summer deadweight must be on board in cargo or ballast.
Note: There is no deballasting arrangement to shore.
Manifold Connection: 8 in. universal flange. Hose lifting and hos connecting arrangements required at the manifold. Minimum derr capacity 5 tons.
Accommodation: Required for Loading Master, tanker team, berthin gang and surveyor (total of 7 persons).
Berthing: Only daylight berthing/unberthing will be carried out.
Note: Tankers will not be berthed if arrival is later than 1400 hrs. (loc time). However, the Portnet Pilot and Marine Operators will evalua each arrival on the day to determine if conditions are suitable for la berthing.
SPM:
Marine Tanker Terminal Single Point Mooring Buoy (MTT): The bu facility is situated at Voorbaai, an open, unsheltered roadstead, i position Lat. 34° 08.6′ S., Long. 22° 08.5′ E., in a depth of about 21.0 m of water at LAT. It is an IMODCO type Single Point Mooring buoy wi a 3 hose system which may be used simultaneously. They consist of ballast line and two product lines. One product line is dedicated t 93 and 97 octane petrol and the other product line to distillate namely illuminating paraffin and automotive diesel oil.
Navigation Aids: The buoy is 8.5 m. in diameter, with a freeboard about 1.6 m. and painted yellow in colour. It is fitted with the followin

Master Lantern:	Morse code 'U' every 15 seconds, amber len range 3.0 km.
Fog Signal:	2.0 km. range, omni-directional, 3 sec. bla every 30 seconds with an output of 55 phons
Load Cell Warning:	Red lantern: 0.5 sec. flash every second mooring line tension exceeds the permitte loading of 50 tonnes.

Personnel: A Loading Master and a tanker team which consists 3 divers/deck watch will all remain on board for the whole loadin operation and accommodation is requested for these personnel.

The Portnet Pilot will, at the specific request of the Shipmaster, rema onboard on the completion of the mooring operation, if this is require The Harbour Master, at his discretion, may require the Portnet Pilot remain on board for safety reasons. In this event, accommodation requested for him.

The divers/deck watch will, with the assistance of the ship's crew connect and disconnect the hoses. They will stand watches as instructe by the Loading Master, and have radio communication with the tan farm at all times. Weather and operational requirements permitting, the will carry out an underwater inspection of the system during the loadin
Mooring Launch and Buoy Tender Vessel (BTV): The moorin launch(es) "Strandloper" and/or "Houtkapper" will be used as the pil vessel for the Pilot and other personnel to board from, and for passin the pick-up rope to the ship. The BTV "Pentow Isipingo" will attend the hoses, and will remain on station in the vicinity of the buoy as th diving support and pollution control vessel. The BTV has a capability towing, and is able to hold the ship off the buoy if required.
Loading Hoses: The hoses are 8 in. internal diameter, and the ends ar fitted with Camlock couplings for the manifold connection and butterf valves, which must be locked in the open position during the whole the loading operation. The hoses will be suitably secured with hangin off chains on the hoses, made fast to either bollards or pad eyes at th manifold. The hoses will be suitably suspended from the ship's derric which must have a minimum SWL of 5 tons.
Mooring Hawser: The mooring hawser consists of a 45 m. × 144 mm diameter braidline nylon with a 45 m. × 64 mm. polypropylene pick-u rope. Between the mooring hawser and the pick-up rope is a length 54 mm. stud link chain designed to be accommodated in an OCIM tongue type bow stopper, with which all tankers loading at this Termina must be fitted.
Weather: The average maximum temperature during Summer month is 22°C (extreme maximum 34°C) and the average minimu temperature is 15°C (extreme 5°C). The average annual rainfall 380 mm. The average relative humidity is 75%. The coastal climate generally mild to temperate throughout the year.
Tides: The tidal range is about 2.0 m.
Currents: There are no significant currents at the Voorbaai MTT locatio
Sea Temperature: Average 20°C.
Water Salinity: Density of 1020 – 1025 kg./cu.m.
Wind: Prevailing winds are S.W. (predominant throughout year), N.W (Winter) and S.E. (Summer), but wind directions and velocities a subject to rapid change without warning. Average wind force is betwe 10 – 25 knots. Heaviest seas and swells are predominant S.E.'ly a accompany the S.E. winds. The S.W.'ly winds seldom cause sw problems.
Berthing Limitations: Berthing will be limited to wind speeds of less th 25 knots and/or sea and swell not exceeding 2.0 m. or in accordan with the advice of the Portnet Pilot. Note that berthing on to the bu will only be performed in *daylight*.

Likewise, should the ship, whilst moored to the buoy, experience wi speeds in excess of 30 knots or swell in excess of 3.0 m. or moori forces in excess of the stipulated force, which activates the red warni light on the buoy or any combination of these, the loading will be stopp and preparations made to leave the berth. Should these conditio persist or worsen, the hoses will be disconnected and the ship taken the buoy until more suitable weather prevails. The advice of the Port Pilot and/or the Loading Master, with regard to these conditions, shou be accepted in the interest of safety.
DENSITY: 1025.
FRESH WATER: Available along Nos. 3, 4 and 5 quays and Vinc Jetty.
FUEL: Available at No. 2 quay and No. 3 quay. Available by road tank at No. 5 quay and Vincent jetty.
REPAIRS: Marine engineering firm available for all classes and typ of onboard afloat repairs. Slipway of 375 tons capacity is available.
CUSTOMS ALLOWANCES: See "Cape Town".
CARGO GEAR: All cargo handling equipment must be in good cond and certificates available for inspection.
AIRPORT: George Airport, 40 km.

TIME: GMT plus 2 hours.
HOLIDAYS: New Year's Day (1st January); Founder's Day (6th April); Good Friday; Family Day; Ascension Day (dates vary); Workers Day (1st May); Republic Day (31st May); Kruger Day (10th October); Day of the Vow (16th December); Christmas Day (25th December); Day of Goodwill (26th December). Cargo is not worked on Christmas Day and Good Friday.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required. Otherwise National Identity Cards, if available.
GARBAGE DISPOSAL: Drums provided alongside by Port Authority. Skips are available for alongside or on board (to be arranged by ship's agent).
WASTE OIL DISPOSAL: No collection service available.
SEAMAN'S CLUBS: None.
CURRENCY: South African Rand (R).
AUTHORITY: Portnet, P.O.Box 32696, Braamfontein 2017, Johannesburg, South Africa. *Tel:* (011) 7738300. *Telex:* 424205. *FAX:* (011) 7738304. *Contact:* The Chief Executive.
Mossel Bay: Portnet, P.O.Box 1942, Mossel Bay 6500, South Africa. *Tel:* (0444) 46271, 3404. *FAX:* 46232. *Contact:* Captain K. Shirley, Port Manager.

AGENT: King & Sons (Pty.) Ltd., 9 Church Street, Mossel Bay 6500, South Africa. Tel: (0444) 7117. Fax: (0444) 913311.

PORT ELIZABETH: (Algoa Bay): 33.57 S. 25.39 E.

(See Plan)

PORT LIMITS: Bounded on the Southward by a line drawn from Cape Recife, East (true) to a point in the Indian Ocean, distant 1,609 m. on the Northward by a line drawn from the extreme point of the East bank of the Swartkops River, East (true) distant 1,609 m. on the Eastward by a line drawn between these 2 points, and shall embrace the foreshore between high and low water marks from Cape Recife lighthouse to the aforesaid line at East bank of the Swartkops River, including that portion of the said river which lies on the seaward side of the bridge carrying the railway line to Alicedale, together with the jetties, harbour works and all land vested in the Government of the Republic of South Africa.
DOCUMENTS:
Customs
Form DA.1 Report Inwards/Outwards for ships.
Form DA.3 Certificate of clearance for ships.
Form DA.4 Transire – for a destination in the R.S.A.
Form DA.5 List of sealable goods on board ship.
Ship's Crew List (Customs Department).
Livestock Form (Customs Department).
Post Office
P1/27 Notice of arrival and departure of vessel.
P1/8 Declaration and Post Office Certificate.
Port Health
Maritime Declaration of Health.
Crew List with last vaccination dates.
Derat or Derat Exemption Certificate.
Port Authority
T958 Report of Arrival.
T962 A Departure/Shifting Notification.
Ship's Manifest.
Also see "Cape Town" – Shipmaster's Report, March 1981.
PILOTAGE: Pilotage is compulsory. Messages addressed to Port Captain, Port Elizabeth. Initial ETA together with draft, 72 hours prior to arrival, updated 12 hours prior to arrival and confirmed with Port Control when within VHF range and when 16 miles East of the breakwater head for ships coming from Eastward and 3.5 miles South of Cape Recife for ships coming from Westward. VHF radio calling on Channel 16. Working frequency Channel 12.

Pilot boats fitted with multi-channelled VHF. Pilot boats black hull with white superstructure, "Pilot-Loods" painted black on white. Pilot boat stationed inside harbour and meets ship on arrival approximately 2.5 nautical miles North East of South breakwater head. Boarding requirements consist of pilot ladder together with 2-manropes or pilot hoist. Pilot ladder usually rigged on starboard side.

Algoa Bay is considered a safe anchorage for all sizes of ships, the bottom consisting mainly of sand. Usual anchorage for ships awaiting Pilot is 3.5 miles Eastward of breakwater, in the Outer Anchorage. Predominant winds are Westerly all the year, with East/South Easterly during the Summer months. The Westerly winds are the stronger of the two but are off land and cause little difficulty. Easterlies being from the sea are inclined to cause an uncomfortable sea.
ANCHORAGE: See "Pilotage".
RESTRICTIONS: Vessels not permitted to enter unless Agents have been appointed.

Vessels which are considered *not gas free* are restricted to daylight entry only.
MAX. SIZE:

	Max. length	*Draft*
Passenger, dry-cargo and container vessels	Subject to Port Captain's prior approval	11.6 m.
Tankers	203.3 m. overall	9.7 m.
Ore carriers	251.5 m.	12.0 m.

HEALTH: Pratique granted at first port of entry in South Africa. Pratique message 24 hours prior to arrival to "Port Health" at port of entry. If Radio Pratique not granted "Q" flag to be flown until ship has been cleared.

Valid certificates must be held for yellow fever. Ships from Eastern ports must also have valid certificates for cholera and typhoid.
RADIO: Port Elizabeth Radio. Call sign ZSQ.
VHF: See "Pilotage".
TUGS: Three "Z-Peller" diesel tugs with a bollard pull of 30 tons and fitted with firefighting and salvage capabilities are available, fitted with radar and VHF. Tugs join between anchorage and harbour entrance. Tug's wires used at no extra charge.
BERTHING:

Container back-up facilities: 22 ha. with 3,500 ground positions for deep sea container traffic and 36 ground positions for reefer container traffic.

10 straddle carriers, 17 haulers and 21 bath-tub trailers for internal use.

A rail terminal for forwarding and receiving containers to and from inland destinations.
Ro-Ro facilities: Side loading for deep sea traffic. End loading for coastwise traffic.
Pre-cooling Stores: South African Co-Operative Citrus Exchange Ltd. Tel: (041) 563825. Telex: 243175. Fax: (041) 560752. Operates 5 pre-cooling chambers with a capacity of 7,500 cu.m. (approx.) at No. 2 Quay.
BULK HANDLING FACILITIES: Ore Loading Plant: Storage capacity approx. 350,000 tons. Rated loading capacity 1,360 t.p.h.
Ore loaders:

Maximum outreach from quay face	19.35 m.
Extreme elevated height of loaders above HWOST	13.92 m.

MEDICAL: Unrestricted hospital facilities. Medical assistance must be arranged through Agent.
TANKERS: Stand-by tugs for the fire watch compulsory.
DENSITY: 1025.
FRESH WATER: Delivery by hose ex-wharf hydrants. Rate 50 t.p.h.
FUEL: 48 hours' notice required. Bunker fuel and gas oil available at ore berth. Bunker oil available at Berth No. 15.
CONSULS: (Code 041).

REPAIRS: Minor deck and engine room repairs.
DRY DOCKS: None. Electrically operated 1,200 ton slipway; depth on keel blocks F. 3.7 m.; A. 7.5 m. HWOST; telescopic cradle 75.4 m. long, minimum length 44.3 m. Max. length of ship 82 m. and max. beam 12 m.
SURVEYORS: All Classification Societies represented.
CUSTOMS ALLOWANCES: See "Cape Town".
CARGO GEAR: Undertaken by shore cranes. No floating crane available.
STEVEDORES: To be arranged through ship's Agency.
GANGWAY/DECK WATCHMEN: Recommended.
OPENING/CLOSING HATCHES: Shipmaster to liaise with stevedores.
REPATRIATION: All facilities available.
AIRPORT: 4 km. from harbour. Regular daily S.A. Airways flights to and from all major centres.
TIME: GMT plus 2 hours.
HOLIDAYS: New Year's Day (1st January); Founder's Day (6th April); Good Friday; Family Day; Ascension Day (dates vary); Workers Day (1st May); Republic Day (31st May); Kruger Day (10th October); Day of the Vow (16th December); Christmas Day (25th December); Day of Goodwill (26th December). Cargo is not worked on Christmas Day and Good Friday.
POLICE/AMBULANCE/FIRE: Police (City) 10111, Police (Harbour) 504-5911, Pager 342211 (No.252); Ambulance 10177; Fire 55-1555. Security 507-2710.
TELEPHONES: Telephones can be supplied at all berths. Arrange through Agents.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: Required. Otherwise National Identity Cards, if available.
GARBAGE DISPOSAL: Skips supplied to all ships for galley refuse only. Hold rubbish/dunnage, etc. by rail truck or by motor truck. Order through Port Control, Tel: 507-2720.
WASTE OIL DISPOSAL: No shore tanks or barges. Waste Tech supply tanker trucks of 10,000 litres capacity at a charge of R800. Contact Tel: 662741 or Fax: 662745.
SEAMAN'S CLUBS: Seaman's Club. Facilities include telephone, church, shop, games can be arranged, minibus collection, postage, games available at club. No accommodation.

AUTHORITY: Portnet, P.O.Box 32696, Braamfontein 2017, Johannesburg, South Africa. *Tel:* (011) 7738300. *Telex:* 424205. *FAX:* (011) 7738304. *Contact:* The Chief Executive.

Port Elizabeth: Portnet, P.O.Box 162, Port Elizabeth. Port Manager Tel: (041) 507-2604 or Port Captain Tel: (041) 507-2043. Telex: 243211. FAX: 552930. Contact: E.C. Bremner, Assistant Port Captain.

AGENT: King & Sons (Pty.) Ltd., P.O.Box 1 (7th Floor, Sanlam Building, 44 Main Street), Port Elizabeth 6000. Tel: (041) 559158. Telex: 243445. Fax: (041) 564194. Cables: Baronet Port Elizabeth.

PORT NOLLOTH: 29.15 S. 16.50 E. (See Plan)

PORT LIMITS: Northward by a line drawn 245° from North Point to a point 4,827 m. from the shore; Westward by a line drawn 155° from the above point to the point where it meets a line drawn 245° from Guap Point, Southward by the latter line.
DOCUMENTS: Port Nolloth is not a port of entry for foreign going vessels. Any vessel arriving from outside South Africa must enter at either Cape Town or other South African ports. Only document required is 1 copy of the arrival form.
PILOTAGE: None. Harbour Master will give directions either from the shore, or will come on board a vessel if requested. 72 hours advance notice of ETA required. Harbour Master stands by on VHF Channel 12 and R/T 2182 kHz from 0800 to 1630 hrs. Monday to Friday. Outside these hours only if a vessel is expected.
ANCHORAGES: Anywhere about 0.5 miles seaward of the Fairway Buoy, usually just North or South of the transit line.
RESTRICTIONS: Daytime port only. Entry usually only possible about 2 to 3 hours either side of HW. Tide gauge on jetty and vessels only allowed to enter when 1 m. above chart datum shown on this gauge.
MAX. SIZE: Length 200 ft., draft 3.5 m.
HEALTH: Pratique automatic as vessel must have cleared at another South African port.
RADIO: Local radio station as under "Pilotage", or call Cape Town Radio.
VHF: VHF in Harbour Master's Office; (Multi-Channel). R/T 2182 kHz. Other VHF Channels available (i.e. 6, 10) on portable VHF sets.
RADAR: Not available.
TUGS: None. 40 ft. launch available if required.
BERTHING: 1 berth, 217 ft. long. Depth alongside 3.5 m. at Chart Datum.
CRANES: 1 electric travelling crane, 7.5 tons SWL (only 4 tons SWL under normal cargo working). 1×2 ton mobile crane available.
STEVEDORES: Stevedores supplied by Marine West (Pty) Ltd. who operate the port. 2 gangs available, no advance notice required.
MEDICAL: Local hospital and resident doctor. Main hospital at Alexander Bay (80 km. distant).
TANKERS: Tankers discharge alongside main cargo jetty. Gas oil only. No slop discharge facilities and no loading of oil. Discharge by vessel's pumps, 2 discharge lines available (Shell and Caltex).
DENSITY: 1025.
FRESH WATER: Fresh water available. Delivery by small bore hose (garden tap size); pressure dependent on municipal mains.
FUEL: Marine diesel available on all 3 jetties (2 fishing jetties and main cargo jetty). Delivery from standard type pump nozzle.
FIRE PRECAUTIONS: Normal when discharging gas oil.
CONSULS: None.
REPAIRS: Small deck and engine repairs can be undertaken.
DRY DOCKS: None. 1 slipway for vessels up to 20 m. length and 60 g.r.t.
SURVEYORS: No cargo surveyors. South African Department of Transport represented by the Harbour Master.
GANGWAY/DECK WATCHMEN: Not required.
HATCHES: Opening/closing carried out by vessel's crew.
CUSTOMS ALLOWANCES: No Customs Officers available.
REPATRIATION: In emergency only.
AIRPORT: Alexander Bay 80 km.; Springbok 140 km. Daily flights from Springbok to Cape Town. 3 weekly flights from Alexander Bay to Cape Town and to Luderitz, Johannesburg, Walvis Bay and Windhoek.
TIME: GMT plus 2 hours throughout the year.
HOLIDAYS: Good Friday, Day of the Vow (December 16th), Christmas Day, Boxing Day and New Year's Day are holidays – cargo work can be arranged on some of these days, but it is not usually asked for.
POLICE/AMBULANCE/FIRE: Police – Port Nolloth Tel: 8320. Ambulance – Port Nolloth Tel: 8229 (municipality) or Tel: 8411 (state). Fire – No fire brigade in the town – Marine West fire fighting facilities Tel: 8244 or 8038 after office hours.
EMERGENCY CO-ORDINATION CENTRE: Port Captain, Cape Town. Tel: Cape Town (021) 4053413. Fax: (021) 252656.

Port Captain, Walvis Bay, Tel: Walvis Bay (0642) 3631.
Port Captain, Saldanha Bay, Tel: (02281) 20452.
Any coast radio station, i.e. Cape Town Radio or Walvis Bay Radio.

TELEPHONES: No facilities exist for placing telephones on board.
BANKS: First National Bank, P.O.Box 72, Port Nolloth 8280. Tel: Port Nolloth 8216. Telex: 5–20471 SA.
STORING: See "Prelims".

1. By truck.
2. No barges available.
3. Trucks can proceed alongside the vessel.
4. Yes.
5. None.
6. Yes.

SHORE LEAVE: Permitted, no restrictions.
IDENTIFICATION CARDS: Not required.
DELAYS: Tidal, unless berth occupied.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Not available.
SEAMAN'S CLUBS: None. Hotel with pool tables, bar & restaurant, bank and post office, supermarket & shops and churches, all within 1000 metres of dock gates. No arranged football matches or dances.
CURRENCY: South African Rand (R).
AUTHORITY: Portnet, P.O.Box 30, Port Nolloth 8280. *Tel:* Port Nolloth (0255) 8340. *FAX:* (0255) 8629. *Contact:* Captain D. M. Bridge, Harbour Master.

Harbour leased to: Marine West (Pty) Ltd., P.O.Box 101, Port Nolloth 8280. *Tel:* (0255) 8244 and after hours 8038. *FAX:* (0255) 8629.

RICHARDS BAY: 28.48 S. 32.06 E. (See Plan)

LOCATION: The port is located some 200 km. North of Durban. Mid point of the bay is approximately Lat. 28° 48′ S., Long. 32° 02′ E.
DOCUMENTS: The following documents should be prepared and ready on berthing:

Port Health:
1 Maritime Declaration of Health.
1 Vaccination List.
1 Crew List.
1 Valid Derat Certificate.

Immigration:
1 Crew List ("I" flag International Code to be flown).
1 Passenger List (if applicable).
1 Stowaway List (if applicable).

Customs:
2 Crew Lists.
1 Ship's Stores List.
1 Crew Customs Declaration (local form only).
1 Narcotics List.
1 Personal Effects List signed by each crew member.
1 Passenger List.
1 Customs Form (D.A. 5).

All vessels using the port, will be subject to Customs Inspection and must obtain a Customs Clearance.

Agents:
2 Crew Lists.
Loading Certificate.
Safety Radio Certificate
Safety Equipment Certificate.
Register.
1 Transire from previous South African port.

PILOTAGE: Pilotage is compulsory and Pilots are provided by the Marine Department of Portnet.

Two pilot vessels available, black hull with white superstructure with "Pilot-Loods" painted on sides.

Boarding points are determined by the Pilot, but generally speaking will be within an area approximately 3 nautical miles S.E. of South breakwater.

Pilot ladders to be clean and comply with Solas Regulations.

Vessels with freeboard in excess of 9.0 m. must have accommodation ladder rigged in conjunction with the pilot ladder, which must be 2.0 m. above sea level, manropes must be provided. Pilot hoists not accepted.

Also see "Restrictions".

ANCHORAGES: 3 to 5 nautical miles South East of the South Breakwater but not opposite Entrance or North of Entrance, which is a prohibited entry area.
Quality of Bottom: Sandy.
Note: Anchorage is similar to Durban and in high S.W. winds anchorage is not safe, and vessels are inclined to drag anchor. In high N.E. winds, caution should be exercised.
RESTRICTIONS: *Marine Traffic Hours:* 24 hours a day, except for vessels that do not meet the ballast draft requirements, which will only be handled at pilot's discretion.
MAX. SIZE: LOA Max. 314 m. Beam max. 47.25 m. Draft max. 17.5 m. D.W. Limit max. 170,000 d.w.t. Larger vessels may be accommodated on request to the Port Captain.
Minimum Ballasted Condition on Entry:

	Length	*Draft – Fore*	*Draft – Aft*
	200 m.	6.1 m.	7.3 m.
	250 m.	7.6 m.	8.5 m.
	275 m.	7.9 m.	9.1 m.
over	275 m.	8.2 m.	9.8 m.

HEALTH: Radio Pratique must be obtained by cabling Port Health – Durban using the standard international procedure for working. See "Radio".

Derat Certificates valid for six months are issued by Port Health as are exemption certificates.

RADIO: *Arrival Advice:*

To "Port Health Richardsbay" – direct through Durban Radio – between 24 hours and 48 hours prior arrival – advising ETA, last port, date sailed, number of crew, full inoculation/vaccination status, and state of health of crew, and requesting Radio Pratique. Port Health will cable vessel directly, either granting Pratique or requesting further details. These messages are free of charge.

To "Portcaptain Richardsbay" during normal port working hours, otherwise to Port Control Signal Station outside hours – direct through Durban Radio – 48 hours prior arrival, advising ETA, draft, freeboard and reason for call at Richards Bay.

Port Control: Fax: (0351) 9052249. Telex: 631119 SA.

VHF: Vessels can communicate with Port Control on Channel 16 VHF, watch is maintained continuously, working channels – 12, 9, 11, 13 and 14. When at anchor, listening watch must be kept to receive berthing instructions.

TUGS: Tug attendance is compulsory. Tugs will supply a working wire or wire-polyprop combination, with a messenger attached. Ship to send heaving line to tug. Tugs are owned and operated by Portnet and consist of the following:

1. Voith Schneider (3 tugs)	4,200 h.p. Bollard Pull 44 tons.
2. Diesel Kort Nozzle (2 tugs)	4,400 h.p. Bollard Pull 50 tons.

Tugs change crew at 0600 hrs., 1400 hrs. and 2200 hrs. on Monday to Friday, and 0600 hrs. and 1800 hrs. on Saturday and Sunday.

BERTHING: Harbour Authorities provide berthing gangs.

Berth	*Length* (m.)	*Depth* (m.)	*Permissible Draft* (m.)	*Cope Level* (m.)
Die Duine (Coal Berths and Chemical Quay):				
209 (Chemicals)	300	14.0	12.5	+4.5
301	350	19.0	17.5	+5.2
302	350	19.0	17.5	+5.2
303	350	19.0	17.5	+5.2
304	350	19.0	17.5	+5.2
Umhlatuzi (General/Heavy/Ro-Ro Cargo Berth):				
609	300	12.8	12.0	+5.2
Bayview (Bulk Cargo Quays):				
701	300	12.8	12.0	+5.2
702-705 (each berth)	250	19.0	17.5	+5.2
706	300	14.7	14.0	+5.2
707	300	14.7	14.0	+5.2
Small Craft Harbour:				
Repair Berth	300	8.0	7.5	+4.3
Dredger Berth	150	7.0	N/A	+4.3
Tug Berth	180	7.0	N/A	+4.3
Pilot Boat Berth	165	4.0-7.0	N/A	+3.4
Harbour Craft Berth	150	4.0	N/A	+3.0 – +3.4
Launch Jetty	175	4.0	N/A	+3.0

Berth Usage:

Berth 701 – Discharge of alumina (Hitachi).
702 – Discharge of sulphur, petroleum coke, etc. (Demag).
703 – Bulk loading berth.
704 – Bulk loading berth.
705 – Woodchip loader and phosphoric acid loading pipes.
706-707 – Steel storage areas and loading berths.

Fendering: All commercial berths are fitted with rubber fendering. Berths No. 301 to 304 are fitted with cylindrical fenders with an outside diameter of 2.0 m. Similar fenders with an outside diameter of 1.6 m. are fitted to Berths No. 609 to 707.

Bridgestone type SM 800 H × 3.0 m. L are fitted to Berth No. 209.

General Cargo Berths: Berth No. 609 is served by rail tracks and has a surfaced back-up area. It is currently used for general and abnormal/heavy cargo working. The berth can also accommodate Ro/Ro vessels.

Dependent on availability, Berths No. 701 to 705 can also be used for general cargo working. There is, however, no stacking area directly behind Berths No. 703 and 705. Rail tracks serve these berths.

The Repair Berth at the Small Craft Harbour can be used by general cargo vessels with a limited draft. There is limited rail access to this berth.

BULK HANDLING FACILITIES: Richards Bay is world renowned for the large-scale coal export operation run by the Richards Bay Coal Terminal Company. In addition, the sophisticated, multi-purpose bulk handling facility operated by Portnet in the Bayview area of the harbour plays a vital role in the successful handling of the big tonnages moved through the port annually. The facility is being upgraded with installation of scraper reclaimers in the storage sheds.

Apart from the bulk ores, namely pig iron and ferro alloys, (both export commodities) all other bulk products which include, amongst others, zircon, rutile, titanium slag (chloride and sulphate), chrome ore, rock phosphate, clay, andalusite, vermiculite, woodchips, vanadium slag and fertilisers (all exports) as well as potash, sulphur, alumina, petroleum coke and rock phosphate (all imports) are handled over conveyor belts.

Export commodities received in rail trucks are discharged at either of the 2 random tipplers or through the bottom discharge dumper. Thereafter the product is conveyed via a conveyor belt network with a centralised computer control system directly to a vessel or to an appropriate storage facility pending shipment.

Storage Areas: Product can be stored in the following areas:

Open Storage: The two open storage areas can each accommodate up to 60,000 tons and are used for the storage of chrome ore only.

General Purpose Sheds: The two General Purpose Sheds can store up to 100,000 tons at a time. They are presently used for the storage of titanium slag, rock phosphate and potash.

Silos: The three 10,000 tons silos are presently being leased to a private concern.

Bulk Storage Bins: This storage facility has a total capacity of 272,000 tons. The reinforced concrete storage bins consist of two adjacent rows of 16 bins, each having a capacity of 3,300 cu.m.

Fourteen bins have been designed to store heavy products having a bulk density of 2.93 tons/cu.m. The remaining eighteen bins have been designed for products with bulk densities up to 2.16 tons/cu.m.

Each row of bins is served by a reclaim conveyor on to which feed 2 rotary plough reclaimers. A peak reclamation rate of 2,500 t.p.h. per belt can be achieved.

Pig Iron Slab: The pig iron slab has a storage capacity of 100,000 tons of non-beltable bulk commodities such as pig iron and ferro alloys.

Beltable Products: Shipping and discharging of beltable product is executed by means of the following equipment:

Wood chip loader: This loader, which has a direct conveyor belt link to Messrs. Central Timber Co-operatives' wood chip plant located on the harbour boundary, has a gross loading rate of 500 t.p.h.

Shiploader: Two shiploaders with a gross loading rate of 700 t.p.h.

Grab ship unloader: The unloader which has a grab payload of 17 tons has a gross unloading rate of 350 t.p.h. This unloader can be used to ship bulk ferro alloys and pig iron in skips.

Pneumatic ship unloader: This unloader, which at present is used exclusively for the handling of aluminia, has a gross discharge rate of 320 t.p.h.

Privately Operated Facilities: Export of coal is handled through the terminal owned and operated by the Richards Bay Coal Terminal Company (Pty) Ltd.

A terminal for the storage and shipping/receiving of liquid chemicals is operated by Messrs. Richards Bay Bulk Storage (Pty) Ltd.

These chemicals are shipped across Berth No. 209.

Coal Terminal: Berths No. 301, 302, 303 and 304 are used solely for the export of South African Steam Coal. The plant is owned and operated by the Richards Bay Coal Terminal Company (Pty.) Ltd.

Length (301-304)	1,400 m.
Depth	19 m.
Permissible draft	17.5 m.
Max. beam	47.25 m.
Max. LOA	314.00 m.
Max. size	170,000 d.w.t.
Quality of bottom	Sandy to hard

Shiploaders: Three. (Dimensions apply to one machine)

Loading rates:

	Loaders No. 1 and 2
Nominal	8,500 t.p.h.
Average	5,000 t.p.h.
	Loader No. 3
Nominal	10,500 t.p.h.
Average	6,500 t.p.h.
Working range of boom	15° up to 15° down
Height of Boom above HWOST with Loader at max. working elevation	21.6 m.

STEVEDORES: *General Cargo Working Hours:* 24 hours working (7 days), with shift changes at 0600 hrs., 1400 hrs. and 2200 hrs.

Richards Bay Coal Terminal: Coal Terminal working hours: 24 hours daily, 7 days per week. Christmas Day not usually worked.

Bulk Handling Facilities: The bulk handling facilities operate 24 hours a day.

MEDICAL:

Hospital: There are 2 modern and well equipped hospitals at Empangeni, (Approx. 25 km. from the berth) and one hospital in Richards Bay.

Doctor/Dentist: Usual port services available on 24 hour basis.

DENSITY: 1026.

FRESH WATER: Available at the berth. Rate approx. 25 t.p.h.

FUEL: Heavy and Medium Fuel Oil. Diesel Oil and Gasoil are available by pipeline at Berths 301, 302 and 209 only. Bunkering can take place concurrently with loading.

There is a bunker barge with capacity 800 tonnes H.F.O. and 120 tonnes B.G.D. Pumping rate 150 tonnes/hr. for H.F.O. (180 cst) and 40 tonnes/hr. for B.G.D.

Stems for bunkers should be placed with normal bunker suppliers who will arrange delivery through the bunker supply company at Richards Bay. All vessels calling for bunkers must either be gas free or inerted before they will be permitted to enter the port.

CONSULS: In Durban.

REPAIRS: Written approval must be obtained from the Port Authorities, via the Agents for vessel to immobilise engines to carry out repairs. Repairs may be carried out at the berth. Radio/radar repairs are undertaken by technicians travelling from Durban.

SURVEYORS: Lloyd's, ABS, BV and NV in Durban. Societe Generale de Surveillance and Chettle and Company in Richards Bay.

GANGWAY/DECK WATCHMAN: Recommended.

OPENING/CLOSING HATCHES: By crew.

CUSTOMS ALLOWANCES: See "Cape Town".

REPATRIATION: Possible.

AIRPORT: There is an airport at Richards Bay 26 km. from the Coal Berth, 8 return flights a week to Johannesburg, where international connections can be made.

TIME: GMT plus 2 hours.

HOLIDAYS: *Local Holidays:*

New Year's Day, 1st January; Founder's Day, 6th April; Good Friday; Easter Monday; Ascension Day; Workers Day, 1st May; Republic Day, 31st May; Kruger Day, 10th October; Day of the Vow, 16th December; Christmas Day, 25th December; Day of Goodwill, 26th December.

In general the port only closes on Christmas Day.

POLLUTION: The Port Authorities demand that no vessel using the port shall discharge any garbage, refuse, vegetable or food matter, deck cleanings, polluted bilge water, oil or rubbish of any description in the vicinity of or in the port of Richards Bay.

Heavy penalties will be imposed for breach of the regulations.

Vessels arriving in ballast must have clean ballast on board, as deballasting takes place alongside the berth. Dirty ballast pumped into the harbour will incur heavy penalties for pollution.

POLICE/AMBULANCE/FIRE: Police Tel: 0351-31608. Ambulance/Fire Tel: 0351-31991 or VHF Channel 16 (Port Control).

TELEPHONES: Telephones are not readily available at the berth. Application for the service should be made through the Agents in advance.

All telephone calls made will be charged to the vessel's account.

Caution: With direct dialling available internationally it is strongly recommended that telephones are placed in the custody of a responsible officer to avoid abuse.

SHIP SUPPLY SERVICE: A helicopter service through Court Republic Helicopters, P.O. Louis Botha Airport, Durban L, 4029. Tel: (031) 426101. Telex: 624246.

Rendevous position Port Dunford Lighthouse 090°T 23 nautical miles.

Note: Aircraft can carry out approximately 100 mile round trip in 1 hour.

A launch service is carried out by the Portnet via the Pilot launch. The efficient operation is dependant on the work load of the Port at the time service is required.

Prior to helicopter/launch being permitted to leave, signed authority from Port Health, Customs and Immigration must be obtained.

SHORE LEAVE: There are no restrictions on shore leave for crew. Crew members proceeding to Durban require written permission from Immigration Authorities.

IDENTIFICATION CARDS: Seaman's Book sufficient.

GARBAGE DISPOSAL: Richards Bay Municipality makes collections twice a week. Drums and skips are provided alongside. Tel: 31111. Charges at present are R 4,500/month (April 1991).

WASTE OIL DISPOSAL: FFS Refiners operate slop collections. Shore tanks are 160 tons capacity. Barges will be made available. Collection at any berth to be arranged by Agent.

SEAMAN'S CLUBS: Seafarers Club, P.O. Box 382, Richards Bay 3900. Tel: 973491/2. Chapel services, snack bar, library, postage service available. Bus service from ship. Football matches and safari tours can be arranged, games room and curio shop available.

Also see "General".

CURRENCY: South African Rand (R).

Only restriction is that seamen cannot buy dollars unless they have cashed in dollars previously (proof or receipt required).

GENERAL: The harbour and the quays are owned by Portnet.

Provisions: Stores and provisions can be obtained through local Ship's Chandlers.

Game Parks: National Parks Board Game Reserves (Hluhluwe and Umfolosi) are within easy reach of Richards Bay by car.

Car Hire: Cars can be hired, through the Agents at reasonable cost to officers and responsible crew members only. An International Driving Licence is required to make use of this service.

Arrival Time at Richards Bay Harbour: The official arrival time of a vessel is taken to mean the time agreed upon with the Signal Station, when the vessel crosses into the proclaimed area of Richards Bay Harbour, as defined.

Draft Regulations: Very strict control is maintained at South African Ports, concerning the overloading of vessels, either on arrival, on sailing, whether calling for bunkers or loading cargo.

Attention is drawn to the fact that the Plimsoll Mark is the only standard by which the Authorities at South African Ports will determine a ship to be overloaded or correctly loaded. *No allowance whatsoever will be made for vessels sagging.* A corresponding mean draft where this occurs is unacceptable to the Authorities. It should be noted that Richards Bay is in the *Summer Zone throughout the year*.

Masters are liable to severe penalties for contravention of these regulations.

Also see "Shipmaster's Report".

Gas free Pre-requisite: Incoming vessels must be gas free, or inerted prior to entry and where applicable, certificates to be issued by qualified chemist who will check that aspect, prior to vessel's entry into Port.

OBO's, whose last cargo was oil, must report this to Port Control on arrival.

Swimming: Seamen are advised that it is dangerous to swim in the sea or the Harbour, due to the presence of sharks and dangerous tidal conditions.

Furthermore, the rivers and fresh water lakes in Zululand are infested with Bilharzia and crocodiles, and you are similarly advised not to swim in these places.

Walport Films: Films/Video tapes are available. One week's notice required if possible.

Foreign Currency: One week's notice required. Currency must have been received from abroad before being released by banks.

Laundry: Excellent service available.

Drugs: (Agent's Notice).

We feel it is important that we draw your attention to the very severe penalties which can be imposed in this country on any person selling, buying or even using any habit-forming drug such as heroin, marijuana, LSD, dagga, etc. We cannot impress on you strongly enough the need for you to advise all members of your crew, and passengers too, of these strict laws.

The following are some of the penalties laid down in the Act on the Abuse of Dependence Producing Substances and Rehabilitation Centres (No. 41 of 1971), which came into force on 1st December, 1971.

(a) Any person who deals in any *prohibited* dependence producing drug or any plant from which such dependence producing drug can be manufactured or who deals in any *dangerous* dependence producing drug or any plant from which such a drug can be manufactured can be on a first conviction sentenced to imprisonment of not less than 5 but not exceeding 15 years and in the case of a second or subsequent conviction to imprisonment of not less than 10 but not exceeding 25 years.

(b) Any person who has in his possession or uses any *prohibited* dependence producing drug or plant or who has in his possession or uses any dangerous dependence producing drug or plant from which such drug can be manufactured can on a first conviction be sentenced to imprisonment of not less than 5 but not exceeding 15 years.

(c) Any person who deals in any potentially dangerous dependence producing drug can be sentenced to imprisonment of up to 10 years.

(d) Any person who has in his possession or uses any *potentially dangerous* dependence producing drug can be sentenced to imprisonment of up to 5 years.

Any person who deals in:

(1) Prohibited or dangerous drugs or plants, can be sentenced to:
  (a) First conviction – 5 to 15 years' imprisonment.
  (b) Second or subsequent conviction – 10 to 25 years' imprisonment.
(2) Potentially dangerous drug can be sentenced to imprisonment up to 10 years.

Any person who uses or possesses any:

(1) Prohibited or dangerous drug plant can be sentenced to:
  (a) First conviction – 2 to 10 years imprisonment.
  (b) Second or subsequent conviction – 5 to 15 yea imprisonment.

Combined Seafarers Club (Missions to Seamen): This has been opene outside the Customs Gate near the Harbour Administration Buildin Souvenirs, refreshments, etc. are available as well as a telephone f making overseas calls. The premises have a wine and malt licenc (i.e. wine and beer are served).

Seaman's Club – Bus Service: 1800 hrs. Coal Terminal
1830 hrs. Club
1845 hrs. Clean Cargo Terminal

Shopping and Business Centres: The shopping and business centre are at Meerensee and Arboretum, Richards Bay, also at Empange where the majority of personal needs are obtainable.

One hour film processing service available from Camera Visio Shop 1, Checkers Centre, Arboretum or Spot Photos, Meerensee.

Vaccinations: Arrangements can be made for Health Authorities t attend on board for vaccinations.

Tides: Tidal change between HWOST and LWOST is approx. 2 m.

Prevailing Winds: South Westerly in Winter; North Easterly in Summe

DEVELOPMENTS: Construction of new berths (No. 607 and No. 60 will commence in the near future.

SHIPMASTER'S REPORT: May 1987 (Updated 1992).

Pilot and tugs most competent. Berths good and well founded. No dra or air draft restriction for a Panamax at this port.

There was a full and efficient hatch inspection made. Loading wa rather spasmodic, due to some very heavy rain, shore plant breakdow and the plant being used for other purposes. A small amount of gra damage was done but this was repaired promptly.

There was no time claimed against the vessel.

Quantity of cargo requested was 63,000 tonnes ±5%. We loade 62,834 tonnes. There is a strict draft survey and a very heavy penal for overloading.

Cargo completed	1010 hrs.
Pilot on board	1051 hrs.
Clear of Berth	1109 hrs.
Commenced Passage	1200 hrs.

Agent's Notices:

Rain Whilst Loading: Following serious complaints from receivers, w have been requested by Principals to instruct Masters of all vesse loading coal at Richards Bay to ensure that all hatches are closed durin periods of rain or threatening rain except for those hatches which ar being loaded. Furthermore, we would request your written advice of an knowledge you have of foreign objects that may have been loaded wi the cargo, giving details of the particular hatch and approximate positio of such objects.

Loading Regulations: May we courteously draw the following to you attention – We have already had numerous vessels loading at Richard Bay which have sailed from Port in an overloaded condition.

The Port Captain has advised that in future any vessels attemptin to sail overloaded will be detained until the vessel is deemed to b correctly loaded. It is an offence to submerge a vessel's Load Line durin any stage of loading, regardless of the amount of ballast still to b pumped out.

Your attention is drawn to the fact that the Plimsoll Mark is the on standard by which the South African Port Authorities will judge a shi to be correctly loaded. No allowance whatsoever will be made for a vessel's sag and the corresponding mean draft. Allowance for fres water can be made provided the physical draft does not exceed 17.5 m and that the Pilot will require proof from the Surveyor that the allowanc is correct in terms of the density of water at the time of survey.

In view of the foregoing, we would ask that the Chief Officer and no the Surveyor completes the loading operation. The Surveyor will on calculate the cargo actually on board at the time of completion.

As the loading appliance is presently capable of a rate in excess o 6,000 tonnes per hour, extreme care should be taken by ship's personn to ensure that the vessel is correctly loaded.

The Department of Transport have advised that in terms o International Convention on Loadlines 1966 Article 12 and four schedule of the Merchant Shipping Act No. 57 of 1951 (as amended) a vessel is permitted to submerge the Summer loadline when floating i water of density less than 1,025. The amount by which the loadline ma be submerged is proportionate to the difference between the actu density of the water in which the vessel is floating and 1,025. Th amount is commonly referred to as the Dock Water Allowance. Th Master therefore has the legal right to make use of this provision whe the density of the water in which his vessel is floating is other than 1,02 It is the duty of the Master or his appointed representative to calcula the Dock Water Allowance. Density used when determining Dock Wat Allowance should be Density in Vacuo. When a draft survey hydromet which is calibrated to read weight in air is used to determine the densit an added air buoyancy correction should be applied.

Kindly acknowledge receipt of the above by signature to copy attache hereto.

Maximum permissible draft in Richards Bay is 17.5 m.

AUTHORITY: Portnet, P.O.Box 32696, Braamfontein 2017 Johannesburg, South Africa. *Tel:* (011) 7738300. *Telex:* 42420 *FAX:* (011) 7738304. *Contact:* The Chief Executive.

Richards Bay: Portnet, P.O.Box 181, Richards Bay 3900. *Tel:* (035 905-3440. *Telex:* 631052. *FAX:* (0351) 905-2207, 905-3449. *Conta* J. Scheepers, Port Manager. B. R. Schaeffler, Combi Termin Manager. Captain D. W. Brink, Port Captain. C. King, Bulk Manage

AGENT: King & Sons (Pty.) Ltd., P.O.Box 9 (Ventura Road), Richard Bay 3900. Tel: (0351) 973140. Telex: 631088. Fax: (0351) 97303 Cables: Baronet Richards Bay.

SALDANHA BAY: 33.02 S. 17.58 E. (See Plan)

LOCATION: Saldanha Bay is on the West coast of South Africa, about 60 miles North of Cape Town. It is a natural harbour, partly protected by an artificial breakwater.

FORMALITIES/DOCUMENTS: Vessels arriving at the port should fly the following flags:

Their own National Flag.
The South African National Flag.
"I" (India) flag until the ship is cleared by Immigration.
"Q" (Quebec) flag if Radio Pratique has not been granted.
"H" (Hotel) flag while the Pilot is on board.

A single officer will handle all the formalities for Customs, Immigration and Port Health. He will board the vessel immediately after docking. The following documents and papers will be required:

5 copies Crew List.
1 copy Stores List.
1 copy Crew Effects List.
1 copy Animal List.
1 copy Narcotics List.
1 copy Passenger List.
1 copy Maritime Declaration of Health.
1 copy List of Sealable Goods (Form DA5).

The following certificates must be available for inspection:

Safety Radio Certificate.
Load Line Certificate.
General Safety Equipment Certificate.
International Oil Pollution Prevention Certificate.
Cargo Safety Construction Certificate.
Derat Certificate.
Passenger Safety Certificate (only if more than 12 passengers).

If the ship has come from a South African port, she will also require a Transire (Form DA4) and a Light Dues Certificate. Light dues are paid at the first South African port of call and are valid for one month.

Should a Derat Certificate be due to expire, the Customs Officer can extend it for one month. Should a new certificate be required, a Port Health Officer must travel up from Cape Town.

The bond will be inspected and sealed by the Customs Officer. A list of crew allowances for cigarettes, wine, etc., appears on Form DA5. Should the ship remain in port for longer than 4 days, arrangements can be made with the Customs for the Bond to be opened and an additional issue made.

Safety and Pollution Control: After docking, all ships will be boarded by the Pollution Control Officer, who will require a check list to be completed. Ballast will be inspected and bilge discharge valves sealed. In the case of tankers, the Pilot who docks the ship is required to inspect the TOVALOP Certificate and the Civil Liability Convention Certificate. A Safety Check List must be completed and handed to the Pilot, who will then, on behalf of the Port Authority, issue the ship with a permit to load or discharge crude oil.

APPROACH/PILOTAGE: Pilotage is compulsory. Masters should call Saldanha Bay Port Control on VHF Channel 16 when 12 miles from the pilot station for instructions. Pilots will board ballasted ships 4 miles off the coast and laden ships 6 miles off. When making an approach, ships should stay South of the 080° leading marks.

Pilot ladders must conform to IMPA standards. Hoists are not acceptable. Masters should anticipate having to manoeuvre to make a lee, particularly in Winter. The Saldanha pilot boat is a 20 m. launch with an orange hull and white wheelhouse. It can be contacted on Channel 12 or Channel 16.

A Cape Town based helicopter is occasionally used if conditions are severe.

Note: The 12 mile time is recorded and a ship is considered "arrived" when she crosses between North and South Head.

ANCHORAGES: Ships awaiting a berth can be anchored near the jetty, but are subject to port dues from the time they pass the outer channel buoys. They are required to take a Pilot for this. The approaches to Saldanha Bay are not a recommended anchorage, and should a vessel be required to wait off the port, Masters are advised to remain underway. St. Helena Bay, 40 miles North of the port, is the nearest good anchorage, although it is exposed to Northerly winds in Winter. Permission must be obtained, through the Agent, from the authorities for a vessel to anchor there.

RESTRICTIONS: *Port Working Hours for Shipping Movements:* Iron ore ships, tankers and concentrate ships are handled at any time day or night with the following exceptions:

1. All loaded tankers and vessels berthing at the ore/oil jetty with a draft of more than 14.0 m. are docked during daylight only.
2. Concentrate vessels with a draft of more than 6.0 m., which must use the Turning Basin to turn, will be handled in daylight only.
3. Ore ships which load to 21.5 m. draft must, when sailing, have at least 1.0 m. on the tide gauge when passing down the channel.
4. Concentrate ships which load to more than 10.5 m. draft must have the equivalent of the excess over 10.5 m. on the tide gauge when sailing.
5. Incoming tankers with a draft of over 19.5 m. must have the equivalent of the excess over 19.5 m. on the tide gauge when turning in the Turning Basin. If the tide is ebbing, the Pilot will decide whether there is sufficient time to complete the operation safely.

Minimum Draft Requirements: Vessels arriving at the Port of Saldanha must pump adequate ballast while still in open water (the minimum depth of the water in the waiting area is 13.7 m. below Chart Datum). The Master of the vessel is responsible for presenting the ship for loading with the proper trim and draft, keeping in mind the loading rate and loader clearance. A clearance safety factor of 2.2 m. is required. Minimum draft requirements will be stipulated by the Port Captain and will be dependent upon existing weather conditions. The following table gives an indication of such minimum draft requirements:

Vessel's length overall	*Forward draft*	*Aft draft*
183 m. (600 ft.)	6.0 m. (20 ft.)	7.5 m. (24 ft.)
213 m. (700 ft.)	7.5 m. (25 ft.)	8.5 m. (28 ft.)
244 m. (800 ft.)	8.0 m. (26 ft.)	9.0 m. (30 ft.)
274 m. (900 ft.)	8.2 m. (27 ft.)	10.0 m. (32 ft.)
over 274 m. (over 900 ft.)	8.5 m. (28 ft.)	10.5 m. (34 ft.)

Tide: 1.50 m. between MLWS and MHWS. All navigation and other charts refer to Chart Datum which is MLWS minus 0.26 m.

Turning Basin: Between the navigation channel and the end of the jetty is situated the main turning basin of 580 m. in diameter and 23.2 m. depth (LWOST). The approach to this basin is marked by beacons on the breakwater and the Eastern and Western extremities are marked by a red buoy and a green buoy.

Vessels with a draft exceeding 14 m. will be handled in the turning basin during daylight hours only.

Weather conditions may prevent entry:

1. Fog, mist, and continuous rain which affects visibility, and heavy swell or sea conditions which affect range action at the berth, manoeuvrability in the turning basin, or tugs towing hawsers within the harbour, will prevent entry.
2. Where poor weather conditions, or a weather forecast, allows the Port Captain to consider it inadvisable for a vessel to enter, he may instruct that the vessel shall not make a closer approach than 12 miles, or such other distance, to the port limits or coastline.

Weather conditions or range action which may cause a vessel to proceed to sea:

1. The Port Captain, or his deputy, may instruct a vessel to stop loading at any time.
2. If, in the opinion of the Port Captain, or his deputy, the movement of the vessel alongside the jetty or berth is excessive he may direct loading operations to cease.
3. The Port Captain, or his deputy, may at any time require a vessel to be removed from her berth and go to an anchorage, or to a safe distance at sea.

MAX. SIZE: *Draft:* At the Ore/Oil Jetty: For ships entering 20.5 m., and for ships departing 21.5 m.
At the Concentrates Quay: 11.5 m.
Size: Ore Berths: No restriction at present.
Tanker Berth: Maximum displacement of 300,000 tons permitted.
Concentrates Quay: Maximum length permitted is 200 m.
Note: Exceptions are permitted by the Port Authority according to the merits of the case.

HEALTH: Pratique should be requested 48 hours before arrival. Message to be addressed to "Porthealth Saldanha", and sent through Cape Town Radio. The message should include the following:

1. Name and nationality of vessel.
2. Port of departure.
3. Destination.
4. Health conditions on board.
5. Number of crew and passengers.
6. Type of cargo or in ballast.
7. ETA

Vessels arriving at the Port of Saldanha in quarantine will be inspected by Health Officer at anchorage or on arrival at the berth. Should the Health Officer board the vessel at anchorage, a proper accommodation ladder must be provided. All expenses shall be for vessel's account.

Masters are requested to have Maritime Health Declaration (one copy) at hand and ready for inspection, also vessel's last Derat or Exemption Certificate. Any person who cannot produce a Yellow Fever Certificate, if called for, shall be vaccinated before being allowed ashore.

All persons requiring medical attention should be available upon vessel's arrival. Agents will provide form of application to be given to doctor for persons requiring medical attention.

No contact with shore is allowed until Free Pratique is granted.

RADIO: *Notice of Arrival:* Notice must be given at least 72 hours before arrival and the Port Captain kept informed of any change to the ETA. The message must include the following information:

1. Arrival and departure draft.
2. Gross tonnage, deadweight and length.
3. Type of vessel.
4. Nature of cargo to be landed/shipped.
5. If a tanker or OBO, whether gas free or inerted and whether there are slops on board.
6. Any other special requirements.

This message should be sent through the vessel's local Agent to Saldanha Port Control (Telex: 522225 or Fax: (02281) 357427). When within VHF range, Masters should call Saldanha Port Control direct on Channel 16 to confirm ETA.

VHF: Saldanha Port Control is equipped for MF, HF and VHF services. Transmissions and reception on Channels 6, 8, 10, 11, 12, 13, 14, 16, 26, 27, 67, 68, 69, 73 and 74.

R/T transmissions on 2182, 1700, 2049, 2716 and 3164 kHz.

Pre-tuned reception: 2182, 1700, 1765, 2002, 2009, 2016, 2023, 2049, 2056, 2716 and 3164 kHz.

Vessels must contact Port Control directly on Channel 16 as soon as possible and be prepared to change to Channel 10 or 12 thereafter.

Channels 9, 11, 13 and 14 should be avoided unless instructed to use them by Port Control or the Pilot.

Berthing Instructions: Vessels are to request instructions from Saldanha Port Control 6 hours before arrival.

The Port Captain is organised to receive VHF, telex and telephone messages on 24 hour basis. Radio traffic by vessels at anchor is permissible in the Port of Saldanha, provided this is not done on the selected Saldanha Bay Harbour VHF Channels (9, 10, 11, 13, 14, 67, 68, 69, 73 and 74) and be in accordance with International Regulations.

Tugs: The tugs operate with VHF Channels 1 – 28 and 60 – 88, and radio telephone.

RADAR: The Port Control is equipped with Radar which can have the approach channels and anchorages marked on the screen.

Port Control Building: The Port Control, operated by Portnet is located on the hill, Hoedjiespunt. This office houses the Port Communications equipment and surveillance radar and is located in position: Lat: 33° 01.70′ S., and Long: 17° 57.77′ E. It is manned on a 24 hour basis by signalmen under the control of the Port Captain.

A radio direction finding system is installed to facilitate the location of vessels calling Port Control. This system is designed to monitor calling frequencies as follows:

1.6 to 4.6 MHz in the marine bands.
0.52 to 1.6 MHz in the broadcast bands.
150 to 400 kHz in the beacon bands.
And all VHF marine calling Channels.

TUGS: Tug service is compulsory at the Port of Saldanha.

Tugs available are:

1. Tug "Marcus" 3,960 b.h.p. diesel, Voith Schneider.
2. Tug "Jutten" 3,960 b.h.p. diesel, Voith Schneider.
3. Tug "Meeuw" 3,960 b.h.p. diesel, Voith Schneider.

The Master, on advice of the Pilot, must decide what tug assistance is required and requests for such tug assistance to be made to the Port Captain 2 hours before arrival.

4 tugs may be required when deep drafted vessels are to be handled. Whenever the Port Captain, or his deputy, requires a fourth tug, this may be available from Cape Town. All expenses and costs to be borne by the vessel involved.

Vessel's Tug Requirements: Conditions at Saldanha can vary at short notice and cannot be predicted accurately prior to a vessel's arrival. Ship Masters must be prepared for high winds of up to 100 km./hr., and heavy swells which can produce swell conditions in the approach channel of up to 5 m.

The following guidelines may be used for programming tug services:

2 tugs: Vessels of less than 14 m. draft.
3 tugs: Vessels more than 14 m. draft but less than 18 m. draft.
4 tugs: Vessels of more than 18 m. draft.

All vessels are turned and berthed "heading out" on arrival. This is to ensure that when a vessel has to leave there will be no difficulty in unberthing and proceeding to sea. Normally only 2 tugs are required to undock vessels and, sometimes, only 1 tug is needed.

Should weather conditions become unduly bad, or swell conditions on the berth cause heavy ranging action, it may be necessary for vessels to either proceed to sea or to an anchorage. Thereafter, when conditions moderate, the vessel will be re-berthed and complete loading.

BERTHING: Ore/Oil Jetty:

The ore loading and oil jetty is of the finger type and consists of 25 caissons in line, 17 of which support) a re-inforced concrete superstructure for the ore loading jetty, 4 are for the oil jetty and 4 serve as mooring caissons. The superstructure serves as a roadway and access way for the shiploaders and ancillary services.

All caissons except the mooring caissons are fitted with floating Yokohama type pneumatic rubber fenders of 3.3 m. diameter, 6.5 m. or 10.6 m. long. These fenders are positioned on both sides of the caissons of the ore loading jetty spaced 39.52 m. apart and on both sides of the oil jetty spaced from 45.43 m. to 46.32 m. apart.

Vessels are moored by means of single and double quick releasing mooring hooks fitted with capstans or fairleads. These hooks have capacities of 100 tons and 200 tons respectively.

The total length of the jetty is 991.65 m. and the total mooring length available is approximately 500 m. for iron ore loading vessels and 450 m. for oil tankers at depths of 23.00 m. below Chart Datum. The depth of the navigation channel is 23.20 m. below Chart Datum seaward of the jetty and the exit of the navigation channel is 23.70 m. below Chart Datum. A turning circle with a diameter of 580 m. and a depth of 23.20 m. below Chart Datum is provided in the navigation channel seaward of the jetty.

Departure from Berth: Vessels which complete loading iron ore during the period 0600 hrs. to 2200 hrs. must sail immediately the draft survey and documentation is completed.

Vessels which complete loading and are ready to sail after 2200 hrs. may, without incurring any extra charges, remain at the jetty and sail at 0600 hrs. the next morning. This provision is optional. If a Master wishes to sail immediately cargo work is completed, he may do so.

General Cargo Quay: This quay is 250 m. in length with a least depth of 12 m. alongside (LWOST). A fixed green light marks each end of the quay and a buoyed channel leads to the quay, with a least depth of 12.5 m., from the vicinity of the Western side of the ore berths. Immediately adjacent to the quay is a turning basin (not to be confused with the main turning basin at the end of the ore jetty), with a radius of 142.5 m. (285 m. diameter), which is marked by 2 red can buoys on its Western side and with a least depth of 12 m. (LWOST). The quay was originally designed for the export of lead, zinc and copper concentrates which are stored in a long shed, conspicuous on the edge of the bay and due West of the ore tippler building at the root of the causeway. Storage for 30,000 tons of concentrates are leased to Black Mountain Mineral Corporation. The concentrates are loaded into vessels by 2×15 ton cranes using specially made skips, each capable of taking 12 tons of concentrate, and transported to the quay on trailers drawn by tractors.

North Western Side of Bay:

New Small Craft Harbour: Below the Port Control Building at Hoedjies Point, and due North of it, is situated the new small craft harbour. West of this harbour and lying in a W.N.W.'ly direction is a fishing vessel quay extending for some 500 m. and ending at the Government Jetty.

Government Jetty: The Government Jetty is located on the S.W. side of the Harbour in an area known as Smitswinkelbaai. The jetty is for use by the local fishing industry and coasters. The dredged depth is 6.7 m. below Chart Datum and the length of the jetty is 100 m. plus 160 m. mooring dolphins. Small vessels can moor on both sides of the jetty.

MOORING: *Mooring Arrangements:* All vessels shall be moored at the ore loading/oil jetty with a minimum of 16 ship's lines, that is to say 4 head lines, 2 breast lines, and 2 back springs forward, and 4 stern lines, 2 breast lines, and 2 springs aft.

All head and stern lines should be of suitable man-made fibre rope.

All springs must have suitable strops of at least 15 m. length.

All breast lines should be of suitable man-made fibre rope throughout but if this cannot be provided, similar rope strops 15 m. in length must be fitted.

All lines to be as strong as possible, of a non-chafe type and preferably not less than 75 mm. in diameter.

Wires generally are not suitable, unless fitted with strops.

Shore ropes are available to supplement ship's lines, for vessel's account. Application to be made to Port Captain, Pilot, or Berthing Master. Ropes to be handled by vessel's crew.

LOADING: *Iron Ore:* The ore jetty has 2 shiploaders fed by a single conveyor belt running from the dump at the base of the causeway. Only one loader can work at a time. The average rate is about 6,000 t.p.h. The minimum safe clearance required under the loader chute differs on either side. On the Eastern side, 24.5 m. is needed, and on the Western side 25.8 m. These heights are from Chart Datum and include a 2.2 m. safety factor.

Lead, Zinc or Copper Concentrates: These are loaded at the General Concentrates Quay by 2×15 ton cranes. The cargo is stored under cover at the base of the causeway and brought to the ship in 12 ton skips towed by tractors. The rate is about 250 t.p.h.

BALLAST: No dumping of dirty ballast or any waste or oil from any vessel is allowed while vessel is within harbour limits or within the South African waters. (Refer to Regulation 39 of the Portnet Regulations for the Harbours of the Republic of South Africa).

Ballast pumped from vessels whilst deballasting shall be continuously checked and controlled by the Port Captain and ISCOR during loading. Vessels failing to comply with the Port Captain's requirements shall be requested to stop deballasting operations and may be instructed to leave the Port of Saldanha.

All vessels must secure bilge systems while in the Port of Saldanha, and complete the Pollution Control Officer's check list soon after arrival.

All vessels must ensure that ballast tanks and piping systems are free of oil contamination prior to arrival. No slop handling facilities are available and no slop or dirty or contaminated ballast can be handled.

STEVEDORES: *Working Hours:*

Ore Berths: 24 hours a day, 7 days a week, all year round, weather permitting.

General Cargo Quay: Monday to Friday, other than public holidays, 0700 to 1630 hrs. (a second shift will be worked from 1900 to 0430 hrs., but only by special agreement).

Black Mountain Concentrates: 24 hours a day from 0700 hrs. Monday to 0700 hrs. Saturday. On request from ship overtime can be worked Saturday 0700 – 1900 hrs., and Sunday can be worked 0700 – 1500 hrs. All cleaning operations to be completed by stopping time.

MEDICAL: *Hospitals:* There is a fully equipped hospital in Vredenberg, 13 km. from Saldanha. Serious medical cases, however, will normally be referred to one of the hospitals in Cape Town.

Doctors: There are several doctors available in Saldanha and nearby Vredenberg. To expedite appointments, however, and to arrange for attendance on board, Agents should be consulted.

Dentist: There are several dentists available in the area, and in order to expedite appointments, Agents should be consulted.

TANKERS: The tanker berth is equipped with 3 Chicksan hydraulic arms. Special spooling pieces, supplied by the Terminal, are bolted to the ship's manifold to enable the arms to be attached. The maximum manifold height allowed is 19 m. The arms have very limited ranging capacity and are fitted with audible alarms to warn of their limits. The storage tanks are about 8 km. from the berth. A discharge rate of 10,000 t.p.h. can be attained depending on the back pressure. Also see "Berthing".

FRESH WATER: Fresh water can be supplied at the approximate rate of 35 t.p.h. Hose is available on the jetty but vessel's crew are required for connecting and disconnecting. Expenses for vessel's account.

FUEL: Heavy oil is not available. Diesel can be supplied by road tankers or drums. Blended fuel is available for small vessels at the Fishing Harbour.

CONSULS: There are no Consulates established in Saldanha, but the following countries are represented at Cape Town:

Argentina
Australia
Austria
Belgium
Bolivia
Brazil
Canada
Chile
Denmark
Finland
France
Germany
Greece
Israel
Italy
Japan
Monaco
Netherlands
Norway
Panama
Peru
Portugal
Spain
Sweden
Switzerland
Taiwan
United Kingdom
U.S.A.
Uruguay

REPAIRS: A slipway (under control of Cape Provincial Administration) for the use of the fishing industry, is situated N.W. of the Government jetty with a jetty for vessels using the slipway. The maximum dimensions of vessels using the slipway are 1,200 tons, 70 m. in length, 11 m. in beam and 5 m. in draft. A crane on the jetty can handle loads of up to 10 tons.

Several large ship repair companies operate from Cape Town:

Dorbyl Marine Pty. Ltd. Tel: (021) 475170. Fax: (021) 476038.

Globe Engineering Works Pty. Ltd. Tel: (021) 4484640. Fax: (021) 4484652.

CERTIFICATES: See "Documents".

SHIP SUPPLY SERVICE: As the Port of Saldanha is situated only 60 nautical miles North of Cape Town the "Off Shore Services" based there are used in the normal course of events.

The harbour tugs or launches could be utilised from Saldanha in the case of medical emergency in the close proximity to Saldanha Bay.

CUSTOMS ALLOWANCES: Master: 400 cigarettes, 1 litre spirits and 6 litres or 1 case of beer. Chief Officer: 200 cigarettes, 1 litre spirits, 6 litres beer. Other Officers: 200 cigarettes, 1 litre spirits, 3 litres beer. Crew: 200 cigarettes only.

All books, films, cards, calendars and arms and ammunition to be sealed in the bond.

See "Cape Town".

AIRPORT: International Airport near Cape Town, about 2 hours by road. Military airport locally but special landing rights have to be applied for.

HOLIDAYS: The following are recognised Public Holidays in the Republic of South Africa:
New Year's Day, January 1st; Founder Day, April 6th; Good Friday; Family Day; Ascension Day; Workers Day, May 1st; Republic Day, May 31st; Kruger Day, October 10th; Day of the Vow, December 16th; Christmas Day, December 25th; Day of Goodwill, December 26th.

EMERGENCY CO-ORDINATION CENTRE: Saldanha Bay is a sub-centre for the main South African Rescue Control Centre at Silvermine, Cape Town. It is responsible for the section of coast between Dassen Island and the Orange River mouth.

BANKS: First National Bank, P.O.Box 31, Saldanha 7395. Tel: (02281) 42251. Fax: (02281) 43096.

TELEPHONES: A telephone is compulsory for tankers and is available to any other ship at the Master's request.

Overseas communications can be made through Cape Town Radio, on VHF Channels 16, 26 and 27, when at anchor.

SHORE LEAVE: Allowed.

GARBAGE DISPOSAL: The Port Authority can provide a truck for the disposal of refuse. The ship's crew are responsible for loading the rubbish, which must be in plastic bags.

WASTE OIL DISPOSAL: No waste oil disposal. Minimal amounts in 45 gallon drums accepted as part of garbage removal. Arranged through Agents.

SEAMAN'S CLUBS: The Biblia International Mission have a recreation room on the jetty with an international telephone. Tel: (02281) 32350.

The Anglican Mission to Seamen is situated in the town itself and operates a bus service to the jetty. Tel: (02281) 41750. International telephone service available, and sports can be arranged.

CURRENCY: South African Rand (R).

DELAYS: Congestion is infrequent. Most delays are caused by heavy swell which makes it necessary to remove vessels from the jetty. These conditions are most common in Winter, and in a typical year, the port will be so affected as to be closed for 2 or 3 days. In general, some movement can be expected on the berth and ships should be well secured. A buoy in the channel monitors the swell height continually. The swell is associated with depressions passing the Cape and is heralded by a strong N.W.'ly wind which later backs round to the South.

NOTICES: Letter to Ship's Agents from Port Captain.

Notification of Expected Arrival, Departure and Shifting of Vessels: In order to facilitate more efficient Marine services in the Port of Saldanha, in the future, Agents and Fishing Companies using these facilities are requested to please conform with the following requirements.

(a) Harbour Regulation No. 2. Notification of the Expected Arrival of Ships. See attached No. I.

(b) Harbour Regulation No. 18. Notice to leave a Harbour. See attached No. II.

The basic intention of these notices is to give sufficient warning of an intended shipping movement to my office so that work and staff may be schedule to conform with general requirements. It should be noted that a minimum of 3 hours notice should be given, with regard to (b) while moves required after 1700 hrs. should be advertised before that time.

In order to simplify the required notifications you are requested to please make use of our telex facilities as this is far more efficient than either telephone or letters. In this respect I attach No. III a telex format for a Docking Notice, and No. IV, a telex format for a Sailing/Shifting Notice.

It can be expected that an advertised Sailing/Shifting Time may be subject to alteration and in this respect telephone advice will be sufficient for two alterations but a further telex is required for a third alteration as well as for every third alteration thereafter.

Any alteration of Sailing/Shifting Time given within 30 minutes of advertised time will not be accepted and a charge will be raised against the vessel accordingly.

Please conform with these requirements.
Signed:
Port Captain.

No. I – Notification of Expected Arrival of Ships:
The Owner or Agent of a ship that intends to call at a harbour shall as early as possible, give notice in writing to the Port Captain and the Port Goods Superintendent at such harbour of the expected date and time of arrival of the ship, and shall give particulars in such notice as to the nature and quantity of cargo to be loaded or discharged, bunker or other requirements and other matters of importance.

No. II – Notice to Leave a Harbour:
The Master shall give at least 3 hours notice in the prescribed form to the Port Captain at his office of the time his ship will be ready to leave the harbour. If he intends that his ship should leave outside ordinary working hours, such notice must be handed in at the office of the Port Captain before 1700 hrs. on the day of departure, or before 1700 hrs. on the preceding day, as the case may be.

No. III – Notification of Arrival:
Telex No. (Port Control) 5 22225. Fax: (02281) 357427.
Telex No. (Agent, Fishing Co., etc.).
To: The Port Captain, Saldanha.
From: (Name of Agency, Fishing Co., etc.).
Time: Date: Pro. No.:
Name of Vessel: Type of Vessel:
ETA: (Date and Time).
Gross Tonnage: d.w.t.: Length:
Draft: Fwd.: Aft.:
Requirements: (Nature of service required. If FW required. Cargo to be landed/shipped. Is vessel gas free, inerted or clean and any other information which may be applicable).
Name of Person requesting service.
Telex No.: 5 22225
Telex No.:

No. IV – Notification of Sailing or Shifting:
Telex No. (Port Control) 5 22225. Fax: (02281) 357427.
Telex No. (Agent, Fishing Co., etc.).
To: The Port Captain, Saldanha.
From: (Name of Agency, Fishing Co., etc.).
Time: Date: Pro. No.
Name of Vessel:
ETD: Draft: Fwd. Aft.
Requirements:
Name of Person requiring service.
Telex No.: (Port Control) 5 22225.
Telex No.: (Agent, Fishing Co., etc.).

GENERAL: *Fresh Provisions and Stores:* This service is provided by ship chandlers who operate from Cape Town. If the quantity to be loaded is large, a lighter will be used to bring them to the ship.

Chandling International Limited, 53 Carisle Street, Paardeneiland, 7405 Cape Town. Tel: (021) 5112336.

Hanill Ship Chandlers, P.O.Box 303, Paardeneiland, 7420 Cape Town. Tel: (021) 5110347.

Removal of Rubbish: Arrangements are available for the removal of rubbish and can be made through the Agents.

Weather: The climate is temperate. Average high temperatures year round are 20°C (68°F) and average low temperatures are in the region of 11°C (52°F). Sea water temperatures average 16°C. Prevailing winds in Summer are S.S.E'ly and in Winter N.W'ly. Rainfall figures are approximately 300 mm. per annum. Saldanha Bay is a Winter rainfall area. Fog occurs generally in the March to August period. Currents – there are no sea or thermal currents in the harbour area. Tidal currents generally will not exceed 1 knot.

Electricity: Can be made available at the ore jetty and the general cargo quay.

Compressed Air: Available ex-quay on application to Portnet via the Agents.

Cranes: A mobile crane can be hired via the Agents.

Sporting Facilities: Can be arranged for all sports through the Missions to Seamen, Saldanha.

Fishing Vessels: Saldanha is an important fishing harbour and all types of fishing vessels, from ocean going trawlers to small motorised dinghies, can be encountered in the approaches and entrance. At certain times of the year, with the onset of different fishing seasons, congestion in the area due to fishing vessels will become noticeable.

Engines: Vessels are requested to have main engine(s) ready and watch maintained when alongside. Permission to deviate from this must be obtained from Port Captain in writing.

Gas Free Certificate: Tankers or OBO's which have carried petroleum products on a previous voyage, and have slops on board, must have a Gas Free Certificate issued by a qualified chemist before being allowed to dock. The ship's Agent will arrange for a chemist to board with the Pilot for this purpose. The ballast water will be inspected and must not have an oil content of more than 2 parts per million. Inert gas systems must be working satisfactorily.

AUTHORITY: Portnet, P.O.Box 32696, Braamfontein 2017, Johannesburg, South Africa. *Tel:* (011) 7738300. *Telex:* 424205. *FAX:* (011) 7738304. *Contact:* The Chief Executive.

Saldanha Bay: Private Bag XI, Saldanha 7395. *Tel:* (02281) 357454. *Telex:* 5-22225 SA. *FAX:* (02281) 357427. *Cables:* Port Captain, Saldanha. *Contact:* John Woodend, Port Captain.

AGENT: King & Sons (Pty.) Ltd., P.O.Box 102, Saldanha 7395. Tel: (02281) 41259. Telex: 527417. Cables: Baronet, Saldanha.

Spain

GENERAL:

TANKERS: The following free translation was received from a major oil company in 1991. Issued by Ministry of Transport, Tourism and Communications, Madrid.

Decree of 17th April 1991, which regulates the anchorage of tankers in the jurisdictional waters and/or exclusive Spanish Economic Zone.

The diversity of tankers of different nationalities, using the S.W. Spanish zone for anchorage purposes whilst awaiting definite orders in respect of discharge ports, requires the adoption of special measures to safeguard the maritime traffic, the natural and environmental resources of the corresponding maritime areas, or of those zones which in the future might be subject to similar operations.

Therefore, and in fulfilment of the dispositions of the International Convention regarding territorial waters and adjacent zones of 1958, and of the International Convention of Intervention of 1969, as well as the ruling National Legislation on Territorial Waters, constituted by Law 10/77 dated 4th January, Law 15/78 dated 20th February, on the Exclusive Economic Zone, and Law 22/88 dated 28th July, on Coasts, following the proposal by the General Directorate of the Merchant Marine, I Decree:

First: The following regulations will be applied to those tankers not having a destination for full or part cargo, for a port or terminal in Spain, and wishing to use the jurisdictional waters or the exclusive Spanish Economic Zone for anchoring, whilst awaiting orders, instructions, or due to any other circumstances other than the innocent passage as defined in Article 14 of the Convention of Geneva of 1958.

Second: The tanker, which in the above mentioned circumstances proposes to anchor, must previously apply for authorisation from the Spanish Maritime Administration, through the corresponding Harbour Office, or directly to the General Directorate of the Merchant Marine, including in the application, the following information:
(a) ETA at anchoring area at intervals of 72, 48, 24, 12 and 6 hours before arrival.
(b) Port of Origin and Destination.
(c) Type and quantity of cargo.
(d) Name, address, telephone, telex and fax numbers of the Owners, Charterers, P & I Club and representatives thereof in Spain.
(e) Number of crew, nationalities, professional qualifications of the Master, Officers and Engineers; and indicating the issuing Authority/Body of said qualifications/titles.
(f) Estimated stay at anchorage area.

Third: In the light of the information received, as previously referred to, the Spanish Maritime Authorities will confirm or deny permission. If permission is granted, the tanker must fully comply with the following conditions:
(a) Anchor in the geographic position indicated by the Marine Authorities.
(b) Upon arrival at the anchorage point, the tanker will be subjected to a safety inspection, the result of which may influence the anchoring authorisation.

Fourth: For the tanker to lie at anchorage, the following obligations must be complied with:
(a) Contract a tug with 6,000 h.p. minimum, fitted with means to combat contamination, which is to remain on "Stand-by" for the duration of the vessel's stay. The Master of the tanker to facilitate any information requested by the Master of the tug.
(b) To maintain at all times the propulsion equipment ready for immediate functioning, the fire extinguishing system lines pressurised, display regulation anchoring signals, and all deck and bridge lights illuminated during the hours of darkness.
(c) To check the geographical position every 15 minutes and record it in the Log Book every hour. The Master to communicate by radio every 4 hours with the Harbour Office, advising the exact anchoring position and of any incident which might affect the security of the vessel and/or of the crew, especially when the anchoring position has been changed due to external causes.
(d) To maintain the corresponding bridge and engine room watches, and verify starting system in both locations. At least one qualified officer and 2 lookouts must be present on the bridge at all times.
(e) Whilst at anchorage, no cargo transfers allowed, no tank cleaning or repairs to the engines, or on deck, without the corresponding authorisation.

Fifth: Any change or transfer of crew is strictly prohibited whilst the tanker is at anchor, unless there is a justified cause, and a previous authorisation from the Spanish Marine Authorities has been obtained.

Sixth: A vessel breaking any of the requisites and obligations stated in this Decree, cannot remain at anchor, and must depart immediately for the open sea, independently of any sanction which might be imposed in accordance with the legislation in force.

Transitory Disposition: Vessels (when this Decree becomes enforceable), which find themselves in the circumstances mentioned in the first paragraph, must apply immediately for the required authorisation, and comply with all the requirements of this Decree.

Final Disposition: This Decree will enter in force from the date on which it is published in the Official State Bulletin.

Madrid, 17th April 1991.
Minister of Public Works and Transports.

AGUILAS and HORNILLO: 37.24 N. 01.35 W. (See Plan)

DOCUMENTS: See "Almeria".
PILOTAGE: Hornillo port has no Pilot. The Pilot of Port of Aguilas which is less than a mile from Hornillo, does pilotage services of both. To enter both ports of Hornillo and Aguilas, anchor mile or a mile and half distance from entrance of Aguilas. Wait for Pilot with engine stopped. To call Pilot give three long blasts several times. Pilot's launch is small motor boat painted white, with letter "P" painted on both sides of boat. During night it carries white light on top of mast, and 8 ft. lower a red light, besides the usual lights.
RESTRICTIONS: It is not possible to enter Hornillo port during dark. Wait till dawn outside Aguilas.
MAX. SIZE: Length up to 160 m., draft about 29 ft.
HEALTH: See "Almeria".
TUGS: None in port and not necessary for either port. If necessary, tugs are available from nearby Port of Garrucha.
BERTHING: Aguilas port has a commercial quay with a berth area about 300 m. and depths of between 8 m. – 12 m. Hornillo port has a pier to handle minerals with berth area of 90 m. to 100 m. and depths between 6 m. – 10 m.
BULK HANDLING: 2 conveyor belts. 1×400 t.p.h. capacity and 1×100 t.p.h capacity for grain and other bulk cargoes.
STEVEDORES: Team of stevedores who belong to "Port Workers Trade Unions" (Sindicato de Obreros Portuarios).
MEDICAL: Master can send cables to consignee requiring this kind of service. There are a number of doctors and a hospital.
FRESH WATER: Available by pipeline at berths.
FUEL: There are no supplies of fuel in either port.
REPAIRS: No facilities.
GANGWAY/DECK WATCHMEN: Not necessary, usually this is done by crew.
OPENING/CLOSING HATCHES: Usually this is done by crew.
REPATRIATION: Facilities for effecting crew changes exist. Repatriation can be done by train to Madrid and by plane from there.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS: See "Almeria".
POLICE/AMBULANCE/FIRE: Ambulance and fire services can be requested from Port Authority. If the police services are required call to "Caseta de Vigilancia" of the Civil Guard in either port.
SHORE LEAVE: Crew members are allowed ashore.
GENERAL: Hornillo port is used only for loading and discharge of minerals, and for this purpose a pier is provided with a railway. The nearest port of Aguilas, less than a mile distant on the West, is the commercial port, with a quay for loading/discharging and a crane of 10 tons capacity.
AUTHORITY: Ayudante de Marina, Capitan del Puerto, Ayudantia de Marina, Aguilas, Murcia, Spain. *Tel:* 968 41 10 74.

ALCANAR: 40.34 N. 00.33 E. (See Plan)

GENERAL: Alcanar is a port owned and used by Cementos del Mar S.A., which has a cement factory very close to Alcanar port. Products normally loaded are cement and cement clinker. On the other hand slag, pyrites, coal, pozzolana (volcanic sand) and gypsum are products generally unloaded for factory consumption.

Sant Carles de la Rapita is 4 miles away N.E. from Alcanar port.

DOCUMENTS:
3 copies Crew List.
3 copies Passenger List or negative.
3 copies Cargo Manifest or Master/Ballast Declaration.
1 copy Stores List.
1 copy Crew Manifest.

PILOTAGE: Pilotage is compulsory and service permanent. Pilot is informed by Agent of vessel's ETA, given 24 hours in advance. When vessels approach the Alcanar Fairway Buoy, Pilot will board. The pilot boat is white with a black "P" painted on the side. Contact Pilot Station on VHF Channel 14. Pilot Tel: (977) 74.05.01/74.08.04.
ENTRY/DEPARTURE CHANNEL: Channel is about 3 miles long and 250 ft. wide, maximum draft is 38 ft., straight and lies 328° from Fairway Buoy. There are 10 pair of buoys marking both channel sides.
ANCHORAGE: 0.5 miles S.E. from Fairway Buoy is the advisable anchorage.
Caution: North limit of a fishing seabed is located about 1.25 miles and bearing 215° from Fairway Buoy. Special care should be taken when approaching Fairway Buoy in order to keep clear of the seabed.
RESTRICTIONS: Draft only. Vessels carrying dangerous cargo should get permission to berth prior to arrival.
HEALTH: Pratique is obtained immediately after berthing. In case of suspected disease of fever on board, the Master must radio Agent in order to inform Health Office in time.
RADIO: Radio Costera of Barcelona and Tarragona.
VHF: See "Pilotage".
TUGS: Available to assist berthing. Tugs normally join vessel at breakwater entrance. The following tugs are available: 1×1,750 h.p. 1×1,200 h.p. and 1×800 h.p.
BERTHING: Maximum depth at berths and in channel is 38 ft. Contact Pilot for draft information.

There are 3 berths as follows: No. 1, 22 ft. depth. No. 2, 38 ft. depth and No. 3, 38 ft. depth.

Conveyor Belt: At all berths, cement is loaded by means of conveyor belt, maximum loading rate is about 350 t.p.h.

CRANES: 2×15 ton cranes at Berth No. 2. 1×6 ton crane at Berth No. 3.
STEVEDORES: 24 hours notice required in order to arrange gangs. Unloading rates depend on type of cargo.
MEDICAL: Any kind of medical service can be arranged if information received in time.
FRESH WATER: Plentiful supply of water by means of hoses from the pier to vessel.
FUEL: Can be supplied by truck, but 24 hours notice required.
CONSULS: See "Tarragona".
REPAIRS: See "Sant Carles de la Rapita".
SURVEYORS: S.G.S., Vista Alegre N. 32-3, 43540 Sant Carles de la Rapita. Tel: (977) 74.22.24/54.22.28. Fax: (977) 54.11.00.
GANGWAY/DECK WATCHMEN: Not compulsory, but advisable at night.
OPENING/CLOSING HATCHES: Normally opened/closed by the crew, otherwise according to Charter Party. Lashing must be carried out by the crew.
CERTIFICATES: SOLAS, Load Lines, I.O.P.P., Derat, Register and Tonnage Certificates.
CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle wine/spirits per person. Any excess must be declared and locked/sealed. Any infringement of the regulations will subject the vessel to the immediate imposition of a heavy fine and confiscation of excess.
AIRPORT: Reus Airport situated 97 km. and 45 minutes by car, regular services to Madrid. Barcelona Airport situated 196 km. and 2 hours by car, worldwide destinations and arrivals.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer (Early April – late September).
HOLIDAYS: September 11th.
POLICE/AMBULANCE/FIRE: Local Police Tel: 73.00.04. Guardia Civil Tel: 74.00.58. Ambulance/Red Cross Tel: 73.70.03. Firemen Tel: 70.00.80.
AUTHORITY: Capitania Maritima, 43540 Sant Carles de la Rapita, Tarragona, Spain. *Tel:* (977) 74.00.59. *Cables:* Capitania Maritima, Sant Carles de la Rapita.

Comissio de Ports de Cataluya, Zona Portuaria II-III, Ronda General Mitre No. 117, 08022 Barcelona, Spain. *Tel:* (93) 211.31.16. *FAX:* (93) 418.60.12. Branch office at Sant Carles de la Rapita, Tel: (977) 74.04.56.

ALCUDIA: 39.50 N. 03.08 E. (See Plan)

DOCUMENTS:
3 copies Crew List.
2 copies Cargo Manifest.
2 copies Crew Personal Effects Manifest.
PILOTAGE: Compulsory. Call Pilot one hour before arrival on VHF Channel 16 and hoist "G" flag when in sight of the port.
Pilot Station Tel: (971) 89 01 79.
ANCHORAGE: With the end of the breakwater bearing 000° at a distance of 7 cables and a depth of 12.0 m.
RESTRICTIONS: Tankers and L.P.G. Carriers berth during daylight only.
Vessels with a list are not permitted to berth.
Keel clearance varies according to berth.
MAX. SIZE: Vessels with maximum draft berth at the breakwater on heading 045° and are not allowed to turn on arrival or departure.
RADIO: Palma Radio.
VHF: Pilot station keeps watch on Channels 16 and 14.
TUGS: Not available.
BERTHING:

Quay	*Length* (m.)	*Depth* (m.)	*Remarks*
Breakwater	90.0	5.90	3×15 ton cranes
	157.0	5.50	(16 cu.m. each)
Rivera	150.0	5.50	2×15 ton cranes
	80.0	5.50	20 m. Ro/Ro Ramp
Gas Butano Jetty	80.0	5.50	8 in. and 4 in. shorelines

CRANES: See "Berthing".
BULK HANDLING FACILITIES: Coal, fertilisers and salt discharged at a rate of 500 t.p.h. by shore cranes.

Cement in bulk stored in 2×1,500 cu.m. tanks; loading and discharging connections; 4 in. shore line with length 110 m.

Asphalt receiving tanks of 3×1,900 cu.m. and 1×800 cu.m.; 8 in. shore line of 345 m. length and one connection.
SPECIALISED CARGO HANDLING FACILITIES: Two Ro-Ro platforms 20 m. wide. Facilities for handling containers.
STEVEDORES: Ordered by Agent. Working hours: 0800 hrs. – 1200 hrs. and 1400 hrs. – 1800 hrs.
MEDICAL: Hospital facilities available.
TANKERS: 2×2,500 cu.m. tanks for fuel oil; distance to tanks 450 m.; shore line 8 in.; no slop facilities.
DENSITY: 1026.
FRESH WATER: Available by gravity feed of approximately 7 t.p.h. Cost 70 pesetas per ton.
FUEL: Marine diesel available from 4 points along the quay, loading rate with pump is 12 t.p.h. Also available by truck with 30 ton capacity.
FIRE PRECAUTIONS: Dispersant liquid and floating boom (140 m.) on sight.
CONSULS: Located in Palma, 50 km. from Alcudia Port.
REPAIRS: Small repairs can be undertaken.
DRY DOCKS: Travel lift of 100 tons capacity at the yacht marina.
SURVEYORS: Watson Gray Espanola de Control S.A.
GANGWAY/DECK WATCHMEN: Not required.
HATCHES: Opening and closing by crew.
CUSTOMS ALLOWANCES: Quantity permitted for each crew member to be held out of bond: 200 cigarettes, 2 litres of wine and 0.75 litres of spirits.
REPATRIATION: Full facilities available.
AIRPORT: Palma Airport.
TIME: 1st October – 31st March GMT plus 1 hour. 1st April – 30th September GMT plus 2 hours.
HOLIDAYS: 1st January, 6th January, 1st May, 15th August, 12th October, 1st November, 8th December and 25th December.
Local Holidays: 29th June and 2nd July.
POLICE/AMBULANCE/FIRE: Local Police/Fire: 54.59.17. Medical: 54.59.68. Red Cross: 54.54.21, or VHF Station Channel 73. Harbour Master: 54.53.01. Customs: 54.71.03.
SERVICES: Magnetic compass adjusting available.
SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Seaman's Book is sufficient.
GARBAGE DISPOSAL: Not available.
WASTE OIL DISPOSAL: Only in tanker trucks. Maximum capacity 20 tons. Require details through agent. Service carried out by Sevmar. Fax: 402499. Tel: 400408, 400561, 400758.
SEAMAN'S CLUBS: No seamans clubs. All facilities available.
CURRENCY: Spanish Peseta (Pta.).
DELAYS: Bunkering undertaken during daylight. Special permission required for bunkering at night.
GENERAL: *Weather Forecasts:*
Fax: (971) 404626.
Time: 1100 hrs. – 1300 hrs. (G.M.T.).
Telex: 688474 (anytime).
Recorded message: (971) 403600 or 403511 (anytime).
Warnings: In Winter, from November to March, winds from N.W. direction up to Force 6/7, make it especially dangerous when berthing and unberthing.

In Summer, from May to September, seaplanes land and take off close to commercial port entrance (taking sea water).

Vessels with dangerous goods are permitted on Alcudia roads. Anchoring point for lightening with this kind of cargo must be applied for from the Port Authorities.

At the end of June to December/January atmospheric pressure could affect the sea water level, thus the maximum drafts allowed may be reduced.
DEVELOPMENTS: Work in progress at the commercial port and the marina.
AUTHORITY: *Contact:* Captain Miguel Suner Mari, Pilot, Urbani "Lago Esperanza" Margallons No. 21, 07408 Puerto Alcudia, Majorca, Spain. Tel: 890179, 890180. Fax: 890179.

ALGECIRAS: 36.08 N. 05.26 W. (See Plan)

DOCUMENTS: *Clearance Inwards of Vessels:*
1 copy Maritime Health Declaration.
5 copies Crew List.
2 copies Cargo Manifests: 1 on entry, 1 on sailing.
2 copies Manifests in Transit: 1 on entry, 1 on sailing.
If Vessel is in transit:
5 copies Transit Passenger List.
2 copies of Arrival Documents.
2 copies Lists of Passengers who have disembarked or embarked.
Tankers:
2 copies Cargo Manifest: entry, sailing or ballast.
PILOTAGE: Vessels entering port must call the Pilot by International Signal Code, sound, light or VHF.

The pilot boat is painted with a black "P" on both sides at its widest part. By day it will fly a blue flag with the letter "P" in white. At night, it will show the International Pilot Lights. The area where the Pilot boards is a circle 0.5 miles radius with its centre 1 mile East of the Western end of the breakwater extremity (red light).
ANCHORAGE: Vessels awaiting the Pilot can anchor to the North of Barranco Lighthouse in water 30 m. depth under indications given by the Pilot by VHF.
RESTRICTIONS: Vessels may enter by day or by night.
MAX. SIZE: Port of Algeciras: No restrictions as to length, max. draft 16.0 m.
Tankers: Gibraltar Refinery: Max. length 315 m., max. draft 60 ft.
Monobuoy: Depth of water 60 m. Designed for vessels up to 500,000 d.w.t. Largest vessel accommodated to date: 423,000 d.w.t. with draft 22.9 m.
HEALTH: Free Pratique is obtained automatically when Authorities board on arrival and Maritime Declaration of Health is completed. In case of suspected disease or fever on board full details should be sent by radio to Sanidad Maritima, Algeciras, before arrival.
RADIO: Tarifa, Mijas, Aranjuez Radio and Cadiz Radio. Vessels bound for the Gibraltar Refinery must announce their arrival on VHF to the Port Captaincy using Channel 16 for calling and Channel 13 for communication.

Agent requires 72, 48 and 24 hours notice of arrival.
TUGS: 8 tugs up to 2,250 h.p., working in accordance with instructions from the Pilot. It is usual for vessels to provide tow-lines.
CRANES: See "Bulk Handling Facilities".
STEVEDORES: Ordered by Vessel's Agent on basis of Master's ETA.
MEDICAL: Doctors and hospital facilities available. International vaccination certificates only required if vessel is proceeding from an infected area.

BERTHING:

Darsena Sur (South Dock):

Name	*Length* (m.)	*Depth* (m.)	*Usage*
Dique Norte	1,125	15 – 32	Bunkers
	590	10	Bunkers
	617	8 – 15	Bunkers
Muelle de la Isla Verde	250	13	General cargo
	250	12	containers and
	248	11	solid bulk cargoes.
	150	9	Ro/Ro
Muelle de la Galera (South)	75	4	Passengers

Muelle del Navio (East)	520	14	General cargo and
	644	16	containers
(South)	300	12	General cargo, containers
	225	10.5	General cargo
(West)	180	10.5	Ro/Ro

BULK HANDLING FACILITIES: *Cement:* Discharged to 2 storage silos at Muelle de la Isla Verde. Rate 200 t.p.h.

Containers: 4×30 ton Paceco (Sealand) gantry cranes at Muelle de la Isla Verde and 4×30.5 ton transtainers.

3×40 ton Paceco cranes and 6×32 ton Paceco transtainers at Maersk Espana Terminal at Muelle del Navio (270 m. length).

2×40 tonne Paceco cranes at Terminals Algeciras at Muelle del Navio (270 m.).

Scrap iron and metal products: Acerinox Quay: Length: 250 m. Depth 9.5 m. 3 jib cranes, capacity 25 tons each.

TANKERS: Refineria Gibraltar (C.E.P.S.A.) – 5 berths for tankers up to 283 m. length, 2 of which can accept draft up to 65 ft. Loading/discharge lines are 12 in., 10 in., 8 in., 6 in. and 4 in. Refineria Gibraltar has 2 slop tanks each of 600 cu.m. capacity which can accept oily residues.

Berth	*Length* (m.)	*Depth* (m.)
South	700	19 – 20
North	380	17 – 19
North	300	17 – 19
North	115	6
South	115	6

There are 20 hydraulic and 6 manually operated loading arms. Max. pressure permitted 150 p.s.i.

Monobuoy: Operated by Compania Espanola de Petroleos S.A. (C.E.P.S.A.).

Location: Lat. 36° 10′ N., Long. 05° 24.8′ W.

Depth: Approx. 60 m.

Anchorage: Pilot will advise anchorage in accordance with weather conditions.

Prohibited Anchorage: Vessels are not to anchor within 0.3 miles of the monobuoy or within 150 m. of the underwater pipeline which runs in a N. 20° E. direction from the buoy to the Terminal onshore.

Pipelines: There are two underwater pipes, one 42 in. for crude oil and one 16 in. for bunkers.

Navigation Aid: Light: Fl. 3 every 8 seconds ("U") Range 5 miles. Height above sea level 6.0 m.

The buoy is also equipped with a radar reflector 7 m. above sea level, "Racon" letter "U" and fog signal manually operated with characteristic 3 blasts every 3 seconds ("U" in Morse code).

The floating hoses display white flashing lights 70 m. apart, 20 flashes every 60 seconds. Range 1 mile. Height above sea level 0.75 m.

Charts: Spanish: No. 3500 and 3503. British: B.A. No. 1448.

Communications:

Telegraphic Address: Spanoil, Algeciras.

Telex Address: 78007 Cepsa E.

Telegraphic Communications: Once the vessel has left the port of loading, Master must send a telegram via Aranjuez Radio, giving the following information:

(a) Name of vessel.
(b) ETA in GMT.
(c) Amount loaded per Bill of Lading.
(d) Specific gravity.
(e) Maximum draft.
(f) Capacity of tanks.
(g) Slops in the cargo.
(h) Whether it has a central bow installation, in which case give dimensions.
Where not, indicate type, characteristics and distance to the stem.

If vessel is to effect loading operations, once it has left its unloading port, Master must send the following telegram:

(a) Name of vessel.
(b) ETA in GMT.
(c) Quantity of cargo required.
(d) Amount of dirty ballast and deballasting time.
(e) Capacity of tanks.
(f) Amounts of slops and kind.
(g) Whether it has a central bow installation, in which case, give dimensions.
Where not, give type, characteristics and distance to the stem.

If the cargo receiving points are of a different type to 16 in. or 12 in. standard ASA 150 lb. this must be communicated both in the case of a vessel coming to load and one which will be discharging.

Within 72 hours of arrival, the Master must send a second telegra including the following information:

(a) Name of vessel and Master.
(b) ETA in GMT.
(c) Amount of fuel required.
(d) Additional requirements.

Within 48 and 24 hours prior to arrival, he must send further telegram confirming his ETA.

Radiotelephone Communications: As soon as the vessel is within VH range, contact must be made with the Pilots or the Port Captaincy o the "Gibraltar" Refinery on Channel 13 to receive instructions with rega to berthing, this station listens out 24 hours a day.

Notice of Readiness: Will be accepted by the Monobuoy Berthin Master, when the vessel is in all respects ready to commenc operations.

Notice of Readiness will be accepted under either of the followin situations:

(a) When the Master receives the Monobuoy Berthing Master or,
(b) When the vessel has anchored in the anchorage area.

Port Closed: The Notice of Readiness will not be accepted when po closed.

Port closure periods are considered to be such when the weathe conditions prevent vessels coming alongside and berthing. The decisio to close the port is made by the Marine Authority.

Berthing sequence: Vessel will berth normally in strict order of arriva and any alteration will be duly communicated and sufficiently in advanc

Services and Facilities:

Pilotage: The Pilotage service is obligatory and the Corporation i available permanently. The waiting area for Pilots is between La 36° 07.5′ and Lat. 36° 08.5′ N. and Long. 5° 24.0′ and Long. 5° 25.0′ W

Mooring: The Monobuoy Berthing Master will board the vessel in th vicinity of the buoy together with a foreman, 2 deckmen and 2 diver and will assist the Pilot and crew respectively in the berthing operation These services are provided free of charge and the personnel remai on board during the whole duration of operations during which food an accommodation of an adequate nature must be provided.

Tugs, launches, mooring equipment: Tugs and/or launches can assi the vessel in the operations of berthing and unberthing under the direc control and supervision of the Pilot and the Monobuoy Berthing Maste There are also launches for transporting crew members ashore.

Consignee: The Compania Espanola de Petroleos, S.A. at i "Gibraltar" Refinery, has a Consignee department. Vessels utilising th service must send their radiograms to the following address:

Compania Espanola de Petroleos, S.A.
"Refineria Gibraltar",
San Roque (Cadiz) – Spain
Telephone: 698060. Fax: 698773. Telex: 78007 Cepsa E
Telegrams: Spanoil (Algeciras).

Arrival Documents: The following documents are required:

6 copies of the Crew List
1 Negative Passenger List
3 copies of Passenger List if any onboard
2 copies of the Cargo Manifest for Algeciras
1 copy of the Cargo Manifest for Cargo in Transit
2 Copies of the vessel's Manifest List, including bunker, oil, tobacc alcohol, medicine, belonging to the vessel.
2 copies of a List of the Crew's and Passengers' Personal Effects.

The maximum quantity of tobacco and alcohol permitted for each cre member and passenger outside the manifest is 200 cigarettes and 1 litr bottle.

Free Pratique: It is not necessary to advise the Health Authorities prio to arrival unless there is any sickness on board.

Free Pratique is granted when the vessel is visited by the Healt Official at the anchorage or when it is berthed at the Monobuoy and th following documents will be required:

1 Health Declaration
1 Crew List
1 Passenger List or
1 Negative Passenger List

The Health Official will inspect the Derat Certificate or Exemptio This Certificate can be drawn up or renewed at Algeciras if required.

Doctor: Medical Service, if required, can be obtained via the Age and will be sent as quickly as possible.

Fuel Bunkers: Fuel Oil is supplied via the Monobuoy.

Apart from the advice by radio to the local Consignee, owners mus contact Campsa-Madrid, advising them of the type and quantity o bunkers required on arrival.

(The suggestion above is based on the fact that in Spain all supplie are effected directly by Campsa through the authorised refineries).

Direct contact with Campsa by the Owner, and the transfer of fund for the supply, required by the local Agent prior to bunkering taking plac

Oils: A majority of international companies have stocks of oil in th country, requirements to be advised via their Agent sufficiently i advance in order to prepare documentation and delivery. This deliver will not be made whilst the vessel is moored at the Monobuoy carryin out loading or unloading operations since it has to be effected by barg or a tanker type tug. Only vessels operating with inert gas are excepte

Water: This is supplied by a 350 ton vessel and must be requeste 48 hours in advance via the local Agent. There is no water line via th Monobuoy.

Victualling and Provisions: All kinds of stores obtainable in Algecira and deck and machinery supplies can also be provided, requiremen are to be communicated to the Agent or Consignee by radio.

All deck and machinery supplies will be supplied by launches or tug prior to berthing or after unberthing at the Monobuoy.

Spares to be supplied from abroad for vessels at Algeciras must b sent to the airport of Malaga, the airport of Seville or the airport at Jere addressed to the Master of the vessel in question and consigned to th local Agent at Algeciras.

Goods sent by TIR should be despatched to Malaga for Customs clearance.

Repairs: Only minor repairs can be carried out by local workshops. In the event of major repairs being required, there is at Cadiz, which is 120 kilometres away (approx.), all types of workshops and equipment. Any kind of repair which might leave the vessel without means of propulsion is absolutely prohibited whilst it is berthed at the Monobuoy.

Classification Societies: Lloyd's Register, Plaza Alta 7. Tel: (956) 662889.

Other Societies have a representative.

Telephone Numbers: Area Code (956)

"Gibraltar" Refinery:

Ambulance	604144

Mooring:

Preparation for Mooring: Vessels must have in position a Pilot ladder and/or hoisting ladder or a gangway which is safe and firmly protected for immediate use and sufficiently long to reach the Monobuoy Berthing Master's launch.

For vessels with a freeboard of 40 ft. or more, the gangway must be extended, lowered and the platform must not be more than 10 ft. from sea level, a Pilot ladder shall also be provided for boarding the platform.

Vessels must provide a lee on the port side for the embarkation or disembarkation of Monobuoy Berthing Masters.

Vessels must have prepared on the forecastle and in the bow section the following:

(a) 2 mooring cables of polypropylene if possible.
(b) 2 veering cables 5 in. circumference, min. length 300 ft.

Vessels must have ready amidships and on the port side the following:

(a) Derrick equipped and ready to lift equipment from the launch.
(b) Mooring shackles.
(c) Wire and equipment for connecting hoses.

Note: If vessels moor with the aid of tugs, the Port Pilot will indicate the number of tugs to be used and the cables required.

Mooring at the Monobuoy: The Monobuoy is equipped with a cable 19 in. in diameter and 180 ft. long (55 m.) and with a breaking strain of 795.6 tons, its ends having collars and special cable protections with corresponding shackles. The shackle which connects it to the Monobuoy has a test strain of 688.8 tons and this is connected to a meter, which indicates at any time the strain to which the whole assembly is subjected. The shackle placed at the other end has a test strain of 510 tons and is connected to a length of chain of two different dimensions, its total length being 40 ft. (12 m.). The first 25 ft. (8 m.) are of 4 in. ending in two lengths of 702 mm. length and 440 mm. wide, and which are connected to the remaining 15 ft. (5 m.) of chain with a dimension of 2.75 in. which ends in two open links 478 mm. long and 293 mm. wide. The end of this length of chain is connected by means of a shackle S.W.L. 40 tons to a plaited cable of polypropylene 11 in. diameter and 250 ft. (76 m.) long, known as the approaching cable. The end of this cable is identified by means of a small 12 in. diameter buoy connected to it by means of a 0.5 in. guy and 5 ft. long. The weight of the length of chain mentioned above is supported by a cylindrical buoy 3,600 kg. in weight.

When the vessel is close to the Monobuoy the crew must pay out the end of the veering cable through the central fairlead or nearest alternative lead available on the port side, whilst at the same time, various flexible cables 16 in. or 10 in. are made fast on board, according to the tonnage, to each bitt and also to the bow, and if there is no central fairlead available, onto the bitts on the port side. Once on board, the chain will be made fast to the cables by means of two 4 in. or 2.5 in. shackles according to the type of cable to be used. Where the vessel has a "Smit Bracket" or similar type of berthing fitment, the chain will be made fast to this. Vessels of less than 150,000 d.w.t. will be connected to the 2.75 in. chain and those exceeding this tonnage will be connected to the 4 in. chain.

Whilst the vessel is berthed at the Monobuoy a tug will remain alongside in the event of it being necessary to remove the vessel from the Monobuoy, in which case she must have available at the stern a very good towing line.

Turbine vessels which may have their propellor turning, must go astern so as not to come close to the buoy and cause damage.

Connection and Disconnection of Hoses:

General: The Monobuoy has two floating hoses 20 in. in diameter for discharge and loading which end in 3×16 in. diameter sections, each for direct connection having an approximate weight of 7 tons. The hoses will be hoisted and connected by the crew of the vessel in collaboration with the foreman and two deckmen from the Terminal. The Monobuoy Berthing Master will assist the vessel's officers in the connection operations. For supply of bunkers there is a 12 in. diameter hose available with a weight limit which is less than those mentioned above.

Derricks: All tankers operating at the Monobuoy must have a derrick with minimum capacity of 10 tons on the port side.

Flanges: The connecting flanges are 16 in. ASA for loading/unloading and 12 in. 150 ASA for bunkers. In the event of vessels not having flanges of these dimensions or reducers, this should be notified by radio 72 hours in advance.

Ballasting and Deballasting:

Anti-pollution precautions: The vessel's Master must take the necessary measures so that there is no loss of dirty ballast and is responsible at all times for damages and costs which may originate from this.

Scuppers: Before commencing operations the scuppers must be closed.

Sea Valves: During the operation of ballasting, the tightness of the sea valves and inlets must be checked, taking all precautions to obviate contamination of the sea.

Ballasting/Deballasting during the night: If these operations are carried out during the night, the area must be adequately lit.

Inability to receive dirty ballast: All vessels operating at the Monobuoy must arrive with clean ballast since there is no facility for reception of dirty ballast. In the event that they have residue arising from tank cleaning, this must be pumped to the slop tanks, which will be measured and which will be loaded by the "load on top" system.

Loading and Discharging:

Communications during loading/discharging: All communications relative to loading and discharging of vessels will be made via the Monobuoy Berthing Master who will remain in contact constantly with the Refinery Blending department via portable VHF on Channel 9. In the event of damage to the portable VHF, contact will be continued via the vessel's equipment.

Damage during communication: In the event of damage to all communications with the Blending Department, the loading and discharging operations will cease immediately.

Average of loading and discharge: The installation can operate at an average (max.) of 12,000 cu.m. per hour and at a working pressure of 12 kg/sq.cm., at the vessel's manifold.

The supply of bunkers can be effected at a maximum average of 2,000 t.p.h. with a working pressure equal to 12 kg./sq.cm.

Anti-pollution precautions: Contamination of the sea by hydrocarbons is absolutely prohibited; this prohibition includes pumping. The non-fulfilment of this regulation can give rise to serious penalties and for which reason all vigilance must be applied to stop leaks which would give rise to the immediate cessation of all operations, the Master/Owner being entirely responsible for costs or damages which might arise therefrom. Trays must be provided to catch any possible leaks during connection or disconnection of hoses to the manifold.

Valve closure due to excessive loading: No valve will be closed which may stop or reduce the movement of the product, whilst the shore pumps are operating unless prior advice has been given to and the approval obtained from the Monobuoy Berthing Master. The practice of closing the valves at the vessel's manifold must be obviated.

If a decrease in pumping rate is required the shore terminal will lower the pumping rate to the required level if requested.

The Master will be responsible for any damage which may arise from the sudden stoppage in flow due to faults on board the vessel. It cannot be overemphasised for this to occur it is extremely dangerous and may give rise to extremely extensive damage to the installation.

Sample intakes and empties: All vessels which have available inert gas installations in service must arrive with all tanks depressurised for the purpose of taking samples, emptying water, etc. Once this operation has been effected, tanks can be pressurised once again. Once discharge has been terminated, the tanks will be depressurised in order that they may be inspected.

Also see "General" before first port.

FRESH WATER: Available from all berths in Algeciras rate 30 t.p.h. – 200 t.p.h. depending on location, and at Refineria Gibraltar. Can also be supplied by barge.

FUEL: Fuel oil and Gas oil supplied by C.L.H. at Dique Norte (North Breakwater) and Muelle de la Isla Verde.

Product	*Location*	*No. of Points*	*t.p.h. per Point*	*t.p.h. of Quay*
Heavy fuel No. 1	Dique Norte	4	200	200
Gas Oil "A"	Dique Norte	4	250	250
"B"	Dique Norte	4	250	250
"B"	Dique Norte	1	75	75
"B"	Dique Norte	1	20	20
"B"	Dique Norte	1	30	30
Heavy Fuel No. 1	Muelle de la Isla Verde	3	150	150
Gas Oil "A"	Muelle de la Isla Verde	3	200	200
Gas Oil "B"	Muelle de la Isla Verde	3	200	200

Bunkers can also be delivered by road tanker or barge.

CONSULS:

Denmark
El Salvador
France
Great Britain
Italy
Morocco
Netherlands
Norway
Panama
Sweden

REPAIRS: Small repairs afloat can be effected. No dry docks.

CUSTOMS ALLOWANCES: Max. quantity of tobacco permitted in ship's stores is 3 kilos per crew member and 2 kilos per passenger. The quantity that may be held out of bond is 40 grammes tobacco per person per day. Wine/Spirits. 1 decilitre per person per day may be held out of bond.

GANGWAY/DECK WATCHMEN: Not available from shore.

OPENING/CLOSING HATCHES: Opened and closed by ship's crew.

AIRPORT: Nearest is at Malaga, 120 km. from Algeciras, and Gibraltar.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day, 6th January, 19th March, Maundy Thursday, Good Friday, Easter Saturday, 1st May, Corpus Christi, 29th June, 25th July, 15th August, 12th October, 1st November, 8th December, 25th December.

POLICE/FIRE/AMBULANCE: *Algeciras:* Police Tel: 091; Fire Tel: 662222, Ambulance Tel: 604144. *Refineria Gibraltar:* Fire and Ambulance Tel: 698060.

SHORE LEAVE: Crew members are permitted to go ashore subject to police control.

AUTHORITY: Autoridad Portuaria de la Bahia de Algeciras, Apartado No. 7, Paseo de la Conferencia S/N, 11207 Algeciras (Cadiz), Spain. *Tel:* (956) 572620. *FAX:* (956) 605834, 573956. *Contact:* Jose Luis Estrada, Port Director.

ALICANTE: 38.23 N. 00.28 W. (See Plan)

PORT LIMITS: The line drawn from Cabo de las Huertas and Cabo de Santa Pola.

DOCUMENTS:

4 Crew Lists.
4 Passenger Lists.
10 Manifests for Cargo, including cargo in transit as well as cargo for Alicante. Tobacco and Cargo Manifests to be visaed by Spanish Consulate in port of origin.
All vessels' Certificates.

Shipmaster's Report: November 1988.

First Port: See "Cadiz".
Second Port:
Customs – "Ruta".
Agent – 1 Crew List.
Quarantine – 1 Crew List and 1 Maritime Declaration of Health.

PILOTAGE: The Pilotage service is permanent, and should be requested by means of the International Signals Code. It has a VHF radio station and can be called up on Channel 16. The Pilots have a motor launch painted white with the letter "P" on both sides, and flies a black flag with letter "P" in white, whilst at night it shows lights in accordance with the International Regulations. The launch meets vessels 1 mile from the green breakwater light, but in bad weather closer to that light. Pilots Tel. 5211137.

ANCHORAGE: Vessels waiting to enter port may anchor at a distance of 0.5 miles off the breakwater in depths of 16 m.

MAX. SIZE: Vessels of up to 225 m. length and 38 ft. draft (60,000 – 80,000 d.w.t.) can be berthed alongside. For tankers, max. draft 35.20 ft. (10.73 m.) 36,000 d.w.t. at Muelle 11. Also see "Berthing".

Discharge of butane is carried out at buoys located to the South of the port and with a limitation of maximum length of 140 m. between perpendiculars and 28 ft. draft.

HEALTH: Regulations as dictated by the International Regulations for Foreign Health are enforced.

RADIO: Radio-telephone communication through Radio La Costera, Alicante, medium frequency range approx. 220 miles and VHF approx. 40 miles.

TUGS: 2 tugs available to assist berthing of 1,500 h.p. Normally ship's lines used for connection with tug. Tug meets vessel at Port entrance.

BERTHING: The breakwater extends in a S.W. direction and vessels berth within the breakwater. Max. depth being available at the outer end of the breakwater, decreasing in the N.E. direction.

Muelle Principe de Asturias: Dry bulk terminal. Length 306 m. Depth 14.0 m.
Muelle 14: Extends along the length of the N.E./S.W. breakwater and depths vary alongside the berth from 12.5 m. at the S.W. end to 8 m. at the N.E. end. Length of quay – 970 m.
Muelle 12: Depth alongside 8.0 m. Length – 296 m.
Muelle 11: A combined tanker and container berth. Depth 10 m. Length – 360 m.
Muelle 10: Depths alongside the berth vary from 6 m. to 8.75 m. Length – 203 m.
Muelle 9: Depth alongside berth 8.75 m. Length – 103 m.
Muelle 7: Depth alongside berth 8.75 m. Length – 240 m.
Muelle 6: Depth Alongside 8.0 m. Length – 160 m.

CRANES: All quays have cranes of 6 tons, and on Quay No. 11 there is a 35 ton portainer and 30 ton container crane. On Muelle Principe de Asturias there are 4×16 ton cranes. Loading and discharging operations are always carried out by shore personnel, irrespective of the means used.

SPECIAL CARGO HANDLING FACILITIES: There are 3 berths in the outer harbour located at the head of Berths 10/12 and 12/14 for Ro/Ro traffic. 2 Ro/Ro berths in the inner basin.

1×400 t.p.h. pneumatic unloader available.

STEVEDORES: It is necessary to advise Agents 48 hours in advance of the arrival of the vessel.

The main goods shipped at this port are: canned goods, aluminium ore, asphalt, ground pepper, bulk cement, etc. Average speeds of loading and discharge are: bulk cargo 60 t.p.h.; general cargo 50 t.p.h.; containers 30 units per hour.

MEDICAL: Many hospitals and medical services available. Advise Agent prior to arrival if medical assistance required.

TANKERS: Tankers discharge takes place at Muelle 11 (See "Berthing"). Product handled: Fuel oil (2×12 in.) and Gas oil (2×10 in.)

DENSITY: Average 1030.

FRESH WATER: Available from hydrants at the quays at the rate of 10 t.p.h., per hydrant.

FUEL: Supplied by CLH on all berths.

CONSULS: The following countries have local representation: Belgium, Denmark, Dominican Republic, France, Germany, Monaco, Norway, Netherlands, Paraguay, Peru, Sweden, United Kingdom.

REPAIRS: Only minor repairs carried out. There is a dry dock for small craft.

SURVEYORS: Comisario Maritimo Espanol (Spanish Maritime Commissary) and Lloyd's.

GANGWAY/DECK WATCHMEN: Agents normally provide watchmen.

OPENING/CLOSING HATCHES: Normally opened by crew and closed by stevedores using cranes.

CUSTOMS ALLOWANCES: 200 cigarettes and one bottle of spirits per person.

CARGO GEAR: All berths have cranes, varying from about 6 tons capacity. There is 1 heavy lift crane capacity 30 tons, and one gantry crane with 35 tons capacity.

REPATRIATION: Possible, without difficulty.

AIRPORT: About 8 km. distance from Alicante, and serviced by international flights.

TIME: GMT plus 1 hour in Autumn and Winter. GMT plus 2 hours in Spring and Summer.

HOLIDAYS: Normally no work is carried out on the following holidays: New Year, 1st January; Epiphany, 6th January; La Pelegrina, 26th April; Maundy Thursday; Good Friday; Labour Day, 1st May; Festival of San Pedro, 29th June; Corpus Christi; Santiago Apostol, 25th July; Assumption; Festival of the Spanish Speaking World, 12th October; All Saints', 1st November; Immaculate Conception, 8th December and Christmas Day, 25th December.

POLICE/AMBULANCE/FIRE: Police, Tel: 091. Ambulance, Tel: 5207201. Fire Brigade, Tel: 5229080.

TELEPHONES: Can be installed on board; the cost of installation currently is about 12,000 pesetas.

DEVELOPMENTS: Entrance channel to be dredged to 14.0 m.

Container Terminal (Muelle 11) to be dredged to 12.5 m.

SHIPMASTER'S REPORT: October 1983.

Documents: Unnecessary to have any papers visaed in previous port. Normal IMO papers acceptable but preferable to have separate Bonded Stores List.

Pilotage: In bad weather, Master will enter harbour without Pilot. Max. speed of pilot boat 7 knots.

On sailing, call Pilot 30 minutes before required by VHF Channels 16 or 12.

Health: No radio health message required.

Discharging: Discharging rate for boxes of pineapples using shore cranes was 25 t.p.h. per gang.

Fresh Water: Available at approx 15 t.p.h.

Watchmen: No watchman required.

Identification Cards: Agent provides separate I.D. cards for non-E.E.C. country crew members going ashore.

AUTHORITY: Junta Del Puerto de Alicante, Muelle de Levante S/No., 03001 Alicante, Spain. *Tel:* (96) 5202255, 5203588. *Telex:* 66554 JPA E. *FAX:* (96) 5216359. *Contact:* Sergio Campos Ferrera, Port Director.

Comandancia de Marina, Tel. 211514, 216163.

ALMERIA: 36.52 N. 02.30 W. (See Plan)

DOCUMENTS:

4 Crew Lists.
4 Passenger Lists (embarking, disembarking and in transit).
2 Cargo Manifests of goods destined to Almeria, as well as other cargoes in transit.
Stores List in duplicate, including tobacco, spirits, radios, etc., belonging to vessel.

Note: Tobacco. In case vessel carries more than 6 kilos of tobacco per man, excess must be declared in a separate manifest, which must be visaed by a Spanish Consul. In absence of Consul, said document will have to be visaed by an Authority of former port of clearance. Otherwise, the vessel would be fined.

PILOTAGE: Compulsory, service is permanent. Pilots board vessels by motor-boat in roads, near entrance formed by two breakwaters. This entrance is 287 m. wide. Pilot boats are painted white and letter "P" is painted in black on each bow. Also boats have a blue flag hoisted on mast, with letter "P" in white on both sides of flag. At night, boats have white light, under this light is a red light. When weather is bad vessels approach as close as possible to entrance so that Pilot can easily board the vessel.

ANCHORAGE: When harbour is congested, vessel can anchor at West Mole while waiting for berth.

MAX. SIZE: Only limitation is draft. Max. draft 39 ft. in the inner port and 43 ft. in the outer port.

HEALTH: Pratique is obtained immediately after berthing, when Health Officer boards vessel, In case of suspected disease or fever on board Master must send a radio message to Agents, in order that they advise the Health Officer. Following documents are required by Health Officer upon berthing: Maritime Declaration of Health, Derat Certificate, 1 Crew List.

RADIO: Nearest important radio stations are Cadiz Radio and Palos Radio.

VHF: Call Almeria Radio on Channel 16 for connection with pilot station.

TUGS: 3 tugs available and compulsory in accordance with LOA, d.w.t. and weather conditions.

BERTHING: Prior to ship's arrival and in accordance with Master's ETA Agent attends Port Authorities to procure a proper available berth. Commercial quays have a length of 350 m. with single shed with max. depth 23 ft. and 712 m. with Ro/Ro ramp with max. depth 31 ft.; in 2 directions there is 350 m. with Ro-Ro ramp with max. depth 24 ft. – 29 ft. (also used by tankers). There is 369 m. of berthing space with 34 ft. depth and 250 m. with 39 ft. depth with open storage area for solid bulk cargoes.

There is a Ro-Ro ramp, max. load 20 tons per axle.

Iron Ore Berth: Max. size 80,000 d.w.t. Max. draft 13.9 m. 1 shiploader, rate 2,200 t.p.h. Operator: Cia. Andaluza de Minas S.A.

STEVEDORES: It is necessary that Master sends ETA so that Agent can inform Receiver's stevedores accordingly and arrange for proper reception of cargo and berth. Timetable of shifts available at the port. Daytime, normal working hours, from 0800 – 1200 hrs. and 1400 – 1800 hrs. (1 shift), 0800 – 1400 hrs. (1 intensive shift), 1400 – 2000 hrs. (1 intensive shift). Night time, from 1800 to 2400 hrs.; Sundays and holidays, from 0900 to 1200 and 1400 to 1800 hrs.

MEDICAL: Medical facilities are available; only it would be appreciated for Master to send a radio message if a crew member is in need of urgent medical attention.

TANKERS: Tankers berth at Muelle Levante (Eastern Breakwater) where the depth is 8.0 m. – 10.0 m. There is 1×8 in. line for diesel oil, 2×10 in. lines for gasoline and 1×12 in. line for fuel oil.
FRESH WATER: Always available. Deliveries from quay available at all berths, supplying about 30 t.p.h.
FUEL: Ordinary fuel oil and gas oil is available at local refinery of "CLH". It is advisable that Shipowners stem bunkers through their own Contractors, with an ETA of 48 hours, so that the order can be received in time.
FIRE PRECAUTIONS: Tankers perform their operations at the berth of "CLH" at East Pier, which has the necessary fire precautions. No special precautions at other piers.
CONSULS: Belgium, Denmark, Finland, France, Italy, Netherlands and Sweden.
REPAIRS: All types deck and engine repairs available.
GANGWAY/DECK WATCHMEN: Available but not compulsory.
OPENING/CLOSING HATCHES: This work normally carried out by crew.
CERTIFICATES: Vessel should have the usual documents on board, but only the Safety Wireless, Safety Equipment and Derat Certificates are required by Authorities.
CUSTOMS ALLOWANCES: The quantity allowed per each crew member is 3 kilos tobacco. (See "Documents".) Wine and/or Spirits: Only 1 bottle for each crew member.
CARGO GEAR: Muelle de Ribera: 6 cranes capacity 3 tons.
Muelle de Poniente: 6 cranes capacity 3 tons – 6 tons, 2 cranes capacity 6 tons and 2 cranes capacity 12 tons.
REPATRIATION: Good facilities available.
AIRPORT: Airport is located about 6 km. from town, well served by regular airlines.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS: 1st January; 6th January; Good Thursday afternoon; Maundy Thursday; Good Friday; 1st May (Labour Day); Corpus Christi; 25th July (Santiago), 15th August; Assumption Day; Last Saturday in August (Our Lady of the Sea – Local Holiday); 12th October; 8th December; 25th December and 26th December (second Christmas Day).
POLICE/AMBULANCE/FIRE: Police 091; Ambulance 220900; Fire 240080.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Port Authority provides containers.
WASTE OIL DISPOSAL: Contact: Jose A. Molina Hernandez. Tel: (951) 239042.
SEAMAN'S CLUBS: Club de Mar. Tel: (951) 230780.
CURRENCY: Peseta.

SHIPMASTER'S REPORT: October 1983.
Pilotage: Pilot boat max. speed 6 knots. In bad weather, vessel should enter breakwater at slow speed and embark Pilot under lee of breakwater.
Health: No radio health message required.
Loading Rate: Vegetables per gang hour 20 – 25 tons using vessel's or shore cranes.
Watchmen: Not necessary.

AUTHORITY: Junta del Puerto de Almeria, Muelle de Levante, 04071 – Almeria, Spain. *Tel:* 23-69-92. *Telex:* Pajo-E 78892. *FAX:* (951) 23-29-49. *Contact:* D. Emilio Grande Onieva, Port Director.

AVILES: 43.35 N. 05.56 W. (See Plan)

DOCUMENTS:
4 Crew Lists.
2 copies Crew Personal Effects Lists, signed by each crew member.
2 Passenger Lists or a negative.
3 sets of Cargo Manifest of goods destined for the port.
Another Manifest covering transit cargo.
2 Provisions and Stores Lists, including tobacco, cigars, cigarettes, coffee, spirits, radios, cameras, etc., in possession of crew. In all cases make and number of radios to be indicated.
Safety Wireless Certificate and Safety Equipment Certificate.
Transit Tobacco Manifest: The Spanish Customs Regulations provide for 6 kilos of tobacco per crew member to be on board as usual provisions. If the total quantity of tobacco (including cigarettes, cigars, pipe and any other kind of tobacco) does not exceed said average of 6 kilos per crew member, such quantity may be declared as "provisions" on the usual Provisions List, and no further documentation is necessary. If the total quantity on board exceeds said average, the excessive quantity must be shown on a special transit manifest. Usual manifest forms may be employed, describing the tobacco in Spanish as "Tabaco en transito".

The essential point is that this transit manifest is visaed by the Spanish Consulate, which must insert a full and complete visa. A simple consular stamp is not sufficient. If there is no Spanish Consulate at the last port of call or nearby, the tobacco manifest may be visaed by the local Customs Authority or by another consulate, but the visa is still essential.
PILOTAGE: Compulsory for vessels over 50 g.r.t. Telegrams to be sent to Corporacion de Practicos, San Juan de Nieva – Aviles Tel: 563013 or 566856. Vessel exceeding LOA 130 m. require 2 Pilots.
Send ETA 2 hours in advance, confirming by VHF when vessel some 10 miles off. Pilots listen continuously on Channels 16 and 12. Pilot craft are painted black with a white "P" on each bow. They are equipped with VHF and listen out on Channel 12, having also available Channels 16, 14, 9 and 6. When coming alongside a vessel they hoist the "H" flag. Normally they remain within the port, going out to vessels up to 1 mile from La Forcada.
ANCHORAGE: Outside the port vessels can use the sector between North and W.N.W. of La Forcada and at a distance of 1 mile from it, in 15 m. to 25 m. depth and sandy bottom. There are no sheltered anchorages. When awaiting a berth, vessels must remain at anchorage with 1 or 2 anchors.
RESTRICTIONS: Vessels LOA 180 m. – 210 m. enter and sail at any time.
Entrance Channel: Breadth: 153 m. Length: 920 m. up to San Juan de Nieva Basin. Depth at LW: 10 m. to 8.5 m. in the axis. Nature of bottom: Sand, hard clay and rock. Exposure: N.W. Breadth: 160 m. Depth at LW: 10 m. Maximum tidal flow: 2.25 knots.
MAX. SIZE: Max. LOA 210 m. In exceptional cases Port Authority may allow vessels up to 220 m. LOA to berth.
Keel Clearance:
LOA up to 130 m. – Keel clearance 2 ft.
LOA 130 m. – 150 m. – Keel clearance 3 ft.
LOA over 150 m. – Keel clearance 4 ft.
The admitted draft is calculated by deducting the number of feet required under the keel from the total depth of water which varies in accordance with tidal conditions. Tide tables are available upon request. In addition, the draft so calculated may still vary (by ±1 ft.) under special atmospherical conditions. However, for a rough guidance, the following average figures, from which the respective number of feet under the keel must be deducted, may be sufficient:

	Normal	*Equinoctial*
Neap Tides	*Spring Tide*	*Spring Tide*
8.80 m.	9.70 m.	10.60 m.
(23 ft. 10 in.)	(31 ft. 10 in.)	(34 ft. 9 in.)

Alongside the quays (equinoctial LW) draft varies between 11 ft. and 30 ft.
HEALTH: Yellow flag to be hoisted, and once Health Authority has boarded, and the Marine Health Certificate completed, provided this is negative, clearance is automatic.
Health documents required: Marine Health Declaration if coming from another country, but if from another Spanish port, the Health Clearance Document from that port suffices.
Derat, or Exemption Certificate required.
If coming from country where epidemic is in force, certificates of vaccination for each crew member.
If sickness on board, patient will be examined immediately and decision taken as to clearance or isolation.
RADIO: *Coastal Station:* Cabo Penas Radio: Lat. 43° 39′ 22″ N., Long. 5° 50′ 53″ W.
Operational Procedures:
1. Safety, Assistance, and Urgency: All medium wave coastal stations listen out permanently on 2182 kHz. It is of maximum interest for the safety of human life at sea for all vessels in Spanish coastal waters at reasonable distances from the coast to maintain a listening watch for as much time as possible on this frequency.
2. Traffic from the Coastal Stations: Having firstly announced the fact on 2182 kHz, Cabo Penas Radio transmits at 1133 hrs. Call-up lists firstly of foreign vessels and then of national vessels. Weather forecasts are transmitted at 1103 hrs. and 1733 hrs.
3. Operating frequency: The station's main frequency is 1757.5 kHz and the subsidiary is 2649 kHz. In calling vessels on these frequencies, the respective vessel reply frequencies are 2013 kHz. and 3231 kHz.
Where vessels call-up Cabo Penas, they use respectively 2013 kHz and 3231 kHz, the coastal station replying on 1757.5 kHz and 2649 kHz respectively. The frequency of 2182 kHz may be used exceptionally by vessels to call up the coastal station when that frequency is not working emergency traffic.
Vessels which do not have the above frequencies, should call up on 2182 kHz, the coastal station inviting them to pass to one of the frequencies assigned to such ships.
Radio telephone calls and messages: Once radio contact has been established with the coastal station, a request is made as follows:–
Radio telephone calls:
(a) name and call sign of the vessel making the request.
(b) Identity number assigned by C.T.N.E. or in the absence of this, the name of the shipowner or responsible entity for paying the ship's accounts, and the CIAC code in the case of a foreign vessel.
(c) Person requesting the call.
(d) Telephone number of person or entity to be called.
(e) Locality, province or country, if the call is international.
At the end of the call, the coastal station will indicate the length and cost of the call, if requested.
Messages: Only vessels belonging to the Maritime Message Service can use this service. The vessel sends its message to the coastal station, firstly indicating the name of its owner and telephone number.
Radio Medical Service: Crew members at sea can obtain help and advice via the coastal station who will connect the ship to the Radio Medical Centre. There is no charge for this service.
VHF: There is no transmission of weather forecasts, although a vessel may obtain such information on VHF by requesting connection to the Regional Meteorological Centre. Such connections have to be paid for.
Assistance, Urgency and Safety: All VHF coastal stations listen out permanently on Channel 16.
Cabo Penas Radio transmits call-up lists at 1103, 1303, 1703, 1903 and 2030 hrs. It transmits general Notices to Mariners at 0903 hrs. and 1603 hrs.
Its main VHF frequency is Channel 26, but also operates on Channels 24, 25 and 27.
The following table shows the frequencies in MHz for traffic between coastal station and vessel.

Channel	*Coastal Stn.*	*Vessel*	
26	161.90	157.30	Duplex working for public correspondence
24	161.80	157.20	
25	161.85	157.25	
27	161.95	157.35	

Radio telephone calls: These can be made in the same way as the M/F transmission.

Operating Range: Cabo Penas Radio operates between Cabo (Cape) Lastres and Cabo (Cape) Vidio.

Boal Radio: Position Lat. 43° 22′ N., 06° 42′ W. Tel: 981-07 on VHF Channels 16 and 26.

TUGS: "Aranon" 600 h.p.; "Xaloc" 1,400 h.p.; "Nieva" 1,200 h.p.; "Raices", 1,800 h.p.

Requirements: LOA 100 m. – 130 m. – 1 tug.
LOA 130 m. – 150 m. – 2 tugs (1,000 h.p.)
LOA 150 m. – 210 m. – 2 tugs (3,000 h.p.)

BERTHING: 10 berths available.

Berth	*Length* (m.)	*Depth* (m.)	*Use*
Raices	822.84	8.0	Bulk and General
E. San Juan	140.00	6.0	Bulk and General
S. San Juan	300.00	6.0	Bulk and General
W. San Juan	277.70	3.5	Bulk and General
S.W. San Juan	90.25	2.0	Bulk and General
New Fish Quay	503.00	5.0	Fish
Aviles Fish Quay	515.94	2.0 – 1.0	Fish
E. Ensidesa	300.00	9.0	Fuel, General, Bulk
E. and S. Ensidesa	715.00	7.0	General, Bulk
S. Ensidesa	107.50	5.0	General
Endasa	132.84	7.0	Bulk cargo

CRANES:

Ensidesa:
1×30 tons lifting capacity
4×15 tons lifting capacity
9×12 tons lifting capacity
2× 6 tons lifting capacity
1×150 tons lifting capacity
2 gantry cranes×12 tons lifting capacity

Endasa:
2×10 tons lifting capacity

Commercial Berths:
5 cranes× 6 tons lifting capacity
2 cranes×45 tons lifting capacity
2 cranes×30 tons lifting capacity
2 cranes×12 tons lifting capacity
6 cranes× 5 tons lifting capacity

Asturiana de Zinc:
1 crane × 4 tons lifting capacity
1 crane × 5 tons lifting capacity

STEVEDORES: Working hours: At "Ensidesa" berth 24 hours a day, 7 days a week, Sundays and holidays included.

All other Quays: Monday/Friday. 0800 – 1200 hrs., 1300 – 1700 hrs. Overtime: 1700 – 2300 hrs.

Saturdays: 0800 – 1200 hrs. No overtime.

Sundays and Holidays: No work done.

MEDICAL: Crew members requiring medical attention, hospitalisation, etc., should be reported by the Master to the Ship's Agent in order to make the necessary arrangements. All services available.

TANKERS: Oil/Gas Berth: Equipped with facilities to load/unload oil products and gas through pipelines.

Liquified Gas Facilities:

Name	"Muelle de Ensidesa" – Zona "B" and "A".
Type of Berth	Concrete berth with rubber fenders.
Mooring	Normal mooring system giving lines to bollards alongside.
Length	300 m.
Depth	29 ft. LWOST alongside at berth, always afloat.
Type of handling installation	Shore hose connections of 6 in. for liquid and vapour available. No vessels' hoses required.
Largest LGC entered/ discharged (part cargo)	34,230/20,406 g.r.t./n.r.t., 53,400 cu.m. cargo capacity. Length overall: 216.10 m. Max. draft 36 ft. 2 in. (April 1982).
Shore Storage Particulars:	
Operator	Empresa Nacional de Fertilizantes, S.A. ("Enfersa").
Other Users	Some Spanish companies occasionally operating by previous agreement with "Enfersa".
Products handled	Ammonia.
Minimum temperature	Minus 33°C.
Cargo pressure	3 kg. – 4 kg.
Receiving temperatures	Ambient and fully refrigerated down to minus 33°C.
Maximum discharging rate	500 t.p.h. at minus 33°C.
Actual discharging rate	350 t.p.h. – 400 t.p.h.
Cargo operations permitted by night	Yes.
Round the clock discharging	Yes (SHinc).
Vapour return line available	Yes.
Distance from berth to storage	2.8 km.
Hoses of 6 in. available	Yes
Diameter of shore lines	12 in. Liquid and 8 in. Vapour.
Maximum back pressure permitted	3 kg. – 4 kg.

Tanks	*Temperature*	*Capacity*	*Cu.m.*
2 Spherical	Ambient	2,000 tons	2,500
1 Cylindrical	Fully refrigerated	10,000 tons	15,000

Cargo handling equipment at Marine Terminal	1 shore line.

FRESH WATER: Available ex-wharf or barge. From the wha connections, it is supplied at 25 t.p.h. and from barge at those berth where there is no supply facility.

FUEL: Fuel and gas oil are supplied to ships by barge. There is a sma tanker doing the service. Stem for bunkers can be arranged throug usual contractors.

CONSULS: The following countries have consular representation in th nearby port of Gijon: Brazil, Colombia, Costa Rica, Dominican Republ Finland, France, Italy, Netherlands, Norway, Panama, Peru, Portuga and Sweden.

REPAIRS: There is one shipyard at Aviles for small coasters and fishin trawlers. All types of repairs will be readily attended by specialise workshops. Advanced notification is suggested. Electrical power supplied ex-wharf. Diver available.

DRY DOCKS: One dock at Las Canteres, owned by "Empresa Naciona Siderurgica", length 50 m., width 9.50 m. Capacity 600 tons.

Four docks at El Monumento owned by Astilleros Ojeda y Anicet length, 2 of 100 m. and 2 of 85 m. Width 3.10 m. Capacity 500 tons.

SURVEYORS: Lloyd's Register, A.B.S., B.V., Hispania Marine and G.L

CUSTOMS ALLOWANCES: Normally Customs permit 200 cigarette per man out of bond. Additional quantities needed on the stay of shi in port. 1 bottle of spirit per man. Also see "Documents".

AIRPORT: The regional airport, named Asturias (in some instances is still known as Oviedo) is 12 km. away from the port. There are dai flights linking Aviles with Madrid, Bilbao, Barcelona, Malaga, Tenerif and Santiago. Bus service available to and from the airport.

TIME: GMT plus 1 hour, except during Summer when GMT plus 2 hours

HOLIDAYS: 1st January, 6th January, 19th March, 1st May, 21st June 16th July (Mercantile Marine), 25th July, 28th August, 8th Septembe 12th October, 1st November, 8th and 25th December, Maund Thursday, Good Friday, Easter Monday, Corpus Christi, Ascension Da

POLICE/AMBULANCE/FIRE: Police 544311 and 544511. Ambulanc 540080, 540511, 540733, 540844. Fire 546114, 544127.

DEVELOPMENTS: Raices Pier to be lengthened by 250 m. an deepened to 12.0 m.

AUTHORITY: Ayudantia Militar de Marina, Avenida Cond Guadalhorce, Aviles, Spain. *Contact:* Carlos Gago Lopez, Comandan Junta del Puerto y Ria de Aviles, Calle de Muelle 8, Aviles.

AGENT: Alvargonzalez, S.A., Guadalhorce 1, Aviles. Tel: 5620756 Telex: 87492.

BARCELONA: 41.20 N. 02.10 E. (See Plan

DOCUMENTS:

(1) Manifest of Barcelona Cargo: 1 set covering all loading ports make sure that this Manifest is in perfectly good order befor ship's berthing, as Customs will board the vessel immediatel and take it away as it is; thereafter any omission or excess pages may lead to a fine. It is important that the Master has copie as Manifests mailed by Agents in loading ports sometimes arriv too late or not at all.
(2) Manifest of Transit Cargo: 2 sets (same recommendations a above).
(3) 3 Crew Lists.
(4) 1 Negative or Passengers List.
(5) 2 sets of Bills of Lading of the Barcelona cargo.
(6) 2 Provisions Lists.

Of items (3), (4) and (6) above several copies will be required fo distribution among various authorities, therefore it would be well for th Master to have at least 3 copies of each ready at hand on arrival Tobacco allowed per crew member is 6 kg.

All tobacco in excess of the 6 kg. allowed by the Spanish authorities should be manifested and signed by the Spanish Consul at the last po of call before Spain. If there is no Spanish Consul at the last port befor calling at Spain, then the consulate of a country friendly to Spain or th Port Authorities could carry out the same formality. The same procedur must be followed when the vessel loads a cargo of tobacco for discharg in Spanish ports, or when the tobacco cargo is loaded in transit.

If any item of cargo manifested for Barcelona should be discharged in error at any other port in the ship's itinerary before arrival at Spain there would be a fine imposed here for shortage of goods if no advic of such shortage is given before arrival.

Shipmaster's Report: November 1988.
4 Manifests of Barcelona Cargo.
5 Manifests of Transit Cargo.
2 sets of Bills of Lading.
5 Crew Lists.
1 (nil) Passenger List in Spanish.
1 (nil) Arms/Ammunition List in Spanish.
2 Maritime Declarations of Health.
2 Stores Lists.
4 Lists of Personal Effects.

APPROACHES: *Entrance:* Width 370 m., depth 16 m. Nature of botto is mud and sand.

PILOTAGE: Pilot boats painted black, with letter "P" in white on eac bow. Telegraphic address: "Pilot Station-Barcelona". Required notice o ETA 24 hours before arrival. Signals to be made by vessels requirin Pilot: the letter "G" in sound and/or light. Can be contacted on VH Channel 16.

Pilot boats have no radar. Pilots give priority to vessels nearest po entrance. Pilotage is compulsory and the service is permanent. In case of port congestion vessels remain at anchor at the roads.

ANCHORAGES: Vessels can anchor 0.8 miles away from breakwaters in depths over 40 m.

MAX. SIZE: Only limitation is draft: max. 45 ft.

HEALTH: Pratique obtained immediately after berthing, when Health Officer boards vessel. In case of suspected disease or fever on board Master must send a message to Agent, to advise Health Office. Following documents are required by Health Officer upon berthing; Maritime Declaration of Health, Derat Certificate, 1 Crew List.

RADIO: Aranjuez Radio, call sign EAD.

VHF: Barcelona Radio can be contacted on VHF Channel 16, 3 hours before arrival and Channel 26 for long distance calls.

TUGS: Operated by two private companies. Vessels do not need a tug for entering or leaving but may require one for internal manoeuvring, depending on the manoeuvre and on the size of the vessel, pre-arrangement with Pilots. Ship lines normally used. 12 tugs available, from 800 h.p. to 1,800 h.p.

BERTHING: Commercial quay, length 15,054 m. with depths 6.0 m. – 14.0 m., depending on location. Pier Barcelona, berths for transoceanic maritime passenger traffic, depth 31 ft. Shore fenders keep vessel about 1 m. off quay.

CRANES:

9 Quay cranes	(Lifting capacity)	3 tons
39 ,, ,,	,, ,,	6 tons
27 ,, ,,	,, ,,	12 tons
4 ,, ,,	,, ,,	16 tons
9 ,, ,,	,, ,,	30 tons
5 Container cranes	,, ,,	35/45 tons
144 Mobile cranes	,, ,,	1/50 tons
1 Floating crane	,, ,,	80 tons

BULK CARGO FACILITIES:

Grain: The Terminal for discharge, storage and delivery of cereals and seed is located on Contradique Wharf (East Side). These products are shipped in large bulk carriers of up to 280 m. length. The maximum draft at the present time is 13.10 m. This terminal has pneumatic facilities on the wharfside for discharging vessels and which may reach optimum rates of 1,200 tonnes/hr. Soya bean is taken by belt conveyor to a factory located in Anden de Costa for conversion to oil and meal. This terminal comprises 3 silos with capacities of 20,000 tonnes, 45,000 tonnes and 80,000 tonnes respectively. There are 2×60 tonnes weighbridges.

In addition there is another terminal located on the Alvarez de la Campa Wharf specialising in the discharge, conversion and processing of soya bean. It has length 250 m., depth 11.20 m. and is equipped with modern pneumatic facilities for discharging, and like the Anden de Costa factory described above, meal and oil are also loaded at this terminal. The terminal's storage capacity is 42,000 tonnes of soya bean and 2,000 tonnes of oil. The discharge rate is 500 tonnes/hr.

Bulk Clinker and Cement loading terminal: Located at Contradique Wharf (South Side). Capacity for 27,000 tons clinker and 38,000 tonnes cement. Vessels up to 40,000 d.w.t. and having a draft of up to 12 m. may be loaded here without delays. This terminal is equipped with a 22 m. hoistable and rotary arm gantry crane for loading bulk carriers. Loading rate, 1,000 tons/hr. for cement and 1,500 tons/hr. for clinker. Apart from this terminal, there is another located on Alvarez de la Campa Wharf. The latter terminal has a storage capacity of 8,800 tonnes. This terminal receives cement from a works in the Province of Tarragona for subsequent overland distribution.

Potash loading terminal: Length 419 m., depth alongside 11.2 m., equipped with 2 loading bridges which can load up to 700 t.p.h. of this product. Storage capacity 80,000 tonnes.

Coal: Discharged at Sur No. 1 Wharf (East Side), length 450 m., depth alongside 14 m. and (North and South Side) length 350 m., depth 12 m. and 14 m. respectively.

It is equipped with portal cranes, lifting capacity 12/16 tons. Average discharge rate 110 tons per crane/hour. The storage area is sufficient for a vessel discharging 60,000 tonnes.

Iron, Steel and Scrap: Handled at Contradique Sur and Sur No. 1 Wharves. 12/16 tonnes capacity cranes are used. Hourly rate is 80 tonnes for scrap and 250 tonnes for manufactured products.

SPECIALISED CARGO-HANDLING FACILITIES:

Containers: Two terminals at Prince of Spain Wharf, total length 1,085 m., depth 14 m., total area 295,000 sq.m., 5 gantry cranes 35/45 tons. Section A (Maritima Layetana, S.A.): 4 transtainers, 13 straddle carriers, 17 forklifts with capacity 2.5/12 tons. 150 reefer points. Section B (Tersaco): 3 transtainers, 6 tractors, 12 trailers, 12 forklifts with capacity 2.5/35 tons. 120 reefer points.

Both terminals have computer systems and CFS.

There are other terminals for domestic traffic.

Roll-on/Roll-off traffic: 20 ramps available at different quays.

General cargo handling: It is fully mechanised and, apart from the pier cranes, there are fork-lift trucks, truck cranes and a palletisation process.

Liquid and non-petroleum bulk: Important special facilities are the liquefied natural gas discharge and gasification plant with special berth (depth 12 m.) and a storage capacity for 240,000 cu.m. of liquid gas.

There are 6 special berths (depth 12 m.) for inflammable liquids, chemicals, vegetable oil and tallow, and a storage capacity of about 150,000 cu.m.

STEVEDORES: *(a)* Daytime, normal working hours, from 0800–1200 and 1400–1800 hrs. (1 shift); *(b)* 0800 – 1400 and 1400 – 2000 hrs. (2 "intensive" shifts). Night-time, from 2000 – 0200 and 0200 – 0800 hrs. (2 intensive night shifts). Extra costs are involved for intensive shifts. Nightwork is paid on an overtime basis. Average rates for discharge of grains in bulk are about 7,500/8,000 tons per day of 24 consecutive hours; for general cargo a rate of 100 tons within normal working hours.

MEDICAL: All medical facilities are available; it would be appreciated if the Master advises in advance if crew member is in need of urgent medical attention. Contact Barcelona Radio in an emergency.

TANKERS: There are 6 berths for oil tankers (refined products), max. size 60,000 d.w.t., depth alongside 12 m. (2), 11 m. (2), 8.5 m. (2). Along the jetty there are 15 pipelines of up to 16 in. diameter, leading the products to the 350,000 cu.m. storage tanks, discharging being effected at a rate about 1,000 tonnes/hour for vessel.

Also see "Shipmaster's Report".

DENSITY: Average density between 1025 and 1028 in all seasons.

FRESH WATER: Available at all berths direct from shore lines. Rate of delivery about 16 t.p.h. – 20 t.p.h. Also possible by barge, rate 150 t.p.h.

FUEL: "Campsa" supplies a range of intermediate fuel oil up to heavy fuel oil bunker "C" 380 cST/50°C and marine gasoil. These products can be supplied by barge, at jetty or by tank truck.

Japan	204-72-24	Venezuela	215-01-12

REPAIRS: All types of deck and engine repairs can be carried out.

DRY DOCKS: Dry dock, max. available length 215 m., width at entrance 35 m. Can accommodate vessels of 50,000 d.w.t.

Floating dock, length 111 m., interior width 18.7 m., interior draft 6.4 m. Lifting capacity 6,000 tons.

SURVEYORS: Lloyd's 2410400. A.B.S. 2399275. B.V. 2371302. G. Lloyd 3154462.

GANGWAY/DECK WATCHMEN: According to police regulations, Master has to keep watchmen on board.

Organised robberies have taken place aboard vessels by gangs using gas to render Master and crew unconscious.

OPENING/CLOSING HATCHES: Normally carried out by crew, except in liner vessels which is contracted for by stevedores.

CERTIFICATES: Vessels should have all usual certificates aboard.

CUSTOMS ALLOWANCES: Quantity allowed for each crew member is 200 cigarettes and 1 bottle wine/spirits.

CARGO GEAR: All commercial piers served by electric shore cranes. In addition, 1 floating crane with a lifting capacity of 80 tons and 144 mobile cranes up to 50 tonnes.

REPATRIATION: Good facilities available.

AIRPORT: Located about 7 km. from town, well served by regular airlines.

TIME: GMT plus 1 hour; GMT plus 2 hours (29th March – 26th September).

HOLIDAYS: New Year's Day (1st January); Epiphany (6th January); Good Friday; Labour Day (1st May), Christmas Day (25th December). No cargo is worked on these days.

Other National holidays occur during the year, but overtime work can be arranged.

POLICE/AMBULANCE/FIRE: Police 091; Harbour Police 3026367; Ambulance 3171717 (Also 24 hour medical service); Fire 080 and 2535353 (080 is best).

TELEPHONES: Only at Terminal Station.

SERVICES: All services available including compass adjusting, radio and radar repairs, supply of charts, nautical publications, availability of Notice to Mariners, availability of safety equipment, etc.

IDENTIFICATION CARDS: Seaman's Book required. Crew List also to be presented at Autonomous Port of Barcelona.

DEVELOPMENTS: Lengthening under construction of breakwater Dique del Este, and Pier Contradique. A wharf with 6 berths for tankers only, plus 4 berths for vessels loading/unloading crude in bulk with a depth of 39 ft.

A 6th container crane is to be erected at Tersaco Container Terminal.

SHIPMASTER'S REPORT: March 1981.

Approaches: If vessel coming from the East, no problems, as the radar picks up the line of the breakwater about 20 miles out. There is also a D.F. station close to the entrance to check vessel's position. Also suitable for calibrating the D.F. if time allows.

The extension to the breakwater is now completed, and the light buoy marking the end of the extension has now been removed.

Anchorage position is about 0.5 miles from the breakwater where vessels usually remain at anchor awaiting instructions.

Port: The large Southern extension of the port is well under way, and it was in this dock that the vessel berthed. It would appear that this extension will be used for general cargo, containers, and oils/gases. The gas berths lie on the Eastern side of the dock. There being 3 berths available at present. The Northern Berth handles LNG/LPG. The second berth LPG and Berth No. 3 handles oils. Dredged depth alongside according to Chart B.A. 1180 is 10 m.

Pilots: Pilots board the vessel just outside the breakwater, from a small launch painted black with a white letter "P" painted on its sides. Pilots are reluctant to proceed very far outside the breakwater entrance.

Pilots can be contacted on VHF about 30 miles out at sea. Working Channels 16 and 12.

After completion of cargo, Pilots are called and appear on the vessel within 30 minutes.

For arrival Pilots are required to be given 24 hours' notice.

Berthing/Unberthing: Vessel's usually berth port side to head up the dock, but if it is required by the ship they will berth starboard side to.

Vessels can berth or sail at any time of the day or night.

Vessel assisted by 2 tugs forward and aft. Tugs using ship's lines. The 2 land side tugs put the lines ashore, and then push the vessel onto the quay until mooring is completed. No particular problems with berthing or unberthing.

Berth: The vessel lies alongside dolphin, which carries the pipeline. The dolphin is adequately fendered. Fenders are large flat wooden faces, with a backing of large rubber tyres.

Aft mooring arrangements not very satisfactory at this call as 2 of the mooring hooks were inoperative. Had they been working the usual arrangement of 3, 2 and 2 could have been possible.

Attention must be paid to the mooring boat, whose crew will take the ropes to any position they feel inclined. This happens forward. Aft they have fewer choices as to where to put the ropes. Vessel tied up at Berth No. 2 on this call.

Cargo Operations: Connection is to a cargo hose 12 in./8 in. line ASA 150. Shore provide the reducer and connect and disconnect. Pumping rate varied between 230/110 t.p.h. (butane). Butane tanks are 3 km. away so the usual high back pressure was experienced. Back pressure during discharge was 8 bars. Discharge was carried out using 2 pumps.

Vessel was informed by the surveyor that it was advisable to use as many pumps as the back pressure allowed, as the shore may protest at the slow discharge rate.

During this stay the shore tanks were full and were being topped off, this could have been the reason for the low rate. Possibly a better rate could be expected with propane as the tanks are only about 1 km. away.

The cargo hose was in a poor condition on the exterior. Burning was in operation on the berth ahead of the vessel, smoking regulations seemed lax.

Communications between the ship and shore were very poor as nobody spoke any English or French. Communications between the jetty and the tanks, were also very poor, messages are passed by sound powered telephone but it would appear that at the tanks nobody is in attendance at all times.

If it is possible and vessel is berthed at Berth No. 2 use the forward manifold otherwise the gangway will not be able to be landed on the dock, and will overhang by a few feet.

General: Papers required for the port are those laid down in "Guide to Port Entry". Chandler available, who can deliver by either road or barge. Storing from the quay would be awkward due to the space available on the dock, and in fact the derrick is supporting the cargo hose. After stores cranes cannot work to the quay. Stores were not taken at this port, for this reason.

Deck and engine repairs can be carried out at this port.

Lloyd's Surveyors are available for hull and engine surveys.

The airport is about 4 miles away and there is no problem with repatriation.

The berth is a considerable distance from the town and arranging taxis to come down to the vessel can cause problems. For this reason the vessel laid on a taxi service for a limited time during the vessel's stay in port. Taxi fare to town was about 400 pesetas.

No telephone available on the berth, but local calls may be made from the gate house of the "Enagas" Terminal across the road from the berth.

Water density 1025 (arrival), 1026 (departure).

RADIO OFFICER'S REPORT: September 1990.

Documents: The following is to be added to the list in the "Guide".

A Declaration of Oil Residues:

Last 3 ports sludge discharged: Date, quantity, by which means.
Total capacity of oil residue tanks.
Quantity of sludge on board.
Total capacity of the slop tanks.
Quantity of oil residue from, tank washing, on board.
Next ports with reception facility.

SHIPMASTER'S REPORT: October 1993.

Charts: B.A. 1180 and 1195.

Approach: The City of Barcelona with Castillo de Montjuich is easily identified. The breakwater entrance is not visually conspicuous, and is best identified on the radar. The stone mole gets lost in the shoreline buildings.

Pilot: The Pilot boards from a typical small black hulled white upperworks Spanish cutter. A good lee is required. 24 hours notice of arrival and 30 minutes notice on departure is required. The port is often very busy, so long waits can be expected. Vessels must not approach within 1 mile of the breakwater entrance until advised to do so by the Pilot Station. Pilot on VHF Channel 14.

Anchorage: Anchorage is exposed, and from previous experience holding ground is not considered good. Do not anchor within 1 mile of the Breakwater Head, and keep clear of the numerous pipelines and cables.

Tugs: Many modern tugs available. Normally two tugs are used. Ship's lines used.

Berth: The Inflammables Quay in the new port section, to the South of the old port, is used for all petroleum products and liquids.

Seven berths, all small jetties, protruding out about 50 m. from the shoreline, are used, all starboard side to, head out.

Depth alongside all berths is about 12.0 m.

We berthed at Pier 3, and used 2 head/stern lines to shore, by mooring boat (actually pilot boat), and 2 springs fore and aft to the jetty.

Ship's gangway at manifold.

Discharge: Discharged latex. Shore tanks across roadway about 200 m. away. Discharge was at maximum rate of ship's pump. Shore hose to ship's manifold to 6 in. Camlock coupling.

Receiver and Surveyor speak little English.

Fresh Water: Available on jetty. Port Authority waterman required. Arrange before weekend. Shore hoses through meter. Brackish.

Chandler: Stores can be delivered to within 50 m. of ship's manifold. The Receiver will provide a lift truck to ship's side.

Telephone: One public telephone near Jetty No. 4, a few minutes walk away.

Formalities: Vessel came from Italy, and paperwork not extensive. We prepared 6 Crew Lists, 1 Personal Effects List, 1 Stores List, 1 Discharge Manifest and 1 Transit Manifest. Formalities were handled by Agent and Civil Guard.

AUTHORITY: Puerto Autonomo de Barcelona, Puerta de la Paz No. 6, 08003 Barcelona, Spain. *Tel:* 3188850, 3188750. *Telex:* 54000 JOPB. *FAX:* (93) 3184047. *Contact:* L. Montero, Port Director.

BILBAO: 43.17 N. 02.55 W. (See Plan)

DOCUMENTS:

6 copies Crew List.
4 copies Passenger List (if any on board) or 2 Negative Passenger Lists.
3 copies Crew's Personal Effects Lists, if any.
3 copies Ship's Stores List.
Safety Radiotelegraphy Certificate.
Safety Equipment Certificate (g.r.t. 500 or above)
Safety Construction Certificate (g.r.t. 500 or above)
International Health Declaration Form.
Narcotic List.
Vaccination List.
Declaration of no animals on board.
3 copies Cargo Manifest.
2 copies Manifest of Cargo in Transit.

Tobacco Allowance: Crew members are not allowed to keep more than 200 cigarettes (or the equivalent in tobacco) and a bottle (1 litre) of spirits out of bond. The rest must be included in the vessel's Store Lists, and is to be sealed. The total maximum quantity that any ship can carry in accordance with the Spanish Laws is 6 kg. of tobacco for each person aboard.

Any quantity over this amount should be manifested as "tobacco in transit" and this manifest to be visaed by the Spanish Consulate in the previous port. For ships diverted at sea to a Spanish port or if a Spanish Consulate is not available at the last port of call, Master is required to send prior to arrival the following cable to:

DIRECCION GENERAL DE ADUANAS-MADRID

"Vessel .... Coming from ....
bound to Bilbao with tobacco Manifest not visaed in the last port of call due to not being available Spanish Consulate".

Master ....

The text of the cable should be entered in the Log Book and a copy delivered to the Custom's Agent when boarding.

Clearance: Health and Customs Authorities will board either when vessel is at anchor or berthed. Customary national and international regulations concerning Free Pratique are applied. Unless contagious sickness being on board, or vessel coming from an epidemic zone, radio advice to Health Authority is not required. Health Declaration, Derat Certificate and Crew List are required by Health Authorities.

PILOTAGE: Pilotage is compulsory for vessels entering and leaving the Port of Bilbao. Vessels must make contact with the pilot station 1 hour before arrival; Masters shall make contact again when 7 miles from the port entrance.

Arrival Information: There are no traffic separation schemes or traffic control systems in the approaches to the port of Bilbao.

The pilot station keeps permanent radio watch on VHF Channel 12. When Pilot on board and ship approaching the berth VHF communication is carried on Channel 14.

ANCHORAGE: Masters will be informed by Harbour Pilot about the estimated berthing time and any other particulars that concern berthing prospects. Should need for anchoring arise, vessels will be requested to anchor under the control of the Harbour Pilot in the usual anchorages, i.e. in waters between former entrance mouth of Santurce and new entrance mouth of Lucero, where only ships under 15,000 R.T. without any IMDG coded cargo on board are allowed to anchor.

Ships whose characteristics and/or cargo conditions do not comply with these limitations are, if needed, obliged to anchor, also under the control of the Harbour Pilot, in some of the following anchorage spots:

Spot "A", true bearing 270° from the Pta. Lucero breakwater green light, 1.5 miles away.

Spot "B", true bearing 310° from the Pta. Lucero Breakwater green light, 1.5 miles away.

Spot "C", true bearing 015° from the Pta. Lucero Breakwater green light, 1.2 miles away.

Spot "D", true bearing 265° from the Pta. Lucero Breakwater green light, 2.5 miles away (for small sized ships).

Spot "E", true bearing 310° from the Pta. Lucero Breakwater green light, 2.5 miles away.

Crude and oil product carriers should also keep in close communication with the Refinery Terminal Superintendency about their positioning and other particulars.

Ships in general (without any IMDG coded cargo on board) that are requested to wait due to berthing schedule, or tide level when bound up river, may receive instructions from Pilot to anchor either in between new outer port entrance of Lucero and the older Santurce Breakwater; or inside waters enclosed by Arriluce and Santurce Breakwaters. In this latter area, an additional facility of 3 sets of mooring buoys for lightening, LASH type ship turnround operations, etc., are located in waters of 14.0 m. depth.

MAX. SIZE: Drafts available for dry cargo vessels range from 4 m. up to 14.5 m. and tankers up to 32 m. The largest vessel received was 409,499 d.w.t., length 378.01 m. and draft 22.48 m.

HEALTH: Vessels requiring Free Pratique have to fly "Q" Flag when entering port. If proceeding direct to berth, Pratique obtained immediately after berthing. Otherwise, at anchorage on arrival. Cases suspected disease or fever on board, Master must radio Agent, to advise Health Office. On berthing Health Authorities require Health Declaration, Derat Certificate and Crew List. Also see "Documents".

RADIO: Short wave communication link through Aranjuez Radio and Pozuelo del Rey Radio. Medium wave communication link is through Machichaco Cape Radio.

VHF: Bilbao Coastal Radio Station on Channel 16.

Other stations in vicinity and operating on the same calling channel are Cabo Mayor, Cabo Machichaco and Choritoquieta.

Petronor Refinery Terminal keeps permanent watch on VHF Channels 12 and 14.

TUGS: No tugs required for entering port, only for berthing or shifting inside river. Ship's lines used, tugs employed according Pilot's advice. 20 tugs available, 500 h.p. – 4,500 h.p.

BERTHING: For commercial use.

Passenger Terminal: 150 m. of berthing, depth 7.0 m., and Ro-Ro facilities.

General Cargo:

2,157 m. of berthing with depth of more than 12 m. and Ro/Ro facilities.
634 m. of berthing with depth between 10 m. and 12 m.
1,520 m. of berthing with depth between 8 m. and 10 m.
350 m. of berthing with depth between 6 m. and 8 m.
681 m. of berthing with depth between 4 m. and 6 m.

Dry Bulk Cargo:

1,068 m. of berthing, water depth over 12.0 m.
175 m. of berthing, water depth 10.0 m. – 12.0 m.
1,088 m. of berthing, water depth 8 m. – 10 m.
607 m. of berthing, water depth 6 m. – 8 m.
2,570 m. of berthing, water depth 4 m. – 6 m.

Liquid Cargoes:

Crude and oil products: Lucero Terminal (leased to Petronor Refinery)
Berth No. 1, draft 32 m., length 400 m. (with a fendered jetty 140 m. wide)
Berth No. 2, draft 19 m., length 400 m. (with a fendered jetty 96 m. wide)
Berth No. 3, draft 13 m., length 200 m. (with a fendered jetty 85 m. wide)
Berth No. 4, draft 11 m., length 200 m.
Berth No. 5, draft 11 m., length 200 m.
Berth No. 6, draft 7.5 m., length 100 m.

Other oils and chemicals:

220 m. of berthing, water depth 5 m.
*620 m. of berthing, water depth 9 m.
*980 m. of berthing, water depth 14 m.
*Jointly shared with dry cargo handling operations.

Privately owned Chemical Plants and Mills: Specially fitted for dry and liquid cargo handling, totalling 5,457 m. of berthing space; water depth 4 m. – 14 m.

Containers:

645 m. of berthing with depth of 14 m.
500 m. of berthing with depth between 8 m. and 10.5 m.

Ro/Ro Facilities:

There are also 4 Ro/Ro ramps available.

CRANES:

	Type	*Commercial Service*	*Private Service*
40 tons	Portainer gantry cranes	2	5

Floating Cranes: 4 units for bulk cargoes, 12 tons – 35 tons capacity. 1 for heavy lift cargoes up to 400 tons capacity.

STEVEDORES: Ordinary working time (Monday/Friday) 0800 – 1200 hrs., 1400 – 1800 hrs. (break at noon).

Ordinary working time (Monday/Friday) 0800 – 1400 hrs; 1400 – 2000 hrs. (2 intensive relief turns).

Extraordinary working time: Round the clock, 7 days a week, available. Inform Agent about requirements in advance.

MEDICAL: Medical service must be arranged by the Agent.

TANKERS: Arrival Information:
Tel: 6365291.
Telex: 32623 Nopre.
Fax: 6365332.

Petronor Refinery: Attention is drawn to the minimum under keel clearance of 1 m. required alongside.

Vessels up to 500,000 d.w.t. (according to draft) range will be accepted at Petronor Terminal.

Loading/Discharging/Transfer Operations:

Bitumen	1×6 in.	6 in.	150/300
		Flexible hose – Camlock coupling.	ASA DIN

N.B.: Any other flange size or rating will require special fabricated spool pieces to meet above flange specification. Spool pieces must be furnished and installed by the vessel. Terminal personnel will connect the coupler to proper ship's flanges. *Ship's* personnel will bolt on any required spool pieces. Ship's manifold must meet requirements of loading arm envelope and must provide suitable base and clearance for loading arms supports. Manifolds must comply with latest OCIMF standards. Failure to present correct reducers/spools will result in terminal making a charge for use of their equipment.

Discharging/Loading Rates:

Discharging: Maximum discharging rate accepted by Terminal:

Crude Oil – Jetty No. 1: 16,000 t.p.h.

Crude Oil – Jetty No. 2: 7,000 t.p.h.

Loading: Maximum loading rate provided, actually, by the Terminal:

Fuel Oil	3,000 t.p.h.	Naphtha	1,400 t.p.h.
Gas Oil	1,500 t.p.h.	LPG – Butane	190 t.p.h.
Kerosene	1,400 t.p.h.	LPG – Propylene	90 t.p.h.
Gasoline	1,400 t.p.h.	Bitumen	270 t.p.h.

Bunkering: Bunkering fuel facilities are available on all jetties.

The minimum quantity to be supplied is 100 tons fuel oil and 20 tons diesel oil.

Deballasting: All ballast will be unloaded to the shore facilities. At the moment, the cost of ballast reception ashore is 50 pesetas per ton, minimum charge 40,000 pts. Shore facilities unable to receive slops from heated cargo, chemical additives, low pour point and lube oils.

The Master will report to the Terminal the quantity of ballast on arrival and when due to bad weather, the ballast quantity is over the normal.

Only segregated ballast contained in SBT will be allowed to be discharged into the harbour after approval by the Port Authorities.

Note: Overboard discharge valves and sea suction valves continue to be a source of oil pollution. *Make sure these are tested and proven to be in good working order, closed tight and sealed.*

Gangway: Owner warrants that the vessel is equipped with a gangway in a safe and good operating condition.

Jetty Nos. 1 and 2 are provided with a shore gangway. The cost to the vessel's account is minimal.

Crude Oil Washing Tanks: When it is required to carry out crude oil washing of tanks during cargo discharge, Master must seek approval of the Port Authority and the Terminal at least 24 hours in advance.

During crude oil washing, it is recommended that 1 tug remains on stand-by during the operation.

Jetty Emergency Shutdown Systems and Surge Pressures: All jetties (fuel oil/clean products/LPG) are equipped with Emergency Shutdown (ESD) System to stop loading operations.

The system is activated by pushing the electrical "stop" button at any one of several stations on the jetty and in the Terminal Control Room.

On activating the loading ESD system, all jetties stop loading; the cargo pumps are all shutdown; the loading arm valves close on all jetties.

The valves and other equipment, have been designed and set to close in a minimum time for safety and still avoid damage by surge pressures.

Recognising the tremendous damage surge pressures can cause, careful check of the ship's emergency shutdown system will be made. If suitable record is not available on valve closure times, the Master will be asked to operate the system to enable timing of the valves.

The Terminal will not load at a rate in excess of that shown as being safe. Excess loading times caused by restricted loading rates due to the ship's ESD system will cause additional laytime to be allowed.

All cargo loading lines for fuel oil/clean products have a pressure switch installed that activates the ESD system with the same effect as mentioned above when the pressure on line exceeds 10 kg./sq.m. In case of activating ESD, Master to deliver to the terminal a full report of the incident.

Fenders: On the jetties the fenders and fendering structures are designed to absorb normal working stress levels, and each has a generous energy-absorbing capacity.

The energy imparted by vessels approaching the jetties is:

Berth No.	*Recommended Max. cm./sec.*	*Recommended Max. Angle to Jetty Face*
1	6	0° up to 7.5°
2	8	
3	9	
4 – 5	10	
6	10	

Intermediate "Yokohama" type fenders have been placed on Berths No. 1, 3, 4, 5 and 6, and No. 2 Berths all Yokohama fenders, to improve the absorption of the kinetic energy of vessel.

Mooring Arrangements: See "Plans".

Customs: The Customs Authority will board either when vessel is berthing or at anchor.

The usual documents required are:

6 copies Crew List.

4 copies Passenger List.

1 copy Negative Passenger List; if there are no passengers aboard.

3 copies Cargo Manifest for Petronor.

2 copies Cargo In-Transit, if any.

3 copies Stores List, including bunkers, vessel's property, tobacco, spirits, medicine chest, etc.

3 copies Crew's and/or Passengers' Personal Effects.

The crew members are not allowed to keep more than 200 cigarettes (or the equivalent in tobacco) and a bottle (1 litre) of spirits out of bond. The excess must be included in the vessel's Store Lists, and are to be sealed. The total maximum quantity that any ship can carry in accordance with the Spanish Law is 6 kg. of tobacco or 6,000 cigarettes for each person aboard (for example, for 30 crew members the maximum quantity allowed is 180 kg. of tobacco or 180,000 cigarettes). Any quantity over these amounts should be manifested as "tobacco in transit" and this Manifest visaed by the Spanish Consulate in the last port.

If a Spanish Consul was not available in the last port of call, Master is required to send prior to arrival the following cable:

To: Direccion General de Aduanas – Madrid.

Vessel .... Coming from ....

Bound for Bilbao Petronor with Tobacco Manifest not visaed last port due to Spanish Consul not available in the last port.

Signed: Master.

The text of this cable is to be registered in the log book and 1 copy of the same is to be given to the Customs Agent when boarding.

Port Health: The national and international regulations concerning Free Pratique are applicable at Bilbao.

Free Pratique is granted when at berth; if anchored, the Agent will be requested to arrange the visit under Master's requirements.

Radio advice to the Health Authorities is not required unless there is contagious sickness on board or if coming from an epidemic zone.

Garbage or trash will not be dumped into the port waters. The area surrounding the vessel shall be kept clean.

DENSITY: 1025.

FRESH WATER: Available at some berths, rate 25 – 60 t.p.h., otherwise by barge.

FUEL: Pipelines available at some berths, rate at cargo berths 130 t.p.h. per loading point and up to 3,000 t.p.h. at VLCC berth, otherwise by barge. Advise Agent 48 hours in advance.

REPAIRS: See "Dry Docks".

DRY DOCKS: 3 dry docks 155 m.×20 m.; 146 m.×21.8 m.; 170 m.×19 m. for vessels up to 15,000 d.w.t. Dry docks served by 4×15 ton cranes.

Repair berth with length 450 m. and 5×15 ton cranes.

Contact: Astilleros Espanoles S.A. Tel: (4)4957150. Telex: 3151 Aers E. Fax: (4)4964976.

SURVEYORS: Most internationally recognised and well founded survey companies, concerned with cargo or ships' class certification, are established in the Port of Bilbao as well as those related to insurance in both areas. Ship's Agent can provide detailed information.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Normally by crew, except in liner vessels, when contracted by stevedores.

CERTIFICATES: Have usual documents on board (Safety Radio, Safety Equipment and Safety Construction).

CUSTOMS ALLOWANCES: Normally, Customs permit 200 cigarettes and 1 bottle wine/spirits per man. Also see "Documents".

CARGO GEAR: Usually shore cranes employed in loading or discharging.

REPATRIATION: Good facilities.

AIRPORT: Sondica Airport 6 km. from the City, Tel: 4531350.

Foronda Airport, 50 km. from the City, Tel: 945-273300.

Overseas services and links to all over the world from both airports.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: 1st January; 6th January; 19th March; Good Friday; 1st May; Corpus Christi Day; 16th July, 25th July; 15th August; 12th October; 1st November; 8th December; 25th December; and another two fixed local holidays.

POLICE/AMBULANCE/FIRE: Police Tel: 088.

Ambulance/Hospitals: Basurto Hospital Tel: 4418800. Emergency medical service, Tel: 4614000 – 4614111.

Red Cross: Sea service, Tel: 4600200. Shore service, Tel: 422222

Fire Service: Santurce Area, Tel: 4922800. Bilbao Area, Tel: 088.

EMERGENCY CO-ORDINATION CENTRE: Marine Authority is in charge of services which are covered by the Coast Guard.

TELEPHONES: Every wharf has fixed public telephone kiosks and stevedoring terminal offices have up to date means of communication. No telephone plugs at berths.

SERVICES: Electronic and conventional marine equipment repairs, tanks and pipe cleaning and services in general up to the level corresponding with a first class port. Detailed information can be provided by ship's Agent.

BANKS: Due to the large activity of the port in international trade, every bank has specialised personnel in charge of overseas maritime commercial affairs.

STORING: Authorised ship chandler service is compulsory in order to arrange Customs Clearance. Ship is free to load up to 10 tons of stores. If over 10 tons dockers must be used.

SHORE LEAVE: In general there are no restrictions.
IDENTIFICATION CARDS: No shore passes are issued. Passport or Seaman's Book should be carried for dock entrance gate checking with Crew List.
GARBAGE DISPOSAL:
Limpiezas Nervion S.A. Tel: 4836726. Fax: 4836726. Charge 2,700 Pts. per trip/day.
Conten. Tel: 4432048/4319013. Fax: 4437889. Charge 13,000 Pts. each container.
Collection 24 hours per day.

CURRENCY: Peseta. U.S.$ 1.00 = 141 Pts. U.K.£ 1.00 = 210 Pts. (8.3.94).
DELAYS: Very exceptional and short time if any.
GENERAL: Stevedores' and Ship Agents' Association. Tel: 4234185 – 4239237.
DEVELOPMENTS: *Works in Progress:* Jetty for liquid bulks at Punta Ceballos: This is situated perpendicular to the coast, and is 340 m. long with a draft of 18.0 m. It has a reinforced concrete caisson platform and 2 berths, one on either side, permitting vessels of 10,000 d.w.t. to operate on the South side while vessels of 50,000 d.w.t. will be able to operate on the North side.

Development of the port in the Outer Harbour: This zone extends from the Santurce Breakwater to Punta Lucero Breakwater. The Port Authority has begun the construction of new docks between the Santurce Breakwater and Punta Lucero Breakwater. This will provide the port with 350 ha. of additional surface area with 8 km. of docks and berths with between 21.00 m. and 25.00 m. draft.
AUTHORITY: *Port Authority:* Puerto Autonomo de Bilbao, Campo de Volantin 37, 48007 Bilbao, Spain. *Tel:* 4871200. *Telex:* 32708 Padb E, 31282 Jprb E. *FAX:* 4871205. *Contact:* Luis I. Gabiola, Commercial Manager.

If Cadiz is the second port, the same papers are required except for Customs you only need the "Ruta".
PILOTAGE: Compulsory. Pilot will board the vessel between Los Cochinos and Diamante Buoys, from small tug having buff funnel with a black top with a black letter 'P' on each side of the buff part of the funnel. Pilots communicate with tugs by means of portable radio sets.

Corporacion Practicos Puerto de Cadiz, Muelle Reina Victoria No. 14, 11006 Cadiz. Telephone: 256550 day and night.

Pilot station on VHF Channel 16 and working Channel 14.
ANCHORAGE: Vessels waiting for a Pilot may anchor in any safe position according to draft and weather conditions. Tankers or deep draft vessels may anchor West of the Junction Buoy in 16 m. – 18 m. depth where the Pilot boards at first opportunity.
RESTRICTIONS: *Cadiz - Commercial Harbour:*
Channel Entrance:
Width .... 250 m.
Length .... 3,600 m.
Controlling depth at LLW .... 13 m.
Kind of bottom: Mud, sand & rocks.
Port Entrance:
Width .... 300 m.
Controlling depth at LLW .... 13 m.
Tides:
Maximum tide level .... 3.90 m.

Berth/unberth restrictions: Vessel can berth/unberth at any time of day or night.

Vessels exceeding 32 ft. 10 in. (10 m.) draft are subject to tide.

Vessels over 39 ft. 04 in. (12 m.) draft anchor North of Diamante Buoy where there are no draft restrictions.

Berths are allocated on strict order of arrival with the following preferences:
1. Passenger and Navy vessels.
2. Vessels unloading or loading.
3. Bunkers or provisions vessels.
4. Repair vessels.

Cadiz – Free Zone Harbour:
Channel Entrance:
Width .... 150 m.
Length .... 1,200 m.
Controlling depth at LLW .... 9 m.
Port Entrance:
Width .... 150 m.
Controlling depth at LLW .... 9.0 m.

Tides:

Maximum tide level.................... 3.90 m.

Berth/unberth restrictions: Vessels can berth/unberth at any time of day or night subject to tides.

Cabezuela:

Entrance Channel:

Width................................ 250 m.
Length............................. 2,000 m.
Depth............................... 13.0 m.

Santa Maria – Commercial Harbour:

Channel River Entrance:

Width.................................. 80 m.
Length............................. 1,250 m.
Controlling depth at LLW.............. 5.5 m.
Kind of bottom: Mud & sand.

Berth/unberth restrictions: Vessels can berth/unberth at any time of day or night, subject to tides.

Explosives and Inflammables: Vessel cannot call at Cadiz carrying explosives or inflammables in Transit.

Power Cable: In position Lat. 36° 30.9′ N., Long. 06° 15.2′ W. with clearance of 50 m.

HEALTH: Master should radio, not more than 50 hours and not less than 5 hours before arrival, the following information to the Port Authority: name and nationality of ship, date and time of arrival, last port of call, number of passengers and crew aboard, if doctor on board and details of any sickness noted on voyage. Message to be addressed to "Sanidad Maritima Cadiz". International code quarantine signals to be shown on arrival when Free Pratique will be given provided health situation is satisfactory.

VHF: See "Pilotage".

TUGS: Normally join vessel off San Felipe Breakwater. 4 tugs available, up to 2,550 h.p.

BERTHING:

Cadiz:

Mole Reina Sofia: 600 m. length, depth alongside 12.0 m. – 13.0 m. LW. Ro-Ro ramp with 20.0 m. width.

Mole Alfonso XIII: 324 m. length, depth alongside 10 m. LW.

Mole Ciudad: 316 m. length, depth alongside 10 m. LW.

Mole Reina Victoria: 220 m. length, depth alongside 10 m. LW.

Mole Marques de Comillas: 380 m. length, depth alongside 10 m. LW.

Ro/Ro Terminals: There are 3 Ro/Ro ramps in the Port of Cadiz, 2×12 m. wide×100 tons capacity and 1×6.5 m. wide×60 tonnes capacity. Depth alongside all ramps is 10.0 m.

Industrial Terminal: Located at Cabezuela on the East side of Cadiz port. 530. m. of wharf with depth of 14.0 m. Terminal is used for bulk solid. In the second stage the length of wharf will be doubled. 4×16 ton cranes.

Free Zone: The free zone is about 2 miles South East of Cadiz. The port has 550 m. of berthing space with 9.5 m. of water alongside. 2×6 tons, 1×3/6 tons and 2×12/25 ton cranes.

Santa Maria: Muelle Exterior: Length 774 m. Depth alongside 6.5 m.

Rota: Entrance Channel: Width 70 m., depth 3.5 m. Length of quay 150 m., depth 3.5 m. Port for fishing vessels and pleasure craft.

Gas freeing Plant: General description of services rendered: Th installation is equipped for cleaning and gasfreeing of tankers, remova of last residues and dirty ballast and/or slops.

Reception of dirty ballast may be effected through separators at maximum rate of 2,400 t.p.h. and slops according to discharge rate o vessel's stripping pumps.

Victor Pirate washing machines, conventional and bottom types, an available for using with either cold or hot water. Air driven exhaust fan for gasfreeing available; special equipment for working cargo tanks, safety lamps, portable lamps for small drainages of tanks and means for unloading of mud are available.

From an elevated structure at the mooring berth, towards midships, connections are made for slopping out dirty ballast and slops as well as for supplies to vessel as detailed below. In this structure is also situated the ship's gangway ladder and a pneumatic crane for both removal of materials and refuse ashore.

Plant is able to supply:
- ballast water up to 400 t.p.h.
- saturated stem to 12.5 kg./sq.cm. or reduced steam up to 12 t.p.h.
- washing water to required temperature up to 80°C. and pressure up to 13 kg./sq.cm. and a flow of 250 t.p.h.
- drinking water.
- treated water for boilers.
- compressed air to 7.5 kg./sq.cm.

Feed water can be connected to ship's fire system.

In the above mentioned structure high capacity foam and water cannons are arranged so that they are able to cover a major part of ship's deck. There are also inlets for fire hoses.

The supply of shore power is not foreseen.

Depths in the mooring area are 8.20 m. forward and 10 m. aft at LLW and size limit of vessel is 150,000 d.w.t.

This installation works uninterruptedly all day and night and Sundays if required.

Operator: Delta, P.O.Box 73, Cadiz (Spain). Tel: 23 10 00 to 23 10 09. Telegrams: "Delta" Cadiz. Telex: 76021 ASTIL E.

SHORE LEAVE: Crew are permitted to go ashore subject to police control.

Armengol Vinas Castro, Technical Director. Pedro L. de Frutos Garcia, Port Captain (Tel: 253903). Juvencio Maeztu and Gregorio de Tejada, Free Zone Delegates (Tel: 244600).

CARBONERAS: 36.58 N. 01.54 W. (See Plan)

SHIPMASTER'S REPORT: November 1983.

DOCUMENTS:
5 Crew Lists.
2 Stores Lists.
2 Crew Declarations.
1 Maritime Declaration of Health.
2 Cargo Manifests (in-transit cargo only).

PILOTAGE: Compulsory. Agents inform Pilot of vessel's requirements. The Pilot boards by tug or small fishing boat, about 1.5 miles off the jetty.

The pilot station is situated at Garrucha, about 15 miles North of Carboneras.

ANCHORAGES: There is a small anchorage South of an island called "Isla Carboneras" locally. The approx. position of the island is Lat. 36° 59.6′ N., Long. 01° 53.9′ W. About 1 mile South of the island vessels can anchor; it is not advisable for larger vessels to stay there long, because this place is too close to the shore and strong Southerly winds can be hazardous.

The depth of this anchorage is between 40 m. and 50 m.

MAX. SIZE: *Hornos Ibericos:* Max. draft 40 ft. Max. LOA 210 m. Max. beam 32 m. Max. airdraft 13 m. 100,000 d.w.t.

HEALTH: No Radio Pratique available, no yellow flag necessary.

RADIO: The nearest stations are Cabo de Gata – VHF Channels 16, 20, 27 and Cabo de Palos (EAP) – VHF Channels 16, 26, 27, but very poor reception.

VHF: The Pilots have to be called on VHF Channel 16; working Channels 12 or 9. Also see "Radio".

TUGS: 2 tugs are available, each 1,300 h.p. If more tugs are necessary, they have to be ordered via Agents from Almeria.

BERTHING: *Hornos Ibericos:* In front of the entrance to the port the vessel will be turned around by two tugs and enter the port stern first. There is one berth (length 240 m.) only and the ships always have to berth with the port side alongside. Usually the starboard anchor will be used. 4 headlines made fast to the shore by a small fishing boat as well as 3 sternlines and 1 breastline aft. 2 fore and 2 aft springs are made fast to the jetty. The jetty is fitted with 4 elastic fenders and additional tyres.

Pucarsa: One quay with length 240 m., depth 15.0 m., for discharge of coal.

BULK CARGO FACILITIES: *Hornos Ibericos:* There is one conveyor for loading cement and/or gypsum with a range of approx. 30 m. Every vessel with a length of approx. 200 m. has to shift for loading all holds. 1 fixed electric crane with capacity 11.5 tons, 1 mobile electric crane with capacity 9 tons and 1 mobile electric crane with capacity 10 tons. *Pucarsa:* 1×35 ton mobile transporter. Discharge rate 1,600 t.p.h.

STEVEDORES: Stevedores work 24 hours a day, including Saturdays and Sundays.

MEDICAL: Only one doctor available. Serious cases are treated at hospital in Almeria. Vaccinations are done in Almeria.

FRESH WATER: Available by lorry only, each lorry carries 8 tonnes.

FUEL: Available by lorry from Almeria, max. 50 tonnes per lorry.

CONSULS: The nearest Consulates are at Almeria.

REPAIRS: Can be undertaken by workshops in Almeria or Cartagena.

GANGWAY/DECK WATCHMEN: Not compulsory as there is a guard at the factory gate.

HATCHES: Opening/closing done by crew. Open parts of hatches will be covered with tarpaulins by stevedores to prevent dust.

CERTIFICATES: No certificates required by Port Authority or Agents.

CUSTOMS ALLOWANCES: The quantity allowed per each crew member is 1 bottle spirits and 1 bottle wine. 6,000 cigarettes is to be allowed on board for each person on board.

REPATRIATION: Possible via Almeria, approx. 70 km. from Carboneras.

AIRPORT: At Almeria.

TIME: GMT plus 1 hour; from June to September GMT plus 2 hours.

HOLIDAYS: See "Almeria".

POLICE/AMBULANCE/FIRE: No facilities. In case of emergency vessel has to inform the stevedores who will contact the agency.

IDENTIFICATION CARDS: Not required. Crew members have to take their Seaman's Books ashore and the guard at the gate checks their names with a Crew List, received from the Agents.

GARBAGE DISPOSAL: Contact: Construcciones y Contratas S.A. Tel: (951) 454125.

WASTE OIL DISPOSAL: Contact: Jose A. Molina Hernandez. Tel: (951) 239042.

SEAMAN'S CLUBS: None.

AUTHORITY: Junta del Puerto de Almeria, Muelle de Levante, 04071 Almeria, Spain. *Tel:* (951) 236992. *FAX:* (951) 232949. *Contact:* D. Emilio Grande Onieva, Port Director.

CARTAGENA: 37.35 N. 00.59 W. (See Plan)

DOCUMENTS:
6 copies of the Crew List.
6 copies of the Passenger List, or 2 negative copies as the case may be.
2 sets copies Manifests covering cargo destined to Cartagena and carried in transit.
Store Provision List, in duplicate, including items such as: tobacco, spirits, radios, coffee, tea, bunkers, and any other items belonging to the vessel.
2 copies of all Personal Effects Lists, from passengers and ship's crew.

The amount of cigarettes allowed for each member of crew/passenger is 6 kilos; any amount over has to be manifested as "tobacco in transit", and this manifest must be visaed by a Spanish Consul in the last loading/discharging port. If there is no Spanish Consul in the port of call before Cartagena, the Master is requested to send a cable to: Direccion General de Aduanas, Madrid, quoting as follows: "m.v. '. . .' coming from . . . order to proceed to Cartagena tobacco manifest unlegalised = Master".

This cable is to be inserted in the radio log-book, and copy of same to be delivered to local Customs Authorities when boarding the vessel.

APPROACHES: Escombreras Bank with datum depth of 8.9 m. situated West of Escombreras Island, extends from 200 m. to 400 m. West of the Western tip of the island. This bank is marked by a West Cardinal Mark on top of a cylindrical post, 10 m. high, with a quick flashing white light, 9 flashes ev. 15 seconds, on the Western end of the bank.

There is a zone used for submarine exercises which is marked on the charts. Occasionally, naval divers carry out exercises in the vicinity of the port entrance. These are accompanied by naval vessels showing appropriate signals.

Ships bound for Escombreras, to enter the port, should steer for a point situated at the intersection of the N.S. line of the red light at the extremity of Navidad Pier, and the E.W. line through the green light at the extremity of the Bastarreche Pier, at which point, approximately, the Pilot boards the vessel. For tankers of more than 100,000 d.w.t., the pilot boards the vessel approximately 2 miles Westward of Escombreras Island.

The least recorded depth in the entrance to the port is 25 m. The approaches to the Port of Escombreras do not present any difficulties.

PILOTAGE: Compulsory. Position of pilot station 37° 34.6′ N., 0° 59′ W. Position with green light of Dique de Curra bearing 000°, and the white light of Las Losas bearing 090°. This is the position at which the Pilot normally boards.

Vessels bound for Escombreras wait for Pilot in position 37° 34.2′ N., 0° 59′ W., with green light of Dique de Curra bearing 000° and the green light of Dique Bastarreche bearing 090°.

Pilot launch is a motor-boat with cabin, about 11.0 m. long, black hull, green below water line, white letter "P" painted on both sides.

When bad weather prohibits Pilot boarding in the above position, vessel may be required to embark Pilot inside the harbour breakwaters.

Vessels call Pilot in daytime by code flag "G", or by sounding 3 prolonged blasts on the whistle.

Radio messages, with ETA, may be sent direct to Practicos Cartagena with 24 hours' notice, and confirmed 12 hours before arrival, messages should include vessel's sea water draft and, if calling for the first time, vessel's length overall. Pilot station equipped with VHF.

ANCHORAGE: Vessels anchored within the port limits should not carry out repairs affecting main engines as the possibility of sudden storms in Winter may make it necessary to move to a sheltered anchorage North of Cabo Tinoso, or to put to sea.

Vessels under 29 ft. 6 in. draft may anchor inside the breakwater provided they do not obstruct other vessels' movements.

Anchorage for larger vessels in Cartagena Roads, approximate position Lat. 37° 34.3′ N., Long. 01° 00.0′ W. in depths of about 65 m., good holding ground.

Anchorage for small tankers off Escombreras in approximate position Lat. 37° 34′ N., Long. 0° 58′ 23″ W., in depths of 42 m.

HEALTH: Free Pratique is immediately obtained when vessels berth any time from sunrise to sunset. Port Health Officers, require Maritime Health Declaration, Derat Certificate, and copy of Crew and Passenger Lists.

MAX. SIZE: No length limitations. For Cartagena max. draft 11.0 m. For Escombreras max. draft 20.4 m.
RADIO: Cartagena Radio, Aranjuez Radio, and/or Gibraltar Radio.
TUGS: 6 tug-boats 1,100 h.p. – 3,800 h.p. with fire-fighting capabilities. All 6 tugs on duty 24 hours duly equipped, with 2 shifts of crew.

Tugs join vessels in vicinity of port entrance, vessel's lines normally used.

The tugs available to assist berthing tankers in Escombreras are all diesel tugs, equipped with fire-fighting equipment. 6 tugs available of up to 3,800 h.p.
BERTHING: Total length of general cargo quays 679 m. Depth alongside 8 m. – 10 m. Solid bulk materials: Total length of berthing 717 m. Depth alongside 8 m. – 10 m.

Also see "Tankers".
CRANES:

No.	*Capacity*	*Type*
7	3 – 20 tons	Electric Gantry
2	3 tons	Mobile-Diesel
1	6 tons	Mobile-Diesel
2	25 tons	Mobile-Diesel
1	90 tons	Mobile-Diesel

STEVEDORES: In the case of a vessel calling at Cartagena at night time, Sundays or holidays, it is important that Master cable 24 hours in advance to advise his ETA in order that Agents are able to arrange stevedores' operations. Gangs can be called on as follows: on weekly working days 0800 and 1330 hrs. On Sundays/holidays 0800 hrs. (with prior advice to Union by 1200 hrs. on Saturdays or day preceding holidays). The official working hours are: Monday/Saturday 0800 to 1200 and 1330 to 1730 hrs. – Sundays/holidays: from 0800 to 1400 hrs.
MEDICAL: Medical services rendered as soon as requested but, in case of emergency, Master required to send urgent cable in advance.
TANKERS: Tankers call at Port of Escombreras 2 miles away from Cartagena Port, this port owned by Repsol Petroleo S.A. Slop discharge facilities available at Escombreras.

For ships of 250,000 d.w.t. Berth No. 7, of recent construction, consists of 4 dolphins, in a line parallel to Bastarreche Mole. Between the first and third dolphin is situated a loading platform with loading/discharging lines. The centre of this platform is situated at a distance of 230 m. from the head of Bastarreche Pier, bearing 140°.

The least depth in Berth No. 7 is 20.6 m. at the extreme South of the berth. The rest of the area has a depth of between 20.6 m. to 26 m.

The maximum length foreseen for tankers of 250,000 tons d.w.t. is 350 m. or, 1,148 ft., since the total length of the berth is 430 m.

The maximum allowable draft is 19.5 m. forward and 21.4 m. aft.

Shore lines for crude oil are 1 of 40 in. diameter and 3,500 m. length, and another of 24 in. diameter and 3,500 m. length.

The Woodfield hose-handling gantry has 4×16 in. hoses of which the 2 outside hoses should be used for loading bunkers as well as for discharging. Connecting flanges of 16 in. diameter, type 150 ASA.

Fresh water can be supplied by pipeline at all berths at a rate of 45 t.p.h.

Only vessels up to about 100,000 d.w.t. may be berthed at night.

8 berths suitable for tankers from 8.0 m. to 20.4 m. draft.

3 berths for LPG carriers up to 11.0 m. draft. Max. length 225 m.

A new berth for LNG carriers and minerals in bulk has been constructed in Escombreras Basin. For LNG carriers, max. draft 11.1 m., max. length 200 m. For minerals in bulk, total length of pier 350 m., max. draft 14.0 m.

Also see "Shipmaster's Report".
FRESH WATER: Available from quay by hose connections, only on working days. On Sundays/holidays notification to be required before 1400 hrs. preceding day.
FUEL: At Cartagena, only gas oil available from tank trucks. At Escombreras all grades of fuel available subject to advance notice given.
FIRE PRECAUTIONS: The port area has its own Fire Department under supervision of Port Director. Although there is no water-borne equipment available, tug "Brio" will assist as required as well as Cartagena City Fire Department.
CONSULS: The following countries are represented in Cartagena:

Belgium	France	Netherlands	Peru
Denmark	Greece	Norway	Sweden
Finland	Italy	Panama	

REPAIRS: There are very good repair facilities. A private shipyard "Empresa Nacional Bazan" and 2 other private repair shops.
DRY DOCKS: One dry dock can accept vessels (35,000 d.w.t.) of 566 ft. length and 73 ft. beam. Syncrolift of 8,740 tons lifting capacity.
GANGWAY/DECK WATCHMEN: Not compulsory, only used when required by Master under Immigration Police Supervision.
OPENING/CLOSING HATCHES: Usually by ship's crew.
CUSTOMS ALLOWANCES: 200 cigarettes per each crew member, out of bond. The excess to be declared as cargo in transit. Wine and/or spirit: 1 bottle for each crew member or passenger.
REPATRIATION: All facilities available.
AIRPORT: San Janvier Airport situated 27 miles from Cartagena with daily service to Madrid, Barcelona and Almeria.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS: 1st January; 6th January; 19th March (St. Joseph); Maundy Thursday from 1400 hrs.; Good Friday; 1st May (Labour Day); Ascension Day; Corpus Christi; 29th June (St. Peter and St. Paul); 18th July (National holiday); 15th August; 12th October; 1st November(All Saints' Day); 25th December.
POLICE/AMBULANCE/FIRE: Police, Tel: 501456. Ambulance, Tel: 503470. Red Cross, Tel: 510727. Fire Department, Tel: 501111. Port Fire Department, Tel: 503100.
CREW IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: Arranged by Agent with local company.
WASTE OIL DISPOSAL: Arranged by Agent with local company.
SEAMAN'S CLUBS: The Casa del Mar can accommodate seafarers in possession of a Seaman's Book (39 beds available). Tel: (968) 505850, 502050.

DEVELOPMENTS: There is a programme to increase berthing-places by building new piers close to breakwaters, available for 3 vessels.

SHIPMASTER'S REPORT: March 1981.
Approaches: Approach to the port provides no great problem coming from either the East or West. Plenty of positions are available from the land as you near the port. The bay in which the port is situated is deep water up to the breakwater. So for anchoring, vessel has to proceed well into the bay. Pilots will advise the number of vessels lying at anchor and a suitable anchorage position.

The bay is exposed to winds from the S.E. through to the S.W. As the weather was good on both occasions that the vessel has visited, no comment can be made as to whether the anchorage would be tenable in strong winds, from these quadrants.
Pilots: Readily available day or night. Pilots board from a small boat which is rather slow. The same boat acts as line boat when the vessel is berthing. Pilots work Channel 16, and can be contacted about 1 hour out from the port.
Berthing/Berth: Vessel can berth either side of the LPG Pier. Although on the Eastern side of the berth the max. draft allowed aft is 31 ft. 6 in. and forward 28 ft. On the Western side of the pier there is 36 ft. of water. Vessels berth with the assistance of 3 tugs (1 forward and 2 aft). Ship's lines are used to the tugs. Usual tie up forward is 4-2-2 and aft 4 lines go to buoys, 2 springs from the stern, and 2 breast lines from the main deck winch.

Pilots advise that the berth is exposed to S.W. winds and vigilance is required in tending moorings. The berth is adequately fendered with large tyres.

Fresh water is available at short notice, and is piped to the quay. The water man can be found at the gate. Water can be supplied any day except on a Sunday. Bunkers are also available from the quay.
Cargo: Cargo is discharged through a 12 in. 150 ASA "T" connection from which 2×6 in. lines are lead off. Shore supply this connection, and connect the pipe.

Discharge back pressure is 8 bars which means running 2 pumps. Discharge rate is between 70 – 210 tonnes per hour. The discharge rate varies without any notice being given to the vessel by the terminal as they direct the cargo into shore tanks or coastal vessels.

Communications are very poor between the terminal, the vessel and the Agent. Little or no information is relayed to the vessel, as to the state of the tanks, number of coasters arriving, etc. On this occasion we discharged half the cargo into another vessel in order to complete the discharge in time for loading our next cargo.

Customs and the shipper's agreements had to be granted.

Daily cargo surveys are carried out, at either 0800 hrs. or 1600 hrs. Surveyor is happy to take ship's readings without sighting ullages and temperatures himself. For commencing and completion surveys he is of course present. From daily surveys the terminal require total discharged and the hourly pumping rate for the day.

The terminal upon arrival, also asks the ship to sign a letter saying they require the cargo to be pumped with a back pressure of 15 kg./sq.cm. and for the cargo to be heated. A booster pump is required for this port and also a cargo heater (this may soon be supplied). At present the vessel has the pipe work for the heater. Heater and booster pump will be sited on the quay, and ship's power and pumps will be used to run both appliances.

With the high back pressure it is difficult to strip the tanks, so if time allows strip tanks into one tank with the manifold valve closed, and then finally discharge from this tank. In the end this will save time.

Shore will request hot gas to clear the cargo lines.
Chandler: Can supply most items but needs a few days to organise matters. Stores can be supplied by boat. The boat is rather like a small pleasure craft but quite adequate.

Shotblast can be supplied at this port. The shot was also delivered by barge.
Repairs: Engine repairs can be carried out in this port by the local shipyard repair firm.

AUTHORITY: Capitan de Navio, Comandante Militar de Marina de Cartagena, Comandancia de Marina. *Contact:* Enrique Rodriguez Sanchez, Port Captain.

CASTELLON DE LA PLANA: 39.58 N. 00.01 W.

(See Plan)

(A) CASTELLON HARBOUR
(B) BREASTING ISLAND AND SEA BERTH

(A) CASTELLON HARBOUR

DOCUMENTS:
- Manifest of Castellon cargo: 1 set covering all loading ports; make sure that this Manifest is in perfectly good order before ship's berthing, as the Customs will board the vessel immediately and take it away as it is; thereafter any omission or excess of pages may lead to a fine.
- Manifest of the Transit Cargo: 2 sets (the same recommendations as above).
- 3 Crew Lists.
- 2 Negative of Passengers.
- 2 sets of Bills of Lading of Castellon cargo.
- 2 Provisions Lists.
- 2 Manifests of Personal Effects.

PILOTAGE: Compulsory, and service is permanent. Pilots board vessels by a cutter in Roads near entrance formed by the 2 breakwaters.

Pilot cutters are painted white and have the letter "P" in black on each bow. Cutters have a blue flag, with letter "P" in white. Signals to be made by vessels requiring Pilot: 3 long blasts. Telegraphic address: Practicos, Comandancia Marina, Castellon".

ANCHORAGE: Vessels can remain at anchor in the Roads. Recommended anchorage: 0.5 miles East of lighthouse in depth of 12 m.

RESTRICTIONS: Max. draft 22 ft. for vessels of about 110 m. – 120 m. length. For vessels of more 120 m., to 140 m. length, max. draft is 20 ft. – 21 ft.

Also see Section "B".

HEALTH: Pratique obtained immediately after berthing, when Health Officer boards vessel. In case of suspected disease or fever on board Master must radio Agent to advise the Health Office. Following documents are required by the Health Officer upon berthing: Maritime Declaration of Health, Derat Certificate, 1 Crew List.

RADIO: Aranjuez Radio, call sign EAD, 36 – 48 hours prior arrival nearest radio station is El Grao Radio, call sign EAV.

TUGS: Tugs join vessels at entrance of port. Vessels of more than 100 m. length normally use 1 or 2 tugs. Ship's ropes used.

STEVEDORES: Very important that Master sends in advance short radio notice regarding vessel's ETA so Agent can inform Shippers or Receivers' stevedores accordingly. Official working hours of port are: Monday/Saturday 0830 – 1230 and 1400 – 1800 hrs.

MEDICAL: All kinds of medical services can be arranged. In case a crew member needs medical attendance urgently, it is advisable that Master sends a radio message in advance.

TANKERS: See Section "B".

LPG: See "Shipmaster's Report".

BALLAST: All ballast must be discharged to shore tanks, no exception will be made to this rule. A total of 17,000 cu.m. (110,000 bbls.) can be received by the Refinery ballast tanks.

FRESH WATER: All piers have water available by shore pipes. The rate of delivery is about 8 t.p.h. – 9 t.p.h.

FUEL: Available with 5 days' notice and subject to "CLH" berthing availability.

CONSULS Italy, Navarra 99, tel. 211004; France, Avda. Almazora S/N, tel. 211717; Norway, Enmedio, 9, tel. 222550; Sweden, Maestro Ripolles, 28, tel. 220053.

REPAIRS: Work shop for small repairs.

GANGWAY/DECK WATCHMEN: Available but not compulsory.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CERTIFICATES: Vessels should have usual documents on board, but only the Safety Wireless, Safety Equipment and Derat Certificates are required by authorities.

CUSTOMS ALLOWANCES: Normally, Customs permit 200 cigarettes per man out of bond and 1 bottle of spirit per man.

CARGO GEAR: All commercial piers served by electric shore cranes able to lift 3 – 6 tons and 14 – 18 tons (restricted use).

REPATRIATION: Good facilities exist.

AIRPORT: Valencia, 70 km. away.

TIME: GMT plus 1 hour. Summertime: GMT plus 2 hours (29th March – 26th September).

HOLIDAYS: 1st January; 6th January; 19th March, St. Joseph; Maundy Thursday after 1400 hrs.; Good Friday; 1st May, Labour Day; Ascension Day; Corpus Christi; 14th June, local holiday; 29th June, St. Peter and St. Paul; 18th July, National holiday; 25th July, St. James; 15th August; 12th October; 1st November; 8th December; 25th December; and 2 or 3 local holidays more, variable.

POLICE/AMBULANCE/FIRE: Police: tel. 220516; Ambulance 213944; Fire 221222.

IDENTIFICATION CARDS: Not required.

SHIPMASTER'S REPORT: December 1980.

Approach: Straightforward (Chart BA. 1701). A plan of the port is included on BA. 1458. During final approach care must be taken not to pass between the buoys around the sea berth for oil tankers.

Anchorage: Can be obtained 1 mile Eastwards of Dique de Levante in 15 m.

Pilotage: Call on VHF Channel 16 and Pilot boards approximately half a mile Eastwards of Dique de Levante. Strong S.W.'ly set experienced whilst awaiting Pilot. Pilot boards from small launch which doubles as a mooring boat.

One tug is taken outside the breakwater using 2 ship's lines through the centre lead forward. A second tug makes fast at port main deck aft (tug's line) when vessel is in inner harbour. (Darsena Comercial). Draft limitation of 22 ft.

Berthing: Possible day or night. Starboard side to Muelle de Serrano Lloberes. The berth doubles as a bulk facility and care must be taken to avoid fouling the loading elevator with the bow flare. The elevator is on rails 1.0 m. inside the face. The berth is fendered with tyres on wooden axles – quite common in Spain and quite effective.

There are ample bollards. As soon as first lines are ashore, the forward tug takes up position at the break of forecastle using tug's line to assist in pushing vessel alongside. Lining up takes some little time using mooring winches.

Connection: Six shore anacondas link a hydrant-like pipe, emerging from a manhole on the quay, with the vessel's 10 in. manifold. Hoses are 6 in. (300 ASA) and shore personnel connect/disconnect. Vessel supplies and fits reducers. Starboard derrick used to support a metal cradle carrying hoses over ship's rail.

Discharge: Upon completion of cargo survey, discharge commences slowly whilst hoses are purged by a small hose from the 'hydrant' to the sea. No heater or booster pump are required at this port. Back pressure approximately 3 kg./sq.cm. and average rate of 125 t.p.h. overall with usual hourly rates of 150/160 tonnes/p.h.

Shore Tanks: Are atmospheric and situated some 200 m. N.E. of berth. There are 2 tanks (each 2,000 – 2,500 tonnes capacity). There would appear to be no reliquefaction plant and gas is flared during filling from a flare situated atop each tank. It is reported that this leads to discrepancies in cargo figures but this was not the case for this call. Throughput is estimated at 15,000 tonnes per month with ammonia arriving from C.I.S., Libya, and Mexico.

Customs: Attended in the morning. Their visit was brief as transit papers (RUTA) has been prepared prior to the vessel's departure from Cartagena. Remember that bond locker must remain sealed when coasting. Customs checked bond seal.

General: Fresh water is available but none taken this call. Lub oils available via normal Madrid 'permit'. The Pilot can be reached on Tel: 222457 if required during the vessel's stay.

Only 2 tugs available and as preference is given to tankers berthing at sea berths, delays can occur in docking/undocking. We were delayed for four hours on leaving. Tugs are necessary for this port.

Local town (El Grao) is very quiet with numerous small restaurants all within a few minutes walk of the berth. A three star hotel opposite the yacht club is good for telephone calls to U.K. (cost around 265 pesetas for first three minutes).

Castellon proper lies 4 km. inland. Bus fare 30 pesetas.

AUTHORITY: Comandancia Militar de Marina, Grao de Castellon, Castellon de la Plana, Spain.

(B) BREASTING ISLAND AND SEA BERTH

LOCATION: The Petroleos del Mediterraneo, S.A. Refinery is located about 1 mile southward of Grao de Castellon Harbour on the Mediterranean coast of Spain.

The Refinery marine facilities are composed of a Breasting Island and a Sea Berth, both located in open sea.

The Breasting Island is located in approximate position Lat. 39° 56′ 42″ N., Long. 00° 01′ 36″ E., and the central point of the Sea Berth is in approximate position Lat. 39° 56′ 16″ N., Long. 00° 03′ 03″ E.

A Sea Buoy with radar reflector, showing a white flash every 10 seconds is located in approximate position Lat. 39° 56′ 07″ N., Long. 00° 03′ 49″ E.

The Refinery flare is located in position Lat. 39° 57′ 00″ N., Long. 00° 00′ 06″ W. The total height of the flare above the ground level is 75 m. (250 ft.).

The Grao de Castellon Harbour lighthouse is located in position Lat. 39° 58′ 06″ N., Long. 00° 01′ 42″ E. A white light showing groups of one and two occulting every 10 seconds is exhibited from it, with a range of about 17 nautical miles.

DOCUMENTS: The Port Authorities will board and clear the vessel at anchor or after berthing.

Vessels calling at Castellon should have ready the following documents:

6 copies Crew List.
2 copies Crew Manifest.
2 copies Stores List.
2 copies Passenger List.
Clearance from Last Port.
Vessel's Certificates.
Consignee's Documents (if calling to discharge), including:
  (a) Vessel's Manifest of cargo.
  (b) Bill of Lading.
  (c) Intake Certificate.
  (d) Ullage Report.
  (e) Inspection Report.
  (f) Certificate of Origin.
  (g) Tanker's Time Report.

PILOTAGE: Pilotage is compulsory for all vessels. The pilot will board vessels in the vicinity of the waiting area or at anchor and will advise the Master on approaches to the berth, mooring and unmooring.

ANCHORAGE: Refer to Agent for certain restrictions on anchorage areas.

RADIO: *Arrival Message:* Masters are requested to advise Petroleos del Mediterraneo, S.A. Refinery, radio address "Petromed Castellon", of their expected time of arrival, 72 hours in advance or on sailing from the previous port. A cable confirming the ETA must be sent to "Petromed Castellon" 24 hours prior to arrival. Any further changes in the vessel's ETA must be promptly advised.

The Refinery will contact the vessel via Saint Lys Radio/FFL or Aranjuez Radio/EAV, with docking or mooring instructions, together with any other information to expedite the vessel's turnaround.

Radio Telephone contact should be established with Petroleos del Mediterraneo, S.A. Refinery on VHF Channels 13 and 16; call sign is "Petromed Castellon".

The arrival message must include:

1. Vessel's name, ETA and Master's full name.
2. (a) If calling to discharge:
    Grade and cubic metres of cargo on board.
    Grade and cubic metres of bunkers required.
    Deepest draft in feet.
    Freeboard in feet.
   (b) If calling to load:
    Grade and cubic metres for each product to be loaded.
    Loading sequence suggested.
    Grade and cubic metres of bunkers required.
    Ballast on board and pumping rate per hour.
3. If calling to discharge crude oil:
    Ship's and shore figures.
    Safe working load of the cargo hose booms (minimum 8 tonnes).
    Number of shackles of usable chain on each anchor.

All of these direct contacts with the Refinery do not relieve the Master from his responsibility to keep his Agent fully informed.

TUGS: The use of tugs is compulsory by all vessels calling at the Petroleos del Mediterraneo, S.A. marine facilities.

Two tugs are stationed at Grao de Castellon and are available to assist vessels using the facilities through the Agency of Petroleos del Mediterraneo, S.A. who will, as Agents for the Owners of the tugs, make arrangements for the services of the tugs.

Ship's ropes must be used to the tugs.

Tugs are equipped with safety devices against fire and oil spillage.

BERTHING: *Sea Berth:* The depth of water in the berth is about 25 m. (82 ft.).

Vessels berth heading 075°/080° using both anchors forward, with about 280 m. (900 ft.) of chain out on each anchor.

The stern is secured to 5 Lamgar buoys equipped with 2 release hooks on each one. These buoys have flashing lights.

One navigational aid consisting of 2 lighted buoys is used to proceed to the Sea Berth and drop the anchors.

The crude oil is discharged through a 42 in. pipeline. The length of the pipeline to the coast is about 4,000 m. (14,000 ft.) and about 300 m. (990 ft.) to the crude oil tanks.

At the Sea Berth, the crude oil submarine pipeline ends in 2 strings of flexible hose. The length of each string is about 85 m. (280 ft.) and consists of 11 sections of 16 in. hose.

The flange of the rail hose to be connected to ship's manifold is 16 in., ASA series 150.

Vessels may be requested to displace the contents of the crude oil line by pumping at a reduced rate.

The maximum pressure at the ship's manifold should not exceed 10.5 kg./sq.m. (150 p.s.i.).

There is also a 10 in. pipeline for bunkering. This pipeline is connected to the Breasting Island and the total length is about 2,250 m. (7,400 ft.). The Sea Berth end of this bunkering line is connected to a string of flexible hoses consisting of 11 sections of 10 in. hose, with a total length of about 85 m. (280 ft.).

All hoses are resting on the sea bed.

The hoses will always be connected to the port side of the vessel.

Vessel's boom and rigging should have a minimum SWL of 8 tonnes.

Mooring: Vessels calling at the Sea Berth should be equipped with a minimum of 10 synthetic stern mooring ropes in good condition and each not less than 150 fathoms in length.

These ropes should be 9 in. or 10 in. in circumference. Mooring wires or wires and nylon tails instead of the ropes are acceptable. All vessels should be equipped with at least 13 shackles of usable chain on each anchor.

Cargo handling operations will not commence until the vessel is adequately moored.

Breasting Island: The depth of water in the berth is about 12.5 m. (41 ft.)

Vessels berth heading either East or West. Max. draft 37 ft.

The Breasting Island is built on piles. A central platform 70 m. (230 ft.) long and 15 m. (49 ft.) wide accommodates the loading arms and the island services. Two mooring dolphins are located at about 128 m. (420 ft.) from the centre of the platform. They are linked with the main platform by a walkway.

The platform elevation from the sea level is 6.8 m. (22 ft.).

Both sides of the Breasting Island central platform and the Eastern dolphin are provided with a resilient fendering system.

No fendering system is installed on the Western dolphin.

Two "swamped" breasting wires are anchored about 200 m. (640 ft.) off both sides of the Breasting Island.

Quick release hooks are provided on the platform corners and on both mooring dolphins.

Metal loading arms of the self–supported counterweighted type are used.

The number and size of the arms on either side of Breasting Island is as follows:

2×10 in. for dark products, bunker and ballast.
2× 8 in. for light products.
1× 8 in. for Ammonia.

The connecting flanges on each are ASA Series 150 and they are equipped with "Camlock" type quick connecting devices.

The following products can be loaded or unloaded at the Breasting Island:

Clean: Naphtha.
Premium Gasoline.
Regular Gasoline.
Automobile Diesel Oil/Heating Oil.
Turbo Fuel.
Ciclohexane.
Ammonia.
Dark: Marine Diesel Oil.
Domestic Fuel Oil.
Fuel Oil.
Crude Oil.

Cargo handling operations will not commence until the vessel is adequately moored.

All mooring ropes shall be in good condition and the crew shall keep them properly tended at all times.

One diesel driven fire pump delivers salt water to the fire system covering the Breasting Island.

This fire system is composed of 6 fire monitors mounted on raised platforms and fire hydrants at deck level.

The pump capacity is 340 cu.m.p.h. (1,500 g.p.m.) at 10.5 kg./sq.cm. (150 p.s.i.).

Fire hoses of 150 ft. and 300 ft. in length are positioned close to the hydrants and also stored on the fire hose racks located on both sides of the Breasting Island main platform.

The Breasting Island is equipped with devices against oil spillage.

LOADING: *Connecting/Disconnecting Loading Arms:* Connecting an or disconnecting of hoses and/or loading arms will be carried out Refinery contracted personnel and the assistance of at least 3 cre members.

All the operations will be performed under the direction an responsibility of a vessel's qualified Deck Officer.

All the vessel's equipment, i.e. winches, topping–off booms, etc., mu be handled by the vessel's crew.

The Refinery will advise the Chief Officer on procedure for connecti the hoses and/or loading arms.

In case of having to leave the Breasting Island or Sea Berth due a change of the weather or any other emergency, the vessel's crew mu carry out all the disconnecting of cargo hoses or loading arms.

After the hoses or loading arms have been connected to the vesse manifold the vessel's crew must carry out any shifting of hoses or loadi arms required, either for loading/discharging or bunkering operations *Loading Rates:* It is expected that all vessels will be able to recei cargo as fast as it can be delivered.

The dark products are pumped by either one or two centrifugal pum of 900 cu.m.p.h. capacity each. The clean products are pumped by eithe one or two centrifugal pumps of 680 cu.m.p.h. capacity each.

BALLAST: All ballast must be discharged to shore tanks, no exceptio will be made to this rule. A total of 15,000 cu.m. (94,000 Bbls.) can b received by the Refinery ballast tanks.

Special care must be taken not to pump overboard the contents engine room and pumproom bilges or any other oily product.

Vessels in ballast shall have sufficient draft and will be proper trimmed for safe manoeuvering on arrival, but should not arri excessively ballasted.

Crude Oil Washing: Vessels which require to carry out crude oil tan washing at Castellon should request authorisation to do so through th Refinery or ship's Agent at least 48 hours before arrival.

The Refinery will send by telex the following questions which must b fully and promptly answered by the vessel; in the event of the answe to those questions being satisfactory, the vessel will be provisional authorised for crude oil washing of tanks.

Example of Telex:

REF	Forthcoming crude oil washing of tanks at Castellon. Following points require confirmation:
AAA	Inert Gas System fully operational and tested.
BBB	Each tank to be positively pressurised and method establishing that this is so to be available.
CCC	The oxygen content of each tank should be maintained belo 8% by volume before and during the operation.
DDD	Inert Gas System gas output to be continuously monitored an the oxygen level maintained below 8% by volume.
EEE	A positive means of establishing the output of the inert ga system is to be available in the ship's control room at all time and under constant supervision of the ship's staff who mus take immediate steps to abort the tank washing if necessar
FFF	Pressures in cargo tanks must be available to control roo personnel.
GGG	All systems to be permanent steel pipework and pressu tested.
HHH	All tank openings to be sealed. Remote tank gauging system therefore essential.
III	Throttling of discharge for crude spraying to be done on ship valves.
JJJ	Responsible designated person to be in charge of operatio
KKK	Efficient radio communication to be maintained between sh and shore.
LLL	Please answer all points and add any additional sh requirements or comments.

When the ship is operating at the Castellon Terminal, before crud oil washing can be carried out, the following questionnaire regardin safety measures should be answered and signed by the Master:

(1) The Check List sent by telex has been carried out, before th operation starts.
(2) The Refinery representative has been informed of th operating plan.
(3) Ship/shore communications have been checked and are correct working order.
(4) Inert Gas System is operating and the oxygen level within th tanks is below 8% by volume.
(5) Positive pressure of Inert Gas System gas exists in all tanks
(6) Ship's personnel are available in their assigned posts.
(7) Stationary oxygen analyser is working correctly.
(8) Portable oxygen analysers are in correct working order.
(9) Oxygen level in tanks is below 8% immediately before startin crude oil washing.
(10) During crude oil washing the Master accepts the responsibili of checking the oxygen level of Inert Gas System effluent least every hour; that, at all times, all ship's machinery sha be and remain closed down except for the machinery essentia for the purpose of the operation and the safety of the ship an that designated personnel in charge of operations kee permanent watch at their assigned posts.
(11) The crude oil washing operation will be carried out at the sol risk and responsibility of the ship and the Master will remai responsible for ensuring that all proper safety precautions a observed.

Minimum Tank Cleaning Requirements: Following is a chart which ha been prepared for general guidance in the preparation of cargo tank for loading the different grades of cargoes indicated.

None of the indications contained in this chart will relieve the Maste of the responsibility for carrying out additional tank preparation whic he may find necessary to protect product specifications or the saf handling of the vessel's cargo.

Previous Cargo	Cargo to be Loaded					
	Naphtha	ATF–1	Mogas	ADO/HO	MDO	FO
Avgas	SH	M	D	M	M	F
JP–4	F	M	F	F	F	F
Mogas	SH	M	F	M	M	F
Naphtha	D	M	F	F	F	F
ATF–1A	F	D	F	F	F	F
ADO/HO	S	M	S	D	D	F
MDO	U	U	U	U	D	D
FO	U	U	U	U	M	D
Lube Oil	U	U	SH	S	M	F

D – Drain tanks, pumps and lines of all previous cargo and ballast water.

F – Tanks, lines and pump drain free of all cargo; flush tank bottoms, pumps and pipelines with clean sea water, drain completely dry.

M – Machine wash with hot water approximately 1 hour each tank or until slop water is clean, flush lines, pumps and risers. Remove loose bottom scale accumulations. Hand hose bottoms as necessary.

S – Thorough hot water machine wash approximately 2 hours or until slop water is clean; flush lines, pumps and risers. Remove excessive loose bottom scale. Hand hose tank, bottoms as necessary.

SH – Extra thorough hot water machine wash; hot water flush pumps, lines and risers. Procedures may require spotting tank cleaning machines in tanks to remove all traces of previous cargo from bulkheads, beams and other internal tank structure. Inspect tanks, remove loose scale/sediment. Hand hose as necessary.

U – Unsatisfactory for this service.

Note: Naphtha is considered as a "Lead free" product.

The above chart indicates the minimum tank cleaning requirements to maintain the specifications of those products loaded in *uncoated* tanks.

When cargo tanks are *coated*, substitute "cold water" instead of "hot water" in the above chart, for the range of clean products to be loaded from Naphtha to ADO/HO.

MEDICAL: Arranged by ship's Agent.

FRESH WATER: Fresh water is available by barge, with a capacity of 280 cu.m. Contact ship's Agent.

FUEL: Bunkers are available. Advice regarding quantities and specifications of oil required should be given to the ship's Agent prior to arrival.

Bunkering at Breasting Island: Vessels which call for loading will take bunkers while alongside using the same loading arms.

Bunkering at Sea Berth: Crude oil ships will take bunkers while berthed, using the bunker pipeline.

The bunker pipeline from Breasting Island to Sea Berth is maintained full of either MDO or ADO/HO and it is displaced into the vessel having bunkers. The total amount of MDO, ADO/HO displaced on board is about 120 cu.m. (750 Bbls.). In order to permit the Refinery to properly displace the bunker line on completion of fuelling, vessel must alert the Refinery when it is approaching within 330 cu.m. (2,075 Bbls.) of the desired volume.

Gasoil is available by barge with a capacity of 200 cu.m. Vessels which require gasoil bunkers shall give notification 48 hours prior to arrival with the exact quantity of gasoil required.

REPAIRS: Only minor repair facilities are available. Services to radio, gyro and radar are available.

As much advance notice as possible must be given to ship's Agent.

REPATRIATION: Crew members can be paid off or leave the vessel at Castellon de la Plana provided all Spanish regulations are satisfied.

All arrangements should be made through the ship's Agent.

SHORE LEAVE: Master to arrange launch service through ship's Agent.

GENERAL: *National Flag:* The Spanish flag must be flown during daylight hours from the foremast when inside territorial waters.

Pollution of the Sea by Oil: Tank cleaning which requires the discharge of slops overboard, must not be carried out anywhere. Accordingly, tank cleaning operations must be done well in advance of vessel's arrival (see "Ballast").

Mail: Ship's Agent will handle all official and private vessel's mail.

Painting and Litter: If painting vessel, proper precautions are to be taken not to get paint on the deck, fenders or string pieces.

No rags, cans or refuse of any kind are to be discarded on the dock or into the water.

Scuppers must be plugged at all times.

A properly rigged shield must cover all toilet and air–conditioning outlets located amidship.

Garbage, food waste or similar rubbish must not be disposed of overboard while in the Marine Terminal waters.

Gangway: Vessels must provide, rig and tend a safe gangway for access to and from the vessel.

Constant Readiness: While alongside at the Breasting Island or moored at the Sea Berth, vessels must maintain engines and propulsion machinery in readiness to leave under full power on short notice. No repairs are permitted which would interfere with this requirement.

Masters are reminded that the safety of the vessel is their responsibility.

Communications Ship/Shore: A person appointed by the Refinery will remain on board all vessels berthing at either the Breasting Island or the Sea Berth and he will be in charge of any ship/shore communications.

Ship/shore communications will be carried out either by telephone and/or by portable radio–telephone sets.

If a total breakdown in communications occurs, discharging/loading will be stopped until normal communications are restored.

Charts: Charts, almanacs, nautical publications and the Spanish Notices to Mariners are available, but requirements should be included in the Arrival Message to the ship's Agent in order to facilitate delivery.

Stores and Provisions: Stores and provisions are available. As much advance notice as possible must be given to ship's Agent in order to facilitate a good supply.

Cash: Masters are to contact their Agent in advance to provide cash.

Laundry: Requirements should be given to ship's Agent immediately on arrival in order to ensure a quick service.

AGENCY: If not otherwise advised, the ship's Agent for Petromed owned, chartered or affiliated vessels is: Consulmar, S.A., C. Canalejas 95, 2°, Post Box 7, Grao de Castellon. Cable Address: Consulmar – Castellon. Telephone: 22 23 88 – 22 24 27 – Castellon. Telex No. 65513

OPERATOR: Petroleos del Mediterraneo, S.A., Apartado 238, 12080 Castellon de la Plana, Spain. *Tel:* 280000. *Telex:* 65513 Pmed E. *Cables:* Petromed. *FAX:* 281399. *Contact:* E. Gomez, Marine Manager.

CASTRO-URDIALES: 43.24 N. 03.14 W.

DOCUMENTS:

3 Cargo Manifests, 1 visaed by the consular authority.
3 Cargo Manifests for other ports if the vessel has called at and loaded in other ports.
3 Ballast Manifests (if the vessel has arrived in ballast).
5 Passenger Lists (if passengers are carried).
5 Master's Certificates to the effect of "No Passengers" if no passengers are carried.
5 Crew Lists.
5 Stores Lists.
5 Crew's Store Lists – cameras, radios, spirits, cigarettes, etc.
Health Certificate.
Certificate of Derat and fumigation against insects.
4 Bills of Lading.
International Freeboard Certificate.
International Safety Certificate.
International Radio Certificate.
Certificate of Stowage of cargo.

PILOTAGE: *To request pilotage:* 1. Advise the arrival of the vessel 24 hours in advance. 2. Hoist flag "G" of the International Flag Code. 3. Anchor within the pilotage limits of the port.

Port Pilotage Limits: Coastal zone comprised between the Onton meridian and that of the Punta del Rabanal at 1 mile from the coast. The Pilot goes out to a limit of 1 mile outside the port. There are no means of radio communication with the pilot boat or pilot station. ETA to be given 24 hours in advance. Sound signals to summon the Pilot – 3 long blasts. In the event of bad weather, the Pilot does not proceed to sea, and the vessel must enter the port and anchor in the bay.

Anchorage to await Pilot: In the mouth of the port at 1 mile distant. The pilot boat carries a blue flag with the white letter "P" upon it. The pilot boat is blue and is a small motor-launch.

ANCHORAGES: The best anchorage is 045° – 800 m. from the green coloured beacon of the breakwater at the port entrance, in a depth of 12 m.

RESTRICTIONS: There are no entry restrictions. Vessels with a draft greater than 6 m. cannot enter the port.

MAX. SIZE: Length 105 m., draft 5 m., depth at the entrance 9.14 m.

HEALTH: The Health Official boards the vessel as soon as it is berthed alongside. In the event of suspected illness or fever, advise Agent by radio and anchor near the port until the Health Doctor authorises entry.

RADIO: The best radio station to pass the ETA telegram to consignees or Agents is Santander Radio station call sign "EAS". Frequency 500 kHz.

TUGS: None available.

BERTHING: Irrespective of tide. The S.E. pier has a total length of 980 ft., of which 500 ft. forms the commercial wharf, mainly for coasters sundry cargoes. No cranes. Fresh water supply. Depth 17 ft. at low water.

Iron ore loading tips: Along open coast adjoining Castro-Urdiales are several cantilever piers connected with the iron ore mines, partly sheltered in creeks or small coves. All vessels bound to load iron ore there should clear and apply at Port of Castro-Urdiales. Vessels cannot remain at these berths during rough weather but may find good anchorage in roads, or immediate shelter at the Port of Castro-Urdiales, or better at Bilbao Harbour 9 miles East.

The Iron Ore Loading berths (no length limit) are as follows:

Name	*Situation*	*Approx. ebb tide draft*	*Loading rate per working hour*
Dicido	1 mile E.	21 ft.	800 tons
Saltacaballo	1.5 miles E.	22 ft.	800 tons
Onton	2 miles E.	21 ft.	1,000 tons

STEVEDORES: Ordered by Agent or Shipper. No ETA to stevedores necessary.

MEDICAL: It is not necessary for Agent to receive advance notice that medical attention is required. In the port there is a corps of doctors and one of them is always on duty for any emergency. Furthermore, there is a permanent Spanish Red Cross service with ambulances to transport any patient to a large hospital centre. There is also a hospital in this town.

In the case of serious illness, patients are taken by ambulance to the Cruces Medical Aid Centre (Province of Vizcaya-Bilbao) 18 km. from Castro Urdiales.

International Vaccination Certificates are required.

DENSITY: 1016.

FRESH WATER: Water may be taken on board at the San Luis Quay (also known as the Ocharan Mazas Quay). By means of hoses and at a rate of delivery of about 40 t.p.h.

FUEL: Not available.

CONSULS: None.

REPAIRS: Limited.

GANGWAY/DECK WATCHMEN: Not necessary.

OPENING/CLOSING HATCHES: Carried out by crew.

CERTIFICATES: Safety Wireless, Safety Equipment, and Derat generally inspected.

CUSTOMS ALLOWANCES: Normally 200 cigarettes per man. For longer stay, new allotment out of bond obtainable. Wine/and/or Spirit: 1 bottle per man.

CARGO GEAR: At the small commercial wharf ship's derricks are used. At the iron ore loading berths along the coast with cantilever piers, conveyor belt employed with spout at the tip.

REPATRIATION: Crew changes and repatriation can be effected, bearing in mind that any consular negotiation must be made in Bilbao, since there are no Consulates in this port.

AIRPORT: Nearest Sondica (Bilbao) 40 km. by road.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: Sundays; 1st January; 19th March (Saint Joseph); April, Holy Thursday and Friday (variable each year); 1st, 23rd May; 13th and 29th June; 18th and 25th July; 15th August; 12th October; 1st November; 25th December. On holidays, work may proceed if requested.

POLICE/AMBULANCE/FIRE: Police (Civil Guard) Tel. 861146; Ambulance Red Cross 861147 and 861191; Hospital 860196; Fire 861294.

TELEPHONES: No arrangements for placing telephones on board.

SHORE LEAVE: Crew allowed ashore.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Services may possibly be obtained from Bilbao.

SEAMAN'S CLUBS: None.

CURRENCY: Spanish Pesetas (Pta).

DELAYS: The only delays that can normally be expected are those due to bad weather.

AUTHORITY: Military Marine Adjutant – Port Captain. Harbour Master Tel: 861147.

CEUTA: 35.53 N. 05.17 W. **(See Plan)**

DOCUMENTS:

Health Declaration.
2 Cargo Manifests.
2 Stores Lists.
4 Crew Lists.
5 Passenger Lists.

PILOTAGE: Radio Agent advising ETA 24 hours in advance; in the event of any unforeseen delay advice should be direct to the pilot station. International code signals used to call Pilot, or give 3 long blasts. Sound signal used day and night. Pilot boards 1 mile from the breakwater. Pilotage compulsory. Pilot on VHF Channel 16 throughout 24 hours, working Channel 12.

ANCHORAGES: To the N.W. of the green light buoy marking the port entrance and to a distance of one mile, in depths of 10 – 15 fathoms, but vessels must leave this area during strong winds from the first and fourth quadrants, in which case the anchorage in the South Bay is advisable. The outer part of the N.W. side of the Western Quay is very rocky.

Prohibited Anchorage: To the East of the meridian passing through the Red Light on the Eastern Quay, anchorage is prohibited due to the presence of submarine cables.

RESTRICTIONS: Vessels carrying explosives must give ample warning of arrival in advance to the pilot station in order that precautions may be taken.

MAX. SIZE: At berths: Length 220 m. Max. draft 33 ft. 6 in.

In bay: No limits at anchorages.

HEALTH: Pratique obtained immediately after berthing when vessel boarded by health officials.

RADIO: Tarifa, Mijas, Malaga, Gibraltar and Tangiers Radio. Preferably the first 3 stations (VHF Channel 16).

RADAR: No service available.

TUGS: Normally 2 tugs in service, 1,100 h.p. and 2,300 h.p. Tugs use ship's lines.

BERTHING:

Berth	*Length*	*Depth*	*Remarks*
Dock-Quays	270 m.	33 ft. 06 in.	—
	1,250 m.	30 ft. 02 in.	—
Muelle Espana	400 m.	7.9 m.–10.06 m.	—
Muelle Canonera Dato	4×125 m.	7.0 m.	4 Ro-Ro berths
Muelle Pesquero	260 m.	3.0 m.	Fish Quay
Muelle de Ribera	4×150 m.	7.0 m.	Under construction

CRANES: One crane of 20/30 tonnes capacity and 7 cranes of 3/6 tonnes capacity.

STEVEDORES: To be requested when sending ETA. The times engaging personnel are from 0730 hrs. to 0830 hrs. and from 1630 h to 1730 hrs., and within these times personnel are appointed up midnight of that day.

On holidays, engagements take place the previous day at 1730 h For Sundays, personnel are engaged on Saturday at midda Extraordinary working hours are prohibited. With effect from 2000 h work is considered as nightwork, and is subject to 50% increase in rate Sundays, holidays, and Saturday afternoons are subject to 40% increa in paid rates.

MEDICAL: Advance notice by radio preferred. Hospital facilit available.

DENSITY: About 3.64%.

FRESH WATER: Available.

FUEL: All grades available, to be ordered in advance. Also s "General".

CONSULS:

Belgium	Tel. 513794 and 515741
Denmark	" 514307
France	" 511268 and 512927
Italy	" 511053 and 515140

Norway	" 511700 and 511759
Portugal	" 514213 and 512509
Sweden	" 514307

REPAIRS: Only minor repairs can be effected. Slipways for vessels u to 300 g.r.t.

SURVEYORS: Surveyors available for all types of certificates.

Comisario Espanol, Delgado Serrano, 1. Tel: 512932.
Lloyd's (Imco Lloyd's), Queipo de Llano, 2. Tel: 516933.

GANGWAY/DECK WATCHMEN: Available but not essential.

OPENING/CLOSING HATCHES: Performed by stevedores.

CUSTOMS ALLOWANCES: Maximum 6 kilos tobacco for each cre member. Normal daily consumption of wine and spirits allowed.

CARGO GEAR: Loading and discharging permitted using ship's gea Loading and discharging of containers and handling of Ro-Ro vesse permitted.

AIRPORT: Nearest international airport at Tangier, 100 km. away, (an at Malaga, 137 km. away by sea).

TIME: GMT plus 1 hour in Winter, GMT plus 2 hours in Summer.

REPATRIATION: All facilities available.

GENERAL: *Vessels greater than 220 m. in length or 33 ft. 6 in. draft:* There are 2 tankers which can effect supplies in the two bays, as well as foodstuffs 24 hours a day. It is necessary to request authorisation from the Local Marine Authority for embarkation and disembarkation in the Roads, together with any type of operation.

AUTHORITY: Comandancia Militar de Marina de Ceuta. *Tel:* 512621 and 512087. *Contact:* Captain Adolfo Garcia Alonso, Comandante.

CORUNNA: 43.23 N. 08.22 W. (See Plan)

DOCUMENTS:

3 Crew Lists.

2 Passenger Lists or a negative.

1 Cargo Manifest of goods destined for the port.

Another Manifest covering Transit Cargo.

2 Stores Lists, including tobacco, cigars, cigarettes, coffee, spirits, radios, cameras, etc., in possession of crew. In all cases make and number of radios to be indicated.

Safety Radio Certificate and Safety Equipment Certificate.

If vessel carries over 6 kilos tobacco per man, the excess to be declared in separate manifest, which must be visaed by Spanish Consul at the last port, otherwise vessel is exposed to heavy fine.

PILOTAGE: Compulsory. International code signals used to call Pilot.

RESTRICTIONS: No restrictions on night manoeuvres.

MAX. SIZE: Length and beam not restricted. Cargo vessels 57 ft. draft for berthing.

Tankers:

Berth	*Max. d.w.t.*	*Max. LOA* (m.)	*Max. Beam* (m.)	*Max. Draft (see note)* (m.)
Jetty No. 1	35,000	190	30.0	11.0
Jetty No. 2	65,000	190	30.0	13.0
Jetty No. 3	120,000	290	44.0	16.5
Jetty No. 4	65,000	290	44.0	15.5
San Diego Wharf	3,500	100	14.0	7.0

Note: The Military Port Authority limits the maximum draft of tankers entering Corunna to 15.5 m. and will notify when a vessel should wait for high water to proceed inwards.

Port Works Authority limits the draft of vessels of over 120,000 d.w.t. to 16.5 m.

HEALTH: International signals shall be displayed by vessels arriving from abroad until Free Pratique is granted. If vessels proceed directly to berth, Pratique can be obtained immediately after berthing. Otherwise, at anchorage at vessel's arrival.

If vessel has sickness on board of a contagious nature Master should advise Health Authorities by radio, and they will examine patients immediately upon arrival, to enable vessel to be granted Free Pratique.

RADIO/VHF:

Short Wave: Vessels can make contact through Pozuelo del Rey or Aranjuez radio stations.

Both maintain a continuous 24 hour service.

Medium Wave: Vessels approaching the Spanish coast can establish communications with any of the following Maritime Stations:

Barcelona	Chipiona (Cadiz)
Bagur (Gerona)	Finisterre (Corunna)
Cabo Gata (Almeria)	Machichaco (Vizcaya)
Cabo de la Nao (Alicante)	Arrecife
Cabo Penas (Asturias)	Las Palmas y Tenerife

VHF:

Station	*Channel*
Corunna Radio	16
Repsol Petroleo Terminal	12/72
Pilots	12
Tugs	12
Hecules' Tower Lookout	16

All stations maintain a permanent watch.

TUGS: 4 Available up to 2,300 h.p.

BERTHING:

Muelle del Centenario	540	16.5

BULK HANDLING FACILITIES: *Private Storage Facilities:*

Cement:	3 silos each of 800 tons capacity.
	4 silos each of 1,000 tons capacity.
Aluminium:	3 silos each of 3,000 tons capacity
	1 silo capacity 4,000 tons.
Fertiliser:	2 tanks each of 7,500 tons capacity.
Unspecified Oils:	2 silos each of 1,000 tons capacity.
	2 silos each of 500 tons capacity
	1 silo capacity 600 tons.
	1 silo capacity 350 tons.
	6 silos each of 500 tons capacity.

CRANES: 29 electric cranes, capacity 3 – 45 tons, outreach 10 – 35 m. 2 diesel-electric mobile cranes, capacity 1.5 – 6.0 tons, outreach 8.0 – 2.5 m.

1 locomotive crane, capacity 5 tons.

TANKERS:

Terminal Operator: Repsol Petroleo, S.A. Cable Address: Repsol Petroleo, S.A., Maritime Terminal, Corunna. Tel: (981) 289111, 289222. Telex: 82144, 86530. Fax: (981) 276011. VHF: Channels 12 and 72 (24 hour watch).

Telexes, cables and faxes must state "Please deliver a copy to Maritime Terminal Office".

Arrival Advice: All vessels bound for Repsol Marine Terminal are required to provide the following information: Time and date of departure and initial ETA at Corunna immediately after leaving the last port of call.

Confirmation of the vessel's ETA to be sent by telex or cable 72, 48 and 24 hours prior to arrival.

Non-compliance with the above requirements may cause delays to the vessel.

All messages should be addressed to the Corunna Ship's Agent with the remarks "please deliver a copy to Repsol Petroleo, S.A. Maritime Terminal".

In the 72 hour message the Master should also state the following information:

Code	*Meaning*
AAA	Ship's name, Call Sign, Flag and Port of Registry.
BBB	DWT and Summer loaded draft.
CCC	Drafts (on arrival, on departure and maximum draft during the stay alongside the Terminal).
DDD	Length, breadth and depth of vessel.
EEE	Operation to be carried out (loading/discharging).
FFF	If loading: Whether vessel is S.B.T/ or C.B.T. and if C.B.T., quantity of ballast to be discharged ashore (maximum rate/whether concurrently with cargo operations/cargo required/sequence/maximum loading rate (cu.m./hr.)/the requirement of being fitted with a derrick in the cargo manifold area for manoeuvring the cargo hoses into position.
GGG	If discharging: Nature and quantity of cargo on board/API/temperature (°C)/discharge sequence/maximum rate/whether the vessel is S.B.T. or C.B.T./if C.B.T., ballasting time and whether vessel is able to load ballast and discharge cargo concurrently.
HHH	Manifolds; type, number and diameter (cargo and bunker).
III	Is the vessel fitted with an Inert Gas system?
JJJ	Is the Inert Gas system fully operational?
KKK	Are cargo tanks inerted with a maximum oxygen content of 8% by volume?
LLL	If C.O.W. is to be carried out during the discharging: Vessels are required to ask for authorisation of the Port Authority to carry out C.O.W. while discharging, at least 24 hours prior to arrival, and it may be routed through the ship's agent.
MMM	Date of expiration and last annual survey of the Certificate of Building and I.O.P.P. Certificates.
NNN	Vessels must comply with the "Admission, Handling and Storage of Dangerous Goods National Regulations at Ports", in addition to the IMO Regulations, SOLAS Convention, MARPOL Convention and the recommendations of the "International Safety Guide for Oil Tankers and Terminals" (ISGOTT).
OOO	Name and type of the Insurance policy or Certificate of Financial Guarantee and P&I Club which are in force, concerning civil responsibility for any damage caused by hydrocarbon pollution.
PPP	Is all navigational, safety, anchoring and mooring equipment fully operational and ready for use? If not, specify.
QQQ	Notice of requirement (bunkers, water, etc.) and any other message that the ship's Master considers convenient.

Note: The ETA should be indicated with 6 figures (date/hour/minutes) in G.M.T.

Repsol Terminal: The Terminal Manager or in his absence, the Terminal Operator, is in charge of the Marine Terminal, with a continuous 24 hour service.

The offices are located in the building next to the main entrance gate.

While a vessel is alongside, an operator of the Marine Terminal shall remain on the jetty or wharf at all times to deal with routine operations and any emergency.

Access to the Marine Terminal through the main entrance gate is under the control of a security guard, who shall check the identity and entry permits of any person visiting the restricted area of the Marine Terminal.

Pilotage: Licensed pilots are available on a 24 hour basis, 365 days per year.

All vessels are requested to contact Corunna Pilots on VHF Channel 16, 2 hours before arrival at the rendezvous position, to give confirmation of the vessel's ETA and for receiving instructions about berthing or anchoring.

Vessels may contact Hercules' Tower Lookout on VHF Channel 16.

Tugs: Two tugs of 3,500 h.p. and 2,650 h.p. each, are contracted by Repsol Petroleo, S.A., to provide a towage service for tankers entering or leaving the harbour as well as emergency, anti-pollution and fire fighting services.

In addition to the tugs mentioned above there are 2 additional tugs whose services can be used when the circumstances require.

Berthing/unberthing manoeuvres of all vessels operating alongside Repsol Petroleo jetties will be carried out in accordance with the following regulations dictated by the Port Authority.

Vessel's Gross Tonnage	*No. of Tugs from 2,500 to 3,100 h.p.*	*Area*	*No. of additional Tugs*
Up to 5,000	1	1st	—
From 5,001 to 10,000	2	1st	—
From 10,001 to 25,000	2	1st, 2nd, 3rd	1 (1st area only)
Over 25,000	2	1st, 2nd, 3rd	1 (1st area only)

All the above tugs maintain a continuous listening watch on VHF Channel 12 and their crew remain on board at all times.

Jetty and Wharf Characteristics: All berths operate throughout 24 hours.

Jetty/Wharf	*Maximum Freeboard (m.)*	*Connections (in.)*	*Pumping Rate (cu.m.p.h.)*	*Products*
Jetty No. 1	10	1×3	100	Bunkers
		1×4	140	Butane/Propane
		1×4	140	Propylene
		1×10	1,200	Naphtha/Kerosene/ Gasoline
Jetty No. 2	10	1×10	1,100	Gas Oil
		1×10	1,100	Fuel Oil
		1×10	1,000^3	Ballast
		1×10	1,500	G.O.P.V. (No. 1 jetty)
		1×12	2,000^3	Crude Oil
		1×10	500^3	MTBE/Methanol
Jetty No. 3	15^1 12.5^2	2×16	6,000^3	Crude
		1×10	1,100	Gas Oil
		1×10	1,100	Fuel Oil
Jetty No. 4	12.5	1×10	2,000^3	Ballast
		1×10	1,100	Bunkers
San Diego Wharf	6	Telescopic Trunk	120 t.p.h	Coke

Note:

[1] For Crude Oil.

[2] For Fuel Oil, Gas Oil and Ballast.

[3] Discharge of MTBE Crudes, Methanol and Ballast.

Customs: Vessels proceeding to discharge should bring the Manifest of Cargo visaed by the Spanish Consul in the port of origin. Should Spanish Consulate not be available, it is to be visaed by the Port Authority, stating in the manifest the remark "no Spanish Consul available".

Foreign vessels are required by Customs Authorities to produce the Ships Stores Declaration, both in English and Spanish, and likewise the Notice of no passengers on board.

Ballast/Pollution:

Vessels in Ballast: Vessels in ballast should arrive with sufficient draft to ensure safe manoeuvring, but shall try to arrive with the minimum of ballast in order to avoid unnecessary delays.

Deballasting: Repsol Terminal is equipped with dirty/clean ballast reception facilities.

Once the vessel is securely moored she will confirm the amount of ballast to be discharged ashore and the estimated time of the deballasting operation.

On no account should dirty ballast, polluted water and oily water or oily wastes from bilges be discharged into the port waters.

Only segregated ballast will be allowed to be discharged into port waters and then only under the responsibility and supervision of the Master.

Pollution: The Master is responsible for the observance of the following instructions:

Any leakage or spillage must be reported immediately to the Terminal Operator and the Terminal Office on VHF Channel 67. The Terminal Operator will immediately take emergency action as necessary and notify the Head of the Terminal Area.

Never rely on a shore stop as this will not exonerate the vessel from responsibility and clean-up expenses if cargo or bunker tanks overflow.

All flanged joints required to connect loading arms/hoses to a vessel e.g. reducing pieces/spools, shall have a full set of bolts/studs available the length of which being such that they stick out of the outer surface of the nut a minimum of 5 mm.

Provisioning: It is strictly forbidden to supply provisions or stores over land to vessels berthed alongside the Terminal jetties.

Provisions or stores shall be allowed to be loaded over the jetty to vessels but only with the permission of the Terminal Manager in cases of emergency and depending on the nature, measurements and weight of the commodities. These shall be carried by a vehicle duly authorised near the access to the jetty where the vessel is berthed.

The accesses to the jetty and/or vessel shall never be blocked and the safety regulations shall be properly complied with.

The Terminal Manager, after having received a request from the ship's agent, will authorise the supply of provisions and stores by sea, for which a barge carries out the service and secures alongside the vessel's stern. The Safety Regulations must be properly complied with, handling the provisions and stores on the poop deck and keeping clear the manoeuvring area (ropes, winches, etc.).

In case of need and at the discretion of Repsol the authorisation for the supply of provisions and/or stores on board the ship may be limited or cancelled.

Light products, LPG or Propylene carriers are not allowed to receive provisions or stores whilst alongside the jetties of the Terminal. The ship's agent should arrange storing to be carried out prior to or after the stay of the vessel alongside the Terminal.

Storage or Goods in Bond: It is strictly prohibited to warehouse in bond on the Terminal, goods discharged from or delivered to vessels.

Waste and Rubbish: It is prohibited to throw garbage or waste materials into the sea or onto the pier. Such materials are not allowed to be discharged ashore either. Vessels are required to have the appropriate installations available to store them during their stay in port.

All circulation pipes, sewage outlets, etc., which discharge on to the shore must be properly protected to prevent the water from falling on to the pier.

FRESH WATER: Can be supplied by pipeline at most berths, rate 30 t.p.h. – 150 t.p.h., or by barge at rate of 150 t.p.h.

FUEL: Can be supplied by pipeline at most berths. No barges.

CUSTOMS ALLOWANCES: Normally Customs permit 200 cigarettes per man out of bond. Additional quantities needed depend on the stay of ship in port. 1 bottle of spirits per man.

REPAIRS: Minor repairs can be effected in shore work shops.

AIRPORT: Nearest international airport at Santiago de Compostela 60 km. away. Local airport at Alvedro 5 km. away.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: Work can be arranged on following holidays. New Year's Day (January 1st, full day); Epiphany (January 6th, full day); Easter Thursday (half day); Easter Friday (full day); St. Joseph Artizan (May 1st, full day); Patron Saint of Spain (July 25th, full day); Ascension Day (August 15th, full day); Holiday of Hispanicism (October 12th, full day); All Saints' (November 1st, full day); Immaculate Conception (December 8th, full day); Christmas Day (December 25th, full day).

POLICE/AMBULANCE/FIRE: Police 221100. Port Police 223200. Ambulance 230810. Fire 295511, 295544 and 225555.

GARBAGE DISPOSAL: Collection service available. Skips provided alongside. This service has to be requested through the agent. 24 hour service. Charges included in normal port dues.

WASTE OIL DISPOSAL: Service available only through agent.

SEAMAN'S CLUBS: None.

CURRENCY: Spanish Pesetas (Pta).

GENERAL:

Chart: B.A. Chart No. 1114.

Winds: The prevailing wind direction in the Winter season is Southwest and Northwest and in the Summer season Northeast.

AUTHORITY: Autoridad Portuaria de la Coruna, Avenida de la Marina No. 3, 15001-La Coruna, Spain. *Tel:* 81.22.74.02 (03-04-05). *Telex:* 82364 Jpco-E. *Cables:* Autoridad Portuaria. *FAX:* (81) 205863. *Contact:* Jose Luis Lopez Paramo, Port Director.

FERROL: 43.28 N. 08.16 W. (See Plan)

PORT LIMITS: Whole of the area in the Estuary joined by an imaginary line between Punta Coitelada and Cabo Priorino.
DOCUMENTS:
3 Crew Lists.
2 Passenger Lists or a negative.
1 Cargo Manifest of goods destined for the port.
Another Manifest covering transit cargo.
2 Stores Lists, including tobacco, cigars, cigarettes, coffee, spirits, radios, cameras, etc., in possession of crew. In all cases make and number of radios to be indicated.
Safety Radio Certificate and Safety Equipment Certificate.
If vessel carries over 6 kilos tobacco per man, the excess to be declared in a separate manifest, which must be visaed by Spanish Consul at the last port, otherwise vessel is exposed to heavy fine.
PILOTAGE: Compulsory. International code signals used to call Pilots. Pilots board off Ensenada de Carino.
MAX. SIZE: For entering and leaving the River Mouth: Cargo vessels up to 32 ft. draft. Tankers up to 35 ft. draft.
HEALTH: If vessel proceeds directly to berth, Pratique can be obtained immediately after berthing. Otherwise, at anchorage at vessel's arrival. If vessel has sickness on board of a contagious nature Masters should advise Health Authorities by radio, and they will examine patients immediately upon arrival, to enable vessel to be granted Free Pratique.
RADIO: Corunna Radio (Riazor): Calls on 1748 kHz and listens on 2182 kHz and 2122 kHz.
Corunna (Eiris): Call sign "EAR" on 500 kHz and 472 kHz.
VHF: El Ferrol Pilot maintains permanent watch on Channel 14.
Corunna (Eiris): Call sign "EAR" on Channel 16 and 26.
TUGS: Available up to 1,750 h.p. Also salvage tug normally stationed at Ferrol.
BERTHING: Depth alongside quays 25 ft. – 32 ft.
CRANES:

No.	*Capacity* (tons)	*Reach* (m.)
1	16	35/9
1	16/30	35/9-10/23
1	3/6	20/15
1	7.5/15	15/9
1	6	20
4	12	26

Floating cranes available up to 130 tons capacity.
TANKERS: CLH, 3 berths, can accommodate tankers up to 656 ft. length and 35 ft. draft.
Tanker Cleaning and Gas-Freeing Plant: A deballasting, gas-freeing and tank cleaning plant is operating at Ferrol. It allows for vessels of any tonnage, and provides washing and degassing of tanks, dirty ballast intake and slops intake. Supply of drinking water and hot water up to 70°C is provided for washing tanks with a flow rate of up to 600 cu.m./hr. and an average pressure of 15 kg./sq.cm. Crane facility is also available.
FRESH WATER: Can be supplied from the quays.
FUEL: Can be supplied from the quays.
REPAIRS: Facilities for repairing all kinds of Naval and merchant ships are available. Any kind of hull or machinery repairs and installations can be carried out, as well as annual and 4 yearly surveys, reclassification, transformations and enlargements.
DRY DOCKS: 5 dry docks for building and repairing Naval and merchant ships. Largest dry dock length 330.20 m., width 50 m., capacity 230,000 g.r.t.
Shipyards: There are two main shipyards in the bay area, one of them with a turbine manufacturing section.
CUSTOMS ALLOWANCES: Normally Customs permit 200 cigarettes per man out of bond. Additional quantities needed depend on the stay of ship in port. One bottle of spirits per man.
AIRPORT: Alevedro Airport (La Coruna), two services a day to Madrid. Labacolla Airport (Santiago) 108 km. from the port. Regular services to Oviedo, Santander, Bilbao, San Sebastian, Barcelona, and Madrid.
TIME: GMT plus 1 hour in Winter. Summertime kept from March to September.
HOLIDAYS: Work can be arranged on following holidays. New Year's Day (January 1st, full day); Epiphany (January 6th, full day); Easter (two days); Easter Monday; St. Joseph Artisan (May 1st, full day); Labour Day (July 13th, full day); Patron Saint of Spain (July 25th, full day); Assumption Day (August 15th, full day); Holiday of Hispanicism (October 12th, full day); Constitution Day (December 6th); Immaculate Conception (December 8th); Christmas Day (December 25th, full day).
SERVICES: A modern deballasting, gas-freeing and tank cleaning plant accepts tankers up to 350,000 d.w.t.
AUTHORITY: Junta del Puerto y Ria de Ferrol, Muelle Curuxeiras, Apartado 20, 15401 Ferrol, Spain. *Tel:* 981-352103. *Telex:* 85552 JPFE. *FAX:* 981-353174. *Contact:* Armengol Vinas Castro, Port Director.

GANDIA: 38.59 N. 00.09 W. (See Plan)

LOCATION: The port is situated 65 km. to the South of Valencia. Entrance to the port faces S.E. and is 200 m. wide, with a low water depth of 7.50 m.
APPROACHES: The harbour is entered along the South side of a 1.0 km. long breakwater, running E.S.E. from the shore North of the harbour. The Entrance Channel is about 600 m. in length, with depths of 7 m. to 6 m. (23 ft. – 20 ft.) LWS over a width of 100 m. The distance between the South Pierhead and the root of the breakwater is about 85 m.
PILOTAGE: Compulsory. Arrival notice should be given by telephone to Agent. Vessels are met about 0.5 – 1 mile off the Breakwater Head.
ANCHORAGES: Vessels can anchor off the harbour, in depths of 10 m. to 15 m., bearing of breakwater head (green light) 250° (True) distance 0.5 miles. Bottom sand and mud.
TUGS: 2×1,250 h.p.
BERTHING: The N.E. end of the commercial basin provides a turning place of about 160 m. diameter, where vessels normally turn for berthing bow seaward.

Berth Name	*Length* (m.)	*Depth* (m.)	*Use*
Sur, Prolongacion	150	7.0	Commercial
Sur	150	6.0	Commercial
Frutero	310	6.0	Commercial
Moto-Veleros	175	4.5	Fishing and fuel supplies
Pesquero	100	3.0	Fish
Norte	125	6.0	Various
Serpis	150	9.0	General Cargo

CRANES: The port of Gandia operates 7 gantry cranes, privately owned, with capacity of 2.5 tons to 35 tons and 4 mobile cranes.
CARGO HANDLING FACILITIES: Good warehouse accommodation. Forklifts, trucks, clamps, etc.
There is a warehouse for cold/frozen cargoes storage.
STEVEDORES: *Working Hours:* Winter: 0800 – 1200/1300 – 1700 Summer: 0800 – 1200/1400 – 1800.
FRESH WATER: Can be supplied alongside all piers.
REPAIRS: Small repairs can be carried out.
AIRPORT: Valencia Airport, 70 km. distant.
AUTHORITY: Autoridad Portuaria de Valencia, Muelle de la Aduana S/n, 46024 Valencia, Spain. *Tel:* (96) 3674391. *Telex:* 64508. *FAX:* (96) 3672752. *Contact:* The General Manager.

GARRUCHA: 37.10 N. 01.49 W. (See Plan)

SHIPMASTER'S REPORT: (Updated 1984).

DOCUMENTS: Usual forms required:
4 Crew Lists
1 Crew Declaration
1 Ship's Stores Declaration
Ship's Register
Cigarettes and spirits sealed.
APPROACHES: Coming in from the East the port is easy to find, first sighting is of a small Spanish town at the edge of the sea. On the radar the harbour breakwater begins to show up at 12 miles, and is clearly distinguished at 6 miles.
PILOTAGE: The Pilot boards from a small open boat about 2 cables from the end of the breakwater, the boat is painted white and for a short spell shows a blue flag with a white "P" on it to convey that he is the Pilot and not a local fisherman.
There are 2 Pilots available. The service of a Pilot is obligatory both on entry and leaving for vessels of more than 50 g.r.t.
ANCHORAGES: On our arrival 1 vessel was anchored in a position off the centre of the town, 2 cables from the end of the breakwater on a line drawn continuing from the breakwater, this appears to be the anchorage mentioned in the Admiralty Pilot Book. We passed close inshore of her and obtained soundings of 14 m. – 16 m. when passing her position, whilst we were alongside another vessel arrived and anchored 1.5 cables to seaward from the breakwater.
RADIO: ETA to Pilots 24 hours prior to arrival.
VHF: Call Pilots on Channel 16, 1 hour prior to arrival.
TUGS: Two tugs of 1,200 h.p. to assist manoeuvring of vessels on entry and departure, the tug's assistance being obligatory for vessels of more than 110 m. LOA or 3,500 g.r.t.
BERTHING: The vessel entered the harbour from the South, when the bow was almost level with the end of the inner berth the starboard anchor was dropped to 1 shackle and the vessel swung to starboard on the anchor, a headline was sent away and when the vessel was three quarters swung the anchor picked up. The face of the quay was protected with large roller rubber tyre fenders.
HARBOUR: The maximum permitted draft at the commercial quay is 8.5 m. The commercial quay will be extended to 220 m. length.
The harbour is man-made, the outer wall is made of high stone blocks in an "L" shape, the foot of the "L" attached to the land and the outer part running in line with the shore. It is entered from the South with a mole on the port hand enclosing a small fishing harbour. Minimum depth according to the Pilot is 6.3 m. In the N.W. corner on the outer breakwater there is a large concrete apron extending for a length of approximately 100 m. where we loaded, then from the seaward end to the end of breakwater there is an open berth with a large cantilevered loading chute jutting out over the harbour which is fed from conveyors on the seaward side of the breakwater.
LOADING: The main export of the port is gypsum stone in bulk, we loaded from quay with 4 conveyor belts being fed by dumper trucks into bins on the end of the conveyor belts from the cargo stacked on the quay. Loading rate with the 4 conveyors was up to 1,000 tonnes/p.h. The labour was helpful in positioning the conveyors to our requirements, and they have one man who keeps a careful eye on the draft.
SUPPLIES: There is a ship chandler in Garrucha. Fresh water is supplied by road tanker and pumped aboard, the tankers holding approximately 6 tonnes and 10 tonnes.

GIJON: 43.34 N. 05.41 W. (See Plan)

LOCATION: The port is located on North coast of Spain in Gijon Bay. The harbour of Gijon has 3 main areas: Commercial area (formerly called Musel) on N.W. of Bay; Local Harbour on S.E. of Bay (used by yachts); Central area, where ship and dockyards are located.

PORT LIMITS: The limits of the harbour are defined by an imaginary line linking the extreme end of the "Dique Principe de Asturias" and Cerro de Santa Catalina. Beyond those limits, a vessel is still considered an "arrived ship", but is exempt from paying port dues.

DOCUMENTS: The following documents, duly signed by the Master, are required:

3 copies Crew List.
2 copies Provisions and Stores List.
2 copies Personal Effects Declaration.
4 copies Passenger List. If no passenger on board, state so in the cargo manifest and no list is required.
5 copies Cargo Manifest (3 for Gijon bound cargo, 2 for any transit cargo. A No-Cargo (ballast) manifest required when no cargo on board).

Transit Tobacco Manifest: If the total quantity of tobacco on board exceeds an average of 6 kilos per crew member, the excess quantity must be declared on a Transit Tobacco Manifest, describing the tobacco in Spanish as "Tabaco en transito". This Manifest is to be signed and stamped at a Spanish Consulate (alternatively to be visaed by another consulate or local Customs Authority).

In addition, the following Ship's Certificates are required for clearance:
Ship's Register.
Safety Radio.
Safety Equipment.
Safety Construction.
Load-Line.
I.O.P.P.
Oil Residues Declaration (Annex I, Marpol 73/78). Forms provided by the Agent.

PILOTAGE: On approaching the Port of Gijon, Masters are to contact the pilot station via VHF Channel 14. The Pilot will board the vessel in the roads. Pilotage is compulsory.

ANCHORAGES: The Bay of Gijon, where the port is located, is a wide open area with deep water. Large vessels remain at anchor (when berth is not available) outside of the port limits. Smaller ships may anchor within the port limits. Masters should contact Pilot for most suitable anchorage place.

RESTRICTIONS: The mouth of the harbour is 600 m. wide, and depth at LWOST is over 18.5 m. Tidal range: 4.6 m.

MAX. SIZE: See "Berthing" and "Developments".

Ships bound to perform unloading operations at "Muelle Moliner" may enter with a max. draft of 46 ft. and a max. length of 275 m.

Ships bound to perform unloading operations at Muelle de Minerales may enter with a max. draft of 57 ft.

HEALTH: Free Pratique obtained by sending a cable to "Sanidad Exterior Gijon". It is automatic for vessels coming from another Spanish port or EEC country. If any death on board, Agent should be contacted first to advise adequate procedure, depending upon the nature of the death.

RADIO: Cabo Penas Radio. Call 2102 kHz. Answer 1677 kHz.

VHF: Pilots/tugs/linesmen on Channel 14. Cabo Penas Radio on Channel 16 (for calling) and Channel 26 (for traffic).

TUGS: "Jove" (500 h.p.), "Torres" (2,050 h.p.), "Penas" (2,500 h.p.), "Nalon" (2,750 h.p.), "Narcea" (2,750 h.p.), "Sella" (3,000 h.p.) and "Arbeyal" (1,650 h.p.). When required, service is complemented with the tugs based at the nearby port of Aviles.

BERTHING: Pier's name, depth alongside during lowest Spring tide, usage and facilities:

Muelle de Minerales:
First Section:
247 m. length. 19 m. depth. Max. draft 17.38 m.
Solid bulk discharge.
Second Section:
405 m. length. 21 m. depth. Max. draft 17.38 m.
Solid bulk discharge.

Two 50 tonne grab unloaders discharging 2,200 t.p.h. each, suitable for 200,000 d.w.t. ships, with a maximum beam of 50. m.

Muelle de Los Porticos (North Pier):
First Section:
554 m. length. 14 m. depth. Solid bulk discharge.
Second Section:
146 m. length. 14 m. depth. Liquefied Gas discharge. Rate 100 cu.m./hr.
Connection to gaseoduct.

Muelle Norte:
First Section:
204 m. length. 8.5 m. depth.
Second Section:
211 m. length. 11 m. depth
Repairs and fitting out. Bulk and general cargo.
One dry bulk loader handling 2,600 t.p.h. for ships of 35,000 d.w.t. maximum.

Muelles de Ribera:
Alineacion 1:
230 m. length. 7 m. depth. General cargo.
Alineacion 2:
109 m. length. 7 m. depth.
Bulk cement loading installation 400 t.p.h.
Alineacion 3:
156 m. length. 8 m. depth. General cargo.

Espigon I:
North Section:
220 m. length. 8/10 m. depth. General cargo.
South Section:
190 m. length. 11.5 m. depth.
170 m. length. 9 m. depth.
Loading of steel goods.
2 cranes of 25 tons handling 140 t.p.h.
2 cranes of 12 tons handling 100 t.p.h.

Estacion Maritima:
Alineacion 4:
32 m. length. 6 m. depth.
Not in service.
Alineacion 5:
225 m. length. 7 m. depth.
Fixed Ro/Ro ramp, 15 m. wide.

Espigon II:
North Section:
300 m. length. 7 m./9.5 m. depth.
Cement loading installation: 200 t.p.h.
General and bulk cargo.
Head Section:
90 m. length. 12 m. depth. No equipment.
South Section 1:
180 m. length. 8.5 m. depth. General cargo, scrap, steel produ
4 cranes of 6 tons. Handling 60 t.p.h.
South Section 2:
180 m. length. 9.0 m. depth. General and bulk cargo.

Oil Berth:
North Section:
180 m. length. 8.5 m. depth.
Connection for oil products. Rate 400 t.p.h.
South Section:
180 m. length. 8.5 m. depth.
Connection for oil products. Rate 400 t.p.h.

Muelles del Rendiello:
Alineacion 6:
346 m. length. 5 m. depth. Fishing and small boats. Repairs.
Muelle Adosado:
443 m. length. 5 m./7 m. depth. Fishing and ice factory.

Muelles de la Osa:
Alineacion 7–1st.: 317 m. length. 8 m./10 m. depth.
Alineacion 7–2nd.: 250 m. length. 12 m. depth.
Bulk, general cargo and containers.
4 cranes of 12 tons handling 100 t.p.h.
2 cranes of 30 tonnes handling 150 t.p.h.
Alineacion 8:
206 m. length. 11.5 m. depth.
Heavy and general cargo.
Alineacion 9:
198 m. length. 10 m./11.5 m. depth.
2 cranes of 6 tonnes handling 60 t.p.h.
Ro/Ro ramp with width 9.5 m./12 m.

Muelle Moliner:
313 m. length. 14 m. depth. Bulk cargo and steel products.
4 cranes of 12 tons handling 100 t.p.h.

STEVEDORES: *Working Hours:* At "Muelle de Minerales" only, 24 hou a day, 7 days a week, Sundays and Holidays included. All other quays Monday/Friday 0800 hrs. – 1200 hrs., 1300 hrs. – 1700 hrs. Norma working hours, 1700 hrs. – 2300 hrs. overtime. Saturda 0800 hrs. – 1200 hrs. Sundays and Holidays no work.

Exceptionally, at "Muelle de Minerales" no work on January 6th 0600 hrs. to 7th/0600 hrs., May 1st/0600 hrs. to 2nd/0600 hrs., July 16th 0600 hrs. to 17th/0600 hrs., December 24th/1400 hrs. to 26th/0600 hrs and December 31st/1400 hrs. to January 2nd/0600 hrs.

MEDICAL: Crew members requiring medical attention, hospitalisatio etc. should be reported by the Master to the Ship's Agent for promp attention. All necessary facilities are available at Gijon.

TANKERS: One tanker berth. See "Berthing". Pipeline connections ar 12 in. and 14 in. diameter. Static pressure 6 kg./sq.cm.

DENSITY: 1025.

FRESH WATER: Available ex-wharf or by barge. From the wha connections it is supplied at 20 t.p.h.

FUEL: Fuel and diesel oil are available and can be supplied to ships either directly from shore connection (available only at oil berth) or b a small tanker in service for the purpose.

CONSULS: The following countries have consular representation i Gijon: Brazil, Colombia, Dominican Republic, Finland, France Netherlands, Norway, Panama, Portugal, Sweden.

REPAIRS: There are shipyards at Gijon, and work shops specialised i naval works. All types of repairs can be attended to. It is recommende that advanced notification is given when assistance is required. Electrica power is supplied ex-wharf.

Spare Parts: In case of spare parts being forwarded by airfreigh each consignment must be accompanied by an original Airwaybill an a commercial invoice (in triplicate). About 2 days should be allowed fo domestic transit and clearance. For truck deliveries, one day.

DRY DOCKS: 2 companies own a total of 4 dry docks at Gijon, th largest of which is 170 m. length, 27.40 m. wide for vessels up to 26,00 tons.

SURVEYORS: American Bureau, Bureau Veritas, Lloyd's Registe Norske Veritas. Cargo inspectors also available.

GANGWAY/DECK WATCHMEN: Normally not required nor necessa

HATCHES: Normally carried out by ship's crew.

CUSTOMS ALLOWANCES: Maximum of 6 kilos of tobacco per crew member, subject to having been declared.

CARGO GEAR: Loading and discharging, save rare exceptions effected by shore gear.

REPATRIATION: Repatriation of crew members is no problem. EEC citizens need no formalities. Other nationalities are subject to visa o immigration control, for which reason advanced notice must be given t the Agent.

TIME: GMT plus 1 hour in Autumn and Winter. GMT plus 2 hours in Spring and Summer.

AIRPORT: The regional airport, named Asturias (in some instances it is still known as Oviedo) is 45 km. away from the port. There are daily flights linking Gijon with Madrid, Bilbao, Barcelona, Santiago and London. There is a bus service for passengers from Gijon to the airport and vice versa.

HOLIDAYS: 1994: January 6th, February 15th, March 31st, April 1st, May 2nd, July 16th, August 15th, September 8th and 29th, October 12th, November 1st, December 6th, 8th and 26th.

For work on holidays, see "Stevedores". July 16th is a port holiday only.

POLICE/AMBULANCE/FIRE: Police, Tel: 091; Ambulance, Tel: 092; Fire, Tel: 080.

EMERGENCY CO-ORDINATION CENTRE: Civil Protection, Tel: 006.

TELEPHONES: No facilities yet for placing telephones on board. Only available at Agent's office, or through Cabo Penas Radio.

SERVICES: Tank cleaning equipment, facilities for discharge of tank washings, compass adjusting, radio and radar repairs, supply of charts, nautical publications, sounding paper, course recorder paper, Notice to Mariners, safety equipment, extension of certificates, etc.

BANKS: All Spanish banks are represented in town, as well as others non-Spanish.

STORING: Vessel can be stored by barge (subject to weather conditions) whilst at anchorage, or by truck when alongside. Storing can take place whilst loading/discharging. Trucks can proceed alongside. Forklifts, if required, can be used. Usual customs clearance formalities apply. Local riggers could be employed to assist with storing.

SHIP SUPPLY SERVICE: There are several operators. Agent should be contacted first.

SHORE LEAVE: Crew members of any nationality are allowed ashore.

IDENTIFICATION CARDS: Seaman's Book is sufficient.

GARBAGE DISPOSAL: Service provided by Port of Gijon Cleaning Service and can be arranged through agent. Garbage must be in plastic bags or drums. A private contractor is also available who will provide containers and collect garbage 3 times per week. Contact Contenedores del Norte S.A., Covadonga Street 24, 33201 Gijon. Charges: 4,000 Pta. for delivery and collection of container.

Toxic waste cannot be handled at this port.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: Stella Maris, El Musel, 33290 Gijon. Tel: (985) 321229. Facilities include accommodation, restaurant, postal facilities, telephone, shop, tv-video, reading material, games and chapel.

Casa del Mar, Avda. Eduardo Castro, s/n La Calzada, Gijon. Tel: 327200/326951/327009/327190.

CURRENCY: Spanish Peseta (Pta). U.S.$ 1.00 = Pta.136.46 (1.3.94).

DELAYS: Allow 24 hours notice for bunkering.

GENERAL: *Wind Conditions:* N.E. to East in Summer time, coinciding with high pressure. West to N.W. coincides with low pressure. Rotation of winds is direct. Starting S.W. and West, passing to N.W. with high sea, reaching with North the maximum intensity of gale. With N.E., fair weather.

DEVELOPMENTS: A new dry bulk unloading terminal (EBHI – European Bulk Handling Installations) has been completed on the Minerales Quay (See "Berthing"), to accommodate vessels of up to 200,000 d.w.t., with 2 berths with 21.0 m. alongside at LWOST, 2×50 tonne grab unloaders, each handling up to 2,200 t.p.h., a stacking area of 300,000 sq.m. 2 Stacker reclaimers handling 2,800 t.p.h. each and 4.4 km. of conveyors. There is a shiploader on the Norte Quay, linked to EBHI by conveyors, suitable for 35,000 d.w.t. vessels. It provides a loading rate of 2,600 t.p.h. and the berth has a depth of 11.0 m. at LWOST.

It is expected that the maximum allowed draft at Muelle de Minerales will soon be increased.

AUTHORITY: Autoridad Portuaria de Gijon, Apartado 82, C/Claudio Alvargonzales 32, 33201 Gijon (Asturias), Spain. *Tel:* (98) 5354945. *Telex:* 87369 Jupo E. *FAX:* (98) 5359917. *Contact:* Carlos Zapico Acebal, Chairman. Joaquin Juan Dalac, Port Director. Jose Pedro Vindel Muniz, General Manager. Harbour Master's Office: Tel: 5321276. Fax: 5310049.

AGENT: Romualdo Alvargonzalez, S.A. Apartado 141, Gijon. Tel: 344400. Telex: 87366.

HUELVA: 37.16 N. 06.55 W. (See Plan)

PORT LIMITS: *Zone I:* The area between the meridians of 6°40.4′ W. and 7° 03′ W. and between the Parallel of 37° North and the coast including the bar as far as the Watchtower Quay (Pilotage Bar Quay on map).

Zone II: From the Watchtower Quay to a line running East/West through Colon Monument on Sebo Point.

Zone III: From Colon Monument up to Odiel Point.

DOCUMENTS:

3 Crew Lists.

2 Passenger Lists or a negative.

1 Cargo Manifest of goods destined to Huelva.

Another Manifest covering transit cargo.

2 Stores Lists, including tobacco, cigars, cigarettes, coffee, spirits, radios, cameras, etc., in possession of crew. In all cases make and number of radios to be indicated.

Safety Radio Certificate and Safety Equipment Certificate.

If vessel carries over 6 kilos tobacco per man, the excess to be declared in a separate manifest, which must be visaed by the Spanish Consul at the last port, otherwise vessel is exposed to heavy fine.

CERTIFICATES: Safety Radio, Safety Equipment and Derat Certificates should be at hand for production if requested.

PILOTAGE: Compulsory. Services from middle to high tide, depending on draft of vessel on arrival or departure. Pilot's motorboat painted white. Letter "P" in black at both bows. Agent must be in close contact with Pilot Office. Pilots are informed by Agent of ETA at bar. In rough weather Pilots will not be available for entries or sailings. Depths of water depend on location, ranging from 15 ft. to 30 ft. in high tide. Pilot station equipped with VHF Channel 16.

Telegraphic address of Pilots – "Practicos–Huelva", 24 hours' notice of ETA required.

At night the regulation lights are exhibited. Contact must be made by VHF to take Pilot on board. Regulation ladder required.

In the event of bad weather the Pilot will board at Cascajera.

MAX. SIZE: Max. draft permitted, 37 ft. up to 41 ft. 08 in., depending on the tide.

The entry to port is always subject to tides and maximum sizes of vessels able to proceed to inner quay berths will depend upon the berth and the tidal constant.

HEALTH: As long as Masters of vessels notify Medical Office by cable that there are no sick on board and that the ship proceeds from an area free from contagious diseases as specified by the International Sanitary Regulations, Free Pratique will be granted to the vessel, although this does not eliminate all the sanitary measures specified in the Exterior Sanitary Regulations in force.

Notice should be given en-route towards the Port of Huelva and sufficiently in advance to permit the Free Pratique to be granted.

When there is any sickness on board, no operation will be carried out until the vessel or its personnel have been inspected by the Medical Authorities.

The granting of Free Pratique does not signify that the Yellow Flag may be lowered. This will be done once the Medical Authorities have carried out their inspection or are in possession of the Maritime Health Declaration Form signed by the Master.

RADIO: Local coastal radio station Chipiona Radio located at Punta Umbria. Working frequency: 1700 kHz. Listens out permanently on 2182 kHz and Channel 16 on VHF.

Hours of service 24 hours (continuous).

National and International Radio traffic – radio conversation, radiotelegrams, advice to navigators.

TUGS: Only used inside harbour. Ship's lines employed, 4 tugs available: 1×1,125 h.p., 1×1,200 h.p., 1×2,000 h.p. and 1×2,500 h.p. Number required to assist vessels at the discretion of the Pilot in charge.

BERTHING: *Muelle de Torre Arenillas:* Mineral loading quay – 465 m. mooring length and 12 m. depth of water at LWST. 2 loaders of 1,200 t.p.h. each.

Pantalan de A.I.E.S.A.: Jetty belonging to "Aragonesas Industria Energia, S.A." for movement of liquid and solid bulk cargo. Length 150 m., with 8 m. depth of water at LWST. For movement of solids, a gantry crane of 6 tonnes is available, together with 3 tubes for liquids – 150 mm. (200 cu.m./hr.); 200 mm. (250 cu.m./hr.) and 100 mm. for liquid chlorine (80 cu.m./hr.).

Fertilizantes Espanoles S.A.: Extension of the Fertilizantes Espanoles jetty consisting of fitting out liquid quay for movement of solid bulk cargo. Length 120 m., 7.0 m. depth of water, 3×15 tonnes gantry cranes and pipes for conveyance of phosphoric and sulphuric acids. Rates: Phosphoric acid (loading) 350 t.p.h. – 550 t.p.h. Sulphuric acid (loading/unloading) 200 t.p.h. – 300 t.p.h. Phosphates (unloading) 500 t.p.h. – 800 t.p.h.

Ertoil S.A.: "Reina Sofia Quay" of Ertoil S.A. for the movement of liquid bulk cargoes, is 700 m. long and 8.0 m. – 9.5 m. depth at LWST. 2 berths for vessels up to 6,000 d.w.t., 1 berth for vessels up to 3,000 d.w.t. and 2 berths for lighters and tugs. Petroleum Products: 2×8 in. loading arms at East Berth; 1×8 in. loading arm at Central Berth and 3×8 in. loading arms at West Berth. Ballast: One loading arm at East and West Berth, rate 350 cu.m./hr. – 800 cu.m./hr. Titanium effluents: Two points at each end berth. Phenol/Acetone: Two loading arms at East Berth and 2 loading arms at West Berth. Propylene: 1×4 in. loading arm at Central Berth.

Pantalan de Foret S.A.: Liquids pier for vessels of 60 m. – 120 m. LOA and draft up to 7.5 m. Depth alongside 9.5 m. 1×8 in. pipeline for transferring sulphuric acid.

Pantalan de Empresa Nacional Minas de Almagrera: Length 120 m., depth 9.5 m. Mooring for vessels with liquid cargoes (sulphuric acid) from 3,000 d.w.t. – 15,000 d.w.t. 1×14 in. pipeline for transferring sulphuric acid.

Levante (Eastern) Quay: Length 1,200 m. of which 700 m. is for general cargo and bulk cargo. Depth 8 m. Equipment includes 6×8 tonne cranes for general cargo.

Tharsis Quay: 320 m. long, depth of water 6.0 m. 2 gantry cranes of 15 tons for loading ore at a rate of 350 t.p.h. Quay not in use.

Fertilizantes Espanoles S.A. Quay: 120 m. long, depth of water 6.5 m. Used for fertilisers and liquid bulk cargoes. 6 in. line for unloading sulphuric acid (100 t.p.h.) and 10 in. line for loading and unloading ammonia (150 t.p.h.).

Pertrechos Quay: Used for fishing boat repairs. Backing on to it is a small floating dock.

Saltes Quay: 200 m. long, depth of water 5.5 m. Used for fitting out and deballasting.

Ingeniero Juan Gonzalo Quay: 902 m. long, depth of water 12 m. LWST for general cargo and solid bulk cargo. Equipped with 8 gantry cranes of 12 tons and 2 cranes of 6 ton, 5×16 tonne cranes and 1×35 tonne crane. There is also a ramp for Ro/Ro vessels at the Southern end.

ENAGAS: Length 290 m. Depth 12.0 m. One berth for LNG. 2 unloading arms rated at 2,000 cu.m./hr. each. One vapour return arm.

CRANES: 43 mobile cranes (private) with capacity up to 160 tons. Also see "Berthing".

STEVEDORES: 48 hours' advice to Agent necessary to engage labour.

MEDICAL: Agent must give at least 24 hours advance notice where medical aid is required. There is a provincial hospital. Vaccination certificates against fevers and cholera are issued by the Provincial Health Authority.

TANKERS: Ertoil S.A. (Oil Division) operate a SBM tanker-mooring 7 miles offshore, about 20 miles distant from Huelva. Mooring is suitable for vessels 900 ft. long with draft up to 70 ft. salt water (depth 72 ft.). Mooring 66 ft. is used for discharging only. Discharge rate is about 2,500 t.p.h. through two 12 in. lines and a 30 in. submarine line.

Within Huelva port, there are 2 tanker berths of which one is used by Campsa.

The 2 berths at the "Torre Arenillas" quay permit a draft of 12 m. at low water, but the max. length permitted at the oil quay is approximately 200 m. Depth of water 13.0 m.

Berth No. 1 (North) loading/discharging:

LPG	8 in. line
Gasoline	10 in. ,,
Naphtha	10 in. ,,
Diesel	10 in. ,,
Fuel oil	10 in. and 12 in. lines

Berth No. 2 (South) loading/discharging:

Benzene	8 in. line
Cyclohexan	8 in. ,,
Gasoline	10 in. ,,
Diesel	10 in. ,,
Distillates	10 in. ,,
Fuel oil	10 in. and 12 in. lines

Loading Rates: Oil/products 1,000 t.p.h. LPG 80 t.p.h.

Residues: There is a receiving station near the oil quay for tank residues, together with a product separator. Connection lines are 10 in.

Product	*S.G.*	*A.P.I.*
Propane	0.507	—
Butane	0.573	—
Gasoline 85-Ron	0.693	72.68
Gasoline 96-Ron	0.735	61.02
Campsa G.O.	0.832	38.57
R.D. 2494	0.789	47.84
Industrial F.O.	0.945	18.24

DENSITY: Water at this port is salt water. Fresh water, in quantity of 1 in. to 7.5 in., only present in heavy rainy weather.

FRESH WATER: The supply of drinking water is made at the Eastern (Levante) Quay at the rate of 20 t.p.h. per vessel and at quays of Ingeniero Juan Gonzalo, Minerales and Petrolero de Torre Arenillas. This can also be provided by means of tugs at a rate of 50 t.p.h and 30 t.p.h.

FUEL: Fuel oil and diesel available in main port. Not available at offshore tanker terminal.

CONSULS:

Belgium
Denmark
Finland
France
Germany
Greece
Italy
Netherlands
Norway
Panama
Portugal
Sweden

REPAIRS: Any kind in engine room, and hull above water.

DRY DOCKS: Only 1 small dry dock available for vessels up to 3,500 g.r.t.

GANGWAY/DECK WATCHMEN: The employment is at the discretion of Masters, who are free to either employ or do without any watchmen.

OPENING/CLOSING HATCHES: Normally effected by crew, liner vessels excepted.

CUSTOMS ALLOWANCES: 200 – 300 cigarettes per man out of bond. If necessary permit may be obtained from Customs Authorities to open bond and provide crew with fresh supplies, if stay in port justifies procedure. Wine and/or Spirit Allowances: Two bottles per man.

REPATRIATION: No difficulty in this respect.

AIRPORT: The nearest is at Seville – San Pablo. A distance of 100 km. from Huelva.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: 1st January; 6th January; 19th March; Thursday preceding Good Friday as from 1400 hrs. Good Friday; 1st May; 3rd August; 15th August; 12th October; 1st November; 8th December; 25th December.

Permit to work on any of the mentioned holidays (1st January, Good Friday and 25th December excepted) can be obtained, but sufficient reasons must be given to justify permission.

POLICE/AMBULANCE/FIRE: Police and Civil Guard 240592 – 241900; Fire-brigade 222879; Customs 245174.

TELEPHONES: No arrangements exist, for the time being, to place telephones on board vessels.

SHORE LEAVE: Permitted.

IDENTIFICATION CARDS: Not necessary.

DEVELOPMENTS: The breakwater has been completed out to No.2 Buoy. The Channel is being dredged to a depth of 10.5 m.

GARBAGE DISPOSAL: There is no organised service for reception of garbage coming from ships. On the Eastern Quay there is a collection service from the quay itself.

WASTE OIL DISPOSAL: At the oil berth of Torre Arenillas, Ertoil can receive waste oil. Contact Tel: 350111/350353/220250.

SEAMAN'S CLUBS: Casa del Mar, Avda. Hispano America, Huelva, Tel: 257411/257565. Facilities include accomodation.

AUTHORITY: Capitania Maritima de Huelva, Huelva, Spain. *Contact:* Carlos Gago, Port Captain.

IBIZA: 38.54 N. 01.28 E. (See Plan)

DOCUMENTS: *Passenger Liners:*

- 5 Crew Lists (Customs, Comandancia de Marina, Health, Police and Consignee).
- 6 Passenger Lists (Customs, Police, Guardia Civil, Obras del Puerto Health and Consignee).
- 2 Lists of Crew and Passengers personal effects (Customs).
- 2 Stores Lists (Customs).
- Health Certificate (Health Department).
- 2 Cargo Manifest, if any. (Customs).
- 2 Negative Cargo Manifests, if no cargo.

Cargo Ships:

- 5 Crew Lists.
- 2 Lists of Crew Personal Effects.
- 2 Stores Lists.
- Health Certificate.
- 2 Cargo Manifests.

PILOTAGE: Pilotage compulsory. No ships allowed to go further than imaginary line between Botafoch Lighthouse and Isla Negra del Este without a Pilot. Advisable to give 24 hours' notice of ETA. Shortly VHF will be installed in pilot station and boats. Pilot's boat is of the canoe type with white sides and letter "P" in black on both sides. Vessels requiring a Pilot must give 3 long whistles. By night flash morse "G".

Pilot will board between Botafoch Lighthouse and Isla Negra del Este. In bad weather vessel should follow pilot boat until Pilot is able to board.

ANCHORAGES: Anchorage area situated inside imaginary line Botafoch-Negra del Este with depths of 40 ft. to 50 ft. Pilot required to anchor.

MAX. SIZE: Max. length for berthing, 135 m. Max. draft 21 ft.

HEALTH: Report in advance to Pilot if there is any problem. If situation is normal, then, after ship berths the Health Inspector boards and quickly grants Pratique. In event of any suspected disease or fever on board the Pilot (without boarding), will show the anchorage area, then Health Inspectors and Authorities will board, and give necessary instructions.

Vessels entering after calling at another Spanish port have no problems obtaining Pratique.

TUGS: Not available.

BERTHING: Depths alongside 4 m. – 8 m.

STEVEDORES: Available, ETA required 24 hours in advance.

MEDICAL: Civil hospital, military hospital, and 3 private clinics available.

TANKERS: Load/discharge lines 10 in. and 8 in. No facilities for discharging residues. 1 berth. Max. draft of the ship is 21 ft.

FRESH WATER: Available at the quays. 9 tonnes/p.h.

FUEL: Available. Notice required 24 hours.

FIRE PRECAUTIONS: Tankers should have a rope over bows, at water level while the ship is berthed.

REPAIRS: There are good work shops and engineers but with limited possibilities. There is a shipbuilder's yard where they build and repair yachts and canoes.

GANGWAY/DECK WATCHMEN: Performed by crew.

OPENING/CLOSING HATCHES: There are no fixed rules on this matter: it varies according to the circumstances.

CUSTOMS ALLOWANCES: There are no free allowances.

REPATRIATION: Facilities for effecting crew changes and arranging any necessary repatriations.

AIRPORT: 8 km. away, served by scheduled flights daily.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: Cargo work can be arranged on the official holidays with an extra charge of 40% to the workmen.

New Year; Epiphany (6th January); Saint Joseph (19th March); Maundy Thursday: half-day (the evening); Good Friday; Ascension of our Lord (40 days after Resurrection); Saint Joseph the Artisan (1st May); The Holy Heart (last Friday of June); Exaltation to work (18th July); Santiago, Lord of Spain (25th July); Our Lady of the Snows; Lord of Ibiza (5th August); Ascent of Blessed Virgin Mary to Heaven (15th August); Feast of the Hispanicism (12th October); All Saint's Day (1st November); Festival of the Immaculate Conception (8th December); Christmas Day (25th December).

Although not yet official there will be introduced as a holiday Easter Monday and 26th December.

POLICE/AMBULANCE/FIRE: Police 301131; Ambulance 301214; Fire telephone call to the Comandancia de Marina, Tel: 301190.

SERVICES: Compass adjusting.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: Required.

DEVELOPMENTS: Increasing depths in the port to 7 m. It has also been approved to enlarge berthing quays to 220 m. and 7 m. depth, and build a fishing dock.

AUTHORITY: Comandancia Militar Marina – Ibiza. *Contact:* Edmundo Fraga Ferreiro, Comandante.

MAHON: Minorca, 39.52 N. 04.18 E. (See Plan)

DOCUMENTS: *Health Department:*

- Crew List.
- Passenger List.
- Disinfect and Derat Certificates.

Port Authorities:

- Crew and Passenger List.
- Ship characteristics and other details.
- Cargo.
- Indication of previous Port and destination.

Customs:
Cargo Manifest.
Bill of Lading (Cargo for this port).
Crew List and Passenger List.

Also the Master will produce, if required, Log book and Passports of crew.

PILOTAGE: Compulsory to take Pilot on entry, departure and any movements within port. On approaching port, during day, ships will hoist flag corresponding to International Code "I need a Pilot". By night, by means of lights, according to International Code.

During day Pilot's boat is recognised by a square blue flag with letter "P" (painted white) in centre of flag. Pilotage area comprises all the estuary, from inside port to outside Capes of La Mola and San Carlos.

ANCHORAGES: Inside are good anchorages, for instance Cala Llorga and Plana de Cala Figueras.

MAX. SIZE: Unlimited length and width, but draft is limited to commercial port, 25 ft.; and to anchorage, 43 ft.

BERTHING: Commercial Quay: Length 518 m. average depth alongside 8 m.

Container and Ro/Ro Quay: Length 180 m. depth alongside 6.5 m.

STEVEDORES: Available. Loading and discharge is as follows:

Container Berth: 2 fixed cranes 800 tonnes per day loading and discharge.

Commercial Quay: 2 fixed cranes and 1 mobile crane with a capacity of 1,000 tonnes per day. Priority to regular lines.

MEDICAL: In case of accident or illness of any member of crew medical assistance and hospitalisation will be in civil hospital.

FRESH WATER: Available. 4 points on the Container Quay and 7 points on the Commercial Quay.

FUEL: Available from CLH at Cala Figueras.

CONSULS: Italy: Tel: 363393; France: Tel: 363889; Netherlands: Tel: 362703.

REPAIRS: Small repairs possible.

OPENING/CLOSING HATCHES: Carried out by crew before 0800 hrs.

AIRPORT: 5 km. from Mahon – international and national flights.

TIME: GMT plus 1 hour from September to March, and 2 hours from March to September.

HOLIDAYS: Main holidays are: 1st January (New Year), Holy Week (variable), 1st May (Labour Day) Corpus Christi (variable), 24th June – National Holiday, 8th September, local holiday, 25th December – Christmas. Work is possible on all these dates provided the labour force is paid extra.

POLICE/AMBULANCE/FIRE: Police: Tel: 36.37.12; Ambulance: Tel: 36.11.80; Fire Brigade: Tel: 36.39.61.

TELEPHONES: No telephones on the Quays.

IDENTIFICATION CARDS: Not required.

AUTHORITY: Comandancia Militar de Marina de Menorca, Anden de Levante 12, Mahon, Menorca, Spain. *Tel:* 364107. *Contact:* Ricardo J. Ruiz de Gopegui y Sendagorta, Comandante.

MALAGA: 36.43 N. 04.25 W. (See Plan)

DOCUMENTS

5 Crew Lists.
5 Passenger Lists or Negative.
1 Cargo Manifest of goods destined to Malaga, as well as of other cargoes in transit.
Stores List in duplicate, including tobacco, spirits, radios, etc., belonging to vessel.
Details list in duplicate of all personal effects of the crew and Passengers (tobacco, spirits, cameras, radios, etc.). For vessels larger than 499 g.r.t., Safety Equipment Certificate.

Note: Tobacco: In case vessel carries more than 6 kilos of tobacco per man, the excess must be declared in a separate manifest, which must be visaed by Spanish Consul. In absence of Consul, said document will have to be visaed by an Authority or Consul of a friendly nation at the time of the former port clearance. Otherwise, vessel may be severely fined.

PILOTAGE: Pilotage is compulsory and service is permanent. Pilots board vessel by cutter in roads, near entrance formed by 2 breakwaters. Pilot cutters are painted black and have letter "P" in white on each bow. Cutters have a blue flag hoisted on mast, with the letter "P" in white, on both sides of flag. At night, cutters have white light, and under this light, a red one. Entrance between breakwaters is 260 m. wide and easily accessible. When weather in the roads is bad, which seldom happens, vessels approach as close as possible to entrance in order that Pilot can board easily.

ANCHORAGES: Vessels can anchor outside of breakwaters, in roads in depths of 80 ft. – 90 ft. Anchoring is prohibited in vicinity of tanker moorings, the Pilot will advise best position. Weather is bad occasionally when East wind blows, during Winter.

MAX. SIZE: No restrictions in respect of breadth. Max. allowed length is 220 m. – 240 m. Max. allowed draft to enter port is 40 ft. – 42 ft.

The tanker sealine berth (in roads) can accept vessels up to 250,000 d.w.t.

Largest tanker at buoy mooring "Liotina", 317,521 d.w.t., length 352 m., draft on entering or leaving 22 m.

HEALTH: If vessels proceed directly to berth, Pratique can be obtained immediately after berthing. In case of any suspected disease or fever on board, Master must radio to Agents, in order that they can advise Health Office.

RADIO: Nearest important radio station is Radio Costera (VHF – Onda Media) Cadiz, or Gibraltar and Aranjuez. Master's messages should be received at least 24 hours before arrival.

TUGS: 1×1,050 h.p., 1×1,200 h.p., 1×1,500 h.p. and 1×1,800 h.p. Ship's lines are used, tug-boats are employed according to Pilot's advice, and upon request.

BERTHING: Pilots will advise Masters whether vessel has a free berth or not. Also if she has to anchor in Roads. Further particulars can also be obtained from Pilot.

Quay (No.)	*Length* (m.)	*Depth* (m.)	*Remarks*
1	472	9.4	General Cargo, Containers
	99	8.0	Container Storage
2	450	10.5	General Cargo, Grain in Bulk and Passengers
3	120	9.0	Passengers and Ferries
	150	8.5	Passengers and Ferries
	140	8.5	Passengers and Ferries
4	485	8.0	General Cargo
5	110	6.5	Armaments
6	420	11.0	Bulk Solids and Bulk Liquids.
7	145	9.4	Fish
8	148	5.0	Fish
	135	5.0	Fish
Foreport:			
East side	300	11.0	Berth for passenger ships when weather fine.
7	340	13.5	Quay for bulks, solids and liquids when weather fine.
South side	240	13.5	Berth for tankers with crude or refined oil.

In Roads:	*Draft* (m.)	*Max. d.w.t.*
Buoy field for tankers with crude oil	22.0 – 25.0	250,000
Buoy field for tankers with liquefied petroleum gases	8.0 – 10.0	1,500
Buoy field for tankers with liquid ammonia	18.0 – 20.0	17,500

CRANES: 21 quay cranes with capacity up to 30 tons.

SPECIALISED CARGO HANDLING FACILITIES: There are regular car ferries for passengers and cargo, Ro/Ro plying with Melilla.

At Quay No. 1, 20 ft. containers can be handled with a crane up to 30 tons and a Hyster forklift with appropriate spreader. Eventually 30 ft. containers will also be handled.

Quay No. 2 includes 15,000 ton silo for grain, loading and discharging capacity 200 t.p.h.

Quay No. 4 includes 9 vegetable oil tanks with a total capacity of 5,782 cu.m.

Quay No. 6 includes a 5,000 ton silo for cement. Unloading capacity 60 t.p.h. – 200 t.p.h.

Quay No. 7 (Foreport) includes 3,312 cu.m. silo for molasses.

Quays No. 6 and 7 can handle all cargo in bulk, rate for coal 4,000 tonnes per day, in an ordinary working day.

There are 24×4 ton forklifts available for general cargo handling and 3 forklifts (25 tons – 28 tons) for container handling.

STEVEDORES: It is important that Master sends advance message regarding the vessel's ETA. Agents can inform Shippers or Receivers' stevedores accordingly, to arrange operations properly. Official working hours of port are: Monday/Saturday 0800 – 1200, 1400 – 1800 hrs.

MEDICAL: Any kind of medical service can be arranged. In case a crew member needs medical attendance urgently, it is advisable that the Master radio in advance.

TANKERS: *Quays No. 4, 6 and 7:* Operator: Demagrisa. Crude oil and caustic soda discharge pipeline – 250 t.p.h. Refined oil discharge pipeline – 300 t.p.h. Storage capacity 5,782 cu.m.

Operator: Sociedad Anonima Cros. 4 lines for naphtha discharge. Rate 210 t.p.h.

Operator: Repsol. Quay No. 7: Discharge lines for crude oil. Rate 1,500 t.p.h.

Western Jetty: Crude oil pipeline, diameter 24 in. with 2 discharge arms and 1 spare. Discharge capacity 2,000 – 2,500 t.p.h.

Operator: C.L.H. (Quays No. 6 and 7) Discharging and loading pipe for crude oil by-products with 4 inlet valves on each wharf, with 800 t.p.h. discharging capacity.

Wharf adjoining the Western Jetty: 1×14 in. and 3×12 in. discharging and loading pipes for crude oil by-products, with 2 inlet valves and a discharging arm, and 1,000 cu.m./hr. capacity.

Operator: Bacardi. Molasses pipeline, discharging capacity 150 t.p.h., storage capacity 3,312 cu.m.

Playa Misericordia: Operator: Repsol Petroleo. Sea-line for discharging tankers up to 250,000 d.w.t. Max. discharge rate 6,000 t.p.h. through 1×30 in. pipeline.

Operator: Repsol Butano. Sea-line for butane which also handles propane. Max. discharge rate 300 t.p.h.

Operator: Sociedad Anonima Cros. Ammonia pipeline for discharging tankers up to 17,500 d.w.t. through 1×8 in. line. Discharge rate 200 t.p.h.

DENSITY: 1025.

FRESH WATER: Always available. Deliveries are performed directly from the quay, rate 20 t.p.h., or by tank-barge.

FUEL: Ordinary fuel oil and gas oil are available at local refinery of C.L.H. It is advisable that Shipowners contract bunkers through their own contractors, with 48 hours notice, so that order can be received in time. Delivery can be performed at bunkering pier at a rate of 60 t.p.h. or by road tankers.

FIRE PRECAUTIONS: Tankers perform their operations at the petroleum berth by Repsol or C.L.H. which have necessary fire precautions.

MOTRIL: 36.43 N. 03.30 W. (See Plan)

DOCUMENTS:
Health Certificate.
5 Passenger Manifests (1 Health, 2 Customs, 1 Police, 1 Agent).
4 Crew Manifests (1 Health, 2 Customs, 1 Agent).
2 Stores Lists (for Customs).

PILOTAGE: Arranged by Agent basis ETA given 24 hours in advance. Pilot boat distinguished by painted "P". Night pilotage possible approx. 100% extra, on holidays 50% extra. Vessels await Pilot just outside port. Pilot compulsory for all foreign vessels and Spanish vessels arriving from abroad. Pilot should be requested when 1 mile from the port by means of international signals.

ANCHORAGES: Area near port. The Roads to the East of the port have very little depth. The sea is rough in this area and vessels can run the serious risk of beaching. The best location for anchorage is outside the port 0.25 miles S.S.W. from the port entrance, in 14 m. to 25 m. of water, mud bottom.

RESTRICTIONS: None, vessels may enter day or night.

MAX. SIZE: Entrance 34 ft. at LWS. Max. draft alongside quays, 34 ft.

HEALTH: Free Pratique given on board.

RADIO: Harbour tugboats and pilot operate on VHF Channel 12.

TUGS: One tug, 1,100 h.p. available.

BERTHING: There is 583 m. of quayage with a depth of 8.2 m. (27 ft.) at LWS; 107 m. of quayage with a depth of 6.4 m. (21 ft.) at LWS; 260 m. with a depth of 10.5 m. (34 ft.) at LWS.

CRANES: There are 5 electric cranes of 6 tons capacity; 2 electric cranes of 12 tons capacity and one mobile crane of 3 tons capacity.

BULK CARGO FACILITIES: Muelle de Levante: 285 m. length. Max. draft 8.2 m. (27 ft.) at LWS. Three cranes 6 ton capacity for handling bulk cargoes (grain, ore, coal, fertilisers, etc.). Loading/discharge rates: 300 t.p.h. One crane 3.5 tons to 6 tons for handling general cargoes.

Muelle de Poniente No. 1: 107 m. length. Max. draft 6.4 m. (21 ft.) at LWS.

Muelle de Poniente No. 2: 260 m. length. Max. draft 10.5 m. (34 ft.) at LWS. 2 cranes of 12 tons capacity.

Muelle de Costa: 298 m. length. Max. draft 8.2 m. (27 ft.) at LWS. Two cranes of 6 tons for handling general cargoes.

SPECIALISED CARGO HANDLING FACILITIES: Muelle de Poniente equipped for handling liquid chemicals and asphalt, by lines.

Ro/Ro Berths: 2 Ro/Ro berths at Muelle de Costa and 1 Ro/Ro berth at Muelle de Levante.

STEVEDORES: No ETA advice necessary. Agents arrange gangs.

MEDICAL: No advance notice required. All facilities available.

TANKERS: Vessel about 8,000 tons. No special requirements.

DENSITY: 1025.

FRESH WATER: Available alongside all quays.

FUEL: Available at Muelle de Levante. Rates of delivery: 200 t.p.h.

CONSULS: None in Motril. The nearest at Granada or Malaga.

REPAIRS: Minor repairs can be affected. There is a slipway for vessels up to 150 tons.

GANGWAY/DECK WATCHMEN: Agent arranges.

OPENING/CLOSING HATCHES: Crew open and close hatches.

CUSTOMS ALLOWANCES: Tobacco: About 100 cigarettes per man. Wine and or spirit. None.

REPATRIATION: Facilities available.

AIRPORT: The nearest airports are Malaga 105 km., Granada 70 km.and Almeria 120 km.

TIME: Local time GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day (January 1st), Epiphany Day (January 6th), Vote Day (January 13th), Maundy Thursday, Good Friday, Wort's Day (May 1st), Santiago Day (July 25th), Assumption Day (August 15th), Pilar's Day (October 12th), Local Holiday (October 15th), Immaculate's Day (December 12th) and Christmas Day (December 25th).

Work can be arranged on above days, however dependent upon permission of the Work Authority.

POLICE/AMBULANCE/FIRE: Police Tel: 601221. Ambulance Tel: 600200. Fire Tel: 600200.

TELEPHONES: No facilities for placing telephones on board.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: Not necessary.

AUTHORITY: Autoridad Portuaria Almeria – Motril, Direccion del Puerto, Recinto Portuario, 18600 Motril (Granada), Spain. *Tel:* (958) 601207, 601238. *FAX:* (958) 601234. *Contact:* Port Director.

PALAMOS: 41.50 N. 03.08 E. (See Plan)

DOCUMENTS:
3 Crew Lists.
1 Passenger List or negative.
Manifest of goods destination Palamos and in transit.
Stores List in duplicate, including tobacco, spirits, radios, etc., belonging to vessel.
Detailed list in duplicate of all personal effects of crew and passengers (Tobacco, spirits, camera, radios, etc.).
Tobacco – any excess over 6 kilos per person must be stated on a separate manifest duly visaed by Spanish Consul.
If on inspection differences are found (more or less), articles removed and heavy fine imposed.

PILOTAGE: Pilotage is compulsory and service is permanent. Pilot is informed by Agent of vessel's ETA given 24 hours in advance. When vessels approach the breakwater, Pilot will board. Pilot boat is white with a black "P" painted on the side.

RESTRICTIONS: None but for draft. Vessels carrying dangerous cargo should get authorisation for berthing prior to arrival of the ship.

MAX. SIZE: No restrictions in respect of length. Max. draft 14.0 m.

HEALTH: Pratique is obtained immediately after berthing. In case of suspected disease or fever on board the Master must radio to Agent in order inform Health Office in time.

RADIO: Radio Costera of Barcelona, Bagur or Marmella.

VHF: Contact pilot station on Channel 9.

TUGS: None. Barcelona's tugs could be hired should the vessel's size make it necessary.

BERTHING: Depth of water in centre of harbour 15.0 m. – 20.0 m.
Commercial Quay: Length 258 m., depth 14.0 m. Ro-Ro ramp at Eastern end with width 30 m. for ships with max. draft 12.0 m.
West Quay: Length 150 m., depth 7.0 m.

CRANES: 1×6 ton quay crane and 2×150 ton mobile cranes.

STEVEDORES: 24 hours' notice required in order to arrange gangs.

MEDICAL: Any kind of medical service can be arranged if information received in time.

FRESH WATER: Plentiful supply of water by means of hoses from the pier to vessel. Maximum rate 100 cu.m./hr.

FUEL: Can be supplied. 24 hours' advance notice required.

CONSULS:

France	Tel: 314472	Portugal	Tel: 320148
Denmark	Tel: 314400	Sweden	Tel: 320850
Italy	Tel: 320200		

REPAIRS: Only small repairs.

SURVEYORS: Comisariado Espanol Maritimo – "Comismar". Tel: 210610, 215666.

GANGWAY/DECK WATCHMEN: It is not compulsory but advisable at night.

OPENING/CLOSING HATCHES: Normally opened/closed by the crew, otherwise according to Charter Party.

CERTIFICATES: Usual documents on board. Safety Wireless, Safety Equipment, Derat and Registered Tonnage Certificates are the only ones required by the Authorities.

CUSTOMS ALLOWANCES: Crew: 6 kilos tobacco per person. Passengers: 2 kilos per person. Any excess on this amount must be declared on a separate Manifest as in transit. Wine and/or Spirit: only 1 bottle per man. Any excess must be declared on a separate Manifest, as cargo in transit and stowed apart from the tobacco and spirits carried under the Provisions List. This Manifest must be visaed by the Spanish Consul at the last port of call. Any infringement of this regulation will subject the vessel to the immediate imposition of heavy fines and confiscation of the excess tobacco.

REPATRIATION: Good facilities exist.

AIRPORT: Gerona Airport situated at 42 km. distance and half an hour by car from Palamos. Regular flight services with Madrid, Barcelona, Palma Mallorca, London, and all over the world with transfer at Madrid and/or Barcelona.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer (April-September).

HOLIDAYS: 11th September.

POLICE/AMBULANCE/FIRE: Police 31 41 87; Ambulance 31 43 50; Fire 31 43 50.

IDENTIFICATION CARDS: Not required.

DEVELOPMENTS: The container yard is to be enlarged in the near future.

PALMA, Majorca: 39.34 N. 02.38 E. (See Plan)

PORT LIMITS: The seaward boundaries in order to pay port dues are constituted by a line between Cap Enderrocat and Punta de Cala Figuera.

DOCUMENTS: To be presented by Spanish registered ships in coastal trade:
Role of Navigation.
Crew List (on entering).
Crew List (on leaving).
Passenger List (if any).
General Declaration.
List of Goods (if any).
Health documents from port of origin.
Declaration of Coastal trade goods under fiscal dues (if any).
Application for berthing or port facilities.

To be presented by Spanish or foreign registered ships arriving from overseas:
Role of Navigation.
Crew List (on entering).
Crew List (on leaving).
List of Solework.
List of ship provisions.
Manifest of Goods (if any).
Health documents from port of origin.
Passenger List (if any).
Declaration of passengers (if any).
Application for berthing or port facilities.

PILOTAGE: Can be requested by VHF Channel 16, by telegram via coastal stations or by an agent to the following address: Camino de la Escollera 19; or by telephone No. 711937 with 2 hours advance notice of ETA.

Pilot boats are located in Consigna Jetty. The boats are painted white with the letter "P" painted in black on each bow or painted in black with the letter "P" painted in white on each bow. The ship should show the "H" flag of the International Code of Signals and should make by light signal the letter "G" of the Morse code. The pilot boat will board the ship in the Pilotage area. If the Pilot boat is unable to reach the ship in this area, it will meet the ship at the entrance to the port. Whilst waiting for the pilot, ships may anchor in the anchoring zone (See "Plan").

ANCHORAGE: West of a line joining Punta de Cala Figuera and Isla de Sa Torre (See"Plan").

RESTRICTIONS: No restrictions are imposed upon entry.

MAX. SIZE: Greatest length of vessel entered: 293.53 m. (Queen Elizabeth), greatest draft of vessel entered: 14.56 m. (Castillo de Salas). No appreciable tides.

HEALTH: If it should be suspected or be known that there is any disease on board, the pilot should be informed, and the ship will be visited by a representative of the Exterior Health Authority accompanied by a Doctor. If the disease is confirmed, the ship will remain at anchor in the area which has been allocated to her, i.e. the quarantine area.

VHF: All communications must be initiated on VHF Channel 16, after which instructions will be given as to which channel will be used.

TUGS: There are 2 tugs in service for ships in the port: the "Manacor" of 825 h.p. and the "Remolcanosa 20" of 1,740 h.p., property of Compania Remolcanosa. There is no minimum tug requirement. The tug will meet the ship at the entrance to the port. The ship's own lines will be used.

BERTHING: There are 2,253 m. of piers and quays with depths between 11 m. and 3 m. in the Eastern docks (Darsenas Comerciales) and 3,176 m. with depth between 12 m. and 4 m. in the Western docks (Darsena de Porto Pi), both for commercial traffic. Four fixed ramps for Ro-Ro vessels are available and 4×6 tons cranes and 1×30 tons (container) crane, for Lo-Lo operations.

CRANES: 2×6 tons at San Carlos Quay, 2×6 tons at the extension of Muelle de Poniente Quay and 1×30 tons at San Carlos Quay. A floating crane of 80 tons capacity is also available. Ship's gear required in Dique del Oeste and Muelles Comerciales Quays.

STEVEDORES: Dockers are organised into official gangs with different composition, according to the type of cargo. Normal work begins at 0800 hrs. and finishes at 1400 hrs.

MEDICAL: Medical attention may be obtained by a request via the pilots. There is no hospital in the Port. If dental attention is necessary, it should be requested from the Agent. Vaccinating, when necessary, will be done by the Exterior Health authorities. It is not possible to take vaccination doses away.

TANKERS: The diameter of the connections are 8 in. It is necessary to fit reducing pieces if the ship's lines are not of this diameter. Tank cleaning can be carried out in the Port. Discharge rate is 200 cu.m.p.h. – 300 cu.m.p.h.

Load/discharge lines for tankers are situated at the outer end of Dique del Oest (West Pier) at the new bulk liquids terminal of C.L.H., S.A.

DENSITY: 1028.

FRESH WATER: Available at most quays. A special request form has to be filled in at the Harbour Master's Office for this service.

FUEL: Official supplier is C.L.H., S.A. Direct quay-vessel delivery is available in Muelle de Peraires Quay. In the rest of the harbour a tanker lorry is used. Advance notice required.

FIRE PRECAUTIONS: The quay must be closed off with barriers between the bow and stern of the ship and to the point from which the connection is made. Smoking, lighting of fires, using lights or running of unprotected engines if forbidden in the enclosed area. Ships should check the Shore Check List for emergency procedures, fire fighting equipment, lighting and electronic equipment, etc.

REPAIRS: Only possible to handle 2,000 ton vessels in the shipyard of "Astilleros Mallorca".

DRY DOCKS: A 250 ton floating unit for yachts is available in "Astilleros Mallorca".

SURVEYORS: Surveyors from Lloyd's Register and Bureau Veritas can be contacted in the area through the Agent Miguel Puigserver S.A. and by Compania Britannia S.A. and TNI. These companies can be contacted via the Customs Agency Schembri S.A. In cases where the ship is insured by another company, refer to Lloyd's Register.

HATCHES: Opening/closing is usually carried out by crew.

CUSTOMS ALLOWANCES: It is forbidden for the crew members to remove from the ship any quantity of tobacco or alcoholic beverages. Passengers may take away 200 cigarettes, one bottle of alcoholic liquor and one bottle of perfume, with contents not greater than 200 gm.

CARGO GEAR: Loading and discharging normally is carried out using the port's equipment.

AIRPORT: Palma Airport is 14 km. from the port. Regular flights to the principal cities of Europe and the most important airports of Spain.

TIME: In Autumn and Winter local time is GMT plus 1 hour and during Spring and Summer GMT plus 2 hours. Change of time is at 0200 hrs. of the Sunday after the change of the season.

HOLIDAYS: The usual holidays at Christmas and Easter and others depending on the yearly Government rules. No cargo work can be arranged on those days.

Local Holidays: 1st January (Epiphany); 20th January (St.Sebastian); at Easter: Good Friday and Monday after Easter; 1st May (Labour Day); 25th July (St.James); 15th August (Assumption Of Our Lady); 12th October (Columbus Day); 1st November (All Saints Day); 6th December (Constitution Anniversary); 8th December (Immaculate Conception); 25th and 26th December (Christmas).

POLICE/AMBULANCE/FIRE: The telephones of the respective headquarters are as follows: Police 091; Ambulance 200706; Fire Brigade 080.

Emergencies: Red Cross of the Sea. Tel: 295000. Fax: 75.26.89; Coast Guard 900-202-202; S.A.R.: 49.05.02; Weather: Tel.40.36.00, Fax. 40.46.26, Telex 68847.

TELEPHONES: Telephones can be installed on board ships at Dique del Oeste and Muelle de la Ribera de San Carlos. Cost is 19,800 Pts per telephone plus the cost of any calls.

SERVICES: The Company Naturaser, located in the Dique del Oeste, Estacion Maritima No.5, can carry out the collection of dirty water produced by tank cleaning, bilge cleaning and fuel slops. It also has equipment necessary to clean tanks. It is possible to adjust compasses and to repair radios and radar.

STORING: See "Prelims".

1. Vessel can be stored by barge or truck.
2. Regulations concerning storing by barge, such storing must not interfere with loading/unloading operations.
3. Trucks can proceed alongside at the berth.
4. Fork lift trucks can be used on the jetty to handle stores.
5. Customs will take whatever action they consider necessary in each case.
6. Local Riggers can be employed to assist with storing.

SHORE LEAVE: Crew members are allowed ashore.

IDENTIFICATION CARDS: No special identification is required. At times ships may supply their own identification cards.

GARBAGE DISPOSAL: Collection service available with drums and containers provided on board or alongside. Contact Naturaserv S.A Tel: 400408/400561. Charges 20,000 Ptas per 5 cu.m.

WASTE OIL DISPOSAL: Collection service available. Contact Servmar Balear S.L. Tel: 400561/400408. Fax: 402499. Charges 8,000 Ptas/ton. 24 hour service. Suction system and international couplings available.

SEAMAN'S CLUBS: None.

CURRENCY: Spanish Pesetas (Pta).

REGULATIONS: There are special Port Regulations for the land and sea areas. They are printed in a a booklet available in Spanish and English at the Port Authority office (Muelle Viejo No.3).

DELAYS: Delays are not normally expected.

Rafael Soler, Technical Director. Juan de Pazos, Port Captain. Jaime Canudas, Customs Chief. Jose Ma. de Felipe, Harbour Master.

PASAJES: 43.20 N. 01.56 W. (See Plan)

PORT LIMITS: In this port a vessel is considered to be an "arrived ship" (subject to C/P Terms) when the Pilot leaves the vessel once she is inside the port. The laytime will commence when the Master has delivered in writing the Notice of Readiness.

Agent's Comment: The Pasajes Port Authority consider the port to be limited by an imaginary line linking the West of Arando Grande and the East of Arando Chico.

DOCUMENTS:

4 Crew Lists.

2 Passenger Lists or negative.

2 Cargo Manifests with an individual copy of each Bill of Lading for items to be discharged at port of Pasajes.

Copy of Manifest covering other cargo on board in transit for other ports.

Stores List in duplicate, including tobacco, cigarettes, spirits, radios, etc., belonging to the vessel.

Detailed Crew's Stores List, in duplicate, of all personal effects pertaining to crew and passengers (tobacco, cigarettes, spirits, cameras, radios, arms, etc.).

For vessels exceeding 499 g.r.t., Safety Certificate, Safety Equipment Certificate and Derat Certificate should be on board ready for production.

PILOTAGE: Pilot service is compulsory and permanent. Pilots board vessel in an area about 1.5 miles out from leading lights of port entrance. The telegraphic address is: Corporacion de Practicos, Pasajes. Notice should be given 24 hours before arrival; generally Agents keep Pilots informed of vessel's time of arrival when they are advised by Masters. VHF service in operation.

Pilots' cutter is painted in naval-grey with letter "P" painted in white on both sides of bridge; flag with letter "P" in white, is hoisted on cutter's mast.

International pilot signals are used by Pilots, by means of Aldis lamps, when approaching vessel at night. International light and sound signals to be made by vessel when requiring Pilot.

In event of bad weather Pilots cannot board vessel at usual 1.5 miles location. In this case vessel has to wait for instructions (VHF or radio) for entering port.

With respect to boarding and safety measures, the international safety regulations are to be followed.

ANCHORAGES: A limited number of vessels may anchor in Roads inside the port, in good shelter. Depth in area of anchorage is 25 ft. – 29 ft.

RESTRICTIONS: The entrance channel is 80 m. – 120 m. wide, 1,200 m. long and its depth 10 m. at LST, with sandy bottom. Vessels with a length not over 130 m., provided their draft allows, may enter or leave at any time during the day or night. Vessels with a length between 130 m. and 140 m. may enter or leave from 1 hour – 3 hours before high tide during day or night. Vessels with a length over 140 m. may only enter or leave from 3 hours – 1 hour before high tide during daylight. Vessels with a draft over 25 ft., though less than 130 m. in length, will only be allowed to sail or enter from 4 hours before high tide to 2 hours after, on account of their draft, both during the day or at night.

MAX. SIZE: The Port Authority has determined the maximum particulars of the vessels that may use the port: those with a length not over 185 m. and a draft not over 28 ft. forward and 29 ft. aft on entering/leaving. However, a special authorisation must be obtained from the Naval (Military) Commandancy for vessels with a length from 175 m. – 185 m. Vessels bound to Lezo Quays are limited to the same draft as above but to 160 m. length.

HEALTH: If vessels proceed directly to berth Pratique can be obtained immediately upon berthing. If vessels anchored in bay, Pratique can be obtained after anchoring. In case of any suspected disease or fever on board, the Master must advise the Agents, by radio, in order that they may inform the Sanitary Authorities in advance.

RADIO: Nearest Radio stations are the coastal radio stations of Igueldo and Cabo Mayor. Messages by radio-telephone can be transmitted via Radio Arcachon (France). Notice of ETA should be sent to Agent 24 hours before arrival.

TUGS: No tug-boats required for vessels with normal steering when entering port. Tug-boats are required for berthing or shifting to and/or from quays for vessels over 80 m. length. Ship's lines are used and tug-boats are employed according to Pilot's advice.

4 tugs available, the smallest and largest being 1,000 h.p. and 1,500 h.p. respectively.

BERTHING: Berths are allocated by Port Control after notice of arrival and information regarding cargo given by Agent. Pilots inform Masters of location of berth appointed, if any. No tidal difficulties for berthing or shifting inside the port.

Berths belonging to Port Control.

Name	*Length* (m.)	*Depth* (m.)	*Use*
Buenavista 2	145.0	10	Mixed cargo, Ro-Ro traffic
Molinao	313.0	10	Solid bulk, general cargo
Capuchinos	298.3	10	Solid/liquid bulk
Petroleos	159.5	10	Liquids. Special installation
Iberdrola I	250.0	10	Private, solid and liquid bulk.

Iberdrola I	1	12.5	16.5	250

Mobile Cranes: 2×52 tons with 25 m. reach.

STEVEDORES: ETA advice should be received by Agent 24 hours before arrival in order arrange loading/unloading operations with stevedores. The official working time in the port is: Monday/Friday 0700 hrs. – 2100 hrs. No overtime or work on Saturdays, Sundays or Holidays.

MEDICAL: Any kind of medical assistance is available. In case urgent surgical or medical assistance required on vessel's arrival, Agent should be informed in plenty of time to make the necessary arrangements.

No particular inoculations required or vaccination/fever certificates to be produced unless epidemic at last or recently visited ports.

TANKERS: Berth at Muelle Petroleos: 2×8 in. (gas oil), 2×8 in. (fuel oil Nos. 1 and 2, gas oil).

FRESH WATER: Fresh water available at all wharves. Rate of delivery 25 cu.m.p.h. – 70 cu.m.p.h.

FUEL: Fuel is supplied by C.L.H. at Buenavista 1 – 2, Molinao and Capuchinos Quays. The rate of delivery is 100 t.p.h. Owners must pay C.L.H. for the fuel 24 hours prior to its delivery.

FIRE PRECAUTIONS: No specific precautions required unless the vessel carries flammable cargo. Special harbour fire-fighting corps.

CONSULS: Consulates/Vice-Consulates at San Sebastian and/or Pasajes:

Argentina
Belgium
Brazil
Colombia
Costa Rica
Chile
Denmark
El Salvador
Finland
France
Germany
Great Britain
Greece
Italy
Netherlands
Norway
Panama
Paraguay
Peru
Portugal
Sweden

REPAIRS: Repair shops and shipyards available, where repairs or overhauls may be carried out.

DRY DOCKS: One (1) floating dock 99.36 m. long. (internal 84.36 m.), 29.75 m. wide (24.50 m. internal), and 10.40 m. depth of water. Capacity 4,000 tonnes.

One (1) floating dock 68.92 m. long (internal 58.62 m.), 23.25 m. wide (18.0 m. internal), and 9.125 m. depth of water. Capacity 2,000 tonnes.

Two (2) slipways with 6 ramps of length between 130 m. and 157 m. and widths between 7.40 m. and 12.50 m. Max. admissable vessel tonnage: 1,200.

GANGWAY/DECK WATCHMEN: Compulsory. Shore watchmen available.

OPENING/CLOSING HATCHES: Normally carried out by crew.

CERTIFICATES: Ship's Registry, Radio, Load Line, Equipment and Construction.

CUSTOMS ALLOWANCES: In case the vessel carries more than 6 kilos tobacco per crew member and more than 2 kilos per passenger, the excess must be declared in a separate Manifest which must be legalised by the Spanish Consular Authorities. In absence of Spanish Consular Authorities that Manifest will have to be legalised by an Authority of last port of clearance wherefrom the vessel proceeds. A reasonable amount of alcohol is allowed per man.

REPATRIATION: Good facilities for repatriation.

AIRPORT: Airport of Fuenterrabia is situated at 10 km. from Pasajes. Regular daily services with Madrid and Barcelona.

TIME: GMT plus 1 hour in Autumn and Winter. GMT plus 2 hours in Spring and Summer.

HOLIDAYS: 1st January; 6th January; 19th March; Maundy Thursday; Good Friday; Lunes de Pascua; 1st May; 7th July; 16th July; 31st July; 15th August; 12th October; 1st November; 6th December; 8th December; 25th December.

POLICE/AMBULANCE/FIRE: Police 529300; Ambulance 272222; Fire 080; Red Cross (local) 351032; Hospital, San Sebastian, 453800.

TELEPHONES: No possibility of placing telephones on board.

SERVICES: Divers.

SHORE LEAVE: Crew allowed to land immediately upon arrival.

IDENTIFICATION CARDS: Not required.

DEVELOPMENTS:

1. Improving the depth in the bay (2nd phase) giving a depth of 12.0 m. at LW and HW.

2. Donibane Area: In the 1st phase, a quay length of 360 m. will be provided with a depth of 12.0 m. To be extended in the 2nd phase to 600 m.

3. Lezo Area: Lezo 3 to be extended, permitting Ro/Ro vessels length 145 m. and beam 26 m. to berth.

AUTHORITY: Comandancia Militar De Marina De San Sebastian, Pasajes, Spain. *Contact:* Guillermo Aldir Albert, Military Marine Commandant.

Autoridad Portuaria de Pasajes, Apartado 56, 20110 Pasaia, Spain. *Tel:* (943) 351844. *FAX:* (943) 352580. *Contact:* Port Director.

RIBADEO: 43.32 N. 07.02 W.

DOCUMENTS:

Manifest of Cargo, including Cargo in Transit.
3 Crew Lists.
2 Passenger Lists or negative.
2 Stores Lists.

If vessel carries over 6 kilos tobacco per man, the excess to be declared in a separate Manifest which must be visaed by Spanish Consul at last port, otherwise is exposed to heavy fine.

PILOTAGE: Prior advice of ETA required by Pilot, who boards at the mouth of the river at the time advised by Agent. Pilot boat is white-painted motor launch, carrying international pilot signals.

In case of bad weather, Pilot will instruct vessel by signals to proceed to anchorage or to berth.

The Pilot always boards on the lee side, in the latitude of Isla Pancha.

ANCHORAGE: At Ensenada de Arneo, approx. position Lat. 43° 33′ N., Long. 7° 01.6′ W. in depth of 9 m. LW.

RESTRICTIONS: Vessels enter night and day, limited only by draft and state of tide.

MAX. SIZE: Length and beam not limited. Max. draft 15 ft.

HEALTH: Pratique given on arrival on production of clean Bill of Health. International quarantine signals to be used. Port Authorities to be advised if any case of suspected disease or fever on board.

RADIO: Messages may be routed through coastal stations at Vigo, La Coruna or Gijon.

TUGS: None available.

BERTHING: Vessels may berth at the mole at any time, or state of tide, according to draft.

STEVEDORES: Stevedores services operated only by Servicio de Trabajadores Portuarios.

MEDICAL: Nearest clinic at Mondonedo 35 km. from Ribadeo.

DENSITY: 1025.

FRESH WATER: Water connections exist along the length of the mole. Rate, 20 t.p.h.

FUEL: There is a gas oil supply for small vessels, rate 12 t.p.h.

GANGWAY/DECK WATCHMEN: None required.

OPENING/CLOSING HATCHES: Performed by crew.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle wine/spirits per man.

CONSULS: Nearest at La Coruna.

REPAIRS: Minor mechanical repairs can be effected. Slipway for vessels up to 200 tons.

AIRPORT: Nearest at La Coruna, 150 km. away, or Aviles, 165 km. away, with regular services to Madrid.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

POLICE/AMBULANCE/FIRE: Tel: Ribadeo 110650.

AUTHORITY: El Ayudante Militar de Marina de Ribadeo.

ROSAS: 42.14 N. 03.10 E. (See Plan

DOCUMENTS:

Crew List.
Passenger List.
(1 of each) Ship's Papers.

PILOTAGE: Pilots from Palamos berth vessels. 24 hours notic required.

ANCHORAGE: Bay of Rosas is anchorage area.

MAX. SIZE: Depth in Commercial Port is 4 m., with berths for carg ships of about 1,000 n.r.t. (metric).

HEALTH: Once ship is anchored in the bay it obtains Pratique by mean of signals, and by raising the yellow health flag. When vessel enterin after calling at another port in the same country, this procedure is no required; Health Inspector boards at the quay side.

RADIO: Bagur Radio on VHF Channel 16.

VHF: Port Authority on Channels 16 and 12.

TUGS: 1 × 400 h.p.

BERTHING: Advisable during daylight only.

SAGUNTO: 39.39 N. 00.13 W. (See Plan

LOCATION: 18 km. North of Valencia.

PORT LIMITS: The East/West line through the point of Cape Escoller de Levante.

DOCUMENTS:

2 copies Entrance Manifest.
4 copies Crew List.
Passenger List disembarking at this port.
Passenger List in transit.

Refer to "Barcelona" for other important information concerning Documentation.

PILOTAGE: Port is privately owned, and Pilots employed by Altos Hornos del Mediterraneo S.A. As Pilots are employed in Consignees Office no separate ETA is necessary. They are sent out to meet vessels as required. Pilot boat is not fitted with radar or VHF. Boat displays signals in accordance with international regulations.

ANCHORAGE: From 155° to 170° from the Cape Canet Lighthouse i 20 m. of water.

RESTRICTIONS: Entrance to port faces S.E. and is 560 m. wide wi a depth of 9.14 m. at LW.

HEALTH: Pratique can be arranged at any time by Consignees.

RADIO: Cadiz Radio-EAC, Cabo Palos Radio-EAP and Valencia Radi EAV.

TUGS: 6 tugs up to 1,250 h.p. available. Tugs normally join vessel either in anchorage or 0.5 miles from entrance. Ship's lines are used. Tugs should be ordered in ETA message also mentioning vessel's length and cargo. Use of tugs is compulsory for vessels berthing at Pantalan.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)	*Use*
Muelle Norte	570	9.80	Solid and General Bulk.
Muelle Centro	660	11.25	–
Muelle Sur	580	9.80	General Cargo and Liquid Bulk.
Pantalan	270	14.00	Solid Bulk by Special Installation.

BULK HANDLING FACILITIES:

Location	*Owner*	*Remarks*
Pantalan	Autoridad Portuaria de Valencia	There is a 2,000 m. long conveyor bel with an output of 2,500 tons per hou
Sur	Enfersa	Offloading of anhydride ammonia b retractable loading arm and loading o fertiliser by belts. Distance to tanks 1 km. Pipeline 6 i Vapour return 4 in. Loadin Discharging arm 8 in. Discharge ra 400 t.p.h. – 600 t.p.h. Temperatu −33°C.

CRANES: The port operates 6 privately owned gantry cranes w capacity of 20 tons to 60 tons and 1 derrick of 250 tons.

STEVEDORES: Employed by consignees.

MEDICAL: Medical assistance should be ordered in advance. All kinds of medical assistance available. One hospital owned by Altos Hornos.

TANKERS: No facilities.

DENSITY: Salt water.

FRESH WATER: Available.

FUEL: None available.

FIRE PRECAUTIONS: Fire service organised by Altos Hornos.

CONSULS: Nearest at Valencia.

REPAIRS: Small repairs possible.

GANGWAY/DECK WATCHMEN: Usually by crew. The Civil Guard keep watch on all ships for contraband.
OPENING/CLOSING HATCHES: Effected by ship's crew.
CUSTOMS ALLOWANCES: 200 cigarettes only. One bottle spirits per man but bottle should be opened. Spanish spirits allowed; one bottle per man. No control of Spanish wines.
REPATRIATION: Facilities for effecting crew changes and arranging repatriation.
AIRPORT: Manises Valencia, 40 km. away.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS: *Religious Festivals:* January 6th, March 19th, August 15th, December 8th and 25th. Variable: Good Friday and Corpus Christi. *National Festivals:* January 1st, May 1st, July 25th, October 12th.
TELEPHONES: None on board. Telephones placed in Boat house and Pilots' Office.
SHORE LEAVE: Crew members allowed ashore.
IDENTIFICATION CARDS: Passport only.
AUTHORITY: Autoridad Portuaria de Valencia, Muelle de la Aduana, S/n, 46024 Valencia, Spain. *Tel:* (96) 3674391. *Telex:* 64508. *FAX:* (96) 3672752. *Contact:* The General Manager.

SAN CIPRIAN: 43.42 N. 07.27 W. (See Plan)

LOCATION: The port is located on the N.W. coast of Spain, about 10.5 miles Eastward of Estaca de Bares Point.

Its entrance is located at Lat. 43° 42′ 09″ N., Long. 07° 27′ 06″ W.

Charts: B.A. Chart No. 1122. Spanish Navy Chart No. 4081.

PILOTAGE: Licensed Pilots are available.

Use of Pilot is compulsory for all vessels over 150 g.r.t. All vessels are requested to contact San Ciprian Pilots, or San Ciprian Port Control, on VHF Channels 16 and 14, 2 hours before arrival at the Pilot's station, giving confirmation on ETA and for receiving instructions about berthing and operations.

Pilots will board one mile N.W. from Farallones Islands, at about Lat. 43° 43′ 04″ N., Long. 07° 27′ 01″ W.

When weather conditions are unfavourable for a Pilot to board at the designated area, the Pilot will instruct through VHF radio, and the vessel may follow the Pilot's boat in, until conditions are suitable for boarding.

APPROACHES: *Entrance:* The port is well sheltered by 2 breakwaters; one in the North part with 935 m. length, leading to E.S.E. seawards, and another in the South part with a length of 1,130 m., leading to N.N.E. seawards, at which are placed the piers.

In between the breakwaters, the entrance of the port is 270 m. wide with a depth of 20.0 m. L.W.S.T.

The breakwater heads are marked with lights and a foghorn will be placed on the South breakwater head.

The port has 2 access channels, both duly marked with leading lights. To enter port through North Channel, vessels should steer on true course 202° from sea, leaving the Farallones Islands by her port side. Vessels may also use the East Channel, steering 271° (T), coming from sea, and leaving the Farallones Islands on the starboard side. In both channels, there is a minimum depth of 17.0 m. (56 ft.) at L.W.S.T.

The two piers are located in the inner part of the South breakwater with a depth from 7.0 m. – 17.0 m., having 320 m. for ship's berthing safely. The principal berth is 232 m. long with 17.0 m. – 14.0 m. depth. The auxiliary berth is 88 m. long with 7.0 m. depth.

The manoeuvring zone is about 1,100 m. × 800 m. and has a minimum depth of 12.5 m. at L.W.S.T.

ANCHORAGES: If ships are less than 80 m. LOA, they may anchor in the port with Port Control consent. If they are longer than 80 m., they must anchor in the roads in position Lat. 43° 44.1′ N., Long. 07° 26′ W., or in Vivero Bay in position Lat. 43° 44′ N., Long. 07° 36′ W.

RESTRICTIONS/MAX. SIZE: The largest size acceptable is 62,000 d.w.t. with a max. draft at the entrance of 12.5 m. These large ships may only manoeuvre with daylight and high water at the same time.

From 12,000 d.w.t. to 62,000 d.w.t., vessels require daylight. Below 12,000 d.w.t., vessels may proceed at any time.

Ships proceeding to the Auxiliary Pier are restricted to 7.0 m. draft and 110 m. LOA.

For all vessels, only clean ballast is to be discharged.

No tank cleaning or pumping of bilges is allowed whilst the vessel is in port or its approaches.

Also see "Berthing".

VHF: Radio Station on Channels 16 and 14.

TUGS: 2 tugs available. "Sertosa-14" 1,900 h.p. (24 tonnes bollard pull) and "Sertosa-19" 2,400 h.p. (32 tonnes bollard pull).

Use of tugs is compulsory for all vessels over 2,000 g.r.t. and when judged necessary by the Port Authority.

A third tug is available to assist large vessels.

BERTHING: *Principal Berth:* The berth accepts vessels up to 240 m. LOA, 36 m. beam and 12.5 m. draft.

It allows discharge of bauxite in bulk, pet coke, fuel oil and also loading of alumina. The berth is also used to load Ro-Ro vessels with aluminium and general cargo vessels with alumina hydrate in bulk.

Equipment: Automatic unloading crane on conveyor belt for handling of bulk goods such as bauxite, pet coke, etc., and capable of handling 15,000 tonnes per day.

Alumina shiploader, capable for loading 1,200 t.p.h.

Terminal arm for connection of fuel oil for the Factory use only. One oil pipe of 16 in. diameter and hose connection of 8 in.

Auxiliary Berth: The berth accepts vessels of up to 110 m. LOA, 16.0 m. beam and 7.0 m. draft.

The berth is used to discharge caustic soda, aluminium, metallurgica sandy alumina in bulk, hydrate in bulk and big-bags, and anodes for electrolysis.

Equipment: Two cranes of 5 tons each, used for loading aluminium and alumina hydrate in big-bags and anodes.

Automatic system for loading alumina in bulk.

Hose connection of 6 in. to discharge caustic soda.

Alumina Maritime Terminal: The Terminal Manager, or in his absence the Terminal Supervisor, is in charge of the Maritime Terminal with a continuous 24 hour service.

The offices are located in a building between the two piers.

While a vessel is alongside, a Supervisor of the Maritime Terminal will remain on the pier or in the office at all times to deal with routine operations and any emergency.

The access to the Maritime Terminal through the Factory is under the control of a security guard, who shall check the identity of personnel.

Upon arrival at the port, Identity Cards will be supplied to allow incomings and outgoings through the premises, but one must keep in the restricted lanes and not trespass into the Factory.

MEDICAL: Hospital facilities at Alumina Espanola S.A. are only available on an emergency basis.

Full hospital facilities available in Burela 15 km. distant, without prior notice. Dentists available during normal work hours.

FRESH WATER: Available. If the vessel is to be supplied with fresh water, an official form must be filled, forms to be supplied by the Agent.

FUEL: Not available locally. Small quantities can be supplied by road tanker from Corunna.

REPAIRS: No major facilities at the port. Mobile repair companies available. No berths dedicated for repair work.

If you are expecting an outside visit, either personal or technical, proper advice is to be given to your Agent for them to obtain the compulsory permits from the Factory.

Should you require some maintenance or repairs, proper notice is to be given to the Port Authorities.

SEAMAN'S CLUBS: None.

GENERAL:

Fire Precautions: The Alumina Terminal has a well trained firefighting crew and fire hydrants are installed at all strategic points. No smoking allowed on all wharves and in ship's holds.

Garbage: Service for solids is available with containers provided on the pier if required, with an official form.

Gangs: All requests for labour must be done by telex or cable.

In order to insure that gangs will be available, it is imperative that the telex message be in the Port Office by 1400 hrs. the day before the gangs are required.

Ladders: If the accommodation ladder is not suitable for the berth configuration, vessel will be requested to fill a form and the Port Authorities will supply an adequate one.

Mobile Cranes: In addition to the quay cranes indicated, the Port Authority have available several cranes, which can be utilised if required, with an official form.

Stores: Stores may be delivered to vessel by road. Loading of stores may be restricted during cargo operations.

Tide/Winds: Rise and fall: 0.5 m. to 4.1 m.

The prevailing wind direction in the Winter season is N.W., and in the Summer season N.E.

AUTHORITY: Alumina Espanola S.A. & Aluminio Espanol S.A., Apartado 71, 27890 San Ciprian, Lugo, Spain. *Tel:* 34-82-596000, 596048. *Telex:* 82298. *FAX:* 34-82-596003.

Port Authority: Miguel A. Lourenzo, Manager. Tel: 34-82-596000, ext. 1174. Telex: 82085. Fax: 34-82-596016.

Harbour Master (at Burela): Captain Bernardo Rodriguez. Tel: 34-82-586100. Fax: 34-82-586110.

The port has the status of a "Private Port", so traffic is subject to the rules of the Factory.

The Owner of the port is Alumina Espanola, S.A.

SANT CARLES DE LA RAPITA: 40.36 N. 00.36 E. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists or negative.
3 Cargo Manifests or Master/Ballast Declaration.
1 Stores List.
1 Crew Manifest.

PILOTAGE: Pilotage is compulsory and service permanent. Pilot is informed by Agent of vessels ETA, given 24 hours in advance. When vessels approach the breakwater, Pilot will board. The pilot boat is white with a black "P" painted on the side. Contact pilot station on VHF Channel 14. Pilot Tel: (977) 74.05.01/74.08.04.

RESTRICTIONS: None but for draft. Vessels carrying dangerous cargo should get permission for berthing prior to arrival.

MAX. SIZE: Maximum draft allowed is 17 ft. Contact Pilot for draft information.

HEALTH: Pratique is obtained immediately after berthing. In case of suspected disease or fever on board the Master must radio Agent in order to inform Health Officer in time.

RADIO: Radio Costera of Barcelona and Tarragona.

VHF: See "Pilotage".

TUGS: Available to assist berthing. Tugs normally join vessel at breakwater entrance. The following tugs are available: 1×1,750 h.p., 1×1,200 h.p. and 1×800 h.p.

BERTHING: Depth of water in centre of harbour 26 ft.

Commercial Wharf: Length 1,607 ft.

CRANES: 2 cranes, 1×12 tons and 1×8 tons.

STEVEDORES: 24 hours notice required in order to arrange gangs. Unloading rates depend on type of cargo.

MEDICAL: Any kind of medical service can be arranged if information received in time.

FRESH WATER: Plentiful supply of water by means of hoses from the pier to vessel.

FUEL: Can be supplied by truck, but 24 hours notice required. Marine diesel oil is available at bunkering pier, but max. draft is 12 ft.

CONSULS: See "Tarragona".

REPAIRS: There are 3 slipways as follows: 1×180 tons, 1×70 tons and 1×0 tons.

SURVEYORS: S.G.S., Vista Alegre N. 32-3, 43540 Sant Carles de la Rapita. Tel: (977) 74.22.24/54.22.28. Fax: (977) 54.11.00.

GANGWAY/DECK WATCHMEN: Not compulsory but advisable at night.

OPENING/CLOSING HATCHES: Normally opened/closed by the crew, otherwise according to "Charter Party". Lashing must be carried out by crew.

CERTIFICATES: Solas, Load Lines, I.O.P.P., Derat, Register and Tonnage Certificates.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle wine/spirits per person. Any excess must be declared and locked/sealed. Any infringement of the regulations will subject the vessel to the immediate imposition of a heavy fine and confiscation of excess.

REPATRIATION: Good facilities available.

AIRPORT: Reus Airport situated 90 km. distance and 45 minutes by car from Sant Carles. Regular flight services with Madrid. Barcelona airport situated 190 km. and 2 hours by car, worldwide destinations and arrivals.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer(early April-late September).

HOLIDAYS: July 25th and September 11th.

POLICE/AMBULANCE/FIRE: Police: 74.07.17; Ambulance: 74.10.12; Fire: 70.00.80.

IDENTIFICATION CARDS: Not required.

AUTHORITY: Capitania Maritima, 43540 Sant Carles de la Rapita (Tarragona-Espana), Spain. *Tel:* 74.00.59. *Contact:* Fernando Cebrian Ruiz, Port Captain.

Comissio de Ports de Catalunya-Zona Portuaria II–III, Rda. General Mitre 117, 08022 Barcelona, Spain. Tel: 93-211.31.16. *FAX:* 93-4186012.

Branch office at San Carles de la Rapita. Tel: (977) 74.04.56.

SANT FELIU DE GUIXOLS (Gerona): 41.46 N. 03.01 E. (See Plan)

PILOTAGE: Pilotage is compulsory. Service between 0700 to 2400 hrs. Tel: 320910 or call Barcelona Radio or Bagur Radio (VHF).

ANCHORAGE: Vessels arriving after midnight or due to port congestion are anchored outside the breakwater.

MAX. SIZE: The maximum advisable draft for berthing is 22 ft. and up to 115 m. length.

TUGS: No tugs available.

BERTHING: Due to the fact that a few vessels can work at the same time, it is advisable to know as soon as possible the ETA for berthing arrangements.

Commercial Wharf: Length 108 m. Depth 22 ft.

Breakwater: Length 116 m. Depth 22 ft.

A pier for coasting vessels with a maximum draft of 18 ft.

MEDICAL: Any kind of medical services can be obtained at Sant Feliu or Gerona hospitals.

FRESH WATER: By means of hoses from the pier.

FUEL: Can be supplied in small quantities.

CARGO GEAR: Commercial Wharf is served by an electric crane able to lift up to 6 tons. Normally vessel's derricks are used.

AUTHORITY: Ayudantia Militar de Marina, Raig 6, Sant Feliu de Guixols (Gerona), Spain. *Tel:* 972-320967. *Contact:* Harbour Master.

SANTANDER: 43.28 N. 03.49 W. (See Plan)

PORT LIMITS: Between Cabo Mayor and Cabo Ajo.

DOCUMENTS:

- 5 Crew Lists.
- 7 Passenger Lists, or 3 negative.
- 3 Cargo Manifests of the goods destined to the Port of Santander.
- 2 sets of Manifests for Cargoes in Transit.
- Stores List in triplicate, including tobacco, spirits, radios, etc., belonging to the vessel.
- Detailed list in triplicate of all personal effects of crew and passengers (tobacco, spirits, cameras, souvenirs, radios, etc.).
- For vessels exceeding 499 g.r.t: Safety Radio Certificate and Safety Equipment Certificate.

Legalisation required for manifests covering tobacco and tobacco products. This legalisation to be effected at the port prior to the first Spanish port of call.

Master and each member of crew of vessel can carry for his own consumption up to 6 kilos of tobacco in whatever form, and, if passengers are carried, up to 2 kilos per passenger, all of which must be declared in Provisions List (1 kilo of tobacco = 1,000 cigarettes = 100 cigars). If Masters carry greater quantity than stated above, it cannot be manifested as tobacco for consumption on board, but must be included in Consular Manifest as being in transit, and as such must be separated in the holds from other cargo and hatches or lockers will be sealed by Customs until ship leaves Spanish waters. This Consular Manifest has to be legalised by a Spanish Consul. In the absence of Consul, said document will have to be visaed by an Authority of the former port of clearance. Otherwise, vessel would be severely fined.

PILOTAGE: Compulsory and service is permanent. Pilots board vessel by a cutter at the roads, near the entrance off Mouro Island. Pilot cutters are painted white and have the letter "P" in black, on each bow. Cutters have blue flag with letter "P" in white, on both sides of flag. At night cutters have a white light, under this a red one. VHF available.

ANCHORAGES: The harbour consists of a large bay which provides good anchorage.

RESTRICTIONS: Entrance is well marked and there is no bar. Depth at entrance is at minimum 35 ft.

MAX. SIZE: No restriction in respect of length or breadth, the maximum advisable draft to enter port is 35 ft. at HWOST.

HEALTH: If the vessel proceeds directly to berth, Pratique can be obtained immediately after berthing. Otherwise, at anchorage on vessel's arrival.

If vessel has sickness on board of a contagious nature Masters should advise Health Authorities by radio, and they will examine patients immediately upon arrival, to enable vessel to be granted Free Pratique. If vessel has to be fumigated or deratted a charge is made.

RADIO: Nearest important radio station is Cabo Mayor Radio, and it is advisable that messages are received at least 24 hours before arrival.

TUGS: No tugs required for entering the port, only for berthing or shifting when in port. Ship's lines are used, and tugs are employed according to Pilot's advice.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)
Calderon	270	4.0
Maura	55.6	6.5
Albareda	267	7.25 to 9.5
Almirante	94.2	9.5
Maliano (Sections 10 and 11)	242	10.5
Maliano (Section 9)	129	7.0
Maliano (Section 8)	106.4	5.0
Maliano (Sections 1 – 7)	710	8.0
North Edge	538	9.5
Raos (No. 1)	300	13.0
Raos (No. 2)	208	13.0
Raos (No. 3)	570	10.0
Raos (No. 4)	270	13.0
Raos (No. 7)	170	10.0
Terquisa Quay	170	12.5
Container Quay (Raos)	150	13.0
Campsa Quays	280	8.5
Repsol Quay	244	11.5

All depths of water quoted above correspond to LWOST and 13 ft. - 14 ft. should be added for depths at HWOST. Bottom is generally soft.

Calatrava Wharf: For discharge of chemicals. Depth alongside 34 ft. with overall length limitation of 980 ft. Up River, at Astillero, beyond the harbour area, there is one spout called Orconera Tip for loading iron ore. Vessels up to 260 ft. – 270 ft. length are allowed with a maximum draft, fully loaded, of 19 ft. Loaded vessels can only sail at high water. A modern installation for dismantling and scrapping vessels is operating up river, on the way to Astillero.

CRANES:

Maura Quay	1 fixed 30 ton crane (electric)	
Maliano Quay (Sections 10 & 11)	3 electric cranes	6 tons
Maliano Quay (Sections 1 to 7)	8 electric cranes	3 – 6 tons
North Edge Quay	4 electric cranes	6 tons
	4 electric cranes	12 tons
Raos 1	4 electric cranes	16 tons
Raos 3	7 electric cranes	16 tons
Raos 3	3 electric cranes	6 tons
Raos 3	Mobile container crane	35 tons

Also movable motor cranes, mechanical shovels and similar available.

STEVEDORES: It is very important that Masters send advance notice regarding vessel's ETA. With this notice, Agents can inform Shippers or Receivers' stevedores accordingly. Official working hours of port, are Monday/Saturday: 0800 – 1200 hrs.; 1400 – 1800 hrs.

CARGO HANDLING FACILITIES: There are berths for handling bul cargoes, grain, ore, coal, etc. There are also berths for handling bul liquids, chemicals. Berth available for Ro/Ro traffic.

1×30.5 tonne Liebherr gantry crane for containers.

MEDICAL: Any kind of medical services can be arranged.

TANKERS: "Campsa" (Spanish State Monopoly): Installation is served by two identical concrete wharves situated in Maliano Basin, berthing space of which is 500 ft. with a depth alongside of 29 ft.

DENSITY: Sea water.

FRESH WATER: Always available. Supply is performed by tugs and from shore connections at various quays.

FUEL: Ordinary fuel, diesel and gas oil are available at "Campsa" Depth alongside 16 ft. – 32 ft.

Advisable that shipowners stem bunkers through their own Contractors with (at least) 48 hours' notice. Delivery can be performed either by tank-trucks or at bunkering pier.

CONSULS:

Note. Acting as Consul of those countries with no Consular Representation: Valentin Lavin del Noval, Dominican Rep. Consul.
REPAIRS: Good repair facilities with various shipyards at port. All types of deck, engine, etc., repairs are possible.
DRY DOCKS: Three dry docks, one of which is within the harbour area and the other at Astillero (beyond the harbour area). Dimensions are:

Extreme length	405 ft.	434 ft.	722 ft.
Breadth at entrance	58 ft.	54 ft.	105 ft.
Depth on sill (high water)	23.7 ft.	20 ft.	38 ft.

GANGWAY/DECK WATCHMEN: Not compulsory but available upon request.
OPENING/CLOSING HATCHES: Effected normally by crew, except in liner vessels, which is contracted by stevedores.
CERTIFICATES: Vessels should have the usual documents on board, but only the Safety Radio, Safety Equipment and Derat Certificates are required by Authorities.
CUSTOMS ALLOWANCES: Normally, Customs permit 200 cigarettes per man out of bond. Additional quantities needed depend on the stay of ship in port. One bottle of spirits per man.
CARGO GEAR: Shore cranes are usually employed in loading/discharging operations.
REPATRIATION: No difficulties.
AIRPORT: About 4 miles from town. There are regular services with Madrid and Barcelona. Also charter flights to U.K. and other European countries.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS:

TELEPHONES: In very special instances, can be arranged.
SERVICES: Available for tank cleaning, washings, compass adjusting, hull cleaning whilst floating, radio installation repairs, etc.
SHORE LEAVE: Crew allowed ashore at any time.
IDENTIFICATION CARDS: Not required.
GARBAGE DISPOSAL: No service available.
WASTE OIL DISPOSAL: No service available.
SEAMAN'S CLUBS: None.
CURRENCY: Peseta.
DEVELOPMENTS: *Extensions:* The entrance channel has been widened to 200 m. and has some depths between 9.5 m. and 10.5 m. at LWOST.
AUTHORITY: Junta del Puerto-Santander, Paseo de Pereda 33-1°, 39004 Santander, Spain. *Tel:* 42-314060. *Telex:* 35936 Jpsr E. *FAX:* 42-314904. *Contact:* Manuel Martin Ledesma, Director del Puerto.

SEVILLE: 37.25 N. 06.00 W. (See Plan)

DOCUMENTS:
3 Crew Lists.
3 Passenger Lists.
2 Cargo Manifest, including cargo for discharge and in transit.
Declaration of Health.
2 Lists of Provisions and Stores.
2 Copies of Bills of Lading.

If vessel carries over 6 kilos tobacco per man the excess to be declared in a separate manifest which must be visaed by Spanish Consul at last port, otherwise is exposed to heavy fine.
PILOTAGE: *At the Bar:* Vessels may commence to enter and leave the river 1.5 hours after low water. Bar Pilots are stationed at Chipiona and come out to board vessels when requested, 2 miles North of Chipiona Lighthouse.

Pilot motor launches about 9 m. long, painted white with black "P" on sides. They carry regulation lights and signals day and night.

River Pilots: Vessels should radio their ETA at least 24 hours in advance to "Practicos Sevilla". River Pilots are stationed at the pier at Bonanza, Lat. 36° 48′ N., Long. 06° 20′ W. Sound signal to call Pilot is 3 long blasts. Pilot boards from white-painted launch marked by black letter "P" and carrying regulation signals. Pilots require means of embarkation in accordance with International Conventions.
ANCHORAGE: At Bonanza, in depth of 20 ft. below chart datum.
RESTRICTIONS: Navigation in the River Guadalquivir is prohibited at night, both inward and outward for tankers or vessels with hazardous cargoes. Any vessel with a draft greater than 19 ft. 06 in. may not leave at night.

Draft is controlled by height of tide and this should be ascertained by Owners or Agents in advance for the probable date of entry.
MAX. SIZE: Max. draft 23 ft., max. beam 24.2 m. (The limitation in beam is for passing through the lock). Lock length 200 m., width 25 m. Tankers are required to have an additional 1 ft. keel clearance.
HEALTH: Pratique is obtained on arrival at Bonanza, on presentation of International Health Certificates.
RADIO: Tarifa Radio – EAC.
VHF: Channel 12 is used to call all stations between Chipiona and Seville, and between vessels.
TUGS: Normally join vessel in the anteport. Ship's tow line is used.
BRIDGES: Vessels berthing at Delicias Quay must pass through the Alfonso XIII drawbridge. May be opened between 0715 hrs. and 2200 hrs.
STEVEDORES: 24 hours' notice should be given by Agents and confirmed 12 hours before vessels arrival.
CRANES: 46 cranes with capacity 3 tons – 36 tons.
MEDICAL: All medical and hospital facilities available.
TANKERS: There are 2 berths, depth alongside 20 ft.
At Quay No. 2, hoses 8 in. diameter.
At Quay No. 3, hoses 8 in. and 10 in. diameter.
DENSITY: Fresh water. The tide has no influence at Seville.
FUEL: All grades available.
CONSULS: The following countries are represented at Seville:

Belgium
Bolivia
Canada
Colombia
Cuba
Chile
Denmark
Dominican Republic
Germany
Great Britain
Greece
Honduras
Italy
Liberia
Nicaragua
Netherlands
Panama
Peru
Portugal
Sweden
United States

Venezuela

REPAIRS: All types of repairs can be effected.
DRY DOCK: Astilleros Espanoles S.A. have 1 dock, length 149 m., breadth 25 m.
GANGWAY/DECK WATCHMEN: Not considered necessary. All quays are watched by the Guardia Civil.
OPENING/CLOSING HATCHES: Performed by ship's crew.
CUSTOMS ALLOWANCES: 6 kilos tobacco per crew man, and 2 kilos per passenger; this includes tobacco in bonded stores. No restriction on wines/spirits.
REPATRIATION: All facilities available.
AIRPORT: Situated 12 km. away, regular daily flights to Madrid, Barcelona, other parts of Spain. Some transatlantic flights.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
HOLIDAYS: 1st January; 6th January; 27th and 28th March,; Maundy Thursday; Good Friday; 1st May; 29th May; 25th July; 15th August; 1st November; 6th and 8th December; 25th December. All holidays may be worked with overtime.
POLICE/AMBULANCE/FIRE: Police: 091; Fire Brigade: 232123; Ambulance: 231945.
TELEPHONES: Can be installed on board if requested 10 days in advance.
SERVICES: Fresh provisions and stores available, refuse collection, correction of compasses.
SHORE LEAVE: No restrictions.
IDENTIFICATION CARDS: Not required.
AUTHORITY: Comandancia Militar de Marina de Sevilla, Avenida de Molini No.7, Sevilla, Spain. *Tel:* 4614146. *FAX:* 4615648. *Contact:* Comandante, Militar de Marina.

SOLLER, Majorca: 39.47 N. 02.46 E.

DOCUMENTS: See "Bilbao".
PILOTAGE: None available. 2 intermittent lights situated on the Mole indicate the Entry Channel.
MAX. SIZE: Advisable length and draft 60 m. and 4.50 m. respectively.
TUGS: None available.
MEDICAL: It is advisable to give advance notice if medical attention is required. There are no hospitals. Medical service is available 5 km. from the port.
FRESH WATER: Not available at the quay.
FUEL: Not available. If required the order should be placed to CLH through the Agent.
CONSULS: None.
REPAIRS: No facilities exist.
GANGWAY/DECK WATCHMEN: Crew do this operation.
OPENING/CLOSING HATCHES: Crew.
AIRPORT: The airport is situated 40 km. away; the island is well connected with the Peninsula (mainland) and with foreign airports.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
SHORE LEAVE: Allowed.
IDENTIFICATION CARDS: It is advisable to have these available.
AUTHORITY: Jefe Encargo del Despacho de Buques, Oficianas del Destacamento de la Comandancia Militar de Marina en Soller.

TARRAGONA: 41.05 N. 01.14 E. (See Plan)

PORT LIMITS: New port limits are within a rectangular sea zone limited by:

1. Harbour breakwaters and adjacent shoreline.
2. Imaginary line starting from Punta Mora (1° 09′ 36″ E.)
3. Imaginary line starting from Salou Cape (1° 20′ 33″ E.)
4. Parallel Lat. 41° 00′ 00″ N.

All the vessels anchoring within this zone will incur harbour dues.

DOCUMENTS: Cargo Manifest of all goods in ship, stating any foreign port from where those goods come. This procedure should always be done in the first Spanish port.

In first Spanish port ship should produce an Itinerary Manifest; and those ships which carry goods to discharge should produce this Manifest in those ports in which they will discharge the goods.

Supplies Certificate for those ships not having any goods to discharge in any Spanish port, or who have previously been in other Spanish port.

Register of the Supplies and Equipment in ship.

Register of the Crew's Effects, if the ship comes directly from a foreign port.

Passenger List (if there are passengers). Negative Passenger List (if there are no passengers).

Crew List.

Health Certificate, if the ship comes from another Spanish port.

All ship's Certificates valid.

Tanker Check List for tankers.

All ship's Declaration of Oil Residues (sludges).

Oil Record Books properly filled in.

APPROACHES: *Entrance Channel:* Width 250 m., length 1,050 m., depth 20.0 m., bottom – gravel and sand.
Entrance Mouth: Width 350 m., depth 22.0 m., max. current 2 knots.

PILOTAGE: Compulsory. Provided by Corporation Pilots of the Port of Tarragona, Muelle Aragon s/n., 43004 Tarragona. Tel: 34-77-24.02.07. Fax: 34-77-24.47.44.

Pilot's communicate with vessel on VHF Channel 16 and Channels 14-12-9. Notice of ETA and request for Pilot must be made to Chief of Operations at least 24 hours in advance (Fax No.= 24.47.44.).

Pilot boats: Black colour with letter "P" painted in white on both sides. Lights: According to International Regulations. Pilotage area begins at a max. distance of 2 miles from port entrance. Ships waiting for Pilot anchor in the Rada (Roads) and East of the lighthouse. If weather does not allow, Pilot will meet ship at port entrance. Ladder for Pilot to be placed at leeward side.

ANCHORAGES: West limit is marked by imaginary line running N/S at the Cap Salou to Latitude 41° N. East limit is marked by imaginary line running N/S at Torre de la Mora to Latitude 41° N. Depths in Rada are 16.0 m. and 30.0 m.; reasonable holding ground (mud and sand).

RESTRICTIONS: There are restrictions regarding berthing of Tankers in the Pantalans Asesa and Repsol, Monobuoy of Repsol and Inflammables Quay, during night hours, whatever their tonnage.

MAX. SIZE: Draft 18.0 m.
Bulk carriers: Draft 18.0 m.
Tankers: At Pier 18.00 m.
At Monobuoy 42.80 m.
LPG Vessels: Draft 12.0 m.

Also see "Berthing".

RADIO: Tarragona Radio, VHF Channel 16.
VHF: Pilot on Channel 16.
BERTHING: Port Authority Facilities:

Muelle Castilla (West): 3×12 tons, 5×16 tonnes.
Mobile Cranes:
1×1 – 6 tons, 2×3 – 30 tons (Astilleros Tarragona).
Floating Crane: 1×65 tons.

SPECIALISED CARGO HANDLING FACILITIES:

Location	*Owner*	*Characteristics*
Muelle Cataluna	Berge Maritima, S.A.	Multipurpose warehouse for cereals and other uses of 40,000 ton capacity. Two platform of 16 tonnes and 60 tonnes with their corresponding offices and without any mechanical service.
Muelle Aragon	Tiem, S.A.	Detachable warehouse for cement, capacity 9,500 tons.
Muelle Aragon	Silos de Tarragona, S.A.	Cereal silos of 44,000 tons capacity, with 2 automatic lifts for grain of 400 t.p.h. and pneumatic scales of 5 tons for weight control, 2 elevators for filling and recirculation of 400 t.p.h., 2 elevators at the entrance and 2 at the exit, all 4 producing 300 t.p.h. each. 2 grain conveyor belts from the berth to the silos of 400 t.p.h.
Muelle Aragon	Berge Maritima S.A.	Multipurpose warehouse for cereals and other uses of 35,000-ton capacity with 4 mechanical lifts with a capacity of 250 t.p.h. each, 2 conveyor belts of 250 t.p.h. and another of 500 t.p.h. and 1×60 ton weighbridge with 15 m.×3 m. platform.
Muelle Lerida/ Aragon	Aut. Portuaria	Quay and double ramp for the loading/unloading of vehicles.
Muelle Lerida/ Levante	Aut. Portuaria	Quay and double ramp for the loading/unloading of vehicles.
Muelle Reus	Edergrasa	3 outlets with 4 pipes for the loading and unloading of chemical products onto or from tankers with capacity of 20,758 cu.m. of storage at 150 t.p.h. and 1×60 ton weighbridge with 15 m.×3 m. platform.
Muelle Reus	Cargill Espana S.A.	Silos for grain of 30,700 tons capacity, with 3 elevators for filling and recirculator and unloading of 300 t.p.h. and 1×60 ton weighbridge with 15 m.×3 m. platform. 1 pneumatic unloader of 150 t.p.h. 2 conveyor belts for grain from berth to silos of 300 t.p.h. each.
Zona entre contradiques	Cargill Espana S.A.	Oil-seed extractor plant with 2 silos of 10,000 ton total capacity and 60 ton weighbridge with a 15 m.×3 m. platform.
Muelle Reus	Cementos del Mar, S.A.	Two silos of 4,000 ton total capacity for loading and unloading of cement and 60 ton weighbridge with a 15 m.×3 m. platform.
Muelle Reus	Fruport, S.A.	Cold storage plant equipped with 2 rooms of 3,250 sq.m. each and a handling area of 1,750 sq.m. Unloader quay to 5 trucks simultaneous.
Muelle Reus	C.L.H.	2×10 in. pipelines for the loading and unloading of liquid fuels producing 250 t.p.h. Fuel supply to fishing boats with 2 outlets and 4 in. pipeline.
Muelle Rioja	C.L.H.	3 pipelines for unloading liquid fuel to the factory. 1×10 in. petrol, 1×10 in. diesel oil and 1×12 in. fuel oil.

Location	Owner	Characteristics
Muelle Rioja	Terminales Quimicos, S.A.	Firefighting system consisting of an electric pump, a diesel pump and two Jockey pumps.
Zona entre contradiques	Terminales Quimicos, S.A.	Chemical products terminal with 45 tanks and total capacity of 28,016 cu.m. and one loading and unloading outlet with 4×6 in. pipelines.
Muelle Castilla	Cargill Espana S.A.	Silos for grain of 40,000 tons capacity and a 10 ton receiving hopper scale, 2 elevators for filling and recirculation and 2 conveyor belts for filling and unloading of 800 t.p.h. each. Automatic unloader of 800 t.p.h. Automatic unloader of 450 t.p.h. A conveyor belt from berth to silos of 800 t.p.h.
Atraque No. 1 de Inflamables	Repsol Butano, S.A.	2×10 in. pipelines for the loading and unloading of LPG with an average of 100 t.p.h. in normal unloading conditions (they do not allow an operational temperature of less than 4°).
Atraque No. 1 de Inflamables	Terminales Quimicos, S.A.	8 outlets with 4 pipes of 6 in.
Zona Inflamables	Terminales Quimicos, S.A.	Chemical products terminal with 37 tanks and total capacity of 60,000 cu.m. Yield of 300 t.p.h. for ship loading and unloading, 16 loading and unloading points for cisterns simultaneously. Possibility of inerting, heat supply and inert atmosphere holding.
Zona Inflamables	Terminales Portuarias S.A.	Enlargement of the terminal for the reception, storage and re-shipment, with the construction of 3 new tanks. Chemical products terminal with 27 steel tanks and 24,755 cu.m. capacity, equipped for possible supply of heat and for the recirculation of the content together with a loading and unloading pump and individual loading arm for each tank. 6 points for loading/unloading of road tankers simultaneously. Possibility of inerting and maintaining inert atmosphere.
Atraque No. 2 de Inflamables	Terminales Quimicos, S.A.	7 terminals with 4×6 in. pipes.
Atraque No. 1 de Inflamables	Terminales Portuarias, S.A.	6 terminals with 4×6 in. stainless steel pipes and 2×6 in. cast steel pipes.
Atraque No. 2 de Inflamables	Terminales Portuarias, S.A.	6 terminals with 4×6 in. stainless steel pipes and 2×6 in. cast steel pipes.
Atraque No. 3 de Inflamables	Repsol Butano S.A.	3×8 in. pipeline for the loading and unloading of LPG with an average return of 100 tons/hr. in normal unloading conditions (they do not allow an operational temperature of less than −4°).
Atraque No. 1 and 2 de Inflamables	Caburos Messer	1×4 in. pipe for the supply of nitrogen to the berthing points No. 1 and 2.
Atraque No. 3 de Inflamables	Carburos Messer	1×3 in. pipe for the supply of nitrogen.
Zona Inflamables	Terminales Quimicos and Terminales Portuarias	Facility for the loading/unloading of wagons for liquids.
Puerto Exterior	Asfaltos Espanoles S.A.	Dolphin 1,300 m. long with 3 moorings for ships of 6,000, 20,000 and 100,000 d.w.t. On the jetty of Asfaltos Espanoles, S.A. (ASESA) there are: 3 pipelines for crude, oil, naphtha and deballasting of 16 in. - 20 in diameter. Capacity 1,000 t.p.h./3,000 t.p.h. 5 piplines for fuel-oil, naphtha, asphalt and firefighting water of 12 in. diameter. Capacity 600 t.p.h. 12 pipelines for ethylene, diesel, petrol, propylene and other chemical products of 6 in.-8 in.- 10 in. diameter. Capacity 100 t.p.h. - 600 t.p.h. 6 pipelines for water supply and gas return.
Puerto Exterior	Repsol Petroleo, S.A.	Dolphin 1,489 m. long with 5 moorings for ships of 11,000, 35,000 and 100,000 d.w.t. 2 pipes for crude oil of 30 in. diameter and 56 in. diameter. Capacity 3,500/12,500 t.p.h. 2 pipes for Naphtha and deballasting of 24 in. diameter. 6 pipes for fuel-oil (2), vacuum gas-oil, petrol (2) and gas-oil of 20 in. diameter. 2 pipes for kerosene and pygas of 16 in. diameter, 1 pipe for bunker fuel of 14 in. diameter, 1 pipe for propane of 12 in. diameter, 2 pipes for ethylene and propylene of 10 in. diameter, 3 pipes for bunker diesel, octene and butane of 8 in. diameter, 3 pipes for butadienne, fresh water (not drinking water) and vapour to flare of 6 in. diameter, 1 pipe for blanketing by nitrogen of 4 in. diameter, 1 pipe for ethylene gas of 3 in. diameter, 1 pipe for propylene gas of 4 in. diameter. Monobuoy for unloading and bunkering of ships up to 250,000 d.w.t. in normal conditions and exceptionally up to 325,000 d.w.t. and 40 m. draft. 2 floating hoses of 24 in. for crude oil. Connection with the ship is 16 in. ASA of 150 lb. and 1 floating hose of 12 in. diameter for bunkering fuel oil, connection with the ship is 10 in. ASA of 150 lb.

CARGO HANDLING EQUIPMENT: (Private).
Fork Lift Trucks: 43×2.5 – 25 tons.
Fork Lifts with Spreaders for Containers: 6×30 – 40 tonnes.
Shovel Loaders: 48×1 – 80 tonnes.
Grabs: 9×3 tons; 13×5 tons; 47×6 tons; 48×12 tons, 9×14 tons, 36×16 tons and 8×20/25 tons.
Hoppers for Trucks: 17×8 tonnes – 50 tonnes.
Conveyor Belts: 12×250-800 t.p.h. for bulk cargoes.

TANKERS:

A.S.E.S.A.:

Platform 100:	Crude and distilled products.
Max. Draft:	39 ft. 06 in. up to 110 m. LOA 39 ft. 00 in. up to 260 m. LOA
Max. LOA:	260 m.
Min. LOA:	150 m.
Max. Size:	100,000 d.w.t.
Platform 20:	Crude, DPP, Asphalt, VCM and Naphtha.
Max. Draft:	32 ft. 00 in. up to 175 m. LOA 29 ft. 00 in. up to 200 m. LOA
Max. LOA:	200 m.
Min. LOA:	75 m.
Max. Size:	20,000 d.w.t.
Platform 6:	Asphalt, VCM, Ethylene and Propylene.
Max. Draft:	24 ft. 00 in.
Max. LOA:	140 m.
Min. LOA:	75 m.
Max: Size:	6,000 d.w.t.

Repsol Petroleo, S.A.:

Platform 100-S	Crude and distillated products.
Max. Draft:	50 ft. 02 in.
Max. LOA:	281 m.
Platform 100-T	Propane.
Max. Draft:	50 ft. 02 in.
Max. LOA:	281 m.
Platform 35-T and 35-S	Crude and distillated products.
Max. Draft:	39 ft. 04 in.
Max. LOA:	230 m.
Platform 11-S	L.P.G.
Max. Draft:	26 ft. 05 in.
Max. LOA:	155 m.
Monobuoy	Crude Oil
Max. Draft:	140 ft. 05 in.
Max. LOA:	350 m.
Max. Size:	325,000 d.w.t.

Mooring and unmooring manoeuvres are performed with the assistance of tugs. Pilotage is compulsory for mooring.

No engine repair is allowed that could prevent the immediate departure of the tanker. The International Safety Regulations are to be observed.

Repsol Monobuoy:

SBM type, with a diameter of 14 m. Anchored with 6 chains, 42 m. depth. Connected to the Monobuoy are 3 floating hoses (2×24 in., 1×12 in. diameter), 287 m. length. Vessels sailing in the proximity should give a wide berth.

The Monobuoy location is: Lat. 41° 04.1′ N., Long. 1° 13.3′ E.

Day marking of Monobuoy: Yellow "X" shaped figure. Night marking by yellow light visible all round, with 4 flashes every 20 secs., range 5 miles.

Dirty Ballast:

At the installations of REPSOL there is a plant for the disposal and treatment of ballast with a maximum capacity of 30,000 cu.m. at a maximum flow of 2,000 cu.m.p.h. The plant is available to all tankers due to take cargo in the Pantalan.

Also see "Specialised Cargo Handling Facilities".

NOTE: The REPSOL Jetty and Terminal Port Captain requires: (1) Vessels due to load/discharge liquid products must guarantee at all times their tanks are free of oxygen; and (2) vessels fitted with IGS must provide for and prove their system is in good working order before approaching any of the REPSOL jetty berths.

Gas Free Certificates: Gas Free Certificates will be required for all tankers, no matter what the previous cargo carried was.

Inward Cargo Manifest: The Customs House will no longer accept general cargo denominations like "chemicals", "productos quimicos", "acids", etc.

All commodities must be manifested with their denominations, viz. "Ethylglycol", "Styrene Monomer", "Sulphuric Acid", etc.

LPG:

Asesa Berth No. C-06:

Ship's Length	Minimum 75 m., maximum 125 m.
Draft	Maximum 25 ft.
Deadweight	Pier owners (Asesa) receive vessels up to 5,000 d.w.t. at this berth.
Allowed weather conditions for berthing	Max. wave height 70 cm. – 80 cm. Max. wind force 35 km./hr. – 40 km./hr.
Mooring Details:	See "Plan".

Products:

Ethylene:

Storage capacity	9,000 tonnes (2 tanks)
Operating pressure storage tanks	10 gm. – 65 gm.
Design pressure storage tanks	70 gm.
Compressor capacity	4.6 tonnes per hour
Pipe-lines to berth	Liquid nominal diameter 10 in. Liquid nominal diameter 2 in. (for pre-cooling purposes only)
Lengths of pipelines	1,100 m.
Unloading facilities on dock	Chicksan type DCMA, nominal diameter 8 in., length 46 ft.
Unloading rate max.	400 tonnes per hour at –103°C (at higher temperatures unloading rate decreases fast).

Propylene Oxide:

Storage capacity	1,600 tonnes (1 tank)
Operating pressure	0.3 – 0.45 kg./sq.m.
Design pressure	0.50 kg./sq.m.
Pipe-lines to berth	Liquid nominal diameter 8 in. Vapour nominal diameter 4 in.
Lengths of pipelines	1,100 m.
Unloading Facilities on dock	SS hoses nominal diameter 4 in. (for vapour)

STEVEDORES: Advisable to report ETA, in order to have all the necessary equipment and necessary number of workmen required for operations. If there are not enough cranes at a given time, own ship equipment is used.

FRESH WATER: Supply of fresh water by means of an underground pipe in all the commercial quays of the port. Rate 20 t.p.h.

FUEL: Fuel oil, diesel oil and gas oil available. Request of this supply should be done with 24 hours' notice through the Commercial Agent of C.L.H.

CONSULS:

Brazil
Colombia
Costa Rica
Cuba
Denmark
Finland
France
Greece
Guatemala
Italy
Netherlands
Norway
Sweden
United Kingdom

REPAIRS: Small repairs available.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Not compulsory, if Master requires them he is provided with specialised staff for this purpose.

OPENING/CLOSING HATCHES: Although this work is normally carried out by crew it can be done as well by the stevedores if required at extra charge.

CUSTOMS ALLOWANCES: It is permitted to have a packet of cigarettes per person per day. Unlimited allowance of national drinks.

REPATRIATION: Facilities exist.

AIRPORT: There is a small airport 12 km. away, for cargo and charter flights.

Nearest international airport for passengers and spare parts consignments is at Barcelona, which is 1 hour 30 minutes drive (60 miles).

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: January 1st and 6th; May 1st; June 24th; August 15th and 19th; September 11th and 23rd; October 12th; November 1st; December 6th, 8th, 25th and 26th. Also: Good Friday and Easter Monday.

POLICE/AMBULANCE/FIRE: Police 23.33.11; Ambulance at local hospital 23.35.35; Fire 54.50.80.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Not required.

GARBAGE DISPOSAL: Service available through Grino Trans S.A., c/o Mar. No. 13, 43004 Tarragona, Tel: 77-215274.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

DEVELOPMENTS: The port is designing 2 quays for dry bulk. One o the quays will have 150 m. length and 14.00 m. depth, and will have a berthing line perpendicular to the present berthing line of the Catalonia Quay. The second quay will have a berthing line of 400 m. length an 14.00 m. depth, and will be located between the Aragon Quay and th Catalonia Quay.

The port is also constructing a new berth for dangerous liquid cargoes at Muelle de Inflamables, which will be operative from 1st June 1994.

The Port of Tarragona will open the new car terminal this year (1994). It is located in a new esplanade which will be ready to operate at the end of the year(1994). The new dock will provide a capacity of 10,00 cars and the esplanade of 16.5 hectares will be connected by road an railway. All Roll-on/Roll-off facilities are ready in the new car terminal.

SHIPMASTER'S REPORT: February 1987.

Vessel: 95,000 d.w.t.

Documents:

6 copies Crew List.
2 copies Crew Declaration.
3 copies Stores List.
1 copy Health Declaration.

Two Health Officers boarded. Ship's stamp required on all documents.

Anchorages: Vessel anchored one mile off East Breakwater. Bottom i mud and holding good.

Tugs: One tug secured forward and aft. 2 ship's lines used through th centre fairleads.

Berthing: Vessel berthed at the Southern outermost berth. Vesse steams in and lets go starboard anchor. Two headlines and one forward backspring are sent ashore after which vessel swings to port wit assistance from the tugs. The backspring is to be kept tight. First line ashore aft is a spring. The lines to the tugs are sent ashore by a boat.

On completion of mooring the vessel has forward: 4 headlines 2 breastlines and 2 springs. Aft: 4 sternlines, 2 breastlines and 2 springs and an additional line to the starboard quarter buoy.

Gangway: Normally a shore gangway is provided but on our visit it was being repaired.

Shore Leave: Passes are required for shore leave. Transport is required.

SHIPMASTER'S REPORT: June 1987.

Vessel arrived at 1700 hrs. and Pilot boarded at 1800 hrs. Vessel a fast at 1900 hrs.

On entering the Pilot boards about one mile from the breakwater and on departure he leaves just inside the breakwater.

Vessels of Panamax size use 3 tugs. Tugs' performance was reasonable.

Our arrival draft was 12.83 m. and the present maximum draft at the bulk terminal is 14.0 m.

There is a new berth nearing completion (Cataluna Quay) which wi have a depth alongside of 20.0 m.

A new SBM is being positioned off the port to take maximum size vessels.

No Spanish arrival forms provided. I.M.O. forms used. Arms and Ammunition List, Passenger List and Drugs List required. These may be typed on ship's paper. Agent requires Load Line Certificate, Safety Certificate, Radio Certificate, Safety Construction Certificate and I.O.P.P.

Cargo operations commenced at 0900 hrs. the following day and cargo (11,000 tonnes) was completed at 0115 hrs. the next day. Documents completed at 0200 hrs. and Pilot boarded at 0300 hrs. The vessel was clear of the berth at 0340 hrs. and Pilot departed at 0410 hrs.

SHIPMASTER'S REPORT: September 1987 (Updated 1990).

Chart: BA. Chart No. 1193.

Documents:

6 copies Crew List.
2 copies Crew Declaration.
2 copies Manifest.
1 copy Health Declaration.
2 copies Cargo Manifest.

Terminal shore passes are issued to all crew members. Customs ar likely to board the vessel at any time.

Anchorage: Anchorage is outside the breakwater in the area indicate on BA. Chart No. 1193. Depth is about 15 fathoms. This is not a good anchorage in Winter due to the heavy ground swell.

Pilotage: The Pilot boards at the anchorage or off the breakwater entrance near the green buoy marking the breakwater extension. Berthing is only carried out during daytime. However, unberthing i possible throughout 24 hours. Unberthing for small vessels may b allowed without the use of a Pilot if no Pilot available.

Movements inside the harbour only take place during daylight hours. Pilot may be contacted on VHF Channels No. 12 and 9.

Berthing: Ethylene is handled at 2 piers operated by REPSOL (Berth No. 11) and ASESA. Vinyl Chloride Monomer (VCM) is handled at one pier by ASESA.

Vessel berthed port side to head out at Berth No. 11 (REPSOL). The berth is very open to Southerly winds and swells. Moorings consisted of3 head/stern lines and 2 springs at each end. The starboard anchor was also used and a line was run from aft to the off shore buoy.

Personnel are not allowed to walk down the pier. A mini bus is provided by the terminal. No stores are allowed on pier. The ASESA Pier is the nearest to the city and the depth on Berth "C" is 30 ft.

VCM is handled on Berths "B" and "C" and ethylene is handled a Berth "B". Vessel berthed starboard side to head out. Moorings consisted of 3 head/stern lines and 2 springs forward and aft. Port anchor used.

In Winter time a line is run to the offshore buoy aft and a heavy shore spring is provided forward. The berth is effected by wind and swells from the South but to a lesser extent that the REPSOL berth. Vehicles with stores are allowed to within 100 m. of the vessel. There is a mini bus every hour on the half hour from 0730 hrs. to 0230 hrs. from the pier t the city centre and on the hour from 0800 hrs. to 0300 hrs. from the city to the pier.

Cargo:

REPSOL: Ethylene is handled through an 8 in. Chicksan at the REPSOL Berth. The arm is the nearest arm to the shore. The ship's maximum pumping rate is allowed up to a back pressure of 2 Bar. Samples can take up to 3 hours.

ASESA: Ethylene is handled through an 8 in. Chicksan. Ship's maximum pumping rate allowed up to a back pressure of 3 Bar. Samples take about 3 hours.

DOW: Ethylene pipelines are interconnected between both berths so berthing can take place on either pier, depending upon availability.

VCM loading is also carried out at ASESA through stainless steel/rubber hoses of 4 in. (liquid and vapour). Ambient storage. (In August our intake temperature was +28° C). Vapour can only be pumped ashore. The terminal has 2 loading pumps which give loading rates of 90 t.p.h. or 150 t.p.h. Samples take 1.5 hours per ship's tank.

VCM storage capacity is 6,000 tonnes in 2 × 3,000 tonne tanks. One tank is for finished product and one for production. Maximum production 450 tonnes per day. However this is greatly reduced in the Summer months due to the high temperature.

Ethylene is purchased from local supplier to produce VCM.

General: There are many ship chandlers in the area.

Fresh water available by barge at both piers. Water is not of good quality and should be only taken in emergency.

Nearest main airport is at Barcelona which is 2 hours drive.

The construction of the breakwater extension has ceased for the present time. The Pilot reported that work is not expected to resume in the near future.

A new quay for bulk cargoes has been completed. Depth alongside 21 m. The channel and turning basin leading to the berth is also dredged to 21 m. Maximum draft permitted at the new berth is 20 m.

SHIPMASTER'S REPORT: October 1993.

Approaches: Breakwater, Oil Piers and Cabo de Salou Lighthouse to South stand out well.

Anchorage: Area as per B.A. Chart No. 1193, to North of Breakwater. Anchorage is exposed. To the south of the breakwater is the SBM and oil pipelines.

Pilot: Pilot on VHF Channels 9 and 14 (24 hours). Pilot boards from typical Spanish cutter with black hull and grey upperworks. A good lee is required. Pilot requires 30 minutes notice on departure.

Tugs: Two tugs of good power used. Tugs lines used.

Berth: Darsena del Molino: A new extension to the West of the old port. West side used for discharge and loading of chemicals and LPG. Three jetty berths as per B.A. 1193. Jetty No. 3 used for LPG. Vessels can berth either side to, pilots prefer Port side to, head in. Depth 10.0 m.

Moorings run by Pilot boat. 2 head/stern to shore. 2 springs either end to jetty.

Good fenders.

Ship's gangway from manifold.

Loading: We loaded Methyl Methacrylate Monomer (MMM) through 6 in. shore hose. Shore labour connect/disconnect hose. Average rate 212 t.p.h. Stop for 15 minutes for "First Foot" samples. Inhibitor added before and during loading. "First Foots" by gravity. Actual loading by shore pump. Shipper and Surveyor spoke good English. Line blown on board on completion.

Stores: Roadway about 60 m. from ship's side. From past experience trucks are not allowed on actual jetty. If a large quantity of stores are being delivered, a fork lift truck is required.

Fresh Water: Available from jetty. From past experience ship's hoses are used.

Telephone: Public call box near bow of ship.

AUTHORITY: Autoridad Portuaria de Tarragona, Passeig de l'Escullera s/n, 43004 Tarragona, Spain. *Tel:* 977-226611 and 226709. *Telex:* 56520 JOPT-E. *FAX:* (977) 225499, 219638. *Contact:* Antonio Pujol Niubo, President. Luis Grau Sbert, Port Director. Ramon Juanola Subirana, Operations Manager.

TORREVIEJA: 37.58 N. 00.40 W.

PORT LIMITS: The port limits are considered to be at 1 mile distance from the lighthouse at the end of the Eastern Dock or breakwater.

DOCUMENTS:

4 Crew Lists.
4 Lists of Passengers.
10 Cargo Manifests, including Cargo in Transit, together with cargo for Alicante. Tobacco and Cargo Manifests visaed by the Spanish Consul in the port of origin. All the vessel's certificates, and where necessary in respect of the cargo which international regulations require.

PILOTAGE: The corporation does not have a radio station, however, it does have a walkie-talkie with a range of about 12 miles on VHF equipped with the following Channels: 6, 9, 11, 14, 16. The pilot craft is 10 m. overall length and is painted white, with the letter "P" painted in black on the sides. The pilot craft normally operates within a 1 mile radius of the white light of the breakwater lighthouse.

ANCHORAGE: The anchorage which is most recommended for vessels is 1 mile from the breakwater, with a sandy bottom and good holding ground.

MAX. SIZE: The port's maximum sizes are: Overall length 150 m. Max. draft on entry of 21 ft., if the vessel has to remain anchored awaiting a berth, and max. departure draft of 29 ft. 6 in.

HEALTH: Regulations as laid down by the International Foreign Health Requirements are enforced.

RADIO: Coastal station at Alicante; on MF with average range of 220 miles, and on VHF with a range of 40 miles.

TUGS: None available.

BERTHING: There is a berth in the Western Dock, with a length of 360 m., and a max. depth of 10 m. The loading operations are effected by shore equipment, provided that bulk salt is being loaded, or with the vessel's gear when bagged salt is being loaded.

CRANES: The port has no cranes, however, a mobile crane can be used for any weight which has to be loaded, the max. capacity of this crane is 7 tons.

STEVEDORES: There are no stevedoring gangs as the work force is employed by the Salt Plant. The only commodity loaded is salt and work is between 0600 hrs. and 2200 hrs.

MEDICAL: If a doctor is required by the Master, medical services can be furnished locally, it being necessary to transfer the patient to clinic in Alicante, if the case is serious.

TANKERS: No facilities available.

DENSITY: Average port density is 1030.

FRESH WATER: Available. Rate 5 t.p.h.

CUSTOMS ALLOWANCES: Each crew member is permitted to have 200 cigarettes and 1 bottle of spirits out of ship's bond.

REPATRIATION: Possible.

HOLIDAYS: Normally no work is done in the port on the following holidays: New Year (January 1st), Epiphany (January 6th), San Vicente (April 23rd), Maundy Thursday, Good Friday; Labour Day (May 1st); Festival of San Pedro (June 29th), Corpus Christi; Santiago Apostol (July 25th); Assumption Day, Festival of the Spanish speaking world (October 12th); All Saints (November 1st); Immaculate Conception (December 8th) and Christmas Day (December 25th).

AUTHORITY: Ayudante Militar de Marina.

VALENCIA: 39.27 N. 00.18 W. (See Plan)

DOCUMENTS:

3 Crew Lists.
2 Passenger Lists or negative.
1 Cargo Manifest of goods destined for the port.
Another manifest covering transit cargo.
2 Stores Lists, including tobacco, cigars, cigarettes, coffee, spirits, radios, cameras, etc., in possession of crew. In all cases make and number of radios to be indicated.
Safety Radio Certificate and Safety Equipment Certificate.

If vessel carries over 6 kilos tobacco per man, the excess to be declared in a separate manifest, which must be visaed by Spanish Consul at the last port, otherwise vessel is exposed to heavy fine.

Shipmaster's Report: November 1988.

Customs: 2 Stores Lists.
2 Crew Declarations.
2 Crew Lists.
2 (Nil) Passenger Lists in Spanish.
2 copies Manifests of Cargo in Transit.
Quarantine: 1 Maritime Declaration of Health.
1 Crew List.
1 (Nil) Passenger List in Spanish.
Agent: 1 Crew List.
1 Crew Declaration.
1 (Nil) Passenger List in Spanish.
1 Stores List.

PILOTAGE: Pilotage is compulsory for this port. Day and night service. The pilot launch is painted black with a letter "P" painted in white on the sides.

ANCHORAGES: There is a good anchorage outside the port, vessels are required to keep the entrance channel clear.

RESTRICTIONS: Entrance to the port faces S.E. and is 500 m. wide, with a low water depth of 17.0 m.

MAX. SIZE: The following size vessel has entered the port:

GRT	*LOA*	*Draft**
105,327 tons	234 m.	13.65 m.

*Real draft on entry/departure.

HEALTH: If the vessels proceed directly to berth, Pratique can be obtained immediately after berthing. Otherwise, at anchorage at vessel's arrival.

If vessel has sickness on board of a contagious nature Master should advise Health Authorities by radio, and they will examine patients immediately upon arrival, to enable vessel to be granted Free Pratique.

RADIO: Coastal radio station with international frequencies 1580 kHz.

ETA to be sent to Agent in advance.

TUGS: 8 tugs available up to 3,630 h.p. Two tugs normally used for berthing and unberthing.

BERTHING: Quays operated by Port Authority:

CARGO HANDLING FACILITIES:

Special Loading/Unloading Facilities:

Location	*Owner*	*Remarks*
Espigon Turia Sur	C.L.H.	3 petroleum products points connected to pipelines, pumping installation.
Muelle del Turia	C.L.H.	Petroleum products point connected to pipelines, pumping installation.
Espigon Turia Testero	C.L.H.	Petroleum products point connected to pipelines, pumping installation.
Dique del Sur	C.L.H.	Unloading of petroleum products. Pier with pipelines up to the factory.
Espigon Turia Testero	Cia.Valenciana de Cementos Portland S.A.	Loading of cement in bulk. Hovercrafts conducted by a rolling bridge, crane fed, with a conveyor belt from silos.
Espigon Turia Testero	Cia.Valenciana de Cementos Portland S.A.	Pneumatic loading of concrete in bulk from trucks with bridges.
Espigon Turia Norte	Demagrisa	Vegetable oils point. Wines point. Both connected to a pipe system with pumping installation.
Muelle del Turia	Esdecasa	Pneumatic loading of grains and seeds by a suction machine, connected to a conveyor belt placed in the gallery.
Espigon Turia Sur	Proas	Asphaltic products point, connected to a pipe, pumping installation.
Espigon Turia Sur	Demagrisa	Point for wines, connected to a pipeline, pumping installation.
Nuevo dique del Este	Terminales Portuarias, S.A.	Chemical products point, connected by a pipeline, pumping installation.
Muelle del Sur	Joaquin Perez Munoz S.A.	Grain terminal with handling directly from vessel to silo or vice versa.

Facilities for Specific Traffic:

Discharge of Petroleum Products: Pier capable of accepting vessels up to 210 m. long with 12 m. draft, having a discharging capacity of 1,000 t.p.h.

Loading of Cement: Special facility using two simultaneous gravity systems by means of conveyor belts and gantries from silos and by pneumatic hoses from trucks, reaching an output of 800 t.p.h. This is carried out at a pier which allows up to 14 m. draft.

Container Terminal: There are 3 specialised container terminals.

(A) Public Container Terminal:

The operator is Maritima Valenciana S.A.

There is a quay length of 800 m. with 14.0 m. water depth, and a second quay with length of 176 m. and a water depth of 9.0 m.

The Terminal is equipped with 5 container gantry cranes, 2×40/45 ton Panamax Paceco and 3×32.5 ton Standard Paceco. The mobile handling equipment consists of 11×40 ton Paceco Fruehau 070 rubber tyred transtainers. There are electrical points for 300 refrigerated units.

There is a total area of 35 ha., of which 25 ha. are used for stacking and handling, with storage for up to 12,500 TEU.

There is a paved back-up area of 13 ha. and 4,000 sq.m. of covered area for CFS operations (storage 80 TEU).

Traffic in 1992: 267,000 TEU.

Traffic in 1993: 260,417 TEU.

(B) Terminales del Turia S.A.:

The quay length is 235 m. with 9.0 m. water depth. The Terminal is equipped with 2 gantry cranes, 1×40 ton Inta Eimar and another 32 tons. There is a transtainer with a capacity of 30 tons.

Traffic in 1993: 33,239 TEU.

(C) Transbalear:

One container quay, served by 1×28 ton Imenasa crane.

Traffic in 1993: 12,178 TEU.

Multi-Purpose Terminal: Terminal operating company: Terport S.A. Berths and cranage: Total quay length 420 m., depth 12.0 m. equipped with 4 portal cranes (2×30 tons and 2×12 tons), 2 Ro-Ro ramps and one mobile crane 80 tons.

Terminal Facilities: Total area 11 ha.; 50 electric reefer points; front handlers: 13 Caterpillar (4×30 tons, 5×10 tons and 4×3 tons).

Consolidation: CFS on Terminal. Covered area 6,000 sq.m.; reefer points on Terminal; forklifts on Terminal.

Traffic in 1993: 44,470 TEU.

Roll-on/Roll-off Traffic: There are 14 specialised berthing places for this type of traffic. On the Levante Quay, there are moorings with a 9.0 m. water depth. Between the Levante and Transveral Levante Quays, there is a corner with 2 berthing places of 12.0 m. and 7.0 m. water depth respectively.

In the interior harbour there are 6 berthing places with water depths of between 7.0 m. and 7.5 m. Between the Outer Poniente Transversal Quay and Poniente Quays, there is a corner with 2 berthing places of 7.0 m. and 9.0 m. water depth respectively. Lastly on the Muelle Turia there are 3 berthing places, one is on the Espigon del Turia Sur with 11.0 m. water depth, and the other 2 are between this quay and the Muelle Turia with a water depth of 9.0 m.

CRANES: There are 51 gantry cranes, 6 with 32/45 tons capacity. There is also one floating crane of 135/34 tons capacity at 7.0/21.40 m. reach.

MEDICAL: All medical services available in the port and in the city.

TANKERS: *C.L.H.:* One berth, length 210 m., depth 12 m.

Pipelines: The port areas equipped for oil traffic are connected to the C.L.H plant by means of a network of 5 pipelines, starting at the Turia Pier and Quay, and ending at the plant itself.

These pipelines are 1×10 in. diameter with a capacity of 300 cu.m./hr., and another of 8 in. and 250 cu.m./hr. for movement of fuel oil. 2×8 in. diameter and 250 cu.m./hr.; one for gas oil and one for gasoline. There are also means of delivery of aviation paraffin by means of 1 pipeline 6 in. diameter at the rate of 120 cu.m./hr.

Also see "Berthing".

Waste Reception Facilities: There is a private service for waste collection. These products are transferred outside of the port enclosure.

Pollution: The naval command has a tug to fight against sea pollution and contamination.

FRESH WATER: Available at all main berths at the rate of 30 t.p.h.

FUEL: C.L.H. can supply by pipelines at the Turia berths, at the rate of 100 t.p.h. – 280 t.p.h.

CONSULS: The following countries are represented in Valencia:

Austria
Belgium
Benin
Bolivia
Brazil
Colombia
Chile
Denmark
Dominican Republic
Ecuador
El Salvador
Finland
France
Gabon
Germany
Great Britain
Greece
Guatemala
Haiti
Honduras
Iceland
Italy
Ivory Coast
Liberia
Monaco
Norway
Netherlands
Peru
Seychelles
Sierra Leone
Sweden
Switzerland
U.S.A.
Uruguay
Venezuela

REPAIRS: All types of hull and machinery repairs can be effected.

FLOATING DOCK: 1 floating dock available, owned by Union Naval de Levante. Interior length 143 m., interior width 24.60 m. Lifting capacity 8,000 tonnes.

CUSTOMS ALLOWANCES: Normally Customs permit 200 cigarettes per man out of bond. Additional quantities needed depend on the stay of ship in port. One bottle of spirit per man.

AIRPORT: Valencia Airport, 15 km. from the port.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: Work can be arranged on following holidays. New Year's Day (January 1st, full day); Epiphany (January 6th, full day); Saint Joseph (March 19th, full day); Easter (two days); Labour Day (May 1st, full day); Patron Saint of Spain (July 25th, full day); Assumption Day (August 15th, full day); Community Day (October 9th, full day); Holiday of Hispanicism (October 12th, full day); Holiday of the Virgin Mary (December 8th); Christmas Day (December 25th, full day).

The Public Container Terminal working time is 24 hours a day, every day, except Labour Day (May 1st, full day); New Year's Day (January 1st, full day) and Christmas Day (December 25th, full day).

POLICE/AMBULANCE/FIRE: Police 091; Fire 3730080; Ambulance 3606211, 3526750.

DEVELOPMENTS: *Brief Description of the Most Important Works (Period: 1993).*

(1) South Enlargement Works: This year has seen the completion of the quarry material pouring work in the breakwater, reaching 3,840 P.K. which coincides with the breakwater head.

By 31st December, approximately 48% of the whole of the works had been carried out, a large part of the artificial rockfill having been poured in and about 1,300 m. of the back wall having been completed.

(2) Canopy at Entrance of Southern Approach: By mid-year, work had finished on the canopy that indicates the entrance to the port area from the South. Booths have been installed under the canopy for entrance control by the Port Police and exit control by the Civil Guard.

(3) Paving of a Piece of Ground for Cars in the South Area: During this year, urbanisation works on 50,000 sq.m. of ground have been completed, to be used as a depot for cars in transit.

These works included paving and illuminating the whole area as well as the accesses to it.

(4) Adaptation of the Fish Market Building in the Port of Valencia to the Standards of the European Economic Community: By the end of the year, work on adapting the installations of the Fish Market Building to the hygiene and health standards dictated by the Directive of the Board on 22nd July 1991 were at quite an advanced stage.

(5) Preparation of the East Wing of the Car Shed for Fire Services: At the end of the year, work was finished on preparing the East wing of the car shed to set up premises for the new fire service which the City Hall of Valencia is going to place in the port area.
This preparation includes a gym, dormitories, a dining room, kitchen, control and communications room and 6 fire engines.

(6) North Basin Dock: At the end of the year, work was at an advanced stage on the dock for loading and unloading cement which is being built in the North Basin.
The berthing line of the dock is 80 m. long, mounted on 24 piles (30 m. long and 1.50 m. in diameter).
The top of the dock is being built with reinforced concrete on header and brace beams 0.60 m. in height.

AUTHORITY: Autoridad Portuaria de Valencia, Muelle de la Aduana, S/n, 46024 Valencia, Spain. *Tel:* 34-6-3674391 (international) and 96-3674391 (national). *Telex:* 64508. *FAX:* 34-6-3672752. *Contact:* The General Manager.

VIGO: 42.14 N. 08.42 W. (See Plan)

DOCUMENTS:
Maritime Declaration of Health.
Crew List.
Passenger List.
Manifest of Cargo for the Port.
Manifest of Cargo in Transit.
Ship's Stores List.
Crew's Personal Effects List.
Ship's Particulars Declaration.

Note: Tobacco: In case the vessel carries more than 6 kilos of tobacco per man, the excess must be declared in a separate manifest, which must be visaed by a Spanish Consul. In the absence of the Consul, said document will have to be visaed by an authority of the former port of clearance. Otherwise the vessel would be severely fined.

PILOTAGE: Pilotage at Vigo is compulsory and the service permanent day and night. Pilots board in auxiliary motor-boats with a letter "P" in white at both sides of the hull and a blue flag with the letter "P" in white, near the entrance of the harbour, in the zone included inside Punta Lameda-Cabo Vicos on the channel of the South Entrance and inside Punta Caballo-Subrido, on the channel of the North, both situated to the West of the harbour. At night the pilot boats have a white light visible around the horizon and under this light another red one, also visible around the horizon. International Code signals used to call Pilot, or 4 long blasts on the whistle. Pilot station situated at Transatlanticos Pier 3. Pilot boats normally on station on a line connecting Borneira and Transatlanticos Pier.

ANCHORAGE: Several suitable anchorages in the Vigo Estuary, naturally sheltered, in depths of more than 35 m. The main anchorage opposite the port on the South side of the "Ria" has depths of 15 m. – 25 m.

MAX. SIZE: No limitation for length and beam, unlimited deep water approaches.
Largest Vessel: LOA 337 m. Draft on arrival and departure 14.50 m.

HEALTH: If vessels proceed directly to the berth, Pratique can be obtained immediately after berthing. Otherwise, at the anchorage on vessel's arrival. In case of suspected disease or fever on board, the Master must send a radio message to the Agent in order that they advise the Health Office.

RADIO: The nearest Radio Station is Vigo Radio, situated in the limits of Vigo Port.

TUGS: No tug-boats are required for entering the port. Only used for berthing ships from 120 m. length upwards according to Pilot's advice. At Vigo there are 7 modern tugs from 350 h.p. – 8,200 h.p. Tugs join vessel off the berth. Tug's line used at no extra charge.

BERTHING:

Berth	*Length* (m.)	*Depth* (m.)	*Use*
Muelles Trasatlanticos	552.40	12.00	Passenger.
Muelle Trasatlanticos Interior y N	534.00	7.00-6.00	Special and laid up ships, Ferry-boat Terminal.

	1 × 35 tons.
Mobile Cranes:	2 × 6/9 tons.
Floating Crane:	1 × 70/125 tons
	1 ×150 tons.

STEVEDORES: It is very important that Masters send advance notice regarding the vessel's ETA. With this notice, Agents can inform Shipper's or Receivers' stevedores accordingly, so that they arrange operations properly. The official working hours of the port for general cargo are Monday-Friday 0830 – 1230 hrs., 1400 – 1800 hrs. With intensive shifts 0830 – 1430, 1430 – 2030 and 2030 – 0230. Saturdays at holiday rates, 0830 – 1430 and 1430 – 2030 with possibility of 1 hour extension to complete only. Sunday and holidays: 0830 – 1430, with additional overtime payments till 0230.

MEDICAL: Doctors and hospital facilities available. Advance notice preferred in urgent cases.

TANKERS: *Muelle Arsenal:* Max. LOA 80 m., max. draft 9.15 m. Black and white oils handled. Bunkers and fresh water available. Three lines for gas oil.
Pantalan CLH: Max. LOA 220 m., max. draft 10.7 m. Max. d.w.t. 40,000 tons. Black and white oils handled. No slop or dirty ballast facilities. Bunkers and fresh water available. Lines: 1×8 in. (gas oil) and 2×12 in. (fuel oil).
Dirty ballast and slop collection service from Descontaminadora del Mar S.A. Tel: 227842 and 220762.

DENSITY: Average 1026.

FRESH WATER: Available from the quays at the rate of 50 – 80 t.p.h. Can also be supplied by tugs at 500 t.p.h.

FUEL: Fuel oil, gas oil and petrol available at a rate of 170 t.p.h. from the Oil Pier or delivered by barge. 24 hours' notice of requirements recommended.

CONSULS: Most countries have consulates at Vigo.

REPAIRS: All types of deck and engine repairs are possible.

FLOATING DOCKS: One floating dock available: Length 128 m., breadth 22.40 m., max. depth 2.80 m. and lifting capacity 5,000 tons.

SURVEYORS: Lloyd's Register.

GANGWAY/DECK WATCHMEN: Available from shore if required.

OPENING/CLOSING HATCHES: Opening may be done by crew to avoid delays. Closing hatches usually performed by crew.

CUSTOMS ALLOWANCES: 200 – 250 cigarettes or 6 kilos of tobacco and 2 bottles spirits may be held out of bond for each person. Wine not restricted.

REPATRIATION: Crew changes and repatriation can be arranged without difficulty.

AIRPORT: Local airport, situated 8 km. from the port, has at least 1 daily flight to Madrid. International Airport of Santiago de Compostela is 100 km. away.

TIME: GMT plus 1 hour in Winter. Summertime from March to September.

HOLIDAYS: 1st January; 6th January; 19th March (St. Joseph); Good Thursday; Good Friday; 28th March (local holiday, Reconquest Day); 1st May (Labour Day); Corpus Christi; 25th July (St. James' Day); 15th August; 16th August (Local); 12th October; 8th December (Immaculate Conception); 25th December.

POLICE/FIRE/AMBULANCE: Police Tel: 091 and 092. Fire Tel: 433333. Ambulance Tel: 410158.

TELEPHONES: No arrangement for connecting on board.

VILANOVA I LA GELTRU: 41.12 N. 01.43 E.

(See Plan)

DOCUMENTS:

3 Crew Lists.

1 Passenger List or negative.

Manifest of Goods destined for Vilanova i la Geltru and in-transit.

Stores List, in duplicate, including tobacco, spirits, radios, etc. belonging to vessel.

Detailed list, in duplicate, of all personal effects of crew and passengers (tobacco, spirits, cameras, radios, etc.).

Tobacco – any excess over 6 kg. per person must be stated on a separate manifest duly visaed by Spanish Consul.

If on inspection differences are found (more or less), articles are removed and a heavy fine imposed.

PILOTAGE: Pilotage is compulsory and service permanent. Pilot informed by Agent of vessels ETA, given 24 hours in advance. When vessels approach the breakwater, Pilot will board. The pilot boat is white with a black "P" painted on the side. Contact pilot station on VHF Channel 16. Tel: (93) 8949655.

RESTRICTIONS: None but for draft. Vessels carrying dangerous cargo should get permission for berthing prior to arrival.

HEALTH: Pratique is obtained immediately after berthing. In case of suspected disease or fever on board, the Master must radio Agent in order to inform Health Officer in time.

RADIO: Radio Costera of Barcelona on 2182 kHz.

VHF: See "Pilotage".

TUGS: None. Barcelona's tugs could be hired should the vessel's size make it necessary.

BERTHING: Depth of water in centre of harbour 16 ft. – 20 ft. South Commercial Wharf length: 836 ft., depth 18 ft.; East: 721 ft., depth 12 ft. – 15 ft.

CRANES: Two railway portico cranes of 16 tons capacity, 1 mobile crane of 3 tons capacity and 1 mobile crane of 20 tons capacity.

STEVEDORES: 24 hours notice required in order to arrange gangs. Unloading rates depend on type of cargo.

MEDICAL: Any kind of medical service can be arranged if information received in time.

FRESH WATER: Plentiful supply of water by means of hoses from the pier to vessel.

FUEL: Can be supplied if required, but 24 hours notice required.

CONSULS: See "Barcelona".

REPAIRS: Only small repairs possible.

SURVEYORS: Comisariado Espanol Maritimo "Comisar".

GANGWAY/DECK WATCHMEN: Not compulsory but advisable at night.

OPENING/CLOSING HATCHES: Normally opened/closed by the crew, otherwise according to "Charter Party". Lashing must be carried out by crew.

CERTIFICATES: Usual documents on board. Safety Radio, Safety Equipment, Derat and Registered Tonnage Certificates are the only ones required by Authorities.

CUSTOMS ALLOWANCES: Crew: 6 kg. tobacco per person. Passengers: 2 kg. per person. Any excess on this amount must be declared on a separate manifest as in-transit. Wine and/or Spirits: Only 1 bottle per person. Any excess must be declared on a separate manifest, as "cargo in-transit" and stowed apart from the tobacco and spirits carried under the Provisions List. This Manifest must be visaed by the Spanish Consul at the last port of call. Any infringement of this regulation will subject the vessel to the immediate imposition of a heavy fine and confiscation of excess tobacco.

REPATRIATION: Good facilities available.

AIRPORT: Barcelona Airport situated 40 km. distant and 30 minutes by car from Vilanova I la Geltru.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer (early April-late September).

HOLIDAYS: September 11th.

POLICE/AMBULANCE/FIRE: Police: (93) 8930947; Ambulance: (93) 8158979; Fire: (93) 8151111.

IDENTIFICATION CARDS: Not required.

AUTHORITY: Ayudante Militar de Marina, Vilanova I la Geltru (Barcelona-Espana). *Tel:* 8154219. *Cables:* Ayudante Marina, Vilanova I la Geltru.

Comissio de Ports de Catalunya, c/Dr. Roux No. 63, 08017 Barcelona. *Contact:* Zona Portuaria II-III, Ronda General Mitre 117, sobreatico-08022 Barcelona. Tel: 93-2113116. *FAX:* 93-4186012.

Vilanova I la Geltru. Tel: (93) 8155219.

VILLAGARCIA DE AROSA: 42.36 N. 08.46 W.

(See Plan)

DOCUMENTS:

Declaration of Health.
3 Crew Lists.
Passenger List.
3 Cargo Manifests.
Manifest for Cargo in Transit.
Crew Declaration.
Ship's Stores List.

APPROACHES: Access through Arosa Bay main channel entrance i position Lat. 42° 28′ N., Long. 08° 59′ W.

PILOTAGE: Compulsory for entering, leaving, berthing, unberthing o shifting. Ships bound for any port in Arosa Bay, must report ETA throug ship's local Agent 24 hours in advance of their arrival, specifying if GMT or local time.

Pilot Boarding Station: Ships bound for Villagarcia are normally boarded 2 miles off harbour breakwater (Lat. 42° 35.4′ N., Long. 08° 50.0′ W.) Under previous request Pilot may be obtained at Lat. 42° 31′ N. Long. 08° 57′ W. (2 miles off Rua Island). Pilots may be contacted b VHF Channel 12.

Pilot for Shifting or Departure: Notify at least 1 hour in advance.

Berths are requested through Ship's Agent and arranged by Harbou Authorities in advance.

Linesmen and Boatmen are arranged through Ship's Agent.

ANCHORAGES: There is sufficient anchorage for any size of vessel i Arosa Bay. Vessels awaiting Pilot at Rua Island may anchor 1 mile Southward of Rua Island, in depths of 35 m. to 40 m, bottom is mud For anchorage in the harbour area (Eastward of El Seijo light), a Pilo must be arranged.

MAX. SIZE: No restrictions, except max. draft 7.0 m. (23 ft.) at LWS.

RADIO/VHF: Nearest stations are: Vigo Radio, VHF Channel 16 Finisterre Radio, MF 2,182 kHz.

TUGS: Compulsory for ships of 90 m. LOA or more.

One small tug available. Additional tugs may be called from Vigo whe required. Ship's lines normally used.

BERTHING:

Berth Name	*Wharf Length (m.)*	*Depth Chart Datum (m.)*	*Remarks*
Comercial W.	243	7.0	Bulk cargoes through pipelines and general cargo.
Comercial N.	80	7.0	General cargo.
Comercial E.	300	3.0-7.0	General cargo.
Pasajeros	430	3.0-4.0	Passengers.
Ramal	120	3.0-4.0	General cargo.
Ramal	250	7.0	Ro-Ro, bulk and general.

CRANES: 1×12 ton, 4×6 ton and 3×3 ton electric cranes at Comerci Mole. 1×12 ton, 1×6 ton and 2×3 ton electric cranes at Ramal Mole.

Mobile diesel cranes also available as required.

SPECIALISED CARGO-HANDLING FACILITIES: Discharge of ceme in bulk through pipeline at Comercial Mole-West. Discharge/loading o liquid chemical products and asphalt through pipelines at Comerci Mole-West.

STEVEDORES: Normal working hours for general cargo: 0830-180 (break 1230-1400). Normal working hours for frozen cargoes (2 shifts 0830-1430 and 1430-2030. Advise ETA before 1700 hrs. in order t commence 0830 hrs. next day.

TANKERS: Discharge lines: 4 in. for methanol, 6 in. for ur formaldehyde, 8 in. for asphalt, at Comercial Mole-West. No sl facilities. No facilities to combat oil spills. No shore steam.

DENSITY: Normal density 1025. In severe rainy seasons may drop t 1020/1018.

FRESH WATER: Available at all berths. Order through Agent. Appro rate 10 t.p.h.

FUEL: Gas-oil available by pipeline at Comercial Mole.

REPAIRS: Small deck and engine repairs can be done. No dry-dock available.

SURVEYORS: Comisariado Espanol Maritimo available. Order through Agent.

HATCHES: Opening/closing of hatches to be carried out by ship's crew only.

REPATRIATION: Crew changes and repatriation possible.

AIRPORT: Nearest airport at Santiago de Compostela, some 50 km. away.

TIME: Western European time kept. (GMT plus 1 hour in Winter; GMT plus 2 hours in Summer).

HOLIDAYS: Set yearly by the Government. For details contact Agent.

POLICE/AMBULANCE/FIRE: Police 091 or 501864/500257; Ambulance 500987; Fire 501008/851633.

EMERGENCY CO-ORDINATION CENTRE: Harbour Master's Office, tel. 500209.

BANKS: Branches of main Spanish banks.

SHORE LEAVE: No restrictions. No shore passes. Seaman's Book is sufficient.

AUTHORITY: Autoridad Portuaria de Villagarcia, Muelle de Pasajeros 5, 36600 Villagarcia de Arosa, Galicia, Spain. *Tel:* (986) 500238/501340. *Telex:* 88081. *FAX:* (986) 507923. *Contact:* Port Director.

NOTES

Please also advise Shipping Guides Ltd.

Sri Lanka

GENERAL:

MINES: *Danger from Mines:* Reports have been received (1986) indicating that waters near Sri Lanka ports may be mined.

NAVIGATION: *Control of Navigation in Sri Lanka Waters:* The Sri Lanka Government has issued regulations controlling navigation in the territorial waters of Sri Lanka.

(1) No vessel shall enter or remain within Sri Lanka's territorial waters other than:

Vessels entering or leaving the ports of Colombo, Galle, Trincomalee and Kankesanturai.

Vessels navigating through the Traffic Seperation Scheme off Dondra Head.

Vessels laid up inside Trincomalee Harbour.

Vessels engaged in Sri Lanka's coastal trade.

Vessels waiting in the roads off the Port of Colombo with the approval of the Harbour Master.

Vessels navigating through Sri Lanka's territorial sea and internal waters in Palk Strait with the permission of the Commander of the Sri Lanka Navy.

(2) Any vessel which enters Sri Lanka's territorial waters in contravention of these regulations shall do so at their own risk, and the Sri Lanka Government shall not be liable for any loss or damage such vessel may suffer.

(3) The Master of any vessel which enters Sri Lanka's territorial waters shall identify itself if challenged by:

Any vessel responsible for performing coastguard duties.

Any aircraft.

Any Sri Lanka authority from land by radio.

(4) Any vessel which has to enter Sri Lanka's territorial waters for purposes other than those given in (1) shall do so only with the approval of the Harbour Master.

(5) All vessels approaching the Port of Colombo are required to keep at least 1.5 miles clear of the single point mooring buoy in position Lat. 06° 58.67′ N., Long. 79° 46.50′ E. No vessel is permitted to go closer than 1.5 miles without the permission of the Harbour Master.

SHIP SUPPLY SERVICE: GAC Shipping Limited (Sri Lanka) operate a Ship Supply Service from the Port of Galle.

Galle is situated approximately 75 miles South of Colombo and 94 miles South of Katunayake International Airport. Flights to all major destinations operate from this busy airport which handles a very large volume of business. The road journey between Colombo and Galle takes approximately 3 hours.

A standard 65 ft. "GACSHIP" crew boat is on station at Galle, and there is a small GAC Operations Office located close by the port entrance. The office is equipped at present with I.D.D. telephone and VHF. Telex and fax facilities are being installed. A VHF listening watch on Channel 16 is maintained on a 24 hour basis, call sign "GACSHIP GALLE". The range of this set has been proven upto a maximum distance of 20 miles.

The SSS Operation is coordinated fully by GAC Shipping Limited, Colombo, which is a 24 hour operational office, fully equipped with telex, facsimile, IDD telephones, and all communications should be addressed to this office.

In addition to the normal crew change, spares and stores delivery services, available in the Arabian Gulf, the following services can be arranged at Galle with sufficient notice, normally 72 hours.

Bunkers	MDO only at present maximum 500 tonnes.
Fresh Water	Maximum 200 tons in one delivery.
Provisions	Fresh/frozen.
Underwater	Hull cleaning/inspection.
Lube Oil	Offshore delivery, drums only.
Survey	Hull machinery and liquid/dry cargoes.

Helicopter services between Katunayake and Colombo, and Colombo and Galle can be arranged without difficulty.

There are no Visa requirements for visiting Company representatives or joining crew members.

The "Rendezvous" position is 12 nautical miles South of Point de Galle in approximately 70 m. depth. This position can be adjusted to suit individual vessel requirements.

Co-Ordinating Office for Sri Lanka SSS:

GAC Shipping Ltd., P.O. Box 1116, 180 Bauddhaloka Mawatha, Colombo 4, Sri Lanka. Tel: 94-1-586191, 584870, 581191/2/3/4. Fax: 94-1-582806. Telex: 23418 GACSHP CE. Office operational 24 hours daily.

Galle Operations: Listening watch on VHF Channel 16, 24 hours daily, call sign "GACSHIP GALLE". Tel: (94-9) 34025.

COLOMBO: 06.56 N. 79.50 E. **(See Pla**

DOCUMENTS:

5 each of Crew and Passenger Lists.
8 Manifests.
1 Arrival Report for Pilot, including Dangerous Cargo Declaration.
1 Master's Declaration for Immigration, and same for Police.
2 Private Property Lists of Officers and Crew for Customs.
2 copies of Preliminary Report by Master for Customs.
1 Maritime Declaration of Health for Port Health Officer.
1 Master's Declaration of Cargo for Quarantine Department.

PILOTAGE: Vessels approaching port apply for Pilot by flying the flag by day or 2 red lights at night. They can, in addition, use VH Channel 16. The telegraphic address of pilot station is "Pilot Station S Lanka Ports Authority Colombo" and a provisional ETA 24 hours ahea is advisable with corrections thereafter. However, these are be channelled through the vessel's Agent. Pilot boat is a wooden mot launch with the word "Pilot" on its side. It flies the "H" flag by day o red and white lights by night according to the international code. Pil boarding position is with the Southwest breakwater North end light i transit with North West Breakwater South end light at a distance o 1.0 miles off. Advice of where to anchor can be obtained from the Pil by VHF.

ANCHORAGES: The anchorage off port is within 3 miles of the harbou mouth where up to 14 fathoms of water is available. 18 fathoms of wate is available within 6 miles. This anchorage is to be used on instruction from pilot station.

All vessels arriving have to anchor South of Panadura (Lat. 6° 43′ N until instructed to proceed to the anchorage off harbour.

RESTRICTIONS: Entry may take place at all hours of the day and nigh

MAX. SIZE: For entering harbour, max. draft 12.0 m. and a length o 900 ft. is permissible. Beam is not critical. There is no appreciable ris and fall of tide.

Tankers' maximum dimensions for berthing alongside: Length 750 ft draft 34 ft.

HEALTH: Vessel entering port must fly the "Q" flag until boarded b the Port Health Officer to grant Pratique. Pratique may be granted b radio if there is a doctor on board provided the ship is not calling fro a port in India. A radio message should be sent within 24 hours of th vessel's ETA in the following terms "Last port — no quarantinab disease on board – Doctor on board" and the Port Health Officer wi reply to the Agent confirming Pratique being granted by radio. Pratiqu is automatic if the vessel enters after calling at another port in Sri Lank If any quarantinable disease on board double "Q" flags must be hoiste prior to entering harbour.

RADIO: "Colombo Radio" with a call sign 4PB is the usual channel fo communicating with Colombo.

VHF: The pilot station is presently available on VHF Channel 10 an the Authorities' Cargo Operations Control Room on VHF Channel 11

TUGS: Tugs normally join the vessel at the harbour mouth and use tug lines. Three tugs up to 45 tons bollard pull are available at any one time 4th tug on advance request.

BERTHING: There are no specific requirements relating to berthin space but early advice of draft and length is most advisable.

Report: September 1993.

The following information has been received from Agent in Colomb

BQ	Bandaranaike Quay
JCT	Jaye Container Terminal
CB	Coastal Berth
PVQ	Prince Vijaya Quay
GP	Guide Pier

CONTAINER HANDLING FACILITIES: Total length of quays for container operations 1,045 m. Depth 11.0 m. – 12.0 m. 6×35 ton gantry cranes and 1×30 ton crane. Reefer points 186. 74 forklift trucks, 2 tons – 40 tons capacity.

See "Developments".

STEVEDORES: The stevedores at Colombo are the Sri Lanka Ports Authority, having the monopoly of stevedoring and lighterage. ETA at least 24 hours in advance if possible.

Working hours: (2 shifts) 0730 to 1630 and 1630 to 0400, depending on requirements, extendable until 0600.

Booking gangs: For discharge on 1st day, 24 hours advance notice required by Agent and thereafter at Agent's request at the end of shift.

MEDICAL: Although advance notice of medical assistance required is helpful, particularly when port stay is limited, it is not essential. Comprehensive hospital facilities are available either in private nursing homes or the Government hospitals. The following inoculations are required: cholera; yellow fever if calling from ports in East Africa and Mozambique.

TANKERS: There is one tanker berth for import of gas oil, lubricating oil and white oil, and export of Naphtha/furnace oil.

The diameter of discharge lines;

White oil, 10 in., capacity 250 t.p.h.

Gasoline, 10 in., capacity 170 t.p.h.

Furnace oil, 14 in., capacity 500 t.p.h.

Naphtha, 12.75 in., capacity 450 t.p.h.

Pumping will not be commenced after nightfall. No residue discharge facilities are available.

There is an SPM 6 miles outside the harbour for discharge of crude oil. Max. size 180,000 tonnes deadweight. Pipeline 36 in.×9.2 km.

Report: December 1992.

(1) Proposed New Oil Terminal:

Planned LOA : 220 m.
Planned Draft : 13.0 m., could be increased to 14.0 m.
Deadweight : 60,000 tonnes
Diesel : Available
Bunkers : Available

This berth will be designed to accommodate broad beam shallow draft tankers up to a maximum of 60,000 d.w.t.

Although this berth was originally planned to be operational in 1993, due to the other various development programmes within the Port of Colombo, no priority has been afforded to this project. It is therefore unlikely that this terminal would be operational prior to the 2nd half of 1994.

(2) North Pier:

LOA : 180 m. at draft 10.36 m. LOA can be increased to 190 m. at draft of 9.8 m. for'd and 10.36 m. aft.
Bunkers/Diesel : Available, subject to quantity required and availability of berth.

Temporary restrictions have been placed on this berth as this area has been utilised in connection with the construction work of the new container terminal.

(3) Prince Vijaya Quay:

Operator : Sri Lanka Ports Authority

(A) PVQ 1
LOA : 137 m.
Draft : 9.2 m.
Density : 1025

(B) PVQ 2
LOA : 152 m.
Draft : 9.45 m.

This berth is primarily for general cargo. Bunkers and water available by barge.

LPG discharged into bowsers (road trucks). No storage available. Normally only vessels that can carry 1,200 – 1,600 tonnes are handled.

(4) Coastal Berth:

(A) CB 1
LOA : 98 m.
Draft : 6.0 m.

This berth is primarily for general cargo.

Bunkers and water available.

LPG discharged into bowsers (road trucks). No storage available. Normally only vessels that can carry 1,200 – 1,600 tonnes are handled.

DENSITY: 1025.

FRESH WATER: Fresh water is readily available by barge and from hydrants at the Jaye Container Terminal. The rate of delivery is approx. 40 t.p.h. The water is of good quality.

FUEL: Furnace, diesel and gas oil available. Advance notice of at least 24 hours is advisable as the bunker requirements of the port often exceed the ability of the oil companies to supply immediately.

4 barges available, 450 tons, 650 tons and 1,000 tons. Fuel also available by pipeline if berth (max. draft 34 ft.) available.

CONSULS:

Belgium
Burma
China
Cyprus
Czech Rep.
Denmark
Egypt
France
Germany
Greece
Indonesia
Italy
Japan
Maldives
Netherlands
Philippines
Poland
Romania
Russia
Thailand
Switzerland
U.S.A.
Yugoslavia

REPAIRS: Most main engine and boiler repairs and minor hull repairs can be effected.

DRY DOCKS: No. 1 – 700 ft.×85 ft.×32 ft. over blocks – Max. size 675 ft. LOA. 80 ft. breadth – Deepest draft 29 ft.

No. 2 – 350 ft.×54 ft.×22 ft. over blocks.

No. 3 – 400 ft.×54 ft.×18 ft. over blocks.

Owners and Operators – Colombo Dockyard Limited.

New dry dock: Length 263 m., width between fenders 44 m., depth over sill 8.2 m., capacity 100,000 d.w.t.

SURVEYORS:

American Bureau: c/o Malship (Ceylon) Ltd., 80 Reclamation Road, Colombo 11. Tel: 24658, 25856. Telex: 21150.

Lloyd's Register: No.7, 19th Lane (2nd Floor), Colombo 3.

Bureau Veritas: c/o Delmege Forsyth & Co. Ltd., 101 Vinniyalankara Mawatha, Colombo 10. Tel: 93361. Telex: 21320.

GANGWAY/DECK WATCHMEN: Watchmen are available and are to be recommended unless members of the crew are available to provide this service.

Piracy: Acts of piracy have taken place in the approaches to the port.

OPENING/CLOSING HATCHES: This work is normally carried out by the stevedores except in the case of MacGregor or similar hatch covers which they will not handle.

CERTIFICATES: Register showing vessel's name, port of registry, gross and net tonnages and owner. Safety Equipment Certificates, quadrennial and annual, Ship's Articles (British) and Clearance from previous port and Derat Certificate.

CUSTOMS ALLOWANCES: Cigarettes 25 per man per day. Tobacco 1 oz. per man per day. Snuff 1 oz. per man per day. Spirits 0.25 bottle per man per day. Wine 1 bottle per man per day. Beer 2 bottles per man per day.

REPATRIATION: There is no difficulty in arranging repatriation and crew changes.

AIRPORT: It is 18 miles to the international airport which is served by regular airlines.

TIME: Sri Lanka standard time is 5.5 hours in advance of GMT, and no alterations are made during the year.

HOLIDAYS: Cargo work can normally be arranged on all except the following holidays:

Sinhalese and Tamil New Year; 1st May; Wesak Full Moon Day; Christmas Day.

POLICE/AMBULANCE/FIRE: Harbour Police 21075; Ambulance 20428; Ambulance launch: Call Pilot Station on VHF Channel 16. Port Fire Brigade 32331 and VHF Channel 16.

EMERGENCY CO-ORDINATION CENTRE: "Colombo Radio".

TELEPHONES: Will be available to vessels alongside in the near future.

BANKS: American Express International Corporation, 45 Janadhipathy Mawatha, P.O.Box 650, Colombo 1. Tel: 23366, 37991, 31288-9. Telex: 21469 "Amex".

Bank of America, P.O.Box 308, Colombo. Tel: 547372/5. Telex: 21481 "Bo Facol" Ce.

STORING: See "Prelims".

1. Yes, able store both by barge and truck.
2. Yes, vessel could store from barges during both loading and discharging.
3. Trucks could proceed alongside vessel.
4. Yes, fork lift trucks could be used.
5. Any operation could be carried out with prior approval of Customs, under Customs supervision.
6. No. Port Stevedoring labour has to be made use of. However, local riggers can be employed by obtaining special permission from the Chief Operations Manager of the Sri Lanka Ports Authority.

SHIP SUPPLY SERVICE: See "General" before first port.

SHORE LEAVE: There is no restriction on crew members being allowed ashore but advised to carry passport or other identification.

IDENTIFICATION CARDS: These are not essential but the crew is expected to carry some form of identification with a photograph on it when they leave the vessel.

GARBAGE DISPOSAL: Garbage in bags is collected by small boats, after making special arrangements with the Agent.

WASTE OIL DISPOSAL: Quantities up to 50 tons can be collected after making special arrangements with Agent.

SEAMAN'S CLUBS: Missions to Seamen, 26 Church Street, Colombo. Tel: 448572.

DELAYS: Delays for vessels working cargo are seldom over 24 hours. Vessels requiring bunkers should advise ETA as early as possible.

GENERAL: Ships should not discharge oil within territorial waters, dispose of any waste into harbour or on to quays, immobilise main engines without prior permission, use radio for transmission in harbour. Ships should hoist national flag during daylight hours.

DEVELOPMENTS: A third container berth to be constructed at Jaye Container Terminal, Length 332 m., depth 13 m. Completion 1994.

AUTHORITY: Sri Lanka Ports Authority, No. 19 Church Street, P.O.Box 595, Colombo 1. *Tel:* 421201, 421231. *Telex:* 21805 Ports Ce. *FAX:* 540651. *Contact:* Mr.F.Wickramasinghe, Chairman – Sri Lanka Ports Authority – *Tel:* 25559.

AGENT: GAC Shipping Ltd., P.O. Box 1116, 180 Bauddhaloka Mawatha, Colombo 4, Sri Lanka. Tel: (94-1) 581191, 581192, 581193, 581194. Telex: 23418 GACSHIP. Cables: Confidence. Fax: (94–1) 582806.

GALLE: 06.01 N. 80.14 E. (See Plan)

PORT LIMITS: To the Eastward Unawatuna Point, to the Westward Gindurah Point, to the Southward the usual sea league from the line between these points.
DOCUMENTS: Pilot brings on board:
Arrival Report and Maritime Declaration of Health.
Port Health Officer boards vessel after berthing and collects Crew List, Passenger List, Maritime Declaration of Health. Examines crew, passengers and International Certificates of Vaccination.
Customs. Manifests, Bonded List, Passenger List, Cargo List, List of Currency, Port Declaration.
Immigration. 3 Crew Lists.
PILOTAGE: Apply for Pilots via local Agents. Send ETA not more than 24 hours prior arrival via Colombo Radio. Vessels telegraph direct to Harbour Master, Galle, via Colombo Radio. Vessels advised listen-in on Channel 16, VHF.
Pilot launch about 60 ft. long with white hull carrying word "Pilot". Pilot launch proceeds to vessels from Harbour Master's Office and Pilot will board about 0.25 mile to South of bell buoy. Vessels should anchor until pilot launch arrives and heave-up on approach of pilot launch; due to heavy swell prevalent *essential* vessels provide good lee for Pilot. Proper pilot ladder and two man ropes should be ready. Vessels anchoring should do so to the South or East of bell buoy. See "Anchorages".
ANCHORAGES: Best anchorage lies to Eastward of bell buoy where depth is 9 fathoms. To Southward of bell buoy depth increases to 15 fathoms. Vessels should anchor about 0.5 mile from bell buoy.
RESTRICTIONS: Vessels should not proceed North of bell buoy. Entry prohibited after 1800 hrs. and may be delayed by bad weather. Generally a wind force of over 25 knots and a swell of over 4 ft. delays entry.
MAX. SIZE: Two alongside berths available for vessels up to 450 ft. length and 24 ft. draft. 750 ft. of quay space available.
HEALTH: The International Declaration of Health, handed to Master by Pilot, must be completed and returned to Port Health Officer, who boards after berthing. Port Health Officer also requires 2 Crew Lists, synopsis of Vaccination Certificates, Derat Certificate and examines Certificate of Vaccination.
RADIO: Colombo Radio.
VHF: Harbour Master's Office on VHF Channel 16, regular watch not maintained.
TUGS: At present only 1 tug of 450 h.p. available throughout year. If sufficient notice given (over 24 hours) an additional tug could be sent from Colombo (only available during N.E. monsoon). Tug meets vessel at berth, tug's lines used. Charges for tugs included in port (pilotage) charges irrespective of ownership of towing lines.
BERTHING: See "Max. Size".
STEVEDORES: All stevedoring carried out by Sri Lanka Ports Authority. Gangs, lighters etc. are all arranged by Sri Lanka Ports Authority. 16 lighters of approx. 15 d.w.t. capacity available for working vessels in stream berth.
MEDICAL: All facilities available. Vessels arriving in Galle and requiring medical attention should cable Agent and "Port Health – Galle" at least 12 hours in advance.
DENSITY: 1025.
FRESH WATER: In cases of emergency up to 20 tons fresh water could be supplied daily in stream in 400 gallon tanks conveyed by lighters. Alongside main quay up to 50 tons per night could be supplied by Bowser.
FUEL: Bunkering Division of Ceylon Petroleum Corporation, Kolonnawa (off Colombo) can service vessels with small quantities of fuel. 5 days' prior notice required.
CONSULS: All Consular Officers in Colombo, 72 miles away, 2 hours by train, 2.5 hours by road.
REPAIRS: No repairs possible as Galle open to S.W., essential that vessels have engines ready at all times. No shutdown permitted.
GANGWAY/DECK WATCHMEN: Ceylon Police Station. Two policemen aboard every vessel in harbour. For vessels berthed alongside policemen stationed aboard through day. For stream vessels policemen stationed only during hours when cargo worked.
OPENING/CLOSING HATCHES: Shore labour, but there is no objection to hatches being opened prior to labour boarding.
CUSTOMS ALLOWANCES: Present allowance 200 cigarettes per week, 2 bottles beer per day. Others proportionately.
REPATRIATION: Sub-collector of Customs acts as Shipping Master and will sign on/off properly authorised crew changes.
AIRPORT: Colombo, approximately 130 km.
TIME: Standard Time is GMT plus 5.5 hours.
HOLIDAYS: Non-working days in the port (dates variable yearly): Sinhala and Tamil New Year in April; Wesak Full Moon in May.
POLICE/FIRE/AMBULANCE: Harbour Police 3222; Ambulance 2261. No fire brigade available.
TELEPHONES: No telephones available aboard.
SHIP SUPPLY SERVICE: See "General" before first port.
SHORE LEAVE: Crew allowed ashore.
AUTHORITY: Sri Lanka Ports Authority, Closenberg Jetty, Magalla, Galle, Sri Lanka. *Tel:* 09-22963 (Resident Manager); 09-22824 (Assistant Harbour Master).
AGENT: See "Colombo".

KANKESANTURAI: 09.49 N. 80.03 E.

SHIPMASTER'S REPORT: May 1979.

LOCATION: Kankesanturai (KKS) is situated on the North coast Sri Lanka in position Lat. 9° 48′ 57.5″ N., Long. 80° 02′ 41.5″ E.
DOCUMENTS: See "Colombo".
APPROACHES: Kankesanturai cannot be approached directly from se but is approached via the Pedro Channel. The area seaward of Ped Channel is very shallow and abounding in reefs.
Approaches to Pedro Channel: The East coast is low lying and sand with only palm trees. The landmarks for making Pedro Channel are (Mullaittivll Light and (b) an obelisk situated in position Lat. 9° 35′ N Long. 80° 27.5′ E. Mullaittivll Light was not working and the obelis which is 100 ft. high can hardly be distinguished because it is surrounde by vegetation. The best approach is to steam on a course of 280° (heading straight for the obelisk. (Note: Radar distances etc., could n be observed as the vessel's radar was out of order). This area is covere by B.A. Charts No. 2197, 2031 and 68A. These charts are not to b fully relied upon as the charts last large correction, etc., was in 194 This vessel did not have a working radar, hence it was decided to lowe the boat and sound the intended track ahead. The track sounded wa followed until the obelisk was ahead of the track and visible, which wa in this case at about 5 miles. Once the vessel enters Pedro Channel has to proceed on a course parallel to the coast. After altering cours in a Northwesterly direction the obelisk which is the only mark in th area is soon covered by vegetation and not visible. The next landma being the Point Pedro Lighthouse which is 25 miles away to the Nort The objects marked on the chart like churches, buildings etc., cann be relied upon at all as they are numerous.
Depths in Pedro Channel: As marked on the chart the depth in Ped Channel varies from 6.5 to 9 fathoms. During this vessel's transit, it wa suspected to be less and at certain points, the boat was again lowere and soundings of 28 ft. were obtained.
Approaches to KKS: After passing Point Pedro Light course was altere to West keeping about 3 miles off the land and dangers. "KKS" can b observed from quite a distance because of chimneys of a cement facto The "KKS" lighthouse could also be visually observed at a distance about 8 miles. When "KKS" lighthouse bore South, distance 2.5 miles the vessel was stopped and again the boat was lowered to sound th anchorage area and approaches. Depths of 30 ft. to 36 ft. were foun just 0.5 miles distance from the land. The anchorage was approache and this vessel anchored with "KKS" light distance 0.5 miles. Fo shackles were used and throughout the stay the vessel held fast.
After anchoring soundings were taken all round the vessel and th least depth obtained was 31 ft. at low water. There is hardly any tid the maximum difference being about 2 ft. The vessel usually lies in a East-West direction and when swinging around usually does so v North. Only on one occasion throughout the stay did she swing via th South.
RADIO: Communication with "KKS" even from Colombo (telephon was very difficult, sometimes delays over 4 to 5 hours were experience "KKS" has no telex communication. The best method is to keep th vessel's radio station open and communicate via Madras Radio.
CARGO OPERATIONS: *Port of "KKS" and Discharging:* This is anchorage only port which is open from March to October. Cargo bagged on board and discharged into lighters. The lighters are the landed on the beaches and labour carries bags ashore to the warehous which is about 30 yards away. On this vessel cargo was bagged durin the night and discharged by day. There are at one time about 200-300 labourers on board. The labour for bagging and discharging a different. The average discharge rate worked out to about 800 tons. Th is the first time the bagging had to be done as normally vessels callin are loaded with bagged cargo. The crane operators are very careful an follow the instructions given by the vessel with regard to the crane About 12 vessels call at this port per year during the season.
DENSITY: Density was found to be constant at 1025.
FRESH WATER: None available. Ample fresh water needed as wat also has to be supplied to the labour.
PROVISIONS: Almost all types of provisions available at reasonab costs. Rice which is also available is of very poor quality. The Agen also handle the ship chandling.
LAUNDRY: Laundry facilities are available, but costs are slightly on th high side. This is also handled by the Agents.
REPAIRS: There is a small workshop available for mechanical/electric repairs.
CURRENCY: All currencies have to be declared and all currenci except Indian, Pakistani and Bangladesh can be changed in banks. Th above three currencies are supposed to be banned in Sri Lank
GENERAL: "KKS" is a very small town. The largest town being Jaff which is 14 miles away. Buses and taxis are available.
AUTHORITY: Port soon to be controlled by Sri Lanka Ports Authori

TRINCOMALEE (including Pulmoddai):

08.36 N. 81.15 E. **(See Plan)**

DOCUMENTS:
International Maritime Declaration of Health.
6 copies Crew List.
6 copies Passenger List.
Cholera or Yellow Fever Certificates required if vessel is arriving from an infected port.

PILOTAGE: Call Pilot on VHF Channel 16, also send ETA via Colombo Radio to pilot station. Vessels should indicate ETA through Colombo Radio, either to Agent or direct to Deputy Harbour Master, Trincomalee, at least 24 hours before arrival. No night pilotage. Pilot boards incoming vessels between hours of 0600 and 1800 hrs. about 2 cables Northward of Round Island (Lat. 8° 30′ 48″ N., Long. 81° 13′ 24″ E.). Vessels embarking Pilot should whenever possible lower an accommodation ladder. Vessels awaiting a Pilot should anchor 0.5 miles N.W. of Round Island light tower in depths from 11 to 13 fathoms.

Vessels arriving between 1800 hrs. – 2100 hrs. may be brought in at Deputy Harbour Master's discretion if they come to anchorage 5 cables N.W. of Round Island.

ANCHORAGES: Trincomalee Harbour is the only entirely sheltered natural harbour in Sri Lanka. Good anchorage may be found in almost any part of harbour in good weather.

RESTRICTIONS: Vessels may enter during hours of daylight only. Range of tide is very small and does not restrict entry.

MAX. SIZE: Almost unlimited length and draft can be accommodated in anchorage. Only 1 berth which can accommodate up to 600 ft. length, and 32 ft. draft. This jetty used for discharging tankers and bunkering.

HEALTH: The Port Health Officer boards vessels after arrival at anchorage to grant Pratique. Pratique automatic for vessels arriving from another port in Sri Lanka.

RADIO: All cables to Deputy Harbour Master, Agents, Receivers, etc., should be routed through Colombo Radio; call sign 4PB.

Pilot carries a portable VHF set, Channel 16, with about 10 miles range.

TUGS: Two tugs available. One tug attends when required. Tow-lines generally not used; but if required tug or ship's lines used.

BERTHING: A bulk-grain berth to accommodate vessels of 800 ft. in length, and draft forward 41 ft. and aft 46 ft. is available at Malay Cove, in the vicinity of Round Point.

Also see "Developments".

Pulmoddai: Pulmoddai is a roadstead, on the Eastern coast of Sri Lanka and approximately 38 miles from Trincomalee. The loading season is usually from April to September.

The Mineral Sands Corporation has housing for their staff and a medical practitioner is employed by them who also acts as a Port Health Officer for granting Pratique to vessels.

The Corporation has two godowns with a capacity of 14,000 tons of rutile and 25,000 tons of ilmenite. Presently ore is transported by conveyor belts from the godowns for lighterage along a pier stretching up to 250 ft. into the sea. The Corporation has a fleet of 8 steel lighters, of which 6 are of 100 tons capacity and 2 of 200 tons capacity. The loading rate is around 2,000-2,600 tons per day working 5 hooks in good and fair weather.

The stevedore labour is private and is recruited from Trincomalee whenever a ship operates at Pulmoddai. As the stevedores stay on board until completion of loading, it will be necessary for the vessel to carry sufficient water to meet the stevedore requirements.

It is customary for the ship to provide food and accommodation for two Customs Officers and a representative of the Shippers during cargo operations.

Prior information is also essential by the Agents of vessel's ETA, etc., which should be passed to the Plant Manager of the Corporation at Pulmoddai by cable or telex to enable him to obtain labourers from Trincomalee.

There is no launch service, but the Corporation provides a launch on a schedule drawn by the Corporation, and the Agents could make use of this facility.

STEVEDORES: Stevedoring operations have been nationalised and are carried out by the Sri Lanka Ports Authority, Trincomalee.

TANKERS: One tanker berth at which vessels of 600 ft. length and 32 ft. draft are discharged.

Report: December 1992

Oil Berth: A temporary restriction has been placed on the oil berth.

At present both the head and stern buoys are very old and due for replacement in the near future.

The fendering on the jetty is extremely poor and the connecting bridge between the dolphins is in a state of disrepair.

LOA:	180 m.
Draft:	10.0 m.

DENSITY: Salt water.

FRESH WATER: Available, supplied by water barges.

FUEL: Marine heavy diesel and furnace oil can be supplied at 24 hours' notice.

CONSULS: All Consular Officers are in Colombo.

REPAIRS: Only minor repairs can be carried out.

GANGWAY/DECK WATCHMEN: Watchmen are provided by the Sri Lanka Ports Authority.

OPENING/CLOSING HATCHES: Carried out by stevedores.

CUSTOMS ALLOWANCES: Tobacco issued as required. Wine and/or Spirit issued as required.

REPATRIATION: Crew changes and repatriation can be effected.

AIRPORT: No International flights through Trincomalee.

TIME: GMT plus 5.5 hours.

HOLIDAYS: Dates of holidays are not fixed. Cargo work can generally be arranged on any holiday.

TELEPHONES: Police 2308; Ambulance 448; Fire 335. There are no telephone connections for ships.

SHIP SUPPLY SERVICE: See "General" before first port.

SHORE LEAVE: Allowed.

IDENTIFICATION CARDS: Identity Cards or Passports are required to be carried by crew members ashore.

DEVELOPMENTS: Tokyo Cement Company Jetty is now in operation to discharge cement clinker by grabs. Length of berth 460 ft. Depth alongside 28.5 ft.

AUTHORITY: Sri Lanka Ports Authority, Inner Harbour Road, Trincomalee. *Tel:* 541395. *Contact:* Resident Manager/Deputy Harbour Master.

AGENT: See "Colombo".

NOTES

Please also advise Shipping Guides Ltd.

Sudan

PORT SUDAN: 19.37 N. 37.14 E. (See Plan)

DOCUMENTS:
Port Sudan Harbour Master's Declaration.
Sudan Customs Declaration.
Quarantine Form.
(All above forms to be filled by Master on arrival).
3 Crew Lists.
3 Passengers Lists.
1 Crew Declaration.
1 Dutiable Stores.
4 copies Manifest.
1 copy Bills of Lading.
1 Provisions List.

PILOTAGE: 24 hours' notice ETA. VHF Channel 14. Pilot boards South of South Wingate Beacon. Pilotage compulsory.

ANCHORAGES: Towartit Anchorage, approx. 8 km. S.E. of harbour.

RESTRICTIONS: No restrictions providing berth available.

Age Restrictions: The Sea Ports Corporation, Port Sudan, issued the following circular:

"(1) Ships of over fifteen years of age will not be allowed to work in the harbour unless able to produce a Sea Worthy Certificate stating that all deck appliances and propellers are fit for work and capable of lifting and handling all kinds of goods carried on board the ship. The Owner or the Charterers of the ship will be held responsible for the correctness of the Certificate and for any delay incurred due to defect or non-efficiency of ship appliances.

(2) Ships working within the Red Sea Basin will be allowed to enter the harbour despite their age limit or nationality provided that they produce the Certificate referred to in Para (1) above.

(3) Ships carrying goods to Port Sudan Harbour must not carry any packages which cannot be lifted by the ship's own gear or are away from the reach of their gear.

(4) Breaches of any of the above will be subject to a fine of two thousand Sudanese pounds."

MAX. SIZE: Length 850 ft. Max. draft at Oil Terminal 39 ft., other berths between 28 ft. and 34 ft. 6 in.

HEALTH: Radio Pratique obtainable if message sent not more than 24 and not less than 8 hours before arrival to "Quarantine, Port Sudan", with following information: Name of ship and ETA; Name of Agent; Whether surgeon carried or not; Whether illness on board, if so, what illness; Port of departure and last port of call. On receipt the Quarantine Medical Officer will inform ship by wireless whether Pratique is granted or not.

RADIO: Port Sudan Radio (call sign STP). Operates daily on High Frequency as follows: 8676 kHz from 0400 hrs. to 2200 hrs. GMT; 500 kHz – continuous listening watch for first 10 minutes of every hour. Radiograms may be handed in at Port Sudan Post Office at all times and at Port Sudan Quays Post Office during office hours.

VHF: Port Sudan Radio on Channel 16 and 19 from 0400-2200 hrs. GMT.

Port Control on Channel 14.

TUGS: About 1 mile from harbour entrance. Either ship's or tug's lines at Pilot's discretion.

BERTHING:

Berth	*Length*	*Depth* *Winter*	*Summer*
Nos. 1 to 5 main berths	458 ft.	30 ft.	28/33 ft.
No. 5A	426 ft.	35 ft.	33 ft.
No. 6	606 ft.	35 ft.	33 ft.
No. 7	606 ft.	35 ft.	33 ft.
No. 8	600 ft.	37 ft.	35 ft.
No. 9	600 ft.	37 ft.	35 ft.
No. 15	642 ft.	37 ft.	35 ft.
No. 16	230 ft.	37 ft.	35 ft.
No. 17	908 ft.	41 ft.	39.5 ft.
No. 18	908 ft.	41 ft.	39.5 ft.

CARGO HANDLING: Grain silo of 50,000 tons capacity situated at Berth No. 15.

Container traffic handled at Berths No. 17 and 18. Ro-Ro vessels handled at Berth No. 16.

20 mobile cranes, capacity 7 tonnes – 54 tonnes.

60 forklift trucks.

STEVEDORES: Require 24/48 hours advance notice of ETA and stowage of cargo. Rate of Discharge and Loading: General cargo, 5 – 10 tons per hook per hour. Bagged cargo, 15 – 20 tons per hook per hour.

Exports: Main exports are cotton, cottonseed, Arabic gum, oilcakes, beans, sugar, oilseed, hides, skins, wheat bran, karkadeh, ground nuts, edible oil, molasses and livestock.

Tea: Following exports should not be stowed with tea: castor-seed, hides, linseed, edible oil, oilcake. Cottonseed may be stowed with tea with separation of 3 ft. but it is preferable to stow in separate compartment from tea.

Cotton: Gum should never be stowed with cotton.

Transhipment cargo: Is normally not accepted at Port Sudan without prior permission, except in very small quantities.

Weight: Deadweight of cargo is expressed per ton of 1,000 kilos.

MEDICAL: Advance notice advisable. Hospital facilities available. Crew and passengers must have valid International Health books.

TANKERS: At Berth No. 16, vessels up to 600 ft. length can berth with overhang. Max. draft 34 ft. 6 in.

Berths 17 and 18 accommodate tankers up to 39 ft. draft. Berths connected by pipeline to refinery 8 km. South of Port Sudan.

Used for discharging crude oil and loading refined products.

"No smoking" notices required.

DENSITY: 1025.

FRESH WATER: Available ex-quay and ex-barge, capacity 200 ton

FUEL: Marine Fuel oil (normally 1000 secs.); marine diesel (42/45 secs.); gas oil (35 secs.). 24/48 hours' advance notice advisab Name of suppliers is required. Bunkers at times in short supply.

CONSULS: Nigeria.

REPAIRS: Minor deck and engine repairs.

DRY DOCKS: Slipways for 2 vessels up to 500 tons capacity.

GANGWAY/DECK WATCHMEN: Recommended.

OPENING/CLOSING HATCHES: Normally by stevedores.

CUSTOMS ALLOWANCES: Tobacco, 200 cigarettes per pers Alcohol not allowed. Only personal requirements may be taken asho

REPATRIATION: Not recommended. Formalities take 2/3 days.

AIRPORT: 16 miles S.E. of port. Two flights daily to Khartoum a 2 flights a week to Cairo.

TIME: GMT plus 2 hours.

HOLIDAYS: The following government holidays will be considered port holidays (1986).

Day	*Date*	*No. Da*
Independence Day	1.1.86	1
Christian Coptic Holiday	7.1.86	1
Rajab Revolution	26.3.86	1
Religious Holiday	7.4.86	1
Sham el Nassem	5.5.86	1
Ramadan Bairam	7.5.86	4
Kurban Bairam	14.8.86	5
Mohammedan New Year	13.11.86	1
Christmas Day	25.12.86	1

The port will not work on the following days: January (Independence Day), November 10th-14th (First Day Kurban Bair December 1st (Mohammedan New Year), February 19th (Mulid El Na June 30th (Revolution Day), September 3rd (First Day of Ramad Bairam), December 25th (Christmas Day). Overtime will be worked all other days.

POLICE/AMBULANCE/FIRE: Police 4888; Ambulance 2400; Fire 59

TELEPHONES: No arrangements exist for placing telephones on boa

IDENTIFICATION CARDS: Identification required in lieu of passpo

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not usually available but could be specia arranged with refinery.

SEAMAN'S CLUBS: None.

CURRENCY: Sudanese Pound (S£). U.S.$1.00 = S£ 4.04 (April 19

GENERAL: Foreign currency allowed ashore, but must be change banks only. Crew are permitted to go ashore with any amount Sudane Currency.

DEVELOPMENTS: The first development stage includes modifica of 2 existing berths to accept ships of up to 50,000 d.w.t. and contai vessels, relaying railway track in the port area and asphalting.

Second phase of development includes extension of 2 contai berths, additional works at the Ro-Ro berth, a new oil be (100,000 d.w.t.) and upgrading of the grain silo complex.

Suriname

MOENGO: 05.38 N. 54.25 W.

A bauxite mining town about 70 miles up the Cottica River, a tributary of the Commewijne River, which latter joins the Suriname River at Fort New Amsterdam. Moengo is 94 miles from the Suriname River Light Buoy.

DOCUMENTS/PILOTAGE/GENERAL: Refer to "Paramaribo".

PILOTAGE: Vessel arriving after 2000 hrs. at the light buoy for Moengo can proceed on a suitable tide and anchor at Fort New Amsterdam without having to call at Paramaribo to be entered. In this case vessel will be entered on arrival at Moengo.

Also see "Paramaribo".

TUGS: 1×1,750 h.p. tug available.

Towage is compulsory in the Cottica River from 40 miles below Moengo for vessels over 200 ft. long.

MAX. SIZE: Ships of 525 ft. can be accommodated. Ore vessels call daily. The Commewijne Bar is 9 ft. – 10 ft., so that the ruling draft is that of the Suriname River, maximum admissable draft being subject to the Suriname River.

BERTHING: Moengo has two piers at which ore is loaded by a transporter at the rate of 800/1,000 t.p.h. One pier is 430 ft. long and has a depth of 24 ft. alongside. Both will accommodate ships of 525 ft. length. Tracks are laid on the 430 ft. pier and a 25 ton crane is available.

PROVISIONS: Not available.

FRESH WATER: Small quantities can be supplied.

FUEL: Small quantities can be supplied.

AIRPORT: About 5 km. from docks.

AUTHORITY: District Commissioner acts as Harbour Master.

See "Paramaribo".

NEW NICKERIE: 05.57 N. 56.59 W.

DOCUMENTS:

6 copies Crew List.
6 copies Passenger List.
Customs Documents; Crew Declaration Lists; for instance, souvenirs, electric apparatus, etc.
2 copies Ship's Store Lists.
3 copies Manifests of Import.
4 copies Manifests of Export.
1 copy Transit Manifest.
2 copies Manifests of Coastal Cargo.
Ship's Papers to be shown on request.

PILOTAGE: Pilotage is compulsory for the Nickerie River for ships bigger than 50 gross tons. There is always a Pilot available; ETA to be sent 48 hours before arrival and, 12 hours before arrival give necessary correction message to the Agent.

Ships can only enter the river at or about the time of high water.

The Pilot boards near the Sea Buoy (Buoy No. 1). The pilot boat is painted black and white with "Pilot 1" on the side. The pilot boat does not use the international red-white pilot lights at night. It is possible to make radio telephone contact with the boat (Pilot carries a walkie-talkie VHF equipped with Channel 12). There is a signal lamp on board.

Send ETA message to Agent who will order the Pilot. Awaiting high water the vessel can anchor about 3 miles N.N.E. of the Sea Buoy.

ANCHORAGES: With a draft of 15 ft. the ship can safely anchor 3 miles N.N.E. of the Sea Buoy. It is not advisable to anchor in the Nickerie River for a long time, the river is too narrow.

MAX. SIZE: Minimum depth on the bar is 2.10 m. with maximum draft at HW varying from 14 ft. to 17 ft., maximum length is 130 m., governed by the width of the river (170 m. and upriver 70 m.). The vessel has to use the high-inlet for cooling water, etc., while passing the bar.

At low water ships are seated in the mud without consequence to hull, rudder or propeller alongside the wharf. There are berths for oil-carriers.

HEALTH: There is no Pratique procedure. Only in the event of any suspected disease on board must a doctor must be called.

RADIO: Send ETA cables to Paramaribo Radio. VHF equipment also used.

TUGS: No tugs available.

BERTHING: The port of New Nickerie is 3 miles up river.

Wageningen: Lies 27 miles up river and can be reached with the same draft as New Nickerie, but the width of the river is only 70 m., which restricts length to 120 m.

STEVEDORES: The Agent orders the gangs (maximum 3 gangs available).

MEDICAL: No advance notice required for medical treatment. There is 1 hospital in Nickerie with a surgeon.

TANKERS: There are 3 piers in Nickerie: Esso, Shell and Texaco pier. Maximum permitted draft 14 ft. 9 in. at Spring tide.

DENSITY: In the dry season the density on the river near New Nickerie is 1015. In the rainy season the density is 1005 near HW, and 1000 near LW. These all depend upon Spring tide or Neap tide.

FRESH WATER: Fresh water is available alongside the wharf of New Nickerie. It is loaded from shore by hose.

FUEL: Small quantities of fuel available from Esso or Shell, also grease and petrol.

CONSULS: No consuls in Nickerie.

REPAIRS: Small engine repairs and shaft repairs and some welding repairs can be done.

GANGWAY/DECK WATCHMEN: It is recommended to have a watchman during the night.

OPENING/CLOSING HATCHES: Patent hatches must be opened by the crew, other hatches by the stevedores.

CUSTOMS ALLOWANCES: Master included: for every 72 hours staying in port: 15 cigars or 60 cigarettes or 30 cigarillos or 150 gm. tobacco plus 0.25 bottle spirits or 5 bottles beer or 1 bottle wine.

REPATRIATION: Possible via Paramaribo.

AIRPORT: The airport is 16 km. from the port of Nickerie. Once per day there is a flight to Paramaribo arranged by Suriname Airways.

Daily bus service between New Nickerie and Paramaribo.

TIME: Local time is GMT minus 3 hours. No alteration during year.

HOLIDAYS: See "Paramaribo".

POLICE/AMBULANCE/FIRE: Police 356; Ambulance 241; Fire 333.

TELEPHONES: No arrangements can be made for a telephone connection on board.

SHORE LEAVE: No restrictions.

IDENTIFICATION CARDS: Not needed.

DELAYS: Delays in berthing: There are only 2 wharves with a total length of 700 ft. Banana ships have priority. Delays in loading and discharging: there are only 3 gangs of stevedores. These can be enlarged to 5 "small gangs".

DEVELOPMENTS: In the future a bigger and deeper port will be built in the Corentyne River, about 20 miles up the river.

AUTHORITY: District Commissioner acts as Harbour Master.

See "Paramaribo".

PARAMARIBO: 05.50 N. 55.09 W.

PORT LIMITS: The seaward boundaries of the port, within which a vessel is considered to be "arrived" is the entrance of the Suriname, Marowijne, Coppename, Corantijn and Nickerie Rivers. Laytime commences to count after vessel has anchored or berthed.

LOCATION: On the left bank of the Suriname River about 8 miles above New Amsterdam and 21 miles from light-buoy at river entrance.

DOCUMENTS:

5 Incoming Cargo Manifests (if any cargo), otherwise 3 copies.
1 Cargo Transit Manifest.
4 Outward-going Manifests.

These above-mentioned must be sent ahead to the Agent so that they can be translated into Dutch.

6 Crew Lists.
2 Stores Lists.
2 Crew Declaration Lists.
6 Passenger Lists.

PILOTAGE: Compulsory. All ships are requested to amend their estimated time of arrival in local time, at least 12 hours in advance by special message through the wireless station to their Agents or to the Harbour Master. Arrival message should include draft of vessel and other requirements. 6 hours prior to arrival the ETA has to be confirmed and if necessary corrected. The Pilot will be dispatched after receiving the confirmed ETA. As shipping only uses the Suriname River, the Commenwijne River, the Cottica River and the Nickerie River, all Pilots except one for Nickerie are stationed at Paramaribo. Paramaribo Pilots board the vessels 1 mile North of the light buoy and between the light and Braamspunt (Lat. 5° 57′ N., Long. 55° 10′ W.). Pilot station on VHF Channel 12. Pilot station and harbour office to be advised of deepest draft. All vessels have to stop off the light buoy.

ANCHORAGES: Anchorage off town in 18 ft. – 35 ft. of water at LWS. Government Officials board vessels immediately on arrival for Inward Clearance. Vessels which are required to anchor off the port to wait for berths may be boarded at the anchorage.

RESTRICTIONS: The bar at the entrance of the Suriname River controls the ports of Paramaribo, Moengo, Paranam and Smalkalden, and has a depth of 15 ft., with a rise at Neaps of 6 ft. 7 in. or Springs 8 ft. 10 in., but it is soft mud. Due to the fact that the bar consists of mud, vessels regularly leave the port with drafts between 22 ft. and 23 ft.

CHANNEL: The channel is marked by numbered buoys with radar reflectors, odd numbers on the West with red lights, and even numbers to the East with green lights and painted respectively black and white or red and white chequers.

HEALTH: Port doctor will visit an arriving ship only if there is a case of contagious disease aboard, or if one of the preceding ports of call has been declared to harbour contagious disease. No Bill of Health is required. A ship with an infection on board must advise the Harbour Master by special message through the wireless station before arrival. Yellow Fever Certificates required. Pratique granted by Customs Officer.

RADIO: There is a 24 hour radio telephone watch at the Harbour Master's Office on VHF Channel 12. The coast station, PZN, also maintains a 24 hour radio telegraph (500 kHz) and telephone service in the 2,182 kHz band.

VHF: Harbour Office on Channel 12, 24 hours a day. Radio Station "PZN" on Channels 16 and 12, 24 hours a day.

RADAR: None.

TUGS: Available from Paranam.

BERTHING:

B.E.M. Wharf: 110 ft. long, least depth 18 ft. Private cement and gravel discharge wharf, Moorings 450 ft. apart.

Banana Export Pier: 297 ft. long, least depth 18 ft. Fresh water can be supplied.

New Oil Terminal: Moorings 570 ft. apart. Least depth 18 ft. Platform length 65 m. Used for oil and gas.

Flour Pier: 36 ft. long. Moorings 160 ft. apart. Least depth 16 ft. Only possible to discharge flour with a grain elevator, rate 30 t.p.h.

Vensur Cement Wharf: 87 m. long, depth alongside 14 ft. Moorings 600 ft. apart.

New Haven Dock: 520 m. long. Least depth on the North end 4.5 m. at L.W.S. and least depth on South end 4.0 m. at L.W.S. Max. depth 21 ft. Fresh water can be supplied.

Shell Oil Terminal: Moorings 540 ft. apart. Least depth at LWS 21 ft. Exclusively for oil, gas and bunkering.

CRANES: One crawler crane 25 tons capacity.

MEDICAL: Excellent medical and dental attention is available to crew members of all vessels. Four hospitals available.

TANKERS: See "Berthing" and "Shipmaster's Report".

BALLAST: Vessels must arrive with sufficient ballast to permit safe handling. All vessels should enter port with clean ballast water that may be pumped overboard while in the harbour, as it is prohibited to pump dirty ballast water or oil residue or sweepings into the harbour.

FRESH WATER: The water is of excellent quality. Available at most berths as mentioned above.

FUEL: Ship's bunkers are available in most ports of Suriname in limited quantities. Advice regarding quantities and specifications of oil should be given to Agent's representative immediately after docking. Suppliers are Shell, Esso and Texaco.

REPAIRS: No facilities for major ship repairs. Local workshops can do repairs of minor nature. There are 2 floating dry docks and 1 floating derrick owned and operated by the Suriname Drydock Co. Lifting capacities of dry docks: 400 – 650 tons.

SURVEYORS: Lloyd's Register, A.B.S. and N.V.

GANGWAY/DECK WATCHMEN: The Customs board the vessel while riding at anchor or alongside one of the docks. All vessels are required to make a proper gangway available to the Customs Boarding Officer.

The local authorities assign one or more Customs Guards to each vessel during its stay in port. The charges for guarding are for the account of the vessel. These Officials must be provided with meals on board at regular meal hours, and cabins if necessary.

CUSTOMS ALLOWANCES: 60 cigarettes or 15 cigars or 0.5 lb. of tobacco. One-fifth litre of spirits, one-third litre of wine, 2 litres of beer, for each crew member.

All remaining stores must be declared and placed under seal. If vessel remains in port over 72 hours Customs will allow an issue of stores.

CARGO GEAR: Load/discharge by ship's gear.

REPATRIATION: Under special circumstances vessels may sail without all crew members on board (sickness, etc.). The Master furnishes a letter to his Agent authorising him to accept responsibility for the missing seaman or seamen.

AIRPORT: Zanderij Airport, 46 km. from Paramaribo. Served by SLM, KLM, ALM, Cruzeiro and Guyana Airways.

TIME: Local time is GMT minus 3 hours. Vessels are required to use local time in ETA messages and when dealing with Agents.

HOLIDAYS: New Year's Day, Revolution Day (February 25th), Holi Phagwa* (March 10th), Good Friday, Easter Monday, Labour Day (May 1st), Freedom Day (July 1st), Id-Ul-Fitr*, Republic Day (November 25th), Christmas Day, Boxing Day. *These holidays depend on the moon.

EMERGENCY CO-ORDINATION: Harbour Office. Tel: 74575. Telex: 163 Havkan Sn.

BANK: Algemene Bank Nederland N.V., Kerkplen 1, Paramaribo. Tel: 71555. Telex: 122 Bancol Sn.

STORING: Can be arranged by Barge or Trucks, whilst loading or discharging, depending on berth, with Customs in attendance. Local labour available.

SHORE LEAVE: Under normal circumstances no restrictions are imposed by the Government Immigration Authorities on shore leave.

GARBAGE DISPOSAL: Not available.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: None.

CURRENCY: Surinamese Guilder (SFl). U.S.$ 1.00 = 1.80 SFl.

GENERAL: While alongside vessels must maintain engines and propulsion machinery in readiness to leave the pier under full power on short notice. No repairs are permitted which should interfere with this requirement. While alongside, oil tankers should have their offshore anchor out about 50 ft.

All vessels except naval vessels, must furnish a statement, of the amount and character of explosives carried, also a certificate to show how they are stored and manner of packing.

Special anchorage areas are provided in the harbour for vessels with dangerous cargo.

All firearms and ammunition must be manifested on store lists and must remain in bond on board during vessel's entire stay in territorial waters of Suriname. Any violation of this regulation renders the vessel subject to fines and confiscation of firearms and ammunition.

SHIPMASTER'S REPORT: March 1990 (Updated 1992).

Shell Terminal at Suhoza: There appears to be more water than charted in river. Chart Datum was verbally quoted to me at 4.6 m. and inward we could have safely been deeper if more cargo was carried, provided vessel came up river with the high tide.

Depths at the berth were not as expected. We were advised there was 22 ft. at all times but vessel was aground at every low tide. This was not felt as vessel sat in soft mud without a list. Vessel lies alongsi 2 dolphins with reasonable fendering, with the hose jetty also adequat fendered.

Mooring arrangements are adequate but it is longwinded getting rop ashore as initially the headlines have to be passed over the fish jetty a dolphin and then brought some considerable distance to river ban

Breast lines were secured to a dolphin and same was well piled.

Stern lines have to be pulled ashore by lorry after boat gets them bank which again makes a longwinded job, but once in berth, desp strong current, vessel sits comfortably.

Springs secured to dolphins as per normal.

The stern dolphin was not used as too near ship for useful moori point. One must ensure fishing boats are out of the way before moorin as once tied up they would be trapped inside their own jetty if on th inboard side.

Loading is all done by barges, one was reasonably fast, the other ha a very slow loading rate. The barges are adequately manned and safe practices are correct. They have sufficient fenders to come alongsi It is suggested that 4 lengths of hose are used next time, as when w are light, the freeboard is nearly too much for 3 lengths, and if 4 lengt available it should be easier for barge to disconnect and us to hang-o hose until next barge comes, rather than disconnecting at ship eve time, as this operation was very labour intensive. I enquired as to wh we could not load at crude jetty and was advised that the depth of wat there is only 14 ft.

Sailing should be done as soon as possible after low water. It wa difficult pulling stern out of mud but if vessel does not get away promp it is difficult to catch the tide at the bar. We actually crossed bar 1 ho after high water and had to increase river speed to make this deadlin Any later than this and it would be safer to anchor off New Amsterda for next high water, which would be uneconomical. Steaming at f speed in river on 19 ft. draft even keel made us squat badly and steeri was a problem. At times vessel was felt to slide through soft mu Sounder was rather blurred when less than 1.0 m. under keel. The are no tugs in river so when coming on and off berth it is essential t use the tide. With a fish jetty close ahead and another jetty astern it rather tight, but no problems.

AUTHORITY: The Ministry of Transport Communication and Touris P.O.Box 888, Paramaribo, Suriname. *Tel:* (597) 474575, 47676 *Telex:* 163 Havkan Sn. *FAX:* (597) 472940. *Contact:* E. Fitz-Jim, Direc of Maritime Affairs.

AGENT: Alcoa Steamship Company, Inc., P.O.Box 1842. Paramarib Suriname. Tel: 77600, 73613. Telex: 113. Cables: Alcoaship Par Steamship Agents/Stevedoring Operators.

PARANAM: 05.38 N. 55.05 W.

LOCATION: On left bank of the Suriname River about 64 km. from t light buoy (Fairway Buoy), consisting of bauxite mining, alumina refin and an aluminium smelter with facilities for shipping these commoditi

DOCUMENTS/PILOTAGE, and all General Information refer t "Paramaribo".

RESTRICTIONS: See "Berthing".

MAX. SIZE: Vessels up to 47,500 d.w.t. load to outer bar dr (approximately half load) and usually top off at Trinidad. Max. LOA 700

HEALTH: Health Officer does not board unless there are quarantina diseases aboard.

TUGS: Available.

BERTHING: *General Dock:* Concrete pier of about 350 ft., moorin 660 ft. apart. Least depth 30 ft., max. air draft 42 ft., max. beam 80 This dock used for loading bauxite or aluminium ingot and for discharg general cargo, oils, caustic and other raw materials,

Apron Unloading Dock: Used for unloading bauxite from Moengo a other country districts. Also used for unloading limestone.

Length 450 ft.
Max. air draft 30 ft.
Unloading rate 600 t.p.h.

Alumina Pier: Depth 25 ft., moorings 680 ft. apart. Used for loadi alumina or discharging oils and caustic. Max. air draft 50 max. clearing height 72 ft. Also see "Shipmaster's Report".

Loading Capacity: Bauxite General Dock: 900 t.p.h.
Alumina at Alumina Dock: 850 t.p.h. Loading conveyor, spout trimmed (Telescopic chute).

CRANES: One gantry crane 55 tons capacity.

FRESH WATER: Can be supplied.

FUEL: Small quantities of light diesel No. 2 only in emergency.

REPAIRS: None can be effected.

AIRPORT: At Zanderij, 30 km. from dock.

GENERAL: The Outer Bar is the limiting factor for the port. Harbo Office at Paramaribo give Bar drafts for each tide.

The river silt is extremely soft and in consequence the river wate very dirty and although fresh (995 at the berths) the evaporators can be kept on line. There is also a great danger of blocking the cool water system, especially when crossing the bars. Blackouts on b motor and steam ships are a common occurence. Care should be tak to ensure that cooling systems are as clear as possible before ente the river. High suctions must be used when passing over all bars Suriname.

SHIPMASTER'S REPORT: October 1986 (Updated 1988).
Alumina Terminal: Lat. 05° 36.9′ N., Long. 55° 05.2′ W.
Local Time: GMT minus 3 hours.
Approaches: Low lying coastline. Vessels anchor about 5 miles North of light buoy (Fairway Buoy) in position Lat. 06° 05′ N., Long. 55° 12.7′ W. to await HW. Lighthouse at Lat. 05° 54′ N., Long. 55° 12′ W.
Pilotage: Compulsory. River Pilot boards 1 mile North, of light buoy (Fairway Buoy). Pilot boarding and HW to be confirmed by Paramaribo Port Control on VHF Channel 12 and Harbour Office on Channels 12 and 16.

Very shallow waters from Buoy No. 1 to Buoy No. 6 on either side, with variable currents. Buoyed channel up to Buoy No. D11 (30 miles from light buoy – Fairway Buoy). Draft restricted to 22 ft. with safe draft of 21 ft. in HW. Safe turning basin and anchorage 2 miles up river from Paranam. For down river transit, waiting anchorage for HW is off Paramaribo at Leonsburg in Lat. 05° 52.5′ N., Long. 55° 05.5′ W.
Berthing: By River Pilot. No tug for berthing. Alumina Pier length 207 m., alongside depth is 30 ft. Other berths at Paranam for discharge of general cargo and loading bauxite.
Loading: By conveyor-fed telescopic chute. Capacity 850 – 1,000 t.p.h. Can reach all holds. Cargo work 24 hours.
Density: About 995 – 996 alongside berth.
Fresh Water: Available at berth.
Bunkers: Not available.
Provisions: Limited quantity of some fresh vegetables and meats available at local Chinese 'supermarket'.
Shore Leave: No restrictions. Paranam Town is 1 mile from berth. Paramaribo City about 1 hour by car. Nearest airport at Zanderij International, 30 km. from Paranam.
Radio: PZN (Paramaribo Radio) provides reliable services.

AUTHORITY: District Commissioner officially acts as Harbour Master but vessel movements, pilotage, etc. handled by Paramaribo Harbour Master's Office.

SMALKALDEN: 05.37 N. 55.05 W.

PORT CLOSED.

NOTES

Please also advise Shipping Guides Ltd.

Sweden

GENERAL:

DEEP SEA PILOTAGE: See "Baltic Deep Sea Pilotage".
PILOTAGE: Helsingborg Pilot Station serves the ports of Hoganas, Helsingborg and Landskrona. Pilots for through-pilotage can be obtained. A 24 hour watch on VHF Channel 16 and/or telephone +4642110035 is maintained. Pilots can also be arranged through ship's local Agents. 5 hours notice is required.

Pilotage is compulsory for all ports for ships of certain gross tonnages and/or carrying certain cargoes. For passage through the Oresund, an IMO Recommendation has been issued recommending all laden tankers with a draft exceeding 7.0 m. and gas or chemical tankers to employ a pilot. Only licensed Swedish or Danish pilots are permitted to pilot vessels through the Oresund.
ICE-BREAKING SERVICE:
Location: Ice-breaking Directorate, Norrkoping.
Telephone: (011) 19 10 00 (0800 hrs. – 1640 hrs. local time).
(011) 12 29 60 (outside above hours).
Telex: 64416 Ice Serv S.
Cables: Civilmarin.
Procedure: Requests for ice-breaker assistance should be made well before vessel's arrival at the ice to the Directorate, locally (to most Swedish Harbour or Pilot Offices) or to an ice-breaker.

Vessels approaching ice-bound areas may be instructed, in daily Ice Reports issued by Coastal Radio Station (see ALRS Vol. 5), to report to the Directorate. Reports, which should be made well before arrival at the ice are to include the following details of the vessel:

1. Name.
2. Nationality.
3. Call sign.
4. Size.
5. Draft.
6. Engine power.
7. Year built.
8. Ice class.
9. Amount of cargo.
10. Destination.
11. ETA at ice-covered waters.

Vessels which have made a request or report and subsequently cancel or delay their voyage must inform the Directorate, a local office or an ice-breaker immediately.
Information Service: For details of Coastal Radio Stations which broadcast Ice Reports, including positions of ice-breakers, see ALRS Volume 5.
Ice-Breakers:
Call: Swedish ice-breakers with their call signs are:

Ymer	SPIA	Tor	SCYN
Frej	SBPT	Oden	SBXQ
Atle	SBPR	Thule	SCKD
Njord	SBPO	Ale	SBPQ

Frequency: 500 kHz WT
2182, 2140 kHz RT
Channels 16, 6 VHF
Procedure: Calls to ice-breakers may be booked through the nearest Coastal Radio Station. Vessels receiving assistance must maintain continuous listening watch on the channel specified by the ice-breaker.
GARBAGE/WASTE OIL DISPOSAL: In Sweden a "no-special-fee-system" applies to reception facilities in all ports, on condition that:

Advanced notice is given during normal working hours, at least 24 hours before delivery.

The delivery takes place during normal working hours.

The delivery takes place at the time which was agreed.

The ship's own pumps are capable of delivering liquids within a reasonable time.

If inadequacies are observed in the system they should be reported to National Swedish Maritime Administration, Ships Division, S-60178 Norrkoping. Tel: 46 11191334. Telex: 64380 shipadm s. Fax: 46 11101949.

In order to obtain further information about individual port facilities contact the relevant port authority.
SEAMAN'S CLUBS: Handelsflottung Kultur-och Fritidsrad (Swedish Government Seamen's Service) (HKF) is a government authority, attached to the Ministry of Transport. Its operations are financed by a fraction of the light dues, paid by vessels calling at Swedish ports.

HKF has its own representatives in Kobe, Antwerp, Rotterdam, Hamburg, Gothenburg, Helsingborg, Malmo, Norrkoping and Stockholm. In foreign ports, HKF co-operates intimately with Swedish Seamen's Missions and the Norwegian Government Seamen's Service, which serve the Swedish seafarers where HKF lacks representatives of its own. Important services include distribution of Swedish magazines and newspapers, movie and library exchange, sports, excursions and transportation.

HKF also provide a news service consisting of the news bulletin SAX-presset, compiled daily by the Swedish Central News Agency and forwarded by the Gothenburg Coast Radio Station. HKF publishes the quarterly Utkik ("Look-out") and an annual seamen's sports magazine and contributes sports information in the monthly merchant navy program of Radio Sweden International.

GARBAGE DISPOSAL: Information available on request to Harbo Office.
WASTE OIL DISPOSAL: Information available on request to Harbo Office.
SEAMAN'S CLUBS: None.
CURRENCY: Swedish Kroner (SEK).
AUTHORITY: Ahus Hamn and Stuveri AB, Krangatan 2, S-29632 Ahu Sweden. *Tel:* 044-289035. *FAX:* 044-241128. *Contact:* Sten Lunde Harbour Master.

BROFJORDEN: 58.21 N. 11.25 E. (See Plan

LOCATION: Brofjorden Harbour is situated near Lysekil in positio Lat. 58° 21′ N., Long. 11° 25′ E.

The harbour facilities are under the control of Scanraff. The bert are open for day and night navigation, allowing vessels to enter a leave at any hour, weather permitting.
PORT LIMITS: Between "Stretudden" (crude oil berth) and the isla "Rixo" in Brofjorden.
DOCUMENTS: Documents required for entry and clearance:

Certificate of Registry, Certificate of Tonnage, Derat Exempti Certificate, 3 Crew Lists, 1 Crew Manifest, 1 Declaration of Bond Stores. Free Pratique will be received via Customs on arrival bef Oil Pollution Certificate.
PILOTAGE: Pilotage is compulsory. The pilots will act as both sea pil and harbour pilots. Pilot station VHF Channel 16 around the clo Channel 16 for calling only, thereafter changing to an agreed Chann Call: Lysekils Pilots.

According to harbour regulations VLCCs are requested to g 72 hours' ETA, and if any changes 48 and 24 hours' ETA.

Product tankers are requested to give 48 and if any changes 24 hou ETA.
Position where Pilot will Board:

VLCCs	Lat. 58° 13′ 05″ N., Long. 11° 09′ 05″ E.
Product tankers	Lat. 58° 15′ 01″ N., Long. 11° 13′ 03″ E.

Notification: All arriving ships not intending to use a pilot shall annou their arrival to "Lysekil Pilot" on VHF Channel 12 at the Brofjord entance buoy.

Ships leaving the jetty and not intending to use a pilot shall cont "Lysekil Pilot" on VHF Channel 12 before departure for announcem and ask for information about ships coming in.

In case of incoming ships, the ship departing shall keep in cont until the ships have passed and are clear of each other.
HEALTH: No special papers required. Master informs by radio or arrival.

ANCHORAGES:

VLCCs	East Scaw, Lat. 57° 42′ N., Long. 10° 49′ E. Water depth: 26 m. Holding ground: Sand, good.

Product Tanker Only (up to 60,000 d.w.t.):

Lat. 58° 20′ 03″ N.	Water depth: 28 m.
Long. 11° 21′ 00″ E.	Holding ground: Clay, good
Lat. 58° 19′ 07″ N.	Water depth: 26 m.
Long. 11° 23′ 05″ E.	Holding ground: Clay, good

RESTRICTIONS: *When Berthing VLCC:* Visibility minimum 4 miles, wind force max. 12 m./sec. and current max. 1 knot at the outer buoys (No. 1 and 2).

MAX. SIZE:

Crude Oil Jetty:

Deadweight:	50,000 – 500,000 tons.
Length overall:	No limit.
Beam restriction:	No limit.
Draft restriction:	25 m. (82 ft.)
Depth of water:	28.0 m. (92 ft.).

Product Jetty (Berths No. 2 and 3):

Deadweight:	50,000 tons.
Length overall:	230 m. (755 ft.).
Beam restriction:	No limit.
Draft restriction:	14.4 m. (47 ft.).
Depth of water:	16.0 m. (53 ft.).

Product Jetty (Berth No. 1):

Deadweight:	7,000 tons.
Length overall:	120 m. (394 ft.).
Beam restriction:	No limit.
Draft restriction:	8 m. (26 ft.).
Depth of water:	8.8 m. (29 ft.).

Product Jetty (LPG Berth No. 4):

Length overall:	100 m. (328 ft.).
Beam restriction:	No limit.
Draft restriction:	7.0 m.
Depth of water:	8.0 m.

RADIO: For ETA cables to Agent and Receivers call Gothenburg Radio.

Pre-Arrival Information: Before arrival, the Master shall, via his agent, inform Scanraff about items asked for in the pre-arrival telex that is sent to the vessel.

Notification Requirements: Notification shall, in addition to what is said in the pre-arrival telex, contain particulars of the vessel's Master and Crew List and the Master is required, if so requested by Scanraff, to supply such further particulars and produce such documents as may be necessary for the calculation of the dues payable in respect of the vessel and goods and for the use of loading and discharging facilities, etc.

The duties incumbent on the Master of the vessel may be fulfilled by his agent or other proxy.

VHF: VHF stations are installed at the pilot station, the pilot boat, the tug boats and at the Scanraff Harbour Office. Scanraff and Lysekil Pilot listen on Channel 16 day and night.

When mooring: the Pilot, Harbour Master, mooring boats and the mooring gangs carry portable VHF sets. Channel 69 is usually used.

RADAR: At the pilot station two radar sets are installed for watching the entrance.

TUGS: Use of tugs is compulsory for berthing/unberthing at the crude oil jetty and depending on the weather condition and type of vessel it can be compulsory even for berthing at product jetties.

One tug with bollard pull of approximately 40 tons is stationed in Brofjorden. Additional tugs are available. The tugs are equipped for fire fighting.

Only towing companies approved by Scanraff are entitled to assist vessels.

Mooring boats are available for handling of mooring lines.

For VLCCs: Tugs made fast after passage of Dynabrott and Brandskars Flak Lighthouses.

For Product Tankers: Tugs made fast when passing Bubacka Buoy (opposite crude oil berth).

BERTHING:

Instruments:	SAAB Doppler Radar and current meter at crude jetty.
Salinity:	18 – 34%
Current Velocity:	0.2 – 0.9 knots at entrance.
Nature of Bottom:	Clay.

The Crude and Product Jetties are equipped with quick release hooks. The coaster berth has usual type of bollards.

One Safety Tug-boat is always standing-by within the harbour area in case of emergency. When a crude carrier is alongside an additional Safety Tug-boat is standing by.

Berthing/Shifting: Berths are allocated by Scanraff. Should no berth be available, incoming vessels will be requested to anchor at an anchorage allocated by the pilot station.

The berthing operation will be supervised by Scanraff personnel.

It is the responsibility of the Master to inform themselves, through Scanraff or the pilot station, of the depth of water at their allotted berth, mooring and anchorage.

Before arrival at the quay all mooring ropes, heaving lines, stoppers, etc. required for mooring shall be ready for immediate use and also a sufficient number of men shall be available during the mooring operation.

All mooring points, except at Jetties No. 1 and No. 4, are equipped with quick release hooks for swift cast-off in case of danger. Operation of these hooks is only to be done by Scanraff personnel.

Vessels arriving at or leaving the harbour must be assisted by tugs if requested by Scanraff.

At the Crude Oil Jetty, the use of tugs is compulsory both at arrival and at departure from the jetty.

Only towing companies approved by Scanraff are entitled to assist vessels arriving at or departing the port.

Vessels approaching the port or at anchor shall communicate with Scanraff or tugs by means of VHF radio.

When vessels are moored, anchored or moved, care must be taken to ensure that no damage is caused to other vessels or to quays, jetties, cables, pipelines or the like and that there is no interference with traffic.

Vessels berthed alongside a quay may not be moored by means of their anchors, without the express permission of Scanraff. Scanraff have the right, due to traffic control or harbour discipline and safety so require, to issue any necessary orders and instructions concerning the mooring, anchoring, warping and movement of vessels and the Masters of vessels shall be required to comply with any order or instruction thus issued.

MEDICAL: Hospital available in Lysekil. No particular inoculations required.

TANKERS:

Crude Jetty:

Concrete jetty for tankers of 50,000 d.w.t. to 500,000 d.w.t.

Length of jetty-deck: 135 m.

Height of jetty-deck above MLW: 6 m.

Minimum distance between fenders: 96 m.

Height of gangway tower: 27 m.

3×16 in. marine arms for cargo handling.

1×12 in. marine arm for bunker supply (Only Bunker "C" available).

All 4 arms are equipped with hydraulic operated speed seal couplings, designed for 150 lb-ASA flanges, minimum size 10 in.

Reach capability of arms: Max. 30 m., min. 4 m. above sea level. Max. 11 m., minimum 3 m. from berthing line.

Fresh water can be supplied at a rate of 60 t.p.h.

1×4 in. sewer-line connection is located between manifolds on jetty-deck.

Shore-connected telephone will be placed on board. Telephone number 604 60. Area number 0523.

Telephone number to Scanraff switchbord 69000. Area number 0523.

Mooring: Vessel is normally moored port side to jetty.

Approach velocity is continously measured by doppler radar and reported to ship's Master/Pilot during berthing operations on request.

Max. allowed approach speed is shown in "Plan Section".

Communication between jetty-pilot-tugs and mooring-boats by VHF.

Under normal weather conditions 6 tugs representing approximately 23,000 h.p. are used for berthing of VLCCs. Under unsteady weather conditions additional tugs can be ordered.

During hard weather conditions Scanraff can demand the use of two tugs during berthing/unberthing operations.

19 mooring lines are required for safe mooring. All lines to be provided by the ship.

Mooring lines to be arranged in accordance with "Plan" (See "Plan Section"), or as close to as possible.

Combination of synthetic, ropes and wires in the same direction shall be avoided.

All mooring wires shall have rope tail ends.

Self tensioning winches are not allowed.

All mooring lines will be put on quick release hooks of 150 tons SWL each.

4×10 in. mooring lines are available on jetty-deck for emergency use.

Safety Precautions: Vessel must be safely moored before gangway is placed on board and marine arms connected.

Correct setting of winch brakes to be checked regularly by ship's personnel.

Safety wires to be properly rigged fore and aft.

Cargo handling and/or bunkering will be stopped if wind velocity reaches 20 m./sec. (39 knots) for wind between N.W. – S.W. and during thunderstorms.

Whenever a crude carrier greater than 35,000 d.w.t. is moored at the Crude Jetty, 2 safety tugs are available in the Brofjorden Harbour. They can be alongside, ready for action within 15 minutes.

Safety tugs are standing-by and can be contacted on VHF Channel 12 or 16: "Lysekil Pilot" and ask for "Safety Tugs Brofjorden" or on telephone No. 0523-605 52.

Telephone will be placed on board.

Product Jetty: Potable water is available at all berths.

Bunker oil is available at Jetties No. 1 – 4 (at Jetty No. 4 only gasoil available).

Cargo and ballast handling is to be carried out on hydraulically operated marine arms, except sulphur which is loaded through a flexible hose.

Dry garbage can be left ashore (free of charge) in containers placed between Berths No. 2 and 3 and beside the harbour building.

The Brofjorden Harbour and Lysekil's Pilot monitor VHF Channels 12 and 16 day and night.

Telephone can be ordered on board through the agent or the Loading Master.

Mooring: At wind velocities equal or higher than 15 m./sec. (on average), use of tugs is compulsory during berthing as follows:

1. For ship equipped with bowthruster and over 15,000 d.w.t.
2. For ship without bowthruster and over 7,000 d.w.t.

Communications between ship and jetty during berthing operations by VHF.

Berths No. 2 and 3 are equipped with quick release hooks for mooring lines. Berths No. 1 and 4 are equipped with fixed bollards, All mooring lines to be provided by the ship.

During high wind conditions Scanraff can order use of tugs for mooring operations.

Safety Precautions: Self-tensioning winches may not be used in automatic mode. Correct setting of winch brakes to be checked regularly by the ship's crew.

Ship's crew to be responsible for proper line tension at all times.

Safety wires to be properly rigged fore and aft.

If wind velocity reaches 25 m./sec. (48 knots) and during thunderstorms, cargo and/or ballast operations can be stopped.

A safety tug is available in the Brofjorden Harbour day and night. Safety tug can be contacted on VHF Channel 12 or 16. Call "Lysekil Pilot" and ask for "Safety Tug Brofjorden", or Telephone No. 0523-605 52.

LOADING: *Required Size of Manifold Flanges on Board Ships:*

Size (in.)	*Flange Rating*	*Service*	*Rate* (cu.m./hr.)

6	300 lbs. ANSI	Butane, Propane	200/175
2	300 lbs. ANSI	Vapour return	
6	300 lbs. ANSI	Butane, Propane	200/175
2	300 lbs. ANSI	Vapour return	

All hard arms are hydraulically operated.

Note: All ships should, on arrival, be equipped with reducers suitable to actual loading arms.

FUEL: Bunker "C" only is available at Crude Oil Jetty, diesel oil is delivered to crude carriers by truck (through pipeline at gatehouse, so can be undertaken during discharging). Bunker "C" and diesel oil are available at Product Jetties and the Coaster Jetty.

FIRE PRECAUTIONS: A special Fire Instruction will be given on board on arrival.

POLLUTION: Oil pollution prevention. A special instruction will be given on board on arrival.

CONSULS: Denmark, Finland, Netherlands, Norway and Germany have consuls in Uddevalla, 40 km. from Scanraff.

REPAIRS: City Varvet Gotenborg. For hull and engine repairs, harbour and voyage service.

Andersson & Callenberg: For electrical installations.

Engine repairs must be reported to Port Captain for permission.

DRY DOCK: Gothenburg, capacity 250,000 tons.

SURVEYORS: Saybolt, Caleb Brett and other cargo inspectors are available.

Lloyd's Register, Det Norske Veritas and others surveyors are available.

GANGWAY/DECK WATCHMEN: The Crude Oil Jetty has gangway tower, but accommodation ladder is necessary at the Product Jetty.

Watchman is compulsory at the Crude Oil Jetty. At the Product Jetty watchman is available on request.

CUSTOMS ALLOWANCES: 1 bottle spirit and 200 cigarettes or 200 grams tobacco.

REPATRIATION: Changing of crew and any necessary repatriation is possible.

AIRPORT: Nearest airport is Gothenburg, 100 km. South of Lysekil.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

POLICE/AMBULANCE: Dial 90 000 and ask for necessary service.

EMERGENCY CO-ORDINATION CENTRE: Skandinaviska Raffinaderi AB Scanraff. Tel: 0523-60460, Fire and Safety Department.

TELEPHONES: Telephone on board is compulsory at the Crude Oil Jetty, and can be ordered on board at the Product Jetties through the agent or the Loading Master.

A coin-operated telephone is also available at the Product Jetty gate.

SERVICES: Compass adjusting is available. Local ship chandler available.

BANK: Skandinaviska Enskilda Banken, Postbox 22. 453 00 Lysekil. Tel: 0523-14020. Telex: 21020 (Gothenburg Office).

STORING: See "Prelims".

1. Vessel can be stored by barge.
2. Vessel can be stored by barge during loading/discharging operation if ship's crane abaft the funnel can be used. Storing amidships can be permitted but not during loading/discharging operation.
3. No trucks are allowed to handle stores. Minor storing can be done by means of wagon from the gate to the jetty and via the ship's gangway.
4. Fork lift trucks are not allowed to be used on the jetty to handle stores.
6. Local riggers are employed by the local ship's chandler to assist with storing.

SHORE LEAVE: Crew members are allowed ashore. No identification card or passes are needed.

GARBAGE DISPOSAL: On the jetties, containers are available for minor amounts of clean garbage.

WASTE OIL DISPOSAL: At Jetties 1 – 4, it is possible to pump engine room slops to shore tank. A container for oily waste is available on jetties.

SEAMAN'S CLUBS: Seamans Church in Uddevalla, Nonnens Vay Uddevalla. Tel: 0522-35526.

CURRENCY: Swedish Kronor (SEK).

REGULATIONS:

Safety Towing Wires: Vessels, while secured alongside the jetty, m provide and rig towing wires with sufficient length and strength on offshore bow and quarter, with eyes maintained just above water le ready for emergency towing.

The wires must be securely fastened to the ship's bollards.

Inert Gas Systems: All vessels carrying crude oil, calling at Brofjorden Harbour, must have a fully operational inert gas system. P to arrival, the vessel must confirm that all cargo tanks are fully iner and have an oxygen content of 8% or less by volume.

Random samples can be taken, and provided these are found to ha an oxygen content of no more than 8% by volume, the vessel wil permitted to commence operations.

If the random samples indicate an oxygen content in excess of by volume, all cargo operations will be ceased, or permission commence operations will not be given to the vessel and the oxyg content of all tanks will be checked, and operations will not commenced until the required oxygen level has been achieved.

If such delays cause extra long lay time in port, Scanraff will have right to charge the vessel for such extra long lay time, and Scanraff not accept any demurrage costs for time caused by that the vesse inert gas system does not comply with these regulations.

It is strictly forbidden to overpressure the tanks with inert gas so mu that the safety valves open to atmosphere.

It is also strictly forbidden to ventilate inert gas to atmosphere fr tanks or through by-passing safety valves.

Inspection: Scanraff's representative shall, at any time, have permiss to enter the vessel to ensure that the Port Regulations are be complied with, and that cargo equipment is in good order. He/she s also have the right to stop operations if the regulations are violated.

Ballast Water: Only clean ballast water contained in segregated ball tanks will be permitted to be discharged into the waters at the Scan area. Random samples can be taken from segregated ballast tanks.

Contaminated ballast water, defined as such according to Swed Law, will not be permitted to be pumped overboard, but will have to pumped ashore to the terminal ballast tanks.

According to Swedish Law, ships which intend to discharge ball water to shore installation must report to Scanraff, before deballast starts, if the ballast water contains emulsifier or other chemical clean agents.

Ballast for entering the harbour should be carried in a minim number of tanks, and all tanks stripped so as to minimise the t required to discharge ballast while alongside the pier.

The Harbour Regulations will be placed on board on arrival.

GENERAL: *Vacating Berth:* Scanraff have the right to request a ves to vacate the Crude Berth when berth time for such vessel reach 48 running hours, provided the retention of such vessel at its berth w in Scanraff's judgement, hinder or delay the berthing of another vess

Running hours shall commence upon the vessel's arrival a completion of mooring and shall cease when the last rope is let go.

If commencement of unloading is delayed for any reason not caus by vessel or its Master or the unloading is prohibited and/or interrup at the request of Scanraff or public authorities, running hours shal extended by the period of such prohibition or interruption unless reason therefore is due to circumstances for which the vessel or Master are responsible.

AUTHORITY: Skandinaviska Raffinaderi AB, S-54381 Lyse *Tel:* 0523-69000, 69456. *Telex:* 42135 Scanraff *FAX:* +46 (0) 523–60486. *Contact:* Mats Eggers, Harbour Master.

GAVLE: 60.41 N. 17.11 E. (See Pla

PORT LIMITS: A line from Utvalnas (approx. 60° 45.2′ N. 17° 21.4 over Bakharen to Langharen (approx. 60° 41.0′ N. 17° 17.5′ E.).

DOCUMENTS:

2 Crew Lists (for European vessels).
2 Crew Lists (for other vessels).
2 Manifests.
2 Bills of Lading.
1 Tobacco List.
1 Stores List.

Following documents supplied by Agent and signed by Master:

On arrival from foreign port:
4 Reports of Arrival (Customs).
1 Declaration of Master (of persons on board).
1 Declaration of living animals (if any).

On arrival from any port:
1 Report of Arrival (Harbour Office).

On departure to foreign port:
4 Reports of Departure.
1 Declaration of Master (of persons on board).

PILOTAGE: *(a)* Sea Pilots: Pilot station: Bonan, Telephone Nos. 99 and 992 20. Telegraphic address: Pilotstation, Gavle. 5 hours adva notice of ETA pilot station. Notice of ETA can be given over any Swe coastal radio station or free of charge on VHF over any Swedish p station or Grundkallen Lighthouse.

VHF: Channels 16:	Calling and Safety	Pilot station and
13:	Pilotage traffic	Pilot boats.

All pilot boats are orange. International signals for calling Pilot. P boards: S.E. of Grasjalsbadan 60° 43′ N., 17° 27′ E., and on requ South of Eggegrund Lighthouse, 60° 43′ N., 17° 34′ E. In case of weather closer to pilot station. Anchorages: Graberget roadstead N of Bonan Lighthouse (approx. 60° 44.8′ N. 17° 20.5′ E.), about 35 from shore and 18 – 21 m. (10 – 13 fathoms) depth. Open to Eas winds. *(b)* Harbour Pilots: Available for moving within harbour area on application to Port Administration, Telephone Nos. 17 88 61 or 17 88 62 or by VHF to Gavle Port Radio, Channels 16, 14 and 13.

ANCHORAGES: See "Pilotage". Outer roadstead situated inside of Northern entrance and in red sector of Fredriksskans Light. Outer roadstead well protected, depth of 15 – 11 metres (8 – 6 fathoms). Anchoring forbidden:

(a) In dredged channel between lights in Northern Channel and to a point 800 m. W.S.W. of Light No. 4.

(b) In white sector of Fredriksskans Light E.N.E. within a distance of 2,000 m. from same.

(c) In navigable channel from Fredriksskans Light to Gavle Dolphin Light.

(d) In Fredriksskans Harbour Basins and between Oil Berth No. 21 and the Terminal Granudden.

RESTRICTIONS: One fairway leads to harbour. Northern Fairway is 10.9 m. deep and has bottom width of 60 m. Day-time: Max. LOA 220 m. Max. breadth 28.0 m. Max. draft 10.4 m. or max. breadth 30 m. Max. draft 9.0 m. Night-time: max. draft 7.35 m.; max. length 172 m. All depths are referred to mean water level. Ships on way from outer roadstead shall give way to vessels proceeding towards outer roadstead. This shall not apply to vessels with tow unless vessel approaching also has tow.

MAX. SIZE: Max. permissible draft (at mean water) as follows:

	Max. Draft (m.)	(ft. in.)	*Real depth* (m.)	*Allowance* (m.)
Fredriksskans Harbour				
Oil Berth No. 21	10.4	34 01	10.8	0.4
Max. length 220 m. (722 ft.)				
Oil Berth No. 1	7.35	24 01	7.7	0.35
Max. length 200 m. (656 ft.)				
Oil Berth No. 2 – 3	5.2	17 01	5.4	0.2
Berth No. 4 – 8	7.35	24 01	7.7	0.35
Berth No. 9 – 14	8.9	29 02	9.3	0.4
Karskar				
Berth No. 105 – 106	6.5	21 04	6.8	0.3
Length 195 m. (640 ft.)				
Berth No. 107 – 108	7.8	25 07	8.1	0.3
Length 196 m. (640 ft.)

Length 35 m. (115 ft.)				
Berth No. 110, North end.	6.0	19 08	6.3	0.3
Length 75 m. (246 ft.)				

Terminal Granudden: See "Cargo Handling".

HEALTH: Pratique always automatic. If any suspected disease or fever on board, notify ship's Agent.

RADIO: Stockholm Radio (SDJ).

RADAR/VHF: No port radar service, but Bonan Pilot Station, Eggegrund Lighthouse, and three pilot cutters equipped with both radar and VHF and assist any ship approaching pilot station on request. After calling pilot station on VHF Channel 16, ships will be given assistance on Channel 13, 12, or 6.

Also see "Pilotage."

TUGS: Join vessel outside Fredriksskans Lighthouse or outside Karskar for berthing, and outside Northern entrance channel for passage through same.

CARGO HANDLING: Container berth, max. draft 8.9 m. Three cranes with 32 tons capacity which have container spreaders for 20 ft. and 40 ft. containers.

Roll-on/Roll-off berth, max. draft see "Terminal Granudden".

Terminal Granudden: A port terminal at Granudden which is situated opposite Fredriksskans Harbour. The terminal comprises 350 m. of quay with a Roll-on/Roll-off berth, having max. draft for vessels: 9.0 m. for length of 150 m. adjacent to Roll-on/Roll-off ramp and 10.4 m. for length of 200 m., 2 warehouses each having an area of 22,000 sq.m., as well as extensive storage space. The total terminal area is 150,000 sq.m. and it will have an annual maximum capacity of 1.2 million tons forest products. The terminal has very good connections with both main roads and the railway system.

STEVEDORES: 24 hours' notice (if possible) order arrange gangs.

MEDICAL: Notice of medical attention to Agent as early as possible. All kinds of medical and hospital facilities available. Vaccinations necessary on arrival from diseased area. (Common for all Swedish ports.)

TANKERS: *Tanker Berth No. 21:*

Max. length 220 m. (722 ft.). Max. draft (M.W.) 10.4 m. (34 ft. 2 in.).

Tanker Quay K201:

Max. length 220 m. (722 ft.). Max. draft 10.4 m. (34 ft. 5 in.).

Owned by Karskar Energi AB.

DENSITY: Fresh water.

FRESH WATER: Delivered from water posts at all quays in Fredriksskans Harbour and Terminal Granudden. At Karskar, fresh water delivered by road tanker.

FUEL: All kinds of fuel oils available either from pipelines at oil berths or by lorries at all other quays. Following viscosities (Redwood 1) normally in stock: 35, 225, 650, 1500, and 3500 secs. Other viscosities can also be delivered. Notice of delivery is required day before.

CONSULS:

Denmark	Tel: 115190	Netherlands	Tel: 177400
Finland	Tel: 125900		

REPAIRS: Repairs can be carried out in all parts of harbour by Brynas Mekano.

DRY DOCKS: None.

GANGWAY/DECK WATCHMEN: Available, but not compulsory.

OPENING/CLOSING HATCHES: Can be done by either crew or stevedores. Only patent hatches have to be opened by crew.

CERTIFICATES:

Tonnage Certificate.
Derat Certificate (Not older than 6 months).
Certificate of Nationality (for Swedish ships only).

CUSTOMS ALLOWANCES: Tobacco: each crew member 200 cigarettes or 100 grammes of tobacco out of Bond.

Wine and spirit: Each crew member 1 bottle (75 centilitres) of spirit and moderate quantities of wine and beer out of bond. After a week in Sweden the same quantity may be taken out on request to Customs Office.

REPATRIATION: Crew changes and repatriation arranged by Agent.

AIRPORT: Stockholm Airport (Arlanda) 145 km. (90 miles) served by regular airlines. Rorberg airport 16 km. (10 miles). Regular traffic to Swedish airports.

TIME: GMT plus 1 hour in Winter. Summertime GMT plus 2 hours.

HOLIDAYS: New Year's Day (Jan. 1st); Twelfth Day (Jan. 6th); Good Friday; Easter Day; Easter Monday; First May (May 1st); Whit Sunday; Whit Monday; Midsummer Day (Saturday nearest to June 24th); All Saints' Day (first Saturday in Nov.); Christmas Day (Dec. 25th); Boxing Day (Dec. 26th).

POLICE/AMBULANCE/FIRE: Police Tel: 655000; Ambulance Tel: 179830; Fire Tel: 179650. Emergency Tel: 90000.

SERVICES: Minor quantities of oil and other liquid residues can be discharged into tank lorries with special suction equipment.

IDENTIFICATION CARDS: Not needed.

GARBAGE DISPOSAL: A number of garbage containers are always provided on the quay. No charge.

WASTE OIL DISPOSAL: Not available.

SEAMAN'S CLUBS: Local club provides facilities which include refreshments, newspapers, games, table tennis, sauna, musical instruments, radio, TV, billiards, swimming pool outside (Summertime), telephone.

Recreation rooms open weekdays 1800 – 2200 hrs., Sundays and holidays 1700 – 2000 hrs. Tel: 026-120858. Closed Saturdays.

CURRENCY: Swedish Kronor (SEK).

No restrictions placed upon seafarers.

DELAYS: Normally no delays in berthing, loading, discharging or bunkering.

AUTHORITY: Gavle Hamn, Fredriksskans, S 80595 Gavle, Sweden. *Tel:* (026) 178840/178861. *FAX:* (026) 140979. *Contact:* C. Westman, Port Director. Leif Aberg, Harbour Master.

GOTHENBURG: 57.42 N. 11.57 E. (See Plan)

DOCUMENTS:

2 Cargo Declarations (IMO Model).
2 Crew Lists.
2 Passenger Lists.
2 Crew Declarations (must be signed by each crew member).
2 Stores Lists.
2 Arms and Ammunition Lists.
1 Health Document (if voyage exceeding 15 days).
Nationality Certificate.
Tonnage Certificate.
Derat Certificate.
Certificate of Insurance or other financial security in respect of civil liability for oil pollution damage (if more than 2,000 tons of oil on board).
Manifests, Bills of Lading.

Note: All certificates should be originals.

TRAFFIC CONTROL SYSTEM (VTS): The Port of Gothenburg is controlled by a traffic control system. It is a vessel movement-control and information system managed from the Gothenburg Traffic Control Centre (TCC), call sign "Gothenburg Traffic". The system is based on radar control and VHF communication. Vessels over 300 g.r.t. or exceeding 50 m. length should report to the TCC on VHF Channel 13, incoming when 6 miles off Vinga Island, out-going when leaving the berth. There are also certain way-points in the area (marked on the charts) where vessels should report to the TCC. Vessels should keep continuous watch on VHF Channel 13 within the whole traffic-control area. A "World VTS Guide" issued by IALA can be obtained from the Port Authority or from ship's Agent. When 6 miles off Vinga Island, Master has to call "Customs Gothenburg" on VHF Channel 16 (working on Channel 14) and report contents of Bonded Stores.

ANCHORAGES: Large tankers may anchor 2 miles S.W. of Trubaduren Light in depths of 40 m. – 70 m. Other vessels can find good anchorages with soft bottom at Vinga Sand, in Danafjord and Rivofjord, outside the traffic routes. Anchoring in the fairway is prohibited.

PILOTAGE: Incoming vessels have to notify the Traffic Control Centre (TCC) call sign "Gothenburg Traffic" on VHF Channel 13 or by telephone 031-12 54 33 that they require a Pilot. Notification to be done 5 hours before ETA at the pilot grounds at Vinga Island, where the pilot boat will be at hand. The pilot grounds are marked on the charts. Approved pilot ladder (if rail is high, accommodation ladder), heaving line and a man standing by to receive Pilot (Also see "Stockholm").

RESTRICTIONS: No restrictions at any time of day and night. Tankers over 75,000 d.w.t. berth and unberth in daylight only.

MAX. SIZE: Torshamnen, water depth 19.6 m. Fully loaded tankers of 225,000 d.w.t. on draft of 18.9 m. received, 19.05 m. with special permission. Partly loaded tankers of max. 318,000 d.w.t. have been received. Skarvik Harbour, water depth 13 m. Tankers up to 50,000 d.w.t. Skandia Harbour, general cargo, container vessels, water depth up to 12 m. General cargo harbours: for other cargo and passenger vessels 10 m. Water depth at MLW. Tide of no importance.

HEALTH: Advise "Portsan Gothenburg" 4 hours before entry via the ship's Agent.

Before the vessel calls at any Swedish port, the Master of the vessel is required to give information covering the state of health on board the vessel to the Customs Authority:

(1) If the Master has reason to believe that there is any sickness aboard which requires quarantine;

(2) If the vessel comes from a port of call that has been declared infected with a quarantine illness and arrival at the Swedish port occurs during the incubation period;

(3) If anyone aboard the vessel has visited or been in contact with an infected area and arrival of vessel at Swedish port occurs before the incubation period for the sickness has expired.

RADIO: Goteborg Radio, call sign SAG.

ETA: Advise Port Authority of ETA 24 hours prior to arrival.

Also see "Pilotage".

VHF:

Gothenburg Pilot	Channel 69.
Gothenburg Traffic	Channel 13.
Gothenburg Customs	Channel 16.

TUGS: Tugs normally join vessel between the islands of Nya Alvsborg and Rya Nabbe. Tugs join at Dana Fiord for tankers bound for Torshamnen. According to Master's desire ship's or tug's lines can be used. 12 tugs available (235 h.p. – 4,000 h.p.).

CRANES: *Mobile Cranes:* 1×36 tons (reach outside quay 28 m.). 1×45 tons (reach outside quay 33 m.).

Floating Crane: 1×150 tons (reach 10 m.) or 30 tons at 22 m. If cra supported by pontoon it can lift 215 tons at 10 m.

Container Cranes: 2×70 tons (hook) or 40 tons under spreade 1×60 tons (hook) or 40 tons under spreader. 1×50 tons (hook) 32 tons under spreader. 2×45 tons (hook) or 32 tons under spreade

BRIDGES: Alvsborgsbron (suspension bridge) in the Western part the city (clearance 45 m.), Gotaalvbron (weighbridge) in the centre the city (clearance 19.5 m.) and Marieholmsbron (railway swing bridg in the Eastern part of the city (clearance 5.3 m). The bridges Gotaalvbro and Marieholmsbron keep continuous watch on VHF Channel 9. If n connection, contact "Gothenburg Traffic" on VHF Channel 13.

STEVEDORES: The Port of Gothenburg provides dock workers.

General Conditions for Assignment of Personnel (excluding extern terminals):

Working time and guaranteed hours: (Port of Gothenburg A supplement to the general terminal conditions of the Swedis Stevedoring Association).

1. *Skandia and Alvsborg Harbour:*

Normal Working Hours:

Daytime Shift I: Monday – Friday 0700 hrs. – 1600 hrs. Meal break 0830 hrs. – 0900 hrs. and 1200 hrs. – 1230 hrs.

Daytime Shift II: Monday – Thursday 1600 hrs. – 2400 hrs., Frida 1600 hrs. – 2300 hrs. Meal breaks: 1930 hrs. – 2000 hrs.

Overtime: Please note that all overtime work is voluntary.

Weekdays 1630 hrs. – 0500 hrs., Saturday 0700 hrs. – 2200 hrs Sunday/holiday 0700 hrs. – 2100 hrs.

Completion:

Monday – Friday 1630 hrs. – 0500 hrs., Saturday 0700 hrs. 0500 hrs., Sunday/holiday 0700 hrs. – 2100 hrs.

2. *Normally no work will be performed on the following days:* Ne Year's Day, May 1st, Midsummer Eve (24th June 1988), Midsumme Day (25th June 1988), Christmas Day, New Year's Eve.

3. *Guaranteed Hours:* All "temporary" labour is guaranteed a minimu of 4 hours pay.

Overtime: (All personnel)

Monday-Friday	3 hours
Saturday	5 hours
Sunday/Public Holiday	6 hours

All hours ordered are to be paid for. Permanent employees are entitle to special compensation for work later than 2100 hrs. Monday – Frida

4. *Deadlines for requesting labour and/or overtime:*

Weekdays latest 1000 hrs. on the day before operation is commence. Cancellation latest 12 noon on the day before operation to commence.

Overtime: Weekdays – latest 1000 hrs. on the same day.

Cancellation latest 1200 hrs. on the same day.

Saturday/Sunday – latest 1000 hrs. on preceding Thursday.

Cancellation latest 0900 hrs. on preceding Friday.

Public holidays – latest 1000 hrs. on the last but one normal workin day before the Public holiday.

Cancellation latest 0900 hrs. on the last working day before the Pub holiday.

5. The above regulations are not valid in case of "force majeure" su as strikes, lock-outs, natural catastrophies, or any other unforeseeab incidents of which the Port of Gothenburg A.B. has no control.

6. These regulations are valid until further notice. They can, howeve be changed with immediate effect when/if some other agreement made with labour unions.

CONTAINERS: The Skandia and Alvsborg Harbours for contai handling with 20 berths and 12 ferry ramps. Also see "Berthing" a "Cranes".

TANKERS:

Torshamnen:

		Berth No. *801*	*Berth No* *800*
Operator		Port of Gothenburg A.B	
Users		OK, Shell and various	
Product		Crude Oil	
Minimum water depth at mean water	approaches	20.50 m.	20.50 m
	alongside	19.60 m.	19.60 m
Under keel clearance	approaches	1.45 m.	1.45 m
	alongside	0.55 m.	0.55 m
Dimensions safely acceptable (also see below)	length	350 m.	280 m
	beam	no restr.	no restr.
	draft	19.05 m.	15.85 m
	d.w.t. (summer)	abt. 250,000	abt. 115,00
Water density		1013	1013
Nature of bottom		clay	clay
Boom arrangement		4×16 in.	2×12 in
Manifold heights	maximum	22.00 m.	17.00 m
	minimum	3.00 m.	1.50 m
Public telephone number		031632446	0316324

Draft: That the above figure, 19.05 m., is given on the basis of me water level and brackish water (density 1013). There is very little tide Gothenburg, only about 20 cm. (8 in.). The draft is more affected wind, Easterly winds blowing the water away from the coast, Weste winds blowing the water towards the coast. In winter and early spr (January-May) there can be long periods of Easterly wind, when it wo be prudent not to arrive on a deeper draft than 18.60 m./brackish wa

Lightering: In case of need lightering can be arranged 3 nautical mi S.W. of the Trubadur Lighthouse. This is in open sea and restricte wind force less than 6 – 7 m./s.

For crude oil distribution to other refineries lightering can take pl across the finger jetty from Berth No. 801 to Berth No. 800.

Gas lightering is being done via 8 in. acid proof steel pipeline acr jetty. Flanges drilled to ASA 150 and 300. No hoses available, vess have to provide same.

Moorings: Berth 801 – VLCCs: Owing to the somewhat exposed na of berth Masters are advised, that when strong off-shore winds forecast, to ballast the vessel, stop discharge if necessary and, main steam on the winches to supplement the brakes. It is strongly recommended that vessels over 210,000 s.d.w.t. make use of the extra mooring as described below.

Instructions for the use of extra mooring (E.M.):

1. Pass ashore a wire and a shackle and make fast to the eye of the E.M. on the caisson. Free the E.M. from its hook by means of the capstan on the caisson. Bring home the E.M. and belay it.
2. At departure. Before letting go the E.M. make fast a strong rope or a wire in the eye of the E.M. and take the other end to the caisson for hanging off the E.M. Let go the E.M. and, by means of the capstan, back to the caisson and place it on its hook, heave it.

Manifold height		hoses used	hoses used	
Public telephone number		031538420	031632434/ 031632433/ 031632432	

Note: Maximum draft:

On lesser draft sizes up to 210 m. – 215 m. may be accepted but special approval from the Harbour Authorities needed on each occasion.

Report: *Restriction:* Entry to Gothenburg by large ships is not undertaken if visibility is less than 3 miles, or if the wind speed exceeds 15 m./sec. (about 30 knots.) Ships over 17.4 m. (57 ft.) draft do not enter during hours of darkness.

Ballast: Cannot be received ashore.

Dimensions: The harbour is prepared to accept vessels exceeding 335 m. length provided distance from bow to manifold is max. 180 m. and vessels' draft does not exceed 18.29 m. (60 ft.), brackish water. Special approval needed in each case.

Bunkers: Supplied by barge only.

Pilotage: Pilotage is compulsory and necessary. Pilots are stationed at TCC and are taken out by fast pilot boats to meet incoming ships based on ETA and VHF contacts. On Vinga Island there is a lookout manned by personnel from Gothenburg Station. The lookout listens continuously on VHF Channels 13-16 and maintains VHF watch on Channel 69 and 11A. Pilots are government controlled. Two Pilots are assigned to ships over 60,000 d.w.t..

Sea pilots go with the ship all the way to berth as there are no harbour pilots.

South of Vinga Island there are 3 anchorage areas named A, B, and C, marked on the Swedish Chart No. 931.

In addition to those mentioned above there are anchorages in the Danafjorden and the Rivofjorden.

Torshamnen Berth: Approaches – Cautionary Advice: Care must be taken when turning from the channel to Torshamnen berth, particularly when the wind is from the West, not to turn too late as the ship can drift laterally and be carried on to Dynan Shoal (rock), or on to the end dolphin of the berth.

Berthing Procedure: All ships are berthed heading N.E., therefore, on the West berth (801) ships are starboard side to, and on the East berth (800), portside to.

Berthing should be as parallel as possible as the forward mooring dolphins are only 10 m. inside the breasting face line and the limits of the 19.6 m. (64.3 ft.) depth run close to the breasting faceline.

The first ropes ashore (by boat) are usually the forward spring and a head line. It is important the ship does not run too far ahead of position as the limit of the 19.6 m. depth is only 200 m. from the centre of the berth. There is no approach velocity measuring device at these berths, and no published maximum allowable impact velocity, but ships should endeavour to control their approach speed to less than 10 cm./sec.

See "Plan" for recommended mooring diagram for the Torshamnen berth.

Svenska Statoil AB Terminal Ryahamnen: Berthing: Ocean going ships always berth heading upriver portside to. Moorings are taken ashore and to the buoys by power boat. Spring lines go to the jetty head, head/breast lines to a buoy forward, stern/breast lines to a buoy aft with 1 or 2 breast lines to a mooring post on shore. It is important to give good lines for the after breast lines as N.W. winds can cause a problem. As the jetty between the end concrete dolphins is constructed entirely of wood, it is important that the large ships contact only the end dolphins during berthing operations.

The fendering of the end dolphins has low energy absorption qualities and, therefore, landing should be as light as possible.

The upriver dolphin is fendered with a solid wood facing, the downriver dolphin with truck tyres.

No shore moorings or shore gangways are provided at this terminal

DENSITY: Average density 1012. Tide of no importance.

FRESH WATER: Available from quay or water boat.

FUEL: All grades available at short notice.

CONSULS:

The following countries are represented in Gothenburg:

Austria
Bangladesh
Belgium
Bolivia
Brazil
Chile
Costa Rica
Denmark
Ecuador

REPAIRS: All kinds of repairs possible.

DRY DOCKS: 3 floating docks. Largest being 268 m. × 34.8 m. with a depth of 8.0 m. over the sill. There are 2×90 ton and 1×70 ton cranes available for ship repairs. Mobile cranes are also available.

GANGWAY/DECK WATCHMEN: Watchmen accepted by Harbour and Fire Authorities on tankers and vessels loaded with explosives. On other vessels not necessary.

OPENING/CLOSING HATCHES: By crew or stevedores.

CUSTOMS ALLOWANCES: Tobacco, per 10 days 200 cigarettes or 250 gram other tobaccos. Wine and/or Spirits, per 10 days 1 bottle of spirits and 1 litre of wine, alternatively 2 litres of wine.

Require report latest 24 hours prior to arrival via Port of Gothenburg Co.

CARGO GEAR: Certificates that equipment is approved.

REPATRIATION: Excellent communications by air or by rail.

AIRPORT: Distance of Landvetter Airport 20 km. – 30 km. depending on where ship is berthed. Airport served by regular airlines.

HOLIDAYS: See "Stevedores".

POLICE/AMBULANCE/FIRE: Tel. 90 000, ask for "Polislarm", "Ambulans", or "Brandlarm".

TELEPHONES: At all quays ships can be connected to telephone.

GENERAL: Seaman's Institute, Amerikagatan 2, open weekdays 1000 to 2130 hrs., Saturdays and Sundays 1400 – 2130 hrs.

SERVICES: Tank-cleaning equipment and facilities for discharge of tank-washings in the Skarvik Harbour. Compass adjusting.

Capacity of barge – 100 cu.m.
Capacity of trucks – 11 cu.m. (10 trucks available).

Disposal of Waste Products: *Disposal of Residual Oil from the Engine Room:* Oil residues and sludge from the engine room, which are not allowed to be discharged at sea, is received, free of charge, outside the shipyards, by the Port of Gothenburg, provided:

1. The waste comes from normal duty of the machine, during the ship's journey between it's previous port and Gothenburg.
2. The quantity of residual oil is proportional to the ship's d.w.t.
3. The waste consists of water, petroleum hydrocarbons and the additives which normally are a part of residual fuel and lubricating oil, and which must be disposed of at a competent reception facility. Any substances from PCB, chlorine, organic solvents and detergents must not exist.
4. The Sea Traffic Department, Port of Gothenburg AB, has been informed at least 24 hours before the disposal of the residual oil is intended to be carried out.
5. The request provides information about quantity, viscosity, specification of oil residues, possible compounds of lubricating/fuel oil with/without solvents, emulsifiers, etc., as well as the hose connection required.
6. The ship's connection is available on deck and of an international standard.
7. The operating pressure in the line between the ship and the reception facility ashore does not exceed 0.6 MPa (6 kp/cu.m.).
8. The operating discharging rate is not less than 5 cu.m./hr.
9. The discharge of the residual oil is transferred to a competent reception facility (e.g. collected by vehicle or vessel), from 0730 hrs. – 1530 hrs. weekdays only.
10. The collecting vehicle's or vessel's waiting time does not exceed 15 minutes, including time for connecting of hoses.
11. The ship is providing a safety watch, who is supervising the operation, in order to prevent leakages.
12. The ship is providing personnel for connection and disconnection of the hose between the ship and the reception facility.
13. Oil residues in drums are put at specific, by the harbour authority designated area.
14. The drums are compact and leakproof without defects, and permanently labelled. The declaration of contents should be in both Swedish and English, together with the ship's name.
15. That smaller amounts of residues are disposed of in designated receptacles, when the possibility of disposal in drums, as described above, are not practicable.
16. The ship will be charged the additional costs, which may arise, if the above mentioned conditions are not complied with.

Safety Regulations concerning Disposal of Residues from the Engine Room:

Responsibility Areas:

1. It is the collecting vessel's or vehicle's responsibility to ensure, before the transfer is commenced, that the operation is supervised by a safety watchman who can, if necessary, order the operation to be stopped.
   The safety watchman of the collecting ship or vehicle could be either a crew member or the driver of the vehicle.
2. All personnel involved in the transfer operation are obliged, within their respective areas of responsibility, to take all necessary precautions, to prevent an oil spillage ashore or into the water.

Precautions before discharge of residues from the engine room is commenced:

(i) All scuppers, on board all vessels involved in the operation, must be plugged.
(ii) The vents of the cargo tanks, of the ship which is receiving the residual oil, must be appropriately fitted to avoid an overflow.
(iii) Information of maximum loading quantity in each tank and maximum operating pressure respectively, must be provided by the discharging ship's responsible officer, to the receiving ship or vehicle.
(iv) The hose for disposal of residual oil must be properly and securely connected on board the collecting ship's or vehicle's manifold, and be rigged in a way which prevents damage of the hose, from possible movements of the ship.
(v) Only approved hoses, which have been tested during the last twelve month period, may be used.
(vi) Checks of the operating valves setting is an obligation, to ensure filling of the right tank.
(vii) Efficient communication, preferably by radio, must be established between the vessel and vehicle involved in the operation. This communication must be maintained until the operation is finished and the hose has been disconnected.

During discharge of residual oil:

1. Hose connections must be continuously checked to detect possi leakage.
2. Supervision by a safety watchman is an obligation throughout t operation. The operation must immediately be stopped on command.

After operation is finished:

The hose must be properly disconnected to avoid any spillage of A drip tray must be used. Hoses which have no automatic shut-do valve must be blanked before being returned to the receiving ship vehicle.

Actions in the event of a hose burst, overfill, or any other circumstanc which may cause a spillage:

These actions must be taken in the event of a hose burst, overfil other circumstances which have caused the spillage:

Stop all operations.
Close all valves in operation on all vessels or vehicles involved the operation.
Call the Vessel Traffic Control Centre by VHF Channel 13 telephone 031-632350.

HALLSTAVIK: 60.03 N. 18.35 E. (See Pla

DOCUMENTS: 2 Crew Lists; other documents see "Stockholm".

PILOTAGE: Svartklubben Pilot Station. VHF Channel 16 and othe Radar at station and in boats. 5 hours' notice prior to arrival. T Hallstavik 0175/10006. Cable: "Pilotstation Hallstavik".

ANCHORAGES: Good and protected anchorage places available.

RESTRICTIONS: Tankers are navigated in daylight only. Max. air d for all vessels 40 m.

MAX. SIZE: LOA 150 m., beam 25 m. and draft not to exceed 23 ft

HEALTH: No special action except for suspected disease. In case disease contact Agent for information.

RADIO: Stockholm Radio.

TUGS: Normally available.

STEVEDORES: Loading effected by factory. Ordinary working hou 0630 – 1530, maximum 1 hour overtime. Saturdays no work.

MEDICAL: Medical attendance available day and night.

TANKERS: Max. draft 23 ft. Connection 6 in., pipe to quay-cisterns about 1,000 m., discharging rate about 200 t.p.h.

DENSITY: Practically fresh water.

FRESH WATER: Available from quay; rate 2 t.p.h.

FUEL: Delivered by trucks from Stockholm.

CONSULS: At Stockholm, 100 km. away.

REPAIRS: Minor repairs only.

OPENING/CLOSING HATCHES: Ship's crew.

CUSTOMS ALLOWANCES: 200 cigarettes and 1 bottle of spirits.

CARGO GEAR: Loading by ship's gear or mobile crane.

AIRPORT: Stockholm Airport, Arlanda, 75 km. away.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: Easter; Whitsuntide; Midsummer; Christmas and N Year's Day.

POLICE/AMBULANCE/FIRE: Alarm Tel: 90000.

GARBAGE DISPOSAL: Facilities available free of charge.

WASTE OIL DISPOSAL: Facilities available free of charge, m capacity 10 cu.m.

GENERAL: *Shippers:* Holmens Bruk AB. Export about 300,000 tons newsreel/year. Import about 50,000 tons of fuel oil. 2 ordinary load quays and 1 Roll-on/Roll-off berth available.

Agency: Erik Clemedson AB. Cables: "Clemed". Telex: 76213.

AUTHORITY: Holmen Paper AB, Hallsta Paper Mill, S-76381 Hallsta Sweden. *Tel:* 0175-26000. *Telex:* 76209. *Cables:* Holmen. *FAX:* 01 26401. Agent 0175-23355. *Contact:* R. Sonderberg, Harbour Maste

HALMSTAD: 56.40 N. 12.52 E. (See Pla

DOCUMENTS:

3 Crew Lists.
3 Passenger Lists.
3 Stores Lists (Tobacco and Stores).
5 Manifests.
2 Bills of Lading and Ship's Papers.

PILOTAGE: Advance notice of ETA 5 hours before arrival. Pilot sta and pilot boat equipped with VHF Channels 16, 13, 6. Pilot boards lightbuoy in Halmstad Road (L.Fl. 10 sec. 56° 37′ N., 12° 47.5′ E.) (see "Stockholm".)

ANCHORAGES: Good holding ground in 30 ft. – 40 ft. in roads 1 to 2 miles S.E. of breakwater.

MAX. SIZE: See "Berthing".

RADIO: Gothenburg Radio.

RADAR: Pilot station equipped with radar.

VHF: Port Authority on Channels 16, 13 and 9.

TUGS: Meet at Halmstad Road. Ship's lines used.

BERTHING:

Berth	*Length* (m.)	*Max. draft* (ft.)
Ostrakajen	300	30 ft.
Ostrakajen	230	27 ft.
Jarnverkskajen	220	27 ft. 6 in.
Importkajen	470	23 ft. 6 in.
Importkajen	270	22 ft.
Tullkammarkajen	400	18 ft.
Kattegattshamnen	285	27 ft. 6 in.
New Quay	135	24 ft. 7 in.
(Ro/Ro ramp ready October 1990)		

	Max. LOA (m.)	*Max. draft* (ft.)
Oceanhamnen – Inner Berth	200	32
Outer Berth	235	33

CRANES: 8 rail mounted cranes and 4 mobile cranes, capacity up to 100 tons.

SPECIAL CARGO HANDLING FACILITIES:

Roll-on/Roll-off: Kattegattshamnen: 2 fixed ramps. 43 m. and 23 m. wide. Max. draft 27 ft. 6 in.

Ostrakajen: 1 fixed ramp. 25 m. wide. Max. draft 27 ft.

Containers: Handled at Ostrakajen and Kattegattshamnen.

BULK HANDLING FACILITIES: A new harbour basin (Oceanhamnen) was opened in 1981. Alongside the berth ships with max. LOA 235 m. and max. draft 11.3 m. can be handled. A rail mounted bulk-unloader, screw type, can discharge bulk-cargoes at a capacity of 500 t.p.h. On the quay is a bulk-terminal operated by Nordic Bulk AB, Halmstad.

Bulk cargo can also be handled alongside the Importkajen and Jarnverkskajen with grab-equipped cranes. 1×200 t.p.h. unloader for limestone and dolomite. 1×100 t.p.h. pneumatic unloader for soda imports.

STEVEDORES: *Working Hours:* Monday – Friday 0700 – 1630 plus 3 hours' overtime. Saturday – Overtime 6 hours. Sundays – By special agreement.

MEDICAL: Hospital facilities available.

TANKERS: Max. draft at oil berth 30 ft. Max. LOA – 700 ft. Diameter of discharge lines 8 in. and 10 in.

DENSITY: Average 1005 (depending on wind).

FRESH WATER: Fresh water available from berth 35 t.p.h.

FUEL: Viscosities available: 1.2 englergrades/20°C. By arrangement with ship's Agent.

CONSULS: Danish, Finnish, German.

REPAIRS: Shipyard carries out ship repairs.

DRY DOCKS: 2 slips.

GANGWAY/DECK WATCHMEN: Not necessary. Available if required.

OPENING/CLOSING HATCHES: Normally carried out by crew, but if carried out by stevedores cost charged to vessel.

CERTIFICATES: Bill of Measure, Nationality Certificate and Derat Certificate.

CUSTOMS ALLOWANCES: Tobacco/spirits, 1 bottle spirits, 1 bottle wine and 200 cigarettes free on board. Quantity over will be closed under Customs seal. No other restrictions.

REPATRIATION: Facilities exist for changing crew and repatriation.

AIRPORT: Halmstad Airport, 1 mile from town centre. 2 flights per day for Stockholm.

TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.

HOLIDAYS: New Year's Day; Twelfth Day; Good Friday; Easter Day; Easter Monday; Ascension Day; Whit Sunday; Whit Monday; Mid-Summer Day; All Saints' Day; Christmas Day; Christmas Monday, Labour Day.

POLICE/AMBULANCE/FIRE: Tel. 90 000.

TELEPHONE: For placing a telephone on board cost is 130 SEK, and 59 SEK, a day for hire.

SHORE LEAVE: Crew members allowed ashore.

IDENTIFICATION CARDS: Only needed in oil harbour.

GENERAL: *Charts:* BA 3671. Swedish 92 and 923.

AUTHORITY: Halmstad Hamn Och Stuveri AB, P.O. Box 1, 30102 Halmstad, Sweden. *Tel:* 46-35-155310. *Telex:* 38076 HSTUV. *FAX:* 46-35-140593. *Contact:* C. Olausson, Harbour Master.

HARGSHAMN: 60.10 N. 18.29 E. (See Plan)

LOCATION: The port is situated in the archipelago of Oregrund, about 130 km. North of Stockholm and about 110 km. South of Gefle. It is a natural and well sheltered harbour, suitable for vessels up to about 10,000 d.w.t.

DOCUMENTS: The Customs Officers require the following documents on arrival:

Tonnage Certificate (Certificate of Registry).
Certificate of Nationality.
Swedish Light Dues Receipt for current year.
Crew List, 2 copies.
Crew's Effects Declaration (spirits and tobacco only), 2 copies.
Ship's Stores Declaration (spirits and tobacco only), 2 copies.
If the international IMO Forms are not available, similar forms are accepted.

PILOTAGE: Pilot is compulsory for tankers over 1,200 g.r.t. and dry cargo vessels over 1,600 g.r.t.

Pilot is available from 0300 hrs. – 2400 hrs. and is embarked off Svartklubben Lighthouse (Lat. 60° 09′ N., Long. 18° 52′ E.). Order for Pilot has to be given 5 hours before needed and can be given via the Agent or direct to the Svartklubben Pilot Station, VHF Channel 16, Tel: Hallstavik 0175-10006, Cables: "Pilotstation Hallstavik".

Distance from sea off Svartklubben to Hargshamn is about 17 nautical miles. For vessels arriving from North, Pilot will board on request at Oregrund or North thereof.

MAX. SIZE:

Max. allowed draft 8.5 m. at MLW (density of water 1005).
Max. allowed length of vessel about 185 m.
Max. allowed breadth of vessel about 28 m.
Max. allowed draft at new quay for general cargo 7.3 m.

RADIO: ETA is to be given 48 hours and 24 hours in advance to the Agent. Tel: Osthammar 0173-20080 or cable: "Oreship Hargshamn".

VHF: Harbour Office on Channels 9, 11 and 16.

TUGS: A tug of 1,200 h.p. is available from Hallstavik, and is normally used to assist vessels over 9,000 d.w.t. on departure only.

BERTHING: *Ore Quay:* Length 90 m. Minimum depth alongside 11 m. Berth equipped with a loading conveyor, capacity 800 t.p.h.

New Quay: Length 40 m. Minimum depth alongside 8 m. Equipped with mobile cranes 50 tons and 160 tons.

Railway Ferry Berth: (Built 1989). One ramp for railway-wagons to lower deck, max. load 395 tons. One ramp to upper deck for lorries, max. load 75 tons. Minimum depth alongside 7.20 m.

STEVEDORES: *New Quay:* Ordinary Working Hours: Monday-Friday 0700 – 1600.

Stevedores: Hargshamn Terminal AB, S-740 73 Hargshamn. Tel: Osthammar 0173-20155.

FRESH WATER: Available.

SURVEYORS: From Stockholm (130 km. away).

CUSTOMS ALLOWANCES: 200 cigarettes per man and 1 bottle of spirits per Officer.

AIRPORT: Stockholm-Arlanda, 100 km.

EMERGENCY CO-ORDINATION CENTRE: Stockholm Radio.

GARBAGE DISPOSAL: Skips available alongside free of charge.

WASTE OIL DISPOSAL: Truck to be ordered via agent. Charges depend on quantity water/oil.

SEAMAN'S CLUBS: None.

CURRENCY: Swedish Kronor (SEK). U.S.$ 1.00 = SEK 8.00 (1.3.94).

STORING: Can be effected with some minor difficulties.

GENERAL: *Ice:* The port can be kept open all Winter. Normally there is ice from last week of December until the last week of March/first week of April. In port and entrance there is fast ice up to 40 cm. – 50 cm. thick.

Navigation is maintained in broken ice-channel.

Off the pilot station or in Aland Sea there is very seldom packed ice or other difficulties during a normal Winter.

Charts: Swedish No. 536 (1:50000). B.A. No. 2335 (1:100000).

AUTHORITY: Hargs Hamn AB, Hamnkontoret, S-74073 Hargshamn, Sweden. *Tel:* Osthammar 0173-20155. *FAX:* Osthammar 0173-20155. *Contact:* Gunder Hurtigh, Port Director.

AGENT: Bjorsbo Shipping AB, S-740 73 Hargshamn. Tel: Osthammar 0173-20080. Fax: Osthammar 0173-20120. Cables: "Oreship Hargshamn".

HARNOSAND (Hernosand): 62.38 N. 17.57 E. (See Plan)

DOCUMENTS:

2 Crew Lists and/or 2 Passenger Lists (stating what tobacco, cigarettes or spirits each man has in their possession).
Derat Certificate.
Manifest and/or Bills of Lading.
Register, and if vessels have previously been in Sweden same year, bills for light dues paid.

Certificates: See "Stockholm".

PILOTAGE: Applications for licensed Pilots should be made at least 5 hours before arrival. When making application, specify name of vessel, tonnage, draft and destination. Also give estimated time for taking Pilot on board and route. If this procedure not followed, the Maritime Service cannot guarantee to supply a Pilot without considerable delay to vessel.

Preferable to make application by telephone or by radio via a coastal station or by some other method direct to pilot station. Also possible to request Pilot by VHF.

Pilot station at Spikarna/Sundsvall for Northbound vessels and Skagsudde/Ornskoldsvik for Southbound vessels.

ANCHORAGES: In port approaches in depth of 15 m. to 40 m.

RESTRICTIONS: During Winter assistance given by State Ice-breakers.

MAX. SIZE: Up to 32 ft. 5 in. draft. Also see "Tankers".

HEALTH: Vessels arriving from ports outside Europe must, for Inward Clearance, provide Customs Officer with written declaration of freedom from infection. Further instructions will be issued by Customs Office when such a declaration cannot be given.

RADIO: Cable Agents to give ETA, draft and cash required via Stockholm Radio SDJ.

TUGS: Tug assistance is available.

BERTHING:

Berth No.	*Length* (m.)	*Depth* (m.)
1	75	4.60
2	45	4.60
3	70	4.30
4	51	8.00
5	67	8.00
6	51	8.00

TANKERS: *Municipal Oil Pier:* Max. LOA 200 m. Max. draft 10.0 m. Depth alongside 10.5 m. Max. d.w.t. 30,000. Vessels berth either side alongside. Tugs available but not required. Offshore anchor used.
DENSITY: Nearly fresh water.
FRESH WATER: Available from the quays.
FUEL: Can be supplied.
REPAIRS: Most repairs possible.
DRY DOCK: At Gustavsvik.
GANGWAY/DECK WATCHMEN: Gangway watchmen available.
OPENING/CLOSING HATCHES: Normally done by crew.
CUSTOMS ALLOWANCES: 200 cigarettes and 75 centilitres spirits per man/week. Extra granted on request.
TIME: GMT plus 1 hour in Winter. GMT plus 2 hours in Summer.
POLICE/AMBULANCE/FIRE: Telephone numbers: Accidents, Police, 90000; Fire: ask for alarm 90000.
IDENTIFICATION CARDS: Not necessary.

HOLIDAYS: New Year's Day; Epiphany; Good Friday; Easter Monda Labour Day; Ascension Day; Whit Monday; Midsummer Day; All Sain Day; Christmas Day; Second Christmas Day.

Work ceases at 1130 hrs. on the following eves of holidays and voluntary and paid with 100 per cent overtime: Easter Eve; Whitsun Ev Midsummer's Eve; Christmas Eve and New Year's Eve.
GARBAGE DISPOSAL: Container placed alongside free of charge.
WASTE OIL DISPOSAL: Facilitated by tanker trucks of 9 cu.m capacity. Contact Port Authority for details.
SEAMAN'S CLUBS: None.
AUTHORITY: Harnosands Hamn, P.O.Box 1005, 87129 Harnosan Sweden. *Tel:* (0611) 28270, 28271. *Telex:* 71020. *Cables:* Hernopor *FAX:* (0611) 28269. *Contact:* Lars Wikstroem, Harbour Master.

HELSINGBORG: 56.03 N. 12.41 E. (See Plan)

DOCUMENTS: See "Stockholm".
APPROACHES: The harbour basins are very easy to approach. The deep water outside breakwaters – varying from 10 m. to 30 m. (33 ft. – 98.5 ft.) – adjacent to the sailing route in the Sound facilitates port calls. Normally comparatively large ships can proceed directly to the quays without tug assistance.
PILOTAGE: Call Pilot on VHF Channel 16 (Tel: 042-110035). Pilots will board and disembark at the roads or at "N:1" Light Buoy in traffic separation scheme "in the Sound" from an orange coloured Pilot boat. Pilots can also be obtained at the Oresund North Light Buoy (Lat. 56° 12′ N., Long. 12° 30′ E.) or off Kullen Light (12 hours advance notice). Helsingborg Pilots are also Seapilot for the Sound, Kattegatt, Baltic and North Sea (See "General – Pilotage" before first port).

Anchorages: It is not recommended to anchor outside Helsingborg due to the heavy ferry traffic.

Good anchorage is found at Raa Roads, about 0.5 nautical miles S.W. from Raa Lighthouse (3 nautical miles South from Helsingborg).

Pilots: 24-hour service. Channel 16, 14 and 13 (VHF relay station on Kullen Lighthouse).
MAX. SIZE: Permissible length about 220 m.; breadth unlimited; draft 7.0 m.–11.7 m. on MW, depending on which berth the vessel is bound for. No tides but certain variations following prevailing current and winds.
Tankers: Max. draft 10.5 m.

ANCHORAGES: See "Pilotage".
HEALTH: Pratique automatic for all vessels arriving from non-infecte ports. In cases where Pratique should be obtained, notice to be give through ship's Agent. Further directions given by Pilot.
RADIO: For communication – Goteborg Radio.
VHF: 24 hour watch on Channel 16. Call sign "Helsingborg Harbour" working Channels 11 and 12. Ships to contact the harbour 1 hour befor arrival and 1 to 0.5 hours before departure.
Pilots: Channel 16, working Channels 13, 14 and 69.
Tugboats: Working Channels 11, 12 and 69.
TUGS: 3 tugs available, up to 2,686 KW.
Tugs join vessel outside entrances.
CRANES: 22 cranes, including 2 container cranes (42 tons and 45 ton and 2 multi-purpose cranes (30 tons each). 2 × 30 ton transtainer available.
BULK CARGO FACILITIES: 2 berths of 215 m. length for grain an fertilisers, max. draft 9.9 m. Loading capacity 700 tonnes per hou Storage 250,000 tonnes.
SPECIALISED CARGO HANDLING FACILITIES: Complete containe terminal West Harbour with 670 m. berths and 3 Ro/Ro berth max. draft 11.7 m. There are a total of 10 Ro/Ro berths in the port. A types of handling equipment. Liquid chemicals handled at the tanke terminal.

BERTHING: (Helsingborg).
